5. CONTRACTOR SHALL BE RESPONSIBLE TO PROVIDE REQUIRED EQUIPMENT TERMINAL LUGS TO FIT THE CONDUCTORS INDICATED. CONDUCTORS SHALL TERMINATE DIRECTLY TO THE CIRCUIT BREAKER LUGS. ADJUST CIRCUIT BREAKER AMPERE FRAME AS REQUIRED.
6. PANELBOARD WITH SHUNT TRIP TYPE MAIN CIRCUIT BREAKER.
7. PROVIDE GROUND FAULT PROTECTION TO CIRCUIT BREAKER.
8. CIRCUIT BREAKER SHUNT TRIP TYPE.
9. SOLAR PV SYSTEM CIRCUIT BREAKER. SEE SHEET E2.6 FOR APPLICABLE NOTES.
10. SOLAR PV MAIN DISCONNECT SWITCH "PV" LOCATED ADJACENT TO UTILITY METER. SEE (2/E6.7) 3P-250AMP SWITCH, 480/277V, 3# IN NEMA 4X STAINLESS STEEL ENCLOSURE.
11. PROVIDE FIRE PUMP DISCONNECT MARKING AND SEPARATE ENCLOSURE COMPLYING TO NEC REQUIREMENT.

DRY TYPE TRANSFORMER SCHEDULE

TA	112.5 KVA, 480–208V/120V, 3ø, 4W
TJR	75 KVA, 480–208V/120V, 3ø, 4W
TCC	150 KVA, 480–208V/120V, 3ø, 4W
TPR2	9 KVA, 480–208V/120V, 3ø, 4W
TCR	30 KVA, 480–208V/120V, 3ø, 4W

GENERAL NOTES:

1. EXTERIOR EQUIPMENT SHALL BE NEMA 4X STAINLESS STEEL ENCLOSURES. INTERIOR EQUIPMENT, HEAVY DUTY NEMA 1 ENCLOSURE. UNLESS OTHERWISE NOTED.
2. CROSSARM, ACCESSORIES, FUSE CUT-OUT, LIGHTNING ARRESTERS, CABLE TERMINATORS, SPLICING KIT, PAD MOUNTED TRANSFORMERS, METERS AND TERMINATION BY GPA. CONTRACTOR SHALL PAY THE CHARGES FOR SERVICE RENDERED AND MATERIALS FURNISHED TO THE PROJECT BY GPA. COORDINATE WORK WITH GPA.
3. ALL CIRCUIT BREAKERS RATED 1200A AND LARGER MUST INCLUDE ARC ENERGY REDUCTION. PROVIDE ENERGY REDUCING MAINTENANCE SWITCHING WITH LOCAL STATUS INDICATOR.
4. ADJUST CIRCUIT BREAKER AND FEEDER SIZE OF SPD AND ALL MOTOR LOADS (HVAC, PUMPS, ETC.) TO MATCH MANUFACTURER'S RECOMMENDATION AT NO ADDITIONAL COST TO THE GOVERNMENT. VERIFY REQUIREMENTS WITH MANUFACTURER.

NOTES:

1. PROVIDE ADJUSTABLE SOLID STATE ELECTRONIC TRIP CIRCUIT BREAKER WITH THE FOLLOWING FEATURES:
   - LONG – TIME PICKUP
   - LONG – TIME DELAY
   - SHORT – TIME PICKUP
   - SHORT – TIME DELAY
   - INSTANTANEOUS PICK-UP
2. NON–FUSIBLE DISCONNECT SWITCH, 3P–30AMPS, NEMA 4X 304 SST 600V.
3. NON–FUSIBLE DISCONNECT SWITCH, 3P–60AMPS, NEMA 4X 304 SST 600V.
4. STARTER, PROVIDED UNDER MECHANICAL SECTION.
5. CONTRACTOR SHALL BE RESPONSIBLE TO PROVIDE REQUIRED EQUIPMENT TERMINAL LUGS TO FIT THE CONDUCTORS INDICATED. CONDUCTORS SHALL TERMINATE DIRECTLY TO THE CIRCUIT BREAKER LUGS. ADJUST CIRCUIT BREAKER AMPERE FRAME AS REQUIRED.
6. NON–FUSIBLE DISCONNECT SWITCH, 3P–100AMPS, 600V.
7. UTILITY BOX, 8"X8"X6"D, NEMA 4X STAINLESS STEEL ENCLOSURE.
8. LOCKABLE TYPE CIRCUIT BREAKER IN OPEN POSITION.
9. NON FUSIBLE SWITCH, 3P–60A, 240V.
10. SOLAR PB SYSTEM MAIN CIRCUIT BREAKER(GCC/CAFERIA) SEE SHEET E2.7 FOR APPLICABLE NOTES.
11. PV SOLAR MAIN DISCONNECT SWITCH "PVC" LOCATED ADJACENT TO UTILITY METER: SEE 1/E6.2

3P–70 AMPS SWITCH, 225AF, 480/277V,3ø,4W IN NEMA 4 STAINLESS STEEL.

1 SOLAR PV SCHEMATIC DIAGRAM
NOT TO SCALE

GENERAL NOTES:

1. THE PV SYSTEM INVERTER OUTPUT SHALL CONNECT TO THE BUILDING ELECTRICAL SYSTEM. POWER GENERATED BY THE PV SYSTEM SHALL BECOME AVAILABLE FOR UTILIZATION BY THE BUILDING LOAD. PROVIDE SURGE PROTECTION AND INTEGRAL GROUND FAULT PROTECTION. PROVIDE ANTI–ISLANDING, OVER AND UNDER VOLTAGE TRIP FUNCTION, OVER AND UNDER FREQUENCY TRIP FUNCTION, VOLTAGE AND FREQUENCY SENSING AND TIME DELAY FUNCTIONS PER IEEE STD 929–2000. PROVIDE WEB BOX CONNECTION FOR REMOTE MONITORING. LOCATION TO BE DETERMINED BY THE OWNER.
2. PV MODULES SHALL BE MOUNTED ON THE ROOF USING MANUFACTURER STANDARD CORROSION RESISTANT CHANNELS. PANEL SHALL BE ORIENTED AND TILTED PER MANUFACTURER'S RECOMMENDATION FOR GUAM. INSTALLATION SHALL BE RATED TO WITHSTAND LATEST WINDLOAD REQUIREMENT BY 1BC LATEST EDITION EXPOSURE C AND ASCE 7–05.
3. PROVIDE NAMEPLATE INDICATING "PHOTOVOLTAIC INVERTER PANELBOARD: DO NOT CONNECT ADDITIONAL LOAD TO THIS PANEL".
4. PROVIDE MARKING "PHOTOVOLTAIC POWER SOURCE" ON RACEWAYS NO LESS THAN EVERY 10 FEET, AT EVERY TURN, ABOVE AND BELOW PENETRATIONS AND ON ALL EXPOSED RACEWAYS. MINIMUM TEXT HEIGHT SHALL BE 3/8" USING WHITE LETTERING ON A RED BACKGROUND. LABELS MUST HAVE REFLECTIVE PROPERTIES AND SHALL MEET UL969 REQUIREMENTS. PROVIDE OTHER LABELS AS REQUIRED BY NEC 2020 SECTION 690.
5. ALL CIRCUIT BREAKERS, REVERSIBLE TYPE 600V, 3ø COMPLETE WITH GROUND AND NEUTRAL BARS BY PV EQUIPMENT SUPPLIER.
6. DISCONNECT SWITCH BY PV EQUIPMENT SUPPLIER.
7. WIRINGS BY PV EQUIPMENT SUPPLIER, CONDUIT BY CONTRACTOR. SIZES AND QTY. PER PV EQUIPMENT SUPPLIER RECOMMENDATION.
8. PROVIDE PERMANENT PLAQUE AT EACH MAIN DISCONNECT SWITCH IN CONFORMANCE WITH NEC REQUIREMENT NEC 230.2(E).
   1. INDICATE LOCATION OF OTHER MAIN DISCONNECTS THAT SERVE THE BUILDING.
   2. INDICATE INFORMATION OF AREA/LOAD SERVE (e.g. DISTRIBUTION PANEL, PV'S, ETC.)
   3. INDICATE MAIN DISCONNECT NUMBER DESIGNATION IN REFERENCE TO THE TOTAL QUANTITIES OF DISCONNECT SWITCHES. (e.g. 1 OF 4, 2 OF 4, ETC.)
9. WHERE TWO SOURCES, ONE A UTILITY AND THE OTHER AN FOR PV BREAKER, LOCATE CIRCUIT BREAKERS AT OPPOSITE END OF THE BUS BAR.

   A PERMANENT WARNING LABEL SHALL BE PROVIDED TO THE DISTRIBUTION EQUIPMENT ADJACENT TO THE PV CIRCUIT BREAKER THAT DISPLAY THE FOLLOWING WORDING "WARNING" INVERTER OUTPUT CONNECTION;
   DO NOT RELOCATE THIS OVERCURRENT DEVICE.
10. AFTER PV CIRCUIT BREAKER IS INSTALLED, PROVIDE WARNING LABEL TO THE EQUIPMENT INDICATING "WARNING", THIS EQUIPMENT IS FED BY MULTIPLE SOURCES.
11. CONTRACTOR SHALL OBTAIN BUILDING PERMIT AND GPA APPROVAL ON BEHALF OF THE OWNER.
12. PROVIDE CONDUIT AND WIRING, PER MANUFACTURER'S RECOMMENDATION.
13. INVERTER SHALL HAVE INTEGRAL GROUND FAULT DETECTION, INTERRUPTION AND ARRAY DISCONNECT (GFPD) DEVICES.

1 AUDITORIUM LIGHTING PLAN - LEVEL 1
SCALE: 1/8"=1'-0"

NOTES:

1. WORK LIGHTS HUNG FROM BATTENS WILL ILLUMINATE CENTER STAGE AND WILL BE PART OF THEATRE SYSTEMS WORK SHOWN ON DLAA DRAWINGS AND SPECS.
2. SEAT MOUNTED AISLE LIGHTING, REFER TO SEATING SPECIFICATION. SEE AU6, SHEET E9.12 FOR MOUNTING. SUBMIT SHOP DRAWING SHOWING LAYOUT, MOUNTING DETAIL, LIGHT FIXTURE DATA SHEET, POINT TO POINT WIRING DIAGRAM FOR REVIEW AND APPROVAL. ELECTRICAL CONTRACTOR TO COORDINATE WITH THEATRE CONTRACTOR. AISLE LIGHTING CIRCUIT WILL BE UNDER PERFORMANCE LIGHTING CONTROL SYSTEM DRAWINGS AND SPECIFICATIONS, ZONE C.
3. RECESSED STEP LIGHT, SEE AU2, SHEET E9.12. SUBMIT SHOP DRAWING LAYOUT, MOUNTING DETAIL, LIGHT FIXTURE DATA SHEET, POINT TO POINT WIRING DIAGRAM FOR REVIEW AND APPROVAL. ELECTRICAL CONTRACTOR TO COORDINATE WITH THEATRE CONTRACTOR. STEP LIGHTS SHALL BE 3'-0" ON CENTER. RECESSED STEP LIGHT CIRCUITS WILL BE UNDER PERFORMANCE LIGHTING CONTROL SYSTEM DRAWINGS AND SPECIFICATIONS, ZONE 6A.
4. LIGHTING FOR EGRESS AT FLOOR LEVEL, INCORPORATED INTO CARPET EDGES, SEE AU7, SHEET E9.12. SUBMIT SHOP DRAWING SHOWING LAYOUT, MOUNTING DETAIL, LIGHT FIXTURE DATA, POINT TO POINT WIRING DIAGRAM FOR REVIEW AND APPROVAL. ELECTRICAL CONTRACTOR TO COORDINATE WITH THEATRE CONTRACTOR. CARPET LIGHTS CIRCUIT WILL BE UNDER PERFORMANCE LIGHTING CONTROL SYSTEM DRAWINGS AND SPECIFICATIONS, ZONE 6.
5. PERIMETER LIGHTS CIRCUIT WILL BE UNDER PERFORMANCE LIGHTING CONTROL SYSTEM DRAWINGS AND SPECIFICATIONS, ZONE 14. LIGHT FIXTURES WITH LETTER "E" DESIGNATION WILL BE UNDER EMERGENCY CIRCUIT.
6. STAGE BLUE LIGHT CIRCUIT WILL BE UNDER PERFORMANCE LIGHTING CONTROL SYSTEM DRAWINGS AND SPECIFICATIONS, ZONE 18.
7. SHOP BLUE (BACKSTAGE) LIGHT CIRCUIT WILL BE UNDER PERFORMANCE LIGHTING CONTROL SYSTEM DRAWINGS AND SPECIFICATIONS, ZONE 17.
8. SHOP (BACKSTAGE) DOWNLIGHT CIRCUIT WILL BE UNDER PERFORMANCE LIGHTING CONTROL SYSTEM DRAWINGS AND SPECIFICATIONS, ZONE 11. LIGHT FIXTURE WITH LETTER "E" DESIGNATION WILL BE UNDER EMERGENCY CIRCUIT.
9. VESTIBULE A196 DOWNLIGHT CIRCUIT WILL BE UNDER PERFORMANCE LIGHTING CONTROL SYSTEM DRAWINGS AND SPECIFICATIONS, ZONE 10. LIGHT FIXTURE WILL BE UNDER EMERGENCY CIRCUIT.

Sheet No. _____ of _____

GENERAL NOTE:

(1) LAYOUT OF DEVICES AND EQUIPMENT IN THE GYMNASIUM IS FOR GUIDELINES ONLY, CONTRACTOR TO SUBMIT SHOP DRAWING LAYOUT, DETAIL POINT TO POINT WIRING. DIAGRAM AND MATERIAL/EQUIPMENT DATA SHEETS FOR APPROVAL.

NOTES:

(1) VAV WITH CONTROL TRANSFORMER PROVIDED UNDER MECHANICAL SECTION. PROVIDE 20A, 120V TOGGLE SWITCH, LOCATE ADJACENT TO EQUIPMENT, PROVIDE MOUNTING SUPPORT. REFER TO MECHANICAL DRAWING FOR CONTROL REQUIREMENT.

(2) DRINKING FOUNTAIN.

(3) WEATHERPROOF, GFI TYPE RECEPTACLE OUTLET, SUITABLE IN WET LOCATION WHILE IN USE.

(4) 3P–30AMPS, 240V, HEAVY DUTY TYPE, NEMA 1 ENCLOSURE. LOCATE SWITCH IN ACCESSIBLE LOCATION.

(5) FLOOR MOUNTED BOX, COORDINATE LOCATION WITH THE ARCHITECT FOR APPROVAL. AS A MINIMUM PROVIDE SCOREBOARD AND SHOT CLOCK PROVISION, 2–20AMP, 120 VOLT FLOOR OUTLETS, COMBINATION TELEPHONE/DATA OUTLET AND MICROPHONE PROVISION.

(6) BLUETOOTH RECEIVER BOX, COORDINATE WITH AUDIO VISUAL DRAWING FOR LOCATION AND REQUIREMENTS. PROVIDE ONE(1) 20A, 120V DUPLEX RECEPTACLE OUTLET ADJACENT TO BOX.

(7) 1 1/4" CONDUIT TO AV–RX7 @ TELECOM ROOM VIA WIREWAY ABOVE EQUIPMENT RACK (MIC) AND GYM SPEAKER CONTROLS.

(8) GYMNASIUM AV INPUT BOX, REFER TO AV DRAWING FOR REQUIREMENTS. PROVIDE ONE(1) 20A, 120V, RECEPTACLE OUTLET, LOCATE ADJACENT TO AV INPUT BOX.

(9) BLEACHER AV JUNCTION BOX, REFER TO AV DRAWING FOR REQUIREMENT. PROVIDE ONE(1) 20A, 120V RECEPTACLE OUTLET, LOCATE RECEPTACLE OUTLET ADJACENT TO BLEACHER JUNCTION BOX.

(10) MOTORIZED WINCH, 3/4HP, 115V.

(11) COORDINATE MOUNTING AND LOCATION WITH EQUIPMENT SUPPLIER.

(12) NON–FUSIBLE SWITCH, 240V, HEAVY DUTY, NEMA–1 ENCLOSURE.

(13) VIA MOTORIZED WINCH KEY SWITCH @ P.E. OFFICE.

(14) SHOT CLOCK PROVISION, COORDINATE LOCATION AND REQUIREMENT.

(15) 1"CONTROL CONDUIT COORDINATE CABLE REQUIREMENT WITH EQUIPMENT SUPPLIER.

(16) SCOREBOARD, 120 VOLTS, COORDINATE EXACT LOCATION WITH THE ARCHITECT, PROVIDE RECEPTACLE OUTLET ADJACENT TO SCOREBOARD.

(17) LOCATE RECEPTACLE OUTLET ADJACENT TO TELEVISION OUTLET.

(18) BLEACHER MOTORIZED CONTROLLER, 208V,3ø, MOTOR HP SHALL BE PER EQUIPMENT MANUFACTURER'S RECOMMENDATION.

1 AUDITORIUM POWER PLAN - LEVEL 1

SCALE: 1/8"=1'-0"

BILL OF MATERIALS

ITEM	PART NUMBER	DESCRIPTION
①	1/4"-20x1" HHCS	1/4"-20 HEX HEAD CAP SCREWS CAD PLATED
②	1/4" LOCKWASHER	1/4" LOCKWASHER CAD PLATED
③	1/4"-20 HEX NUTS	1/4"-20 HEX NUT CAD PLATED
④	AS REQUIRED	3/8"-1 1/4 EVERDUR MCH BOLTS DOSSERT OR EQ.
⑤	AS REQUIRED	3/8"-16 EVERDUR LOCK-WASHER DOSSERT OR EQ.
⑥	AS REQUIRED	3/8"-16 EVERDUR HEX NUTS DOSSERT OR EQ.

NOTES: APPLICABLE TO GROUND BAR

1. SURFACES SHALL BE FREE OF BURRS, ETC.
2. CONTACT SURFACES SHALL BE SANDED OR WIRE BRUSHED CLEAN AND A THIN COAT OF ALCOA NUMBER 2 ELEC. JOINT COMPOUND OR EQUIVALENT APPLIED.
3. PROVIDE LUGS AS REQUIRED TO MATCH CABLES BEING TERMINATED.
4. PROVIDE PLASTIC COVER WITH CAPTION "GROUND PLATE" IN 3/8" HIGH LETTERS AND GREEN SLASHES AROUND CAPTION.

2 GROUND BAR DETAIL

NOT TO SCALE

GENERAL NOTES:

① COORDINATE LOCATIONS OF TERMINAL STRIPS, POWER FEEDS, ETC. WITH THEATER CONTRACTOR.

② PROVIDE POWER WIRING IN METALLIC CONDUIT FROM THE DIMMER/RELAY RACKS TO HOUSE LIGHTING AND CONNECTOR SYSTEM CONNECTOR STRIPS, TERMINAL BOXES, WALL BOXES, AND FLOOR BOXES. TERMINATE POWER WIRING AT CUSTOM FACEPLATES ON THEATRE SYSTEMS BOXES AND CONNECTOR STRIPS. CONNECTOR STRIPS AND WALL BOXES WILL BE PROVIDED BY THEATRE CONTRACTOR AND INSTALLED BY THE ELECTRICAL CONTRACTOR.

③ ALL WIRINGS AND CONNECTIONS SHALL BE INSTALLED IN ACCORDANCE WITH DIRECTIONS FROM THE THEATRE CONTRACTOR.

④ ELECTRICAL CONTRACTOR TO REVIEW THE THEATRE SYSTEM/AUDIO-VISUAL DRAWINGS FOR ADDITIONAL CONDUIT AND POWER REQUIREMENTS.

⑤ PANEL "2TAU" IS TECHNICAL POWER FOR AV "SYSTEM" ALL BRANCH CIRCUITS, TECHNICAL POWER HOT AND NEUTRAL WIRES SHOULD BE TWISTED PAIR TYPE AND BESIDES FROM EQUIPMENT GROUND, SHALL BE PROVIDED WITH ISOLATED GROUND WIRE.

⑥ FOR AUDIO-VIDEO SYSTEM, (TECHNICAL POWER) ALL RECEPTACLES SHOULD BE HEAVY-DUTY ISOLATED GROUND TYPE RECEPTACLES, PROVIDED POWER RECEPTACLES THAT INDICATE THE ISOLATED GROUND SUCH US ORANGE OUTLETS WITH GREEN TRIANGLES. PROVIDE CUSTOM PLATES FOR ALL TECHNICAL POWER RECEPTACLES WITH THE TEXT "AV ONLY".

NOTES:

① AV STAGE MANAGER'S RACK, COORDINATE WITH AUDIO-VISUAL DRAWINGS FOR LOCATION AND REQUIREMENTS. PROVIDE (3) 20A, 120V TECHNICAL POWER CIRCUITS WITH ISOLATED GROUND, QUAD RECEPTACLE OUTLETS. LOCATE OUTLET BEHIND THE RACK.

② FLOOR OUTLET BOX FLUSH MOUNT, COORDINATE WITH THEATRE SYSTEM DRAWINGS FOR LOCATION AND REQUIREMENTS. PROVIDE 20A, 120V, DUPLEX OUTLET IN FLOOR BOX.

③ HP RATED TOGGLE SWITCH, LOCATE ADJACENT TO EQUIPMENT.

④ TO EXHAUST FAN CONTROL SWITCH, REFER TO MECHANICAL DRAWING FOR REQUIREMENT.

⑤ VAV WITH CONTROL TRANSFORMER PROVIDED UNDER MECHANICAL SECTION. PROVIDE 20A, 120V MOTOR RATED TOGGLE SWITCH, LOCATE ADJACENT TO EQUIPMENT, PROVIDE MOUNTING SUPPORT. REFER TO MECHANICAL FOR CONTROL REQUIREMENT.

⑥ MOUNT 8" ABOVE COUNTER/SINK.

⑦ EACH CABINET SHALL BE EQUIPPED WITH ONE 208V, 1ø, 30A OUTLET AND ONE(1) 120V, 1ø, 20A OUTLET. COORDINATE EXACT LOCATION WITH TELECOM.

⑧ FLAT PANEL DISPLAY BOX. COORDINATE WITH AUDIO-VISUAL DRAWINGS FOR LOCATION AND REQUIREMENTS. PROVIDE (1) 20A, 120V, TECHNICAL POWER CIRCUIT WITH ISOLATED GROUND AND LOCATE ADJACENT TO FLAT PANEL DISPLAY BOX.

⑨ STAGE I/O BOX (AUDIO-VISUAL), COORDINATE WITH AUDIO-VISUAL DRAWINGS FOR LOCATION AND REQUIREMENTS. PROVIDE (1) 20A, 120V, TECHNICAL POWER CIRCUIT WITH ISOLATED GROUND AND LOCATE ADJACENT TO STAGE I/O BOX.

⑩ AV FLOOR BOX, COORDINATE WITH AUDIO-VISUAL DRAWINGS FOR LOCATION AND REQUIREMENTS. PROVIDE (1) 20A, 120V, TECHNICAL POWER CIRCUIT WITH ISOLATED GROUND DUPLEX RECEPTACLE IN FLOOR BOX.

⑪ NON FUSIBLE SWITCH, 2P-30, 240V, NEMA 34 ENCLOSURE.

NOT FOR CONSTRUCTION

1 A-WING CLASSROOM POWER PLAN - LEVEL 1 (WEST)

SCALE: 1/8"=1'-0"

2 SCIENCE DEMO TEACHER DESK

NOT TO SCALE

GENERAL NOTE:

1. AS PART OF THE CONTRACT, CONTRACTOR SHALL BE RESPONSIBLE TO FURNISH ADDITIONAL PULLBOX (ES) FOR PULLING REQUIREMENT. PULLBOX (ES) SHALL BE AS PER NEC REQUIREMENT.

NOTES:

1. VAV WITH CONTROL TRANSFORMER PROVIDED UNDER MECHANICAL SECTION. PROVIDE 20A, 120V TOGGLE SWITCH, LOCATE ADJACENT TO EQUIPMENT, PROVIDE MOUNTING SUPPORT. REFER TO MECHANICAL DRAWING FOR CONTROL REQUIREMENT.
2. HP RATED TOGGLE SWITCH, LOCATE ADJACENT TO EXHAUST FAN. PROVIDE MOUNTING SUPPORT.
3. TO EQUIPMENT CONTROL SWITCH, REFER TO MECHANICAL DRAWING FOR REQUIREMENT.
4. STARTER TYPE SWITCH 2P-30A, 240V, NEMA 4 STAINLESS STEEL ENCLOSURE.
5. NON-FUSIBLE SWITCH, 2P-30A, 240V NEMA 4 STAINLESS STEEL ENCLOSURE.
6. TO DISTRIBUTION PANEL "4MA".
7. EACH CABINET SHALL BE EQUIPPED WITH ONE(1), 208V,1ø, 30AMP OUTLET AND ONE(1) 120V,1ø,20A OUTLET, COORDINATE EXACT LOCATION WITH TELECOM.
8. SEE MECHANICAL DRAWING FOR CONTROL REQUIREMENT.
9. RETRACTABLE CORD, SEE 6/E9.0

F1	KITCHENHOOD FIRE SUPPRESSION SYSTEM	208V, 1ø	
H1	HOOD SYSTEM	120V, 1ø 600W	HAND WITH INTEGRAL LIGHT FIXTURE AND CONTROL SWITCH

GENERAL NOTES:

1. CONTRACTOR TO SUBMIT KITCHEN EQUIPMENT SHOP DRAWING INDICATING POINT TO POINT WIRING DIAGRAM, LAYOUT, ELEVATION AND EQUIPMENT DATA SHEET FOR REVIEW AND APPROVAL.
2. SOME OF THE EQUIPMENT ELECTRICAL RATINGS WERE BASED ON UKUDU HIGH SCHOOL KITCHEN EQUIPMENT. VERIFY ACTUAL RATING AND EQUIPMENT POWER POINT OF CONNECTION. IF RATINGS OF ACTUAL EQUIPMENT DIFFERS FROM GIVEN RATINGS, CONTRACTOR TO INFORM THE ELECTRICAL ENGINEER SO ADJUSTMENT TO THE CIRCUIT PROTECTION, WIRINGS CAN BE MADE.

NOTES:

1. VAV WITH CONTROL TRANSFORMER PROVIDED UNDER MECHANICAL SECTION. PROVIDE 20A, 120V TOGGLE SWITCH, LOCATE ADJACENT TO EQUIPMENT, PROVIDE MOUNTING SUPPORT. REFER TO MECHANICAL DRAWING FOR CONTROL REQUIREMENT.
2. HP RATED TOGGLE SWITCH, LOCATE ADJACENT TO EQUIPMENT. PROVIDE MOUNTING SUPPORT.
3. TO EXHAUST FAN CONTROL SWITCH, REFER TO MECHANICAL DRAWING FOR REQUIREMENT.
4. NON-FUSIBLE SWITCH, 2P-30A, 240V NEMA 4 STAINLESS STEEL ENCLOSURE.
5. COORDINATE EQUIPMENT POWER POINT OF CONNECTION, VERIFY WITH EQUIPMENT SUPPLIER.
6. 8"X8"X4"D PULLBOX STAINLESS STEEL WITH HINGED COVER, CEILING MOUNT.
7. OUTLINE OF REFRIGERATION EQUIPMENT ON ROOF, COORDINATE EXACT LOCATION WITH EQUIPMENT SUPPLIER AND MECHANICAL DRAWING.
8. REFRIGERATION CONTROL CONDUIT TO RESPECTIVE EVAPORATOR FAN.
9. NON FUSIBLE DISCONNECT SWITCH 3P-30 AMPS,240 VOLTS, NEMA 4X STAINLESS STEEL ENCLOSURE. PROVIDE MOUNTING FRAME SHOP DRAWING WITH GUAM STRUCTURAL ENGINEER SEAL AND SIGNATURE.
10. REFRIGERATION ACCESSORIES (LIGHT, SWITCH, HEATER, ETC.).
11. VIA RELAY CONTRACTOR "K" SEE 2/E2.5 SCHEMATIC DIAGRAM.
12. DISHWASHER EXHAUST CONNECTION, COORDINATE REQUIREMENT WITH MECHANICAL.
13. LOCATE HP RATED TOGGLE SWITCH, 2P-20A SAME LEVEL AS THE EQUIPMENT.
14. PROVIDE RECEPTACLE OUTLET ADJACENT TO TV OUTLET.

IF SHEET IS LESS THAN 24" X 36" REDUCED PRINT - USE GRAPHIC SCALES

1 AUDITORIUM POWER PLAN - LEVEL 2
SCALE: 1/8"=1'-0"

NOTES:

1. ELEVATOR CONTROLLER, PROVIDE SHOP DRAWING OF COMPLETE LAYOUT, POINT TO POINT WIRING DIAGRAM FOR REVIEW AND APPROVAL.
2. DEDICATED CIRCUIT FOR ELEVATOR CAR LIGHT, ALARM CIRCUIT AND VENTILATION SYSTEM.
3. WEATHERPROOF TYPE WHILE IN USE, GFI TYPE RECEPTACLE.
4. TO DISTRIBUTION PANEL "4AU"
5. AV MIX POSITION UNDERCOUNTER RACK, COORDINATE WITH AUDIO-VISUAL DRAWING FOR LOCATION AND REQUIREMENTS. PROVIDE (1)-20A, 120V TECHNICAL POWER CIRCUIT WITH ISOLATED GROUND TERMINATED TO QUAD RECEPTACLE BEHIND RACK.
6. MIX POSITION JUNCTION BOX, COORDINATE WITH AUDIO-VISUAL DRAWING FOR LOCATION AND REQUIREMENTS. PROVIDE (1)-20AC DEDICATED ISOLATED GROUND, TECHNICAL POWER CIRCUIT TERMINATED INTO PLUGMOLD STRIP ABOVE COUNTER. PROVIDE RECEPTACLE OUTLET EVERY 18" OF STRIP.
7. AV MIX POSITION COUNTERTOP RACK. COORDINATE WITH AUDIO-VISUAL DRAWINGS FOR LOCATION AND REQUIREMENTS. PROVIDE (1) 20A, 120V TECHNICAL POWER CIRCUIT WITH ISOLATED GROUND TERMINATED TO QUAD RECEPTACLE BEHIND RACK.
8. THEATRE VIDEO PROJECTOR BOX, COORDINATE LOCATION AND REQUIREMENTS WITH AUDIO-VISUAL DRAWINGS. PROVIDE (1)-20A, 120V DEDICATED TECHNICAL CIRCUIT WITH ISOLATED GROUND DUPLEX RECEPTACLE OUTLET AND (1)-20A, 208V DEDICATED TECHNICAL POWER CIRCUIT ADJACENT TO PROJECTOR MOUNTING POINT.
9. PROJECTION SCREEN, COORDINATE WITH AUDIO-VISUAL DRAWINGS FOR LOCATION AND REQUIREMENTS. TERMINATE TO 120V, CIRCUIT TO PROJECTOR POWER.
10. CEILING CAMERA, COORDINATE WITH AUDIO-VISUAL DRAWINGS FOR LOCATION AND REQUIREMENTS. PROVIDE (1)-20A, 120V TECHNICAL POWER CIRCUIT WITH ISOLATED GROUND TERMINATED TO DUPLEX RECEPTACLE OUTLET AND ADJACENT TO BOX.
11. LIGHTING CONTROL DESK, COORDINATE EXACT LOCATION AND LAYOUT WITH THEATRE CONTRACTOR. PROVIDE (2) 20A, 120VAC DEDICATED TECHNICAL POWER CIRCUIT. CONNECT TO PANEL 2 TAU-14,16 WITH 3/4"C, 3#12, 1#10 GND.
12. CONTROL EQUIPMENT RACK, COORDINATE EXACT LOCATION AND LAYOUT WITH THEATER CONTRACTOR. PROVIDE (2) 20A, 120VAC DEDICATED ISOLATED GROUND TECHNICAL POWER CIRCUITS INTO NEMA 5-20R RECEPTACLES BEHIND RACK.
13. RELAY PANEL, COORDINATE EXACT LOCATION AND LAYOUT WITH THEATRE CONTRACTOR, SUBMIT SHOP DRAWING OF EQUIPMENT, SHOWING LAYOUT, ELEVATION, POWER CONNECTION FOR REVIEW AND APPROVAL.
14. AV AMPLIFIER RACK, COORDINATE WITH AUDIO-VISUAL DRAWINGS FOR LOCATION AND REQUIREMENTS. PROVIDE (5)-20A TECHNICAL POWER CIRCUIT WITH ISOLATED GROUND TO QUAD OUTLETS. LOCATE OUTLETS BEHIND RACK.
15. LIGHTING CONTROL RECEPTACLE STATION, COORDINATE WITH THEATRE SYSTEM DRAWINGS FOR LOCATION AND REQUIREMENTS. PROVIDE (1)-20A, 120V DUPLEX OUTLET ADJACENT TO RECEPTACLE STATION.
16. MOTORIZED HOIST CONTROL AND INTERFACE BOX, COORDINATE WITH THEATRE SYSTEM DRAWING FOR LOCATION AND REQUIREMENTS. PROVIDE (1)-30A, 208V, 3ø CIRCUIT.
17. MOTORIZED HOIST CONTROL AND INTERFACE BOX, COORDINATE WITH THEATRE SYSTEM DRAWING FOR LOCATION AND REQUIREMENTS. PROVIDE (3)-30A, 208V, 3ø TO RACEWAY.

1 A-WING CLASSROOM POWER PLAN - LEVEL 2 (WEST)

SCALE: 1/8"=1'-0"

NOTES:

1. VAV WITH CONTROL TRANSFORMER PROVIDED UNDER MECHANICAL SECTION. PROVIDE 20A, 120V TOGGLE SWITCH, LOCATE ADJACENT TO EQUIPMENT, PROVIDE MOUNTING SUPPORT. REFER TO MECHANICAL DRAWING FOR CONTROL REQUIREMENT.
2. HP RATED TOGGLE SWITCH, LOCATE ADJACENT TO EXHAUST FAN. PROVIDE MOUNTING SUPPORT.
3. TO EXHAUST FAN CONTROL SWITCH, REFER TO MECHANICAL DRAWING FOR REQUIREMENT.
4. STARTER TYPE SWITCH 2P-30A, 240V, NEMA 4 STAINLESS STEEL ENCLOSURE.
5. TO DISTRIBUTION PANEL "4MA".
6. WIREMOLD TYPE RACEWAY, WITH 20A, 120 VOLT OUTLETS AS SHOWN AND CIRCUIT AS INDICATED. WIRE CIRCUIT TO RECEPTACLE OUTLETS ALTERNATELY.
7. EACH CABINET SHALL BE EQUIPPED WITH ONE(1) 208V, 1ø,30A OUTLET, AND ONE (1) 120V, 1ø, 20A OUTLET, COORDINATE EXACT LOCATION WITH TELECOM.

GRAPHIC SCALE:
0 4' 8' 16'

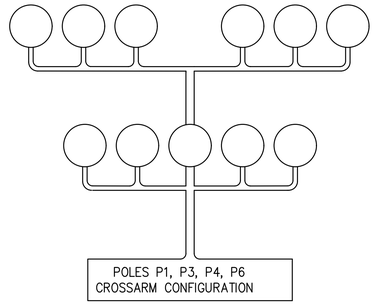
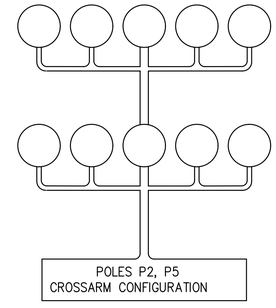
POLE / FIXTURE SUMMARY				
Pole ID	Pole Height	Mtg Height	Fixture Qty	Luminaire Type
P1, P3–P4, P6	90'	90'	44	MUSCO TLC–LED–1500
P6		16'	1	MUSCO TLC–BT–575
P4		16'	1	MUSCO TLC–BT–575
P2, P5	90'	90'	20	MUSCO TLC–LED–1500
P5	90'	16'	2	MUSCO TLC–BT–575

Fixture Type Summary							
Type	Source	Wattage	Lumens	L90	L80	L70	Quantity
TLC–LED–1500	LED 5700K – 75 CRI	1430W	160,000	>120,000	>120,000	>120,000	64
TLC–BT–575	LED 5700K – 75 CRI	575W	52,000	>120,000	>120,000	>180,000	4

ILLUMINATION REQUIREMENT:

AREA	ILLUMINATION REQUIREMENT (AVE)	UNIFORMITY (MAX./MIN.)
TRACK	20FC @ 3'–0 AFF	4.1
FIELD	30FC @ 3'–0 AFF	4.1





Pole location(s) ⊕ dimensions are relative to 0.0 reference point(s) ⊗

GENERAL NOTES:

1. PERFORM NIGHT TIME LIGHT FIXTURE AIMING WHICH WILL BE WITNESSED BY THE ENGINEER. ADJUST AIMING AS DIRECTED TO ACHIEVE DESIRED ILLUMINATION. OBTAIN APPROVAL OF FINAL RATING.
2. DESIGN IS BASED ON SPECIFIC LIGHT FIXTURE. CONTRACTOR MUST PERFORM COMPUTERIZED POINT TO POINT LIGHTING CALCULATION TO PROVE THAT THE FINAL LIGHT FIXTURE SELECTED WILL MEET THE LIGHTING CRITERIA. ADD LIGHT FIXTURES, AND ADJUST BRANCH CIRCUITING IF NECESSARY TO MEET THE REQUIREMENT AT NO ADDITIONAL COST.

Sheet No: ____ of ____

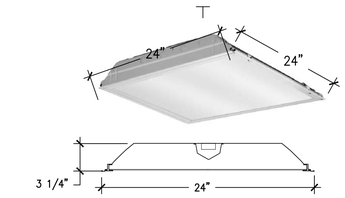
MOUNTING: CEILING, RECESS

DESCRIPTION: 2'X4' LED RECESSED TROFFER, 22 GAUGE COLD-ROLLED STEEL HOUSING, LIGHT WEIGHT, WITH HIGHLY TRANSMISSIVE PATTERN LENS, 80% LED LUMEN MAINTENANCE AT 72,000 HOURS, MULTIVOLT.

REMARKS: E INDICATES WITH EMERGENCY BATTERY BACKUP (10W CONSTANT POWER), SELF-DIAGNOSTICS BATTERY PACK

A A1

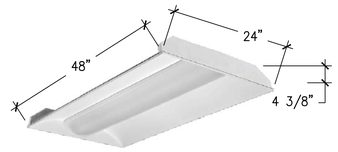


MOUNTING: CEILING, RECESS

DESCRIPTION: 1'X4' LED RECESSED TROFFER, 22 GAUGE COLD-ROLLED STEEL HOUSING, LIGHT WEIGHT, WITH HIGHLY TRANSMISSIVE PATTERN LENS, 80% LED LUMEN MAINTENANCE AT 72,000 HOURS, MULTIVOLT.

REMARKS: E INDICATES WITH EMERGENCY BATTERY BACKUP (10W CONSTANT POWER), SELF-DIAGNOSTICS BATTERY PACK

B B1



MOUNTING: CEILING, RECESS

DESCRIPTION: 2'X2' LED RECESSED TROFFER, 22 GAUGE COLD-ROLLED STEEL HOUSING, LIGHT WEIGHT, WITH HIGHLY TRANSMISSIVE PATTERN LENS, 80% LED LUMEN MAINTENANCE AT 72,000 HOURS, MULTIVOLT.

REMARKS: E INDICATES WITH EMERGENCY BATTERY BACKUP (10W CONSTANT POWER), SELF-DIAGNOSTICS BATTERY PACK

C

MOUNTING: CEILING, RECESS

DESCRIPTION: 2'X4' LUMINAIRE. RUGGED, ONE-PIECE COLD-ROLLED STEEL COATED POLYESTER CONSTRUCTION. VOLUMETRIC TROFFER. HIGH-PERFORMANCE, IMPACT-MODIFIED, SINGLE CLEAR ACRYLIC DIFFUSER. LONG-LIFE LEDs COUPLED WITH HIGH-EFFICIENCY DRIVERS. VOLUMETRIC ILLUMINATION. 80% LUMEN MAINTENANCE AT 60,000 HOURS, ACRYLIC LINEAR PRISMATIC DIFFUSER, MULTIVOLT.

REMARKS: E INDICATES WITH EMERGENCY BATTERY BACKUP (10W CONSTANT POWER), SELF-DIAGNOSTICS BATTERY PACK

D

MOUNTING: CEILING, RECESS

DESCRIPTION: 2'X2' LUMINAIRE. RUGGED, ONE-PIECE COLD-ROLLED STEEL COATED POLYESTER CONSTRUCTION. VOLUMETRIC TROFFER. HIGH-PERFORMANCE, IMPACT-MODIFIED, SINGLE CLEAR ACRYLIC DIFFUSER. LONG-LIFE LEDs COUPLED WITH HIGH-EFFICIENCY DRIVERS. VOLUMETRIC ILLUMINATION. 80% LUMEN MAINTENANCE AT 60,000 HOURS, ACRYLIC LINEAR PRISMATIC DIFFUSER, MULTIVOLT.

REMARKS: E INDICATES WITH EMERGENCY BATTERY BACKUP (10W CONSTANT POWER), SELF-DIAGNOSTICS BATTERY PACK

E

MOUNTING: CEILING, PENDANT/SURFACE

DESCRIPTION: LOW-PROFILE ENCLOSED AND GASKETED, ONE PIECE FIBER GLASS HOUSING, INJECTION MOLDED, ACRYLIC LENS, HIGH EFFICIENCY DRIVERS, MEDIUM AND WIDE DISTRIBUTION, 80% LUMEN MAINTENANCE AT 60,000 HOURS, MULTIVOLT.

REMARKS: E INDICATES WITH EMERGENCY BATTERY BACKUP (10W CONSTANT POWER), SELF-DIAGNOSTICS BATTERY PACK

F F1 F2

MOUNTING: CEILING, RECESS

DESCRIPTION: 4" DOWNLIGHT, FULL SERVICEABLE AND UPGRADABLE LENS, LED LIGHT ENGINE, CONSTRUCTED OF 16-GAUGE GALVANIZED STEEL, CLEAR REFLECTOR & FLANGE COLOR, SELF-FLANGED TRIM STYLE, SEMI-SPECULAR FINISH, MEDIUM WIDE DISTRIBUTION. TUNABLE WHITE 0-10 VOLT DIMMING, MULTIVOLT

REMARKS: E INDICATES WITH EMERGENCY BATTERY BACKUP (10W CONSTANT POWER)

G1

MOUNTING: CEILING, RECESS

DESCRIPTION: 4" SHOWER DOWNLIGHT, FULLY SERVICEABLE AND UPGRADABLE LENSED LED LIGHT ENGINE, LUMINAIRE HOUSING CONSTRUCTED OF 16-GAUGE GALVANIZED STEEL, NON-CONDUCTIVE DEAD-FRONT TRIM, MEDIUM WIDE DISTRIBUTION, REGRESSED LENSED WHITE PAINTED TRIM, SMOOTH CLEAR LENS. MULTIVOLT

REMARKS: E INDICATES WITH EMERGENCY BATTERY BACKUP (10W CONSTANT POWER)

H

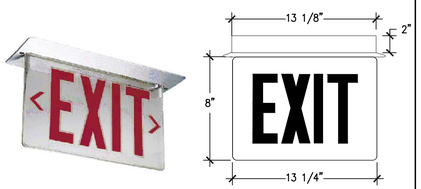
MOUNTING: CEILING, SURFACE

DESCRIPTION: HIGH IMPACT DIFFUSE POLYSTYRENE LENS, NON-ELECTRICALLY CONDUCTIVE POLYCARBONATE FRAME, CLOSED CELL GASKET, ULTRA LOW PROFILE SURFACE LUMINAIRE WITH WIDE DISTRIBUTION

I

MOUNTING: CEILING, SURFACE

DESCRIPTION: DIE CAST ALUMINUM HOUSING AND LENS FRAME. VANDAL-RESISTANT POLYCARBONATE TEXTURED OPAQUE. LONG-LIFE LED, HIGH-EFFICACY, SURFACE-MOUNT LEDs, 70% LUMEN MAINTENANCE AT 100,000 HOURS, 277V.



J J1

MOUNTING: UNIVERSAL

DESCRIPTION: HIGH-POLISH, INJECTION MOLDED VIRGIN ACRYLIC PANEL, ULTRASONICALLY WELDED TO ELIMINATE VISIBLE HARDWARE. SEALED, MAINTENANCE-FREE NICKEL CADMIUM BATTERY. DIRECTIONAL INDICATORS AS SHOWN ON LIGHTING PLANS, MOUNTING TYPE AS SHOWN ON LIGHTING PLANS, 277V

REMARKS: E INDICATES WITH EMERGENCY BATTERY BACKUP

K

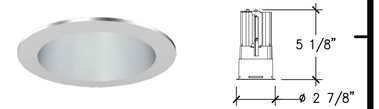
MOUNTING: UNIVERSAL

DESCRIPTION: HIGH-POLISH, INJECTION MOLDED VIRGIN ACRYLIC PANEL, ULTRASONICALLY WELDED TO ELIMINATE VISIBLE HARDWARE. SEALED, MAINTENANCE-FREE NICKEL CADMIUM BATTERY. DIRECTIONAL INDICATORS AS SHOWN ON LIGHTING PLANS, MOUNTING TYPE AS SHOWN ON LIGHTING PLANS, 277V

L

MOUNTING: POLE

DESCRIPTION: ONE PIECE DIE-CAST HOUSING, LOW COPPER ALUMINUM ALLOY WITH INTEGRAL COOLING RIBS, STAINLESS STEEL HARDWARE, LUMINAIRE-TO-POLE ATTACHMENT IS BY INTERNAL DRAW BOLTTS, FADE ABRASION RESISTANT, IP65 OPTICAL ASSEMBLY, 10kV SURGE SUPPRESION.



M M1 M2

MOUNTING: WALL, SURFACE

DESCRIPTION: ARCHITECTURAL WALL SCONCE, DIE-CAST ALUMINUM HOUSING, FULLY GASKETED DIE-CAST DOOR FRAME, FULL CUT-OFF RATED, WIDE DISTRIBUTION, DARK BRONZE FINISH, SUITABLE FOR WET LOCATION, 277V.

N

MOUNTING: CEILING, RECESS

DESCRIPTION: 2" DOWNLIGHT, FULL SERVICEABLE AND UPGRADABLE LENS, LED LIGHT ENGINE, CONSTRUCTED OF 16-GAUGE GALVANIZED STEEL, CLEAR REFLECTOR & FLANGE COLOR, SELF-FLANGED TRIM STYLE, SEMI-SPECULAR FINISH, MEDIUM WIDE DISTRIBUTION. TUNABLE WHITE 0-10 VOLT DIMMING, MULTIVOLT

Drawing No.: E9.10

Sheet No. of

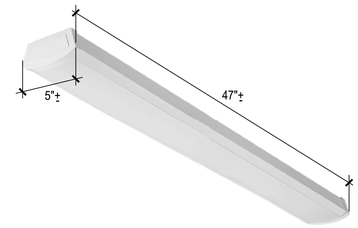
MOUNTING: WALL, SURFACE
DESCRIPTION: ROUGH SERVICE APPLICATION, ONE PIECE, DIE-CAST ALUMINUM, LOW COPPER ALLOY, UTILIZES HIGH EFFICIENCY LED MOUNTED TO 2 METAL CORE CIRCUIT BOARDS.

P

MOUNTING: WALL, SURFACE
DESCRIPTION: ENGINEERING GRADE THERMOPLASTIC, IMPACT-RESISTANT, CORROSION-PROOF HOUSING, TWO LED LAMPS, CURRENT-LIMITING CHARGER MAXIMIZES BATTERY LIFE, SEALED, MAINTENANCE-FREE NICKEL CADMIUM BATTERY, SELF-DIAGNOSTICS CONTINUOUSLY MONITORS AC FUNCTIONALITY, UVOLT

Q

MOUNTING: CEILING, SUSPENDED
DESCRIPTION: LED HIGH BAY, RUGGED DIE-CAST SINGLE-PIECE ALUMINUM HOUSING, IP65 RATING, TGIC THERMOSET POWDER COAT, 410SS HARDWARE, FROSTED ACRYLIC LENS, MEDIUM DISTRIBUTION, SURGE PROTECTION LEVEL DESIGNED TO WITHSTAND 10kV/5kA, WIRE GUARD ATTACHMENT, AIRCRAFT CABLE KITS, 277V

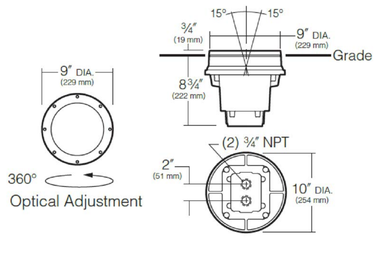


REMARKS: E INDICATES WITH EMERGENCY BATTERY BACKUP (15W CONSTANT POWER), SELF-DIAGNOSTICS BATTERY PACK

R

MOUNTING: CEILING, RECESS
DESCRIPTION: EXTRUDED ALUMINUM HOUSING, PROPRIETARY INJECTION MOLDED OPTIC AND HIGH PERFORMANCE FILM OPTICAL SYSTEM, DAMP LOCATION LISTED

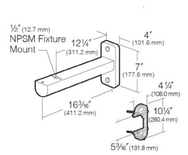
S



MOUNTING: CEILING, SURFACE
DESCRIPTION: METAL HOUSING WITH DECORATIVE PLASTIC ENDS, WHITE FROSTED DIFFUSER, THERMAL FORMED DIFFUSER, HIGH-EFFICIENCY DRIVER, LISTED FOR DAMP LOCATIONS, ENERGY STAR CERTIFIED

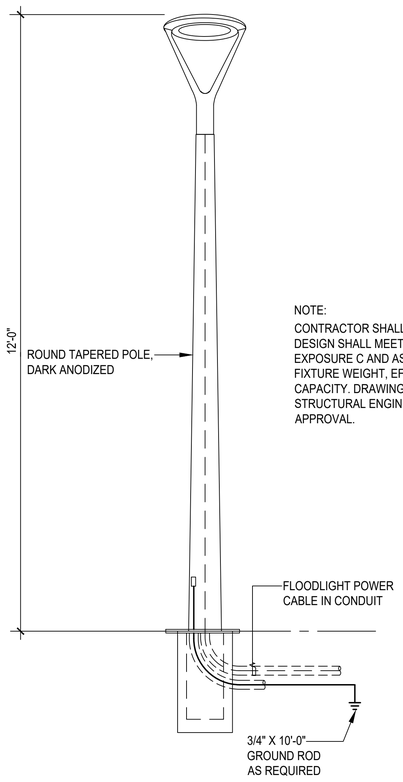
T

MOUNTING: CEILING, RECESS
DESCRIPTION: LED HIGH BAY LIGHT, STEEL CONSTRUCTION, WHITE POLYESTER POWDER-COATED FINISH, INTEGRATED UV STABILIZED POLYCARBONATE LENS



U

MOUNTING: IN-GRADE
DESCRIPTION: DIE-CAST BRASS WITH NATURAL FINISH LENS RING, CLEAR TEMPERED SODA LIME LENS, ONE PIECE MOLDED SILICON LENS GASKET, HEAVY WALL DIE-CAST BRASS HOUSING.



V

MOUNTING: WALL (THREADED KNUCKLE)
DESCRIPTION: LUMINAIRE CONSTRUCTED OF ONE PIECE DIE-CAST, LOW COPPER ALUMINUM ALLOY 360 WITH VENTS. FADE AND ABRASION RESISTANT, ELECTROSTATICALLY APPLIED, THERMALLY CURED, TRIGLYCIDAL ISOCYANURATE POLYESTER POWDERCOAT. IMPACT RESISTANT TEMPERED GLASS WITH ANTI-RELECTIVE COATING LENS, 120-277V.

W

NOTE:
CONTRACTOR SHALL PROVIDE POLE FOUNDATION DESIGN. DESIGN SHALL MEET BASIC WIND SPEED IBC LATEST EDITION EXPOSURE C AND ASCE 7-05, BASED ON ACTUAL POLE AND LIGHT FIXTURE WEIGHT, EFFECTIVE PROJECT AREA (EPA) AND SOIL BEARING CAPACITY. DRAWING SHALL BE CERTIFIED BY A GUAM LICENSED STRUCTURAL ENGINEER. SUBMIT SHOP DRAWING FOR REVIEW AND APPROVAL.

MOUNTING: POLE MOUNTED

X

MOUNTING: WALL, SURFACE
DESCRIPTION: 4' LED HORIZONTALLY WALL-MOUNTED, ROLL FORMED CODE-GAUGE STEEL HOUSING, IMPACT MODIFIED LINEAR FACETED REFRACTOR, HIGH-EFFICIENCY DRIVERS, 90% LED LUMEN MAINTENANCE AT 60,000 HOURS

Y

MOUNTING: CEILING, RECESS
DESCRIPTION: 1'X4' LED RECESSED TROFFER, 20-GAUGE COLD ROLLED STEEL HOUSING, POLYESTER POWDER PAINT, CSA CERTIFIED DRIVER, SURGE PROTECTION LEVEL DESIGNED TO WITHSTAND UP TO 6kV/3kA, WET LOCATION LISTED, IP66 RATING

Z

MOUNTING: CEILING, PENDANT
DESCRIPTION: 20 GAUGE DIE-FORMED STEEL WITH 18 GAUGE DIE FORMED INTERNAL JOINER SYSTEM, FINELITE SIGNAL WHITE POWDER COAT,

Sheet No. ____ of ____

INTERIOR TELECOMMUNICATIONS GENERAL NOTES:

1. INSTALLATION OF INTERIOR TELECOMMUNICATIONS PATHWAYS AND INFRASTRUCTURE SHALL COMPLY WITH THE NATIONAL ELECTRICAL CODE (NEC), THE NATIONAL ELECTRICAL SAFETY CODE, THE APPLICABLE SECTIONS OF THE UNIFIED FACILITIES CRITERIA, AND THE APPLICABLE STANDARDS OF THE TELECOMMUNICATIONS INDUSTRY ASSOCIATION (TIA), UNLESS OTHERWISE NOTED.
2. FURNISH AND INSTALL ALL JUNCTION AND PULLBOXES REQUIRED FOR THE INSTALLATION OF DEVICES AND EQUIPMENT, WHETHER OR NOT SPECIFICALLY INDICATED ON THE PLANS. SIZE PULLBOXES PER THE APPLICABLE TIA STANDARDS, IF NOT OTHERWISE INDICATED ON THE DRAWINGS. ALL JUNCTION AND PULLBOXES SHALL BE READILY ACCESSIBLE.
3. NO SECTION OF CONDUIT SHALL BE LONGER THAN 100 FEET WITHOUT A PULLBOX. A PULLBOX SHALL BE PLACED IN A CONDUIT RUN WHERE THE LENGTH IS OVER 100 FEET, THERE ARE MORE THAN TWO 90 DEGREES BENDS, OR EQUIVALENT, OR THERE IS A REVERSE (U-SHAPED) BEND IN THE RUN. PULLBOXES SHALL BE PLACED IN A STRAIGHT SECTION OF CONDUIT AND SHALL NOT BE USED IN LIEU OF A BEND.
4. CONDUIT RUNS SHOWN ARE DIAGRAMMATIC ONLY. INSTALL ALL CONDUITS TO SUIT FIELD CONDITIONS.
5. MINIMUM CONDUIT SIZE SHALL BE 1"C, UNLESS OTHERWISE NOTED.
6. CONDUIT BENDING CRITERIA:
   a. FOR CONDUITS 2" IN DIAMETER OR SMALLER, MINIMUM RADIUS BENDS SHALL BE SIX TIMES THE DIAMETER OF THE CONDUIT.
   b. FOR CONDUITS LARGER THAN 2" IN DIAMETER, MINIMUM RADIUS BENDS SHALL BE TEN TIMES THE DIAMETER OF THE CONDUIT.
   c. ALL CONDUIT BENDS SHALL BE PRE-FORMED TYPE WHERE PRE-FORMED BENDS OF THE REQUIRED SIZES ARE AVAILABLE.
7. PROVIDE INSULATED BUSHINGS AT ALL TELECOMMUNICATIONS CONDUIT TERMINATIONS AT ALL BOXES AND CONDUIT STUBS.
8. CONDUIT FILL SHALL BE IN ACCORDANCE WITH THE APPLICABLE TIA STANDARDS.
9. THE MAXIMUM FILL RATIO OF ANY CABLE TRAY SHALL BE 50%. THE MAXIMUM FILL DEPTH OF ANY CABLE TRAY SHALL BE 6 INCHES IN ACCORDANCE WITH THE APPLICABLE TIA STANDARDS.
10. ALL TELECOMMUNICATION CONDUITS OUTSIDE THE TELECOMMUNICATION ROOMS OR CLOSETS SHALL BE CONCEALED EITHER ABOVE SUSPENDED CEILINGS, EMBEDDED IN CONCRETE OR BELOW CONCRETE FLOORS OR CEILING STRUCTURES. JUNCTION BOXES FOR CONDUITS ABOVE DRYWALL CEILINGS SHALL BE ACCESSIBLE BY CEILING ACCESS POINTS.
11. ALL CABLE PATHWAYS INCLUDING CONDUITS, PULLBOXES, AND JUNCTION BOXES SHALL BE PROVIDED WITH LABELS THAT STATE WHERE THEY ORIGINATE AND TERMINATE. PULLBOXES AND JUNCTION BOXES SHALL BE NUMBERED IN SEQUENCE FROM THE TELECOM ROOM OUTWARDS. ALL CONDUITS, EMPTY OR USED, SHALL BE CLEARLY AND PERMANENTLY MARKED AT BOTH ENDS, TO INDICATE DESTINATION. MARKING MUST BE CLEARLY VISIBLE AFTER CONSTRUCTION IS COMPLETED.
12. ALL CONDUITS ENTERING THE BUILDING FROM THE EXTERIOR SHALL BE SEALED TO PREVENT ENTRANCE OF MOISTURE, GASES, AND RODENTS.
13. SEAL ALL PENETRATIONS THROUGH FIRE RATED WALLS AND SLABS USING A U.L. LISTED FIRE RATED SEALANT OR ASSEMBLY TO MAINTAIN THE INTEGRITY OF THE FIRE RATING.
14. OUTLET BOXES IN FIRE RATED WALLS SHALL HAVE A MINIMUM SEPARATION OF 24" FROM ANY OUTLET BOXES ON THE OPPOSITE SIDE OF SAME WALL, UNLESS ALLOWED OTHERWISE BY BUILDING CODES.
15. PROVIDE GROUNDING AND BONDING FOR THE TELECOMMUNICATIONS SYSTEM INSTALLATION PER THE NEC AND THE APPLICABLE TIA STANDARDS.
16. ALL NON-CURRENT CARRYING METAL PARTS OF EQUIPMENT RACKS AND SUPPORTING STRUCTURES (CABLE TRAYS, CONDUITS, ETC.) SHALL BE BONDED TO THE TELECOM ROOM SIGNAL GROUND PER THE APPLICABLE TIA STANDARDS.
17. EXTERIOR MOUNTED EQUIPMENT SHALL BE PROVIDED WITH A WEATHERPROOF, NEMA 4X TYPE 316 STAINLESS STEEL ENCLOSURE.
18. INSTALL ALL EQUIPMENT, DEVICES, CONDUIT AND CONDUIT SUPPORTS TO MEET THE PROJECT LOCATION'S SEISMIC RESTRAINT REQUIREMENTS.
19. UNLESS SHOWN OTHERWISE, PROVIDE TREATED, FIRE RATED PLYWOOD BACKBOARDS ON A MINIMUM OF 2 WALLS IN EACH TELECOM ROOM.
20. CABLE LENGTH FROM IDF OR MDF TO DATA OUTLET SHALL NOT EXCEED 290 FEET. NOTIFY THE ARCHITECT OF ANY CABLE LENGTHS OVER 290 FEET.

SITE TELECOMMUNICATIONS GENERAL NOTES:

1. INSTALLATION OF SITE TELECOMMUNICATIONS PATHWAYS AND INFRASTRUCTURE SHALL COMPLY WITH THE NATIONAL ELECTRICAL CODE (NEC), THE NATIONAL ELECTRICAL SAFETY CODE, THE APPLICABLE SECTIONS OF THE UNIFIED FACILITIES CRITERIA, AND THE APPLICABLE STANDARDS OF THE TELECOMMUNICATIONS INDUSTRY ASSOCIATION (TIA), UNLESS OTHERWISE NOTED.
2. THE EXISTING CONDITIONS OF BELOW GROUND PIPING AND UTILITIES SUCH AS WATER MAINS, SANITARY SEWERS, STORM SEWERS, FUEL LINES, ELECTRICAL CONDUITS, COMMUNICATION CONDUITS AND OTHER UTILITIES ARE TAKEN FROM EXISTING RECORD DRAWINGS AND VERIFIED BY LIMITED FIELD OBSERVATION. IT SHALL BE THE CONTRACTORS' RESPONSIBILITY TO FIELD VERIFY THE EXACT LOCATION AND DEPTH OF BELOW GROUND PIPING AND UTILITIES IN THE IMMEDIATE VICINITY OF SUBSURFACE WORK, WHETHER SHOWN ON THE DRAWINGS OR NOT. CONTRACTOR SHALL MARK ALL EXISTING PIPING AND UTILITIES AFFECTED BY THE WORK USING UNDERGROUND MAP LOCATOR POSITION OF PIPES AND CONDUITS ON THE SURFACE. CONTRACTOR SHALL CONTACT THE UTILITIES REPRESENTATIVE 10 DAYS IN ADVANCE FOR ASSISTANCE IN MARKING OUT THE AREAS INVOLVING SUBSURFACE WORK. CONTRACTOR SHALL ADD THE EXISTING UNDERGROUND UTILITIES FOUND DURING PRELIMINARY STAKING TO DRAWINGS FOR RECORD. CONTRACTOR SHALL BE RESPONSIBLE FOR ANY AND ALL DAMAGES WHICH MIGHT OCCUR DUE TO THE CONTRACTOR'S FAILURE TO EXACTLY LOCATE AND PRESERVE ANY AND ALL UNDERGROUND UTILITIES. SUBMIT SHUTDOWN/OUTAGE SCHEDULE IN A TIMELY MANNER TO THE OWNER'S REPRESENTATIVE IN SUFFICIENT TIME TO SUBMIT AN OUTAGE REQUEST.
3. CONDUIT BENDING CRITERIA:
   a. THERE SHALL BE NO MORE THAN TWO 90-DEGREES BENDS OR A TOTAL OF 180 DEGREES BETWEEN MAINTENANCE HOLES, HANDHOLES, AND PULLBOXES.
   b. FOR CONDUITS 2" IN DIAMETER OR SMALLER, MINIMUM RADIUS BENDS SHALL BE SIX TIMES THE DIAMETER OF THE CONDUIT.
   c. FOR CONDUITS LARGER THAN 2" IN DIAMETER, MINIMUM RADIUS BENDS SHALL BE TEN TIMES THE DIAMETER OF THE CONDUIT.
   d. ALL CONDUIT BENDS SHALL BE PRE-FORMED TYPE WHERE PRE-FORMED BENDS OF THE REQUIRED SIZES ARE AVAILABLE.
   e. ALL CONDUIT BENDS REQUIRED DUE TO CHANGES IN GRADE SHALL HAVE A RADIUS BEND OF NOT LESS THAN 25 FEET (HORIZONTAL OR VERTICAL CHANGE).
4. AFTER THE CONDUITS ARE INSTALLED BETWEEN UNDERGROUND STRUCTURES, A ROUND SOLID TEST MANDREL NOT LESS THAN 12" LONG AND HAVING A DIAMETER OF NO MORE THAN 1/4" LESS THAN THE DIAMETER OF THE CONDUIT SHALL BE PULLED THROUGH EACH CONDUIT AFTER WHICH A BRUSH WITH STIFF BRISTLES SHALL BE PULLED THROUGH TO MAKE CERTAIN THAT NO PARTICLES OF EARTH, SAND, OR GRAVEL HAVE BEEN LEFT IN THE CONDUIT.
5. AFTER THE CONDUITS ARE INSTALLED BETWEEN UNDERGROUND STRUCTURES AND BUILDING OR CABINET RISERS, A ROUND SOLID TEST MANDREL NOT LESS THAN 6" LONG AND HAVING A DIAMETER OF NO MORE THAN 1/4" LESS THAN THE DIAMETER OF THE CONDUIT SHALL BE PULLED THROUGH EACH CONDUIT AFTER WHICH A BRUSH WITH STIFF BRISTLES SHALL BE PULLED THROUGH TO MAKE CERTAIN THAT NO PARTICLES OF EARTH, SAND, OR GRAVEL HAVE BEEN LEFT IN THE CONDUIT.
6. MANDREL TEST RESULTS SHALL BE DOCUMENTED AND PROVIDED TO THE CONTRACTING OFFICER WITHIN 14 DAYS OF COMPLETING THE TESTS FOR DISSEMINATION TO THE BASE COMMUNICATIONS OFFICE.
7. PROVIDE 3 SETS OF 3-CELL, 3" PER CELL, FLEXIBLE FABRIC INNER DUCTS IN A MINIMUM OF 50% OF NEW 4" DUCTS. INSTALL POLYESTER PULL ROPE IN ALL NEW CONDUITS AND CAP ALL CONDUITS AFTER TESTING. THE POLYESTER PULL ROPE SHALL BE PRE-LUBRICATED AND PRINTED WITH SEQUENTIAL FOOTAGE MARKINGS. FOR DUCT SYSTEMS WITH MULTIPLE ROWS, THE TOP ROWS SHALL BE PROVIDED WITH INNERDUCTS. EX: FOR A 2x2 DUCT INSTALLATION, FILL THE TOP TWO DUCTS WITH INNERDUCT.
8. ALL CONDUITS SHALL ENTER UNDERGROUND STRUCTURES AT 90 DEGREE ANGLES AND SHALL BE FLUSH WITH FLARED OR BELL ENDS TO PREVENT CABLE DAMAGE.
9. ALL DUCTS ASSOCIATED WITH PULL BOXES OR MAINTENANCE HOLES SHALL BE INSTALLED WITH ADEQUATE DRAINAGE TOWARD THE PULLBOXES OR MAINTENANCE HOLES (MINIMUM ONE-FOURTH PERCENT SLOPE UNLESS OTHERWISE NOTED).
10. ALL DUCTS AND MAINTENANCE HOLES SHALL BE INSPECTED AND ACCEPTED BY THE GOVERNMENT A MINIMUM OF 30 DAYS PRIOR TO SERVICE REQUIRED DATE.
11. ALL DUCTLINES SHALL BE CONCRETE ENCASED, UNLESS SPECIFICALLY IDENTIFIED OTHERWISE.
12. UNDERGROUND CONDUIT SHALL BE PVC SCHEDULE 40, INSTALLED A MINIMUM OF 24" BELOW FINISHED GRADE, UNLESS OTHERWISE NOTED. ABOVE GROUND CONDUIT SHALL BE GALVANIZED RIGID STEEL (UP TO 10' AFF) OR EMT (ABOVE 10' AFF).
13. ALL SPARE CONDUITS SHALL BE SEALED TO PREVENT ENTRANCE OF MOISTURE, GASES, AND RODENTS.
14. ALL OUTSIDE PLANT UNDERGROUND FIBER OPTIC CABLE SHALL BE ARMORED.
15. PROVIDE A MINIMUM 50 FOOT MAINTENANCE LOOP FOR ALL CABLES IN THE LAST MAINTENANCE HOLE FEEDING INTO BUILDING ENTRANCE FACILITIES.
16. PROVIDE CABLE TAGS FOR EACH TELECOMMUNICATIONS CABLE OR WIRE LOCATED IN MAINTENANCE HOLES, HANDHOLES, AND VAULTS IN ACCORDANCE WITH APPLICABLE TIA STANDARD.
17. EXTERIOR MOUNTED EQUIPMENT SHALL BE PROVIDED WITH A WEATHERPROOF, NEMA 4X TYPE 316 STAINLESS STEEL ENCLOSURE.
18. COORDINATE TELECOMMUNICATIONS WORK WITH ALL OTHER TRADES.

Project: 20-133	File

Drawing No.
T0.1
Sheet No. ____ of ____

NOT FOR CONSTRUCTION

TELECOMMUNICATIONS GENERAL NOTES:

1. ALL WORK SHOWN ON THE TELECOMMUNICATIONS DRAWINGS IS NEW UNLESS OTHERWISE NOTED. ALL MATERIALS SHALL BE NEW AND "LISTED" OR "LABELED" AS DEFINED BY THE NATIONAL ELECTRICAL CODE (NEC). WORK INCLUDES INSTALLATION OF ALL TELECOMMUNICATIONS SYSTEMS COMPLETE AND OPERATIONAL AS LIMITED BY THE INTENT OF THE CONTRACT DOCUMENTS.
2. ALL WORK SHALL COMPLY WITH THE NATIONAL ELECTRICAL CODE (NEC), NATIONAL ELECTRICAL SAFETY CODE, RULES AND REGULATION OF THE DEPARTMENT OF PUBLIC WORKS AND GOVERNMENT OF GUAM. CONSTRUCTION PRACTICES SHALL CONFORM TO THE LATEST EDITION OF AMERICAN ELECTRICIANS' HANDBOOK BY CROFT AND APPLICABLE INSTRUCTIONS OF MANUFACTURERS OF EQUIPMENT AND MATERIAL SUPPLIED FOR THIS PROJECT.
3. OBTAIN AND PAY FOR BUILDING / TELECOMMUNICATIONS PERMIT, ARRANGE FOR PERIODIC INSPECTION BY LOCAL AUTHORITIES, AND DELIVER CERTIFICATE OF FINAL INSPECTION TO THE ARCHITECT.
4. CONTACT THE TELEPHONE AND CABLE TELEVISION UTILITY COMPANIES AND COORDINATE ALL WORK WITH THEM. PAY ALL UTILITY COMPANY CHARGES RELATED TO THIS PROJECT UNLESS OTHERWISE DIRECTED. THE DRAWINGS DEPICT ANTICIPATED UTILITY COMPANY REQUIREMENTS. DO NOT PROCEED WITH THE UTILITY COMPANY RELATED WORK WITHOUT VERIFYING THEIR EXACT REQUIREMENTS. NOTIFY THE ARCHITECT OF ANY DIFFERENCES BETWEEN WHAT IS SHOWN ON THE CONTRACT DRAWINGS AND WHAT IS REQUIRED BY THE UTILITY COMPANIES. ARRANGE FOR PERIODIC INSPECTIONS BY THE UTILITY COMPANIES AND PERFORM ALL WORK IN ACCORDANCE WITH THE UTILITY COMPANY STANDARDS.
5. RETENTION OF PLANS: ONE SET OF APPROVED PLANS, SPECIFICATIONS, AND COMPUTATIONS SHALL BE RETAINED BY THE BUILDING OFFICIAL FOR A PERIOD OF NOT LESS THAN 90 DAYS FROM DATE OF COMPLETION OF THE WORK COVERED THEREIN, AND ONE SET OF APPROVED PLANS SHALL BE RETURNED TO THE APPLICANT, AND SAID SET SHALL BE KEPT ON THE SITE OF THE BUILDING OR WORK AT ALL TIMES DURING WHICH THE WORK AUTHORIZED THEREBY IS IN PROGRESS.
6. STRUCTURES UNDERGOING CONSTRUCTION, ALTERATION, OR DEMOLITION OPERATIONS, INCLUDING THOSE IN UNDERGROUND LOCATIONS, SHALL COMPLY WITH NFPA 241, STANDARD FOR SAFEGUARDING CONSTRUCTION, ALTERATION, AND DEMOLITION OPERATIONS, AND NFPA 1, AS LOCALLY AMENDED.
7. FIRE SAFETY DURING ALTERATION:
   a. NFPA 1, 16.4.4.1 WHERE THE BUILDING IS PROTECTED BY FIRE PROTECTION SYSTEMS, SUCH SYSTEMS SHALL BE MAINTAINED OPERATIONAL AT ALL TIMES DURING ALTERATION.
   b. NFPA 1, 16.4.4.2 WHERE ALTERATION REQUIRES MODIFICATION OF A PORTION OF THE FIRE PROTECTION SYSTEM, THE REMAINDER OF THE SYSTEM SHALL BE KEPT IN SERVICE AND THE FIRE DEPARTMENT SHALL BE NOTIFIED.
   c. NFPA 1, 16.4.4.3 WHEN IT IS NECESSARY TO SHUT DOWN THE SYSTEM, THE AHJ SHALL HAVE THE AUTHORITY TO REQUIRE ALTERNATE MEASURES OF PROTECTION UNTIL THE SYSTEM IS RETURNED TO SERVICE.
   d. NFPA 1, 10.7.1.1 AS NECESSARY DURING EMERGENCIES, MAINTENANCE, DRILLS, PRESCRIBED TESTING, ALTERATIONS, OR RENOVATIONS, PORTABLE OR FIXED FIRE-EXTINGUISHING SYSTEMS OR DEVICES OR ANY FIRE-WARNING SYSTEM SHALL BE PERMITTED TO BE MADE INOPERATIVE OR INACCESSIBLE. A FIRE WATCH SHALL BE REQUIRED AS SPECIFIED IN SECTIONS 13.3.3.6.5.2(4)(b), 13.7.1.5.3, 16.5.4, 34.6.3.3, 41.2.2.6, 41.2.2.7, 41.2.4, 41.3.5, 41.4.1, 34.5.4.3, AND 25.1.8 AT NO COST TO THE AHJ. NFPA 1, AS LOCALLY AMENDED.
8. THE DRAWINGS DO NOT REFLECT ALL THE EXISTING CONDITIONS THAT MAY BE ENCOUNTERED DURING CONSTRUCTION. VISIT THE PROJECT SITE AND BECOME FAMILIAR WITH THE READILY OBSERVABLE EXISTING CONDITIONS, THE EXTENT OF ANY DEMOLITION, RELOCATION, RECONNECTION, AND THE NEW WORK PRIOR TO BIDDING. REPORT ANY READILY OBSERVABLE DISCREPANCIES AND/OR DIFFERENCES BETWEEN THE EXISTING CONDITIONS AND THE CONSTRUCTION DOCUMENTS TO THE ARCHITECT. RESOLVE ALL READILY OBSERVABLE DISCREPANCIES AND QUESTIONS PRIOR TO THE START OF WORK. BID SUBMISSION SHALL BE CONSIDERED AS EVIDENCE THAT THE CONTRACTOR HAS VISITED THE SITE AND RESOLVED ALL READILY OBSERVABLE DISCREPANCIES AND QUESTIONS AND NO EXTRA PAYMENT WILL BE AUTHORIZED FOR WORK REQUIRED BY THE CONTRACTOR'S FAILURE TO DO SO.
9. PHASING AND SEQUENCING OF THE TELECOMMUNICATIONS WORK WILL BE REQUIRED. COORDINATE ALL TELECOMMUNICATIONS WORK WITH THE WORK OF THE OTHER TRADES AND SCHEDULE WORK TO MINIMIZE THE NUMBER AND DURATION OF TELECOMMUNICATIONS OUTAGES AND IMPACT TO THE OPERATIONS IN OR ADJACENT TO THE PROJECT AREA. COORDINATE ACCESS TO THE PROJECT AREA AND SCHEDULE ALL REQUIRED SYSTEM OUTAGES WITH THE ARCHITECT.
10. VERIFY AND COORDINATE ALL PENETRATIONS WITH THE STRUCTURAL AND ARCHITECTURAL DRAWINGS PRIOR TO THE START OF CONSTRUCTION. OBTAIN APPROVAL BEFORE MAKING ANY PENETRATIONS THROUGH STRUCTURAL MEMBERS OR FIRE RATED WALLS AND CEILINGS.
11. SCAN (E.G. X-RAY, ELECTROMAGNETIC, ETC.) ALL CONCRETE WALLS OR FLOOR STRUCTURES PRIOR TO COMMENCING WITH CORING/DRILLING WORK FOR PENETRATIONS TO AVOID DAMAGING THE EXISTING REINFORCING STEEL.
12. COORDINATE AND PROVIDE ACCESS PANELS FOR ALL CONCEALED TELECOMMUNICATIONS EQUIPMENT, DEVICES, BOXES, AND CONDUIT BODIES SO THAT THEY ARE ACCESSIBLE.
13. TONING: EXISTING UNDERGROUND UTILITY LINES INDICATED ON THE DRAWINGS ARE SHOWN IN APPROXIMATE LOCATIONS BASED ON TOPOGRAPHIC SURVEY AND ARE SUBJECT TO FIELD VERIFICATION BY THE CONTRACTOR. CONTRACTOR SHALL BE RESPONSIBLE FOR TONING THE PROPOSED ROUTES OF THE PROJECT DUCTLINES TO IDENTIFY ANY POTENTIAL CONFLICTS PRIOR TO EXCAVATION. DAMAGE TO EXISTING UTILITIES CAUSED BY THE CONTRACTOR, AS A RESULT OF THE FAILURE TO TONE THE ROUTE PRIOR TO EXCAVATION WORK, WILL REQUIRE THE CONTRACTOR TO REPAIR THE DAMAGE AT NO ADDITIONAL COST TO THE PROJECT. THE DAMAGED UTILITIES SHALL BE REPAIRED/RESTORED TO ITS ORIGINAL WORKING CONDITION AND TO THE SATISFACTION OF THE OWNER.
14. PROVIDE ALL LABOR, EQUIPMENT, AND HAULING/DISPOSAL SERVICE FOR DEWATERING EFFORTS FOR NEW BELOW GRADE EXCAVATION/TRENCHING IF GROUND WATER IS ENCOUNTERED IN THE PROJECT AREA.
15. WORK INCIDENTAL TO THE CONTRACT AND NECESSARY TO COMPLETE THE PROJECT, ALTHOUGH NOT SPECIFICALLY REFERRED TO IN THE CONTRACT DOCUMENTS, SHALL BE FURNISHED AND PERFORMED BY THE CONTRACTOR AT NO ADDITIONAL COST TO THE PROJECT. AN EXAMPLE OF SUCH INCIDENTAL WORK ARE OUTLET BOXES, JUNCTION BOXES, AND PULL BOXES REQUIRED FOR THE INSTALLATION OF TELECOMMUNICATIONS DEVICES AND EQUIPMENT. ALL INCIDENTAL WORK SHALL BE FURNISHED AND INSTALLED IN ACCORDANCE WITH THE NEC.
16. SHOULD PROJECT CONDITIONS REQUIRE REARRANGEMENT OF THE PROJECT'S WORK, THE CONTRACTOR SHALL MARK SUCH CHANGES ON THE AS-BUILT DRAWINGS. IF THESE CHANGES REQUIRE AN ALTERNATE METHOD TO THOSE SPECIFIED IN THE CONTRACT DOCUMENTS, THE CONTRACTOR SHALL SUBMIT DRAWINGS TO REFLECT THE PROPOSED ALTERNATE METHODS TO THE ARCHITECT FOR REVIEW AND APPROVAL. THE CONTRACTOR SHALL NOT PROCEED UNTIL APPROVAL IS OBTAINED. REARRANGEMENT OF WORK FOR THE PURPOSE OF COORDINATION SHALL NOT BE CONSIDERED AN ITEM FOR EXTRA COST.
17. THE TELECOMMUNICATIONS DRAWINGS ARE BASED ON PROPOSED EQUIPMENT. VERIFY ALL SYSTEM REQUIREMENTS (ELECTRICAL, MECHANICAL, FIRE ALARM, SPECIALTY SYSTEMS, ETC.) WITH THE SELECTED SYSTEM'S MANUFACTURER OR AUTHORIZED REPRESENTATIVE PRIOR TO COMMENCING WITH ANY WORK. CORRECT ALL DISCREPANCIES SO AS TO PROVIDE A COMPLETE AND OPERATIONAL SYSTEM. RECORD CHANGES ON THE AS-BUILT DRAWINGS.
18. ALL EQUIPMENT AND APPARATUS SHALL BE CAPABLE OF FITTING IN THE SPACES SHOWN WHILE MEETING THE MANUFACTURER'S RECOMMENDED ACCESS REQUIREMENTS AND APPLICABLE CODE REQUIREMENTS. REVIEW ALL SPACES WHERE EQUIPMENT IS TO BE INSTALLED PRIOR TO ORDERING OF EQUIPMENT AND NOTIFY THE ARCHITECT OF ANY INADEQUATE CLEARANCES OR CONDITIONS THAT WILL PREVENT THE PROPER INSTALLATION, MAINTENANCE, AND OPERATION OF THE EQUIPMENT.
19. CONCEAL ALL CONDUIT WHEREVER REASONABLY POSSIBLE; EXPOSED CONDUITS ARE PERMITTED ONLY WHERE SPECIFICALLY SHOWN ON THE DRAWINGS. ALL EXPOSED CONDUITS IN FINISHED AREAS SHALL BE INSTALLED IN THE LEAST VISIBLE LOCATIONS. CARE SHALL BE TAKEN TO INSTALL CONDUIT IN THE MOST AESTHETICALLY PLEASING MANNER.
20. WHERE DEVICES, EQUIPMENT, BOXES, AND OTHER TELECOMMUNICATIONS MATERIALS ARE INDICATED TO BE OF WEATHERPROOF (WP) CONSTRUCTION, THE INTERCONNECTING RACEWAYS, INCLUDING COUPLINGS AND CONNECTORS, SHALL BE LISTED FOR AND INSTALLED TO PROVIDE A COMPLETE WEATHERPROOF / WET LOCATION INSTALLATION. ALL INCIDENTAL MATERIALS REQUIRED TO COMPLETE THE INSTALLATION SHALL ALSO BE OF WEATHERPROOF / WET LOCATION LISITING.
21. WIRING DEVICES AND CONDUITS SHALL BE FLUSH MOUNTED, WHEREVER REASONABLY POSSIBLE.
22. PROVIDE NYLON PULLSTRINGS IN ALL EMPTY CONDUITS UNLESS OTHERWISE INDICATED.
23. THE TELECOMMUNICATIONS RACEWAY SYSTEM INSTALLATION SHALL COMPLY WITH TIA/EIA AND BISCI STANDARDS UNLESS OTHERWISE NOTED.
24. CONDUIT BODIES (e.g. LB, LR, etc.) SHALL NOT BE PERMITTED IN THE TELECOMMUNICATIONS RACEWAY SYSTEMS UNLESS SPECIFICALLY INDICATED TO BE UTILIZED AND LISTED FOR TELECOMMUNICATIONS SYSTEM USE.
25. PROVIDE INSULATED BUSHINGS AT ALL TELECOMMUNICATIONS CONDUIT TERMINATIONS AT ALL BOXES, BACKBOARDS, AND CONDUIT STUBS
26. PENETRATIONS THROUGH FIRE-RATED WALLS, CEILINGS, AND FLOORS SHALL BE SEALED TO MAINTAIN FIRE RATINGS. UTILIZE 3M CP25, PUTTY 303, OR OTHER SUITABLE UL-LISTED SEALING SYSTEM.
27. PATCH, REFINISH, AND PAINT ALL PENETRATIONS THROUGH WALLS AND SLABS TO MATCH FINISH OF ADJACENT SURFACES.
28. RESTORE/REPAIR ANY DAMAGE TO SURFACES RESULTING FROM THE INSTALLATION OF NEW ELECTRICAL ITEMS. THE AREAS REPAIRED SHALL MATCH THE ADJACENT SURFACES IN TEXTURE, FINISH, AND COLOR.
29. PAINTING OF TELECOMMUNICATIONS EQUIPMENT:
   a. INTERIOR LOCATIONS - PRIME AND PAINT ALL EXPOSED CONDUITS, BOXES, FITTINGS, SUPPORT CHANNELS, MOUNTING HARDWARE, AND ACCESSORIES WITH TWO FINISH COATS TO MATCH THE SURFACE ON WHICH THEY ARE MOUNTED OR TO MATCH THE FINISH OF THE ADJACENT SURFACES. EQUIPMENT SURFACES/COMPONENTS WITH A FACTORY-APPLIED PAINT FINISH NEED NOT BE PAINTED.
   b. EXTERIOR LOCATIONS - PRIME ALL EXPOSED CONDUITS, BOXES, FITTINGS, SUPPORT CHANNELS, MOUNTING HARDWARE, AND ACCESSORIES WITH A 2-PART EPOXY PRIMER AND FINISH WITH 2 COATS OF AN ALIPHATIC ACRYLIC URETHANE PAINT. PAINT FINISH TO MATCH THE SURFACE ON WHICH THEY ARE MOUNTED OR TO MATCH THE FINISH OF THE ADJACENT SURFACES. STAINLESS STEEL MATERIALS NEED NOT BE PAINTED.
30. PROVIDE EARTHQUAKE BRACING FOR ALL TELECOMMUNICATIONS EQUIPMENT, APPARATUS, AND RACEWAYS. BRACING SHALL, AS A MINIMUM, COMPLY WITH THE GUAM GOVERNMENT BUILDING CODE.
31. ALL CONDUITS ENTERING THE BUILDING FROM THE EXTERIOR SHALL BE SEALED TO PREVENT ENTRANCE OF MOISTURE, GASES, AND RODENTS.

SECTION 01068

REFERENCES

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Specifications format and content.

2. Quality assurance.

3. Reference standards.

4. Abbreviations.

5. Definitions.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

1.2 SPECIFICATIONS FORMAT AND CONTENT

A. Specifications Format: The Specifications are organized into Divisions and Sections based on the Construction Specifications Institute's (CSI) 16-Division format numbering system.

B. The Bid and Contract Documents issued by the Owner are included with the Specifications. The Owner-issued documents will take precedence should there be any conflict between them and the Specifications.

C. Specifications Content: The Specifications use certain conventions in language and intended meaning of certain terms, words and phrases when used in particular situations or circumstances. These conventions are explained as follows:

1. Abbreviated Language: Language used in the Specifications and other Contract Documents is abbreviated type. Words and meanings shall be interpreted as appropriate. Words that are implied, but not stated shall be interpolated as the sense required. Singular words will be interpreted as plural and plural words interpreted as singular where applicable and the context of the Contract Documents so indicates.

2. Imperative and streamlined language is used generally in the Specifications. Requirements expressed in imperative mood are to be performed by the Contractor. At certain locations in the text, for clarity, subjective language is used to describe the responsibilities that must be fulfilled indirectly by the Contractor or by others when so noted.

a. The words "shall be" shall be included by inference wherever a colon (:) is used within a sentence or phrase.

1.3 QUALITY ASSURANCE

A. For products or workmanship specified by association, trade, or other consensus standards, the Contractor shall comply with the requirements of the standard, except when more rigid requirements are specified or are required by applicable codes. Such standards are made a part of the Contract Documents by reference.

B. Conform to the reference standards by the date of issue that was current on the original date of the Contract Documents.

C. Obtain copies of the standards when required by the Contract Documents.

D. Maintain a copy of the standards at the Project Site during submittals, planning and progress of the specific work until Final Acceptance.

E. Should a specified reference standard conflict with the Contract Documents, request clarification from the Owner's representative before proceeding.

F. Neither the contractual relationship, duties or responsibilities of the parties to the Contract nor those of the Owner's representative shall be altered from the Contract Documents by any mention or inference otherwise in any reference document.

1.4 INDUSTRY STANDARDS AND CODES:

A. General Applicability of Standards: Applicable standards of the construction industry and Building Codes adopted by the governing agencies have the same force and effect (and are made a part of the Contract Documents by reference) as if copied directly into the Contract Documents, or as if published copies were bound herewith.

B. Referenced Standards (referenced directly in the Contract Documents or by governing regulations) have precedence over non-referenced standards which are recognized in the industry for applicability to the work. Except as otherwise indicated, where compliance with an industry standard is required, comply with the standard in effect as of the date of the Contract Documents.

C. Conflicting Requirements: Where compliance with two or more standards is specified, and the standards establish different or conflicting requirements for minimum quantities or quality levels, refer the requirements that are different but apparently equal, and uncertainties to the Owner's representative for decision before proceeding.

1. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified shall be the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified or it may exceed the minimum within reasonable limits. In complying with these requirements, the indicated numeric values are minimum or maximum, as appropriate for the context of the requirements. Refer uncertainties to the Owner's representative for a decision before proceeding.

D. Copies of Standards: Each entity engaged in construction of the Project is required to be familiar with the industry standards applicable to that entity's construction activity. Copies of applicable standards are not bound within the Contract Documents.

1. Where copies of standards are needed for the performance of a required construction activity, the Contractor shall obtain copies directly from the publication source.

1.5 ABBREVIATIONS

A. Abbreviations and Names: Trade association names and titles of general standards are frequently abbreviated. Where such acronyms or abbreviations are used in the Specifications or other Contract Documents they mean the recognized name of the trade association, standards generating organization, authority having jurisdiction, or other entity applicable to the context of the text provision. Refer to the "Encyclopedia of Associations," published by Gale Research Company.

1.6 DEFINITIONS (People and Entities)

A. Definitions specified herein are included in order to further clarify terms.

B. Architect-Engineer (of Record): The Architect-Engineer is the person lawfully licensed to practice in professional disciplines such as architecture or civil, structural, mechanical, and electrical engineering.

C. Installer: The Contractor or another entity engaged by the Contractor, either as employee, subcontractor or contractor of lower tier, to perform a particular construction activity, including installation, erection, application, unpacking, assembly, placing, finishing, curing, adjusting, cleaning, protection or similar operation. Installers are required to be experienced in the operations they are engaged to perform.

1. Experienced: The term "experienced," when used with the term "installer," means having a minimum number of years experience on projects similar in size and scope to this Project, being familiar with the special requirements indicated, and having complied with requirements of the authorities having jurisdiction.

2. Trades: Using terms such as "carpentry" does not imply that certain construction activities must be performed by accredited or unionized individuals of a corresponding generic name, such as "carpenter." It also does not imply that the requirements specified apply exclusively to tradespersons of the corresponding generic name.

D. Manufacturer: A person, firm or corporation who makes products.

E. Owner: The individual, firm, corporation or government entity that owns the Project.

F. Owner’s Representative: The individual, firm or company administering the Contract on behalf of the Owner. Owner’s representative may be the Owner him / herself, the Architect of Record, project engineer, Project Manager or other, as designated by the Owner, and includes a duly appointed successor or authorized representative.

G. Project Field Superintendent: The Contractor's representative at the Project Site who is responsible for continuous field supervision, coordination, quality control, completion of the Project, and for the prevention of accidents, unless another person is designated, in writing, by the Contractor.

H. Subcontractor: An individual, firm or corporation having a direct contract with the Contractor or with any other subcontractor for performance of a part of the work at the Project Site.

I. Supplier: A manufacturer, fabricator, supplier, distributor, materialman or vendor having a direct contract with the Contractor or with any subcontractor to furnish materials or equipment to be incorporated into the work by the Contractor or any subcontractor, but does not perform labor at the Project Site.

J. Separate Contractor: An individual, firm or corporation having a direct contract with the Owner for performance of part of the work at the Project Site.

K. Testing Laboratory: An independent entity engaged to perform specific inspections or tests, either at the Project Site or elsewhere, and to report on and, if required, to interpret the results of those inspections or tests.

L. Trade: See Installer.

M. Utility: Local utility agency providing service to the Project..

1.7 DEFINITIONS (Things, Services, and Dispositions)

A. Acceptable: Satisfactory to and approved by the Owner's representative.

B. Approve: The term "approved," when used in conjunction with the Owner representative's action on the Contractor's submittals, applications and requests, is limited to the Owner representative's duties and responsibilities as stated in the Contract.

C. Change Order: A modification to the Contract.

D. Clarification Drawing: A graphic interpretation of a Drawing or other Contract Documents issued by the Architect through the Owner's representative.

E. Construction Operations: Activities of the Contractor at the Project Site.

F. Directed: Instructed by the Owner's representative.

G. Experienced (Qualified): When used to describe the "installer", "fabricator" or similar terms; a person, firm or corporation skilled through observation or of participation in the particular activities required to complete the work or a portion of the work to the degree of quality specified.

H. Final Connections: Complete plumbing, mechanical and electrical connections as required and recommended by the manufacturer for optimum operation of the equipment.

I. Indicated: The term "indicated" refers to graphic representations, notes or schedules on the Drawings, or other paragraphs or Schedules in the Specifications, and similar requirements in the Contract Documents. Where terms such as "shown," "noted," "scheduled" and "specified" are used, it is to help the reader locate the reference. Location is not limited.

J. Install: Operations at the Project Site including actual unloading, unpacking, assembly, erecting, placing, anchoring, applying, working to dimension, finishing, curing, protecting, cleaning and similar operations.

1. Final Connections: Complete plumbing, mechanical and electrical connections as required and recommended by the manufacturer for optimum operation of equipment.

K. Mobilization: To establish and commence work activity at the Project Site.

L. Partial Occupancy: Partial Occupancy occurs when the Owner begins to occupy part of the Project for its own purposes, such as early fixture set-up, merchandising, etc. Partial Occupancy shall not constitute acceptance of work not in accordance with the Contract Documents.

M. Premises: Space or property made available to the Contractor for constructing the work.

N. Project Site: The space available to the Contractor for performing construction operations, either exclusively or in conjunction with others performing other work as part of the Project. The extent of the Project Site is shown on the Drawings and may or may not be identical with the description of the land on which the Project is to be built.

O. Receive: Accepting a delivery. (Entity responsible for accepting a delivery.)

P. Regulations: The term "Regulations" includes laws, ordinances, statutes and lawful orders issued by authorities having jurisdiction, as well as rules, conventions and agreements within the construction industry that control performance of the work.

Q. Reviewed: Examined and found acceptable by the Owner's representative.

R. Substantial Completion: The stage in progress of the work when the work or a designated portion thereof is sufficiently complete in accordance with the Contract Documents so the Owner can occupy or utilize the work for its intended use.

S. Substitution: A product that is exchanged for another of the same function and is of equal or better quality.

T. Supply: To supply, deliver, unload and inspect for damage (same as Furnish).

U. Unacceptable: Determined not satisfactory by the Owner's representative.

1.8 DRAWING:

A. Except as otherwise indicated, graphic symbols used on the Drawings are those symbols recognized in the construction industry for the purposes indicated.

B. Discrepancies: In the event of a discrepancy, as between small scale Drawings and larger scale Details, or between Drawings and Specifications, or within the Specifications, immediately bring the discrepancy to the attention of the Owner's representative / Architect / Engineer for a decision before proceeding with the particular work involved. Work carried out disregarding these instructions is subject to removal and replacement at the Contractor's expense.

SECTION 01150

SCHEDULES, REPORTS, PAYMENTS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Coordination

2. Progress Schedule

3. Submittal Schedule

4. Schedule of Values

5. Payment Requests

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

1.2 COORDINATION

A. Coordinate both the procedural timing and listing (naming and sequencing) of reports / activities required by the provisions of this Section and other Sections, to afford consistency and logical coordination between submitted reports or lists. Maintain the coordination and correlation between the separate reports by updating on a regular basis. Make the appropriate distribution of each report and updated report to entities involved in the work including the Owner's representative / Architect / Engineer. In particular, provide close coordination of the progress schedule, schedule of values, listing of subcontracts, schedule of submittals, progress reports, and payment requests.

1.3 PROGRESS SCHEDULE

A. The Progress Schedule to comply with requirements set forth in the "General Conditions of the Contract for Construction". Update the Schedule on a regular basis, but no less than every two months.

1.4 SUBMITTAL SCHEDULE

A. General: Immediately following development and acceptance of a fully developed Progress Schedule, prepare a complete schedule of work- related Submittals. Correlate the Submittal Schedule with the listing of principal subcontractors, as required by the General Conditions, and with the "listing of products" or "procurement schedule" as specified in "Products and Substitutions" Section 01605 and elsewhere in the Contract Documents.

B. Form: Show the category of the Submittal, name of the subcontractor, generic description of work covered, related Section number, activity or event number on the Progress Schedule, scheduled date for first submission, and blank columns for the actual date of submittal, re-submittal, and final release or acceptance by the Owner's representative / Architect / Engineer.

1.5 SCHEDULE OF VALUES

A. General: Prepare a Schedule of Values acceptable to the Owner's representative, as required by the General and Supplementary Conditions, in coordination with preparation of the Progress Schedule. Correlate line items with other administrative schedules and forms required for the work, including Progress Schedule, payment request form, listing of subcontractors, schedule of allowances, schedule of alternates, listing of products and principal suppliers and fabricators, and Schedule of Submittals. Provide a breakdown of the Contract Sum in sufficient detail to facilitate continued evaluation of payment requests and progress reports. Break down the principal subcontract amounts into several line items. Round off sums to the nearest whole dollar, but with the total equal to the Contract Sum. Submit three (3) copies of the Schedule of Values to the Owner's representative / Architect / Engineer for review and comment.

B. Unit Cost Allowances: Where required, identify line item values as a product of unit cost x measured quantity, as estimated from best indications in the Contract Documents.

C. Schedule Updating: Update the Schedule of Values when Change Orders affect the listing, and when actual performance of the work involves necessary changes of substance to values previously listed.

1.6 PAYMENT REQUESTS

A. General: Except as otherwise indicated, the sequence of progress payments is to be regular, and each must be consistent with previous applications and payments. It is recognized that certain applications involve extra requirements, including the initial application, application at the time of substantial completion, and the final payment application.

B. Waivers of Lien: For each payment application, waivers of lien from subcontractors who could lawfully and possibly file a lien arising out of the Contract and related to work covered by payment, may be requested. Submit partial waivers for the amount requested (prior to deduction or retainage) on each item; and when the application shows completion of an item, submit final or full waivers. The Owner reserves the right to designate which entities involved in the work must submit waivers.

C. Payment Application Times: The "date" for each progress payment is as indicated in the Owner-Contractor Agreement, or if none, as indicated therein - the 30th day of each month.

D. Application for Payment Form: AIA Document G702 and G703 Continuation Sheets.

E. Application for Payment Preparation: Except as otherwise indicated, complete every entry provided for on the form, including notarization and execution by an authorized person. Incomplete applications will be returned without action. Entries must match the current data of the Schedule of Values and Progress Schedule. Listings must include the amount of Change Orders approved prior to the last day of the "period of construction" covered by the Application.

F. Application Transmittal: Submit four (4) signed copies of each Application for Payment, one copy which is to be completed with waivers of lien and similar attachments. Submit each copy with a transmittal form listing those attachments, and recording the appropriate information related to the Application in a manner acceptable to the Owner's representative / Architect / Engineer.

G. Application Processing: Within ten (10) days of receipt of a properly documented Application, the Owner's representative / Architect / Engineer shall review and certify to

the Owner the amount determined to be properly due, or if the form is incorrectly prepared, return to the Contractor for correction. Upon receipt of a certified Application from the Owner's representative / Architect / Engineer, the Owner will make payment within the time allowed by the Contract Documents.

H. Initial Payment Application: The principal administrative actions and submittals which must precede or coincide with submittal of the first Application for Payment can be summarized as follows, but not necessarily by way of limitation:

1. Listing of subcontractors, testing laboratory, principal suppliers and fabricators.

2. Listing of Contractor's staff assignments and principal consultants.

3. Copies of Building Permit (if Contractor's responsibility) and similar authorizations and permits from governing authorities.

4. Progress Schedule.

5. Performance and Labor and Materials Payment Bonds.

6. Schedule of Values.

7. Certificates of Insurance.

8. Submittal Schedule.

I. Application at Time of Substantial Completion: Following issuance of Owner representative's / Architect's / Engineer's final "Certificate of Substantial Completion," and also, in part, as applicable to prior Certificates on portions of completed work as designated, a "special" payment application may be prepared and submitted by the Contractor. The principal administrative actions and submittals which must proceed or coincide with such special applications can be summarized as follows, but not necessarily by way of limitation:

1. Occupancy Permit(s) and similar approvals or certifications by governing authorities and franchised services, assuring the Owner's full access and use of completed work.

2. Final cleaning of the work.

3. Coordination with the Owner on the change over of insurance coverage, including proof of extended coverage, as required.

4. Change of door locks and other Contractor's access provisions to the Owner's property.

5. Listing of the Contractor's incomplete work, recognized as exceptions to the Certificate of Substantial Completion.

J. Final Payment Application: The administrative actions and submittals which must precede or coincide with submittal of a final Application for Payment can be summarized as follows, but not necessarily by way of limitation:

1. Warranties, (Guarantees), maintenance agreements, and similar provisions of the Contract Documents.

2. Test / adjust / balance records, maintenance, instructions, meter readings,

start-up performance reports, training, and similar change-over information germane to the Owner's occupancy, use, operation and maintenance of completed work.

3. Turn-over of spare materials, parts and tools to the Owner, as specified herein.

4. Completion of items specified for completion beyond the time of Substantial Completion (regardless of whether or not a special payment application was previously submitted).

5. Release of liens and other assurances, satisfactory to the Owner that unsettled claims will be settled, and that work not actually completed and accepted will be completed without undue delay.

6. Transmittal of required project construction records to the Owner.

7. Proof, satisfactory to the Owner, that taxes, fees and similar obligations of the Contractor have been paid.

8. Satisfactory removal of temporary facilities, services, surplus materials, rubbish and similar elements.

9. Consent of surety for final payment, as required.

SECTION 01205

PROCEDURES AND CONTROLS

PART 1 GENERAL

1.1 DESCRIPTION OF WORK

A. The Contractor shall be responsible for the control and coordination of all work by his forces, subcontractors and suppliers. Procedures and performance required for this purpose include:

1. Coordination and meetings including meeting minutes.

2. Pre-Installation Conferences.

3. Adequate administrative and supervisory personnel.

4. Maintenance of surveys and records.

5. Enforcement of trades people and workmanship standards.

6. Coordination of the various trades and subcontractors.

7. Conducting of inspections, tests and reports.

8. Coordination of general installation provisions.

9. Proper cutting and patching procedures and techniques.

10. Cleaning and protection of the work.

1.2 COORDINATION AND MEETINGS

A. General: Prepare and distribute to each entity performing work at the Project Site, a written memorandum of instructions on required coordination of activities, including required notices, reports and attendance at meetings. Prepare similar memoranda for separate contractors where the interfacing of work is required.

B. Coordination Drawings: Where work by separate entities requires off-site fabrication of products and materials which must be accurately interfaced and closely intermeshed to produce the required results, prepare coordination drawings to interface and sequence the work shown by separate Shop Drawings.

1.3 PRE-INSTALLATION CONFERENCES

A. General: Schedule and conduct pre-fabrication and pre-installation meetings as required by the Contract Documents. Pre-fabrication and pre-installation meetings are intended to assist the Contractor in determining, before hand, specific project requirements and to encourage coordination between the various trades. Schedule meetings at times appropriate to the type of work involved. Provide adequate notice to all parties to be involved.

1.4 ADMINISTRATIVE / SUPERVISORY PERSONNEL

A. General: In addition to a general superintendent and other administrative and supervisory personnel required for performance of the work, provide specific coordination personnel as specified herein.

B. Project Coordination: Provide a full-time Project Coordinator, who is experienced in the administration and supervision of building construction, including mechanical and electrical work, and who is hereby authorized to act as the general coordinator of interfaces between units of work. For purpose of this provisions, "interface" is defined to include the scheduling and sequencing of work, sharing of access to work spaces, installations, protection of each other's work, cutting and preparation of coordination drawings, inspections, tests, and temporary facilities and services.

1.5 SURVEYS AND RECORDS / REPORTS

A. General: Working from lines and levels established by property survey, and as shown in relation to the work, establish and maintain bench marks and other dependable markers to set lines and levels for the work at each story of construction and elsewhere on-site as needed to properly locate each element of the entire project. Advise tradesmen performing the work, of the marked lines and levels provided for their use in the layout of work.

B. Survey Procedures: Verify layout information shown on the Drawings, in relation to the property survey and existing bench marks before proceeding with layout of the actual work. As work proceeds, check every major element for line, level and plumb (where applicable), and maintain an accurate surveyor's log or record book of such checks, available for reference at reasonable times. Record deviations on the Record Drawings.

1.6 TRADESPEOPLE AND WORKMANSHIP STANDARDS

A. General: Instigate and maintain procedures to ensure that persons performing work at the site are skilled and knowledgeable in the methods and craftsmanship needed to produce the required quality levels for workmanship in the completed work. Coordinate the work of trades and subcontractors. Remove and replace work which does not comply with the workmanship standards as specified and as recognized in the construction industry for the applications indicated. Remove and replace work damaged or deteriorated by faulty workmanship and lack of protection of the work.

1.7 INSPECTIONS, TESTS AND REPORTS

A. General: Required inspection and testing services, as called for in the Specifications are intended to assist in the determination of probable compliance of the work with requirements, but do not relieve the Contractor of responsibility for compliance, or for general fulfillment of the requirements of the Contract Documents. The specified inspections and tests are not intended to limit the Contractor's quality control program. Afford reasonable access to agencies and companies performing tests and inspections. Provide adequate notification to the testing service of the schedule which impacts performance of the required tests.

B. Contract Conforming Work:

1. Resulting from Contract and Code Required Testing / Inspection: The Contractor to obtain and pay the cost of Testing / Inspection Services. Contractor to provide for work required to patch any damaged work.

2. Resulting from Owner Required Testing / Inspection: The Owner to pay the cost

for initial Testing / Inspection Services. Contractor to patch any damaged work as follows:

a. Non-conforming Work:

1) The Contractor to pay the cost for initial testing / inspection and other fair costs, if any, incurred by the Owner and Architect which directly result from the testing / inspection requirements of non-conforming work.

2) The Contractor to correct defective work to meet the Contract requirements. Pay for all subsequent costs including, but not limited to, further testing, as may be required. Requests for additional time will generally not be considered when resulting from the installation of and/or correction of defective work.

C. Qualification of Testing Agencies:

1. Except as otherwise indicated, and except where manufacturer's testing facilities are indicated as acceptable, engage independent testing laboratories specializing in the required services, and complying with "Recommended Requirements for Independent Laboratory Qualification" by American Council of Independent Laboratories (ACIL).

D. Reports: Submit test / inspection reports, including agency's analysis of the results and recommendations, where applicable, in duplicate, except as otherwise indicated, and submit copies directly to the governing authorities where required or when requested.

1.8 DAMAGE CLAIMS

A. The Contractor will be responsible for adequately securing materials stored at the Project Site, and the work in progress, and to conduct the work in such a way as to not create undue risk of injury or damage to persons or property. It is required that the Contractor adequately fence and sign the Project Site, as necessary, and / or arrange and provide for security personnel to adequately keep unauthorized persons from entering the construction area at any hour of the day or night. Notwithstanding anything to the contrary in the General Conditions, and without limiting the generality of anything contained in the General Conditions, Drawings or Specifications, the Contractor is responsible for all damages to persons and property, including damage to the work of other contractors, that occurs as a result of the Contractor's negligence or the negligence of its employees, agents, representatives, or subcontractors upon the Project, in connection with its operations, use of the Project, or prosecution of the work. The Contractor will indemnify and hold harmless the Owner and all of its officers, agents, employees and consultants from any liability, claims, demands or causes of action of any nature whatsoever for damages of any kind, as above set forth, and the Contractor agrees, at its expense, to defend any legal or other action brought against the Owner founded upon such liability, claim, demand or cause of action and to pay any attorneys' fees incurred by the Owner in connection therewith.

1.9 COORDINATION WITH OTHER CONTRACTORS

A. Schedule work activity in coordination with all on-site contractors; make adjustments in work activities to accommodate the requirements of other contractors.

PART 2 PRODUCTS

Not Used

PART 3 EXECUTION

3.1 GENERAL INSTALLATION PROVISIONS

A. Pre-Installation Conferences: Well in advance of the start of installation of every major unit of work which requires coordination and interfacing with other work, meet at the Project Site with installers and representatives of manufacturers and fabricators involved in or affected by the unit of work, and in its coordination or integration with other work which has preceded or will follow. At each meeting review the progress of other work and preparations for the particular work under consideration, including requirements of the Contract Documents, options, related Change Orders, purchases, deliveries, Shop Drawings, product data, quality control samples, possible conflicts, compatibility problems, time schedules, weather limitations, temporary facilities, space and access limitations, structural limitations, governing regulations, safety inspection and testing requirements, required performance results , recording requirements, and protection. Record the significant discussions of each conference, record agreements and disagreements, along with a final plan of action. Distribute records of meetings promptly to everyone concerned, including the Owner’s representative / Architect / Engineer.

B. Installer's Inspection of Conditions: Require Installer of each major unit of work to inspect substrate to receive work, and conditions under which work will be performed, and to report (in writing to Contractor) unsatisfactory conditions. Do not proceed with the work until unsatisfactory conditions have been corrected in a manner acceptable to Installer.

C. Manufacturer's Instructions: Where installations include manufactured products, comply with the manufacturer's applicable instructions and recommendations for installation to the extent these are more explicit or more stringent than requirements indicated in the Contract Documents.

D. Inspect each item of materials and equipment immediately prior to installation, and reject damaged and defective items.

E. Provide attachment and connection devices and methods for securing work properly as it is installed; true to line and level, and within recognized industry tolerances if not otherwise indicated. Allow for expansions and building movements, provide uniform joint widths in exposed work, organized for the best possible visual effect, as approved by the Architect.

F. Re-check measurements and dimensions of the work as an integral step for starting each installation.

G. Install work during conditions of temperature, humidity, exposure, forecasted weather, and status of project completion which will ensure the best possible results for each unit of work, and in coordination with the entire work. Isolate each unit of work from non-comparable work as necessary to prevent deterioration.

H. Coordinate enclosure (closing-in) of the work with required inspections and tests to minimize the necessity of uncovering work for that purpose.

I. Mounting Heights: Where mounting heights are not indicated, mount individual units of the work in compliance with ADAAG or industry recognized standards for the applications indicated. Refer questionable mounting heights to the Owner’s representative / Architect / Engineer for a final decision.

3.2 CUTTING AND PATCHING

A. General: Do not cut-and-patch structural work in a manner that will result in reduction of

the load-carrying capacity or load / deflection ratio; submit proposed cutting and patching of structural elements to the Owner's representative / Architect / Engineer for structural approval before proceeding. Do not cut-and-patch operational elements and safety related components in a manner that will result in decreased operational life, increased maintenance, or decreased safety. Do not cut-and-patch work which is exposed on the exterior or exposed in occupied spaces, in a manner that will result in the reduction of visual qualities or result in substantial evidence of cut-and-patch work, both as judged solely by the Architect. Remove and replace work judged to be cut-and-patched in a visually unsatisfactory or otherwise objectionable manner.

B. Materials: Except as otherwise indicated or approved, provide materials for cutting-and-patching which will result in equal-or-better work than the work being cut-and-patched, in terms of performance characteristics, and including visual effect, where applicable. Use materials identical to the original materials where feasible, and where recognized that satisfactory results can be produced thereby.

C. Temporary Support and Protection: Provide adequate temporary support for work to be cut, to prevent failure. Do not endanger other work. Provide adequate protection of other work during cutting-and- patching, to prevent damage, and provide protection of the work from adverse weather exposure.

D. Cut work by methods least likely to damage work to be retained and adjoining work.

1. Where physical cutting action is required, cut the work with sawing and grinding tools, not with hammering and chipping tools. Core drill openings through concrete work.

2. Comply with the requirements of applicable Division 2, Specifications Sections where cutting-and-patching requires excavating and backfilling.

E. Restore exposed finishes of patched areas, and, where necessary, extend the finish restoration onto the adjoining retained work, in a manner which will eliminate evidence of patching.

1. Where patching occurs in a smooth, painted surface, extend the final paint coat over the entire unbroken surface containing the patch after the patched areas have received prime and base coats.

3.3 CLEANING AND PROTECTION

A. General: During handling and installation of work at the Project Site, clean and protect work in progress and the adjoining work on a basis of perpetual maintenance. Apply suitable protective covering over newly installed work where reasonably required to ensure freedom from damage and deterioration at the time of substantial completion; otherwise, clean and perform maintenance on newly installed work as frequently as necessarily throughout the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.

B. Limiting Exposures of Work: To the extent possible through reasonable control and protection methods, supervise performance of the work in a manner and by means which will ensure that none of the work, whether completed or in progress, will be subjected to harmful, dangerous, damaging, or otherwise deleterious exposures during the construction period.

END OF SECTION

SECTION 01310

PROJECT MANAGEMENT AND COORDINATION

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Administrative and supervisory personnel.

2. Submittals.

3. Contractor’s quality control.

4. Coordination.

5. Project coordination.

6. Pre-Construction meeting.

7. Progress meetings.

8. Pre-Installation meetings.

9. Schedule of Values.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

1.2 ADMINISTRATIVE AND SUPERVISORY PERSONNEL

A. Project Coordination Administrator: Contractor=s Representative experienced in administration, supervision, and quality control of building construction similar to the work of this Project, including mechanical, plumbing and electrical work.

B. Project Field Superintendent: Contractor=s Representative experienced in general field supervision of building construction similar to the work of this Project including finish work, mechanical, plumbing and electrical work; to supervise, direct, inspect and coordinate work of the Contractor, subcontractors, suppliers and installers, and expedite the work to ensure compliance with the Construction Schedule.

1.3 SUBMITTALS

A. Submit a list of the Contractor's principal staff assignments including Project Coordination Administrator, Project Field Superintendent, Quality Control Representative, and other personnel assigned to the Project Site; identify their duties and responsibilities.

B. Submit Shop Drawings, product data, and other required submittals in accordance with Section 01330 - Submittal Procedures, for review and compliance with the Contract Documents.

C. Submit Requests for Information (RFI) and interpretation of Contract Documents in a timely manner.

1.4 CONTRACTOR'S QUALITY CONTROL

A. Perform project quality control in accordance with requirements in the Contract and as specified in Section 01450 - Quality Control.

B. Coordinate the scheduling of inspections and testing required by the individual Specification Sections and in accordance with Section 01450 - Quality Control.

1.5 COORDINATION DRAWINGS

A. Prepare and distribute coordination drawings where close coordination is required for the installation of products and materials fabricated off-site by separate entities, and where limited space availability requires maximum utilization of space for the efficient installation of different components. Show the interrelationship of components shown on separate Shop Drawings. Indicate the required installation sequences.

1.6 PROJECT COORDINATION

A. Coordinate construction activities and the work of all trades under various Sections of these Specifications and work of the Contract to facilitate the orderly installation of each part of the work. Coordinate construction operations included under different Sections of the Specifications and the Contract that are dependent upon each other for proper installation, connection and operation.

B. Coordinate the construction activities of this Contract with Contractors retained separately the Owner.

C. Where installation of one part of the work is dependent upon installation of other components, either before or after that part of the work, schedule construction activities in a sequence to obtain an uninterrupted installation.

D. Obtain drawings, manufacturer's product data, instructions, and other data to provide a proper and complete installation.

1. Check field dimensions prior to installing products. Verify necessary clearances and means of access for equipment from storage to the final position.

2. Make data and information available to all trades involved.

E. Ensure that utility requirements of operating equipment are compatible with the building utilities. Coordinate the work of various Specification Sections for installation and final connection of the equipment.

1. Ensure that mechanical, plumbing and electrical rough-ins have been installed and are properly sized and located.

F. Coordinate space requirements and the installation of mechanical, plumbing and electrical work indicated diagrammatically on the Drawings. Follow the routing shown for pipes, ducts, conduits and wiring as closely as possible; make runs parallel with the lines of the building. Utilize spaces efficiently to maximize accessibility for other installations, for maintenance, and for repairs.

G. Where space is limited, coordinate the installation of different components to ensure maximum accessibility for required maintenance, service and repairs.

H. Provide for installation of items scheduled for future installation.

I. Where necessary, prepare memoranda for distribution to each party involved outlining special procedures required for coordination. Prepare memoranda for the Owner=s representative, separate contractors, where coordination of their work is required.

J. In finished areas, conceal pipes, ducts, conduit and wiring within the construction. Coordinate the location of fixtures and outlets with finish elements.

K. Coordinate completion and clean up of the work of the separate Sections in preparation for completion of the Project.

L. After occupancy, coordinate access to the Site for correction of defective work and work not in accordance with the Contract Documents, to minimize disruption of the Owner's / Tenants activities.

1.7 PRE-CONSTRUCTION MEETING

A. The Owner's representative will schedule a Pre-Construction Meeting after issuance of a Notice to Proceed.

B. Attendance: Owner's representative, Architect, Engineers, Contractor, Project Superintendent and Contractor's Quality Control Representative and other contractors retained by the Owner.

C. Agenda:

1. Submission of executed Bonds and Insurance Certificates.

2. Distribution of Contract Documents.

3. Submission of the Schedule of Values.

4. Designation of personnel representing the parties to the Contract.

5. Procedures and processing of Requests for Information (RFI), field decisions, submittals, substitutions, applications for payment, change proposals, Change Orders, and contract closeout procedures.

6. Scheduling.

7. Construction facilities and temporary controls.

D. The Contractor will record minutes of the meeting and distribute copies to the participants and those affected by the decisions made.

1.8 PROGRESS MEETINGS

A. The Contractor will schedule and administer meetings throughout progress of the work at intervals to be determined.

B. The Contractor will make arrangements for meetings, prepare an agenda, distribute copies to participants and preside over the meetings.

C. Attendance: Job Superintendent, Contractor's Quality Control Representative, major subcontractors and suppliers, Architect and the Owner's representative, engineers and subcontractors as appropriate to the agenda for each meeting.

D. Agenda:

1. Minutes of previous meetings.

2. Work progress.

3. Status of payments.

4. Field observations, problems, and decisions.

5. Submittals Schedule and the status of submittals.

6. Status of off-site fabrications and delivery schedules.

7. Progress Schedule.

8. Corrective measures to regain projected schedules, if necessary.

9. Planned progress during the succeeding work period.

10. Quality and work standards and pre-installation meetings.

11. Pending change proposals and effect of proposed changes on the progress schedule, and coordination.

12. Other business relating to the work.

D. The Owner's representative will record the minutes and distribute copies to the participants.

1.9 PRE-INSTALLATION MEETING

A. When required by an individual Specifications Section or as determined necessary by the Owner's representative, convene a Pre-Installation Meeting at the Project Site prior to commencing the work of that Section.

B. Require attendance of the parties directly affecting, or affected by the work of the specific Specifications Section.

C. Notify the Architect seven (7) days in advance of the meeting date.

D. Prepare an agenda and preside at the meetings:

1. Review requirements of the Contract Documents, conditions of installation, preparation, and installation procedures.

2. Review coordination with related work.

E. The Contractor shall record minutes of the meetings and distribute copies to the participants and those affected by the decisions made.

1.10 SCHEDULE OF VALUES

A. Prior to submittal of the first payment application, submit a construction cost breakdown to the Architect in a form and format acceptable to the Architect.

PART 2 PRODUCTS

Not Used.

PART 3 EXECUTIONS

Not Used.

END OF SECTION

SECTION 01330

SUBMITTAL PROCEDURES

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Submittal procedures.

2. Product data, Shop Drawings, samples and miscellaneous work.

3. Assurance / Control submittals.

a. Certificates.

b. Manufacturer's installation instructions.

4. Owner representative=s action.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

1.2 DEFINITIONS

A. Product Data: Includes manufacturer=s standard printed information on materials, products and systems; not especially prepared for this Project, other than the designation of selections from among available choices printed therein.

B. Shop Drawings: Include specially-prepared technical data for this Project, including drawings, details, diagrams, performance curves, data sheets, schedules, templates, patterns, reports, calculations, instructions, measurements and similar information not in standard printed form.

C. Samples: Include both fabricated and unfabricated physical examination of materials, products and units of work; both as competed units and as smaller portions of units of work; either for limited visual inspection or, where indicated, for more detailed testing and analysis.

D. Mock-Ups: A special form of samples, which are too large or otherwise inconvenient for handling in the specified manner for transmittal of sample submittals.

E. Design Calculations: As required to show that component parts of a system meet the design criteria and performance requirements. Manufacturer=s published calculations or as certified by a professional engineer. Subject to approval of the Owner=s representative, manufacturer or fabricator certifications may be accepted in lieu of calculations.

F. Miscellaneous Submittals: Includes warranties, maintenance agreements, workmanship bonds, project photographs, survey data and reports, physical work records, quality testing and field measurement data, operating and maintenance materials, extra and overrun stock, devices and similar information; applicable to the work and not processed as product data, shop drawings or samples.

1.3 SUBMITTALS

A. Submit two (2) copies of a proposed Schedule of Submittals to the Owner=s representative within 30 days after receipt of a Notice to Proceed. List all items requiring submittal for review and approval by the Architect - Engineer / Owner=s representative.

B. Schedule of Submittals. Include the following:

1. Indicate the type of submittal: Product Data, Shop Drawing, sample, certificate, warranty, technical representative=s report or other submittal.

2. Identify the Specifications Section number, Section paragraph number where the item is specified and a description of the item being submitted.

3. Indicate the scheduled date for initial submittal, date for approval and date for possible re-submittal for each required submittal.

C. Coordinate the Schedule of Submittals with the Construction Schedule.

1.4 SUBMITTAL PROCEDURES

A. General:

1. Coordination and Sequencing: Coordinate the preparation and processing of submittals with performance of the work so that the work will not be delayed by submittals. Coordinate and sequence different categories of submittals of the same work, and or interfacing units of work, so that one will not be delayed by coordination of the submittal review with another.

2. Transmit each submittal to the Owner=s representative on an Owner-approved transmittal form.

3. On the Transmittal form, provide a place to indicate the Project name, date, ATo:@, AFrom:@; names of the Contractor, subcontractors, suppliers, manufacturers, pertinent drawings(s), detail number(s), Specifications Sections, category and type of submittal, purpose, description, distribution record (for both transmittal and submittals), and signature of the transmitter.

4. Identify variations from the Contract Documents and product or system limitations which may affect successful performance of the completed work.

5. Apply the Contractor's stamp, signed or initialed certifying that review, verification of the products required, field dimensions, adjacent construction work and the coordination of information, is in accordance with requirements of the work and the Contract Documents.

6. Provide space for the Owner representative=s remarks and AAction@ stamp.

7. Sequentially number each transmittal form. Provide the original number and a sequential alphabetic suffix on each re-submittal.

8. Package each submittal appropriately for transmittal handling.

9. Schedule submittals to comply with the scheduling requirements of the Construction Schedule.

10. On each re-submittal, identify all changes made since the previous submission.

11. Distribute copies of reviewed submittals to the field, subcontractors and suppliers, as appropriate. Instruct the parties to promptly report any inability to comply with the provisions.

12. Submittals not required will not be processed.

13. Submittals received from sources other than through the Contractor=s office will be returned Awithout action@.

14. Except as otherwise indicated in individual Specifications Sections, comply with the requirements specified herein for each indicated category of submittal. Provide and process intermediate submittals, where required between the initial and final submittals, similar to initial submittals.

B. Product Data:

1. Collect required data into one submittal for each unit of work or system; mark each copy to show which choices or options are applicable to the Project.

2. Include manufacturer=s standard printed information such as catalog cuts, manufacturer's published instructions, standard color charts, roughing-in diagrams and templates, standard wiring diagrams, performance curves and other similar items. Include manufacturer=s standard printed recommendations for application and use, compliance with standards, application of labels and seals, notation of field measurements which have been checked, and special coordination requirements.

3. Mark each copy to identify the applicable products, models, options, and other data. Supplement the manufacturers' standard data with information unique to this Project.

4. Indicate product utility and electrical characteristics, utility connection requirements, and the location of utility outlets for service to functional equipment and appliances.

5. Submit the number of copies the Contractor requires, plus four (4) copies to be retained by the Owner=s representative. Submit six (6) sets of product data; three (3) sets will be returned. Maintain one (1) set of product data at the Project Site, available for reference.

6. Do not submit product data or permit its use on the Project until compliance with requirements of the Contract Documents has been confirmed by the Contractor.

7. Do not proceed with the installation of materials, products or systems until the final copy of applicable product data is in the possession of the installer.

C. Shop Drawings:

1. Provide newly prepared information on reproducible sheets, with graphic information at accurate scales, and with the name of the preparer indicated. Show dimensions and notes based on field measurements. Identify materials and products in the work shown. Provide key plans or cross reference to room numbers to identify the location of multiple elements. Indicate compliance with standards and special coordination requirements. Identify deviations from the Contract Documents, check dimensions; check that trades have been coordinated and that no conflict will develop in its installation.

2. Indicate special utility and electrical characteristics, utility connection requirements, and location of utility outlets for service to functional equipment and appliances.

3. Shop Drawings: Submit for review. After review, produce copies and distribute in accordance with SUBMITTAL PROCEDURES above.

4. Submit in the form of one (1) translucent reproducible transparency and two (2) blueline or blackline prints. The transparency will be returned to the Contractor after review.

5. Do not allow copies of shop drawings without appropriate final AAction@ markings by the Owner=s representative to be used in connection with the work.

D. Samples:

1. Submit samples to illustrate the functional and aesthetic characteristics of the product, with integral parts and attachment devices. Coordinate sample submittals for interfacing work.

2. Include full Project information on each sample submitted.

3. Provide units identical to the final condition of the proposed materials or products of the work. Include Arange@ samples of not less than three (3) units where unavoidable variations must be expected, and describe or identify variations between the units of each set. Provide a full set of optional samples where selection is required. Include information with each sample to show generic description, source or product name and manufacturer, limitations, and compliance with standards. Submit samples for review and confirmation of color, pattern, texture, and Akind@.

4. Submit samples of finishes in the available colors, textures and patterns.

5. Submit the number of samples specified in the individual Specifications Sections; a minimum of two (2), one of which will be retained by the Owner=s representative. At Contractor=s option, provide preliminary submittal of a single set of samples for review and AAction@. Otherwise, initial submittals will be considered the final submittal unless returned with an AAction@ mark that requires re-submittal. Submit three (3) sets of samples in the final submittal; two (2) sets will be returned.

6. Maintain one (1) final set of samples at the Project Site, in suitable condition and available for quality control comparisons.

7. The Owner=s representative will not Atest@ samples, except as otherwise indicated, for compliance with other requirements, which are the responsibility of the Contractor.

8. Returned samples intended or permitted to be incorporated into the work are so indicated in the individual Specifications Sections Samples; must be in an undamaged condition at the time of acceptance.

E. Mock-Ups:

1. Mock-ups and similar samples indicated in individual Specifications Sections are recognized as a special type of sample. Comply with the requirements for Asamples@, to the greatest extent possible, and process transmittal forms to provide a record of activity.

F. Certificates:

1. When specified in individual Specifications Sections, submit certification by the manufacturer Owner=s representative in the quantities specified in Product Data above.

2. Indicate that the material or product conforms to or exceeds the specified requirements. Submit supporting reference data, affidavits and certifications as appropriate.

3. Certificates may be recent or previous test results on materials or products, but must be acceptable to the Owner=s representative.

G. Inspection and Test Reports:

1. Classify each as either Aproduct data@ or Ashop drawing@, depending upon whether the report is uniquely prepared for the Project or a standard publication or workmanship control testing at the point of production. Process accordingly.

H. Manufacturer=s Installation Instructions:

1. When specified in individual Specification Sections, submit printed instructions for delivery, storage, assembly, installation, adjusting, and finishing in the quantities specified in Product Data above.

2. Indicate special procedures, perimeter conditions requiring special attention and special environmental criteria required for the application or installation.

I. Warranties:

1. Refer to individual Specifications Sections for specific general requirements on warranties, product / workmanship bonds, and maintenance agreements. In addition to copies for the Contractor=s use, furnish two (2) additional executed copies. Furnish two (2) additional copies when required for the maintenance manuals.

J. Standards:

1. Where copy submittal is indicated, and except where specified integrally with

AProduct Data@, submit two (2) copies for the Owner representative=s use. Where workmanship at the Project Site and elsewhere is governed by standards, furnish additional copies to the fabricators, installers and others involved in performance of the work.

K. Closeout Submittals:

2. Refer to individual Specifications Sections and to Acloseout@ paragraphs for specific requirements on submittal of closeout information, materials, tools and similar items.

L. Record Document Copies:

1. Submit one (1) set.

M. Maintenance / Operating Manuals;

1. Submit two (2) bound sets.

N. Materials and Tools:

1. Refer to individual Specifications Sections for the required quantities of spare parts, extra and overrun stock, maintenance tools and devices, keys, and similar physical units to be submitted.

O. Administrative Submittals:

1. Submit three (3) copies. No copies will be returned.

P. General Distribution:

1. Provide additional distribution of submittals to the subcontractor, suppliers, fabricators, installers, governing authorities and others as necessary for proper performance of the work. Include such additional copies in the transmittal when required to receive an AAction@ marking before final distribution. Record distributions on the transmittal forms.

1.5 OWNER REPRESENTATIVE=S ACTION

A. For submittals where action and return is required or requested, the Owner=s representative will review each submittal, mark to indicate the action taken, if any, and return promptly, generally within 20 days, excluding delivery time to and from the Contractor. When a submittal is to be reviewed by an off-island consultant or when it must be held for coordination, 25 days will be required for review.

1. Compliance with the specified characteristics is the Contractor's responsibility.

2. No action will be taken on submittals for information, closeout documents, record documents and other submittals for similar purposes.

B. Action Stamp: Owner=s representative will stamp each submittal to be returned to the Contractor with a uniform, self-explanatory AAction@ stamp. The stamp will be appropriately marked, as follows, to indicate the action taken:

1. "Accepted" or AApproved@: Final Unrestricted Release. When a submittal is marked "Accepted" or AApproved@, that part of the work covered by the submittal may proceed provided it complies with the requirements of the Contract Documents; final acceptance will depend upon that compliance.

2. "Accepted@ or AApproved as Noted": Final-But-Restricted Release. When a submittal is marked "Accepted= or AApproved as Noted", that part of the work covered by the submittal may proceed provided it complies with the notations and corrections marked on the submittal and meets requirements of the Contract Documents; final acceptance will depend on that compliance.

3. "Rejected or Disapproved: Submit Specified Item" or "Revise and Resubmit": Returned for Re-submittal. When a submittal is marked "Rejected or Disapproved: Submit Specified Item", or "Revise and Resubmit," do not proceed with the work covered by the submittal, including purchasing, fabrication, delivery or other activity. Revise or prepare a new submittal in accordance with the notations; re-submit without delay. Repeat as necessary to obtain an acceptable action mark.

    a. Do not permit submittals marked "Rejected or Disapproved: Submit Specified Item" or "Revise and Resubmit" to be used at the Project Site or elsewhere where work is in progress.

4. "Returned: Not Required": Where a submittal is primarily for information or record purposes, special processing or other activity, the submittal will be returned, marked "Returned: Not Required".

C. Any review and approval by the Owner=s representative of any Product Data, Shop Drawings, or Samples is only for conformance to the general design concept of the work and does not extend to consideration of structural integrity, safety, detailed compliance with the Contract Documents or any other obligation of the Contractor. Review and approval of any such data does not relieve the Contractor from its obligation to meet his requirements under the Contract Documents, not shall it give rise to any claim in favor of the Contractor or any third party against the Owner.

PART 2 PRODUCTS

PART 3 EXECUTION

Not Used.

END OF SECTION

SECTION 01440

REQUESTS FOR INFORMATION

PART 1 GENERAL

1.1 DESCRIPTION OF WORK

A. Administrative requirements for ARFI=s@.

1.2 DEFINITIONS

A. Request for Information (RFI): Contractor=s written request for information to confirm, re-verify, or clarify the intent required by the Contract Documents.

1.3 SUBMITTALS

A. Submit RFI=s on the Contractor=s standard form.

1.4 QUALITY ASSURANCE

A. Architect=s Intent: It is a condition of the Contract for Construction, that prior to signing of the Contract, the Contractor be fully familiar with and clear as to the requirements (Architect=s design intent) for this Project as presented in the Contract Documents. It is also a condition of the Contract, that prior to signing of the Contract, should there be any aspect of the Contract which is not clear or not complete enough, that the Contractor secure the necessary information from the Architect in order to attain the required understanding of the Project. The primary reasons for this is so the Owner can receive a fair and complete cost proposal for the Work, without hidden or additional costs and to minimize unnecessary costs to administer the Project during progress of the Work.

B. Architect=s Drawings and Specifications

1. Design Intent: It is an accepted historical and understood practice in the industry that the Architect=s Drawings and Specifications reasonably and professionally convey the design intent for the Project without necessarily indicating every single condition for the Work, but to the degree necessary for Contractor=s to propose a fair and complete cost for the Work, including for Work not indicated, but implied by the Architect=s design intent.

2. RFI=s - Basis of Communication: Due to the fact that all conditions are not indicated in the Contract Documents, it is understood that additional clarifications will be necessary during the course of the Work for the Contractor to fully achieve all aspects of the Architect=s design intent, and that the RFI procedure becomes the administrative basis by which information is formally conveyed between the Architect and the Contractor.

C. Misuse of the RFI Process: RFI=s are not to be used frivolously, including as a method of enlisting the Architect=s services for finding information already indicated in the Contract Documents.

D. Contractor Initiation: All RFI=s must be submitted by the General Contractor.

PART 2 PRODUCTS

Not Used.

PART 3 EXECUTION

3.1 CONTRACTOR=S RESPONSIBILITIES

A. Examination: Upon discovering a potential aspect of the Work which may require further clarification from the Architect, the Contractor shall thoroughly examine the Contract Documents to ensure that the information is not indicated.

B. Submittal: When a reasonable search for the needed information has been made without success, complete and submit an RFI.

3.2 ARCHITECT=S RESPONSIBILITIES

A. Review: Not later than ten (10) working days after an RFI is received, return a response to the Contractor on the submittal form.

END OF SECTION

SECTION 01450

QUALITY CONTROL

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Owner representative=s quality assurance (QA).

2. Contractor=s quality control (QC).

3. Quality control procedures.

4. Testing and inspection laboratory services.

5. Contractor=s field inspection and testing.

6. Contractor=s reports.

7. Contractor=s testing and inspection reports.

8. Non-compliance check-off list.

9. Completion and inspection of work.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

1.2 REFERENCES

A. American Society for Testing and Materials (ASTM):

1. ASTM C 802 - Practice for Conducting an Interlaboratory Test Program to Determine the Precision of Test Methods for Construction Materials.

2. ASTM C 1077 - Practice for Laboratories Testing Concrete and Concrete Aggregates for Use in Construction and Criteria for Laboratory Evaluation.

3. ASTM C 1093 - Practice for Accreditation of Testing Agencies for Masonry.

4. ASTM D 3740 - Practice for Minimum Requirements for Agencies Engaged in Testing and / or Inspection of Soil and Rock as Used in Engineering Design and Construction.

5. ASTM D 4561 - Practice for Quality Control Systems for Organizations Producing and Applying Bituminous Paving Materials.

6. ASTM E 329 - Specification for Agencies Engaged in Construction Inspection and / or Testing.

7. ASTM E 543 - Specification for Agencies Performing Nondestructive Testing.

8. ASTM E 699 - Practice for Evaluation of Agencies Involved in Testing, Quality Assurance, and Evaluating of Building Components.

1.3 SUBMITTALS

A. Submit four (4) copies of a proposed Contractor Quality Control Plan within fifteen (15) days after receipt of the Notice to Proceed.

B. Contractor=s Quality Control Plan. Indicate the following:

1. Quality Control Organization: In chart form, showing relationship of the Quality Control organization to other elements of the Contractor's organization.

2. Names and qualifications of personnel in the Quality Control organization, including the Contractor=s Quality Control Representative, inspectors, independent testing and inspection laboratory, independent fire alarm test and certification agency, independent fire sprinkler test and certification agency, independent HVAC test and balance agency, etc.

3. Procedures for reviewing coordination drawings, Shop Drawings, certificates, certifications and other submittals.

4. Testing and Inspection Schedule, keyed to the Construction Schedule, indicating tests and inspections to be performed, names of persons responsible for the inspection and testing for each segment of the work, including preparatory, initial and follow-up.

5. Proposed forms to be used including Contractor's Daily Report, Contractor=s Test and Inspection Report, and Non-Compliance Check-Off List.

C. Independent Testing and Inspection Laboratory. Submit the following:

1. Name.

2. Address.

3. Telephone number.

4. Name of full-time registered Engineer.

1.4 OWNER REPRESENTATIVE=S QUALITY ASSURANCE

A. The Owner=s representative will inspect the quality of work being installed, review and verify the accuracy of changes in the work, receive and distribute the Contractor=s submittals, determine compliance with the Contract Documents and preside at progress and coordination meetings.

B. The Owner=s representative will arrange for factory tests when needed; at the Contractor=s cost.

C. Owner=s Field Inspection: The Owner= representative will perform inspections of the work for quality assurance (QA).

1.5 CONTRACTOR=S QUALITY CONTROL REPRESENTATIVE

A. Qualifications for Contractor=s Quality Control Representative: Minimum five (5) years construction quality control or construction management experience on work similar to the work of this Contract.

1.6 CONTRACTOR=S QUALITY CONTROL

A. The Contractor is responsible for the overall quality of the work performed by the Contractor and subcontractors working under this Contract. The quality of any part of the work must not be less than that required by the Contract Documents. If the Owner=s representative determines that the quality of the work does not conform to the Contract Documents, the Owner=s representative will notify the Contractor, in writing. The Contractor must correct the identified deficiencies and advise the Owner=s representative of the corrective action taken within 7 days of the date of notification.

B. Monitor quality control over the Contractor=s staff, subcontractors, suppliers, manufacturer's, products, services, site conditions and workmanship.

C. Comply fully with the manufacturer's published instructions, including each step in the sequence of installation.

D. Should the manufacturer's published instructions conflict with the Contract Documents, request clarification from the Owner=s representative before proceeding.

E. Comply with the specified standards as a minimum quality for the work, except where more stringent tolerances, codes or specified requirements indicate higher standards or more precise workmanship.

F. Perform the work by persons who are thoroughly qualified and trained in their respective trade to produce workmanship of the specified quality.

G. Secure products in place with positive anchorage devices, designed and sized to withstand wind and seismic loads, stress, vibration, physical distortion and disfigurement.

H. Perform tests required by governing authorities and utility agencies having jurisdiction.

I. Contractor=s Field Inspection: The Contractor or his authorized representative(s) shall inspect all work under this Contract for quality control (QC).

1.7 QUALITY CONTROL TESTING:

A. Field tests made at, or in the vicinity of the Project Site in connection with the actual construction, including but not limited to, concrete batch plants, asphalt batch plants and similar establishments directly involved in the construction process.

1. Field Tests by the Contractor: The Contractor shall perform all field testing specifically required of him in the Contract Specifications and all field tests required by AApplicable Publications@ referenced in the Contract Specifications. The cost of testing shall be borne by the Contractor. The Contractor shall furnish all equipment, instruments, qualified personnel and facilities necessary to perform all tests required by the Contract Documents. The required testing services shall be performed by the Contractor or acquired by the Contractor through a qualified commercial testing laboratory. If a commercial testing laboratory is retained to perform tests under this Contract, all test reports shall be certified by the

laboratory. Test reports shall include the acceptable value for each specification item, actual test results obtained, methods used, and a statement that the product, equipment or system conforms or does not conform to the Specifications requirements.

2. Field Tests by Owner: Field tests conducted by the Owner will be made as necessary to assure quality or as otherwise provided herein.

B. Factory tests made at the point of manufacture of various products shipped to the Project Site as a unit.

C. Certified tests made by approved testing agencies on material and / or equipment to be incorporated into the Project under the Contract. These tests are those performed by Factory Mutual, Underwriters= Laboratories, Inc., and others.

1. Manufacturer=s Certified Tests: Certified tests on materials to be incorporated into the work will be acceptable, provided they are performed by the manufacturer or by Owner=s representative approved agencies or laboratories, show that the materials conform to the Specifications, and that tests and certifications meet the requirements of the paragraph entitled AQuality Assurance@ below.

1.8 TESTING AND INSPECTION LABORATORY SERVICES

A. Selection and Payment:

1. Employment and payment for services of an Independent Testing and Inspection Laboratory to perform specified testing and inspection shall be by the Contractor.

2. Owner Approval of Laboratories: All laboratory work performed under this Contract shall be done by a Laboratory approved by the Owner=s representative, whether the laboratory is employed by the Contractor or by others, or is owned and operated by the Contractor. The basis of approval includes the following:

a. Laboratories performing work in connection with concrete, steel and bituminous material must conform to American Society for Testing and Materials (ASTM) E 329.

b. Laboratories performing work not in connection with concrete, steel and bituminous materials must conform to Sections 3 and 4 of ASTM E 329.

3. Employment of Independent Testing and Inspection Laboratory in no way relieves the Contractor of his obligation to perform work in accordance with the requirements of the Contract Documents.

B. Quality Assurance:

1. Comply with the requirements of ASTM C 802, ASTM C 1077, ASTM C 1093, ASTM D 3740, ASTM D 4561, ASTM E 329, ASTM E 543, ASTM E 699 and ASTM E 1691.

2. Laboratory Staff: Maintain a full-time registered Engineer on staff to review the services provided.

3. Testing Equipment: Calibrated at reasonable intervals with devices of and accuracy traceable to either National Bureau of Standards or accepted values of natural physical constraints.

C. Laboratory Responsibilities:

1. Test samples of mixes submitted by the Contractor.

2. Provide qualified personnel at the Project Site. Cooperate with the Owner=s representative and the Contractor in the performance of services.

3. Perform the specified sampling, testing and inspection of products in accordance with the specified standards.

4. Determine compliance of the materials and mixes with requirements of the Contract Documents.

5. Promptly notify the Contractor=s Quality Control Representative and the Owner=s representative of observed irregularities or non-conformance of work or products.

6. Perform additional tests as required by the Owner=s representative.

1.9 CONTRACTOR=S FIELD INSPECTION AND TESTING

A. Contractor: Test and inspect the work provided under this Contract to ensure that the work is in compliance with the Contract requirements. Required tests and inspections are indicated in the individual Specifications Sections.

B. Preparatory Inspection: Performed prior to beginning the work and prior to beginning each segment of work and includes:

1. Review of Contract requirements.

2. Review of Shop Drawings and other submittal data after approval and return.

3. Examination to assure that the materials and equipment conform to the Contract requirements.

4. Examination to assure that the required preliminary or preparatory work is complete.

C. Initial Inspection: Performed when a representative portion of each segment of the work has been completed, and includes:

1. Performance of the required tests.

2. Quality of the workmanship.

3. Review for omissions and dimensional errors.

4. Examination of products used, connections and supports.

5. Approval or rejection of the inspected segment of work.

D. Follow-Up Inspections: Performed daily and more frequently, as necessary, to ensure that non-complying work has been corrected.

E. Testing and Inspection: Perform testing and inspection in accordance with requirements of the individual Specifications Sections.

1.10 CONTRACTOR'S WEEKLY REPORTS

A. Submit weekly reports to the Owner=s representative for days that work was performed. Include the following information:

1. Contractor=s name and address.

2. Job reference and information.

3. Date, weather, minimum and maximum temperatures, rainfall and other pertinent weather conditions.

4. Daily workforce of the Contractor and subcontractors, by trade.

5. Description of the work started, on-going work, and work completed by each subcontractor.

6. Coordination implemented between the various trades.

7. Approval of substrates received from various trades.

8. Non-conforming and unsatisfactory items to be corrected.

9. Remarks.

1.11 CONTRACTOR'S TESTING AND INSPECTION REPORTS

A. Prepare and submit a written report of each test and inspection, signed by the Contractor=s Quality Control Representative performing the inspection, within two (2) days after the day the inspection was made.

B. Include the following on the written inspection reports:

1. Cover sheet prominently identifying that the inspection "CONFORMS" or "DOES NOT CONFORM" to the Contract Documents.

2. Date of the inspection and date of the report.

3. Project name, location, solicitation number and Contractor.

4. Names and titles of individuals making the inspection.

5. Description of the Contract requirements for inspection by referencing the Specifications Section.

6. Description of the inspection made, interpretation of the inspection results, and notification of significant conditions at the time of the inspection.

7. Requirements for follow-up inspections.

1.12 NON-COMPLIANCE CHECK-OFF LIST

A. Maintain Check-Off List of work that does not comply with the Contract Documents,

stating specifically what is non-complying, date the faulty work was originally discovered and the date the work was corrected. There is no requirement to report deficiencies corrected the same day the deficiency was discovered. Submit a copy of the Non-Compliance Check-Off List of non-complying work items on a weekly basis for review at the next Progress / Coordination Meeting.

1.13 COMPLETION AND INSPECTION OF WORK

A. Prior to final acceptance by the Owner=s representative, submit a certification signed by the Contractor stating that all work has been inspected and that all work, except as specifically noted, is complete and in compliance with the Contract Documents.

B. Record Documents: By Contractor=s Quality Control Representative. Ensure that "Record Documents" required by Section 01780 - Closeout Submittals, are marked to show any deviations made during construction and are kept current on a daily basis. Upon completion of the work, certify the accuracy of the "Record Documents" and submit to the Owner=s representative.

PART 2 PRODUCTS

Not Used.

PART 3 EXECUTION

Not Used.

END OF SECTION

SECTION 01500

TEMPORARY FACILITIES AND CONTROLS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Coordination and Approval.

2. Temporary Utilities: Electrical power, lighting, air conditioning and ventilation, water and sanitary facilities.

3. Fencing.

4. Barriers and Enclosures.

5. Erosion Controls: Surface water control and protection of work.

6. Access Roads and Parking Areas.

7. Project Signs.

8. Field Office and Sheds: Temporary buildings.

9. Construction Aids

10. Progress Cleaning and Waste Removal.

11. Ownership of Temporary Facilities and Controls.

12. Removal of Temporary Construction Facilities and Controls.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

1.2 COORDINATION AND APPROVAL

A. Coordinate with and obtain approval of the Owner=s representative for each temporary facility and control, location, sequence and schedule before starting any temporary work.

1.3 ELECTRICAL POWER

A. Contractor to provide and pay for electrical power from the local power authority; provide generator when island power is not available.

B. Provide a temporary electric feeder from the electrical service at a location determined by the local power authority and approved by the Owner=s representative.

C. Provide temporary power panels, wiring and outlets for construction operations with branch wiring and distribution boxes located as required; provide properly sized flexible power cords.

D. Provide temporary transformers, emergency generators, lines, etc., as necessary for continuous electrical supply to existing buildings affected by the construction of this Project.

1.4 LIGHTING

A. Provide and maintain lighting for construction operations to achieve a minimum lighting level of 2 footcandles.

B. Permanent building lighting may be utilized during construction.

1.5 AIR CONDITIONING AND VENTILATION

A. Provide and pay for cooling devices and cooling, as needed, to maintain the specified conditions for construction operations.

B. Enclose the building prior to activating the temporary cooling equipment.

C. Prior to the operation of permanent equipment for temporary purposes, verify that the installation is approved for operation, the equipment is lubricated, ductwork and equipment are clean, unfinished construction procedures will not be detrimental to use of the equipment, and filters are in place. Provide and pay for the operation, maintenance and regular replacement of filters and worn or consumed parts.

D. Ventilate enclosed areas to assist the cure of materials, dissipate humidity, and prevent the accumulation of dust, fumes, vapors and gases.

1.6 WATER

A. Provide, maintain and pay for suitable quality drinking water for site personnel.

B. Provide temporary water lines, maintain and pay for water required for construction, including compaction, grading and dust abatement.

1.7 SANITARY FACILITIES

A. Provide and maintain required facilities and enclosures.

B. Comply with regulations of the governing authorities having jurisdiction.

1.8 FENCING

A Provide 6' high temporary fence around the entire construction area meeting the requirements, if any, of the Department of Public Works; provide vehicular and pedestrian gates with locks.

1.9 BARRIERS AND ENCLOSURES

A. Provide barriers to prevent unauthorized entry to construction areas and to protect existing facilities and adjacent properties from damage from demolition and construction

operations in accordance with regulations of OSHA and governing authorities having jurisdiction.

B. Provide barricades and covered walkways as required by governing authorities having jurisdiction for public rights-of-way.

C. Protect non-owned vehicular traffic from injury and damage.

1.10 EROSION CONTROL

A. Provide erosion control measures and facilities satisfactory to the environmental agency having jurisdiction and as required by Section 01560 - Environmental Protection.

B. Grade the Site to drain. Maintain excavations free of water. Provide, operate and maintain pumping equipment as necessary.

C. Protect the Project Site from ponding and running water. Provide water barriers as required to protect the Site from soil erosion.

1.11 ACCESS ROADS AND PARKING AREAS

A. Construct and maintain temporary roads accessing a public thoroughfare to serve the construction area.

B. Extend or relocate as work progress requires. Provide detours necessary for unimpeded traffic flow.

C. Provide and maintain access to fire hydrants, free of obstructions.

D. Parking: Arrange for temporary parking areas to accommodate site personnel=s vehicles.

1. When site space is not adequate, provide for off-Site parking.

1.12 PROJECT SIGNS

A. Provide a 4' x 8' temporary project sign. Use new materials; 3/4" exterior grade plywood with hardwood edge trim; mount on treated 4" x 4" hardwood posts or the fence, as appropriate. Sign design to be provided by the Architect.

B. Use primer and two coats of exterior paint on the sign background, rear and posts. Use exterior paint for lettering on the face. Have lettering done by a professional sign painter.

C. Locate the sign(s) as indicated or as directed.

D. Allow no other signs or advertising of any kind on the Project Site, except safety, Directional and warning signs and signs required by law.

1.13 FIELD OFFICE AND SHEDS

A. Provide a building and sheds adequate in size and accommodation for the Contractor=s office and storage.

B. Provide space for Project meetings with a table and chairs to accommodate 10 persons.

C. Place the office and sheds at approved locations.

1.14 CONSTRUCTION AIDS

A. Furnish, install and maintain for the duration of the construction, all scaffolds, shoring, tarpaulins, barricades, canopies, warning signs, steps, bridges, platforms, and other temporary work necessary for proper completion of the Project and protection of the public and site personnel in compliance with relevant OSHA safety and other regulations.

1.15 PROGRESS CLEANING AND WASTE REMOVAL

A. Maintain areas free of waste materials, debris and rubbish. Maintain the Project Site in a clean and orderly condition.

B. Remove debris and rubbish from pipe chases, plenums, attics, crawl spaces and other closed or remote spaces prior to enclosing the space.

C. Broom and vacuum clean interior areas prior to the start of surface finishing and continue cleaning to prevent the accumulation of dust.

D. Collect and remove waste materials, debris and rubbish from the Site weekly, daily if necessary, or as directed by the Owner=s representative, and dispose off-Site.

1.16 OWNERSHIP OF TEMPORARY FACILITIES AND CONTROLS

A. Items provided by the Contractor under this Section shall remain the property of the Contractor and all shall be removed from the Project Site immediately upon completion of the work.

1.17 REMOVAL OF TEMPORARY CONSTRUCTION FACILITIES AND CONTROLS

A. Remove temporary utilities, equipment, facilities and materials prior to the Substantial Completion inspection.

B. Remove temporary underground installations.

C. Clean and repair damage caused by installations and temporary work.

D. Restore existing and permanent facilities used during construction to their original condition, as specified.

PART 2 PRODUCTS

Not Used.

PART 3 EXECUTION

3.1 ACCESS PROVISION

A. Provide ramps, stairs, ladders and similar temporary access elements as reasonably required to perform the work and to facilitate its inspection. Comply with reasonable requests of governing authorities performing inspections. When permanent stairs are

available for access during construction, cover finished surfaces with sufficient protection to ensure freedom from damage and deterioration at the time of Substantial Completion.

3.2 SECURITY / PROTECTION PROVISION

A. The types of temporary security and protection provisions required include, but is not limited to, fire, protection, barricades, warning signs / lights, site enclosure fence, building enclosure / lockup, watchman service, personnel security program (theft prevention), environmental protection, and similar provisions intended to minimize property losses, personal injuries and claims for damages at the Project Site.

3.3 EXTERIOR CLOSURES

A. Temporarily close exterior openings, weather-tight, to provide acceptable working conditions and for the protection of products, to allow for the maintenance of required ambient temperatures identified in the individual Specifications Sections, and to prevent the entry of unauthorized persons. Provide access doors with self-closing hardware and padlocks.

3.4 PROTECTION OF INSTALLED WORK

A. Protect installed work and provide special protection where specified in individual Specifications Sections.

B. Provide temporary and removable protection for installed work. Control activity in the immediate area to prevent damage.

C. Protect finished floors, and other surfaces from traffic, dirt, wear, damage and movement of heavy objects by covering with durable sheet materials.

D. Prohibit traffic and storage of materials on waterproofed and finished roof surfaces. If traffic or activity is necessary, obtain recommendations for protection from the waterproofing or roofing material manufacturer.

E. Prohibit traffic from landscape areas into interior work areas.

3.5 PERMANENT FIRE PROTECTION

A. Complete each fire protection facility at the earliest reasonable date, make ready for emergency use, and inform site personnel of its availability and proper use.

END OF SECTION

SECTION 01560

ENVIRONMENTAL PROTECTION

PART 1 - GENERAL

1.1 DEFINITIONS OF CONTAMINANTS

A. Sediment: Soil and other debris that has been eroded and transported by runoff water.

B. Solid Waste: Rubbish, debris, garbage, and other discarded materials resulting from industrial, commercial, and agricultural operations, and from community activities, such material having insufficient liquid content to be free flowing.

C. Rubbish: A variety of combustible and noncombustible wastes such as ashes, waste materials that result from construction or maintenance and repair work, leaves and tree trimmings.

D. Chemical Wastes: Includes salts, acids, alkalies, herbicides, pesticides, petroleum-derived products and organic chemicals.

E. Sewage: Water-carried waste products from residences, public buildings, institutions or other buildings, including excrementitious or other discharge from the bodies of human beings or animals, together with such ground water infiltration and surface water as may be present.

F. Garbage: Refuse and scraps resulting from preparation, cooling, dispensing, and consumption of food.

G. Asbestos and Asbestos Materials: Asbestos means actinolite, amosite, anthophyllite, chrysotile, crocidolite, and tremolite. Asbestos materials means asbestos or any material containing asbestos such as asbestos waste, scrap, debris, bags, containers, equipment, and asbestos-contaminated clothing consigned for disposal. Friable asbestos material requires a Waste Disposal Permit. Submit one (1) copy of Guam Environmental Protection Agency (GEPA) permit or license which reflects such agency's approval of the disposal plan as being in compliance with their waste disposal regulations.

1.2 ENVIRONMENTAL PROTECTION REQUIREMENTS

A. Provide and maintain during the life of the contract, environmental protection as defined herein. Provide environmental protective measures as required to control pollution that develops during normal construction practice.

B. Provide also environmental protective measures required to correct conditions that develop during the construction of permanent or temporary environmental features associated with the project. Comply with all federal and local statutes and regulations pertaining to environmental protection.

1.3 SUBMITTALS

A. Environmental protection Plan: Submit two (2) copies of the proposed Environmental Protection Plan (EPP) to the Guam Environmental Protection Agency (GEPA) and 2 copies to the Engineer/Owner’s Representative for review and approval no later than 10 calendar days after receipt of the Notice to Proceed (NTP) with work under this project. Review of the plan by the Engineer and GEPA will be accomplished simultaneously. The Contractor shall not undertake any clearing, grubbing, earthwork, and excavations until the EPP has been approved by the GEPA and the Engineer/Owner’s Representative.

B. Solid waste Disposal Permit: Submit one (1) copy of local permit or license which reflects Guam Environmental Protection Agency's (GEPA) approval of the disposal plan as being in compliance with their solid waste disposal regulations.

C. The Contractor must submit an approved Erosion Control Plan (ECP) to Guam EPA, which will be implemented and maintained throughout the duration of the project.

PART 2 - PRODUCT (Not Used)

PART 3 - EXECUTION

3.1 PROTECTION OF NATURAL RESOURCES: The natural resources within the project boundaries and outside the limits of permanent work performed under this contract shall be preserved in their existing condition or restored to an equivalent or improved condition upon completion of the work. Confine construction activities to areas defined by the work schedule, drawings, and specifications.

A. Land Resources: Except in areas indicated to be cleared, do not remove, cut, deface, injure, or destroy trees or shrubs without special permission from the Engineer/Owner's Representative.

B. Protection: Protect existing trees which are to remain and which may be injured, bruised, defaced, or otherwise damaged by construction operations. Remove displaced rocks from uncleared areas. Protect monuments, markers, and works of art.

C. Repair or Restoration: Repair or restore to their original condition all trees or other landscape features scarred or damaged by the equipment or operations. Obtain approval of the repair or restoration from the Engineer prior to its initiation.

D. Temporary Construction: At the conclusion of the project, obliterate all signs of temporary construction facilities such as work areas, stockpiles of excess or waste materials, and all other vestiges of construction.

E. Water Resources: Perform all work in such a manner that any adverse environmental impact on water resources is reduced to a level acceptable to the Engineer/Owner's Representative.

F. Oily and Other Hazardous Substances: Take special measures to prevent oily or other hazardous substances from entering the ground, drainage areas, or local bodies of water.

3.2 CONTROL AND DISPOSAL OF SOLID, CHEMICAL AND SANITARY WASTES: Pick up solid waste and place in containers which are emptied on a regular schedule. The preparation, cooking, and disposing of food are strictly prohibited on the project site. Conduct handling and disposal of waste to prevent contamination of the site and other areas. On completion, leave areas clean and natural looking. Remove signs of temporary construction and activities incidental to construction of the permanent work in place.

A. Disposal of Rubbish and Debris: Dispose of rubbish and debris in accordance with the requirements specified herein.

Remove rubbish and debris from the project site and dispose of it in compliance with federal and local requirements.

B. Garbage Disposal: Place garbage in appropriate containers and transport such refuse to an approved landfill for disposal at least once per week. As an alternative, the Contractor may arrange for weekly pickup and disposal service either with the Government of Guam or a privately-owned garbage collection service. The Contractor shall pay all fees associated with obtaining and maintaining garbage collection and disposal services.

C. Sewage, Odor, and Pest Control: Dispose of sewage through connection to the public sewage system. Where such system is not available, use chemical toilets or comparably effective units and periodically empty waste into the public sanitary sewage system. Include provisions for pest control and elimination of odors.

D. Chemical Waste: Store chemical waste in corrosion resistant containers labeled to identify type of waste and date filled. Remove containers from the project site, and dispose of chemical waste in accordance with federal, state, and local regulations. For oil and hazardous material spills which may be large enough to violate federal and local regulations, notify the Engineer immediately and take measures as instructed by the Engineer/Owner's Representative or appropriate regulatory agencies, at no additional costs to the Owner.

E. Petroleum Products: Conduct fueling and lubricating of equipment and motor vehicles in a manner that affords the maximum protection against spills and evaporation. Dispose of lubricants to be discarded and excess oil in accordance with approved procedures meeting federal and local regulations.

3.3 DUST CONTROL: Keep dust down at all times, including non-working hours, weekends, and holidays. Sprinkle or treat, with dust suppressors, the soil at the site, haul roads, and other areas disturbed by operations. No dry brooming is permitted. Instead use vacuuming, wet mopping, wet sweeping, or wet power brooming. Air blowing is permitted only for cleaning non-particulate debris, such as steel reinforcing bars. No sandblasting is permitted unless dust therefrom is confined. Only wet cutting of concrete blocks, concrete, and asphalt is permitted. No unnecessary shaking of bags is permitted where bagged cement, concrete mortar, and plaster is used.

3.4 NOISE: When available, make the maximum use of "low-noise emission products" as certified by Guam Environmental Protection Agency.

END OF SECTION 01560

SECTION 01567

MAINTENANCE OF TRAFFIC

PART 1 - GENERAL

1.1 Traffic control and safety devices shall be in accordance with Part VI of the Manual on Uniform Traffic Control Devices (MUTCD) For Streets and Highways, Latest Edition.

1.2 Prior to beginning work, the Contractor shall submit to Department of Public Works Traffic Engineering Section approved Traffic Control Plan and a "**copy"** furnished to the Engineer/Owner's Representative. The Contractor shall also include a schedule listing the types and number of traffic control and safety devices proposed for use.

1.3 Unless otherwise approved or directed by the Engineer/Owner's Representative, the minimum widths for one-lane and two-lane traffic shall be 10 feet and 20 feet, respectively.

PART 2 - PRODUCTS

2.1 Traffic control devices shall conform to the applicable specifications, standards and principles of the Manual except as amended herein. The traffic control devices shall be used at the site for construction, construction survey, and related work that might endanger passing motorists, pedestrians and workers.

A. Traffic control devices shall be in place prior to the start of any construction, maintenance, construction survey, and related work and shall be removed until the obstruction or danger of obstruction no longer exists. Where work is performed in stages, there shall be in place those devices that apply to the conditions and activities present during the stage in progress.

B. All signs, markers, barricades, cones, lights, and other devices indicating the existence of special conditions and activities shall remain in place until their need is no longer required, unless otherwise directed by the Engineer/Owner's Representative. Signs that do not apply to existing conditions and activities shall be removed or covered. All devices employed shall be neatly constructed and shall be repaired, cleaned, repainted, and properly maintained in good condition. Special care shall be taken to see that shrubbery, construction materials, equipment, spoil and other obstructions do not obscure any sign, light or barricade, particularly at intersections or curves.

C. When it becomes necessary to excavate along or across a highway or any lane thereof, the work shall be performed to avoid existing local peak traffic hours. The Contractor must coordinate this work with DPW.

2.2 SIGNS:

A. Regulatory signs, warning signs and guide signs used at construction, surveying or other sites shall be reflectorized and shall conform to the basic standards prescribed in the Manual and as specified in the applicable Sections of the Specifications. Generally, signs shall be placed in the most effective locations so as to assure the fastest and most adequate driver response time. All advance warning signs shall be placed on each approach and shall indicate the general character of the work being done, and the distance from the sign to the actual work area.

B. The Engineer/Owner's Representative may waive any requirements specified herein if advance application is made by the Contractor when in his judgment, the placement of signs may not be feasible or such placement may interfere with the progress of the work.

2.3 BARRIERS AND CHANNELIZING DEVICES:

A. Barriers and channelizing devices used at work sites shall follow the basic standards prescribed in the Manual and the following provisions:

1) When it is necessary to confine the traffic to singular lanes, additional transverse barricades and drums shall be placed at close intervals (approximately 120-foot spacing on tangents and curves of more than 500 feet radius and approximately 60-foot spacing on curves of 500 feet radius or less) in the closed lane.

2) Where hazardous locations occur, a series of Type II barricades, cones or drums shall be placed in longitudinal rows along the edge of the closed area (continuously for barricades and at approximately 15-foot spacing for cones and drums).

PART 3 - EXECUTION

3.1 Maintaining Traffic: The Contractor shall conduct construction operations with minimum interference to traffic on roads, streets and driveways and he shall have under construction, no greater length or amount of work than he can prosecute properly with due regard to the rights of the public. Roads, streets and driveways shall be kept free of dirt and debris at all times. Convenient access to driveways, houses and buildings along the line of the work shall be maintained. In all areas, the Contractor shall install and maintain appropriate signs, lights, flares and barricades for the protection of the public. Such signs and barricades and their placement shall conform to instructions contained in Part VI of the "Manual on Uniform Traffic Control Devices (MUTCD) for Streets and Highways". The Contractor is expected to be familiar with all applicable Government of Guam laws and compliance with such laws is considered a part of this contract.

3.2 Coordination:

A. In the case of conflict between the Manual and the Specifications, the most stringent requirements shall apply.

B. This Section of the specifications shall be coordinated with all related documents affecting the work.

C. All work shall be coordinated through the Engineer/Owner’s Representative.

END OF SECTION 01567

SECTION 01600

PRODUCT REQUIREMENTS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Definitions.

2. Products.

3. Product options.

4. Product substitution procedures.

5. Product delivery requirements.

6. Product handling and storage requirements.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

1.2 DEFINITIONS

A. Products: Items for incorporation into the work, whether purchased specifically for the Project or taken from previously purchased stock. This term includes the terms material, equipment, systems, and other terms of similar intent.

B. Named Products: Items identified by manufacturer's name, including make or model number or other designation, as shown or listed in the manufacturer's published product literature.

C. Materials: Products substantially shaped, cut, worked, mixed, finished, refined, or otherwise fabricated, processed, or installed to form a part of the work.

D. Equipment: Products with operational parts, whether motorized or manually-operated, that require service connections, such as water piping, waste piping and / or electrical wiring.

1.3 PRODUCTS

A. Provide products that comply with the Contract Documents, and are new and undamaged at the time of installation.

B. Provide products complete with accessories, trim, finish, safety guards, and other devices and details required for a complete installation and for its intended use and effect.

C. Provide products of a kind from a single source. When the products specified are available only from a source that does not, or cannot produce the quantity necessary to meet the Project requirements, in compliance with the Project Schedule, contact the

Architect, in writing, to determine the most important product qualities before proceeding. Qualities may include attributes, such as visual appearance, strength, durability and compatibility. When the Architect makes a determination, select products from a source that produces products that possess those qualities to the greatest extent possible.

1.4 PRODUCT OPTIONS

A. Products: Throughout the Contract Documents products may be specified by a manufacturer's name and catalog number to establish standards of quality and performance, and not for the purpose of limiting competition. Substitute methods and products may be submitted to the Owner’s representative for consideration in conformance with the article entitled "Product Substitution Procedures" below.

B. Products Specified by Reference Standards or by Description Only: Any product meeting those standards or description.

C. Products Specified by Naming One or More Manufacturers: Products of manufacturers named and meeting the Specifications requirements. Substitutions may or may not be permitted, as stated in the particular Section specifying the product.

D. Products Specified by Naming One or More Manufacturers with a Provision for Substitutions: Submit a request for substitution for any manufacturer not named, Submit in accordance with the article entitled "Product Substitution Procedures" below.

E. Standards, Codes and Regulations: Where only compliance with an imposed standard, code or regulation is required, selection from among products which comply with the requirements, including those standards, codes and regulations, is the Contractor's option.

F. Performance Requirements and Design Criteria: Provide products which have been produced in accordance with the prescriptive requirements for structural capability, anchorage, mixing, fabricating, curing, finishing, testing and similar operations in the manufacturing process.

G. Prescriptive Requirements: Provide products which have been produced in accordance with the prescriptive requirements using the specified ingredients and components, and complying with the specified testing and similar operations in the manufacturing process.

H. Visual Matching:

1. Where matching with an established sample is required, final judgment of whether a product matches the specified cost category is available, which matches the sample satisfactorily, and complies with requirements, comply with the Contract Document provisions concerning, "substitutions".

2. Visual Selection: Except as otherwise indicated, where specified product requirements include "...as selected from the manufacturer's standard colors, patterns, textures..." or words of similar effect, the selection of manufacturer and basic product is the Contractor's option, and the subsequent selection of color, pattern and texture is by the Architect.

1.5 SUBSTITUTIONS

A. Conditions: Contractor's request for substitution will be received and considered when extensive revisions to the Contract Documents are not required, and changes are in keeping with the general intent of the Contract Documents; when timely, fully documented

and properly submitted; and when one or more of following conditions is satisfied, all as judged by the Owner's representative. Otherwise, requests will be returned without action except to record non-compliance with the requirements.

1.6 PRODUCT SUBSTITUTION PROCEDURES

A. Submit each Request for Substitution on a "Contractor's Substitution Request" form with complete data substantiating compliance of the proposed substitution with the Contract Documents.

B. A request constitutes a representation that the Contractor:

1. Has investigated the proposed product and determined that it meets or exceeds the quality level of the specified product.

2. Will provide the same warranty for the substitution as for the specified product.

3. Will coordinate the installation and make changes to other work which may be required for the work to be completed at no additional cost to the Owner.

4. Waives claims for additional cost and time extension which may subsequently become apparent.

C. Substitutions will not be considered when they are indicated or implied on the Shop Drawing or product data submittals, without a separate written request, or when acceptance will require revision of the Contract Documents.

D. Substitution Submittal Procedure:

1. Submit four (4) copies of the "Contractor's Substitution Request" form for substitution consideration. Limit each request to one (1) proposed substitution.

2. Submit Shop Drawings, product data, and certified test results attesting to the proposed product's equivalence. The burden of proof lies with the proposer.

3. The Architect will notify the Contractor, in writing, of the decision to accept or reject the substitution request.

1.6A Requests for Substitutions:

1. Provide a written substitution request, fully documented to show compliance with the requirements for substitutions. Include product data / drawings, description of methods and samples where applicable. The Contractor shall submit a comparison of significant qualities between the specified item and the proposed substitution, including life expectancy, weatherability, durability, fire resistance, compatibility with other materials, susceptibility to defects due to characteristics unique to the product, and product limitations, including other characteristics such as slip resistance, acoustical properties, etc. The Contractor shall submit a statement of effect on construction time, coordination with other affected work, and the Contractor's statement to the effect that the proposed substitution is satisfactory for use in the Project and will result in overall work equal-to-or-better-than the work originally indicated.

2. When not equal-to-or-better, the Contractor shall submit a justification and deductive cost proposal resulting from the substitution.

1.7 PRODUCT DELIVERY REQUIREMENTS

A. Transport and handle products in accordance with the manufacturer's instructions, using means and methods to prevent damage, deterioration, and loss, including theft.

B. Schedule product delivery to minimize long-term storage at the Project Site, and to prevent overcrowding of construction spaces.

C. Coordinate product delivery with the installation schedule to assure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.

D. Deliver products to the Project Site in undamaged condition, in the manufacturer's original, new, sealed container(s) or packaging system, complete with labels intact and instructions for handling, storing, unpacking, protecting, and installing.

E. Promptly inspect shipments to ensure that the products comply with the Project requirements, that quantities are correct, products are undamaged, and are properly protected.

1.8 PRODUCT HANDLING AND STORAGE REQUIREMENTS

A. Store and protect products in accordance with the manufacturers' published instructions, with seals and labels intact and legible.

B. Store products subject to deterioration above ground, under cover, in a weathertight enclosure and with ventilation adequate to prevent condensation and potential degradation. Maintain temperature and humidity within the range required by the manufacturer's published instructions.

C. For exterior storage of fabricated products, place on sloped supports, above ground.

D. Provide off-site storage and protection when the Project Site does not permit on-site storage or proper protection.

E. Store loose granular materials on solid flat surfaces in a well drained area. Prevent mixing with foreign matter.

F. Provide equipment and personnel to handle and store products by methods to prevent soiling, disfigurement, and damage.

G. Arrange storage of products to permit access for inspection. Periodically inspect to verify that the products are undamaged and are maintained in an acceptable condition.

1.9 WARRANTIES

A. Comply with the Warranty provisions of Section 01012 - Supplementary Conditions.

B. Categories of Specific Warranties: Warranties on the work are in several categories, including those of the General Conditions, and including, but not necessarily limited to, Sections of Divisions 2 through 16 of these Specifications.

C. Special Project Warranty (Guarantee): A Warranty specifically written and signed by the Contractor for a defined portion of the work; and, where required, countersigned by the subcontractor, installer, manufacturer or other entity engaged by the Contractor.

D. Specified Product Warranty: A Warranty which is required by the Contract Documents, to be provided for a manufactured product incorporated into the work.

E. Coincidental Product Warranty: A Warranty which is not specifically required by the Contract Documents, other than as specified in this Section, but which is available on a product incorporated into the work, by virtue of the fact that the manufacturer has published a Warranty in connection with purchase and use of the product without regards to specific applications.

F. General Limitations: It is recognized that specific Warranties are intended primarily to protect the Owner against failure of the work to perform as required, and against deficient, defective and faulty materials and workmanship, regardless of the source. Except as otherwise indicated, specific Warranties do not cover failures in the work which result from:

1. Unusual and abnormal phenomena of the elements,

2. The Owner's misuse, maltreatment or improper maintenance of the work,

3. Vandalism after the date of Substantial Completion, or

4. Insurrection or acts of aggression, including war.

G. Start Date: Warranties will commence on the date of Substantial Completion of the Project unless otherwise agreed to by the Owner’s representative.

H. Reinstatement of Warranty Period: Except as otherwise indicated, when work covered by a special Project Warranty or product Warranty has failed and has been corrected by replacement or restoration, reinstate the Warranty by written endorsement for the original time period, starting on the date of acceptance of the replaced or restored work.

I. Replacement Cost, Obligations: Except as otherwise indicated, the cost of replacing or restoring failing warranted units or products is the Contractor's obligation, without regard for whether or not the Owner has already benefitted from use through a portion of the anticipated useful service life.

J. Related Damages and Losses: In connection with the Contractor's correction of warranted work which has failed, remove and replace other work of the Project which has been damaged as a result of the failure, or must be removed and replaced to provide access for correction of the warranted work.

K. Rejection of Warranties: The Owner reserves the right, at the time of Substantial Completion or thereafter, to reject coincidental product Warranties submitted by the Contractor, which in the opinion of the Owner tend to detract from or confuse interpretation of the requirements of the Contract Documents.

L. Contractor's Procurement Obligations: Do not purchase, subcontract for, or allow others to purchase or sub-subcontract for materials or units of work for the Project where a special Project Warranty, specified product Warranty, certification or similar commitment is required, until it has been determined that the entities required to countersign such commitment are willing to do so.

M. Submittal of Warranty Forms: Where a special Project Warranty (Guarantee) or specified product Warranty is required, prepare a written document to contain terms and appropriate identification, ready for execution by the required parties. Submit a draft to the Owner via the Owner's representative for approval and final execution.

PART 2 PRODUCTS

Not Used.

PART 3 EXECUTION

Not Used.

END OF SECTION

SECTION 01700

EXECUTION REQUIREMENTS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Examination.

2. Preparation.

3. Execution.

4. Cleaning.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other documents.

1.2 EXAMINATION

A. Visit the Project Site to determine the existing conditions.

1. Take field measurements and verify field conditions, compare field measurements, conditions, locations of survey benchmarks, and other information known to the Contractor, with the Construction Documents before starting the work.

2. Be responsible for determining conditions of the Project Site, including all existing improvements, paving, above and below ground utilities, and existing construction.

3. Contact local utility companies and agencies and make arrangements to obtain utility locations and marking service before the start of work.

B. Review Bidding and Contract Documents.

1. Carefully study and compare the Contract Documents with each other.

2. Be responsible for thorough knowledge of the Contract Documents and their relationship to each other.

3. If the Contractor performs work knowing it involves a recognized error, inconsistency, or omission in the Contract Documents, without notice to the Owner=s representative, the Contractor assumes responsibility for performance of the work, and is responsible for the cost of corrective work.

C. Verify that existing conditions and substrate surfaces are acceptable and meet the manufacturer's requirements for the application or installation of work.

D. Verify that the substrate is capable of structurally supporting attachment of the work being applied or installed.

E. Examine and verify specific conditions described in the individual Specifications Sections.

F. Verify that utility services are available, of the correct characteristics, and in the correct location for the installation of work.

1.3 PREPARATION

A. Construction Layout:

1. Be responsible for the accuracy of measurements, elevations, lines, and grades of the work.

2. Do not scale Drawings. Use the dimensions indicated on the Drawings for the laying out of work.

3. Errors in construction caused by the Contractor scaling Drawings to obtain measurements for laying out the work is the responsibility of the Contractor. By scaling Drawings, the Contractor assumes responsibility for the performance of such work, and is responsible for the cost of corrective work.

4. Perform field work necessary to lay out and maintain work to the dimensions indicated in the Contract Documents.

B. Field Engineering:

1. Establish permanent benchmarks on the Project Site referenced to established control points indicated on the Drawings. Record locations, with horizontal and vertical data, on the Project Record Drawings.

2. Establish elevations, lines, and levels, for work using survey instrumentation for:

a. Site improvements including pavements; stakes for grading, fill and topsoil placement; utility locations, slopes, and invert elevations.

b. Grid or axis for structures.

c. Building foundations, column locations, and finish floor elevations.

d. Location of existing utilities necessary to adjust, move, or relocate existing structures, utility poles, lines, services, and other items located within the Project Site or affected by the work.

3. Periodically verify layouts by the same means.

C. Preparation for product Installation:

1. Conduct a Pre-Installation Meeting when specified in the individual Specifications Sections.

2. Obtain, read, and understand applicable reference standards and manufacturer's published instructions regarding erection, application, and installation of products.

3. Clean substrate surfaces before applying products.

4. Seal cracks and openings of substrates before applying products.

5. Apply manufacturer=s required or recommended substrate primer, sealer, or conditioner before applying products in contact or bond.

1.4 EXECUTION

A. Cutting and Patching:

1. Employ skilled and experienced tradesmen to perform cutting and patching work.

2. Submit a written request, in advance of cutting or altering elements which affect:

a. Structural integrity of an element.

b. Integrity of weather-exposed or moisture-resistant elements.

c. Efficiency, maintenance, or safety of an element.

d. Visual quality of sight exposed elements.

3. Execute cutting, fitting, and patching to complete work, and to:

a. Fit several parts together, to integrate with other work.

b. Uncover work to install or correct ill-timed work.

c. Remove and replace defective and non-conforming work.

d. Remove samples of installed work for testing.

e. Provide openings in elements of the work for penetrations of mechanical and electrical work.

4. Execute work by methods that will avoid damage to other work, and will provide proper surfaces to receive patching and finishing.

5. Cut masonry and concrete materials using a masonry saw or core drill.

6. Restore work with new products in accordance with requirements of the Contract Documents.

7. Fit work tight to pipes, sleeves, ducts, conduit, and other penetrations.

8. Maintain the integrity of wall, ceiling, and floor construction; completely seal voids.

9. Refinish surfaces to match adjacent finishes. For continuous surfaces, refinish to the nearest intersection; for an assembly, refinish the entire unit.

10. Identify any hazardous substance or condition exposed during the work to the Owner=s representative for a decision or remedy.

B. Installation:

1. Refer to the installation requirements in individual Specifications

Sections.

2. For each product, inspect the substrate and conditions under which the work will be performed. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3. Comply with manufacturer's published installation instructions and recommendations, to the extent that instructions and recommendations are more explicit or stringent than requirements in the Contract Documents.

4. Inspect products ready for installation immediately upon delivery to the Project Site.

    a. Inspect products immediately before the start of application, installation, or erection.

    b. Reject damaged and defective products.

5. Verify and check dimensions and measurements before the start of application, installation or erection.

6. Coordinate the closing-in of work with required inspections and tests.

    a. Do not cover work until inspected and approved by the appropriate person or entity.

    b. Uncover work that has not been inspected as directed by the Owner=s representative.

7. Provide fasteners, attachments, connection devices, and methods as indicated on the Drawings, or as specified.

    a. Where not indicated or specified, provide appropriate methods necessary for securing the work.

    b. Secure work plumb, level and true to line.

    c. Provide for expansion and building movement.

1.5 CLEANING

A. Cleaning During Construction: Coordinate with Section 01500 - Temporary Facilities and Controls.

PART 2 PRODUCTS

Not Used.

PART 3 EXECUTION

Not Used.

END OF SECTION

SECTION 01705

PROJECT CLOSEOUT

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Description of requirements.

2. Prerequisites for Substantial Completion.

3. Closeout procedures.

4. Final cleaning.

5. Starting and adjusting.

6. Operation and maintenance instructions.

7. Partial occupancy or use.

8. Prerequisites for final acceptance.

9. Default.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

1.2 DESCRIPTION OF REQUIREMENTS

A. Definitions: Closeout is hereby defined to include the general requirements near the end of the Contract Time in preparation for substantial completion, beneficial occupancy, final acceptance, and final payment.

1.3 PREREQUISITES TO SUBSTANTIAL COMPLETION

A. General: Prior to requesting an Owner representative=s inspection for certification of substantial completion (for either the entire work or portions thereof), complete the following:

1. Provide a list of incomplete items, reasons for being incomplete and a schedule for completion.

2. Obtain and submit releases enabling the Owner's full and unrestricted use of the work and access to services and utilities, including recorded Occupancy Permit(s), operating certificates, and similar releases.

3. Make final change-over of locks and transmit keys to the Owner. Advise the Owner's personnel of the change-over in security provisions.

4. Complete start-up and testing of equipment and systems including instruction of

Owner's operations / maintenance personnel. Discontinue (or change-over) and remove from the Project Site all temporary facilities and services, along with construction tools and facilities, mock-ups, and similar elements.

5. Place in good working order all equipment and systems, including but not limited to, all fire, mechanical, electrical and life safety systems.

6. Submit manuals and other supporting documentation, as indicated in the Contract Documents.

.

7. Complete final cleaning.

B. Inspection Procedures: Upon receipt of the Contractor's request, the Owner=s representative will either proceed with the inspection or advise the Contractor of prerequisites not fulfilled. Following the initial inspection, the Owner=s representative will either prepare a Certificate of Substantial Completion, or advise the Contractor of work which must be performed prior to the issuance of a certificate. Repeat the inspection when requested and assured that the work has been substantially completed. Results of completed inspection will form the initial "punch-list" for final acceptance.

1.4 CLOSEOUT PROCEDURES

A. At completion of the work of each subcontract or designated division of the work, conduct an initial inspection to verify completion of the work; prepare a list of work to be completed or corrected, and conduct a follow-up inspection to verify that the corrections have been made.

B. Beneficial Occupancy:

1. When the Contractor considers the work, or a portion of the work which the Owner agrees to accept separately, is substantially complete, submit written certification to the Owner=s representative stating that the Contract Documents have been reviewed, work has been inspected, the work is complete in accordance with the Contract Documents, and the work is ready for inspection.

a. Submit a list of items to be completed or corrected.

b. Complete and correct items on the list.

c. Failure to include an item on the list does not change the Contractor=s responsibility to complete the work in accordance with the Contract Documents.

d. Submit Closeout Submittals to the Owner=s representative.

2. The Owner=s representative will review the list and make an inspection to determine if the work, or designated portion of the work, is substantially complete.

a. The Contractor will be notified of items identified during inspection as not in accordance with the Contract Documents, whether they were included on the Contractor=s list or not.

b. Contractor to complete and correct items on the list.

c. Notify the Owner=s representative that the items have been corrected and request re-inspection.

3. The Owner=s representative will re-inspect to determine if the work, or designated portion of the work, is substantially complete.

4. When the work, or designated portion of the work, is substantially complete, the Owner=s representative will notify the Contractor and document the Date of Beneficial Occupancy.

C. Final Acceptance:

1. The Contractor to submit written certification that the Contract Documents have been reviewed, work has been inspected, work is complete in accordance with the Contract Documents, and is ready for final inspection.

2. The Owner=s representative will make an inspection to determine if the work of the Contract is complete.

a. The Contractor will be notified by the Owner=s representative of items identified during inspection as not in accordance with the Contract Documents, and not ready for final acceptance.

b. Contractor to complete and correct items on the list.

c. Contractor to notify Owner=s representative that items on the list have been corrected and request an inspection.

3. When the work is complete, as determined by the Owner=s representative, the Owner=s representative will notify the Contractor and document the Date of Final Acceptance.

1.5 FINAL CLEANING

A. Complete cleaning operations before requesting inspection for Substantial Completion for Final Acceptance or a portion of the Project.

B. Provide final cleaning of the work consisting of cleaning each surface or unit of work to a normal "clean" condition expected from a first class building cleaning and maintenance program. Comply with the manufacturer's instructions for cleaning operations.

C. Use cleaning materials and agents recommended by the manufacturer or fabricator of surfaces to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property, or that might damage finished surfaces.

1. Remove tools, construction equipment, machinery and surplus materials from the Project Site.

2. Remove temporary protection devices and facilities installed during construction.

3. Clean the Project Site, yard and grounds, in areas disturbed by the construction activities, including landscape development areas. Remove rubbish, waste materials, litter and foreign substances. Sweep paved areas broom clean. Remove petrochemical spills, stains and other foreign deposits. Rake grounds that are neither planted nor paved, to a smooth even textured surface.

4. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics and similar spaces.

5. Broom clean concrete floors in unoccupied spaces.

6. Clean exposed exterior and interior hard-surface finishes to a dirt-free condition, free of stains, films and similar foreign substances. Avoid disturbing the natural weathering of exterior surfaces.

7. Remove labels that are not permanent.

8. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other substances that are noticeable vision obscuring materials. Replace chipped and broken glass and other damaged transparent materials. Polish mirrors and glass, taking care not to scratch the surfaces.

9. Vacuum clean carpet and similar soft surfaces, remove debris and excess nap; shampoo if required.

10. Touch-up and otherwise repair and restore marred exposed finishes and surfaces. Replace finishes and surfaces that can not be satisfactorily repaired or restored, or that show evidence of repair or restoration. Do not paint over "UL" and similar labels, including mechanical and electrical name plates.

11. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure. Clean food service equipment to a condition of sanitation ready and acceptable for its intended service use.

12. Clean light fixtures, lamps, globes and reflectors to function with full efficiency. Replace burned out lamps, and defective and noisy starters in fluorescent and mercury vapor fixtures.

13. Replace disposable air filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills. Clean ducts, blowers, and coils if units were operated without filters during construction.

14. Wipe surfaces of mechanical and electrical equipment clean, including elevator and similar equipment. Remove excess lubricants, paint, mortar droppings and other foreign substances.

15. Leave the entire Project Site clean and ready for occupancy.

D. Engage an experienced licensed exterminator to make a final inspection, and rid the Project Site of rodents, insects, and other pests. Comply with regulations of the local authorities having jurisdiction.

E. Comply with governing regulations and safety standards for cleaning operations. Remove waste materials from the Project Site and dispose at a designated site, and in accordance with requirements of the local authorities having jurisdiction.

1.6 STARTING AND ADJUSTING

A. Inspect mechanical and electrical equipment start-up operations, observe testing and balancing, and record the start-up results, including the time and date of start-up.

B. Starting Systems:

1. Coordinate the schedule for start-up of the various items of equipment and systems.

2. Verify that each piece of equipment or system has been checked for proper lubrication, drive rotation, belt tension, control sequence, and for any conditions which may cause damage upon start-up.

3. Verify that tests, meter readings, and the specified electrical characteristics agree with those required by the equipment or system manufacturer.

4. Verify that wiring and support components for equipment are complete and have been tested.

5. Execute start-up under the supervision of appropriate Contractor=s personnel, and in accordance with the manufacturers' instructions.

1.7 OPERATION AND MAINTENANCE INSTRUCTIONS

A. Arrange for each installer of work requiring continuing maintenance or operation to meet with the Owner's personnel at the Project Site to provide basic instructions for proper operation and maintenance of the entire work. Utilize the Operations and Maintenance Manuals as the basis for instructions. Review contents of the manuals, in detail, to explain all aspects of operation and maintenance. Include instructions by manufacturer's representatives where the installers are not expert in the required procedures.

B. Review maintenance manuals, record documentation, tools, spare parts and materials, lubricants, fuels, identification system, control sequences, shutdown, hazards, trouble-shooting, cleaning, servicing, maintenance and similar procedures.

C. For operational equipment, demonstrate start-up, shut-down, operation, control, emergency operations, noise and vibration adjustments, safety, economy / efficiency adjustments, energy effectiveness, and similar operations.

D. Review operations and maintenance in relation to applicable warranties, agreements to maintain, bonds, and similar continuing commitments.

E. Prepare and insert additional data in the Operations and Maintenance Manuals when need, for data that becomes apparent during the instructions.

1.8 PARTIAL OCCUPANCY OR USE

A. The Owner shall have the right to occupy or permit its employees, agents, representatives, or subcontractors to occupy any part or parts of the Project (to the extent that such work is not covered hereunder) and to install special Items, fixtures, furniture, appliances and equipment, notwithstanding that all work hereunder shall not have been completed at the time of such occupancy, provided, however, that:

1. The work completed in the part or parts to be occupied shall have been conditionally accepted by the Owner, in writing, specifying any claimed deficiencies in the work completed;

2. The Owner assumes liability for utilities and the risk of loss with respect to the portion of the Project subject to such early occupancy; and

3. Any such early occupancy shall not reasonably interfere with the Contractor's sequence for completing its work in the areas occupied or in other areas. The Contractor agrees to fully cooperate and coordinate its effort with such early "occupancy" of the Project under this paragraph, and shall give to the Owner

prompt notice of any inconvenience, damage, or delay likely to arise from such early occupancy. Such early occupancy shall have no bearing on the commencement of warranty periods.

1.9 PREREQUISITES FOR FINAL ACCEPTANCE

A. Prior to requesting final inspection for certification of final acceptance and final payment, as required by the General Conditions, complete the following and list known exceptions in the request:

1. Submit final payment request with final releases and supporting documentation not previously submitted and accepted.

2. Submit a dated final statement accounting for changes to the Contract Sum.

3. Submit a certified copy of the final Punch List of itemized work to be completed or corrected, stating that each item has been completed or otherwise resolved for acceptance, endorsed and dated by the Owner=s representative.

4. Submit final meter readings for temporary utilities per Specifications Section 01500 - Temporary Facilities, a measured record of stored fuel, and similar data as of the time of Substantial Completion or when the Owner took possession of and responsibility for corresponding elements of the work.

5. Submit a consent of Surety to the release of final payment.

6. Deliver tools, spare parts, extra stocks of materials, and similar physical items to the Owner.

7. Submit Record Drawings, Record Product Data and Miscellaneous Record Submittals.

8. Submit Warranties, workmanship / maintenance bonds, maintenance agreements, final certifications and similar documents.

9. Submit compliance with mechanics liens laws.

B. Re-inspection Procedure: Upon receipt of the Contractor's notice that the work has been completed, including Punch List items resulting from earlier inspections, and excepting incomplete items delayed because of acceptable circumstances, the Owner=s representative will re-inspect the work. Upon completion of the re-inspection, the Owner=s representative will either process final closeout documents or advise the Contractor of work not completed or obligations not fulfilled, as required for final acceptance.

C. Final Payment, Liens and Punch List of Work: If at the time of Final Payment, any application or applications for mechanic's or materialmen's liens have been filed against the Project, the Owner may withhold an amount equal to two hundred percent (200%) of the amount of the claimed lien or liens until the liens are removed or the Contractor posts a bond or cash deposit discharging such liens. The Owner may also withhold from the final payment such amount as the Owner reasonably deems necessary to cover: 1) minor corrective work (Punch List items) until such corrective work has been completed by the Contractor, and 2) any remaining work the Contractor is required to perform under the Contract Documents. The amount withheld shall be two hundred percent (200%) of the value of the incomplete work as reasonably estimated by the Owner.

1.10 DEFAULT

A. The Owner may declare the Contractor in default in accordance with and in the manner described in the General Conditions of the Contract for Construction for any of the following reasons:

1. Failure to complete the work within the Contract period or any extension thereof.

2. Failure or refusal to comply with an order of the Owner or Architect within a reasonable time.

3. Failure or refusal to remove rejected materials.

4. Failure or refusal to perform anew any defective or unacceptable work.

5. Bankruptcy or insolvency, or the making of an assignment for the benefit of creditors.

6. Failure to pay subcontractors and suppliers promptly.

7. Repeated failure to provide a qualified superintendent, competent workmen or subcontractors to carry out the work in an acceptable manner, or failure to prosecute the work according to the agreed schedule for completion.

PART 3 EXECUTION

Not Used

END OF SECTION

SECTION 01780

CLOSEOUT SUBMITTALS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Maintenance contracts.

2. Operation and maintenance data.

3. Product warranties.

4. Project record documents.

5. Extra materials.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

1.2 MAINTENANCE CONTRACTS

A. Provide Plant Maintenance as part of the work of this Contract as specified in Section 02930 - Exterior Plants.

B. Provide Elevator Maintenance as part of the work of this Contract as specified in Section 14240 - Hydraulic Elevators.

1.3 OPERATION AND MAINTENANCE DATA

A. Prepare instructions and data by personnel experienced in operation and maintenance of the described products and equipment.

B. Format:

1. Prepare data in the form of an instructional manual.

2. Binders: Commercial quality, 8-1/2" x 11", three D, side ring binders with durable plastic covers; 2" maximum ring size. When multiple binders are used, correlate the data into related, consistent groupings.

3. Cover: Identify each binder with typed or printed title OPERATION AND MAINTENANCE INSTRUCTIONS; identify the title of the Project; identify the subject matter of the contents.

4. Provide tabbed dividers for each separate product and system, with a typed description of the product and major component parts of equipment.

5. Text: Manufacturer's published data, or typewritten data on 20 pound paper.

6. Drawings: Provide with reinforced punched binder tabs. Bind in with text; fold large drawings to the size of the text pages.

7. Contents: Prepare a Table of Contents for each volume, with each product or system description identified, in three parts as follows:

   a. Part 1: Directory, listing the name, address, and telephone number of the Architect, Engineers, Contractor, subcontractor, and major equipment suppliers.

   b. Part 2: Operations and maintenance instructions, arranged by system and subdivided by Specifications Section. For each category, identify the name, address, and telephone number of the subcontractor and suppliers. Identify the following:

      1) Significant design criteria.

      2) List of equipment.

      3) Parts list for each component.

      4) Operating instructions.

      5) Maintenance instructions for equipment and systems.

      6) Maintenance instructions for special finishes, including recommended cleaning methods and materials, and special precautions identifying detrimental agents.

   c. Part 3: Project documents and certificates, including the following:

      1) Shop Drawings and product data.

      2) Air and water balance reports.

      3) Certificates.

      4) Copies of Warranties.

C. Contents, Each Volume:

1. Table of Contents: Provide the title of the Project; name, address, and telephone number of the Architect, Engineer, subconsultant, and the Contractor with the name of the responsible party; schedule of products and systems, indexed to the content of the volume.

2. For Each Product or System: List the name, address and telephone number of subcontractor and suppliers, including the local source of supplies and replacement parts.

3. Product Data: Mark each sheet to clearly identify the specific products and component parts, and data applicable to the installation. Delete or do not include inapplicable information.

4. Drawings: Supplement product data to illustrate the relationship of component parts of equipment and systems, to show control and flow diagrams. Do not use the Project Record Documents as maintenance drawings.

5. Typed Text: As required to supplement product data. Provide a logical sequence of instructions for each procedure, incorporating the manufacturer's instructions.

6. Warranties: Bind in a copy of each.

7. Lien Release: Include a copy from each subcontractor and major supplier.

D. Manual for Materials and Finishes:

1. Building Products, Applied Materials, and Finishes: Include product data, with catalog numbers, sizes, composition, and color and texture designations. Provide information for re-ordering custom manufactured products.

2. Instructions for Care and Maintenance: Include the manufacturer's recommendations for cleaning agents and methods, precautions against detrimental agents and methods, and recommended schedule for cleaning and maintenance.

3. Moisture Protection and Weather Exposed Products: Include product data listing applicable reference standards, chemical composition, and details of installation. Provide recommendations for inspections, maintenance, and repair.

4. Additional Requirements: As specified in the individual product Specifications Sections.

5. Provide a listing in the Table of Contents for design data, with a tabbed fly sheet and space for insertion of data.

E. Manual for Equipment and Systems:

1. Each Item of Equipment and Each System: Include description of the unit or system, and component parts. Identify function, normal operating characteristics, and limiting conditions. Include performance curves, with engineering data and tests, and complete nomenclature and model number of replaceable parts.

2. Panelboard Circuit Directories: Provide electrical service characteristics, controls, and communications; typed.

3. Include color coded wiring diagrams, as installed.

4. Operating Procedures: Include start-up, break-in, and routine normal operating instructions and sequences. Include regulation, control, stopping, shut-down, and emergency instructions. Include any special operating instructions.

5. Maintenance Requirements: Include routine procedures and guide for preventative maintenance and trouble shooting; disassembly, repair, and reassembly instructions; and alignment, adjusting, balancing, and checking instructions.

6. Provide a servicing and lubrication schedule, and a list of lubricants required.

7. Include the manufacturer's published operation and maintenance instructions.

8. Include sequence of operation by the controls manufacturer.

9. Provide the original manufacturer's parts list, illustrations, assembly drawings, and diagrams required for maintenance.

10. Provide control diagrams by the controls manufacturer, as installed.

11. Provide the Contractor's coordination drawings, with color coded piping diagrams, as installed.

12. Provide charts of valve tag numbers, with the location and function of each valve, keyed to flow and control diagrams.

13. Provide a list of the original manufacturer's spare parts, current prices, and recommended quantities to be maintained in storage.

14. Include test and balancing reports, as specified.

15. Additional Requirements: As specified in the individual product Specifications Sections.

16. Provide a listing in the Table of Contents of design data, with tabbed dividers and space for insertion of additional data.

1.4 PRODUCT WARRANTIES

A. Submit Warranties required for specific products or work, as specified in the individual Specifications Sections.

B. Form of Submittals:

1. Bind in commercial quality 8-1/2" x 11" three D, side ring binders with durable plastic covers.

2. Cover: Identify each binder with the typed or printed title WARRANTIES with the title of the Project; name, address and telephone number of the Contractor and equipment supplier; and the name of the responsible company principal.

3. Table of Contents: Neatly typed, in the sequence of the Project Manual, Table of Contents, with each item identified with a number and title of the Specifications Section in which specified, and the name of the product or work item.

4. Separate each Warranty with index tab sheets keyed to the Table of Contents listing. Provide full information, using separate typed sheets, as necessary. List the subcontractor, supplier, and manufacturer, with the name, address, and telephone number of the responsible principal.

C. Preparation of Submittals:

1. Obtain Warranties executed in duplicate by the responsible subcontractor, supplier, and manufacturer, within ten (10) days after completion of the applicable item of work. Except for items put into use with the Owner representative=s

approval, leave the date of the beginning of the warranty time until the Date of Final Acceptance has been determined.

2. Verify that the documents are in the proper form, contain complete information, and are notarized.

3. Co-execute submittals when required.

4. Retain Warranties until the time specified for submittal.

D. Time of Submittals:

1. For equipment or component parts of equipment put into service during construction with the Owner representative=s approval, submit documents within ten (10) days after acceptance.

2. Make other submittals within ten (10) days after the Date of Substantial Completion, and prior to the final Application for Payment.

3. For items of work for which acceptance is delayed beyond the Date of Substantial Completion, submit within ten (10) days after acceptance.

1.5 PROJECT RECORD DOCUMENTS

A. Project Record Documents required include:

1. As-Built copies of the Contract Drawings.

2. Marked-up copies of the Shop Drawings.

3. Marked-up copies of the Specifications, addenda and Contract Modifications.

4. Marked-up product data submittals.

5. Field records for variable and concealed conditions.

6. Record information on work that is recorded only schematically.

B. Specific record copy requirements that expand the requirements of this Section are included in the individual Specifications Sections of Division 2 through Division 16.

C. Maintenance of Documents: Store the Record Documents in a field office apart from the Contract Documents used for construction. Do not permit the Project Record Documents to be used for construction purposes. Maintain and protect the Record Documents from damage in a clean, dry, legible condition. Make Documents available at all times for inspection by the Owner=s representative.

D. Record (As-Built) Drawings:

1. During construction, maintain a set of blackline, white prints of the Contract Drawings and Shop Drawings for Project Record Document purposes.

a. Mark these Drawings to indicate actual installations where the installations vary from the installation originally shown. Give particular attention to information on concealed elements which would be difficult to

identify or measure and record later. Items required to be marked include but are not limited to:

1) Dimensional changes to the Drawings.

2) Revisions to Details shown on the Drawings.

3) Depth of foundations below the first floor.

4) Locations and depths of underground utilities.

5) Revisions to the routing of piping and conduits.

6) Revisions to electrical circuitry.

7) Actual equipment locations.

8) Duct sizes and routing.

9) Locations of concealed internal utilities.

10) Changes made by Contract Modifications.

11) Details not on the original Contract Drawings.

b. Mark completely and accurately record on prints of the Contract Drawings or Shop Drawings, whichever is most capable of showing the actual physical conditions. Where Shop Drawings are marked, show a cross-reference on the Contract Drawings.

c. Mark important additional information which was either shown schematically or omitted from the original Drawings.

d. Note construction change directive numbers, alternate numbers, Change Order numbers, clarification numbers and similar identification.

e. Responsibility for Markup and Supervision: Contractor Quality Control Representative, as specified in Section 01450 - Quality Control. Where feasible, the name of the individual or entity who obtained the record data, whether individual or entity is installer, subcontractor, or similar entity, is required to prepare mark-ups on the Record Drawings.

1) Accurately record information in an understandable Drawing technique.

2) Record data as soon as possible after it has been obtained. In case of concealed installations, record and check mark-ups prior to concealment.

3) Contractor Quality Control Representative: Affix signature and certify accuracy of the Record Drawings.

2. Preparation of As-Built Drawings: Immediately prior to the inspection for Final Acceptance, review the completed marked-up record Drawings with the Owner=s representative. Prepare a full set of corrected Drawings of as-built conditions.

a. Incorporate changes and additional information previously marked on the print sets. Erase, redraw, and add details and notations where applicable. Identify and date each Drawing; include the printed designation "PROJECT AS-BUILT DRAWINGS" in a prominent location on each Drawing.

b. Refer instances of uncertainty to the Owner=s representative for resolution.

c. The Owner=s representative will make the original Contract Drawings available to the Contractor in electronic format .

d. The Contractor is responsible for printing the original Contract Drawings and other Drawings.

e. Review of Drawings: Before copying and distributing, submit corrected Drawings and the original marked-up prints to the Owner=s representative for review.

3. Copies and Distribution: After completing the preparation of As-Built Drawings, submit two (2) complete sets of the Drawings on reproducible vellum sheets (24" x 36"), and two (2) complete zip disks (100 mb AutoCAD). Place each set of Drawings in durable tube-type containers with end caps. Mark the end cap of each container with suitable identification. Mark the zip disks similarly.

a. Organize and bind the original marked-up set of prints that were maintained during construction in the same manner.

E. Record Specifications:

1. During the construction period, maintain one copy of the Project Specifications, including addenda and any modifications issued, for Project Record Document purposes.

a. Mark the Specifications to indicate actual installations where the installation varies from that indicated in the Specifications and modifications issued. Note related Project Record Drawing information, where applicable. Give particular attention to substitutions, selection of product options, and information on concealed installations that would be difficult to identify or measure and record later.

1) In each Specifications Section where products, materials or units of equipment are specified or scheduled, mark the copy with the proprietary name and model number of the product furnished.

2) Record the name of the manufacturer, supplier and installer, and other information necessary to provide a record of the selections made and to document coordination with the Record Product Data submittals and Maintenance Manuals.

3) Note the related Record Product Data, where applicable. For each principal product specified, indicate whether the Record Product Data has been submitted in a Maintenance Manual instead of submitted as Record Product Data.

3. Upon completion of the mark-up, submit Record Specifications to the Owner=s representative.

F. Record Product Data:

1. During construction, maintain one (1) copy of each Product Data submittal for Project Record Document purposes.

a. Mark the Product Data to indicate the actual product installation where the installation varies from that indicated in the Product Data submitted. Include significant changes in the product delivered to the Project Site, and changes in the manufacturer's instructions and recommendations for installation.

b. Give particular attention to information on concealed products and installations that cannot be readily identified and recorded later.

c. Note related Contract Modifications and mark-up of Record Drawings, where applicable.

d. Upon completion of the mark-up, submit a complete set of the Record Product Data to the Owner=s representative with an index of all product data cross-referenced wo submittal numbers.

e. Where the Record Product Data is required as part of the Maintenance Manuals, submit the marked-up Product Data as an insert in the Manual instead of submittal as Record Product Data.

G. Additional Record Submittals:

1. Refer to other Specifications Sections for miscellaneous record-keeping requirements and submittals in connection with various construction activities. Immediately prior to Final Acceptance, complete additional records and place in order, properly identified and bound or filed, ready for use and reference. Submit to the Owner=s representative.

a. Categories of requirements resulting in miscellaneous records include, but are not limited to the following:

1) Field records of excavations and foundations.

2) Field records of underground construction and similar work.

3) Survey showing locations and elevations of underground lines.

4) Invert elevations of drainage piping.

5) Surveys establishing building lines and levels.

6) Authorized measurements utilizing unit prices or allowances.

7) Records of plant treatment.

8) Ambient and substrate condition tests.

9) Certifications received in lieu of labels on bulk products.

10) Batch mixing and bulk delivery records.

11) Testing and qualification of tradesmen.

12) Documented qualifications of installation firms.

13) Load and performance testing.

14) Inspections and certifications by governing authorities.

15) Leakage and water-penetration tests.

16) Fire resistance and flame spread test results.

17) Final inspection and correction procedures.

1.6 EXTRA MATERIALS

A. Provide products, spare parts, maintenance, and extra materials in the quantities specified in the individual Specifications Sections.

B. Deliver to the Project Site and place in a location directed by the Owner=s representative; obtain a receipt prior to final payment.

PART 2 PRODUCTS

Not Used.

PART 3 EXECUTION

Not Used.

END OF SECTION

SECTION 01910

GENERAL COMMISSIONING REQUIREMENTS

PART 1 GENERAL

1.1 DESCRIPTION

A. Purpose - The purpose of commissioning is to provide the Owner assurance that the systems listed in this section (mechanical, electrical & specialty systems) have been installed in the prescribed manner and will operate properly to fulfill the design intent as laid out in the Contract documents. Commissioning is a systematic process intended to enhance the quality of system start-up and aid in the orderly transfer of systems to beneficial use by the Owner. Commissioning during the construction phase is intended to achieve the following specific objectives according to the Contract Documents:

1. Verify that applicable component equipment and systems are installed according to the manufacturer's recommendation and to industry accepted standards and that they receive adequate operational checkout by installing contractors.

2. Verify and document proper performance of component equipment and systems.

3. Verify that O&M documentation left on site is complete.

4. Verify that the Owner's operating personnel are adequately trained.

1.2 RESPONSIBILITIES

A. General Responsibilities: The Contractor verifies installation, provides scheduling and coordination of commissioning activates, performs training, starts up component equipment, assists with functional performance testing, corrects deficiencies and assists with retests.

B. The Furnish labor and material to accomplish building commissioning as specified herein. The commissioning process does not take away from or reduce the responsibility of the system designers or installing contractors to provide a finished and fully functioning product. Commissioning does not relieve the Contractor of Contract obligations.

C. The Commissioning Authority (CA) will be provided by the Owner to lead the commissioning process, and provide an objective view of the systems, installation, documentation, operation, and performance. The responsibilities of the CA are indicated here for information only.

D. The CA will participate in reviewing the Owners Project Requirements (OPR).

E. The CA will participate in reviewing the Basis of Design (BOD).

F. The CA reviews submittals for compliance with the original design intent as reflected in the contract documents.

G. The CA will participate and perform a design review.

H. The CA will implement the Commissioning Plan

I. The CA will review the Division 15 mechanical and Division 16 electrical submittals.

J. The CA performs components equipment installation verification throughout the course of the project. The CA verifies completion of installation and may witnesses startup of component equipment.

K. The CA develops Functional Performance Tests (FPT) for component equipment and systems listed in this section.

L. The CA, with the assistance of the contractor, tests the systems designated in this section to verify conformance to the sequence of operation and design intent as reflected in the contract documents.

M. The CA will develop and maintain an Issues log throughout the commissioning process.

N. The CA will develop a Systems Manual for the Owner with participation from the contractors.

O. The CA will with the assistance of the contractors verify the owner's requirements for training have been completed.

P. The CA will provide a final commissioning report to the owner.

1.3 COORDINATION

A. The Contractor will provide overall coordination of the commissioning program as specified herein. The Commissioning process will require cooperation of the Contractor, subcontractors, vendors, Architects, CA, and Owner. The commissioning team will be comprised of the following:

1. Contractor

    a. Project Manager

        1) Subcontractor (as required by the Contractor)

2. Commissioning Authority (CA)

    a. Project Manager

    b. Contractor Consultants (as required by the CA)

3. Owner's Representative (s)

    a. Project Manager

    b. Maintenance Staff

4. Architect

    a. Architect

    b. Mechanical consultant

    c. Electrical consultant

    d. Specialty consultant (s)

1.4 SCHEDULE

A. Integrate commissioning requirements into the Critical Path Method (CPM) master construction schedule. Com missioning scheduling is the responsibility of the Contractor. In the Construction Schedule, the Contractor will schedule Commissioning Tasks. These tasks will include but are not limited to the following:

1. Submittals

2. Installation Checklist

3. Component's equipment Start-up

4. System Integration

5. Functional Performance Test

6. O&M Manuals

7. Training

8. Other tasks as required, i.e., phasing

B. The contractor will provide a copy of the CPM master construction schedule and updates to the CA as part of regular schedule updates and distribution.

1.5 COMMISSIONING MEETINGS

A. Commissioning Scoping Meeting: Within 60 days from Notice to Proceed, the CA will call for a Commissioning Scoping Meeting. The purpose of this meeting is to give instructions to the contractor on the importance of construction Installation checklists and how they will be used throughout the project. The need to have the checklists in place when work starts will be stressed. The Commissioning process will be explained in detail, including startup procedures, O&M manuals, training, and closeout procedures.

Issues related to commissioning will be discussed as required during regularly scheduled Project Meetings.

The CA may require additional meetings if the commissioning process appears to be behind schedule or if there are coordination issues.

1.6 COMPONENT EQUIPMENT & SYSTEMS TO BE COMMISSIONED

A. Definitions:

1. Component equipment or Component – a constituent element, as of a system, part of a mechanical or electrical complex.

2. System – A group of interacting, interrelated, or interdependent elements forming a complex whole, A condition of harmonious, orderly interaction.

3. Integrate – To make into a whole by bringing all parts together; unify. Many systems are coordinated with or integrated into other system s (fire/smoke dam pers with fire alarm). Integration of com ponent equipment into system s, and system -to-system integration will be tested as noted in the matrix.

Critical Mechanical systems are identified in the General Conditions, Division 15, and summarized, but not limited to, the following:

B. Systems:

1. HVAC: All HVAC systems including controls.

2. Domestic Water & DW V: All domestic water systems including, but not limited to: Water Heaters, pumps, and pressure regulators. Alternative Bid Item 8 - Rainwater Catchment system, pumps and controls.

3. Lighting: All lighting fixture interior and exterior, controls for each, occupancy sensors, low voltage control system connections & interface to energy management system. Alternative Bid Item 4 – Photovoltaics system.

1.7 COMMISSIONING REQUIREMENTS

A. The matrix below outlines required commissioning activities by system. The CA is responsible for Functional Performance Testing of the component equipment listed in this section.

As noted in the matrix, testing required by the Architect's consultants, or the Authority Having Jurisdiction (AHJ) will serve as Functional Performance Tests for those system s. The contractor will notify the CA fourteen (14) days in advance of such tests. The CA will witness testing by the Architect's Consultants and the AHJ to assure that they are adequate to completely test the system s. If the CA is unavailable at the scheduled time and location of the activity, so note, and proceed per schedule.

The Contractor will provide the CA with copies of the results of testing performed by others and within three (3) working days of the test. A list of corrections (if required) will be included.

If the CA determines that the tests are not adequate to exercise all functions of the system, the CA will develop additional tests and test the system to assure the owner that the system is completely functional.

SYSTEM	Submittal Review	Pre-functional Test Checklists	Functional Performance Test Checklist	O&M Data Review		Pre-functional Tests	Functional Performance Tests	O & M Manual	Training and Demonstration
HVAC systems									
HVAC & Controls	X	X	X	X		X	X	X	X
Domestic water systems									
Domestic hot water system & Controls	X	X	X	X		X	X	X	X
Rainwater Catchment System & Controls	X	X	X	X		X	X	X	X
Lighting systems									
Lighting Controls	X	X	X	X		X	X	X	X
Photovoltaics System	X	X	X	X		X	X	X	X

1.8 SUBMITTALS

A. The Contractor will provide copies of all approved submittals to CA for the systems

listed in this section, (see matrix above). Provide copies to the CA within 14 days of return of approved copies from Architect.

1.9 INSTALLATION CHECKLISTS

A. Contractors will utilize Installation Checklists provided by the CA which will be developed from the approved submittals. Installation Checklists are used to track proper and complete installation, start up and system integration of each component and each system being commissioned.

CA will verify that Installation Checklists are completed before any component equipment is started up. Contractor will make available the specific installation checklist for each component being started at that time for approval by the CA.

1.10 START UP

A. Develop a project startup plan for all components and systems to be commissioned. Commence with com ponent start-up after CA & Architect has approved the start-up plan and the CA has reviewed the installation checklists for completion.

The Contractor will witness system start-up and repair all system and component deficiencies noted during start-up.

The CA, the Architect's consultant (s), and / or the Owner's Representative will witness all start-up and test activities specified in this Section. The CA will designate witness and alternation for each activity.

Obtain the signature of designated witness on all data form s. If the witness is unavailable at the scheduled time and location of the activity, so note, and proceed per schedule without witness.

1.11 FUNCTIONAL PERFORMANCE TESTING (FPT)

A. Description: The purpose of Functional Performance Testing (FPT) is to assure the Owner that all work has been completed as specified and that system s are functioning in the manner intended, within the limits of the design and the contract documents.

The Contractor will verify the functional readiness of systems to be tested prior to requesting Functional Performance Testing by the CA.
Provide the Declaration of Completion to the CA with the box checked for the appropriate contractor and sign and date the form to affirm functional readiness.

Functional performance testing will commence as systems are brought to substantial completion and will be done on a system -by-system basis. The results of these tests will be documented by the CA and presented to the Owner for final system acceptance.

The FPTs and results will be passed to the owner at the end of the job as a record of baseline building performance. The owner may use the tests at any time in the future as a diagnostic tool to determine proper operation of any commissioned system in the building.

PART 2 – PRODUCTS NOT USED

PART 3 – EXECUTION

3.1 SUBMITTALS

A. Normal Submittals

The CA will receive a copy of the normal submittals for all component equipment or systems to be commissioned.

The CA will review and approve normal Contractor submittals applicable to systems being commissioned for compliance with design intent, concurrent with the A/E reviews.

3.2 INSTALLATION CHECKLIST

A. Installation Checklists and Installation Verification

The contractor will install all equipment in accordance with the Contract Documents. The Contractor will track the installation of all com ponent equipment and systems being installed as listed in this section. Tracking will be done as the work progresses using the Installation Checklist which will be provided by the CA after the equipment submittals have been approved by the Architect.

The Installation Checklist will be copied to provide individual checklists for each component or system. The installation checklist will be maintained on-site in standard 3-hole binders with Division and Section tabs for all Commissioned systems.

During on-site visits, the CA will perform a quality review of the work being completed. This may include a review of the installation checklist to ensure the work is being accomplished according to the contract documents.

If issues are found, the contractor will be notified of the issues and will be responsible for rechecking all com ponents and systems affected. Once this is accomplished, the CA will re- verify the checklist for compliance with the contract documents.

The level of urgency will be indicated on the notification.

Immediate remedy required Correct within 7 days
Correct within 30 days
Correct before job closeout

The actual completed installation checklist for each com ponent being started will be available to the CA for review and approval prior to Startup and Commissioning. Startup will not proceed without the approval of the CA.

Minor equipment issues will be listed on the Installation checklist and a complete list of issues for all equipment to be started will be available to the CA prior to start up.

The Contractor will be responsible for completion of all work including change orders and punch list items to the satisfaction of the Owner's Representative and Architect.

If any work is found to be incomplete, inaccessible, incorrect, or non-functional, make note of deficiencies and correct deficiencies before system start-up work proceeds.

Each checklist will have a place for the person doing the checklist to initial and date each item indicating the task has been completed.

3.3 PROJECT START-UP

A. Project Start-up Plan: At least 14 days prior to start-up, submit to the Commissioning

Team for review and approval, a Project start-up plan for all equipment to be commissioned, consisting of the following items:

1. Project Name
2. Data and time of planned start-up
3. System and component equipment name (s)
4. Component equipment location and ID number
5. Participating parties
6. A copy of the specification section and manufacture's installation instructions describing the start requirement.
7. The specific sequence of operations or other specified parameters being used during the start-up process.
8. Specific step-by-step procedures to execute the start-up, in a clear, sequential repeatable format for each component in the system.
9. Special cautions, alarm limits, load restrictions, etc.
10. The Contractor will take corrective action on all system deficiencies noted and demonstrate suitable system operation.
11. Owner's Representative and CA will physically witness start-up procedures.
12. Contractor will obtain signature of the Owner's Representative and CA indicating successful start-up.

Notify the Commissioning Team in writing seven (7) days prior to component equipment start-up with an agenda that will include the date, time, location, and anticipated duration for each piece of component equipment and/or system to be started.

Provide written notice a minimum of 7 working days in advance of any changes in date, time, location, or anticipated duration of start-up activities. All participants of the Commissioning team will receive notice. Contractor will reimburse Owner for actual costs incurred by the Owner as a result of failure to provide timely notice.

3.4 SUBSTANTIAL COMPLETION

A. General: See Division 1 for all requirements related to Project Closeout and Substantial Completion.

The CA must approve Substantial Completion.

Substantial Completion in the Commissioning process requires that:

1. All startup of commissioned component equipment and systems must be completed and approved.
2. All installation checklists are complete and approved.
3. O&M Manuals are complete, approved, and one copy on site.
4. The Training Plan is complete and approved.

3.5 FUNCTIONAL PERFORMANCE TEST PROCEDURES

A. Objective and Scope: Functional testing facilities bringing the systems from a state of substantial completion to full dynamic operation. Additionally, during the testing process, areas of deficient performance are identified and corrected. A representative sample of each system will be tested in all modes of operation (seasonal, occupied, unoccupied, warm -up, cool-down, part- and full-load) where there is a specified system response. Tests will verify proper responses to standard operating modes as well as failure and alarm conditions.

B. Development of Test Procedures:

1. Tests will be developed by the CA and will be based on the specifications and Sequence of Operations provided in these documents.

2. Before the CA prepares final test procedures, the Contractor will provide to the CA all documentation and a current list of change orders affecting com ponent equipment or systems, control sequence of parameters.

3. Each subcontractor or vendor responsible for component equipment or systems being tested will provide assistance to the CA in developing the FPT procedures. This assistance will be in the form of answering questions, providing documentation, etc.

4. 30 days after final submittal approval, the CA will provide a copy of the test procedures to the Architect and Contractor, who will review the test for feasibility, safety, component, and warranty protection. The contractor and Architect's Consultant will respond with approval or revisions within 2 weeks of receiving the proposed tests.

C. Execution of Testing:

1. FPT begins after all component equipment and systems are started up and TAB and all controls work is complete.

2. Testing may proceed on finished systems for which TAB has been completed before all building systems are finished at the discretion of the CA. CA must have a draft balance report for such systems before testing can proceed.

3. O&M Manuals will be completed, approved by the CA and on-site for reference during FPT. The Owner's witness will attend the Functional Performance Testing.

4. The CA will document the results of all testing and maintain a log of all issues found.

5. Address current A/E punch-lists before testing starts.

D. Test Methods:

Functional performance testing and verification may be achieved by manual testing (persons manipulate the control system or component equipment and observe performance) or by monitoring the performance and analyzing the results using the control system 's trend log capabilities or by stand-alone dataloggers. No sampling by contractors is allowed in installation checklist execution.

E. Acceptance Criteria for FPT

1. All systems and their components must pass Functional Performance Testing at a rate of 90% or higher to be acceptable.

2. Systems and their components with a passing rate of 90% or higher, will be deemed acceptable. The contractor will correct all deficiencies found by the testing procedures and notify the CA when repairs are complete. The failed tests will be repeated to verify proper system operation. If the system fails any testing during the second round of tests, the contractor will correct the deficiencies and the system will be retested until all tests are passed at the contractor's expense.

3. Systems and their components with a passing rate of less than 90% will be deemed unacceptable. The contractor will correct all deficiencies and notify the CA when repairs are complete. The system will be retested until all tests are passed at the contractor's expense.

F. Coordination and Scheduling: The Contractor will provide sufficient notice to the Owner's representative and CA to schedule FPT. This will be communicated through the Master Construction Schedule to updates hereto.

The contractor will verify the FPT schedule with the CA not less than 14 days before FPT begin by delivering the Declaration of Completion to the CA (electronically or in writing).
The Owner's witness will observe and witness the FPT of all component equipment and systems.
Provide ladders, scaffolding, and staging as required to permit the CA & Owner's witness to directly access and observe the performance of the component equipment being tested. The contractor will provide experienced craftsmen with tools to assist the CA during FPT.

Corrections of Minor Issues identified during testing may be made during the tests at the discretion of the Architect's consultant and/or the CA. In such cases the issue and resolution will be documented on the procedure form. The issues will be scored as a failure on the test form.

G. Problem Solving: The Commissioning team may recommend solutions to problems found, however the burden of responsibility to solve, correct and retest problems is with the contractor and Architect.

H. Deferred Testing

If during testing, the desired results cannot be produced because of seasonal conditions, Functional Performance Testing may be deferred until the environmental conditions are satisfactory for performing the test. The Owner's Representative and the CA will determine the scheduling for deferred seasonal test. The contractor will supply labor, material and equipment as required to assist the CA with deferred testing at no additional cost to the owner. The CA will work with the Contractors to accommodate scheduling, but no more than 14 days notice will be required to the Contractor to schedule Deferred Testing.

3.6 DOCUMENTATION, ISSUES AND APPROVALS

A. Documentation: The CA will document the results of all functional performance tests. The CA will include the completed test forms in the Commissioning manual.

B. Issues: Every effort will be made to expedite the testing process and minimize unnecessary delays, while not compromising the integrity of the procedures.

However, the CA will not be pressured into overlooking deficient work or loosening acceptance criteria to satisfy scheduling or cost issues, unless there is an overriding reason to do so at the request of the Owner's representative.

As tests progress and deficiencies are identified, the CA will discuss the issues with the Contractor.

When there is no dispute on the deficiency and the Contractor accepts responsibility to correct it.

The CA documents the deficiency. The contractor corrects the deficiency.
The contractor reschedules the test and test is repeated.

If there is a dispute about a deficiency, regarding whether it is a deficiency of who is responsible:

The deficiency will be documented on the deficiency list with the contractor's response and a copy given to the Contractor and the Architect.

Resolutions are made at the lowest management level possible. Other parties
are brought into the discussion as needed. Final interpretive authority is with the Architect. Final acceptance authority is with the Owner/Architect.

The CA documents the resolution process.

Once the interpretation and resolution have been decided, the appropriate party corrects the deficiency and provides notifies the CA. The Contractor researches the test, and the test is repeated until satisfactory performance is achieved.

The Contractor will respond in writing to the Architect and CA at least as often as project meetings are being scheduled concerning the status of each outstanding issue identified during commissioning. Discussion will cover explanations of any disagreements and proposals for their resolution.

The CA retains the original Issues list until the end of the project.

The contractor will not consider any required retesting by any contractor a justified reason for a claim of delay or for a time extension.
Failure Due to Manufacturer's Defect: If 10% or three, whichever is greater, of identical pieces (size alone does not constitute a difference) of component equipment fail to perform to the Contract Documents (mechanically or substantively) due to manufacturing defect, not allowing it to meet its submitted performance spec, all identical units may be considered unacceptable by the Architect or Owner's representative. In such case, the

Contractor will provide the Owner with the following:

Within one week of notification from the Architect or Owner's representative, the Contractor or manufacturer's representative will examine all other identical units making a record of the findings. The findings will be provided to the Architect,
Owner's representative within two weeks of the original notice.

Within two weeks of the original notification, the Contractor or manufacturer will provide a signed and dated, written explanation of the issue, cause of failures, etc. and all proposed solutions' which will include full component equipment submittals. The proposed solutions will not significantly exceed the specification requirements of the original installation.

The Architect or Owner's representative will determine whether a replacement of all identical units or a repair is acceptable.

Two examples of the proposed solution will be installed by the Contractor and the Architect or Owner's representative will be allowed to test the installation for up to one week, upon which the Architect or Owner's representative will decide whether to accept the solution.

Upon acceptance, the Contractor and/or manufacturer will replace or repair all identical items, at their expense and extend the warranty accordingly, if the original component equipment warrant has begun. The replacement/repair work will proceed with reasonable speed beginning within one week from when parts can be obtained.

B. Approval. The CA notes each satisfactorily demonstrated function on the test form. Formal approval of the functional test is made later after review by the Architect's consultant and the CA and by the Owner's representative, if necessary. The CA recommends acceptance of testing to the Owner's representative in this final report. Non-Conformance – Cost of Retesting. The cost for the Contractor to retest a pre-functional or functional test, if they are responsible for the deficiency, shall be theirs. If they are not responsible, any cost recovery for retesting costs shall be negotiated with the Architect.

1. For a deficiency identified during Functional Performance Testing, the following shall apply:

a. The Commissioning Authority and/or Owner's Representative will retest the equipment, when notified by the Contractor in writing that the deficiency has been corrected. The cost for retesting will be changed to the Contractor. The amount of the change will be deducted from the final progress payment. These charges can include lodging, meals, travel, equipment rental, and labor costs for the Commissioning Authority and/or Owner's Representative.

2. The reason that the charges are the Contractor's responsibility are as follows:

a. The Contractor approved the Functional Performance tests prior to testing. The Contractor and subcontractor signed the Declaration of Completion. The Contractor has run the tests to make sure the equipment functions.

C. Any design deficiencies discovered during the Contractor test were identified and worked out with the Architect/Engineer prior to scheduling the Functional Performance tests.

D. The retesting process will be repeated until satisfactory performance is achieved. Because the Contractor has verified that the equipment is ready for retesting, each retest is subject to a charge to the Contractor, if the test fails. It is important that the Contractor verify performance before asking for a retest.

E. Refer to the sampling section of Section 01810, Part 3.5 for requirements for testing and retesting identical equipment.

3.7 OPERATIONAL AND MAINTENANCE (O&M) MANUALS

A. As part of the required submittals for the Contractor, Contractor will submit a draft copy of the Operation and Maintenance Manuals within 30 days after normal submittals have been approved.

Submit the draft for review by the Owner's Representative, Architect, and Commissioning Agent to ensure completeness, proper written communications, and compliance with each review's knowledge of the significant requirements. The CA will review O&M manuals for compliance with the specifications. Unacceptable Manuals will be returned to the Contractors for revision and resubmitted for review by the CA. The following documentation

will be included for all Divisions:

1. Format: 8 ½" x 11" loose-leaf binders. Each binder will be clearly labeled on the spine. Use as many as required. Do not overload binders. There will be dividers with permanently marked tabs of card stock separating each section and subsection. Tab labels will not be handwritten.

2. There will be a title page and table of contents in the front of each binder for each binder's contents. In each binder, there will be a main tab for each specification section. Behind the section number tab there will be the component equipment ID tag sub-tab for each piece of major component equipment (or group, if small or numerous). These sub-tabs will be similar to the specification number tabs but have a different color. Behind each component equipment name tab will be following sections, in the given order, divided by a double weight colored sheet labeled with the title of the section.

B. Contractor: The first page behind the component equipment tab will contain the name, address and telephone number of the manufacturer and installing contractor and the 24-hour number for emergency service for all component equipment in this section, identified by component equipment.

C. Submittal and Product Data: This section will include all approved submittal data, cut sheets and appropriate shop drawings. If submittal was not required for approval, descriptive product data will be included.

D. Operation and Maintenance Instructions: These will be the written manufacturer's data with the model and features of this installation clearly marked and edited to omit reference to product or data not applicable to this installation. This section will include data on the following:

1. Installation, startup and break-in instructions.

2. All starting, normal shutdown, emergency shutdown, manual operation, seasonal changeover and normal operating procedures and data, including any special limitations.

3. O&M and installation instructions that were shipped with the unit.

4. Preventative maintenance and service procedures and schedules.

5. Troubleshooting procedures

6. A parts list, edited to omit reference to items that do not apply to this installation.

7. Lists of any special tools required to service or maintain the component equipment.

8. Performance data, ratings and curves

9. Warranty, which clearly lists conditions to be maintained to keep warranty in effect and conditions that would affect the validity of the warranty.

10. Any service contracts issued.

E. Supplemental Data: Prepare written text and/or special drawings to provide necessary information, where manufacturer's standard printed data is not available and information is necessary for a proper understanding and operation and

maintenance of component equipment or systems, or where it is necessary to provide additional information to supplement data included in the manual or project documents.

F. Specifications: This section is comprised of the component or system specification section copied and inserted complete with all addenda.

G. System Description: This section will include the individual component equipment portion of the overall system Design Documentation Narrative, if available. It will contain simplified professionally drawn single ling system diagrams on 8 ½ x 11 or folded 11 x 17 sheets, if the system's control drawing is not adequate.

H. Preventive Maintenance Instructions: This section will include condensed typewritten excerpts from the manufacturer's written instructions for weekly, monthly, quarterly, annual, etc. maintenance.

I. Preventive Maintenance Index: This section will include a list of the location by O&M document name and page number of any preventative maintenance instructions applicable to this piece of component equipment.

J. Condensed Operating Instructions: This section will include condensed instructions for start-up, shutdown, emergency operation, safety precautions, unusual features and troubleshooting suggestions. Where control is clearly covered in controls description, it is not to be duplicated here.

In addition, a copy of these instructions will be clearly laminated and secured adjacent to the component equipment where it can be easily read by operating personnel. These instructions will be provided for boilers, furnaces, chillers, pumps, heat rejection component equipment, large air-handling units (greater than 10 tons), heat pump systems, control system, air compressor and dryers.

3.8 TRAINING

A. Prepare and submit for approval an owner's facilities maintenance staff training plan. Training plan will include for each training session:

1. Dates, start and finish times and locations.

2. Outline of the information to be presented.

3. Names and qualifications of the presenters.

4. List of texts and other materials required to support training.

Training materials are due 30 days before training is scheduled to begin. This will be provided to the Architect for review and approval by the design team and the CA.

Obtain assistance from appropriate subcontractors and vendors to provide training for the Owner's operations staff, as specified in all Divisions.

The Owner's Representative will arrange to provide videotaping of training sessions. Training will be in a classroom setting with the appropriate schematics, handouts and audio/visual training aids.

Host each training session.

Provide program overview and curriculum guidance.

Obtain signatures of attendees on a sign-in list.

Component equipment vendors provide training on the specifics of each system and philosophy, troubleshooting and repair techniques as specified in the relevant sections of this specification.

Installation subcontractors provide training on peculiarities specific to this project and job-specific experience as specified in the relevant sections of this specification.

3.9 FINAL COMPLETION

A. The CA will review Contractor's records of completion of commissioning requirements. Upon receiving evidence of satisfactory completion of Final Completion requirements, the CA will submit to the Owner recommendation to accept Final Completion.

3.10 EXCLUSIONS

A. The Owner's Representative and CA are not responsible for construction means, methods, job safety or any management function related to commissioning on the job site.

The Contractor will provide all technician services requiring tools or the use of tools to test, adjust, or otherwise bring component equipment into a full operational state.

DOCUMENTATION REQUIRED FOR DIVISION 1

B The General Contractor will provide the following documentation before Final Acceptance:

1. Copy of Completed Certificate of Occupancy with approval signatures of all Authority Having Jurisdiction

DECLARATION OF COMPLETION

Prior to Functional Performance Testing, the General Contractor will verify with the listed Subcontractors that work is ready and then will complete this document.

Declaration

I declare that I have reviewed the specifications and construction documents and found that all work has been completed, verified and ready to perform as specified by the following subcontractors:

Irrigation / Rainwater system Contractor
Mechanical Contractor
Controls Contractor
TAB Contractor
Electrical Contractor

I have determined that all work has been completed; all corrections, punch-list items, and deficiencies have been corrected to the best of my knowledge and ability, except for those items listed here:

1.
2.
3.
4.
5.

I affirm that the com ponents and system s are ready for Functional Performance Testing and understand the penalties associated with retesting, as outlined in Section 01910, should com ponents or system s fail to perform as specified.

General Contractor: _____ Date: _____

END OF SECTION 01910

SECTION 02050

DEMOLITION AND REMOVAL

PART 1 - GENERAL

1.1 PROCEDURES: Areas in which demolition and removal is to be accomplished shall be as indicated on the drawings either specifically or as a necessary or incidental part of the work. The procedures shall provide for the safe conduct of the work, careful removal and disposition of materials to be removed, protection of property, which is to remain undisturbed, and coordination with other work involved.

1.2 Do not begin demolition until authorization is received from the Engineer. Remove rubbish and debris from the project site daily; do not allow accumulations inside or outside the buildings. Store materials that cannot be removed daily in areas designated by the Engineer/Owner's Representative.

1.3 The Contractor shall submit his/her demolition and removal procedures to the Engineer/Owner's Representative for approval before work is started. Demolition plan shall include procedures for careful removal and disposition of materials specified to be salvaged, coordination with other work in progress, a disconnection schedule of utility services, and a detailed description of methods and equipment to be used for each and sequence of operation.

1.4 EXPLOSIVES: Use of explosives will not be permitted.

1.5 PROTECTION OF EXISTING STRUCTURES, UTILITIES AND OTHER ITEMS OF PROPERTIES: Existing structures, utilities, and other items of properties to remain shall be protected from damage during demolition and removal operation. Any damage to existing facilities, structures, utilities or other works shall be repaired by the Contractor, using materials equal to or better than those existing, all at the Contractor's expense.

1.6 In addition, the Contractor shall seek and obtain written clearances from all utility agencies of the Government of Guam, specifically DPW, GPA, GTA, GWA, DOCOMO, etc. prior to undertaking demolition/removal operations. As part of obtaining such clearances, the Contractor shall specifically request each utility agency to stake out the location of their utilities prior to undertaking any demolition or removal work.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 DEMOLITION

A. The work includes the demolition and removal of existing structures, concrete pads, fences, waterlines, and other items as indicated on the drawings or as required to accomplish the work. Miscellaneous items that will be a hindrance or hazardous to the work to be done shall be removed and disposed of as directed by the Engineer/Owner's Representative.

B. Dust and Noise Control: The amount of dust resulting from demolition shall be controlled to prevent the spread of dust to occupied portions of the area and to avoid creation of a nuisance in surrounding areas. Use of water will not be permitted when it will result in, or create, hazardous or objectionable conditions such as flooding, or pollution. Noise associated with the demolition shall be controlled by proper selection of the equipment used, procedure selected, time of day, or day of the week the work is accomplished, to minimize adverse effects of the necessary noise on the every-day operations or activities of the Contractor.

C. Notifications: Furnish timely notification of demolition work to the Engineer/Owner's Representative in writing 10 working days prior to the commencement of demolition work.

D. Traffic Control Plan: Where pedestrian and driver safety is endangered in the area of removal work, use traffic barricades with flashing lights. Notify the Engineer/Owner's Representative prior to beginning such work.

E. Existing Work: Protect existing work, which is to remain in place, be reused, or remain the property of the Government. Repair items, which are to remain, and which are damaged during the performance of the work to their original or better condition or replace with new. Provide new supports and reinforcements to existing construction weakened by demolition or removal work. Repairs, reinforcements, or structural replacements must have Engineer's/Owner's Representative's approval.

F. Relocations: Perform the removal and reinstallation of relocated items as indicated with the workmen skilled in the trades involved. Coordinate with agency that has jurisdiction over the utility to be relocated. Repair items to be relocated, which are damaged or replace damaged items with new undamaged items as approved by the Engineer/Owner's Representative.

G. Title to Materials: Except where specified in other Sections, all material and equipment removed, and not reused, shall become the property of the Contractor and shall be removed from the project site. Title to material resulting from demolition, and materials and equipment to be removed, is vested in the Contractor upon approval by the Engineer/Owner's Representative of the Contractor's demolition and removal procedures, and authorization by the Engineer/Owner's Representative to begin demolition. The Owner will not be responsible for the condition or loss of, or damage to, such property after contract award. Materials and equipment shall not be viewed by prospective purchasers or sold on the site.

H. Salvage: The Contractor shall remove existing facilities, as necessary or as indicated; salvage usable materials as directed; store, transport, stockpile and/or protect it at the location designated. All salvaged materials shall be the property of the Owner.

I. Disposition: Refuse resulting from demolition operations shall be hauled at the Contractor's expense to an approved disposal site(s) or landfill and shall be disposed of at the Contractor's expense in such a manner as to meet all applicable requirements, regulations and laws of the Government of Guam regarding environmental protection, health, safety and public welfare. The Contractor may not dispose of such refuse by burning on the site of the project at any time.

In no case shall any material be left on the project, shoved onto abutting properties or areas, or be burned in embankments or trenches on the project. Demolition and removal/disposal operations shall be carried out well in advance of construction operations so as to permit a well planned schedule of work.

3.2 CLEANUP: Upon completion of demolition and removal operations, the entire area shall be cleaned of all debris and rubbish in a manner satisfactory to the Engineer/Owner's Representative.

END OF SECTION 02050

SECTION 02050

DEMOLITION AND REMOVAL

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Demolition and removal of existing structures, concrete pads, water lines, sewer lines, fences, and other items as indicated on the Drawings, and as required to accomplish the work.

2. Disconnection, capping and identification of utilities.

3. Removal and disposal of miscellaneous items that will be a hindrance or hazardous to the work to be done, as directed by the Owner=s representative.

4. Demolition of designated structures, foundations, walls, columns, beams and roofs.

5. Removal of suspended ceilings and components; light fixtures, grills and diffusers.

6. Removal of designated partitions and components; frames, doors and windows.

7. Removal of designated building equipment, fixtures and cabinetry.

8. Removal of designated finishes and specialty items.

9. Disconnection, capping and identification of utilities.

10. See Mechanical Sections for fire sprinkler, air conditioning and ventilation systems requirements.

11. See Electrical Sections for lighting, power and alarm systems requirements.

12. Protection of materials removed and stored for re-use.

13. Construction and maintenance of temporary partitions to allow continual occupancy of adjacent building areas.

14. Disposal of materials at approved off-site location(s).

15. Procedures for safe conduct of the work.

16. Protection of property to remain.

17. Coordination with other work.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

1.2 DESCRIPTION OF WORK

A. The extent of the demolition and removal work is indicated on the Drawings and as specified herein, and includes the demolition of designated existing construction, equipment, fixtures and cabinetry; protection of materials for re-use; construction of temporary partitions; disconnection, capping and identification of utility services; removal and disposal of debris; and protection of property to remain.

1.3 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Submit a demolition and removal plan for approval before work begins. Include procedures for careful removal and disposition of the materials specified to be salvaged, disconnection schedule for utility services, coordination with other work, and a detailed description of methods and equipment to be used for each, and the sequence of operation.

1.4 REQUIREMENTS

A. Conform to Section 01560 - Environmental Protection and applicable codes and regulations of authorities having jurisdiction for demolition, removal and disposal.

B. Obtain written clearances from all public and private utility companies and agencies serving the Project Site prior to the start of any demolition work. Request that each utility agency mark the location of their utility service.

C. Obtain all required government Permits.

D. Conform to applicable regulatory procedures if hazardous, toxic or contaminated materials are encountered. Immediately notify the Owner=s representative, in writing.

E. Conduct demolition to minimize impact on existing and adjacent structures. Protect existing structures, utilities, and other items of properties to remain from damage during demolition and removal operations.

F. Minimize interference with adjacent building occupancies.

G. Immediately cease operations if adjacent structures appear to be in danger, and take appropriate corrective measures to ensure safety of the structures and occupancies.

1.5 PROJECT CONDITIONS

A. Provide, erect, and maintain temporary shoring, dust barriers, and security and protection barriers.

B. Conduct demolition to minimize interference with adjacent building areas.

C. Maintain protected access and egress at all times.

D. The use of explosives will not be permitted.

PART 2 PRODUCTS

Not Used

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that measurements, surfaces, materials, substrates and conditions are as indicated.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section, Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Construct and maintain weatherproof closures for unprotected existing openings.

B. Construct and maintain temporary partitions or barriers to prevent the spread of dust, fumes, noise and smoke to adjacent occupied facilities.

C. Protect existing work not indicated to be altered or removed.

D. Provide bracing and shoring as required for work to remain.

E. Disconnect, remove and cap designated utility services within the demolition area. Mark the location of disconnected utilities. Identify and indicate the capped locations on the Project Record Documents.

3.3 REMOVAL

A. Do not begin demolition until authorization has been received from the Owner=s representative.

B. Notify the Owner=s representative, in writing, ten (10) working days prior to commencement of the work.

C. Construct demolition in an orderly and careful manner. Protect existing construction to remain.

D. Where indicated, remove foundation walls and footings to the dept below finished grade, as shown.

E. Remove concrete curbs, walks and asphalt paving on grade. Backfill, rough grade and compact areas affected by the demolition.

F. Dust and Noise Control:

1. Dust resulting from the demolition shall be controlled to prevent the spread to occupied portions of the area, and to avoid creation of a nuisance in surrounding areas. The use of water will not be permitted when it will result in, or create hazardous, objectionable conditions, flooding or pollution.

2. Noise associated with the demolition shall be minimized by the selection and use of the proper equipment, procedures implemented, time of day, or day of the week the work is to be accomplished, to minimize the adverse effects of noise from operations and activities of the Contractor.

G. Traffic Control Plan: Where pedestrian and driver safety is endangered in the area of the removal work, install traffic barricades with flashing lights.

H. Existing Work: Protect existing work which is to remain in place, be reused, or remain the property of the Owner. Repair items, which are to remain but are damaged during performance of the work, to their original or better condition or replace with new. Provide new supports and reinforcements to existing construction weakened by the demolition and removal work. Repairs, reinforcements and structural replacements must be approved by the Owner=s representative.

I. Relocations: Perform removal and reinstallation of relocated items, as indicated, with workmen skilled in the trades involved. Coordinate with the agency that has jurisdiction over a utility to be relocated. Repair items to be relocated, which are damaged or replace damaged items with new undamaged items, as approved by the Owner=s representative.

J. Ownership of Materials: Except where specified in other Sections, all material and equipment removed, and not reused, shall become the property of the Contractor and shall be removed from the Project Site. The ownership of materials resulting from demolition, and materials and equipment removed, is vested in the Contractor upon approval of the Contractor=s demolition and removal plan and procedures, and authorization by the Owner=s representative. The Owner will not be responsible for the condition or loss of, or damage to, such property after the Contract award. Prospective purchasers shall not be allowed on the Project Site to view materials and equipment to be sold by the Contractor.

K. Salvage: The Contractor shall remove existing facilities, as necessary or as indicated; salvage usable materials as directed; store, transport, stockpile and / or protect materials at the location designated. All salvaged materials shall remain the property of the Owner.

L. Disposition:

1. Refuse resulting from demolition operations shall be hauled to an approved disposal site(s) or landfill and shall be disposed of in a manner to meet all applicable federal and local requirements, regulations and laws regarding environmental protection, health, safety and public welfare.

2. Remove rubbish and debris from the Project Site daily. Do not allow accumulation inside or outside the building. Store materials that cannot be removed daily in areas designated by the Owner=s representative.

3. Materials shall not be left on the Project Site, moved to adjoining properties or areas, or be buried on-site.

4. Refuse may not be burned on the Project Site.

5. Remove and promptly dispose of contaminated, vermin infested, and dangerous materials encountered.

M. Restore damaged surfaces, equipment and fixtures to their condition prior to beginning the work, with the same type materials, size and finish as the existing. Damage to existing facilities, structures, utilities or other work to remain shall be repaired by the Contractor using materials equal to or better than those existing, and at the Contractor=s expense.

3.4 CLEANUP

1. Upon completion of demolition and removal operations, the entire area shall be cleaned of all debris and rubbish in a manner satisfactory to the Owner=s representative.

2. Leave the areas of work in a broom clean condition.

END OF SECTION

SECTION 02102

CLEARING AND GRUBBING

PART 1 - GENERAL

1.1 PROCEDURES: Areas in which clearing and grubbing is to be accomplished shall be as indicated on the drawings either specifically or as a necessary or incidental part of the work. The procedures shall provide for the safe conduct of the work, careful removal and disposition of materials to be removed, protection of property that is to remain undisturbed and coordination with other work involved.

1.2 EXPLOSIVES: Explosives shall not be used for clearing and grubbing work.

1.3 PROTECTION OF EXISTING STRUCTURES, UTILITIES AND OTHER ITEMS OF PROPERTIES: Existing structures, utilities, and other items of properties designated to remain not identified to be removed shall be protected from damage during clearing and grubbing.

In addition, the Contractor shall seek and obtain written clearances from utility agencies, with existing utilities at the site, structures, and facilities at or near the project site, prior to undertaking any clearing and grubbing operations. Any damage to existing facilities, structures, utilities or other works shall be repaired by the Contractor, using materials equal to or better than those existing, all at the Contractor's expense.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 CLEARING: Clearing shall consist of the felling of trees and the satisfactory disposal of surface objects, trees, and other vegetation not designated to remain, including mowing, as required. Trees, stumps, roots, brush, and other vegetation in areas to be cleared shall be cut off six (6) inches below the existing ground surface, except such trees and vegetation as may be indicated or directed to be left standing. Hedges shall be pulled or grubbed in such a manner as to assure complete and permanent removal. Clearing shall also include the removal and disposal of structures that obtrude, encroach upon, or otherwise obstruct the work. Demolition is specified in the Section 02050 entitled “Demolition and Removal”.

3.2 TREE REMOVAL: Trees not designated by the drawings or by the Engineer/Owner’s Representative to remain shall be removed by cutting to 6 inches below the existing ground without removing stumps, unless otherwise required. The work shall include the felling and disposal of such trees.

3.3 GRUBBING: Grubbing shall consist of the removal and disposal of stumps, roots larger than three (3) inches in diameter, and matted roots from the area as affected by the proposed site improvements. This material, together with logs and other organic or non-perishable solid objects shall be excavated and removed to a depth of not less than twelve (12) inches below the original soil surface level of the ground in areas indicated to be grubbed and in areas indicated as construction areas under this contract. Depressions made by grubbing shall be filled with suitable material and compacted to make the surface conform to the original adjacent surface of the ground.

3.4 DISPOSAL OF CLEARED AND GRUBBED MATERIALS: All trees, shrub vegetation, and debris shall be removed from the project site and disposed of at an approved location. The Contractor shall make all necessary arrangements with property owners in writing as well as obtain required permits for the use of off-site disposal locations. Woody material may be disposed of by chipping. The wood chips may be used for mulch, slope erosion control or may be uniformly spread over selected areas as directed.

END OF SECTION 02102

SECTION 02200

EARTHWORK

PART 1 - GENERAL

1.1 APPLICABLE PUBLICATIONS: In addition to the recommendations provided within the soils report, which is to be followed closely by the Contractor, the latest issues of the publications listed below form a part of this specification to the extent referenced. The publications are referred to in the text by the basic designation only.

A. American Society for Testing and Materials:

C 136	Sieves or Screen Analysis of Fine and Coarse Aggregates
D 1140	Amount of Material in Soils Finer than the No. 200 (75 micrometer) Sieve
D 1556	Density of Soil in Place by the Sand Cone Method
D 1557	Moisture Density Relations of Soils and Soil Aggregate Mixtures Using 10-lb. (4.54kg) Rammer and 18-in (457-mm) Drop
D 2419	Test for Sand Equivalent Value of Soils and Fine Aggregate
D 2487	Classification of Soils for Engineering Purposes
D 2922	Density of Soil and Soil-Aggregate In Place by Nuclear Methods (Shallow Depth)
D 3017	Moisture Content of Soil and Soil Aggregate In Place by Nuclear Methods (Shallow Depth)
D 4318	Liquid Limit, Plastic Limit and Plasticity Index of Soils

1.2 Army Corps of Engineers Publications:

Army Corps of Engineers Manual EM-385-1-1

1.3 DESCRIPTION OF WORK

This Section covers all earthwork required by the project and other work necessary to complete the work, as shown in the drawings. In addition, this Section covers all earthwork required for restoration of damaged existing roads and driveways affected by the construction activities.

1.4 SUBMITTALS

A. Certified Test Reports: Submit certified test reports before starting work for the following:

1. Fill, backfill, bedding tested in accordance with ASTM C136 and ASTM D2487.

1.5 DELIVERY AND STORAGE: Deliver and store materials in a manner to prevent contamination or segregation.

1.6 SOIL SUBSURFACE INVESTIGATIONS: Refer to General Site Assessment and Preliminary Geotechnical Recommendations, prepared by Geo-Engineering & Testing, Inc., dated 15 June 2022. The boring logs show majority of subsurface soils at the site are moderately hard to hard coralline

limestone. The Contractor shall be prepared to work on this type of condition without additional costs to the Owner.

1.7 CRITERIA FOR BIDDING AND PREVAILING WORK CONDITIONS: Base bids on the following criteria and be fully prepared to work under the following prevailing conditions:

A. Surface elevations are as indicated.

B. Pipes, cables and/or other artificial obstructions in addition to those indicated will likely be encountered.

C. Abandoned pipes or other artificial obstructions encountered are to be demolished and removed at the direction of the Engineer/Owner's Representative.

D. Hard material in the form of concrete foundations, asphaltic-concrete pavement and coral rock will be encountered. Hard material is defined as solid rock, firmly cemented unstratified masses, or conglomerate deposits possessing the characteristics of solid rock which can not ordinarily be removed without systematic drilling and blasting or use of special high impact rock-breaking equipment, and any boulder, masonry, or concrete except slabs, pavement, curbs and foundations, exceeding 1/2-cubic yard in volume.

E. Unless allowed in other parts of the Contract, all earthworks are unclassified and that no special or additional compensation will be made for any class of excavation whatsoever, regardless of the type of material or quantity encountered. No extra compensation will be made by reason of any misunderstanding or error on the part of the Contractor with regards to the site, the conditions thereof or the amount and kind of earthwork to be performed.

1.8 PROTECTION OF EXISTING FACILITIES

Existing utilities and construction shall be protected from damage during earthwork operations. The Contractor shall seek and obtain written clearances from all utility agencies, both private and the Government of Guam, specifically DPW, GPA, GWA, GTA, DOCOMO, etc. prior to undertaking any earthwork operations. As part of obtaining such clearances, the Contractor shall specifically request each utility agency to stake out the location of their utilities prior to undertaking any excavation or filling work. In addition, the Contractor shall obtain and use as reference as-built drawings of existing utilities from all utility agencies that may have utilities at the project site. Any damages to existing facilities, public or private, shall be promptly repaired by the Contractor at no additional costs. Damages to existing facilities, structures, utilities or other works shall be repaired by the Contractor, using materials equal to or better than those existing, all at the Contractor's expense.

When directed by the Engineer/Owner's Representative, excavation near or around known utilities shall be by careful hand excavation. Hand excavation shall start at a reasonable distance from each side of the indicated obstruction and shall be continued until the obstruction is uncovered or until clearance for the new work is assured. The Contractor shall properly support all uncovered utilities or other existing work as affected by the contract excavation.

Report to the Engineer/Owner's Representative any condition found which is not indicated on or anticipated by the drawings and specifications and do not proceed with work in the affected area until a decision is rendered.

1.9 SAFETY REQUIREMENTS: Work on this project shall comply with OSHA requirements and conform to safety requirements set forth in Army Corps of Engineers (ACOE) Manual, EM-385-1-1.

PART 2 - PRODUCTS

2.1 SOIL MATERIALS: In general, shall be free of debris, roots, wood scrap material, vegetable matter,

refuse, soft unsound particles, deleterious, or objectionable materials.

A. General Fill: Shall conform to the general requirements for soil materials and shall meet the following requirements:

1. Liquid Limit (minus #40 mesh material): Not more than 40.
2. Plasticity Index: Not more than 15.
3. Material passing No. 200 mesh sieve: 25 percent maximum.
4. Maximum particle size (in any dimension): 4 inches

On-site excavated materials or materials obtained from designated borrow areas meeting the above requirements may be used.

B. Select Fill: Material for select fill shall be coral limestone or basalt, free of objectionable materials and of fragments no larger than two (2) inches in any dimension. Material shall meet the following requirements:

Sieve Size	Percent Passing by Weight
2 inches	100
No. 4	10 - 100
No. 200	8 - 25
Liquid Limit = 25 maximum	
Plasticity Index = 6 maximum	

C. Crushed Rock: Crushed rock specified for use as sub-grade improvement, or blending with on-site excavated soil materials shall consist of clean crushed coral rock, and except where otherwise specified, shall be in pieces varying from 1/2 inch to 2 inches.

D. Sub-basecourse: Sub-basecourse may be pit run coral limestone, meeting the following properties:

Sieve Size	Percent Passing
3 inches	100
2.5 inches	90 – 100
2 inches	-
1.5 inches	-
¾ inch	-
No. 4	40 – 90
No. 30	-
No. 200	0 – 25
Liquid Limit	Not greater than 25
Plasticity Index	Not greater than 6
R-Value	Not less than 56
Loss Angeles Abrasion	Not greater than 50
Sand Equivalent	Not less than 25

E. Base Course: Refer to Section 02203 of this specification.

F. Unsuitable Materials: In general, unsuitable materials consist of soft soils that cannot meet the compaction requirements after reconditioning by approved methods, and of other objectionable materials.

G. Material Sources: The Contractor shall be responsible for procuring materials from sources approved by the Engineer/Owner's Representative. Unless otherwise indicated by the

drawings, all borrow or imported materials for earthwork shall be obtained from approved sources off site. Materials shall be selected, mixed and or blended thoroughly to conform to the required specifications for each class of material and stored in stockpiles that are segregated from other materials. Representative samples of each stockpile must be taken by the Independent Laboratory employed by the Contractor in the presence of the Engineer/Owner's Representative. No material shall be used in the work or placed in any other location on the project site without the written approval of the Engineer/Owner's Representative.

All clearing, grubbing, quarrying, crushing, hauling, mixing or blending and other work related or incidental to the importation or processing of materials shall be at the Contractor's expense.

PART 3 - EXECUTION

3.1 GENERAL

A. Demolition and Removal: Shall be as specified in Section 02050, entitled "Demolition and Removal".

B. Removal of Unsuitable Material: Remove soil, muck, rubbish, debris and other unsuitable material at and under areas designated for construction, to a depth as determined by the Soils Engineer.

C. Excavation: This work shall consist of excavation, disposal and/or compaction of all materials of whatever character encountered within the limits of the work and which is necessary for the construction of improvements in accordance with the grades, thicknesses and typical cross sections shown on the drawings or established by the Engineer/Owner's Representative. Suitable materials removed from the excavation may be used as far as practicable in the formation of embankment, sub-grade, bedding, and backfill for structures and pipes, and for other purposes shown on the drawings or as directed.

D. Filling (Placement of Fill and Embankment): Filling in areas indicated on the drawings shall consist of placing and compacting of approved material on approved sub-grade, including the placing and compacting of fill material in areas where unsuitable materials have been removed, holes, pits, and other depressions within the project area.

E. Dewatering: Include in dewatering the collection and disposal of all forms of surface and subsurface water that may be encountered in the course of construction.

3.2 REQUIREMENTS FOR GRADING

A. Preparation for Grading: Prior to beginning excavation, grading, and filling work in any area, perform all necessary demolition and removal and clearing and grubbing work in that area in accordance with Section 02050, entitled "Demolition and Removal" and Section 02102, entitled "Clearing and Grubbing".

Where filling below sub-grade is to be made, all sod and vegetable matter, and unsuitable materials shall be removed from the surface upon which the fill is to be placed, and the cleared surface shall be completely broken up by plowing, scarifying, or stripping to a minimum depth of 6 inches and compacted as per Subparagraph 3.2(F).

B. Utilization of Excavated Materials: All suitable material removed from excavation shall be used as far as practicable in the formation of the embankment, filling, sub-grade, and backfill for structures, and for other purposes shown on the drawings or as directed. Only approved materials shall be used in the construction of embankments and backfills. All unsuitable

material shall be properly disposed of at the Contractor's expense at designated and/or approved disposal areas. All excess materials, including rock and boulders that cannot be used in fill areas shall be disposed of as directed by the Engineer/Owner's Representative on or off the project site at the Contractor's expense. Material encountered in the excavation and determined by the Engineer/Owner's Representative as suitable for topping or fill, or other purposes shall be conserved and utilized as directed.

C. Drainage Ditches and Swales: If any drainage ditches and swales required or to be restored after construction shall conform to the slope, grade, and shape of the required cross-section, with no projections of roots, stumps, rock or similar matter. The Contractor shall maintain and keep open and free from leaves, sticks, and other debris all ditches dug by him until final acceptance of the work.

D. Removal of Unsuitable Material: The Contractor shall not excavate beyond the dimensions and elevations established, except where unsuitable materials are encountered in the sub--grade. Where unsuitable materials are encountered, such material shall be removed to a depth required to obtain a dense, unyielding sub-grade as determined by the Soils Engineer. The excavation shall then be backfilled with select fill compacted as required in this Section. If the bottom of excavation is too soft for placing compacted select fill, crushed rock shall be used for backfill in lieu of general fill. Crushed rock backfill shall be spread uniformly without segregation. The upper surface of the crushed rock shall be compacted until it is dense and non-yielding. This work shall be a basic responsibility of the Contractor and shall be accomplished at no additional costs.

E. Placing General Fill: Unless otherwise permitted by the Engineer/Owner's Representative, fills and backfills shall not contain mulch, roots, sod, or other deleterious matter. Rocks, broken concrete, or other solid, bulky materials shall not be placed in embankments areas where piling is to be placed or driven.

Fill material shall be placed in horizontal layers not exceeding 8 inches (loose measurement) and shall be compacted as specified before the next layer is placed, except as otherwise directed by the Engineer/Owner's Representative. Effective spreading equipment shall be used on each lift to obtain uniform thickness prior to compacting. As the compaction of each layer progresses, continuous leveling and manipulating will be required to assure uniform density. Water shall be added or removed, if necessary, in order to obtain the required density. Removal of water shall be accomplished through aeration by plowing, blading, disking, or other methods satisfactory to the Engineer/Owner's Representative. Hauling equipment shall be dispersed uniformly over the entire surface of the previously constructed layer to minimize rutting or uneven compaction.

F. Compaction: Unless otherwise indicated on the drawings or in the other Sections of these specifications, the Contractor shall compact the material placed in all general fill layers, including sub-basecourse, sub-grade fills, and other materials scarified to the designated depth below sub-grade in cut sections, until a uniform density of not less than 95 percent of the maximum dry density as determined by ASTM D1557.

3.3 EARTHWORK FOR STRUCTURES AND PAVEMENTS

A. Description: This work shall consist of the necessary excavating and backfilling for foundations, structures, and pavements in reasonably close conformity with the drawings or as established by the Engineer. This work shall also include necessary dewatering as well as the furnishing of equipment and materials thereto and their subsequent removal.

B. Excavation Requirements (All Structures): Trenches or foundation pits for structures or structure footings shall be excavated to the lines and grades or elevations shown on the drawings. They shall be of sufficient size to permit the placing of structures or structure

footings of the full width and length shown. The elevations of the bottoms of footings, if shown on the drawings, shall be considered as approximate only, but, in fact, the actual dimensions or elevations of footings shall be those deemed necessary by the Engineer/Owner's Representative to permit the placement of base or bedding material as indicated on the drawings or to otherwise secure a satisfactory foundation. Boulders, logs, trash, debris, and any other objectionable material encountered in excavation shall be removed. After each excavation is completed, the Contractor shall notify the Engineer/Owner's Representative to that effect, and no backfill, base course, structure footing or any part of the structure shall be placed until the Engineer/Owner's Representative has approved the depth of excavation and the character of the foundation material.

In excavations for footings carried below the depths indicated without specific directions from the Engineer/Owner's Representative, the additional depths shall be backfilled with lean concrete or other approved materials, or the footing shall be extended to the bottom of the excavations; all additional work of this nature shall be at the Contractor's expense. All foundation excavations shall be cleaned of all loose materials and cut to a firm surface. All loose and disintegrated rock and thin strata shall be removed.

After the required excavations are completed, in the areas to be filled and in the excavated areas within the building footprints, pavements and other concrete on-grade slabs, such as sidewalks, including at least 3 feet wider al around, and any exposed, reddish brown to dark brown silt and clay soils including silty sand of similar color, shall be further excavated to a minimum depth of 18 inches below the finished sub-grade elevation and replaced with compacted non-expansive limestone sand/gravel soils.

When soft or yielding sub-grade soils are encountered during the excavations and /or during re-compaction, soft or yielding soils shall be excavated and removed. The final exposed surface shall be lightly scarified to 6 to 8 inches deep, moisture conditioned, as necessary, and compacted to at least 95% of its maximum dry density. In the event soft or yielding soils are thicker than 2 feet, the Contractor shall consult the Geotechnical Engineer for inspection to determine if complete removal can be modified.

Excavations shall be shored and sheeted with members of sizes and arrangement sufficient to prevent injury to persons, damage to structure, injurious caving, or erosion. Shoring, sheeting, and bracing shall be removed, as the excavations are backfilled; care shall be exercised to prevent injurious caving during the removal of the shoring and/or sheeting.

Utilization of Excavated Materials: All excavated material, so far as suitable, shall be utilized as fill and/or backfill. The surplus material shall not be placed within a drainage area, but shall be stockpiled or disposed of finally as directed by the Engineer/Owner's Representative and in such manner as not to obstruct drainage, or otherwise impair the efficiency or appearance of the structure. No excavated material shall be deposited at any time so as to endanger the partly finished structure.

C. Backfill for/Fill against Structures: Backfill for or fill against structures shall be select fill or sub-base materials per Paragraphs 2.1B and 2.1D, placed simultaneously on both sides of the structure, except where conditions require that backfill or embankment is to be placed on only one side or be higher on one side. In such circumstances, backfill shall be placed only with the permission of the Engineer/Owner's Representative or after the structure has attained sufficient strength. All backfill and embankments adjacent to structures shall be placed in horizontal layers having 8 inches maximum loose thickness, and then compacted as specified herein.

D. Compaction: If the limits of backfill are within the zone of a road, pavement structure, or immediately beneath foundations, as defined on the drawings, backfill shall be basecourse

conform to Paragraph 2.1F, and compacted to not less that 95% as determined by ASTM D1557.

E. Grading Adjacent to Structures: The Contractor shall perform all grading in the areas so indicated. Fill shall be brought to finish grades indicated within 0.10 of a foot and shall be graded to drain water away from structures. Existing grades that are to remain and which are disturbed by the Contractor's operations shall be graded to provide surfaces suitable for the proper use of mowing machines. Grades in areas to receive topsoil shall be brought to acceptable elevation.

F. Disposition of Surplus and Unsuitable Material: Surplus material not required for filling, backfilling, or grading and other soil material shall be deposited in areas designated by the Engineer or hauled off the project site at the Contractor's expense to approved disposal areas. Wasted material shall be spread and leveled at the disposal area(s) to a degree satisfactory to the Engineer/Owner's Representative.

3.4 RESTORATION

All disturbed work, including grassing, planting strips, pavements, etc., shall be restored to their original condition or better. Replacement materials shall be subject to the approval of the Engineer/Owner's Representative.

All remaining work that will be exposed shall have all damaged unfinished areas, or defects caused by the removal and preparatory work completely repaired, patched or filled in as required to match the adjoining existing surfaces. Where the method of repair work is not indicated or specified, the Contractor shall perform the repair work in accordance with the best recognized workmanlike procedure for the area and the surrounding construction involved, subject to the approval of the Engineer/Owner's Representative.

3.5 FIELD SAMPLING AND TESTING

A. Samples: Submit one (1) 50-pound composite sample for fill or backfill material taken from one source or from excavated materials of a similar, uniform character. Samples in the number directed, shall be submitted whenever the source or character of the material changes. Where imported material is used, a sample shall be taken which is representative of each source. Samples shall be placed in a clean container, which shall be secured to prevent loss of material, and tagged for identification. The tag shall contain the following information:

Contract No.:	Source:
Sample No.:	Intended Use:
Date of Sample:	Sampler:

B. Tests: Fill, backfill and bedding shall be tested in accordance with ASTM C136 and for conformance to ASTM D2419, and D2487 gradation limits. Test fill and backfill for material finer than the No. 200 sieve in accordance with ASTM D1140. Test fill and backfill for liquid limit, plastic limit, and plasticity index in accordance with ASTM D4318. Test fill and backfill materials for moisture density relations in accordance with ASTM D1557. Perform one (1) of each of the required tests for each material used when directed by the Engineer/Owner's Representative. Provide additional tests as specified above for each source change. Perform density tests in randomly selected locations and in accordance with ASTM D1556 or D2922 as follows: One test per 2,000 square feet in each layer of lift on fill areas or per 2,000 square feet of sub-grade area in cut; one test per layer of lift per 500 linear feet of utility trench, or per utility trench section, whichever is less.

Determine moisture content of soil material in place in accordance with ASTM D3017 as follows: One test per 2,000 square feet in each layer of lift at fill areas or one test per layer of lift per 500 linear feet of utility trench, or per utility trench section, whichever is less. A change in testing frequency or other requirements may be effected only upon the written approval of the Engineer/Owner's Representative.

END OF SECTION 02200

SECTION 02201

EARTHWORK FOR UTILITIES AND STRUCTURES

PART 1 - GENERAL

1.1 APPLICABLE PUBLICATIONS:The latest issues of the publications listed below referred to thereafter by basic designation only, as a part of this specification to the extent indicated by references thereto.

A. American Society for Testing and Materials (ASTM) Publications:

C136 Method for Sieve Analysis of Fine and Coarse Aggregates.

D1556 Test Method for Density of Soil in Place by the Sand-Cone Method.

D1557 Moisture-Density Relations of Soils Using 10-lb. Rammer and 18 inch Drop.

D2922 Test Method for Density of Soil and Soil-Aggregate in Place by Nuclear Methods (Shallow Depth).

1.2 QUALITY CONTROL:The Quality Control provisions of Division 1, Section 01450 applies to this section. All approvals except those required for field installations, field applications, and field tests shall be obtained before construction is started and before delivery materials or equipment to the project site.

1.3 DESCRIPTION OF WORK:This Section covers all earthworks required for construction of the proposed Simon Sanchez High School project, as shown on the drawings.

1.4 SUBMITTALS:

A. Certified Test Reports:Before delivery of materials and equipment, at least four (4) certified copies of the reports of all tests required in referenced publications or specified herein shall be submitted for review and approval by the Engineer/Owner's Representative. The testing shall have been performed in a laboratory meeting the requirements specified. The testing shall have been performed within three (3) years of submittal of the reports for approval. Test reports shall be accompanied by notarized certificates from the manufacturer certifying that the tested material and equipment is of the same type, quality manufacture, and make as that proposed to be supplied.

B. Dewatering Plan (If Applicable):Before commencing earthwork operation, four (4) copies of the proposed dewatering plan shall be submitted to the Engineer/Owner's Representative for review and approval. Dewatering plan shall include provisions for the control of all forms of surface and subsurface water that may be encountered during construction.

1.5 DELIVERY AND STORAGE:Materials shall be delivered to and stored at the site in a manner, which will maintain different materials in segregated piles and preclude the introduction of deleterious materials.

1.6 ENVIRONMENTAL PROTECTION

A. Environmental Protection:All work and Contractor operations shall comply with the requirements specified in Section 01560.

B. Protection of Utility Lines:Existing utility lines that are indicated or the locations of which are made known to the Contractor prior to excavation and trenching and that are to remain, shall

be protected from damage during excavation, trenching and backfilling, and if damaged, shall be repaired as directed by the Engineer/Owner's Representative at the Contractor's expense.

C. Blasting:Use of explosives will not be permitted. Remove material by drilling and use of jacks or feathered wedges, or the use of backhoe-mounted pneumatic hole punchers or rock breakers, or as approve by the Engineer/Owner's Representative.

1.7 SOIL BORING LOGS AND SUBSURFACE INVESTIGATIONS: Refer to General Site Assessment and Preliminary Geotechnical Recommendations, prepared by Geo-Engineering & Testing, Inc., dated 15 June 2022. The boring logs show majority of subsurface soils at the site are moderately hard to hard coralline limestone. The Contractor shall be prepared to work on this type of condition without additional costs to the Owner.

1.8 PROTECTION OF EXISTING UTILITIES/FACILITIES: Existing utilities and facilities shall be protected from damage during excavation operations. The Contractor shall seek and obtain written clearances from utility agencies prior to undertaking any excavation operations. As part of obtaining such clearances, the Contractor shall specifically request to stake out the location of each utility prior to undertaking any excavation or filling work. Any damages to existing facilities shall be promptly repaired by the Contractor at his own expense.

When directed by the Engineer/Owner's Representative, excavation near or around known utilities shall be by careful hand excavation. Hand excavation shall start at a reasonable distance from each side of the indicated obstruction and shall be continued until the obstruction is uncovered or until clearance for the new line is assured. The Contractor shall properly secure all uncovered lines or other existing work as affected by the contract excavation.

1.9 SAFETY REQUIREMENTS:Work on this project shall comply with OSHA requirements and conform to safety requirements set forth in Army Corps of Engineers (ACOE) Manual EM-385-1-1.

1.10 CRITERIA FOR BIDDING AND PREVAILING WORK CONDITIONS: Refer to Paragraph 1.7 of Section 02200 of these specifications.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Bedding Material:Bedding materials shall be manufactured sand free of organic substances and/or rubbish. When tested in accordance with ASTM C136, the material shall conform to the following gradation limits.

Sieve Size	Percent Passing
3/8 inch	100
No. 4	85 – 100
No. 16	45 - 80
No. 50	10 - 30
No. 100	0 - 10
No. 200	0 - 5

Note: Mining of beach sand is not permitted on the islands of Guam.

B. General Fill: Refer to Paragraph 2.1A of Section 02200 of this specification.

C. Select Fill: Refer to Paragraph 2.1B of Section 02200 of this specification.

D. Crushed Rock: Refer to Paragraph 2.1C of Section 02200 of this specification.

2.2 TOPSOIL: Material from the areas to be excavated or graded which are suitable for topsoil, shall be deposited in piles separate from other excavated material. Piles of topsoil shall be located so that the material can be used readily for the finished surface grading: topsoil shall be protected and maintained until needed. Any surplus of topsoil shall be stockpiled as directed by the Engineer/Owner's Representative. When used for finished surface grading, topsoil shall be spread uniformly over the areas indicated.

2.3 The Contractor shall provide additional topsoil from approved sources off the site, if stockpiled top soil material is insufficient to complete the work indicated.

PART 3 - EXECUTION

3.1 LOCATION OF EXISTING UNDERGROUND UTILITY LINES: Location of existing water, sewer, electrical, telephone, television, and storm drain lines are approximate and may vary in the field; the Contractor shall be responsible for verifying the exact location of these utilities by using suitable detecting devices and shall exercise caution during operations to avoid damage to these utilities. The Contractor shall not commence any grading, digging, and excavation works until all existing utilities at or near the proposed utilities are located or verified in the field.

3.2 EXCAVATING, BACKFILLING, COMPACTION, AND GRADING

A. General: Excavations shall be carried to grades and dimensions indicated or necessary. Excavations shall be kept free from water while construction is in progress. The bottom of the trench excavation shall be compacted to 90 percent ASTM D1557. Soft soil or unsuitable material encountered at bottom of excavation shall be removed to the depth and replaced with suitable material necessary to obtain the required compaction. The excavation shall then be backfilled with select fill compacted to 95 percent. All additional work of this nature shall be at the Contractor's expense.

B. Grading: The Contractor shall perform all grading in the areas so indicated. Fill shall be brought to finished grades indicated within a one-tenth (1/10) of a foot and shall be graded to drain water away from structures. Grades under areas to receive topsoil shall be brought to acceptable elevation.

C. Disposition of Surplus Material: Surplus material not required for filling, backfilling, or grading and other material shall be wasted by disposition in the area indicated or hauled at the Contractor's expense to an approved disposal site in compliance with federal and local requirements.

D. Compaction: Unless otherwise indicated on the drawings or in the other sections of these specifications, the Contractor shall compact the material placed in all general fill layers, sub-grade and the material scarified to the designated depth below sub-grade in cut sections, until a uniform density of not less than 95 percent of the maximum dry density as determined by ASTM D1557. Compact pipe bedding material, to not less than, 90 percent of ASTM D1557 maximum density.

If Contractor uses manufactured sand (Commonly Known as Hammer Mill Sand, which is 100% passing 3/8" Sieve) for pipe bedding, the material shall be compacted until it is dense and non-yielding. No compaction tests are required for this material.

E. Trench Backfill: Trench backfill shall be select fill, placed in horizontal layers having 8-inch maximum loose thickness, and then compacted, as specified in Paragraph 3.2(D) above.

3.3 DEWATERING (If Applicable): Dewatering shall include the control of all forms of surface and subsurface water that may be encountered in the course of construction. The Contractor shall be responsible for obtaining all necessary permits for dewatering operations.

3.4 CUTTING EXISTING PAVEMENTS: Saw cut with neat, parallel, straight lines, one foot wider than trench width on each side, or as indicated in the drawings. When saw cut is within three (3) feet of an existing pavement joint, remove the pavement to the existing joint.

3.5 FIELD SAMPLING AND TESTING

A. Sampling: All sampling shall be conducted by the Contractor at his expense. A 50-lb. sample of bedding material shall be taken at every five hundred (500) cubic yards for sieve analysis of aggregate. Duplicate samples shall be provided to the Engineer/Owner's Representative on an average of one sample a month. The duplicate samples shall be taken at the same time and in the same manner.

B. Sample Identification: Each sample shall be contained in a clean container which shall be securely fastened to prevent loss of material. Each sample shall be tagged for identification. The tag shall contain the following information:

Contract No.:	Sampler:
Sample No.:	Source:
Date of Sample:	Intended Use:
Quantity:	For Testing:

C. Testing: All testing shall be conducted by the Contractor as specified herein at the Contractor's expense.

1. Bedding Material and Select Fill Testing: Gradation test shall be made on each sample in accordance with ASTM C136.

2. Compaction Testing: Compaction shall be made in randomly selected locations in accordance with ASTM D1556 or ASTM D2922 as follows:

Material	Test Frequency
Bedding	1 per 600 linear feet/2,000 sq. ft.
Select Fill Materials	1 per lift per 2,500 sq. ft.

The Engineer/Owner's Representative may reduce, at his discretion the Sampling and Testing frequency if he is assured that quality control is being carefully observed.

END OF SECTION 02201

SECTION 02203

BASE COURSE

PART 1 - GENERAL

1.1 APPLICABLE PUBLICATIONS: The latest issues of the publications listed below form a part of this specification to the extent referenced. The publications are referred to in the text by the basic designation only.

A. American Society for Testing and Materials (ASTM) Publications:

C136	Sieve or Screen Analysis of Fine and Coarse Aggregate.
D75	Sampling Stone, Slag, Gravel, Sand and Stone Blocks for use as Highway Materials.
D1140	Amount of Material in Soils Finer Than the No. 200 Sieve.
D1556	Density of Soil in Place by the Sand Cone Method.
D1557	Moisture-Density Relations of Soils Using 10-lb. Rammer and 18-inch Drop.
D2922	Density of Soil and Soil-Aggregate in Place by Nuclear Methods.

1.2 QUALITY CONTROL: The Quality Control provisions of Division 1, Section 01450, apply to this section. Approvals, except those required for field installations, field applications, and field tests, shall be obtained before construction is started and before delivery of materials or equipment to the project site.

1.3 CERTIFIED TEST REPORTS: Before delivery of materials and equipment, at least four (4) certified copies of the reports of all tests required in referenced publications or specified herein, shall be submitted and approved. The testing shall have performed in a laboratory meeting the requirements specified in the Quality Control Section of Division 1. The tests shall have been performed within two (2) years of submittal of the reports for approval. Tests reports shall be accompanied by notarized certificates from the manufacturer certifying that the tested material and equipment is of the same type, quality, manufacture, and make as that proposed to be supplied. Certified test reports are required for the following:

A. Plasticity Index.
B. R-Value.
C. Liquid Limit.
D. Aggregate gradation.
E. L.A. Abrasion.
F. Sand equivalent.

1.4 DELIVERY AND STORAGE: Materials delivered to the site shall be inspected for damage, unloaded and sorted with a minimum of handling. Aggregates shall be stored in such a manner as to prevent segregation.

PART 2 - PRODUCTS

2.1 MATERIALS: Base Course shall consists of crushed coralline limestone meeting the requirements indicated herein:

Mechanical Analysis:

Sieve Size	Percentage Passing
2 inches	100
1-1/2 inches	90 – 100
3/4 inches	50 - 80
No. 4	30 - 60
No. 40	15 - 30
No. 200*	5 - 13

*Fraction passing No. 200 mesh sieve should not be more than ½ of the fraction passing No. 40 sieve.

Liquid Limit: Not greater than 25.

Plasticity Index: Not greater than 6

California Bearing Ration (CBR) Not less than 100

Los Angeles Abrasion: Not greater than 40

Sand Equivalent: Not less than 35

2.2 CONSTRUCTION EQUIPMENT: The Contractor shall submit a list of all construction equipment to the Engineer for approval 15 days prior to bringing equipment on the job. All equipment shall be dependable and adequate for the purpose intended, and shall be properly maintained in satisfactory and safe operating condition at all times. Calibrated equipment such as scales, batching equipment, spreaders and similar equipment, shall have been re-calibrated by a calibration laboratory recommended by the Contractor and approved by the Engineer/Owner's Representative within 12 months of commending work and every 24 months thereafter, by such laboratory from the date of recalibration, during the term of the contract. The list of equipment shall include the make, model, and serial number, and the date on which the calibrated equipment was last re-calibrated.

A. Three-Wheel General Purpose Rollers: These rollers shall be self-propelled, weighing not less than 10 tons, and having a minimum compression of 300 pounds per inch width of rear wheel. The wheels of the rollers shall be equipped with adjustable scrapers.

B. Tamping Rollers (Sheepsfoot Type): Tamping rollers shall consist of one or more units. Each unit shall be a watertight cylindrical drum not less than 48 inches in length, surmounted by metal studs with tamping feet projecting not less than 6 nor more than 10 inches, measured diagonally from center to center. The tamping feet shall be a type suitable for compacting the material to be used. Each unit shall be equipped with a suitable device for cleaning the tamping feet. The rolling units of multiple type tamping rollers shall be pivoted on the main frame in a manner which will permit the units to adapt themselves to uneven ground surfaces and to rotate independently. When fully loaded, the roller shall produce at least 3,500 pounds per liner foot of drum.

C. Pneumatic-Tired Rollers: Pneumatic-tired rollers shall be single or double axle, vibrating or non-vibrating type, equipped with tires of equal size and diameter, uniformly inflated, so that the air pressure of the several tires shall not vary more than 5 pounds per square inch. Rollers may be self-propelled or towed by a suitable powered unit. The self-propelled roller, or the power unit and towed roller shall be considered a pneumatic-tired roller unit.

1. Light Pneumatic-Tired Rollers: Light pneumatic-tired rollers shall have two axles on which are mounted not less than 9 pneumatic-tired wheels in such a manner that the rear group of tires will not follow in the tracks of the forward group. The axles shall be mounted in a rigid frame provided with a loading platform or body suitable for ballast loading. The roller shall develop a compression of not less than 225 pounds per inch width of tire tread and shall be capable of being loaded to provide loads up to 300 pounds per inch of normal tire width. The rollers shall be weighted as directed by the Engineer.

2. Heavy Pneumatic-Tired Rollers: Heavy pneumatic-tired rollers shall be of the vibratory or non-vibratory type with a minimum loading of 25,000 pounds per tire. The tires shall be suitable for inflation to not less than 90 psi. The loading shall be distributed equally to all wheels.

D. Grid Rollers: Grid rollers have at least two similar metal drums having a minimum outside diameter of 5 feet and a minimum length of 2 feet 6 inches, independently mounted on a common shaft in a rigid frame. The face of the drums shall have the appearance of woven open-mesh made by interlacing bars. Opening between bars shall be not less than 3 inches nor more than 4 inches,; bars shall be not less than 1-1/4 inches or more than 1-3/4 inches in diameter. The roller shall be constructed so that counterweights can be used to adjust the gross weight to 450 pounds per inch of length of roller drum.

E. Vibrating Tampers: Vibrating tampers shall be the self-propelled, crawler mounted type suitable for use on the project.

F. Mechanical Hand Tampers: Mechanical hand tampers shall be standard commercial plate-type vibratory compactors.

G. Tractors: Tractors shall be of the crawler type, suitable for compacting base course.

H. Blade Graders: Blade graders shall have a wheel base of not less than 15 feet and a blade not less than 10 feet in length, and shall be self-propelled.

I. Sprinkling Equipment: Sprinkling equipment shall include tank trucks, pressure distributors, or other equipment designated to apply water uniformly and at controlled quantities to variable widths of surface.

J. Disks: Disks shall be the tandem type, and shall be constructed to prevent any cutting of the sub-grade during mixing operations.

K. Plows: Plows shall be of the multiple-furrow type, and shall be designed so that depth of furrow can be accurately controlled.

L. Hauling Equipment: Hauling equipment shall consist of pneumatic-tired vehicles having dump bodies suitable for dumping materials in layers on the underlying course.

M. Miscellaneous Equipment: Miscellaneous equipment scarifiers, tractors, spring-tooth or spike-tooth harrows, windrow equalizers, spreaders, and other equipment shall be of types suitable for constructing mechanically stabilized aggregate base course.

PART 3 - EXECUTION

3.1 CONSTRUCTION

A. General: The graded aggregate base course shall be constructed on a previously

constructed course, as indicated. The base course shall consist of aggregate processed, deposited, spread, and when the atmospheric temperature is below 35 degrees F or when other weather conditions detrimentally affect the quality of the base course. It shall be the responsibility of the Contractor to protect all areas of complete base course against any detrimental effects. Areas of base course that are damage by weather conditions, during any phase of construction, shall be reconditioned, reshaped, and re-compacted in conformance with the requirements of this specification without additional cost to the Owner. Line and grade stakes shall be provided as necessary for control. Grade stakes shall be placed in lanes paralleling the centerline of the area to the paved, and suitably spaced for string lining.

B. Mixing of Materials: Coarse and fine aggregate shall be mixed in a stationary plant, or in a traveling plant. Coarse and fine aggregates shall be proportioned by weight or by volume in such quantities that specified gradation, liquid limit, and plasticity index requirements should be met after the base course has been placed and compacted. Water measured by weight or by volume in quantities sufficient to provide the necessary moisture content for the specified compaction, shall be incorporated during the mixing operation. Mixing operations shall produce satisfactory uniform blending and the method of discharging into trucks shall not produce segregation.

C. Placing: Mixed material shall not be dumped in piles, but shall be placed on the prepared sub-grade in layers of 8" uniform thickness with a spreader or grader. Layers shall be so placed that when compacted they will be true to grades or levels required with the least possible surface disturbance. Where the base course is constructed in more than one layer, the previously constructed layers shall be cleaned of loose and foreign matter by sweeping with power sweepers, power brooms, or hand brooms. Water content of the material shall be maintained during the placing period as required to obtain the compaction specified. Adjustment in placing procedures or equipment shall be made as required to obtain true grades, to minimize segregation and degradation, to reduce or increase water content, and to insure a satisfactory base course.

D. Compacting and Finishing: Immediately following the spreading, the layer shall be compacted with steel-faced, vibrating or pneumatic-tired rollers, or other suitable compacting equipment or combinations thereof. Compaction shall continue until the layer is compacted to at least 95 percent of maximum dry density when tested in accordance with ASTM D1557. In all areas not accessible to rollers or compactors, the mixture shall be compacted with mechanical hand tampers. If the mixture is excessively moistened by rain, it shall be aerated by means of blade graders, or other suitable equipment, until the moisture content of the material is such that, when the material is compacted, the required density is obtained. The surface of the layer shall be finished by a combination of rolling and blading, and shall be smooth from waves and inequalities.

E. Finishing at Edges of Base Course: Earth or other approved material shall be placed along the edges of the base course in such quantity as will compact to the thickness of the course being constructed, or, when the course is being constructed in two or more layers, to the thickness of each layer of the course, allowing in each operation at least a one-foot width of the shoulder to be rolled and compacted simultaneously with the rolling and compacting of each layer of the base course.

F. Maintenance: After construction is completed, the base shall be maintained throughout except where portion of the succeeding course is under construction thereon. Maintenance shall include drainage, rolling, shaping, and watering as necessary to maintain the course in proper condition. Deficiencies in thickness, composition, construction, smoothness, or density, which develop during the maintenance, shall be corrected to conform to the requirements specified hereinbefore. Sufficient moisture shall be maintained at the surface to prevent a dusty condition, by light sprinkling with water. Before the application of the prime

coat, the base course shall be permitted to partially dry until the average moisture content of the full depth of the base is less than 80 percent of the optimum moisture of the material.

3.2 FIELD SAMPLING AND TESTING: Samples shall be supplied by the Contractor, as specified herein, at the expense of the Contractor. Testing will be conducted by the Contractor at his expense. All material and material sources will be approved by the Engineer/Owner's Representative, 7 days prior to the use of such material in the work.

A. Sampling:

1. Aggregates at Source: Prior to production and delivery of aggregates, at least one initial sample shall be taken in accordance with ASTM D75 from each stockpile. Each sample shall be collected by taking three incremental samples at random from the source material to make a composite sample of not less than 50 pounds. Three random samples shall be taken from each 3,000 tons of material, or a day's run, thereafter during the course of the project. A repetition of the above sampling shall be made when the source of material is changed or when unacceptable deficiencies or variations from the specified grading or materials are found in testing.

2. Sample Identification: Each sample shall be placed in a clean container which shall be securely fastened to prevent loss of material. Each sample shall be tagged for identification. The tag shall contain, at a minimum, the following information:

Contract No.
Sample No. Quality
Date of Sample
Sampler
Source
Intended Use
For Testing

B. Testing:

1. Aggregate Testing: Gradation tests shall be made on each sample without delay. All other aggregate test shall be made on the initial source samples, and shall be repeated when there is a change of source. Sieve analyses shall be made from each sample collected during the course of the project. The test shall include an analysis of each grade of material and analysis of the combined material representing the aggregate part of the mix. Sieve analysis shall be in accordance with ASTM C136. Material retained on each sieve shall not vary from the approved job curve by more than 7 percentage points, plus or minus. Sieve analysis on material passing the No. 200 sieve shall be made in accordance with ASTM D1140.

2. Smoothness Test: Deviations in the surface in excess of 3/8 inch when tested with a 10-foot straightedge applied parallel with and at right angles to the centerline of the paved area shall be corrected by loosening, adding or removing material, reshaping, watering, and compacting. When the base course is to be constructed in more than one layer, the smoothness requirements specified above shall apply only to the top layer.

3. Field Density Tests: Field density tests shall be in accordance with ASTM D1556 D2922. There shall be one field density test for each 2,000 square yards of each layer of base material.

4. Laboratory Density Tests: Laboratory density tests shall be performed in accordance

with ASTM D1557, for all material which does not have more than 5 percent retained on the 3/4 inch sieve. Projects having more than 1,000 cubic yards of base material and having more than 5 percent retained on the 3/4 inch sieve shall have the optimum moisture and density determined in the field by test section. The material shall be rolled and compacted using the equipment approved for the project, and density and moisture determinations will be performed in accordance with ASTM D1556 or ASTM D2922 to establish optimum moisture and maximum density.

5. Thickness Test: The thickness of the base course will be measured at intervals such that there will be a depth measurement for at least each 500 square yards of complete base course. The depth measurements shall be made by test holes, at least 3 inches in diameter, through the base course. Where the base course deficiency is more than 1/2 inch, such areas shall be corrected by scarifying, adding mixture of proper gradation, blading, and re-compacting. Where the measure thickness is more than 1/2 inch thicker than shown, it shall be considered as the indicated or specified thickness plus 1/2 inch for determining the average. The average thickness shall be the average of the depth measurements and shall not underrun the thickness indicated by more than 1/4 inch.

END OF SECTION 02203

SECTION 02280

SOIL TREATMENT

PART 1 - GENERAL

1.1 SUMMARY: Provide soil poisoning to control subterranean termites as specified herein and needed for a complete and proper treatment.

1.2 SUBMITTALS:

A. Product data: Submit Manufacturer's specifications and other data needed to prove compliance with the specified requirements;

Manufacturer's recommended installation procedures which, when approved by the Engineer//Owner's, will become the basis for accepting or rejecting actual application procedures used on the work.

1.3 QUALITY ASSURANCE:

A. Use adequate numbers of skilled workmen who are thoroughly trained and experienced in the necessary task and who are completely familiar with the specified requirements and the methods needed for proper performance of the work of this Section.

B. Qualifications of Subcontractor: Properly licensed to provide such services by the Guam Environmental Protection Agency (GEPA).

Not less than two (2) years successful experience in soil treatment for subterranean termites.

1.4 WARRANTY: Upon completion of the Work, and as a condition of its acceptance, deliver to the Contracting Officer two (2) copies of the Warranty signed by an authorized representative of the installing subcontractor, and co-signed by the Contractor, agreeing:

A. To make an inspection of the Work once each year for a total period of two (2) years following Date of Substantial Completion for the purpose of detecting termite infestation;

B. If termite infestation is found during that 2 year period, to re-treat in accordance with prevailing practices of the trade and within ten (10) calendar days after such infestation is discovered;

C. To repair damage to the Work caused by subterranean termites during that 2 year period;

D. To make such inspections, re-treatment, and repairs at no additional cost to the Owner.

1.5 DELIVERY, STORAGE, AND HANDLING: Comply with the manufacturer's standard procedures for delivery, storage and handling of the chemicals.

PART 2 - PRODUCTS

2.1 MATERIALS: Provide termiticides currently registered by the EPA. Use non-repellant termiticides for maximum effectiveness and duration after application and is suitable for the soil and climatic conditions at the project site and apply at the highest labeled rate. Submit manufacturer's label and Safety Data Sheet (SDS) for termiticides proposed for use.

PART 3 - EXECUTION

3.1 SURFACE CONDITIONS: Examine the areas and conditions under which work of this Section will be performed. Correct conditions detrimental to timely and proper completion of the Work. Do not proceed until unsatisfactory conditions are corrected.

3.2 APPLICATION:

Begin soil poisoning only after all preparation for slab or footing placement is completed and inspected by a representative from GEPA.

For horizontal barriers, applications shall be made using a low-pressure spray after grading is completed and prior to the pouring of the slab or footing.

For a 1% rate, apply 1 gallon of dilution per 10 square feet, or use 2-2/3 fluid ounces of the above chemicals per 10 square feet in sufficient water to provide thorough and continuous coverage of the area being treated.

If the fill is washed gravel or other coarse material, it is important that a sufficient amount of dilution be used to reach the soil substrate beneath the coarse fill.

If concrete slabs cannot be poured over the soil the same day it has been treated, a vapor barrier should be placed over the treated soil to prevent disturbance of the termiticide barrier.

For vertical barriers, apply the 1.0% dilution at a rate of 4 gallons per 10 linear feet per foot of depth. Establish vertical barriers in areas such as around the base of foundations, plumbing lines, backfilled soil against foundation walls and other areas, which may warrant more than just a horizontal barrier.

Rodding and or trenching applications should be made to reach the top of the footing. Rod holes should be spaced to provide a continuous barrier.

Trenches need not be wider than 6 inches. Treat soil with the dilution as it is being replaced in the trench. For a 1.0% rate, apply 4 gallons of dilution per 10 linear feet per foot of depth or 10 2/3 fluid ounces of the above chemicals per 10 linear feet per foot of depth from grade to top of footing in sufficient water to ensure complete coverage.

Hollow block foundations or voids of masonry can be treated to make a complete chemical barrier especially if the soil was snot treated prior to pouring the footing. Apply the dilution at a rate of 2 gallons per 10 linear feet so that it reaches the top of the footing.

For crawl spaces, establish a vertical barrier on both sides of the foundation and around all piers and areas where underground utilities exit the soil. Do not apply the dilution to the entire surface area intended as the crawl.

3.3 GEPA INSPECTION: If necessary, two (2) days minimum prior to application of soil poisoning, the contractor shall submit a request for inspection to GEPA.

END OF SECTION 02280

SECTION 02600

PLANT MIX BITUMINOUS PAVEMENT

PART 1 - GENERAL

1.1 APPLICABLE PUBLICATIONS: The latest issues of the following publications listed below but referred to thereafter by basic designation only, form a part of this specification to the extent indicated by the reference thereto:

A. American Society for Testing and Materials (ASTM):

C131 Test for Abrasion of Coarse Aggregate by the Use of Los Angeles Machine.

D946 Asphalt Cement.

D1188 Test for Bulk Specific Gravity of Compacted Bituminous Mixtures.

D1664 Test for Coating and Stripping of Bitumen- Aggregate Mixtures.

D2726 Test for Bulk Specific Gravity and density of Compacted Bituminous Mixtures Using Saturated Surface-Dry Specimens

D2950 Density of Bituminous Concrete in Place by Nuclear Method.

B. The Asphalt Institute Manuals:

MS-1 Thickness Design (December 1969).

1.2 QUALITY CONTROL: The Quality Control of Division 1, Section 01450, apply to this section. Approvals, except those required for field installations, field applications and field tests, shall be obtained before construction is started and before delivery of materials to the project site.

1.3 SUBMITTALS

A. Samples: Samples of the following materials shall be submitted and approved in accordance with the requirements of the general provisions:

1. Asphalt cement.
2. Course aggregate.
3. Fine aggregate.
4. Mineral filler.

B. Certified test Reports: Before delivery of materials and equipment, five certified copies of the reports of all tests required in referenced publications or specified herein shall be submitted and approved. The testing shall have been performed in a laboratory meeting the requirements specified in the Quality Control Section of Division 1, Section 01450. The tests shall have been performed within 3 years of submittal of the reports for approval. Tests certifying that the tested material and equipment is of the same type, quality, manufacture, and make as that proposed to be supplied. Certified test reports are required for the following:

1. Asphalt cement.

a. Job Mix Formula: A job-mix formula shall be submitted by the Contractor

and shall be approved prior to placing of the bituminous mixture.

The Formula shall indicate the definite percentage of each sieve fraction, the percentage of bitumen, and the temperature of the completed mixture as discharged from the mixer. Variations in the approved job-mix formula shall not exceed the following:

Aggregate passing No. 4 sieve or larger: 5% plus or minus

Aggregate passing No. 10, 40 and 80 sieves: 4% plus or minus

Aggregate passing No. 200 sieves: 1.5% plus or minus

Asphalt: 0.3% plus or minus

Temperature of mixing: 25 degrees F plus or minus

Adjustments of the bitumen content and aggregate gradation, within the limits specified herein, to improve the paving mixtures, shall be made as directed, without adjustment in the contract price.

1.4 DELIVERY, STORAGE, AND HANDLING: All materials shall be delivered to the central mixing plant and stored in their designated areas. Mixed materials shall be hauled directly to the point of use in the site immediate placement.

A. Central Mixing Plant: Sufficient storage space shall be provided at the bituminous mixing plant for each size of aggregate. The different aggregate sizes shall be kept separated until they have been delivered to the cold elevator feeding the drier. The storage yard shall be neat and orderly, and the separate stockpiles readily accessible for sampling. The plant shall include storage bins of sufficient capacity to supply a mixer operating at full capacity. Bins shall be arranged to ensure separate and adequate storage of appropriate fractions of the mineral aggregates.

B. Hauling Equipment: Trucks used for hauling bituminous mixtures shall have tight, clean, smooth metal beds. To prevent the mixture from adhering to them, the beds shall be lightly coated with a minimum amount of paraffin oil, lime solution, or other approved material.

C. Delivery: Loads shall not be sent out as to interfere with spreading and compacting the mixture. During nighttime operations, artificial light, satisfactory to the Engineer/Owner's Representative, shall be provided. The mixture shall be delivered at a temperature within the tolerance allowed in the approved job formula.

1.5 GENERAL REQUIREMENTS: The bituminous hot-mix pavement course shall be constructed on a previously primed base course on existing pavement. The bituminous pavement course shall consist of mineral aggregate, uniformly mixed with hot bituminous material in Bituminous courses shall be constructed when the underlying course is dry. Line and grade stakes shall be provided as necessary for control. Grade stakes shall be placed in lanes paralleling the centerline of the area to be paved, and suitably spaced for string lining.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Aggregates: The aggregates shall consist of crushed limestone obtained from sources

previously approved for such use, clean, hard, sound and free from deleterious coatings, disintegrated material, lumps of clay, and particles of vegetation. The coarse aggregate retained on the No. 4 sieve shall have a percentage of wear not be exceeding 40 after 500 revolutions as determined by ASTM. Standard, Designation C131. The coarse more than 5 percent materials passing the No. 8 sieve. The fine or coarse aggregate or a composite mixture shall show no detrimental amount of stripping when tested in accordance with ASTM D1664.

B. Bituminous Materials: The bituminous materials to be mixed with the mineral aggregates, unless otherwise specified on the project drawings, shall be asphaltic cement conforming to the requirements of ASTM D946 Penetration Grade 60-70 or Viscosity Grade (VG) AR-8000.

C. Composition of Mixture: The gradation of the mineral aggregate shall be as specified below. The percentage of bituminous material, by weight, used in the bituminous mixtures shall be within the limits specified except that the upper limit shall be increased as necessary, if the mineral aggregate is porous.

Percentage by Weight Passing Square Mesh

Laboratory Sieves

SIEVE	MIXTURE
1 - inch	100
3/4-inch	85 - 100
1/2-inch	72 - 87
No. 4	45 - 60
No. 10	32 - 47
No. 40	16 - 26
No. 80	10 - 18
No. 200	4 - 8
Asphalt	5 - 9

For the bituminous mixture, the stability and flow, as determined by the Marshall method, shall be as follows:

Number of blows of compaction hammer on side of molded specimen	75
Stability (minimum) pounds	2,700
Flow (maximum), hundredths of an inch	8 - 4
Percent voids filled with asphalt	70-85
Voids in Mineral Aggregates (VMA)	13% (Minimum) at ¾ - Inch Sieve

The aggregate shall be graded uniformly from coarse to fine and shall not vary from the low limit on the adjacent sieve. The grading is based on aggregates of uniform specific gravity, and the percentages passing the various sieves are subject to appropriate correction when aggregates of varying specific gravities are used.

PART 3 - EXECUTION

3.1 CONSTRUCTION EQUIPMENT

A. General: All equipment shall be dependable and adequate for the purpose intended and shall be properly maintained in satisfactory and safe operating condition at all times. Calibrated equipment such as asphalt distributors, scales, batching equipment, spreaders and similar equipment, shall have been re-calibrated by a calibration laboratory recommended by the Contractor and approved by the Engineer/Owner's Representative within 12 months of commencing work and every 12 months thereafter, by such laboratory from the date of recalibration, during the term of the contract.

B. Plant Requirements: The mixing plant shall be designed, coordinated, and operated to produce a mixture within the job-mix formula tolerances. The plant may be either a weight-batch type or a rotary-drum type and shall have a minimum capacity of 60 tons per hour. Volumetric-proportioning, continuous mixing type may be substituted for the above types, provided the equipment is suitable for producing finished mixtures complying with the job-mix formula specified herein. The mixing plant and equipment shall remain accessible at all times for checking its adequacy, inspecting its operation, verifying weights, proportions, and character of materials, and checking mixture temperatures.

Prior to the start of the mixing work, the Contractor shall obtain the Engineer's/Owner's Representative's written approval of the mixing plant's capacity, equipment, controls, mixing procedure and other relevant appurtenances.

3.2 MIXING AND TRANSPORTING

A. Mixing: The bituminous mixture shall be produced in an approved plant specified hereinbefore. The fine and coarse aggregates shall be piled in separate piles and fed to the dryer by separate mechanical feeders in a manner to produce a bituminous mixture within the tolerances specified for the job-mix formula. When two or more fine aggregates or two or more coarse aggregates of varying gradation are used, pre-mixing by satisfactory methods may be required prior to being placed in the separate piles. The aggregates shall be heated and dried thoroughly before being placed in the bins. The temperature of the aggregates, determined as they are placed in the mixer, shall be such that the temperature of the finished mixture will be within the tolerances specified.

The heated and dried aggregates shall be screened, separated into the sizes as directed or approved, conveyed to separate bins and held ready for mixing with the bituminous material. Adequate dry storage shall be provided for mineral filler at the mixing plant. After, the aggregates have been prepared properly; they shall be accurately weighed or measured and conveyed into the mixer in the proportionate amounts of each aggregate size required. The required amount of the asphalt for each batch, or calibrated amount for continuous mixing, shall be introduced into the mixer. In batch mixing, the aggregates shall be charged into the mixer and shall be mixed for not less than 15 seconds, the asphalt added, and mixing continued for at least 20 seconds or longer, as may be necessary to obtain a homogeneous mixture.

When a continuous mixer is used, the mixing time shall be not less than 30 seconds, or longer as may be necessary to obtain a homogeneous mixture. The additional mixing time, when required, shall be as directed. The temperature of the asphalt at the time of mixing shall not exceed 325 degrees F. The temperature of the aggregate and mineral filler in the mixer shall not exceed 350 degrees F when the asphalt is added. The temperature of the aggregates and asphalt at the time of mixing shall be as directed. When prepared in a twin pug-mill mixer, the depth of the mixer shall not be greater than the tips of the mixer blades

when the blades are in a vertical position. All overheated and carbonized mixtures, or mixtures that foam or show indication of moisture, will be rejected. When moisture is detected in the finished mixture, all aggregates in the bins shall be removed and placed in their respective stockpile.

B. Transportation of Bituminous Mixture: The bituminous mixture shall be transported from the paving plant to the site in trucks having tight, clean, smooth beds which have been oiled with a minimum amount of approved thin oil to prevent adhesion of the mixture to the truck bodies. Each load shall be covered with canvas or other suitable material of ample size to protect it from weather and to prevent the loss of heat. Deliveries shall be made so that spreading and rolling of all the mixture prepared for a day's run can be completed during daylight, unless satisfactory artificial light is provided. The mixture shall be delivered to the area to be paved in such manner that the temperature at the time of dumping into the spreader will not be less than that specified. Any loads wet excessively by rain will be rejected. Hauling over freshly laid material will not be permitted.

3.3 CONSTRUCTION REQUIREMENTS

A. Equipment: Equipment used in the performance of the work shall be subject to approval, and shall be maintained in a satisfactory working condition at all times.

B. Spreaders. Spreaders shall be the self-propelled type, equipped with hoppers, distributing screws, adjustable screens, and equalizing devices, capable of spreading hot bituminous mixtures without tearing, shoving, or gouging, and of producing a finished surface of specified evenness. Spreaders shall operate, when laying mixtures, at such speed between five and forty-five feet per minute, as may be directed. They shall be equipped with a quick and efficient steering device and shall have a forward and reverse traveling speed of not less than one hundred feet per minute.

Unless operating on fixed side forms, pavers shall employ mechanical devices such as equalizing runners, straight-edge runners, leveler arms, or other compensating devices to adjust to grade and confine the edges of the mixtures to true lines without the use of side forms.

C. Rollers. Rolling equipment shall consist of self-propelled rollers of tandem and pneumatic-tired types; Tandem rollers shall weigh not less than 10 tons. Pneumatic-tired rollers shall be of the double-axle type, equipped with pneumatic tires of equal size and diameter. Tires shall be uniformly inflated so that the air pressure in the several tires will not vary more than 5 pounds per square inch and so arranged that the tires on one axle will cover the gap between the tires on the other axles. Pneumatic-tired rollers shall be varied to produce an operating weight per tire from 1,000 pounds minimum to a maximum of 2,000 pounds as directed. All rollers shall be suitable for rolling hot-mix bituminous pavements and shall be capable of reversing without backlash. Pneumatic-tired rollers shall be capable of being operated both forward and backward without turning on the mat, and without loosening the surface being rolled. Rollers shall be equipped with suitable devices and apparatus to keep the rolling surfaces wet and prevent adherence of bituminous mixture.

D. Hand Tampers. Hand tampers shall weigh not less than 25 pounds and shall have a tamping face of not more than 50 square inches. Pneumatic hand tampers shall be standard commercial type.

E. Blowers and Brooms. Blowers and brooms shall be of the power type and shall be suitable for cleaning the surface to be paved.

F. Scales. Scales shall be standard truck scales of the beam type. The scales shall be of

sufficient size and capacity to accommodate all trucks to be used for handling bituminous mixtures. All scales shall be tested, as directed, and the necessary number of standard weights for testing the scales shall be on hand at all times.

G. Placing: The bituminous mixture shall be spread by self-propelled mechanical spreading and finishing equipment with a screen or strike-off assembly capable of spreading the bituminous material to a uniform thickness and density on the required cross-section without the use of side forms. Thickness of the compacted pavement shall not exceed 3" for any single course. All pavement specified in excess of 3" shall be built up in successive course of 1" to 1/2" compacted thickness. Segregation of the coarse and fine portions of mix shall be prevented. All asphalt with a temperature of less than 225 degrees F when dumped in the mechanical spreaders shall be rejected. Unless directed otherwise, placing shall begin along the centerline of areas to be paved on a crown section and at the high side of a section with a one-way slope. The length of any strip to be laid, before placing the succeeding strip, shall be as directed.

Placing of the mixture shall be as continuous as possible. Experienced shoveler and rakers shall follow the spreading machine, adding hot mixture and raking. Where the use of machine spreading is impractical, the mixture may be spread by hand. The mixture shall be dumped on approved dump boards outside the area to be paved, distributed into place by means of hot shovels, and spread with hot rakes. The finished surface shall not deviate more than 1/4" when tested with a 12-foot straightedge. The loads shall not be dumped faster than can be handled by the shoveler and rakers. Rakers not equipped with stilt sandals shall not stand in the hot mixture while raking the course. Contact surface of previously constructed pavement, curbs, manholes and similar structures shall be painted with a thin coat of hot bituminous material prior to placing the bituminous mixture.

H. Compaction of Mixture: Compaction by rolling shall begin without delay as soon as the mixture will bear the roller without undue displacement. Rolling shall start longitudinally at the extreme sides of the lane, proceeding toward the center of the pavement, overlapping on successive trips by at least one-half the width of the rear wheel of the roller. Alternate trips of the roller shall be slightly different lengths. Initial longitudinal rolling shall completely cover the freshly spread asphalt mixture and shall be performed with a two-axle or three-axle tandem roller. Tests for conformity with the specified crown, grade, and smoothness shall be made by the Contractor immediately after initial compression. Before continuing the rolling, any variations shall be corrected by removing or adding materials as directed. The course shall then be subjected to three complete passes with a pneumatic-tired roller, while the temperature of the mixture is above 150 degrees F.

Final rolling of the uppermost layer shall be performed with a tandem roller. The speed of the rollers shall not exceed 3 miles per hour and shall at all times be slow enough to avoid displacement of the hot mixture.

Any displacement of the mixture shall be corrected at once by the use of rakes and fresh mixture applied or removed as required. Rolling shall be continued until all roller marks are eliminated and the course has a density of at least 96 percent of the density obtained in a laboratory specimen of the same mixture when subjected to 50 blows per side when tested. During rolling, the wheels of the rollers shall be moistened to prevent adhesion of the mixture to the wheels, but an excess of water will not be permitted. One pneumatic-tired roller and one tandem roller shall be provided for each spreading machine in operation on the job. Additional 10-ton rollers shall be provided if the specified pavement density is not obtained by the operation of the minimum number of rollers. In places not accessible to rollers, the mixture shall be compacted with hot hand tampers. Skin patching of an area that has been rolled will not be permitted. Any mixture that become mixed with foreign material or is defective shall be removed, replaced with fresh mixture, and compacted to the required

density. The roller shall pass over the unprotected edge of the course only when the laying of the mixture is to become cold. After final rolling, no vehicular traffic of any kind shall be permitted on the pavement until it has the required compaction is attained.

I. Joints: All joints shall have the same texture, density, and smoothness as other sections of the course. Joints between old and new pavements or between successive day's work shall be made carefully in a manner to ensure a continuous bond between old and new sections of the course. All contract surfaces of previously constructed pavement shall be coated with a thick, uniform coat of hot bituminous material immediately before the fresh mixture is placed.

Except when a canvas-rope joint cloth is used, the edge of the previously laid course shall be cut back to expose an even, vertical surface for the full thickness of the course. The fresh mixture shall be raked against the joints, thoroughly tamped with hot tampers, and smoothed with hot smoother, followed by rolling.

Longitudinal joints shall be placed so that the joint in the surface layer will not coincide with that of the lower layer course and will break by at least 6 inches. However, the joint in the top layer shall be at centerline of the pavement if the roadway comprises two lanes of width or at lane lines. When the edges of the longitudinal joints are irregular honeycombed, or poorly compacted, all unsatisfactory sections of Joint shall be cut back to expose an even, vertical surface for the full thickness of the course. Where required, fresh mixture shall be raked against the joint, thoroughly tamped with hot tampers, and smoothed with hot smoother, followed by rolling.

3.4 SAMPLING AND TESTING

A. Sampling

1. Materials: All material samples shall be supplied by the Supplier at his expense. All material and material sources shall be approved prior to use of material in the work, and samples, shall be submitted for approval not less than 15 working days before such aggregates are to bed. Additional samples of materials shall be furnished during construction, upon request. Asphaltic materials may be accepted on the basis of a certificate of compliance by the producer that the materials conform to these specifications.

2. Pavement and Mixtures: Suitable sized samples for the determination of thickness and density of the completed pavement shall be removed by the Contractor at his expense. The Contractor shall cut samples and satisfactorily replace the pavement. Samples of the plant mixtures will be taken and tested for each 400 tons or fraction thereof mixed. Pavement that fails to meet the requirements specified shall be removed and replaced as directed.

B. Tests: All tests to determine conformance with the specified requirements will be performed by the Government.

1. Job-Mix Test. Samples of the plant mixtures will be tested for each 400 tons or fraction thereof of finished mixture to determine gradation and bitumen content.

2. Testing of Pavement Course:

a. Density: Density of the pavement shall be determined on cores obtained from the binder or wearing course in accordance with ASTM D1188. Two cores shall be tested for 200 tons, or fraction thereof, of asphalt placed. Cores will be tested by ASTM D2726 or D1188 whichever applies.

b. In lieu of the core method of density determination, acceptance testing may be accomplished with a nuclear device in accordance with ASTM D2950. The nuclear density test shall then be correlated with the density of cored samples. If the mean density determined from cored samples and nuclear density tests is at least 96 percent, the density determination by nuclear device will be accepted but correlation of the device by core shall be done every 400 tons.

3. Thickness: Thickness of the binder and course shall be determined on cores taken for the density test.

4. Surface Test: The compacted surface of the binder course and wearing course shall be straightedge tested as the work progresses. The straightedge shall be applied parallel with and at right angles to the centerline after final rolling. Unevenness of the binder course shall not vary more than plus or minus 1/4 inch in ten feet; variations in the wearing course shall not vary more than plus or minus 1/8 inch in ten feet. Any portion of the pavement showing irregularities greater than that specified shall be corrected as directed by the Engineer/Owner's Representative. The finished surface shall also not vary more than 0.03 foot above or below the plan grade line or elevation at any point. After the completion of final rolling, the smoothness of the course shall again be tested: humps or depressions exceeding the specified tolerances or that retain water on the replacing with new material, as directed by the Engineer/Owner's Representative. This shall be done at the Contractor's expense.

END OF SECTION 02600

SECTION 02601

BITUMINOUS PRIME COAT

PART 1 - GENERAL

1.1 APPLICABLE PUBLICATIONS: The latest issues of the following publications listed below, but referred to thereafter by basic designation only, form a part of this specification to the extent indicated by the reference thereto:

A. American Association of State Highway and Transportation Officials (AASHTO) Publication:

T102 Spot Test of Asphaltic Materials.

B. American Society for Testing and Materials (ASTM) Publications:

D140 Sampling Bituminous Materials.

C. Federal Specification (FS):

SS-A-674C Emulsified Asphalt.

1.2 QUALITY CONTROL: The Quality Control of Division 1, Section 01450, apply to this section. Approvals, except those required for field installations, field applications, and field tests, shall be obtained before delivery of material or equipment to the project site.

1.3 CERTIFIED TEST REPORTS: Before delivery of materials and equipment, five certified copies of the reports of all tests required in referenced publications or specified herein shall be submitted and approved. The testing shall have been performed in a laboratory meeting the requirements specified in the Quality Control Section of Division 1. The tests shall have been performed within three years of submittal of the reports for approval. Test reports shall be accompanied by notarized certificates from the manufacturer certifying that the tested material and equipment is of the same type, quality, manufacture, and make as that proposed to be supplied. Certified test reports are required for the following:

a. Asphalt Material

1.4 DELIVERY OF STORAGE: Material delivered to the site shall be inspected for damage, unloaded, and stored with a minimum of handling.

1.5 GENERAL: The bituminous prime coat shall be applied on a previously prepared base course.

PART 2 - PRODUCTS

2.1 MATERIALS: Bituminous materials shall be a slow setting emulsified asphalt conforming to Federal Specification SS-A-674C, Designation SS-1, SS-1H, or CSS-1h. Emulsified Asphalt shall be mixed with water in the proportion of 2 or 3 parts of potable water to one part of emulsified asphalt. The exact quantity of water to be added shall be determined in the field by the Engineer/Owner's Representative.

2.2 QUANTITIES TO BE APPLIED: The rate of application shall be not less than 0.25 gallon or more than 0.50 gallon per square yard. The actual rate of application will be determined in the field.

PART 3 - EXECUTION

3.1 EQUIPMENT, TOOLS, AND MACHINES used in the performance of the work required by this section, shall be subject to approval, and shall be maintained in satisfactory working condition.

A. Bituminous Distributor: Bituminous distributor shall have pneumatic tires of such width and number that the load produced on base surface shall not exceed 650 pounds per inch of tire width. The distributor shall be designed and equipped to distribute the bituminous material uniformly at even heat on variable widths of surface up to 15 feet at readily determined and controlled rates from 0.05 to 2.0 gallons per square yard, with a pressure range of 25 to 75 pounds per square inch and with an allowable variation not to exceed 5 percent from any specified rate. Distributor equipment shall include a separate power unit for the bitumen pump, full-circulation spray bars, tachometer, pressure gages, volume-measuring devices, adequate heaters for heating the materials to the proper application temperature, a thermometer to show the temperature of tank contents, and a hose attachment suitable for applying bituminous shall be equipped to circulate and agitate the bituminous material during the heating process.

B. Heating Equipment for Storage Tanks: The equipment for heating bituminous material shall consist of steam coils and equipment for producing material steam, so designed that steam cannot get into the material. An armored thermometer with range from 40 degrees F to 400 degrees F shall be fixed to the tank so that the temperature of the bituminous material may be read at all times.

C. Brooms and Blowers: Brooms and blowers shall be of the power type and shall be suitable for cleaning prepared sub-grade or bases.

3.2 WEATHER LIMITATIONS: The prime coat shall be applied only when the sub-grade, or base course is dry or contains moisture not in excess of the amount that will permit uniform distribution and the desired penetration. The prime coat shall be applied only when the ambient temperature is 55 degrees F or above and when the weather is not foggy or rainy, unless otherwise directed.

3.3 PREPARATION OF SURFACE: Immediately before applying the prime coat to the surface that is to be primed, all loose material, dirt, clay, or other objectionable substance shall be removed from the surface by means of a power broom or blower supplemented with hand brooms. After the cleaning operation and prior to the application of the prime coat, an inspection of the area to be primed will be made by the Engineer/Owner's Representative to determine the fitness of the areas to receive the bituminous priming material. When directed by the Engineer/Owner's Representative, the surface shall be lightly bladed and rolled immediately prior to the application of bituminous material, in which case brooming or blowing will not be required. To assure a uniform spread of the bituminous material, the portion of the sub-grade, or base course prepared for treatment, if excessively dry, shall be lightly sprinkled with water immediately before the application.

3.4 APPLICATION OF BITUMINOUS MATERIAL: Immediately following the preparation of the base course for treatment, the bituminous material shall be applied by means of a bituminous spreader in a uniform, continuous spread. When traffic is maintained, not more than 1/2 of the width of one section shall be traded in one application. The bituminous material shall be applied at a pressure within the range of 25 to 75 pounds per square inch and the amounts directed. The priming material shall be applied with uniform distribution at all points of the surface to be treated. Care shall be taken that the application of bituminous material at the junctions of spreads is not in excess of the specified amount. Excess bituminous material shall be scraped from the surface. Building paper shall be spread on the surface of the applied material for a sufficient distance back from the ends of each application so that flow from the sprays may be started and stopped on the paper, and so that all sprayers will operate at full force on the surfaced to be treated. Immediately after the application, the building paper shall be

removed and destroyed. All sports unavoidably missed by the distributor shall be properly treated with bituminous material.

Following the application of prime material, the surface shall be allowed to dry without being disturbed for a period of not less than 48 hours or longer, as maybe necessary to attain penetration into the foundation course and evaporation of the volatiles from prime material, which period shall be determined by the Engineer/Owner's Representative. The Contractor shall furnish and spread enough approved sand to effectively blot up and cure any excess bituminous material. The Contractor shall maintain the primed surface until the succeeding layer of pavement is placed, by protecting the surface against damage to the Owner. No smoking, fires, or flames other than the heater that are a part of the equipment shall be permitted in the vicinity of heating, distributing, or transferring operations for bituminous materials. When traffic is maintained, one-way traffic shall be permitted on the untreated portion of the roadbed.

Application Temperature for Emulsified Asphalt: Application temperature for emulsified asphalt shall be as directed. Application temperatures shall be within the range of 73 to 130 degrees F.

3.5 FIELD SAMPLING AND TESTING

A. Samples of Bituminous Materials: Samples of bituminous materials shall be furnished by and at the expense of the Contractor. Sampling shall be in accordance with ASTM D140.

B. Tests: All tests of bituminous materials will be made by the Contractor.

1. Spot test for asphalt will be performed in accordance with AASHTO T102.

2. Calibration Test: The Contractor shall furnish such equipment and materials and perform the work to calibrate the tank and measuring devices of the distributor. This shall be done on the job at the beginning of the work.

END OF SECTION 02601

SECTION 02713

EXTERIOR WATER DISTRIBUTION SYSTEM

PART 1 - GENERAL

1.1 APPLICABLE PUBLICATIONS: The latest issues of the following publications listed below form a part of this specification to the extent referenced. The publications are referred to in the text by the basic designation only.

A. American National Standards Institute (ANSI) Publications.

A21.16	Fusion-Bonded Epoxy Coatings for the Interior and Exterior Surfaces of Ductile-Iron and Gray-Iron Fittings.
B16.26	Cast Copper Alloy Fittings for Flared Copper Tubes.

B. American Society for Testing and Materials (ASTM) Publications:

A47	Specification for Ferritic Malleable Iron Castings
A325	Specification for Structural Bolts, Heat Treated, 120/105 ksi Tensile Strength
A536	Specification for Ductile Iron Castings
B62	Specification for Composition Bronze or Ounce Metal Castings
D1784	Rigid Polyvinyl Chloride (PVC) Compounds and Chlorinated Polyvinyl Chloride (CPVC) Compounds
D1785	Polyvinyl Chloride (PVC) Plastic Pipe, Schedules 40, 80, and 120
D2241	Polyvinyl Chloride (PVC) Pressure-Rated Pipe (SDR Series)
D2464	Threaded Polyvinyl Chloride (PVC) Plastic Pipe Fittings, Schedule 80
D2564	Specification for Solvent Cements for Poly (Vinyl Chloride) (PVC) Plastic Pipe and Fittings
D2467	Polyvinyl Chloride (PVC) Plastic Pipe Fittings, Schedule 80
D3139	Specification for Joints for Plastic Pressure Pipes Using Flexible Elastomeric Seals
F477	Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipes
D2000	Standard Classifications System for Rubber Products

C. American Water Works Association (AWWA) Publications:

C104	Cement-Mortar Lining for Ductile-Iron Pipe and Fittings for Water.
C110	Gray-Iron and Ductile-Iron Fittings, 3 In. through 48 In. for Water and Other Liquids.
C111	Rubber Gasket Joints for Ductile-Iron and Gray-Iron Pressure Pipe and Fittings.
C115	Flanged Ductile-Iron Pipe with Ductile Ductile-Iron or Gray Iron Threaded Flanges
C116	Fusion-Bonded Epoxy Coatings for the Interior and Exterior Surfaces of Ductile-Iron and Gray-Iron Fittings.
C151	Ductile-Iron Pipe, Centrifically Cast in Metal Molds or Sand-Lined Molds for Water or Other Liquids.
C 153	Ductile Iron Compact Fitting, 3” through 12” for Water and other Liquids.
C503	Wet Barrel Fire Hydrant
C509	Resilient Seated Gate Valves, 3 Through 12 NPS, For Water and Sewage System
C550	Valves and Hydrants Protective Coatings
C600	Installation of Ductile-Iron Water Mains and Their Appurtenances
C651	Disinfecting Water Mains
C800	Underground Service Line valves and Fittings
C900	Polyvinyl Chloride (PVC) Pressure Pipe, 4 In. Through 12 In., for Water
M20	Manual of Water Supply Practices, Water Chlorination, Principles and Practices

1.2 DESCRIPTION OF WORK

A. The work includes providing new water piping and connecting to existing water system and related work. Provide each system complete, and ready for operation. Water piping systems, including equipment, materials, installation, and workmanship shall be as specified herein.

1. Water Mains & Stub-outs: Provide and install Polyvinyl Chloride (PVC) piping for underground installation, including fittings, gate valves, air release valves, blow-off valves, concrete thrust blocking, and other related appurtenances in accordance with the drawings, and specifications. Fittings shall be ductile iron mechanical joint.

2. Service Lateral: Provide and install Polyvinyl Chloride (PVC), Schedule 80 pipe

including fittings, connections, valves, and other components in accordance with the drawings, and specifications.

B. Coordination of Work: Coordinate all work under this section, particularly connection to existing systems and other activities which will affect water service, with the Engineer/Owner's Representative and Guam Water Works Authority (GWA).

1.3 SUBMITTALS

A. Layout Drawings: Submit drawings for layout of valving systems, connections to existing systems, water service connections and appurtenances, special transition sections, and hydrants. Indicate locations and configurations of all fittings, valves, and other appurtenances and accessories on layout drawings. Do not have pipe, fittings, appurtenances and accessories delivered to the site until layout drawings have been approved.

B. Manufacturer's Data: Submit manufacturer's standard drawings or catalog cuts of the following items:

1. Pipe, fittings, joints, couplings, and gaskets
2. All Valves, including, but not limited to gate, check, float, and air release valves;
3. Corporation stops
4. Valve boxes
5. Water Meter
6. Fire Hydrants
7. Backflow Preventer

C. Standards Compliance: Submit manufacturer's certificates of conformance or compliance for each of the following items:

1. Pipe & fittings, including shop-applied linings and coatings
2. Pipe joint materials
3. All Valves
4. Corporation Stops
5. Water Meter
6. Fire Hydrants
7. Backflow Preventer

1.4 DELIVERY, STORAGE, AND HANDLING OF MATERIALS

A. Delivery and Storage: Inspect materials delivered to site for damage; unload and store with minimum handling. Store materials in enclosures or under protective covering; store rubber gaskets not to be installed immediately under cover, out of direct sunlight. Do not store directly on the ground. Keep interior of pipes and fittings free of dirt and debris.

B. Handling: Handle pipe, fittings, valves, and other accessories and appurtenances in such manner as to ensure delivery to the trench in sound, undamaged condition. Avoid injury to coatings and linings on pipe and fittings; make satisfactory repairs if coatings or linings are damaged. Carry pipe to the trench; do not drag it.

PART 2 - PRODUCTS

2.1 MATERIALS FOR WATER LINE PIPING

A. Water Main: For below ground, Polyvinyl Chloride (PVC) Plastic Water Pipe and Associated

Fittings: Pipe shall conform to AWWA C900, Pressure Class 235 (DR 18), and will be either plain end or gasket bell end with cast-iron-pipe-equivalent outside diameter. For above ground, Ductile Iron Pipe (DIP), Pressure Class 250, Thickness Class 52, AWWA C151. Fittings shall conform to AWWA C110, gray-iron or ductile-iron with a pressure rating not less than that of the pipe. Pipe and fittings shall have cement-mortar lining, conforming to AWWA C104.

Joints for PVC pipe shall be push-on joints conforming to ASTM D3139 or compression-type mechanical joints conforming to ASTM D3139 and AWWA C111. Provide ASTM F477 gaskets for push-on joints for pipe and AWWA C111 gaskets for push-on joints and mechanical joints for joint connections between pipe and metal fittings, valves and other accessories. Joints for DIP shall be either mechanical or flanged or as indicated

B. Service Laterals: Shall be Poly (Vinyl Chloride) (PVC), Schedule 80, conforming to ASTM D-1785. Socket-type fittings shall be polyvinyl chloride (PVC) schedule 80 conforming to ASTM D-2467. Threaded fittings shall conform to ASTM D-2464 and joint compound shall conform to ASTM D-1784.

2.2 CONNECTORS

A. Flexible Couplings: Provide flexible couplings where called for on the drawings or where necessary in sizes and working pressure equal to the design pressure for the pipe for which they are to be installed. For buried pipes, they shall have cast-iron sleeves with flange and bolts of high-strength ductile iron. Gaskets shall be neoprene or natural rubber.

B. Transition Couplings shall be of ductile iron, meeting or exceed the requirements of ASTM A536, Grade 65. Gaskets shall be virgin SBR compounded for water in accordance with ASTM D2000 MBA 710. Bolts and nuts shall be high strength, low alloy steel trackhead bolts. National coarse rolled thread and heavy hex nuts. Steel meets AWWA C111 composition specifications. Coatings shall be fusion bonded or liquid epoxy.

C. Where flexible couplings are used as expansion joints, the ends of the pipes shall be separated 1 inch to allow for expansion. Couplings shall be centered on pipe ends. Runs of pipe containing flexible couplings shall be properly blocked, anchored or tied to the structure to prevent joints from pulling apart.

D. Flanged Coupling Adapters: Flanged adapters shall have at least four (4) anchor studs per coupling or equivalent. Bolts and nuts shall be Type 18-8 stainless steel.

E. Clamp-Type Couplings: Clamp-type couplings shall be designed for a water working pressure equal to the design pressure for the pipe on which they are to be installed, and shall be equipped with rubber gaskets for water service. Band shall be Stainless Steel Type 304 with high strength malleable iron ASTM A47 Grade 32510 or ductile iron ASTM A536 lugs.

F. Insulating Flanges: Insulating flanges shall be used with couplings to connect pipes of dissimilar material or when indicated on the drawings. The insulating flanges shall consist of a central gasket, bolt sleeve and insulating washer with steel washers. The central gasket shall be glass reinforced. The insulating flanges shall be designed to operate at the ASA rating of the flange on which installed.

G. Bolts and Nuts: Unless otherwise specified elsewhere, all bolts, washers, and nuts not specified to be Type 18-8 stainless steel. The material for steel bolts and nuts shall conform to the requirements of the current ASTM A325. If washers are used, they shall be of forged or rolled steel. All bolts shall be furnished with hexagonal or square heads and semi-finished hexagonal nuts. The dimensions of all heads and nuts shall be not less than those required

for the American Standard regular, and the height shall be sufficient to break the bolt in the body portion when tested. Threads shall be American Standard Screw Thread, coarse thread series.

2.3 VALVES

A. Gate Valves on Buried Piping: Unless otherwise specified, valves conforming to AWWA C509. External and internal surfaces of the valve body and bonnet shall have a fusion bonded epoxy coating, complying with ANSI/AWWA C550, applied before assembly. Valves shall have non-rising stem type with mechanical-joint ends, with operating nut, double-disc or split-wedge type gate, designed for pressure rating of not less than 150 psi. Valves shall open by counterclockwise rotation of the valve stem. Valves shall have O-ring stem seals. Stuffing boxes shall be bolted and constructed so as to permit easy removal of parts for repairs.

Valves 3.5 inch and smaller shall be the wedge disc type with non-rising stem, screw ends and brass or bronze body. Metal composition of the body, centerpiece and other cast parts shall be bronze meeting the requirements of ASTM B62. All packing shall have each ring cut to fit with staggered joints. Valves shall be provided with hand wheels and stuffing box glands. Valves shall be for minimum 150 psi water service. Hand wheels shall be of malleable iron. Valves shall be of one manufacturer.

B. Gate Valves in Valve Pits and Aboveground Location: Unless otherwise specified, valves conforming to AWWA C509. External and internal surfaces of the valve body and bonnet shall have a fusion bonded epoxy coating, complying with ANSI/AWWA C550, applied before assembly. Valves shall have non-rising stem type with flanged ends, shall have double-disc or split-wedge type gate, and designed for pressure rating of not less than 150 psi. Valves shall open by counterclockwise rotation of the valve stem. Stuffing boxes shall be bolted and constructed so as to permit easy removal of parts for repair. Hand wheels shall be of malleable iron. Valves shall be of one manufacturer.

C. Valve Boxes: Each gate valve on buried piping shall be provided with an adjustable cast-iron box of a size suitable for the valve on which it is to be used. The head shall be round and the lid shall have the word "WATER" cast on it. The least diameter of the shaft of the box shall be 10.25 inches for waterlines greater than 6 inches in diameter and 5.25 inches for waterlines 6 inches or less in diameter. Each box shall be given a heavy coat of bituminous paint.

D. Corporation Stops: Corporation stops shall be ground key type; shall be made of bronze conforming to ASTM B62; and shall be suitable for the working pressure of the system. Ends shall be suitable for solder-joint, or flared tube compression type joint. Threaded ends for inlet and outlet of corporation stops shall conform to AWWA C800, coupling nut for connection to flared copper tubing shall conform to ANSI B16.26.

E. Air Relief Valves (If Applicable): Air relief valve shall be of type suitable for the system's design pressure of 150 psi. The valve shall be painted with two coats of asphalt varnish. Fittings and nipples for connections of air relief valves shall be cast bronze or "Standard" brass (Grade A) screwed joint with metal conforming to ASTM B62. Corporation stop shall be as specified under Subparagraph 2.3 (B) entitled "Corporation Stops."

1. They shall have an inlet of not less than 3/4 inch and an outlet orifice size of not less than 3/16 inch. The valves shall automatically remove air from the lines when the lines are being filled with water, shall admit air into the lines when water is being withdrawn in excess of the inflow, and shall allow accumulating air to escape while the line is in operation and under pressure. Sizes shall be as shown on the

drawings. Valve and valve seat shall be of bronze, conforming to ASTM B62, high quality stainless steel, heat-treated chrome steel or Buna-n-rubber; however, no stainless steel to stainless steel or Buna-n-rubber to Buna-n-rubber shall be allowed.

2. The levers, float arms, pins and vent cocks shall be bronze conforming to ASTM B62. Floats shall be of the highest quality stainless steel and shall operate with adequate force to insure positive valve action.

F. Shop Painting: All iron body valves shall be given two (2) coats of coal tar paint on the interior cast iron surfaces, and on the exterior two (2) coats of coal tar paint for valves in other locations. Solid brass valves and brass and bronze trim on iron body valves shall not be painted. All finished surfaces shall be given a coating for protection against corrosion and damage during shipment and installation.

G. Backflow Preventer: Shall be Reduced Pressure Principle Backflow Preventer (RPPBP) of size as indicated in the drawings for domestic use. The RPPBP assembly shall consist of two independent “Y” configured check valves and one differential relief valve. For hydrant and fire protection lines, use Double Check Detector Check Backflow Assembly (DCDCBA) with ¾-inch by-pass line, meter, and backflow preventer. The assemblies shall be in compliance with the Foundation for Cross Connection Control and Hydraulic Research (FCCCHR) and shall be equipped with shut-off valves on both ends.

H. Water Meter: Water meters are Radio Read (R.R.) and shall have registers equipped for read data to be collected by walk or drive by radio read system. Meter shall be compatible with GWA’s Radio Read Meter Reading System. Coordinate with GWA for the type of water meter to be used or that are acceptable. Meters and boxes are to be purchased from GWA, as part of a new account set up.

I. Water Meter Box and Cover: Meters from ¾” to 2” shall be installed in Ford Meter Box. Meters 3” and larger must be installed in a meter vault no more than 4 feet deep.

2.4 APPURTENANCES/SPECIAL FITTINGS

A. Fire Hydrants: Hydrants shall conform to AWWA C503, "Wet Barrel" design. Hydrants shall be 6-inch diameter with a minimum 5-inch clear inlet valve opening, and provided with one 4-1/2 inch pumper connection and two 2-1/2 inch hose connections. Hydrants shall be of the non-flooding post type that shall not flood in the hydrant when the valve is closed, and shall be repairable without digging. Provide for a safety flange for post type hydrants. The hydrants shall be designed for a working pressure of not less than 150 psi. Working parts shall be bronze. Hose and pumper connections threads and operating nut shall be National Standard male hose threads with cap and chain. Each hydrant shall be preceded in the piping by a 6-inch gate valve. Provide with at least two (2) coat of primer and two coats of yellow enamel.

B. Water Main Warning Tape: Metallic impregnated warning tape shall be blue color for domestic (Potable) waterline and red color for fire protection waterline with "Caution Buried Water Line Below" printed on it continuously. Tape shall be made by a company regularly engaged in making metallic warning tapes.

C. Tracer Wire for Nonmetallic Piping: Provide bare copper or aluminum wire not less than 0.10 inch in diameter in sufficient length to be continuous over each separate run on nonmetallic pipe. Terminate tracer wire at ductile iron fittings and other metallic components.

D. Cast Iron Manhole Frame and Cover: Frame and cover shall be cast iron, heavy duty type and rated for at least H20 loading. Cover shall be as indicated and marked “WATER”

stamped or cast into cover so that it is plainly visible.

2.5 CONCRETE: Concrete for pipe thrust blocks, supports and anchorage conforming to the requirements of Section 03300, entitled “Cast-In-Place Concrete”.

PART 3 - EXECUTION

3.1 GENERAL: These requirements shall apply to all piping except as specified otherwise.

A. Location of Waterline Improvements: The location of water mains, laterals and appurtenances are shown on the drawings. All mains and laterals shall be installed to the grades and elevations shown on the drawings and, unless otherwise indicated on the drawings, shall be provided with a minimum cover of 3 feet from the top of pipe to existing ground or paved surface. The allowable angle of deflection and bending radius at any point shall not exceed that recommended by the pipe manufacturer for the particular pipe used.

B. Mechanical joint pipe and push-on restrained joint pipe shall be marked in such a manner that it can be determined after installation that the pipe is properly seated.

C. Existing Utilities and Structures: The Contractor shall familiarize himself with the locations of existing utilities and structures. The location of underground utilities where shown on the plans are based upon information obtained from as-built drawings and shall not be taken as final and all-conclusive. The Contractor shall, as part of his basic work, verify with DPW, GWA, GPA, GTA, DOCOMO, etc., the location and configuration of existing utilities and structures which may affect or be affected by work under this project and shall be responsible for their adjustment, removal or relocation. The Contractor shall obtain clearances from all utility agencies prior to excavation for water system work.

D. Pipe Laying and Jointing: Pipe, fittings, valves and accessories will be carefully inspected by the Engineer before and after installation and those found defective will be rejected. Pipe and fittings shall be free from fins and burrs.

Before placing in position, clean pipe fittings, valves, and accessories, and maintain in a clean condition. Provide proper facilities for lowering sections of pipe into trenches. Do not drop or dump pipe, fittings, valves, or any other piping material into trenches. Cut pipe accurately to measurements established at the site and work into place without springing or forcing. Replace pipe or fitting that does not allow sufficient space for proper installation of jointing material with new pipe or fittings of proper dimensions. Blocking or wedging between bells and spigots will not be permitted. Lay bell-and-spigot pipe with the bell end pointing in the direction of laying. Grade the pipe in straight lines; avoid the formation of any dips or low points. Support pipe at its proper elevations and grade; ensure firm and uniform support. Wood support blocking will not be permitted. Lay pipe so that the full length of each section of pipe and each fitting rests solidly on the pipe bedding; excavate recesses to accommodate bells, joints, and couplings.

Provide anchors and supports where necessary (and where indicated) for fastening work into place. Make proper provision for the expansion and contraction of piping. Keep trenches free of water until joints have been completely assembled. At the end of each day's work, close open ends of pipe temporarily with wood blocks or bulkheads. Do not lay pipe when conditions of trench or weather are unsuitable.

3.2 INSTALLATION OF BURIED WATER MAIN PIPING

A. Install pipe and fittings in accordance with the general requirements for installation of piping and with the requirements of AWWA C600 for pipe installation, joint assembly, valve-and-

fittings installation, and thrust restraint, except as otherwise specified herein:

B. The pipe shall be protected to prevent entrance of foreign material during laying operations. When laying is not in progress, open pipe ends shall be protected with a watertight plug or other approved means to exclude water or foreign material.

C. Installation of Tracer Wire and Marking Tape: Install a continuous length of tracer wire for the full length of each run or nonmetallic pipe. Attached wire to top of pipe in such a manner that it will not displace during construction operations. Place warning tape 12 inches below finished/existing grade.

D. Earthwork: Perform excavation, sub-grade improvement (as required), bedding and backfilling in accord with the material and construction requirements of Section 02201, entitled "Earthwork for Utilities."

E. Pipe Anchorage: Anchorage shall be by means of concrete thrust blocks (reaction backing), anchor blocks or encasement as indicated on the drawings. All 22.5 Degree (1/16 Bends) and sharper bends, tees, and dead ends of piping shall be securely blocked in the direction of flow with cast-in-place concrete bearing solidly against the piping and affording a minimum of 3.0 square feet of bearing area against a vertical trench face of undisturbed ground for 3- and 4-inch piping, and in accordance with thrust block schedules for piping 6-inch and larger.

F. Valves and Hydrants:

1. Valves: Install Gate Valves in accordance with AWWA C600. Install air release valves in accord with manufacturer's recommendations.

2. Hydrants: Install hydrants in accordance with AWWA C600. Make and assemble joints, as specified or indicated, for making and assembling the same type joints between pipe and fittings. Install hydrants with the 4.5” connection facing the adjacent paved areas. If there are more than one adjacent surface, contact the Engineer for further instructions.

3.3 Special Requirements for Installation of Service Laterals Metallic Piping: Install pipe and fittings in accordance with standard requirements for installation of piping specified herein and with the applicable requirements of AWWA C600 for pipe installation, unless otherwise specified

A. Jointing:

(1) Screwed Joints: Make screwed joints up tight with a stiff mixture of graphite and oil, inert filler and oil, or graphite compound; apply to male threads only. Threads shall be full cut; do not leave more than three threads on the pipe exposed after assembling the joint.

(2) Joints for Copper Tubing: Cut copper tubing with square ends; remove fins and burrs. Handle tubing carefully; replace dented, gouged, or otherwise damaged tubing with undamaged tubing. Make solder joints using 95-5 tin-antimony or Grade Sn96 solder. Solder and flux shall contain not more than 0.2 percent lead. Before making joint, clean ends of tubing and inside of fitting or coupling with wire brush or abrasive. Apply a rosin flux to the tubing end and on recess inside of fitting or coupling. Insert tubing end into fitting or coupling for the full depth of the recess and solder. For compression joints on flared tubing, insert tubing through the coupling nut and flare tubing.

(3) Flanged Joints: Make flanged joints up tight, taking care to avoid undue strain on flanges, valves, fittings, and accessories.

3.3 FLUSHING AND DISINFECTION

A. Flushing: All foreign matter shall be flushed from the pipeline prior to disinfections. Hoses, temporary piping or other devices shall be provided to dispose of flushing water without damage to adjacent property.

B. Disinfections: Disinfect the new potable water piping and existing potable water piping affected by Contractor's operations in accordance with AWWA C651. Fill the piping systems with solution containing a minimum of 50 parts per million of available chlorine, and allow solution to stand for a minimum of 24 hours. Flush the solution from the systems with clean water until maximum residual chlorine content is not greater than 0.2 parts per million. Allow concrete to cure a minimum of 5 days before testing any section of piping where concrete thrust blocks and anchors have been provided.

All chlorine or chlorine bearing compounds, chlorine dosage equipment, residual chlorine measuring equipment and flow measuring equipment shall be furnished, installed, operated and removed by the Contractor. Samples shall be taken from service outlets or, if none is available, from sample test station to be provided by the Contractor.

Field use of chlorination chemicals and equipment presents particular potential hazards to personnel, and all pertinent safe handling practices must be adhered to. In addition, special precautions should be taken to prevent damage to aquatic life in receiving waters from heavily chlorinated waters. Federal and local regulations regarding toxic wastes shall be followed. If necessary, de-chlorination of wastewater shall be provided prior to discharge. AWWA Manual M20, Water Chlorination, Principles and Practices, shall be used as a basic reference for carrying out disinfections work.

C. Prior to pressure testing or placing waterlines into service, bacteriological samples must be collected from the new water line after flushing and a 24-hour rest period. Coordinate proper procedures with GEPA and GWA for bacteriological testing.

3.4 FIELD TESTS AND INSPECTION

A. General: The Engineer/Owner’s Representative will conduct field inspections and witness all field tests specified in this Section. Perform all field tests, and provide all labor, equipment, and incidentals required for testing, including water and electrical power necessary for the tests. Approval will be by the Engineer/Owner’s Representative. The Contractor shall produce evidence, when required, that any item of work have been constructed properly in accordance with the drawings and specifications. Correct all deficiencies found and retest all affected work at no additional cost.

Do not bury, cover or conceal any piping or appurtenance, thrust blocks or bedding until work has been inspected, tested, and approved. Tests shall be made prior to backfilling of trenches for buried pipe. Tests shall not be made until at least 5 days have elapsed since any concrete thrust blocks in the section have been poured. The pipe shall be filled with water and allowed to stand for a 24-hour period to permit absorption. Each valved section of pipe shall then be slowly filled with water to replace any lost by absorption. Test pressure shall be 150 psi minimum.

B. Testing Procedure: Testing procedure for water mains and water lines shall be in accordance with the applicable requirements of AWWA C600. No leakage will be allowed at pipe joints, except for the special test requirements given hereinafter. Testing procedure and allowable leakage for PVC plastic water main and water service lines shall be in accordance with UNI-B-3, except that no leakage will be allowed at joints made with sleeve-type mechanical couplings.

C. Special Testing Requirements: Hydrostatic pressure for pressure test shall be 125 psi (minimum) at highest elevation and not more than 200 psi (maximum) at the lowest elevation and shall be held for a period of not less than 2 hours. Prior to the pressure test that portion of the water line being tested shall be filled with water for a soaking period of not less than 24 hours. Leakage test may be performed at the same time and at the same test pressure as the pressure test.

D. Testing of Equipment and Control Devices: All equipment and control devices and appurtenances such as valves, etc., shall be tested in operation in a manner approved by the Engineer to demonstrate compliance with the contract requirements.

E. All tests shall be witnessed by the Engineer/Owner's Representative.

END OF SECTION 02713

SECTION 02720

STORM DRAINAGE SYSTEM

PART 1 - GENERAL

1.1 APPLICABLE PUBLICATIONS: The latest issues of the following publications listed below form a part of this specification to the extent referenced. The publications are referred to in the text by the basic designation only.

A. Federal Specifications (Fed. Spec.):

A-A 60005	Frames, Covers, Gratings, Steps, Sump and Catch Basin, Manhole

B. American Concrete Institute (ACI) Publications:

ACI 315	Details and Detailing of Concrete Reinforcements

C. American Society for Testing and Materials (ASTM) Publications:

C 29	Standard Test Method for Bulk Density and Voids in Aggregate
C 478	Pre-cast Reinforced Concrete Manhole Sections
D 1248	Specification for Polyethylene Plastics extrusion Materials For Wire and Cable
D 1557	Test Methods for Laboratory Compaction Characteristics of Soil Using Modified Effort
D 1784	Rigid Polyvinyl Chloride (PVC) Compounds and Chlorinated Polyvinyl Chloride (CPVC) Compounds
D 2412	Test Method for Determination of External Loading Characteristics of Plastic Pipe by Parallel-Plate Loading
D 3034	Type PSM Poly (Vinyl Chloride) (PVC) Sewer Pipe and Fittings (REV B)
D 3350	Specifications for Polyethylene Plastics Pipe and Fittings Materials
F 477	Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe

D. American Association of State Highway and Transportation Officials (AASHTO):

M 294	Corrugated Polyethylene Pipe, 12 to 36-inch Diameter

1.2 DESCRIPTION OF WORK AND GENERAL REQUIREMENTS

A. Storm Drainage System: Drainage system improvements include but not limited to the installation of drainage pipes, drainage manholes, field inlets/catch basins, and other appurtenances for a complete installation, as called for in the plans.

B. Related Sections:

Section 02050 - Demolition and Removal
Section 02201 - Earthwork for Utilities
Section 03300 - Cast-In-Place Concrete

C. Samples: Submit samples of the following materials for approval before work is started:

1. Pipes and Fittings

D. Layout Drawings: Submit drawings for layout of drainage systems. Indicate locations of fittings and other accessories on layout drawings. Do not begin excavation work until layout drawings have been approved by the Engineer.

E. Shop Drawings: Submit shop drawings for the following:

1. Concrete Reinforcement, in accordance with ACI 315
2. Pre-cast concrete manholes
3. Metal Work

F. Manufacturer's Data: Submit manufacturer's standard drawings or catalog cuts of the following items:

1. Pipes
2. Fittings
3. Joints, Couplings and Gaskets
4. Frames, Covers, and Grates

G. Manufacturer's Certificates of Conformance: Submit manufacturer's certificates of conformance or compliance for each of the following materials which are specified to conform to publications referenced under "Products" in this section:

1. Pipe and Fittings
2. Pipe Joint Materials
3. Frames, Covers, and Gratings

All tests required by each applicable referenced publication shall have been performed, whether specified in that publication to be mandatory or otherwise. For tests which are not specified in the referenced publications to be performed at definite intervals during manufacture, the tests shall have been performed within 3 years of the date of submittal of certificates on the same type, class, grade, and size of material as is being provided for the project.

1.3 DELIVERY, STORAGE, AND HANDLING OF MATERIALS

A. Piping: Inspect materials delivered to the site for damage and store with a minimum of handling. Store materials on site in enclosures or under protective coverings. Do not store materials directly on the ground. Keep inside of pipes and fittings free of dirt and debris.

B. Cement: Store cement immediately upon receipt at site of work. Cement in ripped bags at the time of delivery shall be rejected. Store bagged cement and in a suitable waterproof structure which has been made as air-tight as practicable, and which has floors elevated at least 12 inches above ground to prevent absorption of moisture. At the time of use, cement and lime shall be free-flowing and free of lumps. Cement that has been in storage longer

than 6 months shall be tested as deemed necessary to determine its suitability for use. Such cement or shall not be used without the approval of the Engineer/Owner's Representative.

C. Metal Items (Except Concrete Reinforcement): Check upon arrival; identify and segregate as to types, functions, and sizes. Store in a manner affording easy accessibility and not causing excessive rusting or coating with grease or other objectionable materials.

D. Concrete Reinforcement: Store reinforcement in a manner that will avoid excessive rusting or coating with grease, oil, dirt, and other objectionable materials. Store in separate piles or racks so as to avoid confusion or loss of identification after bundles are broken.

E. Handling: Handle pipe, fittings, and accessories in such a manner as to ensure delivery to the trench in sound undamaged condition.

F. Pre-cast Concrete Manholes: Handle pre-cast manhole sections with care to avoid chipping and breakage; store as directed. Protect pre-cast concrete from contact with the earth and exposure to weather; keep dry until used.

PART 2 - PRODUCTS

2.1 PIPING

A. Pipe and Fittings:

1. Pipes larger than 12" diameter shall be Corrugated Polyvinyl Chloride (PVC) pipe, meeting the requirements of AASHTO M294, Type S. Fittings shall conform to AASHTO M294 and MP6-95. Fabricated fittings shall be welded on the interior and exterior at all junctions. Pipe and fitting material shall be high-density polyethylene meeting requirements of ASTM D3350 Cell Classification 335420C, or ASTM D1248 Type III, Class C, Category 4, Grade P33.

2. Pipes 12" diameter and smaller shall be PVC conforming to ASTM D3034 with integral bell gasket joints or approved equal. Rubber gasket shall be factory installed and conform to ASTM F477. Pipe shall be made of PVC plastic having a cell classification of 12454B or 12364B as defined in ASTM D1784 and shall have SDR of 35 and minimum pipe stiffness of 46 psi according to ASTM D2412.

2.2 DRAIN ROCKS: Drain rocks shall consist of washed crushed coral rock, in pieces varying from 1/2" to 2" in any dimension. The drain rocks are assumed to have a void ratio of 35%. The Contractor shall be responsible for analyzing the true voids ratio of the drain rocks proposed to be used in the project. The analyses shall follow standard test method for voids in aggregates, as specified in ASTM C-29.

2.3 PRECAST CONCRETE MANHOLE SECTIONS: Pre-cast concrete manhole risers, base sections, and tops shall conform to ASTM C478. Pre-cast manhole cones shall be suitable for use with 24-inch manhole frames and covers. Exterior surfaces of all manhole components shall be coated with two (2) coats of bituminous paint.

2.4 CONCRETE: Concrete material shall be as specified in Section 03300, entitled "Cast-in-Place Concrete."

2.5 METAL ITEMS: Manhole frames and covers shall conform to Fed. Spec. A-A 60005 and shall be of cast iron as detailed in the drawings. Grate frames and gratings shall be either hot-dipped galvanized after fabrication or cast iron and shall be "Heavy Duty" type or rated for not less than H25 loading.

PART 3 - EXECUTION

3.1 INSTALLATION OF DRAINAGE PIPE AND APPURTENANT CONSTRUCTION

A. General Requirements for Installation: These requirements shall apply to all pipeline installations.

1. Earthwork:Do earthwork in accordance with Section 02201, entitled “Earthwork for Utilities”.

2. Pipe Bedding: A minimum of 6 inches thick, or as indicated, of the material specified in Subparagraph 2.1(C) of Section 02200 shall be placed below the bottom of the storm drainage pipe and compacted to 90% of the maximum density obtained at optimum moisture as determined by ASTM D1557.

   If Contractor uses manufactured sand (Commonly know as Hammer Mill Sand, which is 100% passing 3/8” Sieve) for pipe bedding, the material shall be compacted until it is dense and non-yielding.

3. Up to sub-grade above the pipe: The materials as specified in Subparagraph 2.1(C) of Section 02201, shall be used to fill the trench to a compacted depth of 12 inches minimum above the pipe which shall conform to the details provided on the drawings. The material shall be deposited in loose layers not exceeding 10 inches in thickness and compacted to 95 percent of the maximum density.

4. Pipe laying and jointing: Each pipe and fitting will be inspected before and after installation and those found defective will be rejected. Provide proper facilities for lowering sections of pipe into trenches. Lay pipe with the bell to groove ends in the upgrade direction. Adjust spigots in bells and tongues in grooves to give a uniform space all around. Blocking or wedging between bells and spigots or tongues and grooves will not be permitted. Replace by one of the proper dimensions any pipe or fitting that does not allow sufficient space for proper caulking or installation of joint material. At the end of each day's work, close open ends of pipe temporarily with wood blocks or bulkheads.

3.2 CONCRETE WORK: Refer to Section 03300, entitled “Cast-in-Place Concrete”.

3.3 MANHOLE CONSTRUCTION: Construct base slab of cast-in-place concrete or use pre-cast concrete base sections. Make inverts in cast-in-place concrete and pre-cast concrete bases with a semi-circular bottom conforming to the inside contour of the adjacent inlet and outlet pipe sections. Shapes invert accurately and provide a smooth finish. For changes in direction of the drainage line and entering branches into the manhole, make a circular curve in the manhole invert of as large a radius as manhole size will permit.

3.4 METAL WORK: Workmanship and Finish: Perform metal work so that workmanship and finish will be equal to the best practice in modern structural shops and foundries. Form iron to shape and size with sharp lines and angles. Do shearing and punching so that clean true lines and surfaces are produced. Make castings sound and free from warp, cold shuts, and blowholes that may impair their strength or appearance.

Field Painting: After installation, clean cast-iron frames, covers, gratings, and steps not buried in masonry or concrete to bare metal of mortar, rust, grease, dirt, and other deleterious materials and give a coat of bituminous paint. Do not paint surfaces subject to abrasion.

3.5 RESTORATION TO EXISTING CONDITIONS: Existing road and drainage facilities and other

improvements damaged or adversely affected by construction of drainage system improvements shall be restored to original or better conditions satisfactory to the Engineer/Owner's Representative.

3.6 FIELD TESTS AND INSPECTIONS

A. Field tests and Inspections, General: The Engineer/Owner's Representative will conduct field inspections, if necessary. The Contractor shall perform all field tests, if required, to perform such test. The Contractor shall be able to produce evidence, when required, that any item of work have been constructed properly in accordance with the drawings and specifications.

B. Pipeline Testing: Check each straight runs of pipeline for gross deficiencies by holding a light in an inlet or manhole (also called "lamping"); it shall show a practically full circle of light through the pipeline when viewed from the adjoining end of line. Alternative pipeline testing methods may be used subject to the review and written approval of the Engineer/Owner's Representative.

C. Leakage Tests: As directed by the Engineer/Owner's Representative, test lines for leakage by exfiltration tests. Prior to testing for leakage, backfill trench up to at least the lower half of pipe. When necessary to prevent pipeline movement during testing, place additional backfill around pipe sufficient to prevent movement, but leaving joints uncovered to permit inspection. Make exfiltration test by filling the line to be tested with water so that the head will be at least 4 feet above the top of the pipe at upper end of pipeline section being tested. Allow filled pipeline to stand until the pipe has reached its maximum absorption, but not less than four (4) hours. After absorption, re-establish the head and measure the amount of water needed to maintain this water level during a 2-hour test period. Amount of leakage, as measured shall not exceed 500 gallons per inch of diameter per day per mile of pipe. When leakage exceeds the amount specified, make satisfactory correction and retest pipeline section in the same manner as previously specified. Correct all visible leaks regardless of leakage test results.

The Engineer/Owner's Representative may waive exfiltration testing for large diameter pipes (pipes of 24 inches or larger diameter) in favor of careful visual inspection.

D. Field Tests for Concrete: Field-testing requirements are covered in Section 03300, entitled "Cast-in-Place Concrete".

END OF SECTION 02720

SECTION 02722

EXTERIOR SANITARY SEWER SYSTEM

PART 1 - GENERAL

1.1 APPLICABLE PUBLICATIONS

The latest issues of the following publications listed below form a part of this specification to the extent referenced. The publications are referred to in the text by the basic designation only.

A. American Concrete Institute (ACI) Publications:

ACI 315 Details and Detailing of Concrete Reinforcements

B. American Society for Testing and Materials (ASTM) Publications:

C 443 Joints for Concrete Pipe and Manholes, Using Rubber Gaskets

C478 Pre-cast Reinforced Concrete Manhole Sections

C 923 Resilient Connectors Between Reinforced Concrete Manhole Structures, Pipes and Laterals.

D2321 Underground Installation of Thermoplastic Pipes for Sewers and other Gravity-Flow Applications.

D3033 Type PSP Poly (Vinyl Chloride) (PVC) Sewer Pipe and Fittings

D3034 Type PSM Poly (Vinyl Chloride) (PVC) Sewer Pipe and Fittings (REV B)

D3212 Joints for Drain and Sewer Plastic Pipes Using Flexible Elastomeric Seals

F477 Elastomeric Seals (Gaskets) for Joining Plastic Pipe (ANSI/ASTM F477)

C. American Water Works Association (AWWA) Publications:

C605 Underground Installation of Polyvinyl Chloride (PVC) Pressure Pipe and Fittings

D. Uni-Bell Plastic Pipe Association (UNI) Publication:

UNI-B-5 Installation of Polyvinyl Chloride (PVC) Sewer Pipe

E. Japanese Industrial Standards:

JIS R5210 Japanese Portland Cement

1.2 GENERAL REQUIREMENTS

Work under this section shall include construction of sewer lines, manholes, adjustments of existing manholes, service laterals and connections to existing mains and manholes in general conformance with published material and construction standards of the Guam Waterworks

Authority (GWA).

A. Sanitary Sewer System: The system shall include gravity pipelines, service laterals, manholes and appurtenances, and connections to existing sewer main(s).

1. Pipelines: Unless otherwise specified on the drawings for special sections, provide gravity and pressure sewer mains and laterals of polyvinyl chloride (PVC) plastic pipe.

2. Manholes: Provide manholes at the locations indicated and constructed as shown on the drawings.

B. Layout Drawings: Submit drawings for layout of piping systems. Indicate locations of fittings and others accessories on layout drawings; detail clean outs. Do not begin excavation work until layout drawings have been approved by the Engineer/Owner's Representative.

C. Shop Drawings: Submit shop drawings for the following:

1. Pre-cast concrete manholes
2. Metal work
3. Concrete reinforcement in accordance with ACI 315 as specified in Section 03300 entitled, "Cast-in-place Concrete".

D. Manufacturer's Data: Submit manufacturer's standard drawings or catalog cuts of the following items:

1. Fittings
2. Joints and Couplings
3. Pipe Materials
4. Frames and Covers

E. Standards Compliance: Submit manufacturer's certificates of conformance or compliance for each of the following materials which are specified to conform to publications referenced under paragraph, "Materials" in this section:

1. Pipe and fittings, including factory-applied linings
2. Pipe joint materials
3. Cast iron frames, covers, and gratings
4. Pre-cast concrete manhole sections
5. Concrete aggregates
6. Concrete admixtures (if used)

All tests required by applicable referenced publications shall have been performed, whether specified in those publications to be mandatory or otherwise. For tests which are not specified in referenced publications to be performed at definite intervals during manufacture, the tests shall have been performed within three years of the date of submittal of certificates on the same type, class, grade, and size of material as is being provided for the project.

1.3 DELIVERY, STORAGE, AND HANDLING OF MATERIALS

A. Delivery and Storage:

1. Piping: Inspect materials delivered to site for damage; store with minimum of handling. Store materials on site, in enclosures, or under protective coverings. Store plastic piping and rubber gaskets under cover and out of direct sunlight. Do not store materials directly on the ground. Keep inside of pipes and fittings free of dirt and debris.

2. Pre-cast Concrete Manholes: Handle Pre-cast manhole sections with care to avoid chipping and breakage; store as directed. Protect Pre-cast concrete from contact with the earth and exposure to weather; keep dry until used.

3. Metal Items (Except Concrete Reinforcement): Check upon arrival; identify and segregate as to types, functions, and sizes. Store in a manner affording easy accessibility and not causing excessive rusting or coating with grease or other objectionable materials.

B. Handling: Handle pipe, fittings, and other accessories in such manner as to ensure delivery to the trench in sound undamaged condition. Take special care not to injure linings of pipe and fittings; if lining is damaged, make satisfactory repairs. Carry pipe to trench; do not drag it. Do not leave rubber gaskets and plastic piping that are not to be installed immediately in the sunlight, but store under cover out of direct sunlight.

PART 2 - PRODUCTS

2.1 SEWER PIPING

A. Gravity Sewer Piping:

1. Pipe and Fittings: Pipe and fittings shall conform to ASTM D3033 or D3034, shall be SDR 35, with ends suitable for elastomeric gasket joints.

2. Joints and Jointing Material: Joints shall conform to ASTM D3212. Gaskets shall conform to ASTM F477.

2.2 CONCRETE MATERIALS

Concrete materials shall be as specified in Section 03300, entitled "Cast-in-Place Concrete", except that cement used for manhole construction shall be Portland Cement, Type II or JIS R5210.

2.3 PRE-CAST CONCRETE MANHOLE SECTIONS

Pre-cast concrete manhole risers, base sections, and tops shall conform to ASTM C478 and shall be subject to the approval of the Engineer. Pre-cast manhole cones shall be suitable for use with 30-inch diameter manhole frame and cover. Exterior of all manhole components shall be coated with approved bituminous coating per GWA Standards.

2.4 METAL ITEMS

Manhole Frame and Cover: Frame and cover shall be cast iron, heavy duty type and rated for at least H25 loading. Cover shall be as indicated and marked “SEWER” stamped or cast into cover so that it is plainly visible.

2.5 Gaskets and Connectors: Gaskets for joints between manhole sections shall conform to ASTM C443. Resilient connectors for making joints between manhole and pipes entering manhole shall

conform to ASTM C923. Bands, expanders, and wedges shall be made from 300 Series Stainless Steel.

PART 3 - EXECUTION

3.1 INSTALLATION OF PIPELINES AND APPURTENANT CONSTRUCTION

A. General Requirements for Installation of Pipelines: These requirements shall apply to all pipeline installation except where specified elsewhere:

1. Location: The work covered by this section shall be as shown on the drawings.

2. Earthwork: Do earthwork in accordance with Section 02201, “Earthwork for Utilities”.

3. Pipe Laying and Jointing: Each pipe and fitting will be inspected before and after installation and those found defective will be rejected. Provide proper facilities for lowering sections of pipe into trenches. Lay non-pressure pipe with the bell or groove ends in the upgrade direction. Adjust spigots in bells and tongues in grooves to give a uniform space all around. Blocking or wedging between bells and spigots or tongues and grooves will not be permitted. Replace by one of the proper dimensions any pipe or fitting that does not allow sufficient space for proper caulking or installation of joint material. At the end of each day's work, close open ends of pipe temporarily with wood blocks or bulk-heads.

4. Connection to Existing Lines: Make connections to existing lines in an approved manner. Conduct work so as to avoid interruption of the existing level of waste-water services within and adjacent to the project area. Coordinate all temporary services with the Guam Water Works Authority, for wastewater services.

5. Gravity Sewer Piping: PVC Piping: Install pipe and fittings in accordance with the general requirements for installation of pipelines and with the requirements of ASTM D2321 for laying and joining gravity pipe and fittings. Make joints with the gaskets previously specified for joints with this piping; assemble these joints in accordance with the requirements of ASTM D2321 for assembly of joints. Make joints to other pipe materials in accordance with the recommendations of the plastic pipe manufacturer.

6. Clean-outs: Sewer system clean-outs shall be assembled and installed as shown on the drawings. Piping and fittings shall conform to the requirements of Paragraph 2.1A1. Covers for clean-outs shall be bronze as approved by the Engineer.

7. Concrete Work: Concrete work shall conform to the requirements of Section 03300 entitled “Cast-in-Place Concrete”.

8. Manhole Construction and Adjustments:

a. Manhole Construction: Construct base slab of cast-in-place concrete or use Pre-cast concrete base sections. Make inverts in cast-in-place concrete and Pre-cast concrete bases with a semi-circular bottom conforming to the inside contour of the adjacent sewer sections. Shape inverts accurately and give the bottom a smooth finish. For changes in direction of the sewer and entering branches into the manhole, make a

circular curve in the manhole invert of as large a radius as manhole size will permit. For cast-in-place concrete construction, pour bottom slabs and walls and bond.

b. Manhole Adjustments: Adjust tops of existing manholes to conform to new, finish pavement elevations per details set forth on the drawings.

9. Metal Work:

a. Workmanship and Finish: Perform metal work so that workmanship and finish will be equal to the best practice in modern structural shops and foundries. Form iron to shape and size with sharp lines and angles. Do shearing and punching so that clean true lines and surfaces are produced. Make castings sound and free from warp, cold shuts, and blow holes that may impair their strength or appearance.

b. Field Painting: After installation, clean cast-iron frames, covers, gratings, and steps not buried in masonry or concrete to bare metal of mortar, rust, grease, dirt, and other deleterious materials and give a coat of bituminous paint. Do not paint surfaces subject to abrasion.

10. Pipe Anchorage:

a. For pressure sewer piping, provide concrete thrust block for pipe anchorage. Size and position thrust block as per schedule and as indicated.

3.2 FIELD TESTS AND INSPECTIONS

A. General: The Engineer/Owner's Representative will conduct field inspections and witness all field tests specified in this section. The Contractor shall perform all field tests and provide all labor, equipment, and incidentals required for testing.

The Contractor shall be able to produce evidence, when required, that any item of work has been constructed properly in accordance with the drawings and specifications.

B. Test Procedure for Non-Pressure Lines:

1. Non-Pressure Lines: Check each straight run of pipeline for gross deficiencies by holding a light in a manhole; it shall show a practically full circle of light through the pipeline when viewed from the adjoining end of line.

2. Leakage Tests: Test lines for leakage by either infiltration tests or exfiltration tests, as specified in this paragraph. Prior to testing for leakage, backfill trench up to at least lower half of pipe. When necessary to prevent pipeline movement during testing, place additional backfill around pipe sufficient to prevent movement, but leaving joints uncovered to permit inspection. When the water table is 2 feet or more above top of pipe at upper end of pipeline section to be tested, measure infiltration using a suitable weir or other acceptable device. When the water table is less than 2 feet above top of pipe at upper end of pipeline section to be tested, make exfiltration test by filling the line to be tested with water so that the head will be at least 4 feet above top of pipe at upper end of pipeline section being tested. Allow filled pipeline to stand until the pipe has reached its maximum absorption as recommended by the pipe manufacturer.

After absorption, re-establish the head and measure amount of water needed to maintain this water level during a two-hour test period. Amount of leakage as measured by either infiltration or exfiltration test shall not exceed the 50 gallons per inch of pipe diameter per mile of pipeline. When leakage exceeds the amount specified, make satisfactory correction and retest pipeline section in the same manner as previously specified. Correct all visible leaks regardless of leakage test results.

3. Alternative Leak Testing Procedure: Air testing subject to the approval of the Engineer may be conducted in lieu of water exfiltration testing. This will establish the minimum requirements for use of air testing.

4. Deflection Testing: At the direction of the Engineer/Owner's Representative, make a deflection test on individual lengths of installed plastic pipeline on completion of all work adjacent to and over the pipeline, including leakage tests, backfilling, placement of fill, grading, paving, concreting, and any other superimposed loads. Deflection of pipe in the installed pipeline under all external loads shall not exceed 4.5 percent of the normal inside diameter of pipe. Determine whether the allowable deflection has been exceeded by use of (a) a pull-through device, or (b) a deflection measuring device.

5. Testing Devices:

    a. Pull-Through Device: Pass the pull-through device through each run of pipe, either by pulling it through or flushing it through with water. If the device fails to pass freely through a pipe run, replace pipe which has the excessive deflection and completely retest in same manner and under the same conditions as previously specified.

    b. Deflection Measuring Device: Measure deflections through each run of installed pipe. If the deflection readings in excess of 4.5 percent of normal inside diameter of pipe are obtained, retest pipe by a run form the opposite direction. If retest continues to show a deflection in excess of 4.5 percent of normal diameter of pipe, replace pipe which has excessive deflection and completely retest in same manner and under same conditions as previously specified.

    c. Warranty Period Test: Pipe found to have deflection of greater than 5 percent when deflection test is performed just prior to end of one-year warranty period shall be replaced and tested as previously specified for leakage and deflection.

C. Field Tests for Concrete:

Field testing requirements are covered in Section 03300, entitled "Cast-in-Place Concrete".

END OF SECTION 02722

SECTION 02810

LANDSCAPE IRRIGATION

PART 1- GENERAL

1.1 DESCRIPTION OF WORK:

Work Included: Provide landscape irrigation system complete, including but not limited to the following:

Excavation and backfilling.
Pipe sleeves, fittings, and sprinkler heads.
Valves and cross connection devices.
Automatic controller, remote control valves, and control wire.

Related Work Specified in other Sections (or Elsewhere):

Water stub outs: DIVISION 15 - PLUMBING
Electrical stub outs: DIVISION 16 - ELECTRICAL

1.2 CODES AND STANDARDS:

Perform work in accordance with all applicable laws, codes, and regulations required by authorities having jurisdiction over such work. Nothing in these Drawings or Specifications is to be construed as permitting work not conforming to these codes.

When the Specifications call for materials or construction of a better quality or larger size that required by the aforementioned rules and regulations, the Specifications take precedence over the requirements of the said rules and regulations.

1.3 FEES AND PERMITS: Provide for all fees, inspections, and permits required by Federal, State, and local authorities in furnishing, transporting, and installing materials.

1.4 SUBMITTALS:

Materials List:

Submit a complete list of materials proposed for installation.
List all materials by manufacturer's name and model number.
Attach copies of supportive data in the form of catalog sheets, manufacturer's specifications, or brochures.
Once the Materials List has been accepted, items other than those listed will not be allowed, unless otherwise directed by written approval from the Landscape Architect.
Substitutions:

Pre-bid requests for substitutions of any equipment or material specified or indicated will be considered if the proposed substitution is judged to be equal or superior for the particular purpose or application specified; or if proof is established that the materials specified or indicated are not available.
Submit written requests to the Landscape Architect in accordance with requirements specified in DIVISION 1.

Construction Schedule: Submit in accordance with SUBMITTALS Section. (or) At the pre-construction meeting, provide a written copy of the projected construction schedule noting the estimated completion date, number of working days required, and any special coordination requirements.

Shop Drawings: Submit in accordance with SUBMITTALS Section. (or) Submit shop drawings drafted by a competent draftsperson.

Manuals: Submit in accordance with SUBMITTALS Section. (or) Prior to the final inspection of the irrigation systems, furnish 3 individually bound Service Manuals in 3-ring, hard cover type binders containing the following items, to the Landscape Architect for use by the Owner.

Index sheet indicating Contractor's name, address, and telephone number.
Copies of equipment and material warranties and certificates.
List of equipment and materials with names, addresses and telephone numbers of local manufacturer's representatives.
Complete exploded drawings and diagrams.
Spare parts lists of equipment, showing components and catalog numbers.
Complete operating and maintenance instructions in sufficient detail to permit operating personnel to understand, operate and maintain all equipment.

As-Built Drawings: Prepare an "As-Built" drawing on a print of the Irrigation Plan(s) showing deviations and changes in the layout with accurately dimensioned locations of mains, points of connection, valves, control wires, electrical boxes, controllers, sprinkler heads, and caps for future connections. Deliver as-built drawing to the Landscape Architect prior to final acceptance of the work.

Update as-built drawing daily and maintain an updated copy on the site at all times.
Dimension the revised locations from a permanent point of reference (e.g., building, sidewalk, curb, pavement, monuments, etc.) Take dimensions prior to backfill.
Indicate all changes in red.
Upon completion of the irrigation systems, submit the marked-up as-built print(s) and 1 copy of reproducible to the Landscape Architect.

Controller Chart: Prepare a map diagram showing the location and identifying all valves, mainlines and control wiring. Identify control valves as to size, station number and type of planting irrigated. Submit diagram to the Landscape Architect.

Provide one chart for each automatic controller installed, showing the zone covered by the controller. Provide maximum size that will fit inside of controller door. Use a reduced drawing of the actual as-built systems for the chart. However, in the event the controller sequence is not legible when the drawing is reduced, enlarge it to a size that will be readable.
Use a blackline print for chart and a different color to show area of coverage for each valve circuit. When completed and approved, hermetically seal the chart between 2 pieces of minimum 10 mil thick clear plastic. Chart must be completed and approved prior to final inspection of the irrigation systems.

Certificates of Warranty: Provide all certificates of warranty from the irrigation equipment manufacturers.

1.5 QUALITY ASSURANCE:

Supervision: During the progress of the work, maintain a competent superintendent and any assistants necessary on site, all satisfactory to the Landscape Architect and Owner. Do not change this superintendent, except with the consent of the Landscape Architect, unless he proves unsatisfactory and ceases to be employed. All directions given to or by the Superintendent are binding to the Contractor.

1.6 PRODUCT DELIVERY, STORAGE, AND HANDLING:

Deliver materials in timely manner to ensure uninterrupted progress of the work. Store in a manner to preclude damage and permit ready access for inspection and identification of each shipment.

Deliver manufactured materials in original containers with brand and maker's names marked thereon. Materials in broken containers or showing evidence of damage will be rejected and must be immediately removed from the site.

Store plastic pipe on flat pallets and protect from sunlight.

1.7 VERIFICATION OF LINES AND LEVELS:

Scaled dimensions are approximate. Before proceeding with any work, carefully check and verify all dimensions on the site. The drawings are diagrammatic in that swing joints, offsets and all fittings are not shown.

Space sprinkler heads, stake out, and locate valves as indicated on the Drawings and specified herein. For any deviation from Drawings or Specifications, obtain written approval from the Landscape Architect.

Check grades to determine that work may safely proceed, keeping within the specified material depths. The irrigation layout plan is based on horizontal plane dimensions, and therefore measurements taken on the surface of slopes will differ from those indicated.

1.8 JOB CONDITIONS:

Acceptance of Previous Work: Inspect and accept the condition of the site relative to this work before commencing. If not acceptable, notify the Landscape Architect in writing. By proceeding with the work, the Contractor indicates his acceptance of all previous related work.

Meet on Site: Prior to commencing work, meet with the Landscape Architect, the Owner's representative, and other concerned parties on the site to review the work. Request this meeting one week prior to desired meeting time.

Underground Utilities and Obstructions: Verify the location of underground utilities and other obstructions that may affect the work. Report any obstructions encountered to the Landscape Architect. Repair all damage to any known utility line or other underground obstruction at Contractor's expense. Report damage to any unknown utilities to the Landscape Architect.

Protection:

Comply with all governing safety regulations.

Provide necessary safeguards and exercise caution against injury or defacement of existing site improvements. Prevent vehicles of any kind from passing over sidewalks, curbs, and similar items, unless adequate protection is provided. Do not store materials or equipment or operate equipment near or under the branches of any existing plants that are to remain, except as actually required for construction in those areas.

Be responsible for damages caused by leaks in the piping systems being installed or during the Warranty period due to failure of workmanship or materials. Repair all damage to return the area to the previous condition.

Securely cover openings into the system and cover apparatus, equipment and appliances, both before and after being set in place, to prevent breakage, misuse, or disfigurement, and also prevent obstruction of pipes.

1.9 COORDINATION: Schedule and coordinate the work to facilitate the most expeditious completion of the project in a workmanlike manner.

Consult all other relevant Specification sections to determine the extent and character of related work specified elsewhere.

Schedule and coordinate required irrigation utility connections with other project trades and utility companies.

Obtain information pertaining to location of existing and proposed lines and appurtenances prior to irrigation installation.

Verify static pressure at irrigation point of connection prior to any irrigation installation. Report to the Landscape Architect any discrepancies from that listed on the Drawings.

Coordinate with appropriate associated trade the placement of pipe, sleeves, and conduit in, through or under structures, walls, and paving.

Give at least 72 hours' notice to the Landscape Architect prior to inspections and observations.

1.10 GUARANTEE:

Guarantee the entire irrigation system for 1 year from the date of final acceptance against defects in materials, equipment, and workmanship, including repair of damage to any part of the premises resulting from defects, leaks, or settling of trenches. Promptly repair defects and damage, including the restoration of planting, paving, structures, and other improvements.

Manufacturer's warranties will not relieve liability under the guarantee. Such warranties only supplement the guarantee.

The Owner reserves the right to make temporary repairs as necessary to keep equipment in operating condition without voiding the Contractor's guarantee or bond.

PART 2 - PRODUCTS

2.1 MATERIALS:

Use new materials in perfect condition throughout the system, without flaws or defects, and of quality and performance specified. Material overages at the completion of the installation are the property of the Contractor; remove from the site.

See Legend, Notes and Construction Details on Drawings for project materials.

2.2 PIPES:

Pressure Mains:

2-1/2 inches and larger - Class 200 PVC, SDR 21, ASTM D 2241-84 with integral gasket bell end.

2 inches or less - Sch 40 PVC, ASTM D-1784-87 with solvent weld bell end.

Laterals: Class 200 PVC, SDR 21, ASTM D 2241-84 with solvent weld bell end.

Visible Pipe and Fittings: Integral gray color or painted as directed on Drawings or in Specifications.

Threaded Risers and Nipples: Schedule 80 PVC.

Other Risers and Fittings: Schedule 40 PVC, Type 1, solvent weld.

Cement: ASTM D 2564-84 or as recommended by the manufacturer.

Flexible Tubing: Toro 850-01 thick wall pipe or equal for flexible swing joints.

Sleeves: Schedule 40 PVC.

Conduit: Schedule 40 PVC, UL approved.

2.3 GATE VALVES: American made 200 WOG brass, with non-rising stem and threaded ends.

2.4 VALVE BOXES: Plastic box with locking lid. Ametek, Brooks, Carson, or acceptable equal. Rectangular for remote control valves. Round for gate valves.

2.5 SWING JOINTS: Dura or Lasco or acceptable equal.

2.6 FLEX RISERS: King Brothers, Global Water System, Excaliber, or acceptable equal.

2.7 STAKES: #4 rebar - length as noted or required.

2.8 CLAMPS: Stainless steel screw clamps.

2.0 CONTROL WIRE:

Specifically designed for direct burial use, Type UF with copper conductor, #14 minimum size.

Use yellow jacket for common and different color-coded wires (as available) for individual control lines.

Provide size of conductor to meet all the requirements of the installation instructions of the manufacturer of the valves and controllers.

2.9 WIRE CONNECTORS: Spears Dry-Splice, Snap-Tite, or acceptable equal.

2.10 THRUST BLOCKS: One cubic foot of redi-mix concrete or minimum 1 cubic foot of 2,500 psi/28-day concrete.

PART 3 - EXECUTION

3.1 GENERAL:

Install all equipment and material where indicated, as noted and detailed, and in accordance with the manufacturer's published instructions.

Wherever the term "as per manufacturer's specifications and/or instructions" is used, it means in strict accordance with the manufacturer's printed directions. If these directions conflict with this Specification, bring the matter to the Landscape Architect's attention and obtain his instructions before proceeding with the work.

3.2 LAYOUT:

Stake out locations of all pipes, valves, and sprinkler heads as accurately as possible in accordance with the Drawings. Coordinate irrigation plan with intent of construction detailing sheets.

Where site conditions do not permit locating piping, valves, and heads where indicated, notify the Landscape Architect immediately and determine relocation in joint conference. Correct immediately at the Contractor's sole expense unacceptable revision work carried out without prior approval of the Landscape Architect.

Do not install the sprinkler systems as indicated on the drawings when it is obvious in the field that previously unknown obstructions or grade differences exist, or if discrepancies in construction details, legend, or specific note are discovered. Bring all obstructions or discrepancies to the attention of the Landscape Architect, or the Contractor assumes full responsibility for any revisions that may be necessary.

When discrepancies exist between drawings and specifications, and no specific interpretation is issued prior to bidding, the decision regarding this interpretation rests with the Landscape Architect. The discrepancy must be clarified before proceeding, and the Contractor will be compelled to act on the clarification as directed.

3.3 CONNECTION TO PROJECT UTILITIES:

Connect to water source as noted on the Drawings.

Make connections to electric power supply as noted on the drawings. Provide all conduit and boxes as required by codes governing this work.

3.4 EXCAVATING AND TRENCHING:

Perform trenching and excavations required for the installation of the work including shoring of earth banks to prevent cave-ins.

Make excavations ample in size to permit the pipes to be laid at the elevations intended, and to permit ample space for jointing. Make trenches for pipelines deep enough to provide at least the minimum cover from finish grade as noted on the Drawing(s). Trench depth shall be:

18 inches minimum cover over mains.
10 inches minimum cover over laterals.
24 inches minimum cover over sleeves under paving.

Entirely remove boulders, roots and other obstructions or cut out to the width of the trench and a depth of 6 inches below the trench bottom. Dispose of such debris off-site.

Remove rocks over 2 inches in largest dimension excavated during trenching and dispose of off-site.

Backfill over-excavation and carefully tamp to provide a smooth and firm-bearing surface for laying the pipe.

Where possible, mainlines may occupy the same trench as sprinkler lines, provided specified minimum clearances are maintained.

Barricade and/or light the excavated area to prevent undue hazard to the public.

3.5 ASSEMBLING PIPEWORK:

Assemble pipe in accordance with manufacturer's published instructions and in consideration of prevailing site and weather conditions.

Install irrigation lines under existing paving by appropriate method acceptable to the Landscape Architect.

Install no irrigation lines before subgrade for roadways has been completed and notice to proceed has been given.

Plastic Threaded Joints:

Field threading of plastic pipe or fittings is not permitted - use only factory-molded material.
Make plastic to metal threaded connections by means of female plastic threads.

Make metallic threaded joints with proper tools and joint compounds. Caulking is not permitted. No more than 3 full threads shall show when joint is made up. Field cuts are permissible only where absolutely necessary.

Use approved gaskets and bolt sets for flanged connections. Tighten assembly bolts to proper torque.

Install concrete thrust blocks where required to resist system pressure on belled-joint pipework. Form blocks in such a way that concrete does not come in direct contact with the pipe; set blocks between solid soil and pipe fitting.

Provide removable, non-decaying plug at ends of pipe sleeves and control wire conduit.

For copper pipe assembly instructions, see PLUMBING section.

3.6 LAYING OF PIPE:

Install all pipes as dimensioned or approximately in the location shown and of the sizes indicated. (Refer to the Planting Plan for precise routing relative to plant locations.)

Parallel piping indicated on the Drawings may be installed in the same trench with all pipe at the same depth and 2 inches minimum horizontal separation between pipes. Parallel piping shall not cross in the trench.

Lay piping accurately to the line and grade required, with full bearing on the trench bottom. Do not lay pipe on soft fill or other unstable material.

Do not lay pipe when there is water in the trench.

Except where necessary in making connections with other lines, lay pipe with the bells facing in the direction of laying.

Provide 2 inches minimum vertical separation for crossing pipes. No direct contact between other pipes or structures will be permitted.

Perform work in strict accordance with the manufacturer's installation instructions for the various types of pipe specified.

Flush out pipes thoroughly to remove debris and foreign matter.

Conduct all testing and repairs to lines that will be rendered inaccessible by paving, prior to the installation of paving materials.

Inspect pipes for leaks at the joints and fittings, and repair or replace as required prior to backfilling.

3.7 IRRIGATION HEADS AND SPRINKLERS:

Install all irrigation heads and sprinklers in conformance with the manufacturer's recommendations. Do not install heads in a manner which will not permit required performance. In the event that job conditions will not permit this, contact the Landscape Architect immediately for a decision before proceeding with the work.

Set heads plumb and level (or as detailed for slope conditions) at the locations indicated on the Drawings.

Thoroughly clean, adjust and inspect heads for proper operation and performance.

In turf areas, initially install heads on the risers 1/2 inch above grade level. Prior to final inspection of the landscape planting, adjust heads as necessary.

Install flex risers on heads adjacent to paved surfaces, walks, or curbs.

Adjust spray patterns of irrigation heads and sprinklers to eliminate overspray onto building, windows, and walks. See testing section.

3.8 EQUIPMENT INSTALLATION:

Valves:

Thoroughly flush mainline before installing valves.

Install valves connected directly to the main line plumb, with sufficient clearance for service and operation. Install valves no farther than 12 inches from mainline unless Landscape Architect approves installation at a greater distance prior to construction.

Install manual control valves and gate valves in the location indicated on the Drawings and accessible for proper use.

Locate valve box edges no closer than 12 inches from walk edges, buildings walls, and header boards.

Place control valves in valve boxes; use extensions as necessary to keep soil away from valves and solenoids. Install one valve per box. Set top of box parallel and flush with finish grade, unless directed otherwise by the Landscape Architect. Set box parallel to adjacent paving as well.

Valve Boxes:

Centrally locate remote control valves among the sprinklers in accordance with the Drawings. Adjust the flow control for proper operation of the sprinklers.

Where feasible, group several valves together in a large valve box with 4 inches minimum clearance between valves and from the box. Position over the valves so all parts can be reached for service.

Install above a 6 inches deep gravel pit for drainage. Keep the box reasonably free from dirt and debris.

Set with the top level or following the adjacent finish grade as detailed. Permanently label boxes with valve number and controller letter in manner approved by the Landscape Architect.

Automatic Control Wiring:

Run wire within a protective conduit for pavement crossings, and where other conditions make it necessary.

Run wiring along mains wherever practical. Tie wire bundles with pipe wrapping tape at 10-foot intervals and allow slack for contraction between strappings.

For both control wire and ground wire, loop a minimum of 2 feet of extra wire at each valve box, at each splice, at each change of direction, at every 500 feet of straight run, and at each controller for expansion and servicing. Coil excess wire neatly in valve boxes.

Make connections with approved connectors.

Splicing will be permitted only on runs exceeding 2,500 feet. Locate splices at valve locations or in separate electrical splice box. Accurately and clearly label splice box Make splices and connections watertight.

Controllers: Connect control lines to controllers in sequential arrangement according to assigned identification number of valve shown on Drawing(s): Label control lines at the controller with permanent non-fading labels indicating identification number of valve controlled.

3.9 FLUSHING: Thoroughly flush out lines before installing valves and sprinkler heads. After flushing, mainline pipe may be partially back filled. Keep butt joints, fittings, and connections free and visible.

3.10 TESTING:

Center load pipe with sufficient backfill in accordance with paragraph 3.11 to anchor pipe before testing. Do not cover fittings or joints

Notify the Landscape Architect at least 3 days in advance of testing.

Purge air from lines prior to applying test procedures.

Perform testing and furnish necessary equipment.

Apply the following tests after solvent weld plastic pipe joints have cured for at least 24 hours.

Test mainlines hydrostatically at 150 PSI minimum. Lines will be approved if test pressure is maintained for 6 hours. Make tests and repairs as necessary until test conditions are met. Install valves prior to pressure testing.

During the test, stop detectable leaks and correct defects regardless of the amount of leakage. Use materials and installation procedure identical to those specified herein for making corrections.

Perform tests and repairs before paving is installed and while pipes are still accessible.

Apply the following coverage tests after solvent weld plastic pipe joints have cured for at least 24 hours and section E above has been fully complied with.

Perform a coverage test in the presence of the Landscape Architect and/or owners' representative to determine if coverage of water afforded to planting areas is complete.

Change heads, nozzles, orifices, or arcs as may be required to provide satisfactory coverage.

Prior to any recommendation of final acceptance of the irrigation system, test the automatic sprinkler controllers through all their cycles in the presence of the Landscape Architect and the Owner's representative.

3.11 BACKFILLING AND COMPACTION:

Do not backfill until pipe has been tested and results reported to the Landscape Architect.

Keep initial 4 inches of backfill for mainlines free of debris and rocks larger than 1 inch diameter. Use clean soil free of rubbish, for remaining backfill.

Compact backfill for trenching to dry density equal to the adjacent undisturbed soil, and conform to adjacent grades without dips, sunken areas, humps or other irregularities. Adequately compact installations above structural slabs to support the piping being installed.

Truck wheels are not permitted for compacting soil.

Provide clean sand backfill as noted on the Drawings.

Restore surfaces, existing underground installations, and other items damaged or cut as a result of excavations, to original conditions in manner consistent with these Specifications and as approved by the Landscape Architect.

Reseed, resod, or replant the trenched areas as needed. Should the soil level of the trenches settle during the Warranty period, refill the trenches as needed.

3.12 ADJUSTING THE SYSTEM:

If it is determined that adjustments in the irrigation equipment will provide proper and more adequate coverage, including changes to the nozzle, make such changes, or make

arrangements with the manufacturer to have adjustments made, prior to any planting. Pay all additional costs associated with these changes or adjustments.

The entire system in a given phased construction area shall be operating properly before any lawn or ground cover planting operations begin in that area.

Periodically check operation of the system and adjust it as necessary for the duration of the Contract, including the guarantee period.

3.13 CONTROLLER CHARTS: Affix a non-fading copy of the irrigation diagram on the inside cabinet door of the controller showing valve locations, numbers, and wire routing.

3.14 MAINTENANCE PERIOD:

The maintenance period for the irrigation system shall be exactly concurrent with the maintenance period for the planting as described in Section 02900. Mechanism for establishing this period is the same as for the planting maintenance period.

No partial approvals will be given relative to the commencement of maintenance periods without the consent of the Owner.

3.15 REPAIR OF LEAKS: Remake leaking joints using new materials, whether discovered at time of installation or at any time during the Warranty period. Use of caulking or cement to repair leaks is prohibited.

3.16 CLEAN UP: Keep all areas of work clean, neat, and orderly at all times. Clean construction areas at the end of each day. Remove surplus material and other debris generated from this work from the site. Neatly return to proper grade all disturbed areas. Flush all paving, walks, and similar areas to achieve a "broom clean" appearance.

3.17 FINAL INSPECTION:

At the completion of all irrigation work request a final inspection. Notify the Landscape Architect 5 working days prior to the inspection, so a mutually agreeable time for inspection may be arranged.

The Landscape Architect, Landscape Planting and Irrigation Contractor, and Owner, or their representatives, shall be present at the inspection.

If, after the inspection, the Landscape Architect and the Owner are of the opinion all work has been performed in accordance with the Drawings and Specifications, written notice of acceptance and completion of the Project will be given. If portions of the work are not acceptable, a reasonable amount will be retained from the final payment until the defects are corrected and the work is accepted by the Landscape Architect and the Owner.

END OF SECTION

SECTION 02831

CHAIN LINK FENCES

PART 1 - GENERAL

1.1 SUMMARY: Provide chain link fence system where shown on the Drawings, as specified herein, and as needed for a complete and proper installation.

1.2 APPLICABLE PUBLICATIONS: The latest issues of the following publications listed below form a part of this specification to the extent referenced. The publications are referred to in the text by the basic designation only.

A. American Society for Testing and Materials (ASTM)

A392	Standard specification for zinc-coated Steel Chain-Link Fence Fabric.
D1187	Standard specification for Asphalt-Base Emulsion for use as protective coating for metals.
F626	Standard Specification for Fence Fittings
F1083	Standard Specification for Pipe, Steel, Hot-dipped Zinc-Coated (Galvanized) Welded, for Fence Structures

1.3 RELATED SECTIONS

A. SECTION 02200 - EARTHWORK
B. SECTION 03300 - CAST-IN-PLACE CONCRETE

1.4 SUBMITTALS

A. Product data: Within 35 calendar days after the Contractor has received the Owner's Notice to Proceed, submit:

1. Materials list of items proposed to be provided under this Section;

2. Manufacturer's specifications and other data needed to prove compliance with the specified requirements;

3. Shop Drawings in sufficient detail to show fabrication, installation, anchorage, and interface of the work of this Section with the work of adjacent trades;

4. Manufacturer's recommended installation procedures which, when approved by the Contractor, will become the basis for accepting or rejecting actual installation procedures used on the Work.

1.5 QUALITY ASSURANCE: Use adequate numbers of skilled workmen who are thoroughly trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and the methods needed for proper performance of the work of this Section.

1.6 DELIVERY, STORAGE, AND HANDLING: Deliver materials to the site in an undamaged condition. Store materials off the ground to provide protection against oxidation caused by ground contact.

PART 2 - PRODUCTS

2.1 DIMENSIONAL DATA

A. General: Pipe sizes indicated are commercial pipe sizes.

2.2 GALVANIZING

A. On steel framework and appurtenances, provide galvanized finish with not less than the following weight of zinc per square feet.

1. Pipe: 1.8 oz/square feet, complying with ASTM F1083.

2. Hardware and accessories: Comply with Table I of ASTM F626.

3. Fabric: 1.20 oz/square feet, complying with Class 1 of ASTM A392.

2.3 FABRIC

A. Provide number 9 gage or 0.148" wires in 2" mesh.

B. Provide fabric in one-piece widths.

C. Fence heights less than 6 feet shall be knuckled at both top and bottom selvages.

D. Fence heights 6 feet and over shall be twisted at top selvage and knuckled at the bottom selvage.

2.4 POSTS, RAILS, AND ASSOCIATED ITEMS

A. End, corner, slope, and pull posts: Provide the following minimum sizes and weights as indicated on the plan.

Material and dimensions:	Lbs per linear ft:
Pipe, 2.875" outside Dimension	5.79
Pipe, 3.50" outside Dimension	7.58
Pipe, 4.00" outside Dimension	9.11

B. Line posts: Provide minimum sizes and weights as follows:

Material and dimensions:	Lbs per linear ft:
Pipe, 2.37" outside Dimension	3.65
Pipe, 2.87" outside Dimension	5.79
Pipe, 3.50" outside Dimension	7.58

C. Gate posts: Provide gate posts for supporting single gate leaf, or one leaf of a double gate installation, for nominal gate widths as follows:

Material and dimension:	Lbs per linear ft:
Pipe, 4" outside dimension	9.11

1. Over 13 feet wide, and up to 18 feet wide: Use 6.62" outside diameter pipe weighing 18.97 lbs per linear ft.

2. Over 18 feet side: Use 8.62" outside diameter pipe weighing 28.55 lbs per linear ft.

D. Top rails:

1. Use 1.90" outside diameter pipe weighing 2.72 lbs per linear ft; or

2. Provide in manufacturer's longest lengths, with expansion type couplings approximately 6" long for each joint.

3. Provide means for attaching top rail securely to each gate, corner, pull, slope, and end post.

E. Post brace assemblies:

1. Provide at end and gate posts, and at both sides of corner, slope, and pull posts, with the horizontal brace located at mid-height of the fabric.

2. Use 1.90" outside diameter pipe weighing 2.72 lbs per linear ft for horizontal brace.

3. Use 3/8" diameter rod with turnbuckle for diagonal truss.

F. Tension wire: Provide number 7 gage galvanized tension wire at bottom of fabric.

G. Post tops:

1. Provide steel, wrought iron, or malleable iron, designed as watertight closure cap.

2. Provide one cap for each post.

3. Provide caps with openings to permit through passage of top rail.

H. Stretcher bars:

1. Provide one-piece lengths equal to full height of fabric, with a minimum cross-section of 3/16" x 3/4".

2. Provide one stretcher bar for each gate and end post, and two for each corner, slope, and pull post, except where baric is woven integrally into the post.

I. Stretcher bar bands:

1. Provide steel, wrought iron, or malleable iron, spaced not over 15" on centers, to secure stretcher bars to end, corner, pull, slope, and gateposts, with a minimum cross-section of 1/8" x 3/4".

2. Bands may be used also with special fittings for securing rails to end, corner, pull, slope, and gateposts.

2.5 GATES

A. General:

1. Fabricate gate perimeter frames of tubular members.

2. Provide additional horizontal and vertical members to assure proper operation of the gate, and for attachment of fabric, hardware, and accessories.

3. Space so frame members are not more than 8 feet apart.

4. Fabricate gate frames from:

Material and dimensions:		Lbs per linear ft:
a.	Pipe 1.90" outside diameter:	2.72

B. Fabrication:

1. Assemble gate frames by welding with special malleable or pressed steel fittings and rivets for rigid connections.

2. Use same fabric as used in the fence.

3. Install fabric with stretcher bars at vertical edges as a minimum.

4. Attach stretchers to gate frame at not more than 15" on centers.

5. Attach hardware with rivets or by other means which will provide security against removal and breakage.

6. Provide diagonal cross bracing consisting of 3/8" diameter adjustable length truss rods on gates where required to provide frame rigidity without sag or twist.

C. Gate hardware: Provide following for each gate:

1. Hinges:

a. Pressed or forged steel or malleable iron, to suit the gate size; non-lift-off type, offset to permit 180 degree opening.

b. Provide 1-1/2 pair of hinges for each leaf over 6 feet in nominal heights.

2. Latches:

a. Provide forked type or plunger-bar type to permit operation from either side of the gate.

b. Provide padlock eye as integral part of latch.

3. Keeper: Provide keeper for vehicle gates, which automatically engages the gate leaf and holds it in the open position until manually released.

4. Double gates:

a. Provide gate stops for double gates consisting of mushroom or flush plate, with anchors.

b. Set in concrete to engage the center drop rod or plunger bar.

c. Provide locking device and padlock eyes as an integral part of the latch, requiring one padlock for locking both gate leaves.

2.6 MISCELLANEOUS MATERIALS AND ACCESSORIES

A. Wire ties:

1. For tying fabric to line posts, use number 9-gage wire ties spaced 12" on centers.

2. For tying fabric to rails and braces, use number 9-gage wire ties spaced 24" on centers.

3. For tying fabric to tension wire, use number 9 gage hog rings spaced 24" on centers.

4. Manufacturer's standard wire ties will be acceptable if of equal strength and durability.

5. Concrete: Comply with provisions of Section 03300, entitled “Cast-in-Place Concrete”.

B. Bituminous Coatings: Fence post and hardwares embedded in concrete shall receive two (2) coats of bituminous material as per ASTM D1187.

PART 3 - EXECUTION

3.1 SURFACE CONDITIONS: Examine the areas and conditions under which work of this Section will be performed. Correct conditions detrimental to timely and proper completion of the Work. Do not proceed until unsatisfactory conditions are corrected.

3.2 INSTALLATION

A. General:

1. Install posts at a maximum spacing of 10 feet on centers.

2. Install corner or slope posts where changes in line or grade exceed a 30-degree deflection.

B. Excavating:

1. Drill holes for post footings in firm, undisturbed or compacted soil, strictly adhering to the dimensions and spacing shown.

2. Post hole dimensions:(unless otherwise specified)

a. Provide 30" deep by 12" diameter foundations for line posts for 5 foot fabric height and less.

b. Provide 36" deep by 12" diameter foundations for line posts for fabric

heights exceeding 5 feet.

c. Provide 42" deep by 12" diameter foundations for all other posts or as specified on plan.

C. Spread soil from excavations uniformly adjacent to the fence line, or on adjacent areas of the site if so directed.

D. When solid rock is encountered near the surface, drill into rock at least 12" for line posts and at least 18" for end, pull, gate, and corner posts. Drill holes at least 1" greater diameter than the largest dimension of the post to be placed.

E. If solid rock is below soil overburden, drill to full depth required, except penetration into rock need not exceed minimum depths specified above.

F. Setting posts:

1. Remove loose and foreign materials from sides and bottoms of holes, and moisten soil prior to placing concrete.

2. Center and align posts in holes.

3. Place concrete around posts in a continuous pour, and vibrate or tamp for consolidation.

4. Check each post for vertical and top alignment, and hold in position during placement and finishing operations.

5. Trowel tops of footings, and slope or dome to direct water away from posts.

6. Extend footings for gateposts to the underside of bottom hinge.

7. Set keeps, stops, sleeves, and other accessories into concrete as required.

8. Keep exposed concrete surfaces moist for at least seven days after placement, or cure with membrane curing material or other curing method approved by the Engineer/Owner’s Representative.

9. Grout-in those posts that are set into sleeved holes, concrete constructions, or rock excavations, using non-shrink Portland cement grout or other grouting material approved by the Engineer/Owner’s Representative.

G. Concrete strength:

1. Allow concrete to attain at least 75% of its minimum 28-day strength before rails, tension wires, and/or fabric is installed.

2. Do not, in any case, install such items in less than seven days after placement of concrete.

3. Do not stretch and tension fabric and wire, and do not hang gates, until concrete has attained its full design strength.

H. Rails and bracing:

1. Install fence with a top rail and bottom tension wire.

2. Install top rails continuously through post caps or extension arms, bending to radius for curved runs.

3. Provide expansion couplings as recommended by the fencing manufacturer.

4. Provide bracing to the midpoint of the nearest line post or posts at all end, corner, slope, pull, and gateposts.

5. Install tension wires parallel to the line of fabric by weaving through the fabric, and tying to each post with not less than number 6 gage galvanized wire, or by securing the wire to the fabric.

I. Installing fabric:

1. Leave approximately 2" between finish grade and bottom selvage.

2. Excavate high points in the ground to clear the bottom of the fence.

3. Place and compact fill to within 1" of the bottom of the fabric in depressions.

4. Pull fabric taut and tie to posts, rails, and tension wires.

5. Install fabric on outward side facing side of fence, and anchor to framework so that the fabric remains in tension after pulling force is removed.

6. Install stretcher bars by threading through or clamping to fabric on 4" centers, and secure to posts with metal bands spaced 15" on centers.

7. Install fence fabric to provide approximately 2-inch deflection at center of fabric span between two posts, when a force of approximately 30 pounds is applied perpendicular to the fabric. Fabric should return to its original position when force is removed.

J. Installing gates:

1. Install gates plumb, level, and secure for full opening without interference.

2. Install ground-set items in concrete for anchorage in accordance with the fence manufacturer's recommendations as approved by the Engineer/Owner’s Representative.

3. Lubricate and adjust the hardware for smooth operation.

K. Clearing Fence Line: All trees, brush, stumps, logs, and other debris which would interfere with the proper construction of the fence in the indicated locations shall be removed to a minimum width of 5 feet on each side of the fence centerline before starting fencing operations. The cost of removing and disposing of the materials shall not constitute a pay item but shall be considered incidental to the fence construction.

L. Miscellaneous:

1. Use U-shaped tie wires, conforming to diameter of pipe to which attached, clasping pipe and fabric firmly with ends twisted at least two full turns.

2. Bend ends of wire to minimize hazards to persons and clothing.

3. Fasteners:

   a. Install nuts for tension band and hardware bolts on side of fence opposite fabric side.

   b. Peen the ends of bolts to prevent removal of nuts.

4. Repair coatings damaged in the shop or field erection, using a hot-applied repair compound applied in accordance with its manufacturer's recommendations as approved by the Engineer/Owner’s Representative.

END OF SECTION 02831

SECTION 02900

LANDSCAPE PLANTING

PART 1 - GENERAL

1.1 SCOPE OF WORK

Work Included: Provide planting work complete, including:
- Imported soil.
- Pre-planting weed control.
- Soil preparation and conditioning.
- Plant materials.
- Planting operations.
- Maintenance.
- Warranty.

Related Work Specified in Other Sections:
- Section 02810 - Irrigation

Plant Material Quantities:
Provide sufficient quantities of plant materials needed to complete the work as indicated on the Drawings. Quantities indicated on the Plant List are approximate only. The unit price list reflects the approximate quantities the Landscape Architect has established for the work, subject to availability. These quantities may vary.

Adjustments to Contract Sum for Imported Soil:
Contract Sum includes the cost of all labor and equipment required to place, amend, and fine grade imported soil. Include the anticipated cost of fertilizers required by the Contract Documents.
Contract Sum does not include the anticipated material cost of fertilizer or amendments not indicated. A Change Order for the costs of any required fertilizers or amendments delivered to site, will be issued based on the soil analysis result.

Utilities: Unless otherwise indicated, sufficient water will be available at no expense for work specified in this section.

Fees and Permits: Provide for all inspections and permits required by Federal, State, and local authorities in furnishing, transporting, and installing materials.

1.2 REFERENCES

Grades and Standards:
Grades and Standards for Container-grown Landscape Plants prepared by Landscape Industry Council of Hawaii.
Soil Chemistry Testing: US Department of Agriculture Handbook #60, Diagnosis and Improvement of Saline and Alkali Soils, 1954. (USDA #60)

Nomenclature: In Gardens of Hawaii by Marie C. Neal, or generally accepted in the local nursery trade.

1.3 SUBMITTALS

Submit duplicate samples and certificates for the following items:
- Soil Amendments: Samples and manufacturer's certificates.
- Fertilizers: Manufacturer's certificate.

Material certificates for material delivered to the site, both in containers and in bulk. State source, quantity or weight, type and analysis, and date of delivery.

Imported Soil:

After the Contract is awarded, submit documentation on the source of imported soil. Submit test results on imported soil and proposed schedule of fertilizers.

Substitutions:

If any plant specified is not obtainable, submit a written substitution request. Present either a different size of the same species or a similar alternate species with the proposed adjustments to the Contract Sum for each.

Substitutions of plant materials will not be permitted unless authorized in writing by Landscape Architect.

Construction Schedule: At the pre-construction meeting, provide a written projected planting schedule noting the estimated completion date, number of working days required and any special coordination requirements.

1.4 QUALITY ASSURANCE

Inspection: Right of inspection for approval or rejection is reserved at the place of growth or on the project site at any time. Plants will be inspected for size, variety, condition, defects, or injury.

Codes and Standards: Perform work in accordance with all applicable laws, codes, and regulations required by authorities having jurisdiction over such work.

Pre-Installation Meeting: Prior to commencing work, meet with the Owner or the Owner's representative and all other concerned parties on the site to review project conditions and the work required by this section. Request this meeting in writing five (5) working days prior to desired meeting time.

1.5 DELIVERY AND STORAGE

Deliver manufactured materials in original containers with brand and manufacturer's name clearly indicated. Materials in broken containers or showing evidence of damage will be rejected and must be immediately removed from the Project Site. Do not bring odorous materials to the site until they are to be used.

Protect plants in transit and after delivery to the site. Plants in broken containers and plants with broken branches or injured trunks will be rejected. Remove rejected material from the site immediately.

1.6 PROJECT CONDITIONS

Underground Utilities and Obstructions:

Verify the location of all underground utilities and other obstructions that may affect the work.

Report any obstructions encountered to the Landscape Architect.

Repair all damage to any known utility line or other underground obstruction. Report damage to any unrecorded utilities to the Landscape Architect.

Notify the Landscape Architect in writing of any other underground obstructions, either geological or manmade, encountered that may affect the work. Include a cost proposal for the correction of the problem for approval before proceeding with work.

Clean Up:

Keep all areas of work clean, neat and orderly at all times during the period of Contract.

Clean all construction areas at the end of each day.

1.7 WARRANTY

Plant Material:

Warrant in writing plant materials furnished or relocated (25 gal. or larger) for a period of one (1) calendar year; lawn and container plants up to 15 gal. size, for ninety (90) days from the date of final acceptance against improper installation and defective, unsound, or diseased conditions that may appear.

The Contractor, in protecting his own interest, is obligated to periodically check work areas during this warranty period to ensure proper maintenance procedures are being implemented. In case of negligent or improper maintenance, the Contractor shall state in writing to the Owner and the Landscape Architect his observation and recommendations. All claims not in writing will not be considered.

Upon receipt of written notice from the Landscape Architect of the death of any warranted plant materials during the warranty period, promptly replace the subject plant materials with same species as originally planted and of a size closely approximating the size of the plant if normal growth had occurred since the original planting. Replaced materials are subject to all contract requirements.

When plants are replaced, advise the Owner in writing of the necessary establishment maintenance which must be performed.

Expense of replacement shall be borne by the Contractor if replacement is necessary through no fault of the Owner during the maintenance period.

The Contractor shall not be held liable for loss of plant materials due to vandalism, acts of God, accident, or damages by others.

Special Warranty: Warrant all plant materials furnished as to the species, hybrid, flower color, or variety specified.

Liability: The liability under the warranty includes the repair of damage to the work of other contractors, or damage to the Owner's property caused by the failure of the work of this section. All requirement of this section applies to work performed to satisfy the requirements of the warranty.

PART 2 - PRODUCTS

2.1 IMPORTED SOIL

General:

Texture: As near as practical to the native subgrade texture.

Nutrients: Provide imported soil with sufficient quantities of available nitrogen, phosphorus, potassium, calcium and magnesium to support normal plant growth or amendable to support normal plant growth in accordance to the soil analysis recommendations.

Physical Properties:

Designation: Sandy loam or loamy sand; USDA classification of fraction passing sieves:

Class	Particle Size Range	Maximum Percentage	Minimum Percentage

Coarse Sand	0.5 - 2.0 mm	1	
Silt plus Clay	<0.05 mm	5	
Gravel	2 - 13 mm	2	
Rock	1/2 - 1 inch	10% by volume	Organic
15			

Chemistry: Comply with USDA #60 for the following:

Salinity: Saturation Extract Conductivity (ECe) of less than 3.0 Millimhos per cm at 25 degrees C.

Sodium: Sodium Absorption Rate (SAR) of less than 1.0 ppm.

Boron: Saturation Extraction Concentration of less than 1.0 ppm.

Reaction: pH of saturated paste: 5.5 - 7.5.

2.2 SOIL AMENDMENTS

Chemical Fertilizers:

N-P-K as recommended by soil analysis, uniform in composition, free-flowing and suitable for application with approved equipment.

Plant Tablet: Agriform 21-gram tablet or acceptable substitute.

Organic Soil Conditioner:

Burnt Bagasse, shredded mulch, or other acceptable equal organic matters.

Redwood Shavings: Nitrogen stabilized and passing through a 1/2-inch screen.

2.3 PLANT MATERIAL

General:

Comply with nomenclature, grades, and standards indicated in Contract Documents. Provide trees, shrubs, vines, and ground covers with a normal habit of growth, sound, healthy, vigorous, and free from disease and insect infestations.

Trees and Shrubs:

General: Comply with minimum measurements indicated on the Plant List. Measure trees and shrubs after pruning, with branches in normal positions. Plants that meet the measurements specified, but do not possess a normal configuration or balance of height and spread will be rejected.

Caliper Measurement:

Container-grown Materials 4 Inches or Less in Caliper: Measure at a point on the trunk 6 inches above natural ground line.

Container-grown Materials More than 4 Inches in Caliper: Measure at a point 12 inches above the natural ground line.

Field Stock Materials: Measure 4-1/2 feet above the natural ground line.

Trees: Straight and uniform shape without damage unless a unique or special character is specified.

Container-Grown Material: Provide material grown in containers of the size stated on Drawings, with sufficient roots to hold the root ball together after removal from containers without being rootbound.
Specimen, Field Grown, and Field Stock Palms and Trees: Provide with a rootball or roots of sufficient size to support the plant's recovery from transplanting. Palms and trees delivered with small or inadequate root balls will be rejected.

Rooted Cuttings: Healthy, vegetative material with well established roots at one or more nodes.

Stolons: Healthy vegetative material free from other foreign grasses.
Provide coarse grass and ground-cover stolons of 4-inch minimum length.
Provide hybrid bermuda stolons of 2 inches minimum length.

Seed:
USDA Fancy Grade.
50 percent hulled from the most recent harvest.
Provide seed passing a certified germination test.
Deliver to the site in unopened, sealed containers, labeled with brand name and percent purity, and germination test certification.

2.4 MISCELLANEOUS MATERIALS

Water: Potable.

Herbicides and Weed Control:
Pre-Planting Herbicide: Round-Up or acceptable substitute.
Pre-Emergent Weed Control:
Ronstar-G, Treflan, Eptam, Vegitex or acceptable substitute.
Verify compatibility with proposed plant list.

Tree Stakes: 2 inches by 2 inches by 8 feet rough construction grade redwood, or eucalyptus with no paint or stain, or acceptable substitute.

Hose and Wire Ties: 1/2-inch diameter hose with Number 12 gage galvanized iron wire, or acceptable substitute.

Guy Wire:
Number 12 gage galvanized iron wire for 15- and 25-gallon trees or palms
Number 9 gage galvanized iron for field grown trees or palms.

Anchors:
Number 4 steel reinforcing bars, 24 inches minimum length for 15- and 25-gallon trees, or acceptable substitute.
Number 7 steel reinforcing bars, 36 inches minimum length for larger trees, or acceptable substitute.

Plastic Header: "Black Diamond" flexible 6 inches polyethylene bed divider or acceptable substitutes.

Marker: Plastic surveyor tape. Bright color, minimum 18 inches long. Use same color throughout project.

Sand: Natural or man-made sand, size from number 16 to number 100, free from debris.

2.5 HYDROMULCH

Specially processed fiber containing no growth or germination inhibiting factors.

Provide material which will form a homogenous slurry and will not be detrimental to plant growth after agitation in the hydraulic equipment with seed, fertilizer, water and other additives.

Provide material which will form a blotter-like ground cover which readily absorbs water and allows filtration to the underlying soil when hydraulically sprayed on the soil.

2.6 SOURCE QUALITY CONTROL

Soil Analysis for Imported Soil: Take representative soil samples from the proposed source area. Submit samples to approved soil laboratory for analysis for required fertilizers.

Clearly label samples with the project name, date of sampling, sample numbers, and source on site.

Perform tests on each individual sample unit for conformance to the specifications, pH, soil fertility, and salinity.

Provide a written analysis on each individual sample as well as fertility recommendations or corrective measures, if required, to provide the specified plant material a healthy growing medium.

Selection, Tagging and Ordering Plant Material:

Plants are subject to inspection by Landscape Architect at place of growth and after deliver. Plants which do not conform to the requirements of the Contract Documents may be rejected.

Submit a request for inspection and documentation to Landscape Architect not less than one month prior to start of work under this Section that all plant materials have been ordered.

Plants identified as specimen, field grown, field stock, and all palms with a trunk greater than 10 feet may be inspected at place of growth.

Container Stock:

Grow for at least 6 months, but no longer than 2 years in the delivery containers.

Root bound plants are not acceptable, nor are plants with cracked or broken root balls. Remove such material from the site and replace with acceptable plant material.

PART 3 - EXECUTION

3.1 EXAMINATION

Inspect and accept the condition of the site relative to this Section before commencing with the work required in this section. If not acceptable, notify the Landscape Architect in writing.

By proceeding with the work required in this section, the Contractor accepts site conditions.

3.2 PREPARATION

Protection:

Provide necessary safeguards and exercise caution against damage or defacement of existing site improvements. Prevent vehicles of any kind from passing over sidewalks, curbs, etc., unless adequate protection is provided. Do not store materials or equipment or operate equipment near or under the branches of any existing plants that are to remain, except as actually required for construction in those areas.

Be responsible for damage resulting from landscape planting operations. Repair damage to return the area to the previous condition at Contractor's expense.

Clearing:

Clear all planting areas of existing vegetation not specified to remain and all other debris and foreign material considered a hindrance to planting operations and/or unsightly in appearance.

Maintain previously established grades and swales.

Pre-Planting Weed Control:

Apply pre-planting herbicides to all visible weeds, before and after soil placement.

Protect all existing plants from damage.

Imported Soil: Provide an even 6 inches layer (after settlement) of imported soil over all planting areas. All planting areas will be left at sub-grade.

Soil Preparation:

Uniformly distribute 1-inch organic soil conditioner and apply fertilizer specified by the soil analysis over all planting areas as noted on the Drawings.

Roto-till the top 6 inches of compacted soil area adjacent to the highway and all planting areas to evenly incorporate the amendments in the soil.

At the Contractor's option, soil amendment and fertilizer can be pre-mixed with the imported soil prior to installation.

Finish Grading of Planting Areas:

Adjust finish grading with imported soil or sand as necessary. Grade planting areas smooth and even on a uniform plane, with no abrupt changes or pockets. Slope away from all buildings.

Verify the surface drainage of all planting areas, and notify the Landscape Architect of any discrepancies, obstructions, or other conditions considered detrimental to proper execution of the work. Maintain lateral drainage in ditch adjacent to the highway.

After initial settlement the planting surface shall be lower than adjacent walks, curbs, and headers:

Bermuda and Other Fine Grasses: 1/4 inch to 1/2 inch.

Buffalo and Other Coarse Grasses: 1/2 inch to 3/4 inch.

Shrubs and Ground Covers: 1 inch to 1-1/2 inches.

Immediately prior to planting operations, clean all planting areas of weeds, debris, rocks over 1 inch in diameter, and clumps of earth that will not break up.

3.3 PLANTING OPERATIONS

Soil and Drainage Conditions:

Notify Landscape Architect in writing of all soil or drainage conditions encountered during planting operations which the Contractor considers detrimental to growth of plant material. Include a cost proposal for the correction of the problem for approval before proceeding with work.

If drainage conditions of plant pits appear unsatisfactory, test drainage by filling with water. Conditions permitting the retention of water in planting pit for an excessive period of time shall be brought to the attention of Landscape Architect.

Handling Plants:

Handle plants in a manner to avoid any damage to the plant.

Notify Landscape Architect in writing where environmental or planting conditions are adverse to installation per normal industry practice.

Protect plants at all times from sun or drying winds. Plants that cannot be planted immediately on delivery shall be kept in the shade, well protected, and adequately watered.

Plant specimen, field grown and field stock palms and trees not later than 24 hours after they are delivered to the site.

Trees and Shrubs:

Plant Pits:

Install trees and shrubs in pits with 1-1/2 the diameter and the same depth of the root ball or container.

Use of tree spades in planting operations is acceptable.

Setting Container and Larger Plants:

Set plants set with the soil level, even with the finish grade, and planted to give the best appearance in relationship to adjacent structures or surroundings.

Use appropriate excavated material to continue filling plant pits. Set plant plumb and brace rigidly in position until material has been tamped solidly around root ball. When 3/4 of the pit is backfilled, water thoroughly, saturating the root ball.

Evenly distribute planting tablets or comparable fertilizer in accordance with manufacturer's instructions. Continue filling pit to finish grade with backfill mix.

When the plant pit is filled, form saucer berm around plants as necessary or as noted on details.

Water all plants immediately after planting.

Staking and Guying: Immediately after planting, stake all 15-gallon and smaller trees as needed. Guy all larger trees as detailed. At Contractor's option, staking or guying may be omitted. However, Contractor retains all liability for failure of plant materials.

Ground Cover: Install plant material in moist soil in the areas and at the spacings shown, in neat rows, ensuring complete coverage of all planting areas including under and around trees and shrubs. Spacings shown in the Plant List or on the Drawings are triangular spacing, unless otherwise noted.

Pre-Emergent Weed Control: Immediately after planting, apply pre-emergent weed control material to all planted areas which will not be seeded.

Stolonizing

On the prepared surface, evenly distribute at the rate shown on the Drawings and dice stolons into the soil in such a manner that at least 75 percent of the stolons are buried.

Upon completion of discing operation, roll the planted area with a lawn roller to firm the ground and insure close contact of the soil and stolons.

Seeding:

Planting Surface Preparation: Moist, even, smooth, and free of rocks prior to seeding.

Application: Broadcast seed uniformly at the rate shown on the Drawings. Rake seeds into the top 1/4 inch of the amended imported screened soil.

Compacting: Immediately after seeding, compact the entire area with a cultipacker or roller weighing 60 to 90 lbs. per lineal foot. If a combination seeder and cultipacker is used during seeding operation, additional compaction is not required.

Irrigation: Water seedbeds immediately after compacting and keep moist as needed for optimum plant growth. Apply water for short periods to prevent erosion or gullying.

Hydromulching:

Surface Preparation: Bring areas to be hydromulched to a smooth even surface.

Fertilizer: Determine the proper fertilizer required, for both planting and on-going maintenance, for the plant materials. Determine the quality, analysis and ratio; method of application; and frequency of the fertilizer, to insure sufficient nutrients for the sustained growth of the plant material.

Application:

Apply mulch at the rate of 1,500 lbs. per acre. In every application, completely cover the soil.

Hydromulching Operations:

Seeded Lawn Areas: Mixing the required seeds at the specified rate with the hydromulch slurry and spray the mixture over the soil.

Grass or Ground Cover Stolons: Broadcasting the vegetative parts evenly over the areas at the rates specified, with a minimum of 90 percent coverage over the entire area and capping with hydromulch.

Plant areas not accessible to hydromulching applications by hand methods as required.

Irrigation: Apply water following mulching in such quantities as to moisten the soil and mulch, and to ensure proper growth, yet prevent erosion damage to the planted areas.

3.4 PRE-MAINTENANCE INSPECTION AND FINAL INSPECTION

Conduct the Pre-Maintenance Inspection at the completion of all landscape planting operations or phased landscape planting operation, and prior to the beginning of the formal maintenance period.

Conduct the Final Inspection at the completion of the Formal Maintenance period.

Request these inspections of the Landscape Architect five (5) working days prior to the completion of work in order that a mutually agreeable time for inspection may be arranged. Such request shall be responded to and scheduled within five working days.

The Landscape Architect, Contractor, and Owner, or their representatives, shall be present at the Inspection.

At the time of inspection, have all landscaped areas a minimum of 90 percent free of weeds, dead leaves and trash, neatly cultivated and raked with all stakes, guys and plant basins in good order. At the Final Inspection, cut lawns to be neat and presentable.

After the Pre-Maintenance Inspection, if the Landscape Architect and the Owner are of the opinion that all work has been performed in accordance with contract requirements, written notice of preliminary acceptance will be given. This report will note any items which must be corrected and state the date of commencement and completion of the formal maintenance period.

After the Final Inspection, if the Landscape Architect and the Owner or his representative are of the opinion that all work has been performed in accordance with contract requirements, written notice of acceptance and completion of the Project will be given. If all or certain portions of the work do not comply with contract requirements, a reasonable amount will be retained and the final payment and the formal maintenance period for the unaccepted work and any related items shall be extended at no cost to the Owner until the defects in the work have been corrected and the work is accepted by the Landscape Architect and the Owner.

3.5 PROTECTION AND MAINTENANCE

General: Maintain all plants and planted areas in optimum growing condition and appearance.

Begin maintenance with the delivery of the first plant materials to the site and continue 90 days after commencement of the Formal Maintenance Period or until the approval of the Final Inspection. Care of plant materials during installation is not considered part of the Formal Maintenance Period.

Maintenance includes:

Protection: The Contractor, at his option, may set up barricades to keep traffic out of newly planted areas, as needed and where safety allows.

Irrigation: Irrigate planting areas as required to ensure active growth keeping areas moist but not saturated. Regulate irrigation as necessary to avoid erosion and gullying.

Fertilizing: Fertilize as needed in accordance with the manufacturer's recommendations. Exercise proper caution and take measures necessary to avoid plant burn.

Weed Control: Keep planting areas a minimum of 90 percent free of weeds and undesirable grasses through daily weeding if required. Remove the entire root system. Dispose of all weeds in appropriate trash containers. Approved methods of chemical weed control may be implemented at the Contractor's option.

Disease and Insect Damage:

Inspect all plants, including lawn, for disease or insect damage weekly. Treat affected material immediately.

Remove damaged or diseased growth from trees and shrubs.

Dead or Dying Plant Materials: Immediately remove any plants not in a vigorous thriving condition. Replacement shall be the same species and size as originally planted.

Guys and Stakes: Restake, tighten, repair guys, and reset to proper grades or upright position any plants that are not in their proper growing position.

Ground Covers and Lawns:

Mow lawn to appropriate height.

As it becomes evident that certain seeded, stolonized, or hydromulched lawns and ground covers have not uniformly or properly established, replant the areas immediately with the same plants and quantity as specified for the initial planting and maintain as specified for 90 percent coverage of healthy, actively growing grass and ground covers for approval during the final inspection.

END OF SECTION

SECTION 02920

LAWNS AND GRASSES

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Seed.

2. Sod.

3. Sprigs.

4. Mulches.

5. Water.

6. Erosion Control Material.

7. Topsoil.

8. pH Adjusters.

9. Fertilizer.

10. Pre-Emergent Weed Control (Herbicide).

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 02120 - Earthwork: Topsoil and grading; restoration.

2. Section 02930 - Exterior Plants: Planting materials.

1.2 DESCRIPTION OF WORK

A. The extent of lawns and grass work is indicated on the Drawings and as specified herein, and includes providing and placing top soil, soil preparation, fine grading, weed control, grass planting operations, maintenance, and warranty.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Sod Producers Association (ASPA):

1. ASPA STSMT - Specification for Turfgrass Sod Materials and Transplanting / Installing.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Topsoil. Submit an analysis of the topsoil composition.

2. Assurance / Control Submittals:

a. Certificates:

1) Submit a certificate from the seed supplier for each grass seed mixture stating the botanical and common name and the percentage by weight of each species and variety, and the percentage of purity, germination, and weed seed; year of production and date of packaging.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Maintenance Data: Include maintenance instructions; cutting method and maximum grass height; types of application, frequency and recommended coverage of fertilizer for one full growing cycle.

1.5 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Deliver products to the Project Site in the suppliers original packaging.

PART 2 PRODUCTS

2.1 SEED

A. Classification:

1. Certification that the seeds are from the latest seasons crop, delivered in original, sealed packages, bearing the producer's guaranteed analysis for percentages of mixtures, purity, germination, weed seed content, and inert material.

2. Label in conformance with applicable local seed laws, if any.

3. Wet, moldy and damaged seed shall not be used.

2.2 SOD

A. Classification:

1. Field as classified in ASPA STSMT.

2. Machine cut sod at a uniform thickness of 1" with a tolerance of 1/4", excluding top growth and thatch. Each individual sod piece must be capable of supporting its own weight when lifted by its ends.

3. Broken pads, irregularly shaped pieces, torn and uneven ends will not be accepted.

2.3 SPRIGS

A. Healthy living stems, stolons, or rhizomes with attached roots of locally adapted grass, without adhering soil, including two to three nodes from 4" - 6" long, obtained from heavy and dense sod.

1. Provide sprigs which have been grown under climatic conditions similar to those in the locality of the Project.

2. Coordinate harvesting and planting operations to prevent the exposure of sprigs to the sun for more than 30 minutes before covering and moistening.

3. Sprigs containing weeds or other detrimental material or that are heat damaged shall be rejected.

2.4 MULCHES

A. Provide mulch free of noxious weeds, mold and other deleterious materials.

B. Straw: Stalks from oats, wheat, rye, barley or rice. Air-dry condition of proper consistency for placing with commercial mulch blowing equipment.

C. Hay: Use only marsh hay for lawn areas. Air-dry condition of proper consistency for placing with commercial mulch blowing equipment.

D. Wood Cellulose Fiber:

1. Processed to contain no growth or germination inhibiting factors, dyed an appropriate color to facilitate visual metering of the materials application.

2. Composition on air-dry weight basis: 9 to 15% moisture, pH range from 3.5 to 5.0.

3. Use with hydraulic application of grass seed and fertilizer.

2.5 WATER

A. Quality suitable for irrigation.

2.6 EROSION CONTROL MATERIAL

A. Net: Heavy, twisted jute mesh, plastic mesh, biodegradable paper fabric with knitted yarns or standard weave burlap.

B. Blanket: Fiber or excelsior.

2.7 TOPSOIL

A. On-Site topsoil may be used if in compliance with the composition requirements below.

B. Topsoil:

1. Containing from 5 to 20% organic matter as determined by a soil testing service. Maximum particle size, 3/4", with a maximum of 3 percent retained on a 1/4" screen.

2. Component Percentages:

a. Silt: 25 to 50

b. Clay: 10 to 30

c. Sand: 20 to 30

d. pH: 5.5 to 7.0

e. Soluble Salts: 600 ppm maximum.

2.8 pH ADJUSTERS

A. Lime:

1. Material: ASTM C 602, Class T, commercial agricultural grade ground limestone containing not less than 50 percent total oxides.

2. Gradation: Minimum 75% passing 100 mesh sieve and 100% passing 20 mesh sieve.

B. Ferrous Sulfate: Commercial Grade.

2.9 FERTILIZER

A. Bonemeal: Commercial, raw, finely ground; minimum 4% nitrogen and 20% phosphoric acid.

B. Superphosphate: Commercial grade complete fertilizer of neutral character consisting of fast-and-slow-release nitrogen, 50% derived from natural organic sources of urea-form, phosphorous and potassium.

C. Slow-Release Fertilizer: Granular fertilizer consisting of 50% water-insoluble nitrogen, phosphorous, and potassium.

2.10 PRE-EMERGENCE WEED CONTROL (HERBICIDE)

A. Chipco Ronstar G.

B. Eptam 8-E.

C. Vegitex.

D. Approved equal.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, and conditions are as required, and ready to receive the work.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until unsatisfactory conditions have been corrected.

D. Refer to the Drawings for the types and locations of plants. Use the method indicated.

3.2 TOPSOIL

A. Prepare subsoil to eliminate uneven areas and low spots. Maintain lines, levels, profiles and contours. Make changes in the grade gradual. Blend slopes into level areas. Remove foreign materials, weeds, and undesirable plants and their roots. Remove contaminated subsoil. Scarify the subsoil in areas where the subsoil has been compacted by construction activities.

B. Topsoil Thickness. 3" minimum.

C. Place topsoil on finish graded areas, uniform and smooth, free of rocks, debris and irregular surface changes with a maximum tolerance of 0.10 feet above or below established finish subgrade elevations. Provide graded surfaces sloping uniformly between indicated elevations.

D. Provide drainage ditches graded with uniform slopes to allow drainage without ponding; minimizing potential for erosion. Institute procedures to protect slopes and control erosion.

E. Weed eradication. Apply pre-emergent weed control in accordance with the manufacturer=s directions.

3.3 FERTILIZING

A. Apply fertilizer in accordance with the manufacturer's published instructions.

B. Apply after smooth raking of the topsoil and prior to roller compaction.

C. Do not apply fertilizer at same time or with the same machine used to apply seeds.

D. Mix thoroughly into the upper 2" of topsoil.

E. Lightly water to aid the dissipation of fertilizer.

3.4 SEEDING AND HYDROSEEDING

A. Sow one-half of the seeds in one direction and the remainder at right angles to the first sowing.

B. Cover seeds to an average depth of 1/2@ by means of spike-tooth harrow, cultipacker or other recommended device.

C. Hydroseeding:

1. Mix the seed, fertilizer and wood cellulose fiber in the required amount of water to product a homogeneous slurry. Add wood cellulose fiber after the seeds, water and fertilizer have been thoroughly mixed, and apply at the rate of 200 pounds per acre, dry weight.

2. Hydraulically spray the material on the ground to form a blotter-like cover impregnated uniformly with grass seeds.

3. Immediately following application of the slurry mix, make a separate application of wood cellulose mulch at the rate of 800 pounds per acre, dry weight.

4. Apply the cover so that rainfall or applied water will percolate to the underlying soil.

D. Mulch:

1. Spread evenly.

2. Anchor by crimping mulch with a serrated disc or by spraying asphalt emulsion on the mulched surface.

3. Take precautionary measures to prevent asphalt materials from marking or defacing structures, paving, utilities and plantings.

E. Rolling:

1. Immediately after seeding, firm up the entire area, except for slopes in excess of 3:1, with a roller not exceeding 90 pounds per foot of roller width.

2. If seeding is performed with a cultipacker-type seeder or hydroseeding, rolling may be eliminated.

F. Erosion Control Material: Install in accordance with the manufacturer's instructions.

3.5 SODDING

A. Placing:

1. Place within a maximum of 20 hours after initial harvesting, in accordance with ASPA GSS, as modified herein.

2. Thoroughly moisten the areas immediately prior to placing sod.

B. Spot Sodding:

1. Cut sod into plugs 2" square or 2" in diameter. Place the individual pieces on 6" centers and press firmly into the soil by foot pressure or by tamping.

2. Overseed for erosion control on 3:1 or greater slopes and drainage ways in spot sodded areas.

C. Full Sodding:

1. Scarify subsurfaces to receive sod.

2. Place sod blankets with tight edges and a level surface, lightly proof roll.

D. Slopes and Ditches:

1. For slopes 2:1 and greater, lay with long edge parallel to the slope.

2. In AV@ and flat bottomed ditches, lay with the long edge perpendicular to the flow of water.

3. On sloped areas, start sodding at the bottom of the slope.

E. Finishing: After completing sodding, blend the edges of sodded area smoothly into the surrounding area.

F. Watering: Start immediately after the sodding work each day. Apply at a rate sufficient to ensure thorough wetting of the soil to a minimum depth of 4".

3.6 SPRIGGING

A. Rate:

1. Perform within a maximum of 36 hours after initial harvesting. Inspect sprigs for heat damage during planting.

2. Plant groups of sprigs at 12" intervals, maximum. Limit the interval between dropping sprigs and covering with soil to 10 minutes.

B. Planting:

1. Plant to a depth of approximately 4" and cover sprigs so that the surface is flush with the designated grade and a live portion of each sprig is exposed.

C. Rolling: Immediately after the completion of sprigging and additional seeding, if required, roll the planted area with a cultipacker or roller not exceeding 90 pounds per foot of roller width.

D. Watering: Apply at the time of sprigging at a rate sufficient to ensure thorough wetting of the soil to a depth of 4".

3.7 CLEANING AND PROTECTION

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Remove soil and debris created by the lawn work from paved areas. Clean the wheels of vehicles before leaving the Site to avoid tracking soil onto the surface of streets, roads, walks and other paved areas.

C. Immediately after seeding, sodding or sprigging, protect the area from traffic and other use.

D. Restore existing lawn and grass areas damaged during execution of the work of this Section to its original condition.

E. Keep one paved pedestrian access route and one paved vehicular access route to each building clean at all times. Clean other paving after the work in adjacent areas has been completed.

3.8 ESTABLISHMENT PERIOD

A. Definitions:

1. Lawns and grasses establishment period will be in effect for 90 days from the date of substantial completion of the landscaping or until lawns and grasses have been mowed 3 times, which ever occurs the latest.

2. Stand of lawn and grass shall be 95 percent ground cover of the established species.

B. Maintenance During the Establishment Period:

1. Mow lawns and grassed areas to an average height of 1-1/2@ whenever the average height of the grass becomes 3".
2. Promotion of growth: Mow, remove excess clippings, eradicate weeds, water, fertilize, overseed, and perform other operations necessary to promote growth.

3. Post-fertilize areas with a commercial grade fertilizer approximately 30 days after planting and at intervals of 6 weeks thereafter until accepted.

3.9 FINAL INSPECTION AND ACCEPTANCE

A. Final Inspection and Acceptance:

1. Final inspection will be made upon a written request from the Contractor and at least 10 days prior to the last day of the lawn and grasses establishment period.

2 Final acceptance will be based upon a satisfactory stand of lawns and grasses as defined in the paragraph above entitled, "Establishment Period."

B. Re-planting: Re-plant areas which do not have a satisfactory stand of lawn and grass.

END OF SECTION

SECTION 02930

EXTERIOR PLANTS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Plants, trees and shrubs.

2. Antidesicants.

3. Pesticides.

4. Fertilizer.

5. Planting soil mixtures.

6. Membrane ground cover.

7. Bedding.

8. Mulches.

9. Edging material.

10. Trunk wrapping material.

11. Staking and guying material.

12. Water.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 02120 - Earthwork: Topsoil and grading.

2. Section 02920 - Lawns and Grasses: Grass, sod and sprigs.

1.2 DESCRIPTION OF WORK

A. The extent of the exterior plants work is as indicated on the Drawings and as specified herein, and includes providing and installing plants, trees, shrubs, ground cover, pesticides and fertilizer, planting operations and plant maintenance.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American National Standards Institute (ANSI):

1. ANSI Z60.1 - American Standard for Nursery stock.

C. National Arborist Association (NAA):

1. NAA PSST - Pruning Standards for Shade Trees.

D. University of Guam:

1. APruning Trees and Shrubs in Micronesia@ by M. V. Mickelbart.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Submit product data including installation and storage instructions for the following:

a. Edging.

b. Antidesicants.

c. Pesticides.

d. Metal anchors.

2. Assurance / Control Submittals:

a. Delivery Schedule: Submit schedule of delivery of trees, plants and ground covers a minimum of 10 days prior to the first scheduled delivery.

b. Pesticide Control Plan:

1) Submit a plan for the proposed sequence of pesticide application including common name, chemical composition, formulation, concentration rate and method of application for each type of pesticide.

2) Submit the names of Certified Applicators in the appropriate categories.

c. Certificates: Submit a certificate from the nursery or tree, plant and groundcover supplier for the items supplied indicating the name of the plants, trees, shrubs and groundcovers in accordance with ATropica@ by A.B. Graf; include type, quantity and size.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Maintenance Data: Include maintenance instructions recommending procedures to be established for the maintenance of trees, plants, and ground covers. Include the cutting and trimming method and types, application frequency, and recommended coverage of fertilizer. Submit before the expiration of maintenance during the plant establishment period.

1.5 QUALITY ASSURANCE

A. Horticultural Standards:

1. Names conform to "Standardized Plant Names" by the American Joint Committee on Horticultural Nomenclature.

2. Material selection, sizing, transportation, protection and planting in accordance with "American Standard for Nursery Stock" by American Association of Nurserymen and American National Standard Institute (ANSI), Publication Z60.1.

B. Plant, tree and shrub materials must be inspected at the growing site, tagged for size and quality, and approved for delivery to the Project Site.

1.6 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Delivery:

1. Branched Plants: Branches tied and exposed branches covered with a material that allows air circulation. Prevent damage to root balls and desication of leaves.

2. Fertilizer and Lime: In original, unopened containers, bearing manufacturer's chemical analysis, name, trade name or trademark, and indication of conformance with federal and local laws and regulations. May be furnished in bulk with a certificate indicating the above information.

3. Labels: Durable waterproof labels in weather-resistant ink, legible for a minimum of 60 days after delivery to the Project Site, stating correct name and size as specified in the list of required plants. Attach to the plants, bundles and containers of plants. Groups of plants may be labeled by tagging one plant.

4. Pesticides: In original, unopened containers with legible label indicating the manufacturer's registered uses and the U.S. Environmental Protection Agency (EPA) federal registration number.

C. Storage:

1. Plants, Trees and Shrubs: Store and protect plants not planted on the day of arrival at the Project Site as follows:

a. Shade and protect the plants in outdoor storage areas; protect from wind and direct sunlight until planted.

b. Heel-in bare root plants.

c. Protect balled and burlapped plants from drying out by covering balls or roots with moist burlap, sawdust, wood chips, shredded bark, peat moss or other approved material. Provide a covering which allows for air circulation.

d. Keep all plants in a moist condition by watering with a fine mist spray until planted.

2. Lime, Fertilizers, Mulch: Store in a dry location away from contaminants.

3. Pesticides, Antidesicants: Do not store with other landscape materials.

D. Handling: Do not drop or dump materials from vehicles. Handle plants by root balls or containers. Do not lift or carry by stems or crowns.

1.7 PROJECT CONDITIONS

A. Environmental Requirements:

1. Protection of Personnel and Property: Apply pesticides to prevent damage to personnel and property from either direct spray or drifting of chemicals both on and off-site.

2. Disposal of Excess Chemicals and Containers: In accordance with laws and regulations of federal and local authorities having jurisdiction.

1.8 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Submit a written Warranty signed by the material supplier and the installer agreeing that they will:

1. Warrant plants, trees and shrubs unconditionally for 1 year from the date of Substantial Completion of the landscaping.

2. Replace any material diseased or 25 percent dead or more at no additional cost to the Owner.

3. Provide replacement materials as required.

PART 2 PRODUCTS

2.1 SUBSTITUTIONS

A. Pre-Bid: If any plant specified is not obtainable, submit a written request for substitution during the bid period.

B. Substitution of planting materials will not be permitted unless approved.

2.2 PLANTS, TREES AND SHRUBS

A. Varieties: Furnish nursery stock in accordance with ANSI Z60.1, except as otherwise specified or indicated. Furnish plants grown under climatic conditions similar to those in the locality of the Project Site. Spray plants budding into leaf or having soft growth with an antidesicant before digging. Provide plants of the same specified species in uniform size and character of growth.

B. Shape: Well branched, well formed, sound, vigorous, healthy planting stock free of disease, sunscald, windburn, abrasion and harmful insects and insect eggs and having a healthy, normal and unbroken root system.

C. Deciduous Trees and Shrubs: Symmetrical tops with a typical spread of branches for each particular species or variety.

D. Ground Covers and Vines: Number and length of runners and clump sizes indicated,

and of the proper age for the grade of plants indicated. Furnish in removable containers, integral containers or formed homogeneous soil section.

E. Size: Minimum sizes measured before pruning and with branches in normal position, conform to the measurements indicated based on the average width or height of the plant for the species specified in ANSI Z60.1. Plants of larger size than specified may be used with
approval. When larger plants are used, increase the ball of earth size or the spread of roots in accordance with ANSI Z60.1.

F. Balled and Burlapped (B&B) and Balled and Potted (B&P) Plants: Ball size and ratios, conform to ANSI Z60.1. Ball the plants with firm, natural soil. Wrap B&B plants firmly with burlap or strong cloth and tie securely.

G. Balled and Platformed (BP) Plants: Wrap and ball in the same manner as B&B plants and fasten securely to strong platforms.

H. Bare-Root Plants: Dig with root system substantially intact but with the earth carefully removed. Cover roots with a thick coating of mud by puddling after plants are dug or wrap with a moist material immediately after digging.

I. Container Grown Plants: Sufficient root growth to hold earth intact when removed from the container. Root bound plants will not be accepted.

2.3 TOPSOIL

A. Refer to Section 02920 for topsoil to be used as backfill.

2.4 ANTIDESICANTS

A. Antidesicants: Subject to compliance with the requirements, manufacturers offering the specified items which may be incorporated into the work include the following:

1. "Vapor Guard" - Miller Chemicals & Fertilizer Corp., Hanover, PA.

2.5 PESTICIDES

A. Soil fumigant, herbicide, insecticide and fungicide: EPA registered and locally approved. Furnish for re-emergence and post-emergence applications.

2.6 FERTILIZERS

A. Commercial Grade Fertilizer: Granular, free flowing and uniform in composition, nitrogen-phosphorus-potash ratio.

B. Controlled Release Fertilizer: Magnesium ammonia phosphate and magnesium potassium phosphate, nitrogen-phosphorus-potassium ratio granulated to pass 1/8" screen.

2.7 MEMBRANE GROUND COVERS

A. Sheet Polyethylene: Black, conforming to ASTM D 2103, minimum thickness 4 mils.

B. Asphalt Glass Felt: ASTM D 2178; Types I, III or IV.

C. Roll Type Fiberglass Mats: 100 percent lime borosilicate glass fibers with an average fiber diameter of 8" - 12" and 2" - 4" strands of fiber bonded with phenol formaldehyde

resin, water permeable, having a minimum of 1/4" and a maximum of 1/2@ thickness with a density of not less than 3/4 pound per cubic foot.

2.8 MULCHES

A. Free of noxious weeds, mold and other deleterious materials.

B. Inert Mulch Materials: Crushed bricks or volcanic rock ranging in size from 1/2@ - 1".

C. Organic Mulch Materials: Ground or shredded bark, shredded hardwood Cypress ranging in size from 1" - 2".

2.9 EDGING

A. Plastic Edging: Minimum 6" high with galvanized metal anchoring stakes at 4 ft. o.c.

2.10 TRUNK WRAPPING

A. Two thicknesses of burlap, minimum 4" width.

B. Tying Material: 3-ply, lightly tarred, medium or coarse sisal yarn twine.

2.11 STAKING AND GUYING

A. Tree Support Stakes: Rough sawn hardwood, free of knots, rot, cross grain, bark, long slivers and other defects that impair strength. Minimum 2" square or 2-1/2@ diameter by 8 feet long, pointed at one end. Paint or stain wood stakes a dark brown color.

B. Guying Wire: 12 gauge galvanized steel.

C. Hose Chafing Guards: New or used 2-ply, 3/4" diameter, reinforced rubber or plastic hose, black or dark green color; use only one color.

D. Flags: White surveyor's plastic tape, 6" long, fastened to guying wires or cables.

E Driven Anchors: May be used instead of guy stakes for trees with 3" - 6" caliper, malleable iron, arrow shaped, galvanized.

2.12 WATER

A. Quality suitable for irrigation.

PART 3 EXECUTION

3.1 PREPARATION

A. Layout: Stake out all approved plant material locations and bed outlines on the Project Site before digging plant pits or beds. The Owner=s representative reserves the right to adjust the plant material locations to meet field conditions at no additional cost to the Owner.

B. Verify the location of underground utilities prior to excavation. Protect existing adjacent turf before excavations are made. Where planting beds occur in existing turf areas, remove the turf to a depth that will ensure removal of the entire root system. Measure the depth of pits from finished grade. Depth of excavation shall provide proper relation between the top of the ball and the finished grade as specified in the paragraph

"Handling", below.

3.2 PLANTING

A. Handling: Move balled, burlapped and container-grown plants only by supporting the ball or container. Set plants on a hand compacted layer of planting soil 6" thick and hold in position until soil has been firmly placed around the roots or ball. Set plants with 1/8 to 1/4 of the ball depth above the surrounding grade. Replace balled plants whose balls are cracked or broken either before or during the planting process.

1. Ball diameter 12" or less. Balled or potted items: Excavate pits at least 16" larger in diameter and 6" deeper than the ball or container.

2. Ball diameter greater than 12". Balled or potted items: Excavate pits at least 24" larger in diameter and 6" deeper than the ball or container.

3. Mulch: Provide 3" deep mulching material over the entire earth saucer and berm surface around trees and shrubs. Keep mulch out of the crowns of shrubs.

B. Balled and Burlapped Stock: Backfill with topsoil to approximately half the depth of the ball, tamp and water. Carefully remove or fold back excess burlap and tying materials. Tamp and complete the backfill, place mulch and water.

C. Bare-Root Stock: Plant so roots are arranged in a natural position. Apply tree wound dressing to cuts larger than 1/2A in diameter. Carefully work topsoil between the roots. Tamp the remainder of the backfill, place mulch and water.

D. Container Grown Stock: Remove from container to prevent damage to the plant and root system. Cut the root ball vertically in 3 to 5 places with a sharp knife before planting.

E. Ground Covers and Vines: Plant after placing mulch. Do not remove from flats or containers until immediately before planting. Space at intervals indicated, sufficiently deep to cover all roots. Immediately sprinkle with water until the entire area is soaked. Smooth the areas after planting to provide an even, smooth finish. Mulch as indicated.

F. Fertilization: After establishment of the finished grade around plants, top dress all pit and bed areas with fertilizer. If fertilizer adheres to plants, carefully remove by flushing.

G. Application of Pesticides:

1. Hydraulic Application:

a. Hydraulic equipment for liquid application of chemicals shall have leakproof tanks and a positive agitation method, with gauges and valves capable of maintaining a constant application pressure.

b. Calibrate and meter equipment so the application of chemicals in specified amounts can be determined.

2. Restrictions:

a. Apply herbicides and other chemicals in accordance with EPA label restrictions and recommendations, and federal and local laws and regulations.

b. Prepare daily reports stating the areas treated with each chemical, quantity applied and spray mixture of formulation used. Provide a copy

upon request.

c. Apply at each location under the supervision of a Certified Applicator.

3. Safety and Protective Measures:

a. Apply in well ventilated areas. Avoid inhalation, injection and spilling on clothing and skin.

b. Wear protective clothing in accordance with the manufacturer's material safety data sheet recommendations.

c. Personnel shall not be exposed to pesticides exceeding the exposure levels
recommended in the most stringent of the following: (OSHA), 29 Code of Federal Regulations (CFR) 1910.1000, SUBPART Z, or manufacturer's material safety data sheet.

d. If excessive exposures are unavoidable, use respirators approved by the National Institute for Occupational Safety and Health (OSHA) for protection from pesticides, fumigants, herbicides and fungicides.

e. Conform to the selection and usage guidelines in ANSI Z88.2.

3.3 FINISHING

A. Root Saucer: Properly shape a topsoil sauce around trees and plants to retain water and avoid erosion.

B. Edging: Uniformly edge beds of individual plants with a 3" - 4" deep "Vee" cut to provide a clear division line between planted areas and adjacent lawn. Form bed shapes as indicated. Install edging materials as specified. Mulch to the bottom edge of the cut.

C. Mulching: Provide mulching materials at other indicated locations. Keep mulch off of buildings, sidewalks, light standards and other structures.

1. Placing Inert Materials: Lay the membrane with edges lapped 6" - 12" to receive inert mulch material. Punch a grid of 1/4" holes at 12" o.c., both ways, over the entire area for drainage. Spread the mulch.

2. Placing Mulching Materials: Spread to a uniform thickness of 3".

D. Wrapping: Tie trunk wrapping material to the trunks of deciduous trees with the specified material within one day after planting. The trunks of deciduous trees will be inspected for physical damage, insect infestation and disease, and a determination of required treatment or rejection made prior to the wrapping operation. Begin wrapping at the base and extend up to the first branches. Overlap wrapping half the width of the underlying wrap and securely tie at the top, bottom, and at 18" intervals, maximum, with twine.

E. Staking and Guying:

1. Deadmen: Stake, guy and place deadmen for plantings as indicated.

2. Chafing Guards: Hold the plants firmly between stakes with a double-strand of 12 gauge guying wire. Use hose chafing guards where wire will contact the plants. Provide turnbuckles as indicated.

3. Stakes: Drive vertically into the ground 3 feet deep outside of the plant balls. Do not injure balls or roots.

4. Ground Stakes: Drive into firm ground outside of the plant pit with the top of the stakes flush with the ground.

5. Deadmen: Place a minimum of 18" below the ground surface.

6. Iron Anchors: Drive a minimum of 30" below the ground surface.

7. Steel Anchors: Insert steel screw anchors as recommended in the manufacturer's data.

8. Flags: Securely fasten flags on each guy wire at approximately 2/3 of the distance from the ground.

F. Pruning: NAA DSST; prune in accordance with the safety requirements of ANSI Z133.1.

1. Trees and Shrubs: Remove dead and broken branches. Prune deciduous trees and shrubs to reduce the total amount of branching structure by a maximum of one-third. Retain the typical grown habit of individual plants with as much height and spread as practical. Make cuts with sharp instruments, flush with the trunk or adjacent branch, above node.

2. Wound Dressing: Apply tree wound dressing to cuts 1/2A in diameter and larger, immediately after pruning.

3.4 MAINTENANCE

A. Commencement: Begin maintenance immediately after each item has been planted.

B. Inspection: Inspect plants at least once a week during the installation period and perform needed maintenance promptly.

3.5 PLANT ESTABLISHMENT AND MAINTENANCE PERIOD

A. Commencement: On the date that inspection shows that all new plants have been satisfactorily installed.

B. Plant Establishment Period: 90 days from the date of Substantial Completion of the landscaping.

C. Maintenance During the Plant Establishment Period:

1. Promote Plant Growth: Water, prune, mulch, re-guy, re-wrap and perform other operations necessary to promote plant growth.

2. Fertilizing Plants: At least once during the plant establishment period. Fertilize by top dressing the plant pit or bed area or by tablet or packet form with controlled release fertilizer.

3. Remove Dead Plants: Remove and replace dead plants and replace stakes, guys, wraps and eroded plant saucers. No additional plant establishment period will be required for replacement plants.

4. Tracking Unhealthy Plants: Plants not in a healthy growing condition will be noted, removed immediately and replaced with plants of the same species and

sizes originally specified. Make replacements in the manner specified for the original plantings.

3.6 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect plant conditions, placement and soil conditions.

3.7 FINAL INSPECTION AND ACCEPTANCE

A. Final Inspection: Upon written request from the Contractor and at least 10 days prior to the last day of the plant establishment period. Prior to final inspection, fertilize all plants by top dressing the plant pit or bed area or by tablet or packet form with controlled release fertilizer.

B. Final Acceptance: Base on compliance with the following:

1. Total Plants on Site: Plants have been accepted and the required number of replacements are planted.

2. Mulching and Weeding: Plant beds and saucers are properly mulched and free of weeds.

3. Supports: Stakes and guys are in good condition.

4. Remedial Work: Remedial measures directed by the Owner=s representative have been carried out to ensure plant survival.

5. Fertilizing: Plant materials have been fertilized as required.

END OF SECTION

SECTION 03210

CONCRETE FIBER REINFORCEMENT

PART 1- GENERAL

1.1 WORK INCLUDED

A. Furnish and place all fiber reinforcing for cast-in-place concrete for metal deck concrete topping only.

1.2 REINFORCEMENT

A. The concrete spacers shall be reinforced with 100% new collated, fibrillated polypropylene fibers containing no reprocessed olefin materials, and with the following physical properties:

- Specific Gravity: 0.91
- Modulus of Elasticity: 500 to 700 ksi
- Tensile Strength: 70 to 110 ksi
- Length: 0.25 to 2.5 inches

B. The contractor shall provide certification that all fibers furnished meet the physical properties listed in Subsection 1.2.A of this specification.

1.3 CONCENTRATION OF REINFORCEMENT FIBER:

One and one-half pounds of fiber shall be homogeneously mixed into each cubic yard of concrete furnished. The fiber shall be added to and mixed into the concrete at the batch plant to ensure uniform and complete dispersion of the collated-fibrillated fiber bundles into single monofilaments within the concrete.

PART 2 - PRODUCTS

2.1 GENERAL:

The proportion of cement, fiber reinforcement, and fine and coarse aggregates shall be such that it shall produce a maximum strength mixture which is consistent with the requirements of workability. The concrete must be tested to maintain an alkalinity content of 13 or higher. Refer to Section 03300 for concrete minimum compressive strength.

2.2 CONSISTENCY AND WORKABLITY:

A. The consistency of the concrete mix shall be such that it is plastic and workable. The consistency shall be determined in advance of placing concrete by the standard slump test. The concrete mix shall have a slump of 4 inches, ± 1 inch (ASME C-143).

B. The workability of the concrete shall not be increased by adding water to the mixture. Whenever necessary, the workability shall be varied by changing the mix proportions while

maintaining the required water-cement ratio. An increase in workability may be obtained by increasing the ratio of fine-to-coarse aggregate, or by increasing the cement content, or both.

2.3 PLACING:

Contractor shall install a 4-inch thick minimum concrete pad or as noted on the contract drawings. The new spacer slab is to follow the existing slope of the existing tank bottom.

PART 3 – EXECUTION (See 03300)

END OF SECTION 03210

SECTION 03217

PAVEMENT MARKINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes painted markings applied to asphalt and concrete pavement.

B. Related Requirements:

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to marking pavement including, but not limited to, the following:

a. Pavement aging period before application of pavement markings.

b. Review requirements for protecting pavement markings, including restriction of traffic during installation period.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include technical data and tested physical and performance properties.

B. Shop Drawings: For pavement markings.

1. Indicate pavement markings, colors, lane separations, defined parking spaces, and dimensions to adjacent work.

2. Indicate, with international symbol of accessibility, spaces allocated for people with disabilities.

1.5 QUALITY ASSURANCE

A. Regulatory Requirements: Comply with materials, workmanship, and other applicable requirements of the Department of Public Works for pavement-marking work.

1. Measurement and payment provisions and safety program submittals included in standard specifications do not apply to this Section.

1.6 FIELD CONDITIONS

A. Environmental Limitations: Proceed with pavement marking only on clean, dry surfaces and at a minimum ambient or surface temperature of 55 ^{o}F for water-based materials, and not exceeding 95 ^{o}F.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with project requirements. Available manufacturers offering products that may be incorporated into the Work include, but are not limited to products approved by the Department of Public Works for Pavement markings.

2.2 PAVEMENT-MARKING PAINT

A. Pavement-Marking Paint: Alkyd-resin type, lead and chromate free, ready mixed, complying with AASHTO M 248, Type N; colors complying with FS TT-P-1952.

1. Color: As indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that pavement is dry and in suitable condition to begin pavement marking according to manufacturer's written instructions.

B. Proceed with pavement marking only after unsatisfactory conditions have been corrected.

3.2 PAVEMENT MARKING

A. Do not apply pavement-marking paint until layout, colors, and placement have been verified with Engineer.

B. Allow paving to age for a minimum of 30 days before starting pavement marking.

C. Sweep and clean surface to eliminate loose material and dust.

D. Apply paint with mechanical equipment to produce pavement markings, of dimensions indicated, with uniform, straight edges. Apply at manufacturer's recommended rates to provide a minimum wet film thickness of 15 mils.

1. Apply graphic symbols and lettering with paint-resistant, die-cut stencils, firmly secured to pavement. Mask an extended area beyond edges of each stencil to prevent paint application beyond the stencil. Apply paint so that it cannot run beneath the stencil.

2. Broadcast glass beads uniformly into wet markings at a rate of 6 lbs./gal.

3.3 PROTECTING AND CLEANING

A. Protect pavement markings from damage and wear during remainder of construction period.

B. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 03217

SECTION 03300

CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.1 DESCRIPTION OF WORK:

A. Work Included: Provide all cast-in-place concrete, including reinforcing steel.

B. Related Work Specified in Other Sections:

1. Exposed aggregate paving: Section 02510.

1.2 CODES AND STANDARDS:

A. Perform work in accordance with applicable laws, codes, and regulations required by authorities having jurisdiction over such work and provide for all inspections and permits required by Federal, State, and local authorities in furnishing, transporting, and installing materials. Nothing in these Drawings or Specifications is to be construed as permitting work not conforming to these codes.

B. Except where different requirements are accepted, comply with the following standards by American Concrete Institute (ACI):

1. ACI 301-84(85) "Specifications for Structural Concrete for Buildings."

2. ACI 304-85 "Recommended Practice for Measuring, Mixing and Placing Concrete."

3. ACI 304.2R-71(82) "Placing Concrete by Pumping Methods."

4. ACI 308-81(86) "Recommended Practice for Curing Concrete."

5. ACI 318-83(86) "Building Code Requirements for Reinforced Concrete."

C. Comply with the referenced ASTM standards for materials and testing.

D. Concrete Testing and Inspection:

1. Testing laboratory will be hired and paid for by Owner to:

a. Test all concrete ingredients upon request.

b. Be responsible for and test all cylinders.

c. Review concrete mix designs.

2. Assist testing laboratory in making cylinders and slump tests.

3. Provide the testing laboratory free access to places where concrete materials are stored, proportioned, or mixed. All materials, equipment and methods used shall be subject to its inspection, test, and approval.

4. The following tests will be taken. Provide all materials to be tested.

   a. Compressive Test Cylinder: Take 4 identical standard 6-inch by 12-inch cylinders from each 10 cubic yards of concrete or fraction thereof placed in each day. Make, store, and cure cylinders in accordance with ASTM C 172 and C 31. Test cylinders in accordance with ASTM C 39, one at 7 days and two at 28 days. Keep 1 cylinder as spare for test at later date as directed.

   b. Slump test: Take 1 for each batch.

E. Reinforcing Steel Standards: Comply with the following:

1. ACI 316-83(86) "Manual of Standard Practice for Detailing Reinforced Concrete Structures".

2. Concrete Reinforcing Steel Institute "Manual of Standard Practice, 1984."

F. When provisions of pertinent codes and standards conflict with this Specification, the more stringent provision governs.

1.3 SUBMITTALS:

A. Shop Drawings: Submit in accordance with Section 01300.

1. Before any concrete reinforcement materials are fabricated, submit Shop Drawings of all concrete reinforcing.

2. The minimum format is 8 1/2 inches by 11 inches. Drawings shall be drafted by a competent draftsperson in conformance with paragraph 1.02 B.

3. Do not order concrete reinforcement to the job site until receipt of Shop Drawings acceptance from Landscape Architect.

B. Samples and Certificates:

1. All steel materials shall bear mill tags with heat number identification and with mill analysis and report available. Material not so labeled and identifiable may be required by the Landscape Architect to be tested by a laboratory selected by the Owner, in which case random samples will be taken by the Landscape Architect for one series of tests from each 2-1/2 tons or fraction thereof each size and kind of reinforcement steel.

2. Submit concrete finish and color sample for exposed aggregate concrete for acceptance by Landscape Architect. Minimum size 2' x 2'.

C. Submit design mixes from the batch plant as evidence that the design requirements have been met. Substantiate with copies of recent lab tests of same mixes.

D. Transit-mix concrete delivery slips:

1. Keep records showing time and place of each pour of concrete, together with transit-mix delivery slips certifying contents of the pour.

2. Make the records available to the Landscape Architect for his inspection upon request.

3. Upon completion of this portion of the work, deliver the records and the delivery slips to the Landscape Architect.

1.4 QUALITY ASSURANCE:

A. Supervision: Provide at least one supervisor on site at all times during the execution of this Work, who is thoroughly familiar with the type of materials being used, the best methods for their application, and who directs the work.

1.5 PRODUCT DELIVERY, STORAGE, AND HANDLING:

A. Deliver materials in timely manner to ensure uninterrupted progress of the work; store in such a manner as will preclude damage and permit ready access for inspection and identification of each shipment.

B. Protection:

1. Use all means necessary to protect concrete reinforcement before, during, and after installation and to protect the installed work and materials of other trades.

2. Store in a manner to prevent excessive rusting and fouling with dirt, grease, and other bond-breaking coatings.

3. Use all necessary precautions to maintain identification after bundles are broken.

C. Replacement: In the event of damage, immediately make all repairs and replacements necessary to the approval of the Landscape Architect.

1.6 VERIFICATION OF LINES AND LEVELS:

A. Scaled dimensions are approximate. Before proceeding with any work, carefully check and verify dimensions on the site.

B. Check grades and slab elevations to determine that work may safely proceed, keeping within the specified material depths. The layout plan is based on horizontal plane dimensions, and therefore measurements taken on the surface of slopes will differ from those indicated.

1.7 JOB CONDITIONS:

A. Acceptance of Previous Work: Inspect and accept the condition of the site relative to this work before commencing. If not acceptable, notify the Landscape Architect in writing. By proceeding with the work, the Contractor indicates his acceptance of all previous related work.

B. Meet on Site: Prior to commencing work, meet with the Landscape Architect, the Owner's representative, and other concerned parties on the site to review the work. Request this meeting one week prior to desired meeting time.

C. Protection:

1. Comply with governing safety regulations.

2. Provide necessary safeguards and exercise caution against injury or defacement of existing site improvements. Prevent vehicles of any kind from passing over sidewalks, curbs, and similar items, unless adequate protection is provided. Do not

store materials or equipment or operate equipment near or under the branches of any existing plants that are to remain, except as actually required for construction in those areas.

3. Be responsible for damages caused by failure of workmanship or materials. Repair all damage to return the area to the previous condition.

D. Clean Up: Keep areas of work clean, neat, and orderly at all times. Clean construction areas at the end of each day. Remove surplus material and other debris generated from this work from the site. Neatly return to proper grade any disturbed areas. Flush paving walks and similar areas to achieve a "broom clean" appearance.

1.8 COORDINATION: Schedule and coordinate to facilitate the most expeditious completion of the project.

A. Consult other relevant Specification sections to determine the extent and character of related work specified elsewhere.

B. Take precautions to maintain alignment and prevent damage of such items during placement of concrete.

C. Perform cutting and patching made necessary by failure or delay in complying with these requirements.

D. Give at least 48 hours notice to the Landscape Architect prior to inspections and observations.

PART 2 - PRODUCTS

2.1 CONCRETE MATERIALS:

A. Cement: ASTM C 150-86, Type II. Use only one manufacturer for all cement unless otherwise accepted by the Landscape Architect.

B. Aggregates: Clean and free from salt, organics, soil, and other deleterious materials.

1. Fine aggregate: ASTM C 33-86. (Limestone sand for exposed aggregate concrete.)

2. Coarse aggregate: ASTM C 33-86. (#4 blue rock and limestone chips for exposed aggregate concrete.)

C. Water: Clean and potable.

D. Water Reducing/Retarding: ASTM C 494-86, Type A, B, or D. Calcium Chloride is not permitted.

E. Coloring Admixture: By L.M. Scofield Chromix.

2.2 DESIGN MIXES:

A. Design concrete mix in accordance with ACI 301 and ACI 318. Proportion design mixes by weight in accordance with ACI 211.1-81(85), to meet the following requirements:

1. Strength fc. 3,000 PSI

2. Min. Sacks/Yd. 6.00 Sacks

3. Max. Slump 3 Inches

B. Mix components for exposed aggregate concrete (to match landscape paving):

688# cement
369# limestone sand
1079# #4 blue rock aggregate
1795# limestone chips
16-1/2# color as selected
36 gal. water

C. The quantity of cement and admixture required per cubic yard of concrete is given for estimating purposes. The exact amount of cement, fine and coarse aggregate, admixture, and water to be used shall be determined by the batch plant, subject to the review testing laboratory. The actual slump produced may not exceed amounts listed. These proportions shall produce concrete of maximum density, minimum shrinkage and required minimum strength.

D. Design the concrete mix to work readily into the corners and angles of the forms and reinforcement without excessive puddling, spading or vibration and without permitting the materials to segregate or free water to collect on the surface. Use the minimum amount of water consistent with these requirements. In general, accomplish the workability by grading rather than by adding water.

E. Test cylinders shall be prepared and tested as specified, to verify compliance of the concrete with the specifications. All concrete shall develop the specified minimum strength. Adjustments will be made if test results warrant changes.

2.3 REINFORCING STEEL:

A. Bar Reinforcement: Conform to "Specifications for Deformed Billet-Steel Bars for Concrete Reinforcement", ASTM A 615-87a, grade 60.

B. Wire Reinforcement: Conform to "Specifications for Cold-Drawn Steel Wire for Concrete Reinforcement", ASTM A 82-88, galvanized.

2.4 FORMS:

A. Form Materials: Either steel or wood, of size and strength to resist movement during concrete placement and to retain horizontal and vertical alignment until removal. Use forms that are clean, straight, smooth, dense, and free of distortion, rust, and defects. Use flexible spring-steel forms or laminated boards to form radius bends as required.

B. Form Coating: Non staining form-releasing agent that will not discolor or deface the surface of the concrete, nor prevent bonding of finishes to its surface.

2.5 MISCELLANEOUS:

A. Curing and Sealing Compounds: ASTM C 309-81, Type 1, Class B clear, non-yellowing resin based, as manufactured by W.R. Meadows AR-30, Burke Res-X, or acceptable equal.

B. Grout: Non-shrink nonmetallic; Five Star Grout, Master Builder, Thoro-Grip, Burke, or acceptable equal. Do not use grout in exposed conditions.

C. Waterstops: PVC or rubber dumbbell or centerbulb type as indicated of proper size to fit joint; Burke, Greenstreak, Hunts, W.R. Meadows, or acceptable equal.

D. Expansion Joint Filler: ASTM D 1751-83 non-extruding premolded 1/2" thick asphalt-impregnated fiberboard, unless otherwise indicated.

E. Vapor Barrier: Polyethylene film, .006" thick.

PART 3 - EXECUTION

3.1 PREPARATION:

A. Thoroughly clean the areas to ensure proper placement and bonding of concrete.

B. Verify that reinforcement, when placed, will permit placement of concrete in the design indicated on the Drawings.

C. Make sure that steel reinforcement is free of rust, scale, and bond-inhibiting coatings.

D. Verify that all waterproofing materials are adequately protected from damage by the installation of the reinforcing materials.

E. Notify the Landscape Architect and Owner at least 48 hours before concrete will be placed.

3.2 STEEL FABRICATION:

A. Fabricate reinforcement in strict accordance with Shop Drawings.

B. Do not use bars with kinks or bends not indicated on the Drawings or the reviewed Shop Drawings.

C. Do not bend or straighten steel in a manner that will injure the material.

D. Bend bars cold.

E. Make bends for stirrups and ties around a pin having a diameter not less than 2 times the minimum thickness of the bar.

F. Make bends for other bars, including hooks, around a pin having a diameter not less than 6 times that minimum thickness of the bar.

3.3 PLACING REINFORCEMENT:

A. Before starting concrete placement, accurately place concrete reinforcement, positively secure and support by concrete blocks, spacers, or metal hangers. Over vulnerable waterproofing materials do not allow steel reinforcement to touch waterproofing directly; protect surface with compressible filler or fiberboard.

B. Clearance:

1. Preserve clear space between bars of not less than 1-1/2 times the nominal diameter of round bars.

2. In no case let the clear distance be less than 1-1/2" nor less than 1-1/3 times the maximum size of aggregate.

3. Provide at least 2" of concrete covering over reinforcement.

C. Splicing: Horizontal bars:

1. Place bars in horizontal members, with minimum lap at splices sufficient to develop the strength of the bars.

2. Bars may be wired together at laps except at points of support of the member, at which points preserve clear space described above.

3. Whenever possible, stagger splices of adjacent bars.

4. Splice 40 bar diameters minimum.

D. Dowels: Place required steel dowels and securely anchor into position before concrete is placed.

E. Obstructions: In the even conduits, piping, inserts, sleeves, or any other items interfere with placing reinforcement as indicated or otherwise required, immediately consult the Landscape Architect and obtain approval of new procedure before placing concrete.

3.4 CONCRETE MIXING:

A. Provide ready mixed concrete in compliance with the referenced ACI standards and ASTM C 94-86b.

B. Mix concrete in a transit mixer at a peripheral drum speed of 200 ft. per minute for a period of not less than 10 minutes, including at least 3 minutes at the job site.

C. Start the discharge of concrete not more than 45 minutes after the introduction of mixing water. Complete placing of concrete within 90 minutes of the first introduction of water into the mix, except when air temperature is between 85° F. and 95° F., reduce time to 75 minutes.

D. Do not add water to the mix after leaving the plant without the specific approval of the Landscape Architect.

E. Upon his approval, water may be added as long as slump does not exceed that specified and the designed water/cement ratio is not exceeded.

3.5 TEMPERATURE CONTROLS:

A. Temperature delivered at plant not to exceed 150° F.

B. Comply with the following temperature limitations:

1. Maximum temperature of concrete at time of placement: 75° F.

2. Minimum temperature of concrete at time of placement: 50° F.

3.6 PLACING:

A. Keep a record of the time and date of placing concrete in each portion of the project. Make this record open for inspection by the Landscape Architect at any time.

B. Compact concrete thoroughly, using approved mechanical vibrators.

1. Use mechanical vibrator at each point of dump, and keep a standby vibrator in good working condition, but not in use, on the job until all concrete is placed.

2. Internal vibration must be direct action in the concrete and not against forms or reinforcement. Vibrate each pour until the water shows indications of rising, but not until the water has risen.

3. Use suitable tools along the faces of the forms during the pour, to force large aggregate away from the forms and bring mortar to the surface of the forms. Take appropriate means to provide fully filled out, smooth, clean, and properly aligned surfaces, free from pockets and blemishes.

3.7 CONSTRUCTION AND CONTROL JOINTS:

A. Construction Joints:

1. Form construction pour joints as detailed or as accepted by the Landscape Architect.

2. Sandblast the entire top surface of construction joints with coarse sand to clean and roughen the joint for bond to next pour. Expose coarse aggregate solidly embedded in mortar matrix. Clean away drippings, sand, and debris, so the next pour is placed on clean, solid, rough surface.

3. Waterstops: Install waterstops in construction joints where indicated on the drawings, to form a continuous diaphragm in each joint. Make provisions to support and protect waterstops during the progress of the work. Fabricate waterstop field joints in accordance with manufacturer's printed instructions. Protect waterstop material from damage where it protrudes from any point.

B. Vertical Pour Joints: Form vertical pour joints within walls with beveled 2 x 4 to form continuous key at center of wall.

3.8 SPECIAL REQUIREMENTS:

A. Place slabs and top of walls to the following tolerances:

1. Unless otherwise noted: 1/8 inch in 10 feet.

2. Not more than 1/8-inch maximum deviation above or below the established datum lines.

B. Areas with Drains: Unless otherwise indicated, pitch carefully to drains so as to afford an even fall from all parts of the fountain, using screen extending from the flow drain in a fan shape.

3.9 PATCHING:

A. Repair defects in exposed concrete work as follows: Chip voids to depth of at least 1" or to remove loose material, with the edges perpendicular to the surface and parallel to form markings. Fill voids, surface irregularities, chipped areas, and similar depressions, by

patching, and rubbing. Prepare a sample of repaired condition for approval by the Landscape Architect before proceeding with this work.

3.10 PROTECTION AND CURING:

A. Protect concrete from injurious action of the elements and defacement during construction operations.

B. Protect slabs and exposed corners of concrete from traffic or use which will damage them.

C. Keep forms sufficiently wet to prevent drying out of the concrete.

D. Lightly sandblast colored concrete walls in landscaped areas to expose aggregate where indicated.

E. Apply curing compound to all freshly poured concrete. Apply uniformly at the rate recommended by the manufacturer.

3.11 CLEANING: As the work progresses, clean concrete drippings or splashings immediately from all surfaces. Dispose of concrete debris legally off the site.

END OF SECTION

SECTION 03300

CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes cast-in-place concrete, including formwork, reinforcement, concrete materials, mixture design, placement procedures, and finishes, for the following:

1. Footings.
2. Foundation walls.
3. Slabs-on-grade.
4. Suspended slabs.
5. Building frame members.
6. Building walls.

B. Related Sections:
1. Section 31200 "Earth Moving" for drainage fill under slabs-on-grade.

1.3 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of the following: fly ash; subject to compliance with requirements.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Design Mixtures: For each concrete mixture. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

1. Indicate amounts of mixing water to be withheld for later addition at Project site.

C. Steel Reinforcement Shop Drawings: Placing drawings that detail fabrication, bending, and placement. Include bar sizes, lengths, material, grade, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, splices and laps, mechanical connections, tie spacing, hoop spacing, and supports for concrete reinforcement.

D. Formwork Shop Drawings: Prepared by or under the supervision of a qualified professional engineer detailing fabrication, assembly, and support of formwork.

1. Shoring and Reshoring: Indicate proposed schedule and sequence of stripping formwork, shoring removal, and reshoring installation and removal.

E. Construction Joint Layout: Indicate proposed construction joints required to construct the structure.

1. Location of construction joints is subject to approval of the Architect.

F. Samples: For waterstops vapor retarder.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer manufacturer testing agency.

B. Welding certificates.

C. Material Certificates: For each of the following, signed by manufacturers:

1. Cementitious materials.
2. Admixtures.
3. Form materials and form-release agents.
4. Steel reinforcement and accessories.
5. Waterstops.
6. Curing compounds.
7. Bonding agents.
8. Joint-filler strips.
9. Repair materials.

D. Material Test Reports: For the following, from a qualified testing agency, indicating compliance with requirements:

1. Aggregates. Include service record data indicating absence of deleterious expansion of concrete due to alkali aggregate reactivity.

E. Floor surface flatness and levelness measurements indicating compliance with specified tolerances.

F. Field quality-control reports.

G. Minutes of preinstallation conference.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer who employs on Project personnel qualified as ACI-certified Flatwork Technician and Finisher and a supervisor who is an ACI-certified Concrete Flatwork Technician.

B. Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.

1. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities."

C. Testing Agency Qualifications: An independent agency, acceptable to authorities having jurisdiction, qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.

1. Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-1 or an equivalent certification program.
2. Personnel performing laboratory tests shall be ACI-certified Concrete Strength Testing Technician and Concrete Laboratory Testing Technician - Grade I. Testing Agency laboratory supervisor shall be an ACI-certified Concrete Laboratory Testing Technician - Grade II.

D. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer.

E. Welding Qualifications: Qualify procedures and personnel according to AWS D1.4/D 1.4M, "Structural Welding Code - Reinforcing Steel."

F. ACI Publications: Comply with the following unless modified by requirements in the Contract Documents:

1. ACI 301, "Specifications for Structural Concrete," Sections 1 through 5.
2. ACI 117, "Specifications for Tolerances for Concrete Construction and Materials."

G. Concrete Testing Service: Engage a qualified independent testing agency to perform material evaluation tests and to design concrete mixtures.

H. Preinstallation Conference: Conduct conference at Project site.

1. Before submitting design mixtures, review concrete design mixture and examine procedures for ensuring quality of concrete materials. Require representatives of each entity directly concerned with cast-in-place concrete to attend, including the following:

    a. Contractor's superintendent.
    b. Independent testing agency responsible for concrete design mixtures.
    c. Ready-mix concrete manufacturer.
    d. Concrete subcontractor.
    e. Special concrete finish subcontractor.

2. Review special inspection and testing and inspecting agency procedures for field quality control, concrete finishes and finishing, curing procedures, construction contraction and isolation joints, and joint-filler strips, forms and form removal limitations, shoring and reshoring procedures, vapor-retarder installation, anchor rod and anchorage device installation tolerances, steel reinforcement installation, floor and slab flatness and levelness measurement, concrete repair procedures, and concrete protection.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Steel Reinforcement: Deliver, store, and handle steel reinforcement to prevent bending and damage.

B. Waterstops: Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.

PART 2 - PRODUCTS

2.1 FORM-FACING MATERIALS

A. Smooth-Formed Finished Concrete: Form-facing panels that will provide continuous, true, and smooth concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.

1. Plywood, metal, or other approved panel materials.
2. Exterior-grade plywood panels, suitable for concrete forms, complying with DOC PS 1, and as follows:

    a. High-density overlay, Class 1 or better.
    b. Medium-density overlay, Class 1 or better; mill-release agent treated, and edge sealed.
    c. Structural 1, B-B or better; mill oiled, and edge sealed.
    d. B-B (Concrete Form), Class 1 or better; mill oiled, and edge sealed.

B. Rough-Formed Finished Concrete: Plywood, lumber, metal, or another approved material. Provide lumber dressed on at least two edges and one side for tight fit.

C. Forms for Cylindrical Columns, Pedestals, and Supports: Metal, glass-fiber-reinforced plastic, paper, or fiber tubes that will produce surfaces with gradual or abrupt irregularities not exceeding specified formwork surface class. Provide units with sufficient wall thickness to resist plastic concrete loads without detrimental deformation.

D. Pan-Type Forms: Glass-fiber-reinforced plastic or formed steel, stiffened to resist plastic concrete loads without detrimental deformation.

E. Void Forms: Biodegradable paper surface, treated for moisture resistance, structurally sufficient to support weight of plastic concrete and other superimposed loads.

F. Chamfer Strips: Wood, metal, PVC, or rubber strips, 3/4 by 3/4 inch, minimum.

G. Rustication Strips: Wood, metal, PVC, or rubber strips, kerfed for ease of form removal.

H. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and will not impair subsequent treatments of concrete surfaces.

1. Formulate form-release agent with rust inhibitor for steel form-facing materials.

I. Form Ties: Factory-fabricated, removable, or snap-off metal or glass-fiber-reinforced plastic form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.

1. Furnish units that will leave no corrodible metal closer than 1 inch to the plane of exposed concrete surface.
2. Furnish ties that, when removed, will leave holes no larger than 1 inch in diameter in concrete surface.
3. Furnish ties with integral water-barrier plates to walls indicated to receive damp proofing or waterproofing.

2.2 STEEL REINFORCEMENT

A. Reinforcing Bars: ASTM A 706, Grade 60, ASTM A 615/A 615M, Grade 60, deformed shall be permitted if:
1. The actual yield strength based on Mil tests does not exceed f_y by more than 18,000 psi, and
2. The ratio of the actual Tensile Strength to the actual Yield Strength is not less than 1.25.

B. Galvanized-Steel Welded Wire Reinforcement: ASTM A 185/A 185M, plain, fabricated from galvanized-steel wire into flat sheets.

2.3 REINFORCEMENT ACCESSORIES

A. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place. Manufacture bar supports from steel wire, plastic, or precast concrete according to CRSI's "Manual of Standard Practice," of greater compressive strength than concrete and as follows:

1. For concrete surfaces exposed to view where legs of wire bar support contact forms, use CRSI Class 1 plastic-protected steel wire or CRSI Class 2 stainless-steel bar supports.

2.4 CONCRETE MATERIALS

A. Cementitious Material: Use the following cementitious materials, of the same type, brand, and source, throughout Project:

1. Portland Cement: ASTM C 150, Type I or Type II.

a. Fly Ash: ASTM C618, Class F.

B. Normal-Weight Aggregates: ASTM C 33, Class 1N coarse aggregate or better, graded. Provide aggregates from a single source with documented service record data of at least 10 years' satisfactory service in similar applications and service conditions using similar aggregates and cementitious materials.

1. Maximum Coarse-Aggregate Size: 1-1/2 inches nominal.
2. Fine Aggregate: Free of materials with deleterious reactivity to alkali in cement.

C. Water: ASTM C 94/C 94M and potable.

2.5 ADMIXTURES

A. Air-Entraining Admixture: ASTM C 260.

B. Chemical Admixtures: Provide admixtures certified by manufacturer to be compatible with other admixtures and that will not contribute water-soluble chloride ions exceeding those permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride.

1. Water-Reducing Admixture: ASTM C 494/C 494M, Type A.
2. Retarding Admixture: ASTM C 494/C 494M, Type B.
3. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
4. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.
5. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.
6. Plasticizing and Retarding Admixture: ASTM C 1017/C 1017M, Type II.

2.6 WATERSTOPS

A. Chemically Resistant Flexible Waterstops: Thermoplastic elastomer rubber waterstops, for embedding in concrete to prevent passage of fluids through joints; resistant to oils, solvents, and chemicals. Factory fabricate corners, intersections, and directional changes.

1. Products: Subject to compliance with requirements, provide one of the following :

    a. JP Specialties, Inc.; Earth Shield TPE-Rubber.
    b. Vinylex Corp.; PetroStop.
    c. WESTEC Barrier Technologies, Inc.; 600 Series TPE-R.
    d. .

2. Profile: Flat, dumbbell with center bulb.
3. Dimensions: 6 inches by 3/16 inch thick; non-tapered.

2.7 CURING MATERIALS

A. Evaporation Retarder: Waterborne, monomolecular film forming, manufactured for application to fresh concrete.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

    a. BASF Construction Chemicals - Building Systems; Confilm.
    b. ChemMasters, Inc; SprayFilm.
    c. Sika Corporation; SikaFilm.
    d. Unitex; PRO-FILM.

B. Absorptive Cover: AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. when dry.

C. Moisture-Retaining Cover: ASTM C 171, polyethylene film or white burlap-polyethylene sheet.

D. Water: Potable.

E. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B, dissipating.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. BASF Construction Chemicals - Building Systems; Kure 200.
b. ChemMasters, Inc; Safe-Cure Clear.
c. SpecChem, LLC; Spec Rez Clear.
d. .

2.8 RELATED MATERIALS

A. Expansion- and Isolation-Joint-Filler Strips: ASTM D 1751, asphalt-saturated cellulosic fiber or ASTM D 1752, cork, or self-expanding cork.

B. Bonding Agent: ASTM C 1059/C 1059M, Type II, non-redispersible, acrylic emulsion or styrene butadiene.

2.9 REPAIR MATERIALS

A. Repair Underlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/8 inch and that can be feathered at edges to match adjacent floor elevations.

1. Cement Binder: ASTM C 150, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
2. Primer: Product of underlayment manufacturer recommended for substrate, conditions, and application.
3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand as recommended by underlayment manufacturer.
4. Compressive Strength: Not less than 4100 psi at 28 days when tested according to ASTM C 109/C 109M.

B. Repair Overlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 1/4 inch and that can be filled in over a scarified surface to match adjacent floor elevations.

1. Cement Binder: ASTM C 150, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
2. Primer: Product of topping manufacturer recommended for substrate, conditions, and application.
3. Aggregate: Well-graded, washed gravel, 1/8 to 1/4 inch or coarse sand as recommended by topping manufacturer.

4. Compressive Strength: Not less than 5000 psi at 28 days when tested according to ASTM C 109/C 109M.

2.10 CONCRETE MIXTURES, GENERAL

A. Prepare design mixtures for each type and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, according to ACI 301.

1. Use a qualified independent testing agency for preparing and reporting proposed mixture designs based on laboratory trial mixtures.

B. Cementitious Materials: Limit percentage, by weight, of cementitious materials other than portland cement in concrete as follows:

1. Fly Ash: 25 percent.

C. Limit water-soluble, chloride-ion content in hardened concrete to 0.06 percent by weight of cement.

D. Admixtures: Use admixtures according to manufacturer's written instructions.

1. Use water-reducing or plasticizing admixture in concrete, as required, for placement and workability.
2. Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.
3. Use water-reducing admixture in pumped concrete, concrete for heavy-use industrial slabs and parking structure slabs, concrete required to be watertight, and concrete with a water-cementitious materials ratio below 0.50.
4. Use corrosion-inhibiting admixture in concrete mixtures where indicated.

2.11 CONCRETE MIXTURES FOR BUILDING ELEMENTS

Pump Mix Slump Limits: 8 inches for concrete with verified base slump noted below before adding high-range water-reducing admixture or plasticizing admixture.

A. Footings: Proportion normal-weight concrete mixture as follows:

1. Minimum Compressive Strength: 4000 psi at 28 days.
2. Maximum Water-Cementitious Materials Ratio: 0.45.
3. Slump Limit: 4 inches, plus or minus 1 inch.
4. Air Content: 5.5 percent, plus or minus 1.5 percent at point of delivery for 1-1/2-inch nominal maximum aggregate size.
5. Air Content: 6 percent, plus or minus 1.5 percent at point of delivery for 3/4-inch nominal maximum aggregate size.

B. Foundation Walls: Proportion normal-weight concrete mixture as follows:

1. Minimum Compressive Strength: 4000 psi at 28 days.
2. Maximum Water-Cementitious Materials Ratio: 0.45.
3. Slump Limit: 4 inches, plus or minus 1 inch.

4. Air Content: 5.5 percent, plus or minus 1.5 percent at point of delivery for 1-1/2-inch nominal maximum aggregate size.
5. Air Content: 6 percent, plus or minus 1.5 percent at point of delivery for 3/4-inch nominal maximum aggregate size.

C. Slabs-on-Grade: Proportion normal-weight concrete mixture as follows:

1. Minimum Compressive Strength: 4000 psi at 28 days.
2. Minimum Cementitious Materials Content: 470 lb/cu. yd.
3. Maximum Water-Cementitious Materials Ratio: 0.45.
4. Slump Limit: 4 inches plus or minus 1 inch.
5. Air Content: 5.5 percent, plus or minus 1.5 percent at point of delivery for 1-1/2-inch nominal maximum aggregate size.
6. Air Content: 6 percent, plus or minus 1.5 percent at point of delivery for 3/4-inch nominal maximum aggregate size.
7. Air Content: Do not allow air content of trowel-finished floors to exceed 3 percent.

D. Suspended Slabs: Proportion normal-weight concrete mixture as follows:

1. Minimum Compressive Strength: 4000 psi at 28 days.
2. Minimum Cementitious Materials Content: 540 lb/cu. yd.
3. Maximum Water-Cementitious Materials Ratio: 0.45.
4. Slump Limit: 4 inches, plus or minus 1 inch.
5. Air Content: 5.5 percent, plus or minus 1.5 percent at point of delivery for 1-1/2-inch nominal maximum aggregate size.
6. Air Content: 6 percent, plus or minus 1.5 percent at point of delivery for 3/4-inch nominal maximum aggregate size.
7. Air Content: Do not allow air content of trowel-finished floors to exceed 3 percent.

E. Building Frame Members: Proportion normal-weight concrete mixture as follows:

1. Minimum Compressive Strength: 4000 psi at 28 days.
2. Maximum Water-Cementitious Materials Ratio: 0.45.
3. Slump Limit: 4 inches plus or minus 1 inch.
4. Air Content: 5.5 percent, plus or minus 1.5 percent at point of delivery for 1-1/2-inch nominal maximum aggregate size.
5. Air Content: 6 percent, plus or minus 1.5 percent at point of delivery for 3/4-inch nominal maximum aggregate size.

F. Building Walls: Proportion normal-weight concrete mixture as follows:

1. Minimum Compressive Strength: 4000 psi at 28 days.
2. Maximum Water-Cementitious Materials Ratio: 0.45.
3. Slump Limit: 4 inches, plus or minus 1 inch.
4. Air Content: 5.5 percent, plus or minus 1.5 percent at point of delivery for 1-1/2-inch nominal maximum aggregate size.
5. Air Content: 6 percent, plus or minus 1.5 percent at point of delivery for 3/4-inch nominal maximum aggregate size.

G. Metal Deck Topping: Proportion normal-weight concrete mixture as follows:

1. Minimum Compressive Strength: 4000 psi at 28 days.
2. Minimum Cementitious Materials Content: 540 lb/cu. yd.
3. Maximum Water-Cementitious Materials Ratio: 0.45.
4. Slump Limit: 4 inches, plus or minus 1 inch.
5. Air Content: 5.5 percent, plus or minus 1.5 percent at point of delivery for 1-1/2-inch nominal maximum aggregate size.
6. Air Content: 6 percent, plus or minus 1.5 percent at point of delivery for 3/4-inch nominal maximum aggregate size.
7. Air Content: Do not allow air content of trowel-finished floors to exceed 3 percent.
8. Fiber Reinforcement: Refer to Section 03210.

2.12 FABRICATING REINFORCEMENT

A. Fabricate steel reinforcement according to CRSI's "Manual of Standard Practice."

2.13 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94/C 94M and furnish batch ticket information.

1. When air temperature is between 85 and 90 deg F, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F, reduce mixing and delivery time to 60 minutes.

PART 3 - EXECUTION

3.1 FORMWORK

A. Design, erect, shore, brace, and maintain formwork, according to ACI 301, to support vertical, lateral, static, and dynamic loads, and construction loads that might be applied, until structure can support such loads.

B. Construct formwork so concrete members and structures are of size, shape, alignment, elevation, and position indicated, within tolerance limits of ACI 117.

C. Limit concrete surface irregularities, designated by ACI 347 as abrupt or gradual, as follows:

1. Class A, 1/8 inch for smooth-formed finished surfaces.

D. Construct forms tight enough to prevent loss of concrete mortar.

E. Fabricate forms for easy removal without hammering or prying against concrete surfaces. Provide crush or wrecking plates where stripping may damage cast concrete surfaces. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical.
1. Do not use rust-stained steel form-facing material.

F. Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and slopes in finished concrete surfaces. Provide and secure units to support screed strips; use strike-off templates or compacting-type screeds.

G. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar. Locate temporary openings in forms at inconspicuous locations.

H. Refer to architectural details for chamfer requirements of exterior corners and edges of permanently exposed concrete.

I. Form openings, chases, offsets, sinkages, keyways, blocking, screeds, and bulkheads required in the Work. Determine sizes and locations from trades providing such items.

J. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.

K. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.

L. Coat contact surfaces of forms with form-release agent, according to manufacturer's written instructions, before placing reinforcement.

3.2 EMBEDDED ITEMS

A. Place and secure anchorage devices and other embedded items required for adjoining work that is attached to or supported by cast-in-place concrete. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

1. Install anchor rods, accurately located, to elevations required and complying with tolerances in Section 7.5 of AISC's "Code of Standard Practice for Steel Buildings and Bridges."

3.3 REMOVING AND REUSING FORMS

A. General: Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than 50 deg F for 72 hours after placing concrete. Concrete has to be hard enough to not be damaged by form-removal operations and curing and protection operations need to be maintained.

1. Leave formwork for beam soffits, joists, slabs, and other structural elements that supports weight of concrete in place until concrete has achieved at least 80 percent its 28-day design compressive strength.
2. Remove forms only if shores have been arranged to permit removal of forms without loosening or disturbing shores.

B. Clean and repair surfaces of forms to be reused in the Work. Split, frayed, delaminated, or otherwise damaged form-facing material will not be acceptable for exposed surfaces. Apply new form-release agent.

C. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints. Align and secure joints to avoid offsets. Do not use patched forms for exposed concrete surfaces unless approved by Architect.

3.4 SHORES AND RESHORES

A. Comply with ACI 318 and ACI 301 for design, installation, and removal of shoring and reshoring.

1. Do not remove shoring or reshoring until measurement of slab tolerances is complete.

B. In multistory construction, extend shoring or reshoring over a sufficient number of stories to distribute loads in such a manner that no floor or member will be excessively loaded or will induce tensile stress in concrete members without sufficient steel reinforcement.

C. Plan sequence of removal of shores and reshore to avoid damage to concrete. Locate and provide adequate reshoring to support construction without excessive stress or deflection.

3.5 VAPOR RETARDERS

A. Sheet Vapor Retarders: Place, protect, and repair sheet vapor retarder according to ASTM E 1643 and manufacturer's written instructions.

1. Lap joints 6 inches and seal with manufacturer's recommended tape.

3.6 STEEL REINFORCEMENT

A. General: Comply with CRSI's "Manual of Standard Practice" for placing reinforcement.

1. Do not cut or puncture vapor retarder. Repair damage and reseal vapor retarder before placing concrete.

B. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that would reduce bond to concrete.

C. Accurately position, support, and secure reinforcement against displacement. Locate and support reinforcement with bar supports to maintain minimum concrete cover. Do not tack weld crossing reinforcing bars.

D. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.

E. Install welded wire reinforcement in longest practicable lengths on bar supports spaced to minimize sagging. Lap edges and ends of adjoining sheets at least one mesh spacing. Offset laps of adjoining sheet widths to prevent continuous laps in either direction. Lace overlaps with wire.

3.7 JOINTS

A. General: Construct joints true to line with faces perpendicular to surface plane of concrete.

B. Construction Joints: Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Architect.

1. Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of strip placements of floors and slabs.
2. Form keyed joints as indicated. Embed keys at least 1-1/2 inches into concrete.
3. Locate joints for beams, slabs, joists, and girders in the middle third of spans. Offset joints in girders a minimum distance of twice the beam width from a beam-girder intersection.
4. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at the top of footings or floor slabs.
5. Space vertical joints in walls as indicated. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.
6. Use a bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
7. Use epoxy-bonding adhesive at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.

C. Contraction Joints in Slabs-on-Grade: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of concrete thickness as follows:

1. Grooved Joints: Form contraction joints after initial floating by grooving and finishing each edge of joint to a radius of 1/8 inch. Repeat grooving of contraction joints after applying surface finishes. Eliminate groover tool marks on concrete surfaces.
2. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8-inch- wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before concrete develops random contraction cracks.

D. Isolation Joints in Slabs-on-Grade: After removing formwork, install joint-filler strips at slab junctions with vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.

1. Extend joint-filler strips full width and depth of joint, terminating flush with finished concrete surface unless otherwise indicated.
2. Terminate full-width joint-filler strips not less than 1/2 inch or more than 1 inch below finished concrete surface where joint sealants, specified in Section 079200 "Joint Sealants," are indicated.
3. Install joint-filler strips in lengths as long as practicable. Where more than one length is required, lace or clip sections together.

3.8 WATERSTOPS

A. Flexible Waterstops: Install in construction joints and at other joints indicated to form a continuous diaphragm. Install in longest lengths practicable. Support and protect exposed waterstops during progress of the Work. Field fabricate joints in waterstops according to manufacturer's written instructions.

B. Self-Expanding Strip Waterstops: Install in construction joints and at other locations indicated, according to manufacturer's written instructions, adhesive bonding, mechanically fastening, and firmly pressing into place. Install in longest lengths practicable.

3.9 CONCRETE PLACEMENT

A. Before placing concrete, verify that installation of formwork, reinforcement, and embedded items is complete and that required inspections have been performed.

B. Do not add water to concrete during delivery, at Project site, or during placement unless approved by Architect.

C. Before test sampling and placing concrete, water may be added at Project site, subject to limitations of ACI 301.

D. Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new concrete will be placed on concrete that has hardened enough to cause seams or planes of weakness. If a section cannot be placed continuously, provide construction joints as indicated. Deposit concrete to avoid segregation.

1. Deposit concrete in horizontal layers of depth to not exceed formwork design pressures and in a manner to avoid inclined construction joints.
2. Consolidate placed concrete with mechanical vibrating equipment according to ACI 301.
3. Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 6 inches into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity. At each insertion, limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.

E. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.

1. Consolidate concrete during placement operations so concrete is thoroughly worked around reinforcement and other embedded items and into corners.
2. Maintain reinforcement in position on chairs during concrete placement.
3. Screed slab surfaces with a straightedge and strike off to correct elevations.
4. Slope surfaces uniformly to drains where required.
5. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleedwater appears on the surface. Do not further disturb slab surfaces before starting finishing operations.

F. Hot-Weather Placement: Comply with ACI 301 and as follows:

1. Maintain concrete temperature below 90 deg F at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
2. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade uniformly moist without standing water, soft spots, or dry areas.

3.10 FINISHING FORMED SURFACES

A. Rough-Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defects repaired and patched. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

1. Apply to concrete surfaces not exposed to public view.

B. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defects. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

1. Apply to concrete surfaces exposed to public view, to be covered with a coating or covering material applied directly to concrete.

C. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

3.11 FINISHING FLOORS AND SLABS

A. General: Comply with ACI 302.1R recommendations for screeding, restraightening, and finishing operations for concrete surfaces. Do not wet concrete surfaces.

B. Scratch Finish: While still plastic, texture concrete surface that has been screeded and bull-floated or darbied. Use stiff brushes, brooms, or rakes to produce a profile amplitude of 1/4 inch in one direction.

1. Apply scratch finish to surfaces indicated and to receive mortar setting beds for bonded cementitious floor finishes.

C. Float Finish: Consolidate surface with power-driven floats or by hand floating if area is small or inaccessible to power driven floats. Restraighten, cut down high spots, and fill low spots. Repeat float passes and restraightening until surface is left with a uniform, smooth, granular texture.

1. Apply float finish to surfaces indicated to receive trowel finish.

D. Trowel Finish: After applying float finish, apply first troweling and consolidate concrete by hand or power-driven trowel. Continue troweling passes and restraighten until surface is free of trowel marks and uniform in texture and appearance. Grind smooth any surface defects that would telegraph through applied coatings or floor coverings.

1. Apply a trowel finish to surfaces indicated exposed to view or to be covered with resilient flooring, carpet, ceramic or quarry tile set over a cleavage membrane, paint, or another thin-film-finish coating system.
2. Finish surfaces to the following tolerances, according to ASTM E 1155, for a randomly trafficked floor surface:

a. Specified overall values of flatness, F(F) 25; and of levelness, F(L) 20; with minimum local values of flatness, F(F) 17; and of levelness, F(L) 15.
b. Specified overall values of flatness, F(F) 35; and of levelness, F(L) 25; with minimum local values of flatness, F(F) 24; and of levelness, F(L) 17; for slabs-on-grade.
c. Specified overall values of flatness, F(F) 30; and of levelness, F(L) 20; with minimum local values of flatness, F(F) 24; and of levelness, F(L) 15; for suspended slabs.
d. Specified overall values of flatness, F(F) 45; and of levelness, F(L) 35; with minimum local values of flatness, F(F) 30; and of levelness, F(L) 24.

3. Finish and measure surface so gap at any point between concrete surface and an unleveled, freestanding, 10-ft.- long straightedge resting on two high spots and placed anywhere on the surface does not exceed 1/8 inch.

E. Trowel and Fine-Broom Finish: Apply a first trowel finish to surfaces indicated where ceramic or quarry tile is to be installed by either thickset or thin-set method. While concrete is still plastic, slightly scarify surface with a fine broom.

1. Comply with flatness and levelness tolerances for trowel-finished floor surfaces.

F. Broom Finish: Apply a broom finish to exterior concrete platforms, steps, ramps, and elsewhere as indicated.

1. Immediately after float finishing, slightly roughen trafficked surface by brooming with fiber-bristle broom perpendicular to main traffic route. Coordinate required final finish with Architect before application.

G. Slip-Resistive Finish: Before final floating, apply slip-resistive aggregate finish where indicated and to concrete stair treads, platforms, and ramps. Apply according to manufacturer's written instructions and as follows:

1. Uniformly spread 25 lb/100 sq. ft. of dampened slip-resistive aggregate over surface in one or two applications. Tamp aggregate flush with surface, but do not force below surface.
2. After broadcasting and tamping, apply float finish.
3. After curing, lightly work surface with a steel wire brush or an abrasive stone and water to expose slip-resistive aggregate.

H. Dry-Shake Floor Hardener Finish: After initial floating, apply dry-shake floor hardener to surfaces according to manufacturer's written instructions and as follows:

1. Uniformly apply dry-shake floor hardener at a rate of 100 lb/100 sq. ft. unless greater amount is recommended by manufacturer.
2. Uniformly distribute approximately two-thirds of dry-shake floor hardener over surface by hand or with mechanical spreader and embed by power floating. Follow power floating with a second dry-shake floor hardener application, uniformly distributing remainder of material, and embed by power floating.
3. After final floating, apply a trowel finish. Cure concrete with curing compound recommended by dry-shake floor hardener manufacturer and apply immediately after final finishing.

3.12 MISCELLANEOUS CONCRETE ITEMS

A. Filling In: Fill in holes and openings left in concrete structures after work of other trades is in place unless otherwise indicated. Mix, place, and cure concrete, as specified, to blend with in-place construction. Provide other miscellaneous concrete filling indicated or required to complete the Work.

B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and by steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.

C. Equipment Bases and Foundations: Provide machine and equipment bases and foundations as shown on Drawings. Set anchor bolts for machines and equipment at correct elevations, complying with diagrams or templates from manufacturer furnishing machines and equipment.

3.13 CONCRETE PROTECTING AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and ACI 301 for hot-weather protection during curing.

B. Evaporation Retarder: Apply evaporation retarder to unformed concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete, but before float finishing.

C. Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces. If forms remain during curing period, moist cure after loosening forms. If removing forms before end of curing period, continue curing for the remainder of the curing period.

D. Unformed Surfaces: Begin curing immediately after finishing concrete. Cure unformed surfaces, including floors and slabs, concrete floor toppings, and other surfaces.

E. Cure concrete according to ACI 308.1, by one or a combination of the following methods:

1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:

    a. Water.
    b. Continuous water-fog spray.
    c. Absorptive cover, water saturated, and kept continuously wet. Cover concrete surfaces and edges with 12-inch lap over adjacent absorptive covers.

2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 12 inches, and sealed by waterproof tape or adhesive. Cure for not less than seven days. Immediately repair any holes or tears during curing period using cover material and waterproof tape.

a. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive floor coverings.
b. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive penetrating liquid floor treatments.
c. Cure concrete surfaces to receive floor coverings with either a moisture-retaining cover or a curing compound that the manufacturer certifies will not interfere with bonding of floor covering used on Project.

3. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.

a. Removal: After curing period has elapsed, remove curing compound without damaging concrete surfaces by method recommended by curing compound manufacturer unless manufacturer certifies curing compound will not interfere with bonding of floor covering used on Project.

4. Curing and Sealing Compound: Apply uniformly to floors and slabs indicated in a continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Repeat process 24 hours later and apply a second coat. Maintain continuity of coating and repair damage during curing period.

3.14 JOINT FILLING

A. Prepare, clean, and install joint filler according to manufacturer's written instructions.

1. Defer joint filling until concrete has aged at least one month(s). Do not fill joints until construction traffic has permanently ceased.

B. Remove dirt, debris, saw cuttings, curing compounds, and sealers from joints; leave contact faces of joint clean and dry.

C. Install semirigid joint filler full depth in saw-cut joints and at least 2 inches deep in formed joints. Overfill joint and trim joint filler flush with top of joint after hardening.

3.15 CONCRETE SURFACE REPAIRS

A. Defective Concrete: Repair and patch defective areas when approved by Architect. Remove and replace concrete that cannot be repaired and patched to Architect's approval.

B. Patching Mortar: Mix dry-pack patching mortar, consisting of one part portland cement to two and one-half parts fine aggregate passing a No. 16 sieve, using only enough water for handling, and placing.

C. Repairing Formed Surfaces: Surface defects include color and texture irregularities, cracks, spalls, air bubbles, honeycombs, rock pockets, fins and other projections on the surface, and stains and other discolorations that cannot be removed by cleaning.

1. Immediately after form removal, cut out honeycombs, rock pockets, and voids more than 1/2 inch in any dimension to solid concrete. Limit cut depth to 3/4 inch. Make edges of cuts perpendicular to concrete surface. Clean, dampen with water, and brush-coat holes and voids with bonding agent. Fill and compact with patching mortar before bonding agent has dried. Fill form-tie voids with patching mortar or cone plugs secured in place with bonding agent.
2. Repair defects on surfaces exposed to view by blending white portland cement and standard portland cement so that, when dry, patching mortar will match surrounding color. Patch a test area at inconspicuous locations to verify mixture and color match before proceeding with patching. Compact mortar in place and strike off slightly higher than surrounding surface.
3. Repair defects on concealed formed surfaces that affect concrete's durability and structural performance as determined by Architect.

D. Repairing Unformed Surfaces: Test unformed surfaces, such as floors and slabs, for finish and verify surface tolerances specified for each surface. Correct low and high areas. Test surfaces sloped to drain for trueness of slope and smoothness; use a sloped template.

1. Repair finished surfaces containing defects. Surface defects include spalls, popouts, honeycombs, rock pockets, crazing and cracks in excess of 0.01 inch wide or that penetrate to reinforcement or completely through unreinforced sections regardless of width, and other objectionable conditions.
2. After concrete has cured at least 14 days, correct high areas by grinding.
3. Correct localized low areas during or immediately after completing surface finishing operations by cutting out low areas and replacing with patching mortar. Finish repaired areas to blend into adjacent concrete.
4. Correct other low areas scheduled to receive floor coverings with a repair underlayment. Prepare, mix, and apply repair underlayment and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface. Feather edges to match adjacent floor elevations.
5. Correct other low areas scheduled to remain exposed with a repair topping. Cut out low areas to ensure a minimum repair topping depth of 1/4 inch to match adjacent floor elevations. Prepare, mix, and apply repair topping and primer according to manufacturer's written instructions to produce a smooth, uniform, plane, and level surface.
6. Repair defective areas, except random cracks and single holes 1 inch or less in diameter, by cutting out and replacing with fresh concrete. Remove defective areas with clean, square cuts and expose steel reinforcement with at least a 3/4-inch clearance all around. Dampen concrete surfaces in contact with patching concrete and apply bonding agent. Mix patching concrete of same materials and mixture as original concrete except without coarse aggregate. Place, compact, and finish to blend with adjacent finished concrete. Cure in same manner as adjacent concrete.
7. Repair random cracks and single holes 1 inch or less in diameter with patching mortar. Groove top of cracks and cut out holes to sound concrete and clean off dust, dirt, and loose particles. Dampen cleaned concrete surfaces and apply bonding agent. Place patching mortar before bonding agent has dried. Compact patching mortar and finish to match adjacent concrete. Keep patched area continuously moist for at least 72 hours.

E. Perform structural repairs of concrete, subject to Architect's approval, using epoxy adhesive and patching mortar.

F. Repair materials and installation not specified above may be used, subject to Architect's approval.

3.16 FIELD QUALITY CONTROL

A. Testing and Inspecting: Engage a qualified testing and inspecting agency to perform tests and inspections and to submit reports.

B. Inspections:

1. Steel reinforcement placement.
2. Steel reinforcement welding.
3. Headed bolts and studs.
4. Verification of use of required design mixture.
5. Concrete placement, including conveying and depositing.
6. Curing procedures and maintenance of curing temperature.
7. Verification of concrete strength before removal of shores and forms from beams and slabs.

C. Concrete Tests: Testing of composite samples of fresh concrete obtained according to ASTM C 172 shall be performed according to the following requirements:

1. Testing Frequency: Obtain one composite sample for each day's pour of each concrete mixture exceeding 5 cu. yd., but less than 25 cu. yd., plus one set for each additional 50 cu. yd. or fraction thereof.
2. Testing Frequency: Obtain at least one composite sample for each 100 cu. yd. or fraction thereof of each concrete mixture placed each day.

    a. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.

3. Slump: ASTM C 143/C 143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
4. Air Content: ASTM C 231, pressure method, for normal-weight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
5. Concrete Temperature: ASTM C 1064/C 1064M; one test hourly when air temperature is 40 deg F and below and when 80 deg F and above, and one test for each composite sample.
6. Unit Weight: ASTM C 567, fresh unit weight of structural lightweight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
7. Compression Test Specimens: ASTM C 31/C 31M.

    a. Cast and laboratory cure two sets of two standard cylinder specimens for each composite sample.
    b. Cast and field cure two sets of two standard cylinder specimens for each composite sample.

8. Compressive-Strength Tests: ASTM C 39/C 39M; test one set of two laboratory-cured specimens at 7 days and one set of two specimens at 28 days.

    a. Test one set of two field-cured specimens at 7 days and one set of two specimens at 28 days.

b. A compressive-strength test shall be the average compressive strength from a set of two specimens obtained from same composite sample and tested at age indicated.

9. When strength of field-cured cylinders is less than 85 percent of companion laboratory-cured cylinders, Contractor shall evaluate operations and provide corrective procedures for protecting and curing in-place concrete.
10. Strength of each concrete mixture will be satisfactory if every average of any three-consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi.
11. Test results shall be reported in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.
12. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.
13. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect. Testing and inspecting agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C 42/C 42M or by other methods as directed by Architect.
14. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
15. Correct deficiencies in the Work that test reports and inspections indicate do not comply with the Contract Documents.

D. Measure floor and slab flatness and levelness according to ASTM E 1155 within 24 hours of finishing.

END OF SECTION 03300

SECTION 03301

MISCELLANEOUS CONCRETE STRUCTURES

PART 1 - GENERAL

1.1 QUALITY CONTROL: The Quality Control of Division 1, apply to this section.

1.2 GENERAL REQUIREMENTS: The construction requirements of this section apply to concrete sidewalks, driveways, concrete-paved drainage swales/ditches, concrete thrust blocks, fence post footings, concrete curbs, and concrete curb and gutter, conforming to the lines and grades shown on the plans.

A. Earthwork: Unless otherwise specified in this section or on the plans, the earthwork requirements of Section 02200, entitled “Earthwork”, shall also apply to this section.

B. Concrete Construction: Unless otherwise specified in this section, or on the plans, the concrete construction requirements of Section 03300, entitled “Cast-in-Place Concrete”, shall also apply to this section.

C. Concrete Compressive Strength: Minimum 3,000 psi at 28 days.

PART 2 - PRODUCTS

2.1 General: Products mentioned in Section 03300, Cast-in-Place Concrete shall also apply to this section.

PART 3 - EXECUTION

3.1 CONSTRUCTION REQUIREMENTS

A. Concrete Walkways: This work shall consist of the construction of concrete walkways, sidewalks, or concrete slabs in accordance with these specifications and in reasonably close conformity with the lines and grades shown on the plans or established by the Engineer.

1. Excavation: Excavation shall be made to the required depth and to a width that will permit the installation and bracing of the forms. The foundation shall be shaped and compacted to an even surface conforming to the section shown on the plan. All soft and yielding material shall be removed and replaced with acceptable material, which shall be thoroughly compacted to the degree indicated on the plans.

2. Forms: Forms shall be of wood or metal and shall extend for the full depth of the concrete. All forms shall be straight, free from warp and of sufficient strength to resist the pressure of the concrete without springing. Bracing and staking of forms shall be such that the forms remain in both horizontal and vertical alignment until their removal.

3. Placing Concrete: The foundation shall be thoroughly moistened immediately prior to the placing of the concrete. The proportioning, mixing and placing of the concrete shall be in accordance with the requirements of Section 03300, entitled “Cast-in-Place Concrete”.

4. Finishing: The surface shall be finished with a wooden float. No plastering of the surface will be permitted. All outside edges of the slab and all joints shall be edged with a 1/4 inch radius edging tool.

5. Joints: Expansion joints shall be of the dimensions specified, and shall be filled with

the type of pre-molded expansion joint filler. The sidewalk shall be divided into sections by dummy joints formed by a jointing tool or other acceptable means as directed. These dummy joints shall extend into the concrete for at least 1/3 of the depth and shall be approximately 1/8 inch wide.

6. Construction joints shall be formed around all appurtenances such as manholes, utility poles, etc., extending into and through the installed in these joints. Expansion joint filler of the thickness indicated shall be installed between concrete sidewalks and any fixed structure such as a building or bridge. This expansion joint material shall extend for the full depth of the sidewalk.

7. Curing: Concrete shall be cured for at least 72 hours. Curing shall be by means of moist burlap or mats or by other approved methods.

8. Base Course Material: Base Course Material for sidewalks and driveways shall conform to the requirements for base course in Section 02203, entitled “Base Course”.

B. Concrete Curbing: This work shall consist of the construction of curb, gutter or combination curb and gutter in accord with these specifications and in reasonably close conformity with the lines and grades shown on the plans or established by the Architect.

1. Excavation: Excavation shall be made to the required depth, and based upon which the curb is to be set shall be compacted to an even surface. All soft and unsuitable material shall be removed and replaced with suitable material which shall be thoroughly compacted to the degree indicated on the plans.

2. Forms: Forms shall be of wood, metal, or other suitable material and shall extend for the full depth of the concrete. All forms shall be straight, free from warp and of sufficient strength to resist the pressure of the concrete without displacement. Bracing and staking of forms shall be such that the forms remain in both horizontal and vertical alignment until their removal. All forms shall be cleaned and coated with an approved form release agent before concrete is placed. Divider plates shall be of metal.

3. Mixing and Placing: Concrete shall be proportioned, mixed and placed in accordance with the requirements of Section 03300, entitled “Cast-In-Place Concrete”. Consolidation of concrete placed in the forms shall be by vibration or other acceptable methods. Forms shall be left in place for 24 hours or until the concrete has set sufficiently so that they can be removed without injury to the curbing. The concrete shall be struck off to the cross-section specified, after which it shall be finished smooth and even by means of a wood float.

   For the purpose of matching adjacent concrete finishes or for other reasons, the Architect may permit other methods of finishing. No plastering will be permitted.

4. Sections: Curbing shall be constructed in sections having a uniform length as shown on the plans unless otherwise directed by the Engineer/Owner’s Representative. Sections shall be separated by open joints 1/8 inch wide except at expansion joints. Where the curb is constructed adjacent to concrete pavement, the construction or open joints in the curb shall match the contraction joints in the pavement.

5. Expansion Joints: Expansion joints shall be formed at the intervals shown on the plans using a pre-formed expansion joint filler having a thickness of 1/2 inch. When the curb is constructed adjacent to or on concrete pavement, expansion joints shall be located opposite or at expansion joints in the pavement.

6. Curing: Immediately upon completion of the finishing, the curbing shall be moistened and kept moist for three (3) days, or the curbing shall be cured by the use of membrane forming material. The method and details of curing shall be subject to the approval of the Architect.

7. Backfilling: After the concrete has set sufficiently, the spaces in from and back of the curb shall be refilled to the required elevation with suitable material, which shall be thoroughly tamped, in layers of not more than eight inches thick.

C. Drainage Swales/Ditches: This work shall consist of paving swales/ditches or other similar waterways with concrete constructed on a prepared bed in reasonably close conformity with these specifications and with the lines, grades and dimensions shown on the plans or established by theEngineer.

1. Excavation: Excavation shall be made to the required depth, and the base upon which the curb is to be set shall be compacted to an even surface. All soft and unsuitable material shall be removed and replaced with suitable which shall be thoroughly compacted to the degree indicated on the plans.

2. Forms: Forms shall be of wood, metal, or other suitable material and shall extend for the full depth of the concrete. All forms shall be straight, free from warp and of sufficient strength to resist the pressure of the concrete without displacement. Bracing and staking of forms shall be such that the forms remain in both horizontal and vertical alignment until their removal. All forms shall be cleaned and coated with an approved form release agent before concrete is placed.

3. Mixing and Placing: Concrete shall be proportioned, mixed and placed in accordance with the requirements of Section 03300, entitled “Cast-in-Place Concrete”. Consolidation of concrete placed in the forms shall be by vibration other acceptable methods. Forms shall be left in place for 24 hours or until the concrete has set sufficiently so that they can be removed without injury to the structure. The concrete shall be struck off to the cross-section specified, after which it shall be finished smooth and even.

4. Sections: Swales shall be constructed in sections as shown on the plans unless otherwise ordered.

5. Curing: Immediately upon completion of the finishing, the structure shall be moistened and kept moist for three days. The method and details of curing shall be subject to the approval of theEngineer/Owner’s Representative.

6. Backfilling: After the concrete has set sufficiently, the spaces shall be refilled to the required elevation with suitable material, which shall be thoroughly tamped, in layers of not more than eight inches thick.

7. Base Course Material: Base course material for concrete curbing shall conform to the requirements Section 02203, entitled “Base Course”.

END OF SECTION 03301

SECTION 03350

CONCRETE FINISHES

PART 1 GENERAL

1.1 SUMMARY

A. Section includes:

1. Finishes for cast-in-place concrete.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 – Cast-in-Place Concrete: Substrate for finishing.

2. Section 07190 - Water Repellents (Sealer): Substrate waterproof sealer.

3. Section 09900 – Painting: Finishing.

1.2 DESCRIPTION OF WORK

A. The extent of the concrete finishes work is indicated on the Drawings and Schedules and as specified herein, and includes providing materials and applying to in-place concrete surfaces.

B. Materials and work specified herein, are in addition to the work under Division 3 – CONCRETE, and are required to achieve the specified finishes.

1.3 REFERENCES

A. American Concrete Institute (ACI):

1. Applicable provisions.

B. American Society for Testing and Materials (ASTM):

1. ASTM E 1155 - Test Method for Determining FF Floor Flatness and FL Floor Level Numbers.

C. Americans with Disabilities Act Accessibility Guidelines (ADAAG):

1. Accessibility Guidelines for Buildings and Facilities.

2. Accessibility Guidelines for Building Elements Designed for Children’s Use.

1.4 SUBMITTALS

A. Section 01330 – Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer’s technical information and application instructions for the materials required.

2. Shop Drawings (if requested): Layout drawings and details for proper installation of the work.

3. Mock-Up: Construct a Mock-Up of 4' x 8', minimum size, not as part of work, to be reviewed for quality of workmanship and finish. Prior to beginning the Mock-Up, secure the Owner representative's general approval of the application technique to be used.

4. Assurance / Control Submittals:

a. Documentation of experience indicating compliance with the specified qualifications requirements.

1.5 COORDINATION

A. Concrete Characteristics. Without changing the design intent, it is required that the concrete characteristics, such as moisture content, pH levels, finish texture, and any materials used in conjunction with the concrete work meet the requirements of other work to be applied to and into it and whose performance, in part or whole, depends upon the concrete work provided. Verify and coordinate requirements with other Installers providing such work prior to the construction of each structure affecting such Installers.

1.6 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Applicator / Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

1.7 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements. Transport, handle, store, and protect the products.

B. Deliver products to the Project Site in the manufacturer's original, new and unopened packages or containers with seals and labels intact; dry and undamaged, bearing the product name, and precautionary labels.

C. Store materials not in actual use, in tightly enclosed containers. Maintain containers used in the storage of materials, in a clean condition, free of foreign materials and residue.

D. Store materials in a well-ventilated area, and in compliance with the manufacturer's published instructions.

E. Store and handle materials to prevent deterioration and damage due to moisture, temperature changes, contaminants, and other causes.

PART 2 PRODUCTS

2.1 FORM MATERIALS

A. In addition to materials required to achieve the finishes specified herein, comply with

Division 3 - CONCRETE Sections.

B. Form Coatings: Form coatings shall not bond with, stain, or adversely affect concrete surfaces, and shall not impair subsequent treatment of concrete surfaces.

2.2 CONCRETE MATERIALS

A. In addition to materials required to achieve the finishes specified herein, comply with Division 3 - CONCRETE Sections.

B. Skim Coat Cement Finish: (CF-3) Cement based polymer modified, quick setting concrete finishing material; dry powder blend of Portland Cement and acrylic additives designed specifically for application to concrete surfaces for a Class A finish. Fine finish texture. LAHABRA ACRYLIC FINISH, PRO-FINISH by Bonded Materials Co., or approved equal.

C. Hardening / Sealing Agent for polished finish (CF-9)

1. Advanced Floor Products; Retro-Plate 99

2. Eloco: Ironshine HG

2.3 RELATED MATERIALS

A. Salt: Coarse salt, 100% passing 3/8" sieve and 85% remaining on #8 sieve. Morton Softener Salt, Somat Water Softener Salt, North American Salt or approved product by another company.

B. Curing Materials: Comply with Division 3. - CONCRETE Sections.

2.4 MIXES

A. Comply with Division 3 - Concrete Sections.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that surfaces, substrates and conditions are as required, and ready to receive the work.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 FINISH OF FORMED SURFACES

A. (CF-1) Rough Formed Finish: Formed concrete surfaces not exposed-to-view in the finished work or by other construction, unless otherwise indicated. Concrete surfaces having texture imparted by the form facing material used, with tile holes and defective areas repaired and patched, and fins and other projections, exceeding 1/4" in height, rubbed down or chipped off.

D. (CF-2) Smooth Form Finish: Formed concrete surfaces exposed-to-view, or that are to be covered with a coating material applied directly to the concrete, or a covering material applied directly to the concrete, such as waterproofing, dampproofing, veneer plaster, paint, wall covering or other similar materials. As-cast concrete surfaces resulting from selected form facing material, arranged orderly and symmetrically with a minimum of seams. Repair and patch defective areas with fins or other projections completely removed and ground smooth.

C. (CF-3) Skim Coat Finish: Formed surfaces exposed-to-view, provided with a skim coat finish, smooth or textured as indicated or selected by owner's representative. Apply over all contiguous surfaces.

D. Related Un-formed Surfaces: Tops of walls, horizontal offsets, and similar un-formed surfaces adjacent to formed surfaces. Strike-off smooth and finish with a texture matching the adjacent formed surfaces. Continue final surface treatment of the formed surfaces uniformly across adjacent un-formed surfaces, unless otherwise indicated.

3.3 MONOLITHIC SLAB FINISHES

A. Floor Flatness Standard: ASTM E1155, with "F" number requirements as specified herein.

B. (CF-4) Float Finish:

1. Location: Apply on surfaces to receive a trowel finish, and as otherwise indicated.

2. Installation: After screeding, consolidating, and leveling concrete slabs, do not work the surface until ready for floating.

3. Begin floating when surface water has disappeared or when the concrete has stiffened sufficiently to permit operation of power driven floats, or both. Consolidate surface with power driven floats or by hand floating if the area is small or inaccessible to power units. Check and level the surface plane and uniformly slope surfaces to drains. Immediately after leveling, refloat the surface to a uniform, smooth, granular texture.

C. (CF-5) Trowel Finish:

1. Location: Apply to the following surfaces, and as otherwise indicated.

a. In general, apply to all exposed-to-view surfaces with no tile or stone finishes scheduled to be applied.

b. Surfaces to receive water repellent sealer.

c. Surfaces to receive carpet.

d. Surfaces to receive resilient flooring.

e. Surfaces to receive paint coatings.

2. Installation: After floating, begin first finish operation using a power driven trowel. Begin final toweling when surfaces produce a ringing sound as trowel is moved over the surface. Consolidate concrete surfaces by final hand toweling, free of trowel marks, uniform in texture and appearance, and with the surfaces leveled. Grind smooth surface defects that will telegraph through an applied floor finish.

D. (CF-6) Trowel with Fine Broom Finish:

1. Location: Apply to the following surfaces, and as otherwise indicated.

   a. Vehicular traffic surfaces which are not ramps.

   b. Pedestrian (foot trafficked) concrete surfaces, such as walkways, ramps, and stairs.

   c. Surfaces to receive mortarbed or thinset tile or stone.

2. Installation: Apply trowel finish as specified herein, then immediately follow by slightly scarifying the surface to a 1/16" maximum profile with a fiber bristle broom or brush.

3. Profile, Texture, and Pattern:

   a. Vehicular and Pedestrian Traffic Surfaces: Verify profile, texture, and pattern with the Owner's representative, and provide in accordance with directions. Apply perpendicular to the direction of traffic, or as otherwise instructed.

   b. Tile / Stone and Waterproofed Surfaces: Verify scarifying profile with the Installer of the final exposed finish.

E. (CF-7) Scored (Rib) Finish:

1. Location: Apply to vehicular and pedestrian ramps, and as otherwise indicated.

2. Installation: Apply trowel finish as specified herein, then immediately follow with a scoring machine or tool leaving raked ribs perpendicular to the vehicular traffic direction, nominal 1/8" x 1/8" profile, at 2" o.c., or such other pattern and profile, as approved.

F. (CF-8) Salt Finish:

1. Location: As indicated.

2. Installation: Distribute at the rate of not less than 5 lb / 100 sf, or as otherwise approved by the Owner's representative, or as determined by an approved Mock-Up. Washout salt when concrete has set.

G. Water Repellent Sealer Finish:

1. Location: Apply to the following surfaces, and as otherwise indicated.

   a. In general, apply to all surfaces in which concrete is scheduled to be exposed to view and not scheduled to receive a tile, stone, carpet, or resilient floor finish.

   b. Pedestrian (foot trafficked) concrete surfaces, such as walkways and stairs.

3. Installation: Apply sealer / hardener after complete curing and drying of concrete surfaces. Apply proprietary materials in strict accordance with the manufacturer's printed instructions.

H. (CF-9) Polished Finish:

1. Apply to floors where indicated.

2. Performance Criteria:

a. Abrasion Resistance: ASTM C779

b. Impact Strength: ASTM C805

c. Ultra Violet Light and Water Spray: ASTM G23

4. Sealing, Hardening and Polishing of Concrete Surface

a. Concrete must be in place a minimum of 45 days or as directed by the manufacturer before application can begin.

b. Only a certified applicator shall apply sealer and hardener. Applicable procedures must be followed as recommended by the product manufacturer and as required to match approved test sample.

c. Achieve water repellency, hardening, dust proofing, and abrasion resistance of the surface without changing the natural appearance of the concrete, except for the sheen.

d. The Sealing, Hardening and Polishing procedures shall be in strict accordance with the manufacturer's Standard Installation Methods for the product.

e. Upon completion of concrete finish application, clean areas to be striped to remove any debris and residue,

f. Provide Lust value test results.

3.4 CONCRETE SURFACE REPAIRS

A. Non-Structural Defects: Repair the following types of defects.

1. Exposed-to-View Surfaces.

2. Cracks: Repair and fill all cracks, which affect durability of the concrete.

3. Voids: Repair all spalls, air bubbles, honeycomb, rock pockets, bug holes, tile holes, and other voids larger than a pinhole (1/16").

4. Projections: Remove fins and other projections from surfaces.

5. Color / Texture Irregularities: Remove stains and other discolorations.

6. High Areas on Slabs: Correct surfaces by grinding after the concrete has cured at least fourteen (14) days.

7. Low Areas on Slabs: Correct surfaces during or immediately after completion of surface finishing operations by cutting out low areas and replacing with fresh concrete. Finish repaired areas to blend into adjacent concrete. Proprietary patching compounds may be used when approved by the Owner's representative.

8. Concealed Surfaces: Repair defects that affect durability of the concrete. If defects cannot be repaired, remove and replace with new concrete. Where waterproofing materials are indicated, remove projections and defects necessary for proper waterproofing of the surfaces in conformance with instructions of the waterproofing manufacturer.

9. Non-Structural Repairs: Utilize polymer-reinforced mortar patching materials in strict accordance with the material manufacturer's written instructions. Provide appropriate aggregate sizes for the depth of the area to be repaired. Finish smooth to blend with adjacent surfaces.

10. Structural Repairs: Perform structural repairs with prior approval of the Owner's representative for method and procedure, using epoxy adhesive and mortar.

E. Color / Texture Repair: Even out the color / texture appearance of all exposed-to-view formed surfaces with a wash finish where not required to be opaque painted or where irregularities can telegraph through the final finish.

3.5 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Upon completion of the finishing work, clean all surfaces free of foreign matter.

C. Clean surfaces with acid solutions only when permitted by the Owner's representative. Protect metal surfaces and cast iron from the effects of acid cleaning. Flush surfaces with clean water before and after cleaning.

D. Leave finished installations clean and free of cracks, chips, and otherwise defective work.

3.6 PROTECTION

A. Protect finish work with Kraft paper or other heavy covering to prevent staining, damage and wear.

B. Immediately before final inspection, remove the protective coverings and rinse with clean, potable water.

END OF SECTION

SECTION 03410

PRECAST STRUCTURAL CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Precast structural concrete.

B. Related Sections:

1. Section 03300 "Cast-in-Place Concrete" for concrete panels and placing connection anchors in concrete.
2. Section 05120 "Structural Steel Framing" for furnishing and installing connections attached to structural-steel framing.
3. Section 05500 "Metal Fabrications" for kickers and other miscellaneous steel shapes.
4. Section 07840 "Firestopping" for joint-filler materials for fire-resistance-rated construction.
5. Section 07920 "Joint Sealants" for elastomeric joint sealants and sealant backings.

1.3 DEFINITION

A. Design Reference Sample: Sample of approved precast structural concrete color, finish, and texture, preapproved by Architect.

1.4 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design precast structural concrete, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.

B. Structural Performance: Precast structural concrete units and connections shall withstand design loads indicated within limits and under conditions indicated.

C. Structural Performance: Provide precast structural concrete units and connections capable of withstanding the following design loads within limits and under conditions indicated:

1. Dead Loads: Refer to drawings.

2. Concrete Load: Refer to drawings.
3. Live Loads: Refer to drawings.
4. Roof Loads: Refer to drawings.
5. Seismic Loads: Refer to drawings.
6. Wind Loads: Refer to drawings.

7. Design precast structural concrete framing system and connections to maintain clearances at openings, to allow for fabrication and construction tolerances, to accommodate live-load deflection, shrinkage and creep of primary building structure, and other building movements. Maintain precast structural concrete deflections within limits of ACI 318 (ACI 318M).

8. Fire-Resistance Rating: Select material and minimum thicknesses to provide indicated

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Design Mixtures: For each precast concrete mixture. Include compressive strength and water-absorption tests.

C. Shop Drawings: Include member locations, plans, elevations, dimensions, shapes and sections, openings, support conditions, and types of reinforcement, including special reinforcement. Detail fabrication and installation of precast structural concrete units.

1. Indicate joints, reveals, and extent and location of each surface finish.
2. Indicate separate face and backup mixture locations and thicknesses.
3. Indicate welded connections by AWS standard symbols. Show size, length, and type of each weld.
4. Detail loose and cast-in hardware, lifting and erection inserts, connections, and joints.
5. Indicate locations, tolerances, and details of anchorage devices to be embedded in or attached to structure or other construction.
6. Include and locate openings larger than by 10 inches.
7. Indicate location of each precast structural concrete unit by same identification mark placed on panel.
8. Indicate relationship of precast structural concrete units to adjacent materials.
9. Indicate locations and details of corner units and special shapes, and joint treatment.
10. Indicate locations and details of stone facings, anchors, and joint widths.
11. Indicate shim sizes and grouting sequence.
12. Design Modifications: If design modifications are proposed to meet performance requirements and field conditions, submit design calculations and Shop Drawings. Do not adversely affect the appearance, durability, or strength of units when modifying details or materials and maintain the general design concept.

D. Delegated-Design Submittal: For precast structural concrete indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer, fabricator and testing agency.

B. Welding certificates.

C. Material Certificates: For the following, from manufacturer:

1. Cementitious materials.
2. Reinforcing materials
3. Admixtures.
4. Bearing pads.
5. Structural-steel shapes and hollow structural sections.

D. Material Test Reports: For aggregates.

E. Source quality-control reports.

F. Field quality-control reports.

1.7 QUALITY ASSURANCE

A. Fabricator Qualifications: A firm that assumes responsibility for engineering precast structural concrete units to comply with performance requirements. Responsibility includes preparation of Shop Drawings and comprehensive engineering analysis by a qualified professional engineer.

B. Installer Qualifications: A precast concrete erector qualified to erect Category S1 - Simple Structural Systems.

C. Installer Qualifications: An experienced precast concrete erector who performs work in accordance with PCI MNL 127, "PCI Erector's Manual - Standards and Guidelines for the Erection of Precast Concrete Products."

D. Testing Agency Qualifications: Qualified according to ASTM C 1077 and ASTM E 329 for testing indicated.

E. Design Standards: Comply with ACI 318 and design recommendations in PCI MNL 120, "PCI Design Handbook - Precast and Prestressed Concrete," applicable to types of precast structural concrete units indicated.

F. Quality-Control Standard: For manufacturing procedures and testing requirements, quality-control recommendations, and dimensional tolerances for types of units required, comply with PCI MNL 116, "Manual for Quality Control for Plants and Production of Structural Precast Concrete Products."

G. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D.1.1M, "Structural Welding Code - Steel."
2. AWS D1.4, "Structural Welding Code - Reinforcing Steel."

H. Preinstallation Conference: Conduct conference at Project site.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Support units during shipment on nonstaining shock-absorbing material in same position as during storage.

B. Store units with adequate bracing and protect units to prevent contact with soil, to prevent staining, and to prevent cracking, distortion, warping or other physical damage.

1. Store units with dunnage across full width of each bearing point unless otherwise indicated.
2. Place adequate dunnage of even thickness between each unit.
3. Place stored units so identification marks are clearly visible, and units can be inspected.

C. Handle and transport units in a position consistent with their shape and design in order to avoid excessive stresses that would cause cracking or damage.

D. Lift and support units only at designated points shown on Shop Drawings.

1.9 COORDINATION

A. Furnish loose connection hardware and anchorage items to be embedded in or attached to other construction before starting that Work. Provide locations, setting diagrams, templates, instructions, and directions, as required, for installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Fabricators: Subject to compliance with requirements, available fabricators offering products that may be incorporated into the Work include.

2.2 MOLD MATERIALS

A. Molds: Rigid, dimensionally stable, non-absorptive material, warp and buckle free, that will provide continuous and true precast concrete surfaces within fabrication tolerances indicated; nonreactive with concrete and suitable for producing required finishes.

1. Mold-Release Agent: Commercially produced liquid-release agent that will not bond with, stain or adversely affect precast concrete surfaces and will not impair subsequent surface or joint treatments of precast concrete.

B. Surface Retarder: Chemical set retarder, capable of temporarily delaying final hardening of newly placed concrete mixture to depth of reveal specified.

2.3 REINFORCING MATERIALS

A. Reinforcing Bars: ASTM A 615/A 615M, Grade 60, deformed.

B. Supports: Suspend reinforcement from back of mold or use bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars in place according to PCI MNL 116.

2.4 CONCRETE MATERIALS

A. Portland Cement: ASTM C 150, Type I or Type II, gray, unless otherwise indicated.

1. For surfaces exposed to view in finished structure, mix gray with white cement, of same type, brand, and mill source.

B. Supplementary Cementitious Materials:

1. Fly Ash: ASTM C 618, Class C or F, with maximum loss on ignition of 3 percent.
2. Metakaolin Admixture: ASTM C 618, Class N.
3. Silica Fume Admixture: ASTM C 1240, with optional chemical and physical requirement.
4. Ground Granulated Blast-Furnace Slag: ASTM C 989, Grade 100 or 120.

C. Normal-Weight Aggregates: Except as modified by PCI MNL 116, ASTM C 33, with coarse aggregates complying with Class 5S. Stockpile fine and coarse aggregates for each type of exposed finish from a single source (pit or quarry) for Project.

1. Face-Mixture-Coarse Aggregates: Selected, hard, and durable; free of material that reacts with cement or causes staining; to match selected finish sample.

    a. Gradation: To match design reference sample.

2. Face-Mixture-Fine Aggregates: Selected, natural or manufactured sand of same material as coarse aggregate unless otherwise approved by Architect.

D. Coloring Admixture: ASTM C 979, synthetic or natural mineral-oxide pigments or colored water-reducing admixtures, temperature stable, and nonfading.

E. Water: Potable; free from deleterious material that may affect color stability, setting, or strength of concrete and complying with chemical limits of PCI MNL 116.

F. Air-Entraining Admixture: ASTM C 260, certified by manufacturer to be compatible with other required admixtures.

G. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and to not contain calcium chloride, or more than 0.15 percent chloride ions or other salts by weight of admixture.

1. Water-Reducing Admixtures: ASTM C 494/C 494M, Type A.
2. Retarding Admixture: ASTM C 494/C 494M, Type B.
3. Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.
4. Water-Reducing and Accelerating Admixture: ASTM C 494/C 494M, Type E.
5. High-Range, Water-Reducing Admixture: ASTM C 494/C 494M, Type F.
6. High-Range, Water-Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.
7. Plasticizing and Retarding Admixture: ASTM C 1017/C 1017M.

2.5 STEEL CONNECTION MATERIALS

A. Carbon-Steel Shapes and Plates: ASTM A 36/A 36M.

B. Carbon-Steel-Headed Studs: ASTM A 108, AISI 1018 through AISI 1020, cold finished, AWS D1.1/D1.1M, Type A or B, with arc shields and with minimum mechanical properties of PCI MNL 116.

C. Carbon-Steel Plate: ASTM A 283/A 283M.

D. Malleable-Iron Castings: ASTM A 47/A 47M.

E. Carbon-Steel Castings: ASTM A 27/A 27M, Grade 60-30.

F. High-Strength, Low-Alloy Structural Steel: ASTM A 572/A 572M.

G. Carbon-Steel Structural Tubing: ASTM A 500, Grade B.

H. Wrought Carbon-Steel Bars: ASTM A 675/A 675M, Grade 65.

I. Deformed-Steel Wire or Bar Anchors: ASTM A 496 or ASTM A 706/A 706M.

J. Carbon-Steel Bolts and Studs: ASTM A 307, Grade A; carbon-steel, hex-head bolts and studs; carbon-steel nuts, ASTM A 563; and flat, unhardened steel washers, ASTM F 844.

K. High-Strength Bolts and Nuts: ASTM A 325 or ASTM A 490, Type 1, heavy hex steel structural bolts; heavy hex carbon-steel nuts, ASTM A 563; and hardened carbon-steel washers, ASTM F 436.

   1. Do not zinc coat ASTM A 490 bolts.

L. Shop-Primed Finish: Prepare surfaces of nongalvanized-steel items, except those surfaces to be embedded in concrete, according to requirements in SSPC-SP 3, and shop apply lead- and chromate-free, rust-inhibitive primer, complying with performance requirements in MPI 79 according to SSPC-PA 1.

M. Welding Electrodes: Comply with AWS standards.

N. Precast Accessories: Provide clips, hangers, plastic or steel shims, and other accessories required to install precast structural concrete units.

2.6 BEARING PADS

A. Provide one of the following bearing pads for precast structural concrete units as recommended by precast fabricator for application:

   1. Elastomeric Pads: AASHTO M 251, plain, vulcanized, 100 percent polychloroprene (neoprene) elastomer, molded to size or cut from a molded sheet, 50 to 70 Shore, Type A durometer hardness, ASTM D 2240; minimum tensile strength 2250 psi, ASTM D 412.

2.7 GROUT MATERIALS

A. Sand-Cement Grout: Portland cement, ASTM C 150, Type I, and clean, natural sand, ASTM C 144 or ASTM C 404. Mix at ratio of 1 part cement to 2-1/2 parts sand, by volume, with minimum water required for placement and hydration.

B. Nonmetallic, Nonshrink Grout: Premixed, nonmetallic, noncorrosive, nonstaining grout containing selected silica sands, portland cement, shrinkage-compensating agents, plasticizing and water-reducing agents, complying with ASTM C 1107, Grade A for drypack and Grades B and C for flowable grout and of consistency suitable for application within a 30-minute working time.

C. Epoxy-Resin Grout: Two-component, mineral-filled epoxy resin; ASTM C 881/C 881M, of type, grade, and class to suit requirements.

2.8 CONCRETE MIXTURES

A. Prepare design mixtures for each type of precast concrete required.

1. Use fly ash, pozzolan, ground granulated blast-furnace slag, and silica fume as needed to reduce the total amount of portland cement, which would otherwise be used, by not less than 40 percent.
2. Limit use of fly ash to 25 percent replacement of portland cement by weight and granulated blast-furnace slag to 40 percent of portland cement by weight; metakaolin and silica fume to 10 percent of portland cement by weight.

B. Design mixtures may be prepared by a qualified independent testing agency or by qualified precast plant personnel at precast structural concrete fabricator's option.

C. Limit water-soluble chloride ions to maximum percentage by weight of cement permitted by ACI 318 or PCI MNL 116 when tested according to ASTM C 1218/C 1218M.

D. Normal-Weight Concrete Mixtures: Proportion face and backup mixtures or full-depth mixtures, at fabricator's option by either laboratory trial batch or field test data methods according to ACI 211.1, with materials to be used on Project, to provide normal-weight concrete with the following properties:

1. Compressive Strength (28 Days): 4000 psi, unless noted otherwise.
2. Maximum Water-Cementitious Materials Ratio: 0.45.

E. Water Absorption: 6 percent by weight or 14 percent by volume, tested according to PCI MNL 116.

F. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having an air content complying with PCI MNL 116.

G. When included in design mixtures, add other admixtures to concrete mixtures according to manufacturer's written instructions.

H. Concrete Mix Adjustments: Concrete mix design adjustments may be proposed if characteristics of materials, Project conditions, weather, test results, or other circumstances warrant.

2.9 MOLD FABRICATION

A. Molds: Accurately construct molds, mortar tight, of sufficient strength to withstand pressures due to concrete-placement operations and temperature changes. Coat contact surfaces of molds with release agent before reinforcement is placed. Avoid contamination of reinforcement and prestressing tendons by release agent.

1. Place form liners accurately to provide finished surface texture indicated. Provide solid backing and supports to maintain stability of liners during concrete placement. Coat form liner with form-release agent.

B. Maintain molds to provide completed precast structural concrete units of shapes, lines, and dimensions indicated, within fabrication tolerances specified.

1. Form joints are not permitted on faces exposed to view in the finished work.
2. Edge and Corner Treatment: Uniformly chamfered.

2.10 FABRICATION

A. Cast-in Anchors, Inserts, Plates, Angles, and Other Anchorage Hardware: Fabricate anchorage hardware with sufficient anchorage and embedment to comply with design requirements. Accurately position for attachment of loose hardware, and secure in place during precasting operations. Locate anchorage hardware where it does not affect position of main reinforcement or concrete placement.

1. Weld-headed studs and deformed bar anchors used for anchorage according to AWS D1.1/D1.1M and AWS C5.4, "Recommended Practices for Stud Welding."

B. Furnish loose hardware items including steel plates, clip angles, seat angles, anchors, dowels, cramps, hangers, and other hardware shapes for securing precast structural concrete units to supporting and adjacent construction.

C. Cast-in reglets, slots, holes, and other accessories in precast structural concrete units as indicated on the Contract Drawings.

D. Cast-in openings larger than 10 inches in any dimension. Do not drill or cut openings or prestressing strand without Architect's approval.

E. Reinforcement: Comply with recommendations in PCI MNL 116 for fabricating, placing, and supporting reinforcement.

1. Clean reinforcement of loose rust and mill scale, earth, and other materials that reduce or destroy the bond with concrete.
2. Accurately position, support, and secure reinforcement against displacement during concrete-placement and consolidation operations. Completely conceal support devices to prevent exposure on finished surfaces.

3. Place reinforcement to maintain at least 3/4-inch minimum coverage. Increase cover requirements according to ACI 318 when units are exposed to corrosive environment or severe exposure conditions. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position while placing concrete. Direct wire tie ends away from finished, exposed concrete surfaces.
4. Place reinforcing steel to maintain at least 1-inch minimum concrete cover. Increase cover requirements for reinforcing steel to 1-1/2 inches (38 mm) when units are exposed to corrosive environment or severe exposure conditions. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position while placing concrete. Direct wire tie ends away from finished, exposed concrete surfaces.
5. Install welded wire fabric in lengths as long as practicable. Lap adjoining pieces at least one full mesh spacing and wire tie laps, where required by design. Offset laps of adjoining widths to prevent continuous laps in either direction.

F. Reinforce precast structural concrete units to resist handling, transportation, and erection stresses.

G. Comply with requirements in PCI MNL 116 and in this Section for measuring, mixing, transporting, and placing concrete. After concrete batching, no additional water may be added.

H. Place face mixture to a minimum thickness after consolidation of the greater of 1 inch or 1.5 times the maximum aggregate size, but not less than the minimum reinforcing cover specified.

I. Place concrete in a continuous operation to prevent seams or planes of weakness from forming in precast concrete units.

1. Place backup concrete mixture to ensure bond with face-mixture concrete.

J. Thoroughly consolidate placed concrete by internal and external vibration without dislocating or damaging reinforcement and built-in items, and minimize pour lines, honeycombing, or entrapped air on surfaces. Use equipment and procedures complying with PCI MNL 116.

1. Place self-consolidating concrete without vibration according to PCI TR-6, "Interim Guidelines for the Use of Self-Consolidating Concrete in Precast/Prestressed Concrete Institute Member Plants."

K. Comply with PCI MNL 116 procedures for hot-weather concrete placement.

L. Identify pickup points of precast structural concrete units and orientation in structure with permanent markings, complying with markings indicated on Shop Drawings. Imprint or permanently mark casting date on each precast structural concrete unit on a surface that will not show in finished structure.

M. Cure concrete, according to requirements in PCI MNL 116, by moisture retention without heat or by accelerated heat curing using low-pressure live steam or radiant heat and moisture. Cure units until compressive strength is high enough to ensure that stripping does not have an effect on performance or appearance of final product.

N. Discard and replace precast structural concrete units that do not comply with requirements, including structural, manufacturing tolerance, and appearance, unless repairs meet requirements in PCI MNL 116 and meet Architect's approval.

2.11 CASTING INSULATED WALL PANELS

A. Cast and screed wythe supported by mold.

B. Place insulation boards abutting edges and ends of adjacent boards. Insert wythe connectors through insulation, and consolidate concrete around connectors according to connector manufacturer's written instructions.

C. Cast and screed top wythe to meet required finish.

2.12 FABRICATION TOLERANCES

A. Fabricate precast structural concrete units straight and true to size and shape with exposed edges and corners precise and true so each finished unit complies with PCI MNL 116 product dimension tolerances.

2.13 COMMERCIAL FINISHES

A. Commercial Grade: Remove fins and large protrusions and fill large holes. Rub or grind ragged edges. Faces must have true, well-defined surfaces. Air holes, water marks, and color variations are permitted. Limit form joint offsets to 3/16 inch.

B. Standard Grade: Normal plant-run finish produced in molds that impart a smooth finish to concrete. Surface holes smaller than 1/2 inch caused by air bubbles, normal color variations, form joint marks, and minor chips and spalls are permitted. Fill air holes greater than 1/4 inch in width that occur more than once per 2 sq. in. Major or unsightly imperfections, honeycombs, or structural defects are not permitted. Limit joint offsets to 1/8 inch.

C. Grade B Finish: Fill air pockets and holes larger than 1/4 inch in diameter with sand-cement paste matching color of adjacent surfaces. Fill air holes greater than 1/8 inch in width that occur more than once per 2 sq. in. Grind smooth form offsets or fins larger than 1/8 inch. Repair surface blemishes due to holes or dents in molds. Discoloration at form joints is permitted.

D. Grade A Finish: Fill surface blemishes with the exception of air holes 1/16 inch in width or smaller, and form marks where the surface deviation is less than 1/16 inch. Float apply a neat cement-paste coating to exposed surfaces. Rub dried paste coat with burlap to remove loose particles. Discoloration at form joints is permitted. Grind smooth all form joints.

E. Screed or float finish unformed surfaces. Strike off and consolidate concrete with vibrating screeds to a uniform finish. Hand screed at projections. Normal color variations, minor indentations, minor chips, and spalls are permitted. Major imperfections, honeycombing, or defects are not permitted.

F. Smooth, steel trowel finish unformed surfaces. Consolidate concrete, bring to proper level with straightedge, float, and trowel to a smooth, uniform finish.

G. Apply roughened surface finish according to ACI 318 to precast concrete units that will receive concrete topping after installation.

2.14 COMMERCIAL ARCHITECTURAL FINISHES

A. Manufacture member faces free of joint marks, grain, and other obvious defects with corners, including false joints, uniform, straight, and sharp. Finish exposed-face surfaces of precast concrete units to per the Architect's approval and as follows:
   1. PCI's "Architectural Precast Concrete - Color and Texture Selection Guide," of plate numbers indicated.
   2. Smooth-Surface Finish: Provide surfaces free of excessive air voids, sand streaks, and honeycombs, with uniform color and texture.
   3. Textured-Surface Finish: Impart by form liners or inserts to provide surfaces free of pockets, streaks, and honeycombs, with uniform color and texture.
   4. Bushhammer Finish: Use power or hand tools to remove matrix and fracture coarse aggregates.
   5. Exposed-Aggregate Finish: Use chemical-retarding agents applied to concrete molds and washing and brushing procedures to expose aggregate and surrounding matrix surfaces after form removal.
   6. Abrasive-Blast Finish: Use abrasive grit, equipment, application techniques, and cleaning procedures to expose aggregate and surrounding matrix surfaces.
   7. Acid-Etched Finish: Use acid and hot-water solution, equipment, application techniques, and cleaning procedures to expose aggregate and surrounding matrix surfaces. Protect hardware, connections, and insulation from acid attach.
   8. Honed Finish: Use continuous mechanical abrasion with fine grit, followed by filling and rubbing procedures.
   9. Polished Finish: Use continuous mechanical abrasion with fine grit, followed by filling and rubbing procedures.
   10. Sand-Embedment Finish: Use selected stones placed in a sand bed in bottom of mold, with sand removed after curing.

2.15 SOURCE QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to evaluate precast structural concrete fabricator's quality-control and testing methods.

   1. Allow testing agency access to material storage areas, concrete production equipment, concrete placement, and curing facilities. Cooperate with testing agency and provide samples of materials and concrete mixtures as may be requested for additional testing and evaluation.

B. Testing: Test and inspect precast structural concrete according to PCI MNL 116 requirements.

   1. Test and inspect self-consolidating concrete according to PCI TR-6.

C. Strength of precast structural concrete units will be considered deficient if units fail to comply with ACI 318 requirements for concrete strength.

D. If there is evidence that strength of precast concrete units may be deficient or may not comply with ACI 318 requirements, employ a qualified testing agency to obtain, prepare, and test cores drilled from hardened concrete to determine compressive strength according to ASTM C 42/C 42M.

1. A minimum of three representative cores will be taken from units of suspect strength, from locations directed by Architect.
2. Cores will be tested in an air-dry condition or, if units will be wet under service conditions, test cores after immersion in water in a wet condition.
3. Strength of concrete for each series of 3 cores will be considered satisfactory if average compressive strength is equal to at least 85 percent of 28-day design compressive strength and no single core is less than 75 percent of 28-day design compressive strength.
4. Test results will be made in writing on same day that tests are performed, with copies to Architect, Contractor, and precast concrete fabricator. Test reports will include the following:

    a. Project identification name and number.
    b. Date when tests were performed.
    c. Name of precast concrete fabricator.
    d. Name of concrete testing agency.
    e. Identification letter, name, and type of precast concrete unit(s) represented by core tests; design compressive strength; type of break; compressive strength at breaks, corrected for length-diameter ratio; and direction of applied load to core in relation to horizontal plane of concrete as placed.

E. Patching: If core test results are satisfactory and precast structural concrete units comply with requirements, clean and dampen core holes and solidly fill with same precast concrete mixture that has no coarse aggregate, and finish to match adjacent precast concrete surfaces.

F. Defective Units: Discard and replace precast structural concrete units that do not comply with requirements, including strength, manufacturing tolerances, and color and texture range. Chipped, spalled, or cracked units may be repaired, subject to Architect's approval. Architect reserves the right to reject precast units that do not match approved samples, sample panels, and mockups.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting structural frame or foundation and conditions for compliance with requirements for installation tolerances, true and level bearing surfaces, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

C. Do not install precast concrete units until supporting, cast-in-place, building structural framing has attained minimum allowable design compressive strength or until supporting steel or other structure is complete.

3.2 INSTALLATION

A. Install clips, hangers, bearing pads, and other accessories required for connecting precast structural concrete units to supporting members and backup materials.

B. Erect precast structural concrete level, plumb, and square within specified allowable tolerances. Provide temporary structural framing, supports, and bracing as required to maintain position, stability, and alignment of units until permanent connection.

1. Install temporary steel or plastic spacing shims or bearing pads as precast structural concrete units are being erected. Tack weld steel shims to each other to prevent shims from separating.
2. Maintain horizontal and vertical joint alignment and uniform joint width as erection progresses.
3. Remove projecting lifting devices and grout fill voids within recessed lifting devices flush with surface of adjacent precast surfaces when recess is exposed.
4. For hollow-core slab voids used as electrical raceways or mechanical ducts, align voids between units and tape butt joint at end of slabs.

C. Connect precast structural concrete units in position by bolting, welding, grouting, or as otherwise indicated on Shop Drawings. Remove temporary shims, wedges, and spacers as soon as practical after connecting and grouting are completed.

1. Do not permit connections to disrupt continuity of roof flashing.

D. Field cutting of precast units is not permitted without approval of the Architect.

E. Fasteners: Do not use drilled or powder-actuated fasteners for attaching accessory items to precast, prestressed concrete units.

F. Welding: Comply with applicable AWS D1.1/D1.1M and AWS D1.4 for welding, welding electrodes, appearance, quality of welds, and methods used in correcting welding work.

1. Protect precast structural concrete units and bearing pads from damage by field welding or cutting operations, and provide noncombustible shields as required.
2. Clean weld-affected steel surfaces with chipping hammer followed by brushing, and apply a minimum 4.0-mil- thick coat of galvanized repair paint to galvanized surfaces according to ASTM A 780.
3. Clean weld-affected steel surfaces with chipping hammer followed by brushing, and reprime damaged painted surfaces.
4. Remove, reweld, or repair incomplete and defective welds.

G. At bolted connections, use lock washers, tack welding, or other approved means to prevent loosening of nuts after final adjustment.

1. Where slotted connections are used, verify bolt position and tightness. For sliding connections, properly secure bolt but allow bolt to move within connection slot. For friction connections, apply specified bolt torque and check 25 percent of bolts at random by calibrated torque wrench.

H. Grouting: Grout connections and joints and open spaces at keyways, connections, and joints where required or indicated on Shop Drawings. Retain grout in place until hard enough to support itself. Pack spaces with stiff grout material, tamping until voids are completely filled.

1. Place grout to finish smooth, level, and plumb with adjacent concrete surfaces.
2. Fill joints completely without seepage to other surfaces.

3. Trowel top of grout joints on roofs smooth and uniform. Finish transitions between different surface levels not steeper than 1 to 12.
4. Place grout end cap or dam in voids at ends of hollow-core slabs.
5. Promptly remove grout material from exposed surfaces before it affects finishes or hardens.
6. Keep grouted joints damp for not less than 24 hours after initial set.

3.3 ERECTION TOLERANCES

A. Erect precast structural concrete units level, plumb, square, true, and in alignment without exceeding the noncumulative erection tolerances of PCI MNL 135.

B. Minimize variations between adjacent slab members by jacking, loading, or other method recommended by fabricator and approved by Architect.

3.4 FIELD QUALITY CONTROL

A. Special Inspections: Engage a qualified special inspector to perform the following special inspections:

1. Erection of precast structural concrete members.

B. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

C. Field welds will be visually inspected and nondestructive tested according to ASTM E 165 or ASTM E 709. High-strength bolted connections will be subject to inspections.

D. Testing agency will report test results promptly and in writing to Contractor and Architect.

E. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.

F. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

G. Prepare test and inspection reports.

3.5 REPAIRS

A. Repair precast structural concrete units if permitted by Architect.

1. Repairs may be permitted if structural adequacy, serviceability, durability, and appearance of units has not been impaired.

B. Mix patching materials and repair units so cured patches blend with color, texture, and uniformity of adjacent exposed surfaces and show no apparent line of demarcation between original and repaired work, when viewed in typical daylight illumination from a distance of 20 feet.

C. Prepare and repair damaged galvanized coatings with galvanizing repair paint according to ASTM A 780.

D. Wire brush, clean, and paint damaged prime-painted components with same type of shop primer.

E. Remove and replace damaged precast structural concrete units that cannot be repaired or when repairs do not comply with requirements as determined by Architect.

3.6 CLEANING

A. Clean mortar, plaster, fireproofing, weld slag, and other deleterious material from concrete surfaces and adjacent materials immediately.

B. Clean exposed surfaces of precast concrete units after erection and completion of joint treatment to remove weld marks, other markings, dirt, and stains.

1. Perform cleaning procedures, if necessary, according to precast concrete fabricator's written recommendations. Clean soiled precast concrete surfaces with detergent and water, using stiff fiber brushes and sponges, and rinse with clean water. Protect other work from staining or damage due to cleaning operations.
2. Do not use cleaning materials or processes that could change the appearance of exposed concrete finishes or damage adjacent materials.

END OF SECTION 034100

SECTION 03732

CONCRETE REPAIRS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Cementitious materials.

2. Reinforcement.

3. Epoxy mortar.

B. Related Documents:

1. The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section maybe found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-in-Place Concrete: Substrate for plaster.

1.2 DESCRIPTION OF WORK

A. The extent of concrete repair work is indicated on the Drawings and Schedules and as specified herein, and includes providing and installing reinforcement, mortar, injection of epoxy, and finishing of repairs and patches in defective concrete, for a complete and finished installation.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society for Testing and Materials:

1. ASTM A 615 - Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement.

2 ASTM C 33 - Specification for Concrete Aggregates.

2. ASTM C 150 - Specification for Portland Cement.

3. ASTM C 882 - Test Method for Bond Strength of Epoxy-Resin Systems Used with Concrete By Slant Shear.

4. ASTM D 638 - Test Method for Tensile Properties of Plastics.

5. ASTM D 695 - Test Method for Compressive Properties of Rigid Plastics.

6. ASTM D 790 - Test Method for Flexural Properties of Unreinforced and

Reinforced Plastics and Electrical Insulating Materials.

C. Americans with Disabilities Guidelines (ADAAG):

1. Accessibility Guidelines for Buildings an Facilities.

2. Accessibility Guidelines for Building Elements Designed for Children=s Use..

D. American Welding Society (AWS):

1. AWS D 1.4 **-** Structural Welding Code - Reinforcing Steel.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer's product specifications and application instructions for each material.

1.5 QUALITY ASSURANCE

A. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

B. Applicator: Company experienced in concrete repairs with a minimum of five (5) years documented experience.

C. Single Source Responsibility: To the greatest extent possible, obtain cement plaster materials from a single manufacturer and source.

1.6 DELIVERY, STORAGE AND HANDLING

A. Deliver materials in the manufacturer=s original, new, unopened packages or containers, bearing the manufacturer=s name, and brand name.

B. Store materials inside, under cover, and in manner to keep dry, protected from weather, direct sunlight, surface contamination, aging, corrosion, damage from construction traffic and other causes, and away from damp floors, walls and other surfaces.

1.7 JOB CONDITIONS

A. Protect adjacent work from soiling, spattering, moisture deterioration and other harmful effects which might result from the repair work.

B. Protect plaster from uneven and excessive evaporation during hot, dry weather, and strong wind currents.

PART 2 PRODUCTS

2.1 MATERIALS

A. Cleaning Agent: Commercial muriatic acid.

B. Bonding Agent: Polyvinyl acetate emulsion, dispersed in water while mixing, non-coagulant in mix, water resistant when cured.

C. Portland Cement: ASTM C 150, Type II, gray color.

D. Sand: ASTM C 33, clean.

E. Water: Potable, with no brackishness.

F. Epoxy Resin: Two-part epoxy adhesive containing 100% solids, meeting the following minimum characteristics:

Characteristics	Test Method	Results
Bond Strength	ANSI / ASTM C 882	2,700 psi
Tensile Strength	ASTM D 638	6,600 psi
Elongation	ASTM D 638	2% at 7 days at 70E F
Flexural Strength	ASTM D 790	8,000 psi
Compressive Strength	ASTM D 695	6,500 psi

2.2 REINFORCEMENT

A. Reinforcing Steel: 60 ksi yield grade, deformed billet-steel bars, un-coated, ASTM A 615.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 GENERAL REQUIREMENTS

A. Defects in the work due to defective workmanship and / or materials furnished and installed hereunder, shall be repaired and refinished with materials and in a manner to meet the requirements of this Section.

3.3 PREPARATION

A. Clean concrete surfaces of dirt, laitance, corrosion and other contaminants. Wire brush using water. Rinse surfaces and allow to dry.

B. Flush out cracks and voids with water to remove laitance and dirt.

C. Provide temporary entry ports spaced to accomplish movements of fluids between ports no deeper than the depth of the crack to be filled. Limit port size diameter to no greater than the thickness of the crack. Provide a temporary seal at the concrete surface to prevent leakage of the adhesive.

D. For areas patched with epoxy mortar, remove broken and soft concrete to a depth of 1/4". Remove corrosion from steel. Clean surfaces mechanically and rinse with water.

E. Sandblast clean exposed reinforcement steel surfaces. Mechanically cut away damaged portions of the reinforcement.

F. Repair reinforcement by welding new bar reinforcement to the existing reinforcement with sleeve splices. The strength of welded splices and reinforcement to exceed the original stress values.

3.4 MIXING CEMENTITIOUS MATERIALS

A. Mix cementitious mortar in accordance with the manufacturer=s instructions for the purpose intended. Include bonding agent as an additive to the mix.

3.5 APPLICATION, CEMENTITIOUS MORTAR

A. Apply a coat of bonding agent to dry concrete surfaces; provide full surface coverage.

B. Apply cementitious mortar by steel trowel to an average thickness of 3/8". Tamp into place filling voids at spalled areas. Work the mix into thickness.

C. Damp cure cementitious mortar and grout for four (4) days.

3.6 MIXING EPOXY MORTARS

A. Mix epoxy mortars in accordance with the manufacturer=s instructions for the purpose intended. Mix components in clean equipment or containers. Do not exceed the pot life and workability limits.

3.7 APPLICATION, EPOXY MORTAR

A. Trowel apply mortar mix to an average thickness of 1/2". Tamp into place filling voids at spalled areas.

B. For patching honeycombs, trowel mortar onto the surface and work into the honeycomb to bring the surface flush with the surrounding areas. Finish trowel patched surfaces to match the surrounding surfaces.

C. Cover exposed steel reinforcement with epoxy mortar, feather edges to flush with the adjacent surfaces.

3.8 INJECTION, EPOXY RESIN ADHESIVE

A. Inject adhesive into prepared ports under pressure using equipment appropriate for the particular application.

B. Begin injection at lower entry port and continue until adhesive appears in the adjacent entry port. Continue from port to port until the entire crack has been filled.

C. Remove the temporary seal and excessive adhesive.

D. Clean surfaces adjacent to the repair and blend the finish to match the adjacent surfaces.

3.9 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting the installed work.

B. Make adjustments necessary to eliminate high spots and depressions.

3.10 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect the applied work for level, plumb, flush, and secure bond to substrates.

3.8 FINISH

A. Finished repaired surfaces must match the finish, texture and plane of adjacent surfaces.

END OF SECTION

SECTION 05120

STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Structural steel.
2. Grout.

B. Related Sections:

1. Section 01400 "Quality Requirements" for independent testing agency procedures and administrative requirements.
2. Section 05310 "Steel Decking" for field installation of shear connectors through deck.
3. Section 05500 "Metal Fabrications" for miscellaneous steel fabrications and other metal items not defined as structural steel.
4. Section 09900 "Painting" for surface-preparation and priming requirements.

1.3 DEFINITIONS

A. Structural Steel: Elements of structural-steel frame, as classified by AISC 303, "Code of Standard Practice for Steel Buildings and Bridges."

1.4 PERFORMANCE REQUIREMENTS

A. Connections: Provide details of connections required by the Contract Documents to be selected or completed by structural-steel fabricator, including comprehensive engineering analysis by a qualified professional engineer, to withstand loads indicated and comply with other information and restrictions indicated.

1. Select and complete connections using details indicated.
2. Use LRFD; data are given at factored-load level.

B. Moment Connections: Type FR, fully restrained.

C. Construction: Shear wall system.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Show fabrication of structural-steel components.

1. Include details of cuts, connections, splices, camber, holes, and other pertinent data.
2. Include embedment drawings.
3. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length, and type of each weld. Show backing bars that are to be removed and supplemental fillet welds where backing bars are to remain.
4. Indicate type, size, and length of bolts, distinguishing between shop and field bolts. Identify pretensioned and slip-critical high-strength bolted connections.
5. Identify members and connections of the seismic-load-resisting system.
6. Indicate locations and dimensions of protected zones.
7. Identify demand critical welds.
8. For structural-steel connections indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

C. Welding Procedure Specifications (WPSs) and Procedure Qualification Records (PQRs): Provide according to AWS D1.1/D1.1M, "Structural Welding Code - Steel," for each welded joint whether prequalified or qualified by testing including the following:

1. Power source (constant current or constant voltage).
2. Electrode manufacturer and trade name, for demand critical welds.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer and testing agency.

B. Welding certificates.

C. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.

D. Mill test reports for structural steel, including chemical and physical properties.

E. Product Test Reports: For the following:

1. Bolts, nuts, and washers including mechanical properties and chemical analysis.
2. Direct-tension indicators.
3. Tension-control, high-strength bolt-nut-washer assemblies.
4. Shear stud connectors.
5. Shop primers.
6. Nonshrink grout.

F. Source quality-control reports.

1.7 QUALITY ASSURANCE

A. Fabricator Qualifications: A qualified fabricator that participates in the AISC Quality Certification Program and is designated an AISC-Certified Plant, Category STD.

B. Installer Qualifications: A qualified installer who participates in the AISC Quality Certification Program and is designated an AISC-Certified Erector, Category ACSE.

C. Shop-Painting Applicators: Qualified according to AISC's Sophisticated Paint Endorsement P2 or SSPC-QP 3, "Standard Procedure for Evaluating Qualifications of Shop Painting Applicators."

D. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1. Welders and welding operators performing work on bottom-flange, demand-critical welds shall pass the supplemental welder qualification testing, as required by AWS D1.8. FCAW-S and FCAW-G shall be considered separate processes for welding personnel qualification.

E. Comply with applicable provisions of the following specifications and documents:

1. AISC 303.
2. AISC 341 and AISC 341s1.
3. AISC 360.
4. RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."

F. Preinstallation Conference: Conduct conference at Project site.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store materials to permit easy access for inspection and identification. Keep steel members off ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from corrosion and deterioration.

1. Do not store materials on structure in a manner that might cause distortion, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

B. Store fasteners in a protected place in sealed containers with manufacturer's labels intact.

1. Fasteners may be repackaged provided Owner's testing and inspecting agency observes repackaging and seals containers.
2. Clean and relubricate bolts and nuts that become dry or rusty before use.
3. Comply with manufacturers' written recommendations for cleaning and lubricating ASTM F 1852 fasteners and for retesting fasteners after lubrication.

1.9 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

PART 2 - PRODUCTS

2.1 STRUCTURAL-STEEL MATERIALS

A. Angles Shapes: ASTM A 36/A 36M

B. Plate and Bar: ASTM A 36/A 36M Retain first paragraph below for corrosion-resisting (weathering) structural steel and indicate locations on Drawings.

C. Steel Pipe: ASTM A 53/A 53M, Type E or S, Grade B.

1. Weight Class: Extra strong
2. Finish: Galvanized

D. Welding Electrodes: Comply with AWS requirements.

2.2 BOLTS, CONNECTORS, AND ANCHORS

A. Zinc-Coated High-Strength Bolts, Nuts, and Washers: ASTM A 325 (ASTM A 325M), Type 1, heavy-hex steel structural bolts; ASTM A 563, Grade DH (ASTM A 563M, Class 10S) heavy-hex carbon-steel nuts; and ASTM F 436 (ASTM F 436M), Type 1, hardened carbon-steel washers.

1. Finish: Hot-dip zinc coating
2. Direct-Tension Indicators: ASTM F 959, Type 325 (ASTM F 959M, Type 8.8), compressible-washer type with mechanically deposited zinc coating finish.

B. Tension-Control, High-Strength Bolt-Nut-Washer Assemblies: ASTM F 1852, Type 1, heavy-hexhead assemblies consisting of steel structural bolts with splined ends, heavy-hex carbon-steel nuts, and hardened carbon-steel washers.

1. Finish: Mechanically deposited zinc coating.

C. Headed Anchor Rods: ASTM F 1554, Grade 55, weldable straight.

1. Nuts: ASTM A 563 (ASTM A 563M) heavy-hex carbon steel.
2. Plate Washers: ASTM A 36/A 36M carbon steel.
3. Washers: ASTM F 436 (ASTM F 436M), Type 1, hardened carbon steel.
4. Finish: Hot-dip zinc coating, ASTM A 153/A 153M, Class C

D. Threaded Rods: ASTM A 36/A 36M

1. Nuts: ASTM A 563 (ASTM A 563M) heavy-hex carbon steel.
2. Washers: ASTM F 436 (ASTM F 436M), Type 1, hardened carbon steel.
3. Finish: Hot-dip zinc coating, ASTM A 153/A 153M, Class C

2.3 PRIMER

A. Low-Emitting Materials: Paints and coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

B. Primer: Comply with Section 09900 "Painting". Primer in first paragraph below requires SSPC-SP 2 surface preparation or better and 24 hours' drying before recoating. Type II has lower VOC content than Type I.

C. Primer: SSPC-Paint 25, Type II, zinc oxide, alkyd, linseed oil primer.

D. Primer: SSPC-Paint 25 BCS Type II, zinc oxide, alkyd, linseed oil primer.

E. Primer: SSPC-Paint 23, latex primer.

F. Primer: Fabricator's standard lead- and chromate-free, non-asphaltic, rust-inhibiting primer complying with MPI#79 and compatible with topcoat.

G. Galvanizing Repair Paint: ASTM A 780

2.4 GROUT

A. Metallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, metallic aggregate grout, mixed with water to consistency suitable for application and a 30-minute working time.

B. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive and non-staining, mixed with water to consistency suitable for application and a 30-minute working time.

2.5 FABRICATION

A. Structural Steel: Fabricate and assemble in shop to greatest extent possible. Fabricate according to AISC's "Code of Standard Practice for Steel Buildings and Bridges" and AISC 360.

1. Camber structural-steel members where indicated.
2. Fabricate beams with rolling camber up.
3. Identify high-strength structural steel according to ASTM A 6/A 6M and maintain markings until structural steel has been erected.
4. Mark and match-mark materials for field assembly.
5. Complete structural-steel assemblies, including welding of units, before starting shop-priming operations.

B. Thermal Cutting: Perform thermal cutting by machine to greatest extent possible.

1. Plane thermally cut edges to be welded to comply with requirements in AWS D1.1/D1.1M.

C. Bolt Holes: Cut, drill, or punch standard bolt holes perpendicular to metal surfaces.

D. Finishing: Accurately finish ends of columns and other members transmitting bearing loads.

E. Cleaning: Clean and prepare steel surfaces that are to remain unpainted according to SSPC-SP 2, "Hand Tool Cleaning" Retain first paragraph below if shear connectors are shop installed to structural steel.

F. Holes: Provide holes required for securing other work to structural steel and for other work to pass through steel framing members.

1. Cut, drill, or punch holes perpendicular to steel surfaces. Do not thermally cut bolt holes or enlarge holes by burning.
2. Baseplate Holes: Cut, drill, mechanically thermal cut, or punch holes perpendicular to steel surfaces.
3. Weld threaded nuts to framing and other specialty items indicated to receive other work.

2.6 SHOP CONNECTIONS

A. High-Strength Bolts: Shop install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.

1. Joint Type: Snug tightened

B. Weld Connections: Comply with AWS D1.1/D1.1Mand AWS D1.8/D1.8M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

1. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding tolerances in AISC 303 for mill material.

2.7 SHOP PRIMING

A. Shop prime steel surfaces except the following:

1. Surfaces embedded in concrete or mortar. Extend priming of partially embedded members to a depth of 2 inches (50 mm).
2. Surfaces to be field welded.
3. Surfaces to be high-strength bolted with slip-critical connections.
4. Surfaces to receive sprayed fire-resistive materials (applied fireproofing).
5. Galvanized surfaces.

B. Surface Preparation: Clean surfaces to be painted. Remove loose rust and mill scale and spatter, slag, or flux deposits. Prepare surfaces according to the following specifications and standards:

1. SSPC-SP 2, "Hand Tool Cleaning."

2. SSPC-SP 3, "Power Tool Cleaning."
3. SSPC-SP 7/NACE No. 4, "Brush-Off Blast Cleaning."
4. SSPC-SP 11, "Power Tool Cleaning to Bare Metal."
5. SSPC-SP 14/NACE No. 8, "Industrial Blast Cleaning."
6. SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
7. SSPC-SP 10/NACE No. 2, "Near-White Blast Cleaning."
8. SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning."
9. SSPC-SP 8, "Pickling."

C. Priming: Immediately after surface preparation, apply primer according to manufacturer's written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of 1.5 mils (0.038 mm). Use priming methods that result in full coverage of joints, corners, edges, and exposed surfaces.

1. Stripe paint corners, crevices, bolts, welds, and sharp edges.
2. Apply two coats of shop paint to surfaces that are inaccessible after assembly or erection. Change color of second coat to distinguish it from first.

D. Painting: Prepare steel and apply a one-coat, non-asphaltic primer complying with SSPC-PS Guide 7.00, "Painting System Guide 7.00: Guide for Selecting One-Coat Shop Painting Systems," to provide a dry film thickness of not less than 1.5 mils (0.038 mm).

2.8 GALVANIZING

A. Hot-Dip Galvanized Finish: Apply zinc coating by the hot-dip process to structural steel according to ASTM A 123/A 123M.

1. Fill vent and drain holes that will be exposed in the finished Work unless they will function as weep holes, by plugging with zinc solder and filing off smooth.

2.9 SOURCE QUALITY CONTROL

A. Testing Agency: Owner will engage an independent testing and inspecting agency to perform shop tests and inspections and prepare test reports.

1. Provide testing agency with access to places where structural-steel work is being fabricated or produced to perform tests and inspections.

B. Correct deficiencies in Work that test reports and inspections indicate does not comply with the Contract Documents.

C. Bolted Connections: Shop-bolted connections will be inspected according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."

D. Welded Connections: In addition to visual inspection, shop-welded connections will be tested and inspected according to AWS D1.1/D1.1M and the following inspection procedures, at testing agency's option:

1. Liquid Penetrant Inspection: ASTM E 165.

2. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.
3. Ultrasonic Inspection: ASTM E 164.
4. Radiographic Inspection: ASTM E 94.

E. In addition to visual inspection, shop-welded shear connectors will be tested and inspected according to requirements in AWS D1.1/D1.1M for stud welding and as follows:

1. Bend tests will be performed if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear connector.
2. Tests will be conducted on additional shear connectors if weld fracture occurs on shear connectors already tested, according to requirements in AWS D1.1/D1.1M.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify, with steel Erector present, elevations of concrete- and masonry-bearing surfaces and locations of anchor rods, bearing plates, and other embedment for compliance with requirements.

1. Prepare a certified survey of bearing surfaces, anchor rods, bearing plates, and other embedment showing dimensions, locations, angles, and elevations.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide temporary shores, guys, braces, and other supports during erection to keep structural steel secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated.

1. Do not remove temporary shoring supporting composite deck construction until cast-in-place concrete has attained its design compressive strength.

3.3 ERECTION

A. Set structural steel accurately in locations and to elevations indicated and according to AISC 303 and AISC 360.

B. Base Bearing and Leveling Plates: Clean concrete- and masonry-bearing surfaces of bond-reducing materials and roughen surfaces prior to setting plates. Clean bottom surface of plates.

1. Set plates for structural members on wedges, shims, or setting nuts as required.
2. Weld plate washers to top of baseplate.
3. Snug-tighten anchor rods after supported members have been positioned and plumbed. Do not remove wedges or shims but, if protruding, cut off flush with edge of plate before packing with grout.

4. Promptly pack grout solidly between bearing surfaces and plates so no voids remain. Neatly finish exposed surfaces; protect grout and allow to cure. Comply with manufacturer's written installation instructions for shrinkage-resistant grouts.

C. Maintain erection tolerances of structural steel within AISC's "Code of Standard Practice for Steel Buildings and Bridges."

D. Align and adjust various members that form part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact with members. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.

1. Level and plumb individual members of structure.
2. Make allowances for difference between temperature at time of erection and mean temperature when structure is completed and in service.

E. Splice members only where indicated.

F. Do not use thermal cutting during erection.

G. Do not enlarge unfair holes in members by burning or using drift pins. Ream holes that must be enlarged to admit bolts.

H. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1/D1.1M and manufacturer's written instructions.

3.4 FIELD CONNECTIONS

A. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.

1. Joint Type: Snug tightened.

B. Weld Connections: Comply with AWS D1.1/D1.1M and AWS D1.8/D1.8M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.

1. Comply with AISC 303 and AISC 360 for bearing, alignment, adequacy of temporary connections, and removal of paint on surfaces adjacent to field welds.
2. Remove backing bars or runoff tabs where indicated, back gouge, and grind steel smooth.
3. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding tolerances in AISC's "Code of Standard Practice for Steel Buildings and Bridges" for mill material.

3.5 PREFABRICATED BUILDING COLUMNS

A. Install prefabricated building columns to comply with AISC 360, manufacturer's written recommendations, and requirements of testing and inspecting agency that apply to the fire-resistance rating indicated.

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to inspect field welds.

B. Bolted Connections: Bolted connections will be inspected according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts."

C. Welded Connections: Field welds will be visually inspected according to AWS D1.1/D1.1M.

1. In addition to visual inspection, field welds will be tested and inspected according to AWS D1.1/D1.1M and the following inspection procedures, at testing agency's option:

    a. Liquid Penetrant Inspection: ASTM E 165.
    b. Magnetic Particle Inspection: ASTM E 709; performed on root pass and on finished weld. Cracks or zones of incomplete fusion or penetration will not be accepted.
    c. Ultrasonic Inspection: ASTM E 164.
    d. Radiographic Inspection: ASTM E 94.

D. In addition to visual inspection, test and inspect field-welded shear connectors according to requirements in AWS D1.1/D1.1M for stud welding and as follows:

1. Perform bend tests if visual inspections reveal either a less-than-continuous 360-degree flash or welding repairs to any shear connector.
2. Conduct tests on additional shear connectors if weld fracture occurs on shear connectors already tested, according to requirements in AWS D1.1/D1.1M.

E. Correct deficiencies in Work that test reports and inspections indicate does not comply with the Contract Documents.

3.7 REPAIRS AND PROTECTION

A. Galvanized Surfaces: Clean areas where galvanizing is damaged or missing and repair galvanizing to comply with ASTM A 780.

B. Touchup Painting: Immediately after erection, clean exposed areas where primer is damaged or missing and paint with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Clean and prepare surfaces by SSPC-SP 2 hand-tool cleaning or SSPC-SP 3 power-tool cleaning.

C. Touchup Painting: Cleaning and touchup painting are specified in Section 09900 "Painting ".

END OF SECTION 05120

SECTION 05210

STEEL JOIST FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. LH- series long-span steel joists.
   2. Joist girders.
   3. Joist accessories.

B. Related Requirements:

   1. Section 03300 "Cast-in-Place Concrete" for installing bearing plates in concrete.
   2. Section 05120 "Structural Steel Framing" for field-welded shear connectors.

1.3 DEFINITIONS

A. SJI's "Specifications": Steel Joist Institute's "Standard Specifications, Load Tables and Weight Tables for Steel Joists and Joist Girders."

B. Special Joists: Steel joists or joist girders requiring modification by manufacturer to support non-uniform, unequal, or special loading conditions that invalidate load tables in SJI's "Specifications."

1.4 ACTION SUBMITTALS

A. Product Data: For each type of joist, accessory, and product.

B. Shop Drawings:

   1. Include layout, designation, number, type, location, and spacing of joists.
   2. Include joining and anchorage details, bracing, bridging, and joist accessories; splice and connection locations and details; and attachments to other construction.
   3. Indicate locations and details of bearing plates to be embedded in other construction.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer

B. Welding certificates.

C. Manufacturer certificates.

D. Mill Certificates: For each type of bolt.

E. Comprehensive engineering analysis of special joists signed and sealed by the qualified professional engineer responsible for its preparation.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A manufacturer certified by SJI to manufacture joists complying with applicable standard specifications and load tables in SJI's "Specifications"]

1. Manufacturer's responsibilities include providing professional engineering services for designing special joists to comply with performance requirements.

B. Welding Qualifications: Qualify field-welding procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle joists as recommended in SJI's "Specifications[."]

B. Protect joists from corrosion, deformation, and other damage during delivery, storage, and handling.

1.8 SEQUENCING

A. Deliver steel bearing plates to be built into cast-in-place concrete construction.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide special joists and connections capable of withstanding design loads indicated.

1. Use ASD; data are given at service-load level
2. Design special joists to withstand design loads with live-load deflections no greater than the following:
   a. Roof Joists: Vertical deflection of 1/240 of the span.

2.2 LONG-SPAN STEEL JOISTS

A. Manufacture steel joists according to "Standard Specifications for Longspan Steel Joists, LH-Series " in SJI's "Specifications," with steel-angle top- and bottom-chord members; of joist type and end and top-chord arrangements as follows:

1. Joist Type: LH-series steel joists
2. End Arrangement: Square.
3. Top-Chord Arrangement: Parallel

B. Provide holes in chord members for connecting and securing other construction to joists.

C. Camber long-span steel joists according to SJI's "Specifications."

D. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds 1/4 inch per 12 inches (1:48).

2.3 JOIST GIRDERS

A. Manufacture joist girders according to "Standard Specifications for Joist Girders" in SJI's "Specifications," with steel-angle top- and bottom-chord members; with end and top-chord arrangements as follows

1. End Arrangement: Square.
2. Top-Chord Arrangement: Parallel

B. Provide holes in chord members for connecting and securing other construction to joist girders.

C. Camber joist girders according to SJI's "Specifications

D. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds 1/4 inch per 12 inches (1:48).

2.4 PRIMERS

A. Low-Emitting Materials: Paints and coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

B. Primer: SSPC-Paint 15, or manufacturer's standard shop primer complying with performance requirements in SSPC-Paint 15.

C. Primer: Provide shop primer that complies with Section 09900 "Painting."

2.5 JOIST ACCESSORIES

A. Bridging: Provide bridging anchors and number of rows of diagonal bridging of material, size, and type required by SJI's "Specifications" for type of joist, chord size, spacing, and span. Furnish additional erection bridging if required for stability.

B. Fabricate steel bearing plates from ASTM A 36/A 36M steel with integral anchorages of sizes and thicknesses indicated. Shop prime paint

C. Steel bearing plates with integral anchorages are specified in Section 05500 "Metal Fabrications."

D. Furnish ceiling extensions, either extended bottom-chord elements or a separate extension unit of enough strength to support ceiling construction. Extend ends to within 1/2 inch (13 mm) of finished wall surface unless otherwise indicated.

E. Carbon-Steel Bolts and Threaded Fasteners: ASTM A 307, Grade A (ASTM F 568M, Property Class 4.6), carbon-steel, hex-head bolts, and threaded fasteners; carbon-steel nuts; and flat, unhardened steel washers.

1. Finish: Hot-dip zinc coating, ASTM A 153/A 153M, Class C

F. High-Strength Bolts, Nuts, and Washers: ASTM A 325 (ASTM A 325M), Type 1, heavy hex steel structural bolts; ASTM A 563 (ASTM A 563M) heavy hex carbon-steel nuts; and ASTM F 436 (ASTM F 436M) hardened carbon-steel washers.

1. Finish: Hot-dip zinc coating, ASTM A 153/A 153M, Class C.

G. Welding Electrodes: Comply with AWS standards.

H. Galvanizing Repair Paint: ASTM A 780.

I. Furnish miscellaneous accessories including splice plates and bolts required by joist manufacturer to complete joist assembly.

2.6 CLEANING AND SHOP PAINTING

A. Clean and remove loose scale, heavy rust, and other foreign materials from fabricated joists and accessories by hand-tool cleaning, SSPC-SP 2power-tool cleaning, SSPC-SP 3

B. Apply one coat of shop primer to joists and joist accessories to be primed to provide a continuous, dry paint film not less than 1 mil (0.025 mm) thick.

C. Shop priming of joists and joist accessories is specified in Painting" and Section 09900 "Painting."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting substrates, embedded bearing plates, and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Do not install joists until supporting construction is in place and secured.

B. Install joists and accessories plumb, square, and true to line; securely fasten to supporting construction according to SJI's “Specifications” joist manufacturer's written recommendations, and requirements in this Section.

1. Before installation, splice joists delivered to Project site in more than one piece.
2. Space, adjust, and align joists accurately in location before permanently fastening.
3. Install temporary bracing and erection bridging, connections, and anchors to ensure that joists are stabilized during construction.
4. Delay rigidly connecting bottom-chord extensions to columns or supports until dead loads are applied.

C. Field weld joists to supporting steel bearing plates and framework. Coordinate welding sequence and procedure with placement of joists. Comply with AWS requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.

D. Bolt joists to supporting steel framework using carbon-steel bolts.

E. Bolt joists to supporting steel framework using high-strength structural bolts. Comply with Research Council on Structural Connection's "Specification for Structural Joints Using ASTM A 325 or ASTM A 490 Bolts" for high-strength structural bolt installation and tightening requirements.

F. Install and connect bridging concurrently with joist erection before construction loads are applied. Anchor ends of bridging lines at top and bottom chords if terminating at walls or beams.

3.3 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to inspect field welds and to perform field tests and inspections and prepare test and inspection reports.

B. Visually inspect field welds according to AWS D1.1/D1.1M.

1. In addition to visual inspection, test field welds according to AWS D1.1/D1.1M and the following procedures, as applicable:

a. Liquid Penetrant Inspection: ASTM E 165.
b. Magnetic Particle Inspection: ASTM E 709.
c. Ultrasonic Testing: ASTM E 164.

C. Visually inspect bolted connections.

D. Correct deficiencies in Work that test and inspection reports have indicated are not in compliance with specified requirements.

E. Perform additional testing to determine compliance of corrected Work with specified requirements.

3.4 PROTECTION

A. Repair damaged galvanized coatings on galvanized items with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.

B. Touchup Painting: After installation, promptly clean, prepare, and prime or reprime field connections, rust spots, and abraded surfaces of prime-painted joists bearing plates, abutting structural steel, and accessories.

1. Clean and prepare surfaces by hand-tool cleaning according to SSPC-SP 2, or power-tool cleaning according to SSPC-SP 3.
2. Apply a compatible primer of same type as primer used on adjacent surfaces.

C. Touchup Painting: Cleaning and touchup painting are specified in Section 099123 "Interior Painting."

D. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that joists and accessories are without damage or deterioration at time of Substantial Completion.

END OF SECTION 05210

SECTION 05310

STEEL DECKING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. .
   2. Composite Roof deck.

B. Related Requirements:

   1. Section 03300 "Cast-in-Place Concrete" for normal-weight and lightweight structural concrete fill over steel deck.
   2. Section 05120 "Structural Steel Framing" for shop- and field-welded shear connectors.
   3. Section 05500 "Metal Fabrications" for framing deck openings with miscellaneous steel shapes.
   4. Section 09900 "Painting" for repair painting of primed deck and finish painting of deck.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of deck, accessory, and product indicated.

B. Shop Drawings:

   1. Include layout and types of deck panels, anchorage details, reinforcing channels, pans, cut deck openings, special jointing, accessories, and attachments to other construction.

1.4 INFORMATIONAL SUBMITTALS

A. Welding certificates.

B. Product Certificates: For steel deck.

C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating that each of the following complies with requirements:

   1. Power-actuated mechanical fasteners.

D. Evaluation Reports: For steel deck.

E. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to ASTM E 329 for testing indicated.

B. Welding Qualifications: Qualify procedures and personnel according to AWS D1.3, "Structural Welding Code - Sheet Steel."

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect steel deck from corrosion, deformation, and other damage during delivery, storage, and handling.

B. Stack steel deck on platforms or pallets and slope to provide drainage. Protect with a waterproof covering and ventilate to avoid condensation.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members."

B. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL's "Fire Resistance Directory" or from the listings of another qualified testing agency.

2.2 ROOF DECK

A. Manufacturers: Subject to compliance with requirements available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. ASC Profiles, Inc.; a Blue Scope Steel company.
2. Canam United States; Canam Group Inc.
3. CMC Joist & Deck.
4. Consolidated Systems, Inc.; Metal Dek Group.
5. Cordeck.
6. DACS, Inc.
7. Epic Metals Corporation.
8. Marlyn Steel Decks, Inc.
9. New Millennium Building Systems, LLC.
10. Nucor Corp.; Vulcraft Group.

11. Roof Deck, Inc.
12. Valley Joist; Subsidiary of EBSCO Industries, Inc.
13. Verco Manufacturing Co.
14. Wheeling Corrugating Company; Div. of Wheeling-Pittsburgh Steel Corporation.

2.3 COMPOSITE ROOFDECK

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. ASC Profiles, Inc.; a Blue Scope Steel company.
2. Canam United States; Canam Group Inc.
3. CMC Joist & Deck.
4. Consolidated Systems, Inc.; Metal Dek Group.
5. Cordeck.
6. DACS, Inc.
7. Epic Metals Corporation.
8. Marlyn Steel Decks, Inc.
9. New Millennium Building Systems, LLC.
10. Nucor Corp.; Vulcraft Group.
11. Roof Deck, Inc.
12. Verco Manufacturing Co.
13. Wheeling Corrugating Company; Div. of Wheeling-Pittsburgh Steel Corporation.

B. Composite Roof Deck: Fabricate panels, with integrally embossed or raised pattern ribs and interlocking side laps, to comply with "SDI Specifications and Commentary for Composite Steel Floor Deck," in SDI Publication No. 31, with the minimum section properties indicated, and with the following:
1. Galvanized-Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), Grade 33 (230), G90 (Z275) zinc coating.
2. Profile Depth: 1-1/2 inches (38 mm)
3. Design Uncoated-Steel Thickness: 0.0358 inch (0.91 mm)
4. Span Condition: Triple span or more.

2.4 ACCESSORIES

A. General: Provide manufacturer's standard accessory materials for deck that comply with requirements indicated.

B. Mechanical Fasteners: Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.

C. Side-Lap Fasteners: Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, No. 10 (4.8-mm) minimum diameter.

D. Flexible Closure Strips: Vulcanized, closed-cell, synthetic rubber.

E. Miscellaneous Sheet Metal Deck Accessories: Steel sheet, minimum yield strength of 33,000 psi (230 MPa), not less than 0.0359-inch (0.91-mm) design uncoated thickness, of same material and finish as deck; of profile indicated or required for application.

F. Pour Stops and Girder Fillers: Steel sheet, minimum yield strength of 33,000 psi (230 MPa), of same material and finish as deck, and of thickness and profile recommended by SDI Publication No. 31 for overhang and slab depth.

G. Column Closures, End Closures, Z-Closures, and Cover Plates: Steel sheet, of same material, finish, and thickness as deck unless otherwise indicated.

H. Piercing Hanger Tabs: Piercing steel sheet hanger attachment devices for use with floor deck.

I. Weld Washers: Uncoated steel sheet, shaped to fit deck rib, 0.0747 inch (1.90 mm) thick, with factory-punched hole of 3/8-inch (9.5-mm) minimum diameter.

J. Flat Sump Plates: Single-piece steel sheet, 0.0747 inch (1.90 mm) thick, of same material and finish as deck. For drains, cut holes in the field.

K. Recessed Sump Pans: Single-piece steel sheet, 0.0747 inch (1.90 mm) thick, of same material and finish as deck, with 3-inch- (76-mm-) wide flanges and level recessed pans of 1-1/2-inch (38-mm) minimum depth. For drains, cut holes in the field.

L. Galvanizing Repair Paint: ASTM A 780

M. Repair Paint: Manufacturer's standard rust-inhibitive primer of same color as primer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Install deck panels and accessories according to applicable specifications and commentary in SDI Publication No. 31, manufacturer's written instructions, and requirements in this Section.

B. Install temporary shoring before placing deck panels if required to meet deflection limitations.

C. Locate deck bundles to prevent overloading of supporting members.

D. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before being permanently fastened. Do not stretch or contract side-lap interlocks.

1. Align cellular deck panels over full length of cell runs and align cells at ends of abutting panels.

E. Place deck panels flat and square and fasten to supporting frame without warp or deflection.

F. Cut and neatly fit deck panels and accessories around openings and other work projecting through or adjacent to deck.

G. Provide additional reinforcement and closure pieces at openings as required for strength, continuity of deck, and support of other work.

H. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used for correcting welding work.

I. Mechanical fasteners may be used in lieu of welding to fasten deck. Locate mechanical fasteners and install according to deck manufacturer's written instructions.

3.3 ROOF-DECK INSTALLATION

A. Fasten roof-deck panels to steel supporting members by mechanical fasteners or arc spot (puddle) welds of the surface diameter indicated or arc seam welds with an equal perimeter that is not less than 1-1/2 inches (38 mm) long, and as follows:

1. Weld Diameter: 5/8-inch (16 mm) Hilti:-X-EDN 19 Deck pin at each rib to frame nominal.
2. Weld Spacing: Weld edge and interior ribs of deck units with a minimum of two welds per deck unit at each support. Space fasteners or welds as indicated.
3. Weld Washers: Install weld washers at each weld location.

B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of 1/2 of the span or 18 inches (457 mm) [and as follows:

1. Mechanically fasten with self-drilling, No. 10 (4.8-mm-) diameter or larger, carbon-steel screws.
2. Mechanically clinch or button punch.
3. Fasten with a minimum of 1-1/2-inch- (38-mm-) long welds.

C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 1-1/2 inches (38 mm), with end joints as follows:

1. End Joints: Lapped 2 inches (51 mm) minimum

D. Roof Sump Pans and Sump Plates: Install over openings provided in roof deck and weld or [mechanically fasten flanges to top of deck. Space welds or mechanical fasteners not more than 12 inches (305 mm) apart with at least one weld or fastener at each corner.

1. Install reinforcing channels or zees in ribs to span between supports and weld or mechanically fasten.

E. Miscellaneous Roof-Deck Accessories: Install ridge and valley plates, finish strips, end closures, and reinforcing channels according to deck manufacturer's written instructions. Weld or mechanically fasten to substrate to provide a complete deck installation.

1. Weld cover plates at changes in direction of roof-deck panels unless otherwise indicated.

F. Flexible Closure Strips: Install flexible closure strips over partitions, walls, and where indicated. Install with adhesive according to manufacturer's written instructions to ensure complete closure.

3.4 FIELD QUALITY CONTROL

A. Testing Agency - Engage a qualified testing agency to perform tests and inspections.

B. Field welds will be subject to inspection.

C. Testing agency will report inspection results promptly and in writing to Contractor and Architect.

D. Remove and replace work that does not comply with specified requirements.

E. Additional inspecting, at Contractor's expense, will be performed to determine compliance of corrected work with specified requirements.

3.5 PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on both surfaces of deck with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.

B. Repair Painting: Wire brush and clean rust spots, welds, and abraded areas on both surfaces of prime-painted deck immediately after installation and apply repair paint.

1. Apply repair paint, of same color as adjacent shop-primed deck, to bottom surfaces of deck exposed to view.
2. Wire brushing, cleaning, and repair painting of bottom deck surfaces are included in Section 09900 "Painting".

C. Repair Painting: Wire brushing, cleaning, and repair painting of rust spots, welds, and abraded areas of both deck surfaces are included in Section 09900 "Painting".

D. Provide final protection and maintain conditions to ensure that steel deck is without damage or deterioration at time of Substantial Completion.

END OF SECTION 05310

SECTION 05500

METAL FABRICATIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Steel framing and supports for applications where framing and supports are not specified in other Sections.

B. Products furnished, but not installed, under this Section:
   1. Post installed anchor bolts for cast-in-place concrete.,
   2. Steel weld plates and angles for casting into concrete for applications where they are not specified in other Sections.

C. Related Sections:

   1. Section 03300 "Cast-in-Place Concrete" for installing anchor bolts, steel pipe sleeves, slotted-channel inserts, wedge-type inserts, and other items cast into concrete.

D. Shop Drawings: Show fabrication and installation details for metal fabrications.

   1. Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items.

1.3 INFORMATIONAL SUBMITTALS

A. Welding certificates.

B. Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers certifying that shop primers are compatible with topcoats.

1.4 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

B. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."

1.5 PROJECT CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication.

1.6 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of anchorages and steel weld plates and angles for casting into concrete. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

PART 2 - PRODUCTS

2.1 METALS, GENERAL

A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For metal fabrications exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

2.2 FERROUS METALS

A. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.

B. Steel Tubing: ASTM A 500, cold-formed steel tubing.

2.3 FASTENERS

A. Stainless-Steel Bolts and Nuts: Regular hexagon-head annealed stainless-steel bolts, ASTM F 593; with hex nuts, ASTM F 594; and, where indicated, flat washers.

B. Post-Installed Anchors: Torque-controlled expansion anchors.
   1. Material for Exterior Locations and Where Stainless Steel is Indicated: Alloy Group 2 stainless-steel bolts, ASTM F 593, and nuts, ASTM F 594.

2.4 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

B. Low-Emitting Materials: Paints and coatings shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

C. Shop Primers: Provide primers that comply with Section 09900 "Painting."

D. Nonshrink, Metallic Grout: Factory-packaged, ferrous-aggregate grout complying with ASTM C 1107, specifically recommended by manufacturer for heavy-duty loading applications.

E. Nonshrink, Nonmetallic Grout: Factory-packaged, non-staining, noncorrosive, nongaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.

F. Concrete: Comply with requirements in Section 03300 "Cast-in-Place Concrete" for normal-weight, air-entrained, concrete with a minimum 28-day compressive strength of 3000 psi.

2.5 FABRICATION, GENERAL

A. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.

B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

D. Form exposed work with accurate angles and surfaces and straight edges.

E. Weld corners and seams continuously to comply with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing.

F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners or welds where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) fasteners unless otherwise indicated. Locate joints where least conspicuous.

G. Fabricate seams and other connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

H. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.

I. Provide for anchorage of type indicated, coordinate with supporting structure. Space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.

2.6 STEEL WELD PLATES AND ANGLES

A. Provide steel weld plates and angles not specified in other Sections, for items supported from concrete construction as needed to complete the Work. Provide each unit with no fewer than two integrally welded steel strap anchors for embedding in concrete.

2.7 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Finish metal fabrications after assembly.

C. Finish exposed surfaces to remove tool and die marks and stretch lines, and to blend into surrounding surface.

2.8 STEEL AND IRON FINISHES

A. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A 153/A 153M for steel and iron hardware and with ASTM A 123/A 123M for other steel and iron products.

1. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.

B. Shop prime iron and steel items unless they are to be embedded in concrete, sprayed-on fireproofing, or masonry, or unless otherwise indicated.

1. Shop prime with primers specified in Section 09900 "Painting”.

C. Preparation for Shop Priming: Prepare surfaces to comply with SSPC-SP 3, "Power Tool Cleaning."

D. Shop Priming: Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

1. Stripe paint corners, crevices, bolts, welds, and sharp edges.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.

B. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

C. Field Welding: Comply with the following requirements:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

D. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, lag screws, wood screws, and other connectors.

E. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

3.2 INSTALLING MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.

3.3 ADJUSTING AND CLEANING

A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.

B. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Section 09900 "Painting”.

C. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.

END OF SECTION 05500

SECTION 05500

METAL FABRICATIONS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Rough hardware.

2. Miscellaneous framing and supports.

3. Loose bearing and leveling plates.

4. Counters and equipment supports.

5. Miscellaneous steel trim.

6. Shelf and relieving angles.

7. Steel ladders.

8. Aluminum ladders.

9. Pipe bollards.

10. Metal bar gratings.

11. Cast-in-place stair nosings and thresholds.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Substrate for attachments.

2. Section 04230 - Reinforced Unit Masonry: Substrate for attachments.

3. Section 05520 - Steel Handrails and Railings: Inserts and anchorage for.

4. Section 05600 - Ornamental Metal Work: Inserts and anchorage for.

5. Section 07724 - Roof Hatch: Safety ladder post.

6. Section 09900 - Painting: Metal finishes.

7. Products Furnished But Not Installed Under this Section: Inserts and anchors preset in masonry and concrete for anchorage of metal work.

1.2 DESCRIPTION OF WORK

A. The extent of metal fabrications is indicated on the Drawings, schedules and as specified

herein, and includes providing, fabricating and installing items made from iron and steel shapes, plates, bars, strips, tubes, pipes and castings which are not structural steel or other metal systems specified elsewhere herein.

B. All light iron and miscellaneous metal work not specified under another Section, but required for the work shall be provided under this Section whether or not specifically referred to herein.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Institute of Steel Construction (AISC):

1. Specification for Structural Steel for Buildings.

C. American National Standards Institute (ANSI):

1. ANSI B18.5 - Round Head Bolts (Inch Series).

2. ANSI B18.6.1 - Wood Screws (Inch Series).

D American Society of Civil Engineers (ASCE):

1. ASCE / SEI 7 - Minimum Design Loads for Buildings and Other Structures.

E. American Society for Testing and Materials (ASTM):

2. MBG 531 - Metal Bar Grating Manual.

3. MBG 532 - Heavy Duty Metal Bar Grating Manual.

4. MBG 533 - Welding Specification for Fabrication of Steel, Aluminum and Stainless Steel Bar Grating.

J. SSPC: The Society for Protective Coatings (formerly Structural Steel Painting Council):

1. SSPC Painting Manual.

2. SSPC PA 1 - Specification Procedure for Shop, Field and Maintenance Painting of Steel.

3. Paint 20 - Specification of Zinc-Rich Coating Type 1 - Inorganic and Type II - Organic.

4. SSPC SP 2 - Requirements for Hand Tool Cleaning of Steel Surfaces.

5. SSPC SP 3 - Requirements for Power Tool Cleaning of Steel Surfaces.

6. SSPC SP 6 - Standard for Commercial Blast Cleaning of Steel Surfaces.

7. SSPC SP 7 - Standard for Brush-Off Blast Cleaning of Steel Surfaces.

8. VIS 3 - Guide and Reference Photographs for Steel Surfaces Prepared by Power and Hand-Tool Cleaning.

1.4 DEFINITIONS

A. Custom Metal Fabrications: Metal fabrications custom built for a specific Project purpose.

B. Pre-Manufactured Metal Fabrications: Metal fabrications which are factory-fabricated for a specific architectural purpose. These products may require modification to meet the Project requirements, but their primary manufactured purpose is not altered.

C. Non-Structural Metal Fabrications: Metal work which has not been designed by the Project Structural Engineer, and which is not part of the Structural Engineer=s documents.

1.5 SYSTEM PERFORMANCE

A. Structural Performance: Provide assemblies which, when installed, comply with the following minimum requirements for structural performance, unless otherwise indicated.

1.6 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer=s specifications, anchor details and installation instructions for pre-manufactured products. Submit data indicting materials used in miscellaneous metal fabrications, including paint products and grout.

2. Shop Drawings:

a. Drawings for fabrication and erection of miscellaneous metal fabrications; including plans, elevations and details of sections and connections. Show anchorage and accessory items. Provide templates for anchor and bolt installations by others.

b. Where materials or fabrications are required to comply with requirements for design loadings, include structural computations, materials properties and other information for structural analysis. Prepare under the seal of a professional structural engineer for products requiring structural engineering to meet the Performance Requirements.

c. Include profiles, sizes, connection attachments, reinforcing, anchorage, size and type of fasteners and accessories, erection drawings, elevations,

welded connections using standard AWS welding symbols with net weld lengths.

d. Take field measurements prior to the preparation of Shop Drawings and prefabrication when possible. Allow for trimming and fitting where taking of field measurements before fabrication might delay construction.

3. Samples:

a. Submit representative samples of materials and finished products as requested by the Architect.

1.7 QUALITY ASSURANCE

A. Qualifications:

1. Fabricator: Company specializing in fabricating the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

B. Performance Requirements:

1. Provide the capacity to withstand the following loading requirements for exterior units:

a. Design, fabricate and install to resist combined positive and negative windloading in accordance with IBC 2009, Section 1609 with a Vmph of 170, qs of 74.0 psf, exposure [B] [C] [D] and importance factor [1.0] [1.25] [1.5], as applicable per ASCE 7.

2. Provide assemblies which, when installed, comply with the following minimum requirements for structural performance, unless otherwise indicated.

a. Treads and Platforms of Steel Stairs: Capable of withstanding a uniform load of 100 pounds per square foot, or a concentrated load of 300 pounds so locates as to produce maximum stress conditions.

C. Take field measurements prior to the preparation of Shop Drawings and fabrication, where possible. Do not delay the construction. Allow for trimming and fitting when the taking of field measurements before fabrication might delay the work.

D. Pre-assemble items in the shop to the greatest extent possible, to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and a coordinated installation.

1.8 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Protect materials from corrosion, deformation and other damage during delivery, storage and handling.

C. Deliver product to the Project Site in the fabricator=s original, unopened packages, containers or bundles.

D. Store and protect the materials with a weatherproof covering; ventilate to avoid condensation.

PART 2 PRODUCTS

2.1 MATERIALS

A. Use only materials which are smooth and free of surface blemishes including pitting, seam marks, roller marks, rolled trade names and roughness for fabrication of miscellaneous metal work which will be exposed to view.

B. Steel Plates, Angles, and Other Structural Shapes: ASTM A 36 / A 36M.

C. Steel Pipe: ASTM A 53 / A 53M. Type and grade (if applicable), as selected by the fabricator and as required for the design loading. Black finish, unless galvanizing is indicated. Standard weight (Schedule 40), unless otherwise indicated.

D. Galvanized Steel Pipe and Tube: ASTM A 53 / A 53M.

E. Steel Tubing: Cold-formed, ASTM A 500 / A 500M or hot-rolled, ASTM A 501.

F. Sheet Steel, Galvanized: ASTM A 123 / A 123M.

G. Sheet and Strip Steel, Hot-Rolled: ASTM A 568 / A 568M.

H. Structural Steel Sheet: Hot-rolled, ASTM A 134 or cold-rolled ASTM E 936, Class 1; of grade required for the design loading.

I. Galvanized Structural Steel Sheet: ASTM A 653 / A 653M, of grade required for the design loading. Coating designation as indicated, or if not indicated, G90.

J. Stainless Steel: AISI Type 304 for fumed and welded products. ASTM A 276 for base shapes and forging; ASTM A 167 or A 176 as best suited for plates, sheets and strip. Satin finish typical.

K. Gray Iron Castings: ASTM A 48, Class 30.

L. Malleable Iron Castings: ASTM A 47, grade as selected by the fabricator.

M. Steel Bar Grating: ASTM A 36 / A 36M or NAAMM MBG 531.

N. Brackets, Flanges and Anchors: Cast or formed metal of the same type material and finish as the supported fabrications.

O. Concrete Inserts. Threaded or wedge type; galvanized ferrous castings, either malleable iron, ASTM A 47, or cast steel, ASTM A 27. Provide bolts, washers and shims, as required, hot-dip galvanized, ASTM A 153.

P. Non-Shrink, Non-Metallic Grout: Premixed, factory-packaged, non-staining, non-corrosive, non-gaseous grout complying with ASTM C 1107 (formerly CE CRD-C621). POR-ROK Anchoring Cement by Minwax Co. division of Eastman Kodak Co., or approved equal. Comply with the manufacturer=s printed instructions.

Q. Welding Materials: AWS D1.1 / D1.1M. Type required for the materials being welded.

R. Anchors:

1. Threaded Type, Concrete Inserts: Galvanized malleable iron or cast steel capable of receiving 3/4" diameter machine bolts.

2. Slotted Type, Concrete Inserts: Welded box type, fabricated with a minimum 1/8" thick galvanized pressed steel plate with slots to receive 3/4" diameter square head bolts, and knockout cover.

3. Expansion Shield, Masonry Anchorage: FS FF-2-325.

4. Toggle Bolts: FS FF-B-588, type, class and style as required.

S. Fasteners:

1. Provide zinc-coated fasteners for exterior use or where built into exterior walls, Select fasteners for the type, grade and class required.

2. Bolts, Nuts and Washers at Interior Locations: ASTM A 307, Grade A, regular hexagon head.

3. Bolts, Nuts and Washers at Exterior Locations: ASTM A 307, galvanized per ASTM A 153.

4. Bolts, Round Head: ANSI B18.5.

5. Lag Bolts: Square head type, FS FF-B-561.

6. Plain Washers: Round, carbon steel, FS FF-W-92.

7. Lock Washers: Helical spring type, carbon steel, FS FF-W-84.

8. Masonry Anchorage Devices: Expansion shields, FS FF-S-325.

9. Toggle Bolts: Tumble-wing type, FS FF-B-588, type, class and style as required.

10. Machine Screws: Cadmium plated steel, FS FF-S-92.

11. Wood Screws: Flat head carbon steel, FS FF-S-111.

T. Primers:

1. Primer for Field Painting: Provide one of the following:

a. No. 99 Red Primer by Tnemec Co.

b. Ceco No. 15 Primox by Chessman-Elliot Company.

c. No. 7-C-19 by Rowe Products, Inc.

2. Touch-Up Primer for Galvanized Surfaces: High zinc dust content paint for re-galvanizing welds in galvanized steel, complying with SSPC-Paint-20 and ASTM A 780.

3. Section 01600 - Product Requirements: Product options and substitutions: Substitutions: Permitted.

U. Concrete Fill:

1. Concrete Materials and Properties: Comply with the requirements of Division 3 Sections for normal weight, ready-mix concrete with minimum 28-day compressive strength of 4,000 psi, 440 pounds cement per cubic yard, minimum, and a W/C ration of 0.65, maximum, unless higher strength is indicated.

2. Non-Slip Aggregate Finish: Factory-graded, packaged material containing fused aluminum oxide grits or crushed emery as abrasive aggregate; rust-proof and non-glazing; unaffected by moisture and cleaning materials.

2.2 ROUGH HARDWARE

A. Furnish bent or otherwise custom fabricated bolts, plates, anchors, hangers, dowels and other miscellaneous steel and iron shapes as required for framing and supporting woodwork, and for anchoring or securing woodwork to concrete or other structures. Straight bolts and other stock rough hardware items are specified in Sections of Division 6.

B. Fabricate items to the sizes, shapes, and dimensions required. Furnish malleable-iron washers for heads and nuts which bear on wood structural connections; elsewhere, furnish steel washers.

2.3 MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Provide steel framing and supports for the applications indicated, or which are not a part of the structural steel framework, as required to complete the work.

B. Fabricate miscellaneous units to the sizes, shapes, and profiles indicated or, if not indicated, of the required dimensions to receive adjacent other construction retained by framing and supports. Except as otherwise indicated, fabricate from structural steel shapes, plates, and steel bars, of welded construction using mitered joints for field connections. Cut, drill, and tap units to receive hardware, hangers, and similar items.

1. Equip units with integrally welded anchors for casting into concrete or building into masonry.

2. Furnish inserts if units must be installed after concrete has been placed.

3. Except as otherwise indicated, space anchors and inserts 16" o.c., and provide the minimum number of anchor units in the form of steel straps 1-1/4" wide x 8" long.

2.4 LOOSE BEARING AND LEVELING PLATES

A. Provide loose bearing and leveling plates for steel items bearing on concrete or masonry construction, made flat, free from warp and twist, and of the required thickness and bearing area. Drill plats to receive anchor bolts and for grouting, as required. Galvanize after fabrication.

2.5 MISCELLANEOUS STEEL TRIM

A. Provide shapes and sizes indicated for the profiles shown. Unless otherwise indicated, fabricate units from structural steel shapes, plates, and steel bars, with continuously welded joints and smooth exposed edges. Use concealed field splices wherever possible. Provide cutouts, fittings, and anchorages as required for the coordination of assembly and installation with other work.

B. Hot-dip galvanize miscellaneous framing and supports in exterior locations and where indicated.

2.6 SHELF AND RELIEVING ANGLES

A. Provide structural steel shelf and relieving angles of the sizes indicated for attachment to concrete farming. Provide slotted holes to receive 3/4" bolts, spaced not more than 6" from the ends and at not more than 24" o.c., unless otherwise indicated.

B. Hot-dip galvanize shelf angles to be installed on exterior concrete framing.

C. Furnish wedge-type concrete inserts, complete with fasteners, for attachment of shelf and angles to cast-in-place concrete.

2.7 STEEL LADDERS

A. Comply with OSHA, and the requirements of other agencies having jurisdiction.

B. Fabricate ladders for the locations shown, with dimensions, spacings, details and anchorages as indicated.

C. Wall Ladders: All steps / rungs shall be non-slip serrated treads or by coating of the rungs with aluminum oxide granules set in epoxy resin adhesive, or by using a manufactured rung filled with aluminum oxide grout. Hot-dip galvanize all ladders, brackets, and fasteners. Adhesive-applied coating strips are not acceptable.

1. Siderails: Continuous steel flat bars, with eased edges, 1/2@ x 2-1/2"; 18" apart.

2. Bar Rungs: Round steel bars, 3/4"diameter, spaced 12" o.c., unless otherwise noted.

3. Fit rungs at the centerline of side rails, plug weld and grind smooth on the outer rail faces.

4. Support ladders at the top and bottom, and at intermediate points spaced not more than 5'-0" o.c. by means of welded or bolted steel brackets.

5. Size brackets to support the design dead and live loads required, and to hold the centerline of the ladder rungs clear of the wall surface by not less than 7".

D. Provide safety post in accordance with Section 07724 - Roof Hatch.

2.8 ALUMINUM LADDERS

A. Wall Ladders: Aluminum, all welded; standard duty channel or tube shape rails; rungs 24" wide, spaced at 12" o.c., deep serrated aluminum, carry 1,000 pounds load without deformation or failure; aluminum pipe handrails not less than 1-1/2" in diameter with end caps; mill finish; standard wall mounting brackets.. OSHA / ANSI A14.3 compliant. Model 500 as manufactured by O=Keeffe=s Inc. or approved equal.

B. Ship Ladder: Aluminum, all welded; standard duty channel or tube shape rails; rungs 24" wide, spaced at 12" o.c., deep serrated aluminum, carry 1,000 pounds load without deformation or failure; aluminum pipe handrails not less than 1-1/2" in diameter with end caps; mill finish; standard wall mounting brackets; incline as shown on the Drawings. OSHA / ANSI A14.3 compliant. Model 520 as manufactured by O=Keeffe=s Inc. or approved equal.

2.9 PIPE BOLLARDS

A. Fabricate pipe bollards from Schedule 80 galvanized steel pipe.

B. Fabricate sleeves for bollard anchorage from galvanized steel pipe with 1/4" thick steel plate welded to the bottom of the sleeve.

2.10 METAL BAR GRATINGS

A. Provide close mesh bar gratings using bars of the type, material, sizes, spacing and construction indicated, or if not indicated, to support the truck loadings indicated. Comply with the AStandard Specifications for Metal Bar Grating and Metal Bar Grating Treads@ portion of the NAAMM, AMetal Bar Grating Manual@.

B. Material: Steel.

C. Type Grating: Welded.

D. Bearing Bars: Size and shape as required by the anticipated loading.

E. Cross Bars: Rectangular. Provide true alignment and equal spacing of the cross bars by notching the bearing bars prior to welding. Do not notch the bearing bars at supports to maintain elevation.

F. Traffic Surface: Plain.

G. Edge Band openings in the grating which interrupt four or more bearing bars with bars of the same size and material as the bearing bars.

H. Steel Finish: Hot-dip galvanized with a coating of not less than 1.5 oz. per square foot of coated surface.

2.11 METAL STAIR NOSINGS

A. Material: Cast aluminum with hatched aluminum abrasive surface, 1/4" nosing lip x 3" minimum depth, embedded; one piece the full width of stair treads and landings.

B. Manufacturers:

1. DSA3 by American Safety Technologies.

2. Style 3511 by American Safety Tread Co.

3. Type 231 by Wooster Products Inc.

4. Section 01600 - Product Requirements: Product options and substitutions: Substitutions: Permitted.

2.12 FABRICATION

A. Fabricate steel items according to the approved Shop Drawings and to the applicable portions of AISC Specifications.

B. Pre-assemble products in the shop to the greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for re-assemble and installation.

C. For fabrications exposed to view, use materials which are smooth and free of surface

blemishes including pitting, seam marks, roller marks, roller trade names and roughness. Remove blemishes by grinding or by welding and grinding prior to cleaning, treating and the application of surface finishes, including zinc coating.

D. Workmanship: Use materials of the size and thickness indicated or, if not indicated, as required to produce the strength and durability in the finished products for the intended use. Work to the dimensions indicated or accepted on the Shop Drawings, using proven details of fabrication and support. Use the type of materials indicated or specified.

E. Form exposed work true to line and level with accurate angles and surfaces and straight sharp edges. Fabricate items with joints tightly fitted and secured. Make exposed joints butt tight, flush and hairline. Ease exposed edges to a radius of approximately 1/32", unless otherwise indicated. Form bent-metal corners to the smallest radius possible, without causing grain separation or otherwise impairing the work.

F. Conceal welds where possible. Weld corners and seams continuously, complying with AWS and the Building Code. At exposed connections, grind the exposed welds smooth and flush to match and blend with the adjoining surfaces.

G. Form exposed connections with hairline joints, flush and smooth using concealed fasteners wherever possible. Use exposed fasteners of the type indicated or, if not indicated, Phillips flat-head (countersunk) screws, or bolts.

H. Exposed Mechanical Fastenings: Flush countersunk screws and bolts, unobtrusively located, except where specifically noted otherwise; consistent with the design.

I. Provide anchorage of the type indicated, coordinated with the supporting structure. Fabricate and space anchoring devices to provide adequate support for the intended use. Fabricate anchorage and related components of the same material and finish as the metal fabrication, unless indicated otherwise.

J. Cut, reinforce, drill and tap miscellaneous metal work, as indicated, to receive the finish hardware and similar items.

K. Fabricate joints which will be exposed to weather in a manner to exclude water, or provide weep holes where water may accumulate.

L. Galvanizing: For items indicated to be galvanized, apply zinc-coating by the hot-dip process in compliance with the following requirements:

1. ASTM A 153 / A 153M for galvanizing iron and steel hardware.

2. ASTM A 123 / A 123M for galvanizing both fabricated and un-fabricated iron and steel products made of un-coated rolled, pressed, and forged shapes, plates, bars, and strip 0.0299" thick and heavier.

3. ASTM A 123 / A 123M for galvanizing assembled steel products.

2.13 FINISHES, GENERAL

A. Comply with NAAMM, Metal Finishes Manual for Architectural and Metal Products, for recommendations relative to the application and designation of finishes.

B. Finish metal fabrications after assembly.

2.14 SHOP PAINTING AND PROTECTIVE COATING

A. Conform to SSPC-PA 1, including preparation for painting.

B. Apply shop primer to un-coated surfaces of metal fabrications, except those with a galvanized finish or to be embedded in concrete, masonry, or sprayed-on fireproofing, unless otherwise indicated. Comply with the requirements of SSPC-PA 1, "Paint Application Standards, Guides and Specifications No. 1", for shop painting.

C. Preparation for Shop Priming: Prepare un-coated ferrous metal surfaces to comply with the minimum requirements indicated below for SSPC surface preparation specifications and the environmental exposure conditions of the installed metal fabrications:

1. Interiors (SSPC Zone 1A): SSPC-VIS 3.

2. Exteriors (SSPC Zone 1B): SSPC-SP 6.

D. Shop primer for Ferrous Metal: Fast-curing, lead-free, abrasion-resistant, rust-inhibitive primer selected for compatibility with the substrates and with the types of alkyd-type paint systems indicated, and for compatibility to provide a sound foundation for field-applied topcoats, despite prolonged exposure; complying with the performance requirements of FS TT-P-86, Types I, II and III.

E. Hot-Dip galvanizing and zinc coatings applied on products fabricated from rolled, pressed, and forged steel shapes, plates, bars and strips shall comply with ASTM A 123 / A 123M. Galvanized surfaces, for which a shop coat of paint is specified, shall be chemically treated to provide a bond for the paint. Except for bolts and nuts, all galvanizing shall be done after fabrication.

F. Clean surfaces of rust, scale, grease and foreign matter in accordance with SSPC-SP 1 Solvent Cleaning, prior to finishing. Prepare surfaces for painting in accordance with SSPC-SP 2, SSPC-VIS 3 or SSPC-SP 7.

G. Do not prime surfaces that will be in direct contact with concrete, or where field welding is required.

H. Prime paint items scheduled, with one coat.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Coordinate and furnish anchorages, setting drawings, diagrams, templates, instructions, and directions for the installation of anchorages, such as concrete inserts, sleeves, anchor bolts, and miscellaneous items having integral anchors to be embedded in concrete or masonry.

B. Coordinate the delivery of such items to the Project Site.

3.3 INSTALLATION

A. Fastening to In-Place Construction: Provide anchorage devices and fasteners, where necessary, for securing miscellaneous metal fabrications to in-place construction, including threaded fasteners for concrete and masonry inserts, toggle bolts, through-bolts, lag bolts, wood screws, and other connectors, as required.

B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for the installation of miscellaneous metal fabrications. Set fabrications accurately in location, alignment, and elevation with edges and surfaces level, plumb, true, and free of rack; measured from established lines and levels.

C. Setting Loose Plates: Clean concrete or masonry bearing surfaces of any bond-reducing materials, and roughen to improve bond to the surfaces. Clean the bottom surface of bearing plates.

D. Set loose leveling and bearing plates on wedges, or other adjustable devices. After the bearing members have been positioned an plumbed, tighten the anchor bolts. Do not remove the wedges or shims, but if protruding , cut-of flush with the edge of the bearing plate before packing with grout. Use metallic non-shrink grout in concealed locations where not exposed to moisture; use non-metallic, non-shrink grout in exposed locations, unless otherwise indicated. Pack grout solidly between bearing surfaces and pates to ensure that no voids
remain.

E. Provide temporary bracing or anchors in the formwork for items to be built into concrete, masonry or similar construction.

F. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints, but cannot be shop welded because of shipping size limitations. Grind exposed joins smooth and touch-up shop paint coat. Do not weld, cut or abrade the surfaces of exterior units which have been hot-dip galvanized after fabrication, and are intended for bolted or screwed field connections.

G. Bollards:

1. Anchor bollards in concrete by means of pipe sleeves preset and anchored into a concrete footing. After bollards have been inserted into sleeves, fill the annular space between the bollard and the sleeve solid with non-shrink, non-metallic grout, mixed and placed to comply with the grout manufacturer=s directions.

2. Fill bollards with concrete and round off the top.

H. Metal Bar Gratings:

1. Comply with the recommendations of NAAMM, AMetal Bar Gratings Manual@, for the installation of gratings, including installation clearances and standard anchoring details.

2. Secure removable units to supporting members with the type and size clips and fasteners indicated, of if not indicated, as recommended by the grating manufacturer for the type of installation conditions shown.

3. Secure non-removable units to supporting members by welding where both materials are the same, otherwise fasten by bolting, as indicated.

I. Field Welding: Comply with the AWS Code for procedures of manual shielded metal-arc welding, appearance and quality of the welds made and methods used in correcting

welding work, and the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion-resistance of the base metal.

2. Obtain fusion without undercut or overlap.

3. Remove welding flux immediately.

4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and the contour of the welded surface matches the adjacent surfaces.

J. Touch-Up For Galvanized Surfaces: Clean the welds, bolted connections and abraded areas, and apply two (2) coats of galvanizing repair paint in compliance with SSPC Paint 20 and ASTM A 780.

K. Touch-Up Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with the same material as used for shop painting; comply with SSPC-PA 1 requirements for touch-up of field painted surfaces.

1. Apply by brush or spray and provide a minimum dry film thickness of 2.0 mils.

3.4. ISOLATION REQUIREMENTS

A. Dissimilar Metals:

1. Where metal surfaces are in contact with, or fastened to dissimilar metals except stainless steel, zinc or zinc coating, the metal shall be protected from the dissimilar metal.

2. Where drainage from a dissimilar metal passes over the metal, paint the dissimilar metal with a non-lead pigmented paint.

B. Cementitious Materials: Paint metal where in contact with mortar, concrete, masonry or other cementitious material, with an alkali-resistant coating such as heavy-bodied bituminous paint or epoxy paint.

C. Wood Contact: Isolate metal from cedar, redwood, oak and acid-treated lumber by means of unbroken 6-mil polyethylene construction sheet or a heavy coating of metal-protective paint.

D. Surfaces in contact with sealants after installation need not be coated with any type of protective material.

3.5 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect fabrications and installations for alignment, attachment to the structure, and secure and rigid installation.

3.6 ADJUSTING AND CLEANING

A. Section 01700 - Execution Requirements: Adjusting the installed work

END OF SECTION

SECTION 05520

STEEL HANDRAILS AND GUARDS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Steel handrails and guards.

2. Stainless guardrails.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Substrate for anchoring handrails and guards.

2. Section 04230 - Reinforced Unit Masonry: Substrate for anchoring handrails and guards.

3. Section 05500 - Metal Fabrications: Inserts and anchors for handrails and guards.

4. Section 09900 - Painting: Finishing of handrails and guards.

D. Products Furnished By But Not Installed Under this Section: Inserts and anchors preset in concrete and masonry for anchorage.

1.2 DESCRIPTION OF WORK

A. The extent of handrails and guards work is indicated on the Drawings and as specified herein, and includes providing, fabricating and installing miscellaneous steel handrails and guards not included in other Sections of these Specifications.

B. Handrails and guards shall comply with the applicable Building Code, ADAAG, and other Codes and standards which apply to this work of this Section.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Institute of Steel Construction (AISC):

1. Specification for Structural Steel for Buildings.

C. American National Standards Institute (ANSI):

1. ANSI B18.5 - Round Head Bolts (Inch Series).

2. ANSI B18.6.1 - Wood Screws (Inch Series).

D. American Society for Testing and Materials (ASTM):
1. ASTM A 36 / A 36M - Specification for Carbon Structural Steel.

2. ASTM A 53 / A 53M - Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.

3. ASTM A 123 / A 123M - Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

4. ASTM A 136 - Specification for Pipe, Steel, Electric-Fusion (ARC)-Welded (Sizes NPS 16 and Over).

5. ASTM A 153 / A 153M - Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

6. ASTM A 167 - Specification for Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet and Strip.

7. ASTM A 176 - Specification for Stainless and Heat-Resisting Chromium Steel Plate, Sheet and Strip.

8. ASTM A 276 - Specification for Stainless Steel Bars and Shapes.

9. ASTM A 500 / A 500M - Specification for Cold-formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.

10. ASTM A 501 - Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing.

11. ASTM A 568 / A 568M - Specification for Steel, Sheet, Carbon, Structural, and High-Strength, Low-Alloy, Hot-Rolled and Cold-Rolled, General Requirements for.

12. ASTM A 780 - Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.

13. ASTM C 1107 - Specification for Dry, Hydraulic-Cement Grout (Nonshrink).

E. American Welding Society (AWS):

1. AWS D1.1 / D1.1M - Structural Welding Code - Steel.

F. Americans with Disabilities Act Accessibility Guidelines (ADAAG):

1. Accessibility Guidelines for Buildings and Facilities.

G. International Code Council:

1. International Building Code (IBC), 2009.

H. SSPC: The Society for Protective Coatings (formerly Structural Steel Painting Council):

1. SSPC Painting Manual.

2. SSPC-PA 1- Shop, Field, and Maintenance Painting of Steel.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Submit manufacturer=s product specifications and installation instructions for the products and processes used in handrails and guards, including grouting and finishing.

2. Shop Drawings: Submit for fabrication and erection of handrails and guards, including plans, elevations and details of fittings, connections, joining methods, sizes and shapes, anchorage, and relationship to other work. Provide templates for anchors and bolts installation by others.

3. Samples: Submit for each type of metal finish indicated. Prepare samples on metal of the same gage and alloy to be used in the work. Include 6" long samples of stainless steel railing members including handrails, toprails, posts, and rail coverings, if any. Include samples of fittings and brackets.

4. Assurance / Control Submittals:

a. Manufacturer=s certificate that the product meet or exceed the specified requirements.

b. Calculations indicating that the system and anchorage satisfies the performance requirements.

c. Documentation of experience indicating compliance with the specified qualifications requirements.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

B. Performance Requirements: Handrails and guards shall be designed, fabricated and installed to meet the structural loading conditions below, unless otherwise indicated:

1. Handrails and guards shall be designed to resist a load of 50 pounds per linear foot applied in any direction at the top and to transfer the load through the supports to the structure.

2. Handrails and guards shall be able to resist a single concentrated load of 200 pounds, applied in any direction, at any point along the top, and to transfer the load through the supports to the structure. This load need not be assumed to act concurrently with the loads specified above.

3. Intermediate rails (all those except the handrail), balusters and panel fillers shall be designed to withstand a horizontally applied normal load of 50 pounds on an area equal to 1 square foot, including openings and space between rails. Reactions due to this loading are not required to be superimposed with those of the above loads.

C. Engineering of each handrail and guard assembly is the responsibility of the manufacturer of the assembly.

D. Shop Assembly: Preassemble items in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only, as necessary, for shipping and handling limitations. Clearly mark the units for reassembly and coordinated installation.

1.6 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Protect the materials from corrosion, deformation and other damage during delivery, storage and handling.

C. Deliver products to the Project Site in the fabricator=s original, unopened packages, containers or bundles.

D. Store and protect the materials with a weatherproof covering; ventilate to avoid condensation.

PART 2 PRODUCTS

2.1 MATERIALS

A. General: Comply with the standards indicated for shapes and types of metals indicated, or required for the handrail and guards components. For fabrication of miscellaneous metal work which will be exposed to view, use only materials which are smooth and free of surface blemishes including pitting, seam marks, roller marks, rolled trade names and roughness.

B. Steel:

1. Steel Plates, Shapes and Bars: ASTM A 36.

2. Steel Tubing: Cold-formed, ASTM A 500; or hot-rolled, ASTM A 501.

3. Structural Steel Sheet: Hot-rolled and cold-rolled ASTM A 568 / A 568M, Class 1; of the grade required for the design loading.

4. Steel Pipe: ASTM A 53; type and grade as selected by the manufacturer, and as required for the design loading; black finish unless galvanizing is indicated; standard weight (Schedule 40).

5. Stainless Steel: AISC, Type 304 for fumed and welded products; ASTM A 276 for base shapes and forging; ASTM A 167 or A 176, as best suited for plates sheets and strip. Satin finish typical.

6. Brackets, Flanges and Anchors: Cast or formed metal of the same type material and finish as the supported rails.

C. Non-Shrink, Non-Metallic Grout: Pre-mixed, factory-packaged, non-staining, non-corrosive, non-gaseous, complying with ASTM C 1107 (formerly CE CRD-C621). Provide grout specifically recommended by the manufacturer for interior and exterior applications of the type specified in this Section.

D. Welding Electrodes and Filler Metal: Provide the type and alloy of filler metal and

electrodes recommended by the producer of the metal to be welded, and as required for color match, strength and compatibility in fabricated items.

E. Fasteners: Use fasteners of the same basic metal as the fastened metal. Do not use metals which are corrosive or incompatible with the materials joined.

F. Provide concealed fasteners for the interconnection of handrail and guard components, and for their attachment to other work.

1. Provide Phillips flat-head machine screws for exposed fasteners.

G. Anchors and Inserts: Provide anchors of the proper type, size, and material for the type of loading and installation condition shown, as recommended by the manufacturer, unless otherwise indicated. Use stainless steel anchors and inserts. Use lead expansion shield devices for drilled-in anchors. Furnish inserts required to be set into concrete and masonry work.

2.2 FABRICATION

A. General: Fabricate handrails and guards to the design, dimensions and details shown.

1. Provide handrail and guard members in the sizes, profiles and wall thickness indicated, with supporting posts and brackets of the size and spacing shown, but not less than required to support the design loads indicated.

2. The gripping portion of handrails with a circular cross section shall be as shown on the Drawings, but shall have an outside diameter of at least 1-1/4" but not greater than 2".

3. Handrails shall return to a wall, guard or the walking surface or shall be continuous to the handrail of an adjacent stair flight or ramp run.

4. Handrails shall extend horizontally at least 12" beyond the top riser and continue to slope for the depth of one tread beyond the bottom riser.

5. At ramps where the handrails are not continuous between runs, handrails shall extend horizontally above landings 12" minimum beyond the top and bottom of ramp runs.

6. Handrail extensions shall be in the same direction of stair flights at stairways and ramp runs at ramps.

7. Comply with ADAAG for additional extension requirements.

B. Steel Fabrication: Form exposed connections with hairline joints, flush and smooth. Weld corners and seams continuously, complying with AWS recommendations. At exposed connections, grind welds smooth and flush to match and blend with the adjoining surfaces.

1. Join steel handrail and guard members by butt-welding or welding with internal connectors, at the fabricator=s option. At tee and cross intersections, provide coped joints.

2. At bends, join pipes by means of prefabricated elbow fittings or flush radius bends, of the radiuses indicated. Form bends by the use of prefabricated elbow fittings and radius bends, or by bending the pipe at the fabricator=s option. Form simple and compound curves by bending pipe in jigs to produce a uniform curvature. Maintain the cylindrical cross section of the pipe throughout the entire

bend without buckling, twisting or otherwise deforming exposed surfaces of the pipe.

3. Close exposed ends of pipes by welding 3/16" thick steel plate in place, or by the use of prefabricated fittings.

4. Provide wall returns at the ends of wall-mounted handrails.

A. Brackets, Flanges, Fittings and Anchors: Provide the manufacturer's standard brackets, flanges, end closures, miscellaneous fittings and anchors for the connection of handrail and guard members to other work. Furnish inserts and other anchorage devices for connecting handrails and guards to concrete and masonry. Fabricate and space anchorage devices, as indicated, and as required to provide adequate support. Coordinate anchorage devices with the supporting structure.

C. Toe Boards: Where indicated, provide toe boards at guards around openings and the edge of open-sided floors and platforms. Fabricate to the dimensions and details indicated, or if not indicated, use a 4" high x 1/8" plate welded to, and centered between, each guard post.

G. Weeps: For exterior exposed units, fabricate joints which will be exposed to weather, to exclude water, or provide weep holes where water may accumulate.

2.3 FINISHES

A. Steel Finish: Paint finish per Section 09900 - Painting for galvanized and plain steel. Apply shop primer to the surfaces of metal fabrications, except those which are galvanized, or as indicated to be embedded in concrete or masonry, and in compliance with the requirements of SSPC-PA 1 for shop painting. Apply an extra coat at exposed welds.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section -01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Coordinate setting drawings, diagrams, templates, instructions, and directions for installation of anchorages, such as sleeves, concrete inserts, anchor bolts and miscellaneous items having integral anchors, which are to be embedded in concrete or masonry. Coordinate the delivery of such items to the Project Site.

B. Field Measurements: Take field measurements prior to the preparation of Shop Drawings and fabrication, where possible. Do not delay job progress. Allow for adjustments during installation where the taking of field measurements before fabrication might delay the work.

3.3 INSTALLATION

A. Fit exposed connections accurately together to form tight, hairline joints.

B. Perform cutting, drilling and fitting required for the installation of handrails and guards. Set work accurately in location, alignment and elevation, plumb, level, true to line and free of rack, measured from established lines and levels. Do not weld, cut or abrade surfaces of handrail and guard components which have been coated or finished after fabrication, and are intended for field connection by mechanical means without further cutting or fitting.

C. Corrosion Protection: Paint metal surfaces where in contact with mortar, concrete or other masonry materials with alkali-resistant coatings such as heavy-bodied bituminous paint or epoxy paint.

D. Adjust handrails and guards prior to anchoring to ensure matching alignment at abutting joints. Space posts at the interval indicated, or if not indicated, as required by the design loadings.

E. Plumb posts in each direction. Secure posts and railing ends as follows:

1. Anchor posts in concrete by means of sleeves pre-set and anchored into concrete. After posts have been inserted into sleeves, fill the space between the posts and sleeves solid with non-shrink, non-metallic grout, mixed and placed to comply with the grout manufacturer's instructions.

2. Leave anchorage joint exposed; wipe off excess grout and leave 1/8" build-up sloped away from the posts. For installations exposed on the exterior or to the flow of water, seal the grout to comply with the grout manufacturer's directions.

3. Anchor posts to metal surfaces with the manufacturer's standard fittings designed for the purpose.

F. Anchoring Guard Ends:

1. Anchor guards into concrete or masonry with the manufacturer's standard fittings designed for the purpose.

2. Anchor guards to metal surfaces with the manufacturer's standard fittings using concealed fasteners.

H. Attachment of Handrails and Guards to Walls:

1. Secure handrails and guards to walls with the manufacturer's standard wall brackets and end fittings. Provide brackets with 1-1/2" clearance between the wall and the inside face of handrails. Locate brackets as indicated or, if not indicated, at spacings required by the design loading.

2. Secure wall brackets and wall return fitting as follows:

a. Use the type of bracket with flanges tapped for concealed anchorage to threaded hanger bolts.

b. For concrete and solid masonry anchorage, use drilled-in expansion shields and concealed hanger bolts.

c. For hollow masonry anchorage, use toggle bolts with square heads.

d. For stud partitions anchorage, use lag bolts fastened to treated wood blocking between studs. Coordinate with the stud spacing for the accurate location of blocking members.

3.4. ISOLATION REQUIREMENTS

A. Dissimilar Metals: Where metal surfaces are in contact with, or fastened to dissimilar metals except stainless steel, zinc or zinc coating, the metal shall be protected from the dissimilar metal. Where drainage from a dissimilar metal passes over the metal, paint the dissimilar metal with a non-lead pigmented paint.

B. Cementitious Materials: Paint metal where in contact with mortar, concrete, masonry or other cementitious material, with an alkali-resistant coating such as heavy-bodied bituminous paint or epoxy paint.

C. Wood Contact: Isolate metal from cedar, redwood, oak and acid-treated lumber by means of unbroken 6-mil polyethylene construction sheet or a heavy coating of metal-protective paint.

D. Surfaces in contact with sealants after installation need not be coated with any type of protective material.

3.5 CONSTRUCTION

A. Site Tolerances:

1. Maximum Variation from Plumb: 1/4".

2. Maximum Offset From True Alignment: 1/4".

3. Maximum Out-of-Position: 1/4".

3.6 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting the installed work.

B. Remove protective covering at completion of the Project, or when directed by the Owner=s representative.

C. Restore finishes damaged during installation and construction so no evidence of the corrective work is noticeable.

D. Return items which cannot be refinished in the field to the shop, make the required alterations and refinish the entire unit, or provide a new unit.

3.7 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect installations for accurate location, alignment, elevation, plumb, level, true and free of rack.

3.8 PROTECTION

A. Protect finishes of handrails and guards from damage during construction by use of temporary protective coverings, approved by guard manufacturer.

END OF SECTION

SECTION 05720

ALUMINUM HANDRAILS AND GUARDS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Aluminum handrails.

2. Aluminum guardrails.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-in-Place Concrete: Substrate for attachment of handrails and guards.

2. Section 04230 - Concrete Unit Masonry: Substrate for attachment of handrails and guards.

D. Products Furnished By But Not Installed Under this Section: Inserts and anchors preset in concrete and masonry for anchorage.

1.2 DESCRIPTION OF WORK

A. The extent of handrails and guards work is indicated on the Drawings and as specified herein, and includes providing, fabricating and installing miscellaneous aluminum handrails and guards not included in other Sections of these Specifications.

B. Handrails and guards shall comply with the Building Code, ADAAG, and other Codes and standards which apply to this work of this Section.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. The Aluminum Association, Inc. (AA):

C. American Society for Testing and Materials (ASTM):

1. ASTM B 26 / B 26M - Specification for Aluminum-Alloy Sand Castings.

2. ASTM B 209 - Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

3. ASTM B 221 - Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles and Tubes.

4. ASTM B 429 / B 429M - Specification for Aluminum-Alloy Extruded Structural Pipe

and Tube.

5. ASTM C 1107 - Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink).

D. Americans with Disabilities Act Accessibility Guidelines (ADAAG):

1. Accessibility Guidelines for Buildings and Facilities.

E. International Code Council:

1. International Building Code (IBC), 2009.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer=s product specifications, anchor details and installation instructions for the products and processes used, including finishing and grouting.

2. Shop Drawings: For the fabrication and installation of handrails and guards, including plans, elevations and details of fittings, connections, joining methods, sizes and shapes, anchorage and relationship to other work. Provide templates for anchor and bolt installations by others.

3. Samples: For each type of metal finish indicated. Prepare samples on metal of the same gage and alloy to be used in the work. Where normal color and texture variations are to be expected, provide "range" samples showing the limits of such variations.

a. 6" long samples of distinctly different railing members, including handrails, toprails, posts, and rail coverings, if any.

b. Include samples of fittings and brackets.

4. Assurance / Control Submittals:

a. Fabricator=s certificate that the products meet or exceed the specified requirements.

b. Calculations indicating that the system and anchorage satisfies the performance requirements.

c. Documentation of experience indicating compliance with the specified qualifications requirements.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in fabricating the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

B. Performances Requirements: Handrails and guards shall be designed, fabricated and installed to meet the structural loading conditions below, unless otherwise indicated:

1. Handrails and guards shall be designed to resist a load of 50 pounds per linear foot applied in any direction at the top and to transfer the load through the supports to the structure.

2. Handrails and guards shall be able to resist a single concentrated load of 200 pounds, applied in any direction, at any point along the top, and to transfer the load through the supports to the structure. This load need not be assumed to act concurrently with the loads specified above.

3. Intermediate rails (all those except the handrail), balusters and panel fillers shall be designed to withstand a horizontally applied normal load of 50 pounds on an area equal to 1 square foot, including openings and space between rails. Reactions due to this loading are not required to be superimposed with those of the above loads.

C. Engineering: Engineering of each assembly is the responsibility of the manufacturer of the assembly.

D. Shop Assembly: Preassemble items in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

1.6 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Protect finished aluminum surfaces with a strippable coating. Do not use adhesive papers or sprayed coatings which bond when exposed to sunlight or weather.

C. Pack, box, ship, unload, store and protect the products in a manner to avoid abuse, damage and defacement.

D. Deliver products to the Project Site in the manufacturer=s original, unopened protective packaging.

E. Store inside, protected from weather.

F. Store to provide for water drainage and air circulation.

1.7 MAINTENANCE

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Provide the Owner with two (2) gallons, minimum, of touch-up paint to match the finish.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Newman Brothers, Inc.
2. Poma Construction Corp.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS

A. Metals: Comply with the standards indicated for shapes and types of metals indicated or required for handrail and railing components.

B. Aluminum: Alloy and Temper: Provide alloy and temper recommended by aluminum producer or finisher for type of use and finish indicated, and with not less than the strength and durability properties of the alloy and temper, designated below for each aluminum form required.

1. Extruded Bar and Shape: ASTM B 221, 6063-T6.

2. Extruded Pipe and Tube: ASTM B 429 / B 429M, 6063-T6.

1. Plate and Sheet: ASTM B 209, 6061-T6.

2. Castings: ASTM B 26 / B 26M, 356-T6.

C. Non-Shrink, Non-Metallic Grout: Premixed, factory-packaged, non- staining, non-corrosive, non-gaseous grout complying with ASTM C 1107 (formerly CE CRD-C621). Provide grout specifically recommended by the manufacturer for interior and exterior applications of the type specified in this Section, POR-ROK Anchoring Cement by Minwax Co. division of Eastman Kodak Co., or approved equal.

D. Welding Electrodes and Filler Metal: Provide the type and alloy of filler metal and electrodes recommended by the producer of the metal to be welded, and as required for color match, strength and compatibility in the fabricated items.

E. Fasteners: Use fasteners of the same basic metal as the fastened metal, unless otherwise indicated. Do not use metals which are corrosive or incompatible with materials joined.

1. Provide concealed fasteners for the interconnection of handrail and railing components, and for their attachment to other work, except where otherwise indicated.

2. Provide Phillips flat-head machine screws for exposed fasteners, unless otherwise indicated.

F. Anchors and Inserts: Provide anchors of the proper type, size, and material for the type of loading and installation condition shown, as recommended by manufacturer, unless otherwise indicated. Use stainless steel anchors and inserts. Use lead expansion bolt devices for drilled-in anchors. Furnish inserts, as required, to be set into concrete and masonry work.

2.3 FABRICATION

A. General:

1. Fabricate handrails and guards to the design, dimensions and details shown. Provide handrail and guard members in the sizes and profiles indicated, with supporting posts and brackets of the size and spacing shown, but not less than required to support the design loads indicated.

2. The gripping portion of handrails with a circular cross section shall be as shown

on the Drawings, but shall have an outside diameter of at least 1-1/4" but not greater than 2".

3. Handrails shall return to a wall, guard or the walking surface or shall be continuous to the handrail of an adjacent stair flight or ramp run.

4. Handrails shall extend horizontally at least 12" beyond the top riser and continue to slope for the depth of one tread beyond the bottom riser.

5. At ramps where the handrails are not continuous between runs, handrails shall extend horizontally above landings 12" minimum beyond the top and bottom of ramp runs.

6. Handrail extensions shall be in the same direction of stair flights at stairways and ramp runs at ramps.

7. Comply with ADAAG for additional extension requirements.

B. Non-welded Connections: Fabricate for the interconnection of members by means of the manufacturer's standard concealed mechanical fasteners and fittings, unless otherwise indicated. Fabricate members and fittings to produce flush, smooth, rigid, hairline mitered joints.

1. Fabricate splice joints for field connection using epoxy structural adhesive where this represents the manufacturer's standard splicing method.

C. Welded Connections: Fabricate for the interconnection of members by concealed internal welds to eliminate surface grinding, using the manufacturer's standard system of sleeve and socket fittings.

D. Radius Bends: Form to a uniform radius with smooth finished surfaces free from buckles and twists.

E. Provide wall returns at the ends of wall-mounted handrails.

F. Close exposed ends of handrail and railing members by use of the manufacturer's standard prefabricated end fittings.

G. Brackets, Flanges, Fittings and Anchors: Provide the manufacturer's standard brackets, flanges, end closures, miscellaneous fittings and anchors for the connection of members to other work. Furnish inserts and other anchorage devices for connecting to concrete and masonry. Fabricate and space anchorage devices, as indicated and as required to provide adequate support. Coordinate anchorage devices with the supporting structure.

H. Toe Boards: Where indicated, provide toe boards at guards around openings and the edge of open-sided floors and platforms. Fabricate to the dimensions and details indicated, or if not indicated, use a 4" high x 1/8" plate welded to, and centered between, each guard post.

I. Weeps: For exterior exposed units, fabricate joints which will be exposed to weather so as to exclude water, or provide weep holes where water may accumulate.

2.4 ALUMINUM FINISH

A. Siliconized powder coating: Kynar or approved equal.

B. Anodized.

C. Powder coat.

D. Color as selected from manufacturer=s standards.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Coordinate setting drawings, diagrams, templates, instructions, and directions for the installation of anchorages, such as sleeves, concrete inserts, anchor bolts and miscellaneous items having integral anchors to be embedded in concrete or masonry. Coordinate the delivery of such items to the Project Site.

B. Field Measurements: Take field measurements prior to the preparation of Shop Drawings and fabrication, where possible. Do not delay job progress. Allow for adjustments during installation where the taking of field measurements before fabrication might delay the work.

3.3 INSTALLATION

A. Fit exposed connections accurately together to form tight, hairline joints.

B. Perform cutting, drilling and fitting required for the installation. Set work accurately in location, alignment and elevation, plumb, level, true to line and free of rack, measured from established lines and levels. Do not weld, cut or abrade surfaces of components which have been coated or finished after fabrication, and are intended for field connection by mechanical means without further cutting or fitting.

C. Corrosion Protection: Coat concealed surfaces of aluminum, which will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of epoxy paint.

D. Adjust prior to anchoring to ensure matching alignment at abutting joints. Space posts at the intervals indicated, or if not indicated, as required by the design loads.

E. Anchoring Posts:

1. Anchor posts by means of sleeves preset and anchored into concrete. After posts have been inserted into the sleeves, fill the space between the posts and sleeves solid with non-shrink, non-metallic grout, mixed and placed to comply with the grout manufacturer's directions.

2. Leave anchorage joints exposed. Wipe off excess grout and leave 1/8" build-up, sloped away from the post. For installations exposed on the exterior, or to the flow

of water, seal the grout in compliance with the grout manufacturer's instructions.

3. Anchor posts to metal surfaces with the manufacturer's standard fittings designed for the purpose, unless otherwise indicated.

F. Railing Connections:

1. Permanently connect components together using the manufacturer's standard mechanical or adhesive joiner method and fittings, unless otherwise indicated. Use wood blocks and padding to prevent damage to members and fittings. Seal recessed holes of exposed locking screws using plastic filler, colored to match the finish of the handrails and guards.

G. Anchoring Handrails and Guards Ends:

1. Anchor ends into concrete and masonry with the manufacturer's standard fittings designed for the purpose, unless otherwise indicated.

2. Anchor ends to metal surfaces with the manufacturer's standard fittings using concealed fasteners, unless otherwise indicated.

H. Attachment of Handrails and Guards to Walls:

1. Secure to walls with the manufacturer's standard wall brackets and end fittings; maintain 1-1/2" clearance between walls and the rail.

2. For anchorage to concrete and solid masonry, use drilled-in expansion shields and concealed hanger bolts, unless otherwise indicated.

3. For hollow masonry anchorage, use toggle bolts with square heads, unless otherwise indicated.

4. For anchorage to stud partitions use lag bolts fastened to treated wood blocking between the studs. Coordinate with the spacing of studs for accurate location of the blocking.

3.4 ISOLATION REQUIREMENTS

A. Dissimilar Metals: Where aluminum surfaces are in contact with, or fastened to dissimilar metals except stainless steel, zinc or zinc coating, the aluminum shall be protected from the dissimilar metal. Where aluminum contacts another metal, paint the dissimilar metal with epoxy paint. Where drainage from a dissimilar metal passes over aluminum, paint the dissimilar metal with a non-lead pigmented paint.

B. Cementitious Materials: Paint aluminum where in contact with mortar, concrete, masonry or other cementitious material, with an alkali-resistant coating such as heavy-bodied bituminous paint or epoxy paint.

C. Wood Contract: Isolate aluminum from cedar, redwood, oak and acid-treated lumber by means of unbroken 6-mil polyethylene construction sheet or a heavy coating of metal-protective paint.

D. Surfaces in contact with sealants after installation need not be coated with any type of protective material.

3.5 CONSTRUCTION

A. Site Tolerances:

1. Maximum Variation from Plumb: 1/4".

2. Maximum Offset From True Alignment: 1/4".

3. Maximum Out-of-Position: 1/4".

3.6 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting the installed work.

B. Protect finishes of guards and handrails from damage during construction by use of temporary protective coverings approved by the railing manufacturer.

C. Remove protective covering at project completion.

D. Restore finishes damaged during installation and construction so no evidence of the corrective work remains.

E. Return items which cannot be refinished in the field to the shop, make the necessary alterations, and refinish the entire unit, or provide a new unit, as required.

3.7 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect the installations for correct location, alignment and elevation, plumb, level, true to line, free of rack and secure attachment and anchorage.

3.8 PROTECTION

A. Protect the finishes of the handrails and guards from damage during construction by the use of temporary protective coverings approved by the manufacturer.

END OF SECTION

SECTION 05800

EXPANSION CONTROL

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Exterior expansion joint sealing systems at junctures of buildings above and below grade.

2. Interior expansion joint cover assemblies.

3. Fire-rated joint sealing assemblies.

4. Pre-molded joint fillers.

5. Roof expansion joints.

6. Accessories.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Substrate for attachment.

2. Section 07120 - Fluid-Applied Urethane Roofing: Adjacent roof finish material.

3. Section 07620 - Sheet Metal Flashing and Trim: Flashing and trim.

4. Section 07900 - Joint Sealers: Caulking and sealants.

1.2 DESCRIPTION OF WORK

A. The extent of the expansion control work is indicated on the Drawings and as specified herein, and includes providing and installing expansion and contraction joints and accessories required for complete systems installation.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society for Testing and Materials (ASTM):

1. ASTM A 167 - Standard Specification for Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet and Strip.

2. ASTM B 221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods. Wire, Shapes and Tubes.

3. ASTM C 920 - Standard Specifications for Elastomeric Joint Sealants.

4. ASTM E 1399 - Standard Test Methods for Cyclic Movement and Measuring the Minimum Joint Widths of Architectural Systems.

C. American Iron and Steel Institute (AISI).

D. International Code Council:

1. International Building Code (IBC), 2009.

E. Copper Development Association (CDA).

F. Federal Specifications (FS):

1. FS TT-C-494 - Coating Compound, Bituminous, Solvent Type, Acid Resistant.

G. National Association of Architectural Metal Manufacturers (NAAMM).

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer's product specifications, installation instructions and general recommendations for each specified material and fabricated product.

2. Shop Drawings: Indicate layout, joining, profiles, and anchorages of expansion and contraction joint products.

3. Samples: 8" long samples of the specified materials to be exposed as finished surfaces, when requested.

4. Assurance / Control Submittals:

a. Manufacturer's certificate that the products meet or exceed the specified requirements.

b. Documentation of experience indicating compliance with the specified qualifications requirements.

1.5 QUALITY ASSURANCE

A. Single-Source Responsibility: Obtain all expansion joint cover assemblies from a single manufacturer.

B. Coordinate compatibility with expansion joint cover assemblies specified in other Sections.

C. Fire-Test-Response Characteristics: Where indicated, provide expansion joint cover assemblies whose fire resistance has been determined per ANSI / UL 263, NFPA 251, UBC 43-1 or ASTM E 119, including hose stream test of vertical wall assemblies, by a nationally recognized testing and inspecting agency acceptable to the government authorities having jurisdiction.

1. Fire-Resistance Rating: Not less than the rating of the adjacent construction.

D. Qualifications:

1. Manufacturer: Company specializing in fabricating the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

E. Performance Requirements:

1. Design and install to withstand the following loading requirements, where applicable:

a. Design, fabricate and install to resist combined positive and negative windloading in accordance with IBC 2009, Section 1609 with a Vmph of 170, qs of 74.0 psf, exposure [B] [C] [D] and importance factor [1.0] [1.25] [1.5], as applicable per ASCE 7.

b. In no case shall the combined loading be less than 75 psf.

c. Comply with requirements of the applicable Building Code, if more stringent than the requirements stated above.

F. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Warranty: Submit a written Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.6 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store, and protect the products.

B. Deliver products to the Project Site in the manufacturer=s original, unopened protective packaging.

C. Stack the materials to prevent twisting, bending and abrasion. Slope metal sheets to ensure drainage. Provide ventilation.

D. Prevent contact with materials which may cause corrosion or discoloration.

1.7 JOB CONDITIONS

A. Coordinate the work of this Section with interfacing and adjoining work for the proper sequencing of each installation. Ensure the best possible weather resistance, appearance and durability of the work, and protection of the materials and finishes.

1.8 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Special Warranty:

1. Provide a written Warranty jointly signed by the manufacturer and the installer certifying that the products and the installation is free of defective materials and workmanship and will replace or repair any defective component or the system, in whole or in part, as necessary to provide an installation meeting its intended purpose and integrity.

2. Warranty Period: One (1) year for labor, materials and installation; two (2) years against leaks from the date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Balco, Inc.

2. C/S Group.

3. Metalines, Inc.

4. MM Systems Corp.

5. Watson Bowman Acme Corp.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS

A. Aluminum: ASTM B 221, alloy 6063-T5 for extrusions; ASTM B 209, alloy 6061-T6 for sheet and plates.

1. Protect aluminum surfaces to be placed in contact with cementitious materials with a protective coating.

B. Bronze: ASTM B 455, alloy C38500 for extrusions; alloy C28000 Muntz Metal for plates.

C. Brass: UNS alloy C26000 for half hard sheet and coil.

D. Stainless Steel: ASTM A 167, Type 304 with non-slip finish, unless indicated otherwise, for plates, sheets, and strips. Finish as selected from the manufacturer=s standards..

E. Extruded Preformed Seals: Single or multicellular elastomeric profiles as classified under ASTM D 2000, designed with or without continuous, longitudinal, internal baffles. Formed to fit compatible frames. Color as selected from the manufacturer=s standards.

F. Preformed Sealant: Manufacturer's standard elastomeric sealant complying with ASTM C 920, Use AT@, factory-formed and bonded to metal frames or anchor members. Color as selected from the manufacturer's standards.

1. Joints 2" Wide and Less: Withstand plus or minus 35% movement of the joint width without failure.

2. Joints 2" to 4" Wide: Withstand plus or minus 50% movement of the joint width without failure.

G. Seismic Seals: Typical for exterior applications; two single-layered elastomeric profiles, one interior and one exterior, as classified under ASTM D 2000; retained in a set of compatible frames. Color as selected from the manufacturer=s standards.

H. Fire Barriers: Designed for the indicated or required dynamic structural movement without material degradation or fatigue when tested in accordance with ASTM E 1399. Tested in maximum joint width condition with a field splice as a component of an expansion joint cover per ANSI / UL 263, NFPA 251, UBC 43-1, or ASTM E 119, including hose stream test of vertical wall assemblies by a nationally recognized testing and inspection agency acceptable to the government authorities having jurisdiction.

I. Accessories: Manufacturer's standard anchors, fasteners, set screws, spacers, flexible moisture barriers and filler materials, drain tubes, lubricants, adhesive, and other accessories compatible with the material in contact, as indicated or as required for a complete installation.

2.3 EXPANSION JOINT COVER ASSEMBLIES

A. General: Provide expansion joint cover assemblies of the design, basic profile, materials, and operation indicated. Provide units comparable to those indicated or as required to accommodate the joint size, variations in adjacent surfaces, and dynamic structural movement without material degradation or fatigue when tested in accordance with ASTM E 1399. Furnish units in the longest practicable lengths to minimize the number of end joints. Provide hairline mitered corners where joints change directions or abuts other materials. Include closure materials and transition pieces, tee-joints, corners, curbs, cross-connections, and other accessories as required to provide continuous joint cover assemblies.

B. Moisture Barrier: Provide manufacturer's continuous, standard, flexible vinyl moisture barrier under covers at roofs, exterior walls and locations indicated.

C. Fire-Rated Joint Covers: Proved expansion joint cover assemblies with manufacturer=s standard continuous flexible fire barrier seals under covers at locations indicated, to provide a fire-resistive rating not less than the rating of the adjacent construction.

D. Coverless Fire Barrier: Provide manufacturer=s standard continuous flexible fire barrier seals at locations indicated, to provide a fire-resistive rating not less than the rating of the adjacent construction.

E. Metal Floor-to-Floor Joint Cover Assemblies: Provide continuous extruded metal frames of the profile indicated with seating surface and raised floor rim or exposed trim strip to accommodate the flooring and concealed bolt and anchors embedded in concrete. Provide assemblies formed to receive cover plates of the design indicated and to receive filler materials, if any, between the raised rim of the frame and edge of the plate. Furnish depth and configuration to suit the type of construction and to produce a continuous non-slip wearing surface flush with the adjoining finish floor surface.

1. Partially Concealed Cover: Provide one frame on each side of the joint, designed to accommodated the manufacturer=s floor cover plate and filler.

2. Exposed Cover: Provide one frame on each side of the joint, designed to support the floor plate and filler.

3. Flat Cover Plates: Provide cover plates of the profile and wearing surface indicated. Extend flat plates to lap each side of the joint.

a. Filler Insert: Furnish abrasive-resistant flexible gasket filler between the edge of the cover plate and the raised rim of the frame to accommodate the required movement.

4. Fixed Cover Plates: Attach one side of the cover plate to a frame or finished

wearing surface with the other side resting on the other frame or finished wearing surface to allow free movement.

5. Self-Centering Cover Plates: Concealed centering device with the cover plate secured in or on top of the frames so as to have free movement on both sides.
6. Floor Cover Plate Wearing Surfaces: Provide cover plates with the following type of wearing surface:

    a. [Plain.]

    b. [Fluted.]

    c. [Recessed to receive full thickness of the flooring material.]

    d. [Abrasive plate.]

    e. [Adhesive filled plate.]

    f. [Adhesive strip plate.]

7. Ceiling infill, if required, as detailed.

F. Floor-to-Wall Joints: Provide one frame on the floor side of the joint only. Provide wall side frame where required by the manufacturer=s design.

1. Angle Cover Plates: Attach angle cover plates for floor-to-wall joints to the wall with countersunk, flat-head exposed fasteners secured to drilled-in-place anchor shields, unless otherwise indicated, at the spacing recommended by the joint cover manufacturer.

G. Metal Wall Joint Cover Assemblies: Provide continuous extruded metal frames of the profile indicated. Concealed anchors embedded in concrete. Provide assemblies formed to receive cover plates of the design indicated.

1. Cover plates: Provide cover plates of the profile indicated. Extend plate to lap each side of the joint. L000-82-11 and 000-92-11 by Architectural Art Manufacturing or approved equal.

H. Wall, Ceiling and Soffit Joint Cover Assemblies: Provide interior wall and ceiling expansion joint cover assemblies of the same design and appearance. Provide exterior wall and soffit expansion joint cover assemblies of the same design and appearance. Provide wall expansion joint cover assemblies compatible with the floor expansion joint cover assemblies design and appearance.

1. Fixed Metal Cover Plates: Provide a concealed, continuously anchored frame fastened to the wall, ceiling, or soffit only on one side of the joint. Extend the cover to lap each side of the joint to permit free movement on one side. Attach the cover to the frame with the cover in close contact with adjacent finish surfaces.

2. Floating Metal Cover Plates: Cover plate secured in or on top of the frames to permit free movement on both sides.

3. Self-Centering Cover Plates: Concealed centering device with the cover plate secured in or on top of the frame to permit free movement on both sides.

4. Flexible Filler: Secure the approved flexible filler between the frames to compress and expand with movement.

I. Joint Cover Assemblies with Preformed Seals: Provide joint cover assemblies consisting of continuously anchored aluminum extrusions and continuous extruded preformed seals of the profile indicated or as required to suit the types of installation conditions shown. Furnish extrusions designed to be embedded in or attached to concrete with lugs. Vulcanize or heat-weld splice, if any, to ensure hermetic joint conditions.

1. Cover Plate: Include extruded aluminum cover plate fastened to one side of the joint and extend the plate to lap each side of the joint to permit free movement with the cover in close contact with the adjacent surfaces.

J. Joint Cover Assemblies with Elastomeric Sealant: Provide continuous joint cover assemblies consisting of elastomeric sealant, factory-bonded to extruded aluminum frames of the profile indicated or required to suit the types of installation conditions shown. Provide frames for floor joints with means for embedding in or anchoring to concrete without using exposed fasteners and that will result in exposed surfaces of sealant and aluminum frames finishing flush with adjacent finished floor surfaces without exposing the anchors.

K. Compression Seals: Preformed, elastomeric extrusions having an internal baffle system in sized and profiles shown or as recommended by the manufacturer. Provide lubricant and adhesive for installation as recommended by the manufacturer.

L. Foam Seal: Non-extruded, low-density, cross-linked, nitrogen-blown ethylene vinyl acetate polyethylene copolymer foam; Evazote 380 E.S.P. by Royston or approved equal. Provide adhesive for the installation as recommended by the manufacturer.

2.4 METAL FINISHES

A. General: Comply with NAAMM, AMetal Finishes Manual@ for finish designations and application recommendations, except as otherwise indicated. Apply finishes to products in the factory after fabrication. Protect finishes on exposed surfaces before shipment.

B. Aluminum Finishes: Medium Bronze, Anodized.

C. Bronze Finish: Comply with NAAMM, AMetal Finishes Manual@ for recommendations relative to application and designations for finishes.

D. Natural Satin Finish: CDA Designation M32, mechanical finish, directional textured, medium satin.

E. Stainless Steel Finishes: Comply with NAAMM, AMetal Finishes Manual@ for recommendations relative to application and designations of finishes.

1. [Bright, Cold-Rolled Unpolished Finish: AISI, No. 2B finish.]

2. [Bright, Directional Polish: AISI, No. 3 finish.]

F. Factory Finish: Manufacturer=s standard factory finish.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and

conditions are as required, and ready to receive the work.

1. Verify that roofing terminations and base flashings are in place, sealed, and secure.

C. Report in, writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 PREPARATION

. Manufacturer's Instructions: In addition to the requirements herein, comply with the manufacturer's instructions and recommendations for the phases of work, including the preparation of substrates, application of materials, and protection of the installed work.

B. Coordinate and furnish anchorages, setting drawings, templates, and instructions for the installation of expansion joint cover assemblies to be embedded in or anchored to concrete or to have recesses formed into the edges of concrete slabs for later placement and grouting-in of frames.

C. Fastening to In-Place Construction: Provide anchorage devices and fasteners where necessary to secure expansion joint cover assemblies to in-place construction, including threaded fasteners with drilled-in expansion shields for masonry and concrete where anchoring members are not embedded in concrete. Provide fasteners of metal, type and size to suit the type of construction indicated and to provide for the secure attachment of expansion joint cover assemblies.

3.3 INSTALLATION

A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting as required to install expansion joint covers. Install joint cover assemblies in true alignment and in proper relationship to the expansion joints and adjoining finished surfaces, measured from established lines and levels. Allow adequate free movement for thermal expansion and contraction of the metal to avoid buckling. Set floor covers at elevations to be flush with adjacent finished floor materials. Locate wall, ceiling and soffit covers in continuous contact with adjacent surfaces. Securely attach in place with the required accessories. Locate anchors at intervals recommended by the manufacturer, but not less than 3" from each end and at not more than 24" on center.

B. Continuity: Maintain continuity of the expansion joint cover assemblies with a minimum number of end joints. Align metal members mechanically using splice joints. Cut and fit ends to produce joints that will accommodate thermal expansion and contraction of the metal to avoid buckling of the frames. Adhere flexible filler materials, if any, to the frames with adhesive or pressure-sensitive tape as recommended by the manufacturer.

C. Extruded Preformed Seals: Install seals complying with the manufacturer=s instructions and with a minimum number of end joints. For straight sections, provide preformed seals in continuous lengths. Vulcanize or heat-weld field splice joints in preformed seal material to provide watertight joints using procedures recommended by the manufacturer. Apply adhesive, epoxy, or lubricant-adhesive approved by the manufacturer to both frame interfaces before installing the preformed seal. Seal transitions according to the manufacturer=s instructions.

D. Elastomeric Sealant Joint Assemblies: Seal end joints within continuous runs and joints at transitions according to the manufacturer's directions, to provide a watertight installation.

E. Seismic Seals: Install interior seals in continuous lengths; vulcanize or heat-weld field splice joints in interior seal material to provide watertight joints using the manufacturer=s recommended procedures. Install exterior seals in standard lengths. Seal transitions and end joints in accordance with the manufacturer=s instructions.

F. Moisture Barriers: Install moisture gutters with a tight fit and sealed ends. Drain as required.

G. Fire Barriers: Install fire barriers, including transitions and end joints, according to the manufacturer=s instructions so that the adjacent fire-rated construction is continuous.

3.4 ISOLATION REQUIREMENTS

A. Wood Contact: Isolate from cedar, redwood, oak and acid-treated lumber with an unbroken 6-mil polyethylene construction sheet or a heavy coating of metal-protective paint.

B. Aluminum Surfaces: Shall not directly contact other metals except stainless steel, zinc, or zinc coated. Where aluminum contacts another metal, paint the dissimilar metal with a primer followed by two coats of aluminum paint. Where drainage from a dissimilar metal passes over aluminum, paint the dissimilar metal with a non-lead pigmented paint.

C. Metal Surfaces: Paint where in contact with mortar, concrete, or masonry materials with an alkali-resistant coating such as heavy-bodied bituminous paint.

3.5 REPAIRS TO FINISH

A. Scratches, Abrasions and Minor Surface Defects: May be repaired in accordance with the manufacturer=s printed instructions. Replace items which cannot be repaired to the satisfaction of the Owner=s representative.

3.6 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field testing and inspection.

B. Inspect the floor slab, roof slab and wall construction, alignment and attachment to the structure.

3.7 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Do not remove protective coverings until the finish work in adjacent areas is complete. When the protective coverings are removed, clean the exposed metal surfaces in compliance with the manufacturer's instructions.

C. Remove substances which might cause corrosion of metal or deterioration of finishes.

3.8 PROTECTION

A. The installer shall advise the Contractor of required procedures for surveillance and protection of the work during construction to ensure that all work will be without damage or deterioration at the time of Substantial Completion.

END OF SECTION

SECTION 06100

ROUGH CARPENTRY

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Framing lumber and construction.

2. Miscellaneous wood blocking, supports and rough-in.

3. Plywood.

4. Moisture Barriers.

5. Anchors and connectors.

6. Preservative and fire-resistive treatment.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03100 - Concrete Formwork: Cast-in inserts and attachment substrate.

2. Section - 03300 - Cast-In-Place Concrete: Substrate for attachment.

3. Section - 04230 - Reinforced Unit Masonry: Substrate for attachment.

4. Section 06200 - Finish Carpentry: Finish work to be anchored.

5. Section 06400 - Architectural Woodwork: Finish work to be secured.

6. Section 09110 - Non-Load Bearing Steel Framing: Substrate for attachment.

D. Work furnished under other Sections but installed in whole, or in part under this Section:

1. Section 05500 - Metal Fabrications.

2. Section 08210 - Wood Doors.

3. Section 08710 - Door Hardware.

4. Division 10 - Applicable Sections.

1.2 DESCRIPTION OF WORK

A. The extent of the rough carpentry work is indicated on the Drawings and as specified herein, and includes providing and installing wood framing and construction, anchors and

connectors, miscellaneous blocking, supports and wood rough-in as required by the Project conditions.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Lumber Standards Committee (ALSC):

1. Softwood Lumber Standards.

C. American Plywood Association (APA):

1. Grades and Standards.

D. American Society of Civil Engineers (ASCE):

1. ASCE / SEI 7 - Minimum Design Loads for Buildings and Other Facilities.

E. American Society for Testing and Materials (ASTM):

1. ASTM A 307 - Specification for Carbon Steel Bolts and Studs, 60,000 psi Tensile Strength.

2. ASTM E 84 - Test Method for Surface Burning Characteristics of Building Materials.

F. American Wood Preservers Association(AWPA):

1. AWPA - C1 - All Timber Products - Preservative Treatment by Pressure Process.

2. AWPA - C15 - Wood for Commercial-Residential Construction Preservative Treatment by Pressure Processes.

3. AWPA - C20 - Structural Lumber - Fire-Retardant Treatment by Pressure Processes.

4. AWPA - C27 - Plywood - Fire-Retardant Treatment by Pressure Processes.

5. AWPA - P5 - Water Borne Preservatives.

G. International Code Council:

1. International Building Code (IBC):

H. Underwriters' Laboratories, Inc. (UL):

1. UL FR S - Fire-Rated Treated Wood with Flame Spread and Smoke Developed Ratings of 25 or less in accordance with ASTM E 84.

2. UL 723 - Test for Surface Burning Characteristics of Building Materials.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Shop Drawings: Dimensioned plans, elevations, sections, large scale details, attachment devices, anchors and other components.

2. Assurance / Control Submittals:

   a. Wood Treatment: Treatment manufacturer=s instructions for the proper use of each type of treated material.

   b. Certificates:

      1) Pressure Treatment and Termite Treatment: Certification from the treating plant identifying the chemicals and process used, net amount of preservative retained; conformance with applicable standards.

      2) Water-borne Preservatives: Certification from the treating plant stating that the moisture content of treated materials was reduced to a maximum of fifteen percent (15%) prior to shipment to the Project Site.

      3) Fire Retardant Treatment: Certification from the treating plant stating that the type of chemicals used and the fire performance characteristics achieved; that the fire-retardant treatment materials comply with the governing code, ordinances and requirements of local authorities having jurisdiction; that treatment will not bleed through finished surfaces.

1.5 QUALITY ASSURANCE

A. Perform work in accordance with the following agencies:

   1. Lumber Grading Agency: Certified by ALSC.

   2. Plywood Grading Agency: Certified by APA.

B. Regulatory Requirements: Conform to the applicable codes for fire-retardant treatment of wood surfaces for flame / smoke ratings.

C. Performance Requirements: For exterior uses, design, fabricate, reinforce, install and anchor to withstand the following windload requirements:

   1. Combined positive and negative windloading in accordance with IBC 2009, Section 1609 with a Vmph of 170, qs of 74.0, exposure [B] [C] [D], and importance factor of [1.0] [1.25] [1.5], as applicable per ASCE 7.

D. Evidence of Grade:

   1. Stamp each piece of lumber and plywood with a grade mark and trademark of the Association having jurisdiction, or accompany each shipment with an official certificate of inspection. Stamp on concealed surfaces or surfaces scheduled for opaque paint finish.

1.6 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

1. Inspect wood materials for conformance with the specified grades, species and treatment at the time of delivery to the Project Site.

2. Reject and return unsatisfactory wood materials.

B. Provide facilities for the handling and storage of materials to prevent damage to edges, ends and surfaces.

C. Keep materials dry. Stack materials off the ground a minimum of 12A or, if on a concrete slab-on-grade, a minimum of 1-1/2"; fully protected from the weather. Provide for air circulation within and around stacks, and under temporary coverings.

D. For materials pressure treated with waterborne chemicals, place spacers between each bundle to provide for air circulation.

PART 2 PRODUCTS

2.1 FRAMING LUMBER

A. General:

1. Use Douglas Fir or Southern Pine where concealed; Redwood where exposed.

2. Pressure and termite treated.

3. Sizes shown are nominal. Actual sizes shall conform to American Lumber Standard, PS 20-70.

4. Dimensioned lumber shall be S4S to standard dimensions.

5. Moisture content shall be fifteen percent (15%) or less, unless otherwise noted.

6. All lumber shall bear the grade mark of Western Wood Products Association (WWPA) standard grading rules, latest edition. Grades called out below are minimum. Use appearance grade where exposed to view.

B. Non-Load Bearing, Blocking, Bridging and Miscellaneous Framing: Standard Grade, Table 1.

C. Load-Bearing and Non-Load Bearing Studs (8' long or less), Related Plates and Sills: No. 2 Grade, Table 3.

D. Load-Bearing Studs (over 8' long), Related Plates and Sills: Select No. 1 or better grade, Table 3. Knots, pitch pockets, checks, splits, or bark shall not be allowed at full length of board edges.

E. Roof, Ceiling and Floor Joists, Purlins, Rafters, Posts: No. 1 Grade, Table 3.

F. Load-Bearing Beams, Headers, Stair Stringers, Truss Members: Select Structural Grade, Table 3.

G. Boards: Construction Grade.

2.2 NAILERS, BLOCKING, FURRING AND SLEEPERS

A. Wood for nailers, blocking, furring and sleepers: Construction grade, finished 4 sides, 15 percent maximum moisture content. Pressure preservative treat items in contact with roofing, flashing, waterproofing, concrete, masonry or the ground.

2.3 PLYWOOD

A General: Grading Rules in accordance with American Plywood Association (APA), Plywood Specification & Grade Guide, 1978 edition. All plywood with pressure and termite treatment shall bear appropriate grade trademark of the APA.

B. Wall / Roof Sheathing: 3/4", C-D 48/24, INT-APA Grade, Group 1; exterior glue, unsanded, T&G all edges - full face, 48" x 96" panels.

C. Roof / Floor Sheathing: 1-1/8", 2-4-1, C-D, INT-APA grade, Group 1; exterior glue, unsanded, T&G all edges - full face, 48" x 96" panels.

D. Subfloor Over Concrete: 3/4", CDX Ext Grade; exterior glue, 48" x 96" panels.

E. Plywood Backing Plates (for mounting electrical and telephone equipment): Fire-retardant treated panels with grade designation, APA C-D PLUGGED INT; exterior glue, in thickness indicated, or if not indicated, not less than 2".

2.4 MOISTURE BARRIERS

A. Install where shown on the Drawings or where required.

B. Place under wood plates bearing directly on earth supported concrete slabs and at subfloors over concrete slabs.

C. 15 pound asphalt saturated roofing felt, non-perforated.

2.5 ROUGH HARDWARE

A. All necessary hardware for installation of the work specified herein, of the sizes and quantities required by Building Code or herein after specified. Hardware shall be hot-dip galvanized steel or approved type of non-ferrous metal.

2.6 FRAMING CONNECTORS AND ACCESSORIES

A. Provide connectors and accessories where indicated or as required by conditions; zinc-coated steel, Code approved, as manufactured by Simpson Company, Silver Metal Products, Inc., or as approved. If a specific type is not shown, use type recommended by the connector manufacturer for the conditions of installation. Secure with nails, screws, or bolts provided or recommended by the manufacturer.

2.7 CONSTRUCTION ADHESIVE

A. Conform to APA performance specification AFG-01 and specific application recommendations of the manufacturer.

B. Products as manufactured by Bostik, Inc., Henkel, Sovereign Specialty Chemicals, Inc. or approved equal.

2.8 FASTENERS

A. General: Hot-dip galvanized steel, typical.

1. Nails and Staples: Federal Spec FF-N-105B.

2. Bolts: Federal Spec FF-B-575.

3. Nuts: Federal Spec FF-N-836.

4. Lag Screws and Bolts: Federal Spec FF-B-561.

5. Toggle Bolts: Federal Spec FF-B-588.

6. Wood Screws: Federal Spec FF-S-111.

7. Expansion Shields: Federal Spec FF-S-325.

B. Fasteners:

1. Bolts, Nuts, Lag Screws, Wood Screws and Washers: ASTM A 307, medium carbon steel; size and type to suit the application, unless otherwise noted.

2. Expansion Shield Fasteners: For anchorage of non-structural items to solid concrete and masonry.

3. Powder or Pneumatically Activated Fasteners: For anchorage of non-structural items to steel.

4. Fasteners for Non-Structural Wood Members to Masonry: 1/4" diameter x 3-1/4", Phillips, flat head.

C. Provide necessary installation of the work required; sizes and quantities of fasteners noted herein or as required by Code.

D. Tools: Provide the manufacturers recommended power tool for installing each type of fastener.

2.9 WOOD TREATMENT

A. General:

1. Treatment material shall provide protection against termites and fungal decay and shall be approved for use as a wood preservative for its intended use by the U. S. Environmental Protection Agency.

2. For all lumber and plywood above the ground and in ground contact, comply with the applicable requirements of AWPA, Standards C2 for Lumber, C9 for Plywood and of the AWPB standards referenced below.

3. Treated material shall meet the interior Type A requirements in AWPA, Standard C-20 for lumber and C-27 for plywood.

4. Pressure treat above ground items with water-borne preservatives complying with AWPA LP-2.

5. After treatment, kiln dry to a maximum moisture content of fifteen percent (15%).

6. Mark each treated item with AWPB Quality Mark Requirements.

7. Chemicals used to treat materials shall be free of halogens, sulfates, ammonium phosphate and formaldehyde.

B. Wood Requiring Treatment:

1. Lumber, Preservative Treated: All interior and exterior wood including nailers, blocking, stripping and similar items in conjunction with roofing, flashing and other construction; sills, blocking, furring, stripping, ledgers, supports and similar items in contact with concrete or masonry.

2. Lumber, Fire-Retardant Treated: Interior framing, blocking, furring, stripping, ledgers, supports, nailers, and miscellaneous exposed wood. Do not use fire-treated wood in contact with concrete or masonry.

3. Interior Plywood, Fire-Retardant Treated: Plywood backing for electrical and telephone equipment.

C. Preservative Pressure Treated Lumber:

1. Products:

a. Ammoniacal Copper Zinc Arsenate (ACZA).

b. Chromated Copper Arsenate (CCA).

c. Fluor Chrome Arsenate Phenol (FCAP).

d. Pentachlorophenol (Penta).

2. Comply with EPA and OSHA requirements and regulation and in accordance with AWPA, P-9. Type C treatment shall not discolor the wood used for exposed finish.

3. Incising is not permitted for appearance grade lumber or where materials are exposed to view.

4. Impregnate lumber with a preservative treatment conforming to AWPA, Standard C1 and P5. Apply preservative in a closed cylinder by the pressure process in accordance with AWPA, Standard C15.

5. Retention of dry salts:

a. Moderate service conditions (weather exposure): 0.25 pounds per cubic foot (oxide basis).

b. Severe conditions (constant contact with the ground or water): 0.40 pounds per cubic foot (oxide basis).

6. Remove excess moisture where shrinkage is a serious fault and where treated lumber will be in contact with concrete, masonry or plaster, and where water-borne treated lumber is to be painted or stained.

7. Lumber to be painted or stained shall have knots and pitch streaks sealed the same as for untreated wood.

8. Liberally brush freshly cut surfaces, bolt holes and machined areas with the same preservative, in accordance with AWPA, Standard M4.

D. Fire-Retardant Treatment:

1. Where fire-retardant lumber or plywood is specified, otherwise indicated or required by the Building Code, provide materials which comply with AWPA standards for pressure impregnation. Use fire-retardant chemicals which have a flame spread rating of not more than 25 when tested in accordance with UL Test 723 or ASTM E 84, and show no increase in flame spread and significant progressive combustion upon continuation of the test for an additional twenty (20) minutes.

2. Where treated items are exposed at the exterior or high humidities or are to have a transparent finish, provide appearance grade materials which show no change in fire hazard classification when subjected to standard rain test UL 790 or ASTM B 2898.

3. Use fire-retardant treatment which will not bleed through or adversely affect the type of finish indicated and which does not require brush treatment of field made cuts to maintain the fire hazard classification.

4. Where transparent finish is indicated, use the type of treatment and species which permits milling of the lumber after treatment without altering the indicated fire hazard classification, as determined by fire testing.

5. Kiln dry treated items to a moisture content of fifteen percent (15%), maximum.

6. Provide UL label on each piece of fire-retardant lumber and plywood.

7. Inspect each piece of treated lumber and plywood after drying. Discard damaged and defective pieces.

8. Products:

a. "Dricon" by Arch Wood Protection.

b. "Pyro-Guard" by Hoover Treated Wood Products.

c. Section 01600 - Product Requirements: Product options and substitutions. Substitutions: Permitted.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

1. Verify that spacing, direction and details of supports are correct to accommodate the installation of blocking, backing, stripping, furring and nailing strips.

2. Verify that surfaces to receive work are rigid, secure, accurately sized and located and otherwise properly prepared.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 COORDINATION

A. Fit carpentry work to other work. Scribe and cope as required for accurate fit.

B. Coordinate the location of furring, nailers, blocking, grounds and similar supports to allow for the proper attachment of other work.

3.3 GENERAL

A. Field Measurements:

1. Verify field measurements prior to fabrication.

2. If field measurements differ slightly from Drawing dimensions, modify the work as required for accurate fit.

3. If measurements differ substantially, notify the Owner=s representative prior to fabrication.

B. Workmanship:

1. Carefully layout, cut, fit and install rough carpentry items.

2. Use sufficient number of nails, spikes, screws and bolts to insure rigidity and permanence.

3. Drive nails perpendicular to the grain of wood in lieu of toenailing, where feasible.

4. Provide for installation and support of plumbing, air conditioning and ventilation work.

5. Install work true to lines, plumb and level, unless indicated or required otherwise.

C. Installation:

1. Install proprietary products in accordance with the manufacturer=s directions.

2. Provide washers under nuts and heads when making bolted or lag screwed connections.

3. Except as otherwise specified herein, machine nail or staple with written approval only.

4. Install framing connectors where indicated; secure with fasteners recommended by the manufacturer.

D. Protecting Other Work and Existing Facilities: Protect against damage and discoloration caused by the work of this Section.

3.4 PLATES

A. Provide single plates at floors and bottoms of openings; double plates face nailed together at ceilings and heads of openings.

B. Provide headers, as specified herein, over openings more than 2'-6" wide.

C. Splice single plates; stagger ends of double plates at least 48"; splice plates abutting corners. Locate plate splices directly over studs.

D. Unless shown otherwise on the Drawings, anchor plates resting on concrete or masonry with 1/2" diameter bolts at 48" o.c., maximum, or as required by windload.

3.5 JOISTS AND RAFTERS

A. Set with crown side up; lap and spike together over bearings utilizing joist hangers proper for the application. Minimum bearings on wood or metal: 1-1/2"; on masonry: 3".

B. Spike studs to joists resting on ribbon boards, block ends between studs where joists and studs are not in contact.

C. Double joists under partitions running parallel to the joists; space to provide clearance for pipes in partitions.

D. Double headers and trimmers; spike beams with ledgers to the ends of joists.

3.6 BRIDGING

A. Cross Bridging:

1. Nominal 2" x 3" wood, or approved type metal.

2. Provide at not more than 8 feet apart in joist spans. Do not anchor until dead loads are in place.

3. Space cross bridging members 1/4" apart to avoid rubbing against each other.

B. Solid Bridging:

1. Provide nominal 2" solid bridging over bearings, full depth of the joists, unless noted otherwise.

3.7 PLYWOOD SUBFLOORING

A. Apply face grain perpendicular to and continuous over joists or sleepers with end joints on bearings; stagger end joints.

B. Leave 1/16" space at all edge and end joints; 3/32" at T&G edges.

C. Before panels are placed, apply a bead of construction adhesive to the joists and T&G joints with a caulking gun.

D. Secure panels to joists with 8d deformed shank nails at 6" o.c. at edges and 10" o.c. at intermediate supports.

E. Complete all nailing within the adhesive manufacturer=s specified assembly time.

F. Protect from moisture and other damage during construction.

G. Place 15 pound asphalt roofing felt over concrete subfloors and concrete slabs with plywood, secured to the floor with 1-1/2" screws in expansion shields.

3.8 ROOF SHEATHING

A. Apply face grain perpendicular to and continuous over supports with end joints on bearings; stagger end joints.

B. Leave 1/16" space at all square edges; 1/32" at T&G joints.

C. Secure 1-1/8" panels with 10d ring shank nails at 6" o.c. at edges and intermediate supports, unless noted otherwise.

D. Protect from moisture and other damage until roofing is applied.

3.9 DOOR & WINDOW BUCKS, FRAMING BLOCKING

A. Provide treated wood, cut to size at locations against concrete and masonry.

B. Provide fire-retardant treated bucks and framing in fire-rated partitions.

3.10 SITE TREATMENT OF WOOD MATERIALS

A. Apply preservative treatment in accordance with the manufacturer's published instructions.

B. Brush apply two coats of preservative treatment on wood in contact with cementitious materials and roofing and related metal flashings.

C. Treat site-sawn cuts.

D. Allow preservative to dry prior to erecting members.

3.11 CONSTRUCTION

A. Site Tolerances: Framing Members: 1/4" from true position, maximum.

END OF SECTION

SECTION 06200

FINISH CARPENTRY

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Interior wood paneling.

2. Wood door frames.

3. Standing and running trim.

4. Plastic laminate.

5. Adjustable shelving.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 06100 - Rough Carpentry: Blocking and backing plates for anchorage.

2. Section 06400 - Architectural Woodwork: Cabinetry.

3. Section 08710 - Door Hardware: Hardware for wood doors.

4. Section 09110 - Non-Load Bearing Steel Framing: Substrate framing.

5. Section 09900 - Painting: Finishes.

1.2 DESCRIPTION OF WORK

A. The extent of finish carpentry work is indicated on the Drawings and as specified herein, and includes providing and installing all finish woodwork, wood trim for bases, wall rails, crown moldings, ceiling battens, wood door and window frames, jambs and moldings and wood veneer paneling as required to complete the Project.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American National Standards Institute (ANSI):

1. ANSI A135.4 - Basic Hardboard.

2. ANSI A208.1 - Mat Formed Wood Particleboard.

C. Architectural Woodwork Institute (AWI):

1. AWI AWQS - Architectural Woodwork Quality Standards, 8th Edition, Version 2.0.

D. American Society for Testing and Materials (ASTM):

1. ASTM E 84 - Test Method for Surface Burning Characteristics of Building Materials.

E. Americans with Disabilities Act Accessibility Guidelines (ADAAG):

1. Accessibility Guidelines for Buildings and Facilities.

2. Accessibility Guidelines for Schools.

F. National Electric Manufacturer=s Association (NEMA):

1. NEMA LD3 - High Pressure Decorative Laminates.

G. United States Department of Commerce Product Standard (PS):

1. PS 20 - American Softwood Lumber Standard.

H. Western Wood Products Association (WWPA):

1. WWPA - Quality Standards.

1.4 DESIGN INTENT

A. It is the design intent that similar woodwork throughout the Project match. Coordinate work between the separate installers providing similar woodwork to ensure that the design intent is achieved to the satisfaction of the Owner=s representative.

1.5 SUBMITTALS

A Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer=s specifications and installation instructions for each item of factory-fabricated paneling, wood veneer, finish hardware, anchorage devices and finish coating products.

2. Shop Drawings: Show the location of each item, dimensioned plans and elevations, large scale details, attachment, anchorage and related components.

3. Samples: For each species and cut or pattern of finish carpentry. Label each sample according to species, grade, grain cut and finish type.

a. Treated Wood: 12" long sample of termite, preservative and fire-retardant treated wood items.

b. Interior standing and running trim: 24" long x full board or molding width, unfinished.

c. Factory-Finished Plywood Veneer and Wood Paneling: 24" long x panel width.

d. Worked (Shaped) Pieces, Unfinished: Profile size x 12" lengths. For work requiring eased edges, submit samples of each size of eased edge

required. Samples for each species, grade, and grain cut need not be submitted.

e. Finished Samples: Representative board samples of 3/4" x 8-1/2" x 11" size with transparent finishes of each type, color and texture required; finished by the Paint applicator.

f. Hardware: One (1) complete unit of each type and finish required.

4. Wood Treatment Data: Chemical treatment manufacturer=s instructions for handling, storage, installation and finishing treated materials.

a. Pressure Treatment and Termite Treatment: For each type specified, include certification by the treating plant stating the chemicals and process used, net amount of preservative retained and conformance with applicable standards.

b. Dip Treatment: For each type specified, include certification by the treating plant stating the chemical solutions used, submersion period and conformance with applicable standards.

c. Fire-Retardant Treatment: Include certification by the treating plant indicating the type of chemicals used and fire performance characteristics achieved.

5. Assurance / Control Submittals:

a. Manufacturer=s certification that the fabricated woodwork complies with the quality grades and other requirements indicated.

b. Documentation of experience indicating compliance with the specified qualifications requirements.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Warranty: Submit a written Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.6 COORDINATION

A. Pre-Installation Meeting: Convene a Pre-Installation Meeting at the Project Site prior to the delivery of finish carpentry materials to the Site.

1. Require attendance of the Contractor, Architect, Owner=s representative and representatives of the installer of architectural woodwork, other finishes, painting and related mechanical and electrical work.

2. Review coordination and environmental controls required for proper installation and ambient conditions in areas to receive the work.

3. Review preparation and installation procedures, and the coordination and scheduling required with related work.

B. Support Work:

1. For support work not indicated in the Contract Documents, coordinate requirements with other installers, in a timely manner.

2. Provide work as necessary to ensure that all work has proper framing and reinforcing supports to ensure secure and solid installations.

1.7 QUALITY ASSURANCE

A. Perform the work in accordance with AWI, Premium quality where designated, Custom quality all others

B. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

C. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

1.8 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Material and Equipment: Transport, handle, store and protect to prevent damage.

B. Deliver products to the Project Site in the manufacturer=s original, unopened packaging.

C. Do not deliver products to the Project Site until wet work, grinding, painting and similar operations which could damage, soil or deteriorate the finish carpentry has been completed in the installation areas, and humidity has been stabilized.

D. If, due to unforeseen circumstances, finish carpentry materials must be stored in other than installation areas, store only in areas meeting the requirements specified for the installation areas.

E. Protect installed finish carpentry from damage and excessive relative humidity until final acceptance.

1.9 JOB CONDITIONS

A. Fabricator of the finish carpentry shall determine the optimum moisture content and the required temperature and humidity conditions.

B. The installer shall advise the Contractor of the temperature and humidity requirements for the finish carpentry installation areas. Do not store or install finish carpentry until the required temperature and relative humidity has been stabilized and will be maintained in the installation areas.

C. Stabilize temperature and humidity in installation areas as necessary to maintain the moisture content of the installed finish carpentry within a 1.0% tolerance of optimum moisture content, from the date of installation throughout the remainder of the construction period.

PART 2 PRODUCTS

2.1 GENERAL

A. Finish Carpentry Standards:

1. Comply with AWI, Premium quality where designated, Custom quality grade for trim, jambs, frames and detailing.

2. Lumber shall be best grade for clear finishes.

3. Moisture content of lumber shall be no more than 13%.

4. Minimum lengths for trim and frames shall be:

a. One continuous piece for openings.

b. Joints no closer than 12 feet apart in running trim.

5. Sizes and profiles as called for on the Drawings.

B. Backpriming:

1. Back prime work immediately upon arrival of the units at the Project Site with a single coat of spar varnish or other acceptable sealer for fabricated units to be installed as an exterior component or where against portland cement plaster, gypsum plaster, or against exterior facing walls of concrete or masonry.

2. Ensure that the sealer does not contaminate surfaces requiring a transparent finish.

2.2 MATERIALS

A. Millwork:

1. Wood door and window frames, trim and plywood, ceiling frames and panels, and solid paneling shall be the species and cut designated in finish schedules, drawings and details; best clear Premium quality where designated, Custom quality grade, for transparent finish; sized and fabricated as detailed.

2. Exterior wood fascia boards, [screens], [trellis frames], shall be clear, all heart Redwood.

B. Panels: Fiberboard or fiberboard core plywood, construction balanced.

C. Plywood: For exterior use and interior use exposed to moisture shall be marine grade.

D. Veneers: Species, cut and matching as indicated or selected, grade 1, factory-finished.

2.3 WOOD TREATMENT

A. Preservative Treatment: For all exterior and interior wood, comply with applicable requirements of AWPA, Standards C2 (Lumber), C9 (Plywood), and of AWPB, Quality Marks Requirements.

B. Preservative Treatment Types:

1. Ammoniacal Copper Zinc Arsenate (ACZA).

2. Pentachlorophenol (Penta).

3. Fluor Chrome Arsenate Phenol (FCAP).

C. Pressure-treat above ground items with water-borne preservatives complying with AWPB LP-2.

D. Dip-treat interior wood.

E. Apply in accordance with OSHA and EPA requirements and regulations and in accordance with AWPA, P-9. Treatment shall not discolor finished wood exposed to view.

F. Fire-Retardant Treatment:

1. Where fire-retardant wood is specified or required, provide materials which comply with AWPA standards for pressure impregnation with fire-retardant chemicals, and which have a flame spread rating of not more than 25 when tested in accordance with UL Test 723 or ASTM E 84, and shows no increase in flame spread and significant progressive combustion upon continuation of the test for an additional twenty (20) minutes.

2. Where treated items are exposed to the exterior or to high humidity or are to have a transparent stain or sealer finish, provide appearance grade materials which show no change in the fire-hazard classification when subjected to standard rain test in accordance with UL 790 or ASTM B 2898.

3. Use fire-retardant treatment which will not bleed through or adversely affect the type of finish indicated, and which does not require brush treatment of field made cuts to maintain the fire-hazard classification.

G. Products Scheduled for Transparent Finish:

1. Treatment color shall be compatible with products scheduled for a transparent finish. Provide samples of treatment with finish applied for review.

2. Where a transparent finish is indicated, use the type of treatment and species which permits milling of the lumber after treatment without altering the indicated fire-hazard classification, as determined by fire testing.

H. Incised Materials: Do not use incised materials where finished work will be exposed to view.

2.4 INTERIOR WOOD PANELING

A. Veneer plywood for transparent finish, clear plain cut Mahogany, color and grain matched for consistency between panels and with the trim.

B. Stain and transparent finish.

2.5 WOOD DOOR FRAMES

A. Grade:

1. Opaque Painted: AWI, Custom.

2. Transparent: AWI, Premium.

B. Wood: Same species as the wood door face veneer. Ease edges.

2.6 STANDING AND RUNNING TRIM

A. Grade:

1. Opaque Painted: AWI, Custom.

2. Transparent: AWI, Premium.

B. Trim, boards and plywood for painted finish: Softwood suitable for the exposure and use.

C. Trim and boards for transparent finish: Wood species as selected.

D. Back Construction: Rout or groove the backs of flat trim members, kerf backs of other wide flat members, except for members with ends exposed in finish work.

2.7 PLASTIC LAMINATE

A. Manufacturers: Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Formica Corp.

2. Nevamar Corp.

3. Wilsonart International.

B. High-Pressure Laminate: NEMA LD3, Grade 50, General Purpose, fire-rated, 0.048" thick.

C. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.8 ADJUSTABLE SHELVING

A. Shelving: Softwood plywood; PS 1, graded in accordance with AWI; veneer cover core sides, edges and ends with plastic laminate; cover medium density particle board with factory-applied finish, as selected. 3/4" thick x depth shown on the Drawings x maximum possible length.

B. Standards: Heavy-duty, 2" slot adjustments, length as required. Knape & Vogt # 87 or comparable product as approved. Color as selected.

C. Brackets: Heavy-duty, for 2" slots, nylon cam lock lever, length as required. Knape & Vogt # 186 / 187 or comparable product as approved. Color as selected.

2.9 RELATED MATERIALS

A. Closet Rod: 1-1/16" diameter stainless steel round tubing with chrome-plated mounting end flanges, Knape & Vogt # 660 or comparable product as approved. Provide support brackets when required by the manufacturer; of the same material and finish.

B. Anchorage Devices, General: Nails, screws, toggle bolts, expansion shields, and other devices, of type, size and finish required for each use to ensure strong connections. Where products are subject to moisture, provide hot-dipped galvanized products, otherwise electroplated zinc or cadmium anchorage devices are acceptable.

2.10 FABRICATION, GENERAL

A. Field Measurements:

1. Before proceeding with the fabrication of finish carpentry products, obtain field measurements and verify dimensions.

B. Wood Products:

1. Fabricate finish carpentry products to the dimensions, profiles and details indicated with the construction and materials complying with referenced standards of the specified AWI grades.

2. Where necessary for fitting at the Project Site, provide reasonable allowance for scribing, trimming and fitting. Pre-cut openings, where possible, to receive hardware, and mechanical and electrical work.

3. Ease edges of rectangular solid wood components to a 1/16" radius for members less than 1" in nominal thickness; 1/8" radius for edges of members over 1" in nominal thickness.

4. Conceal all anchorage devices except where decorative fasteners are approved.

2.11 OTHER

A. General: Where the quality of workmanship may not be specifically indicated, comply with the applicable provisions of AWI as follows as applicable to the grade of material, construction and finish:

1. Scheduled for Opaque Painting: AWI, Custom Grade.

2. Scheduled for Transparent Finish: AWI, Premium Grade.

B. Finish: Exposed wood surfaces (except resawn surfaces) shall be sanded and free of tool marks and similar blemishes. Hand sand inside the building after installation until all defects have been entirely removed. Any material showing machinery, tool, sandpaper or other defacing marks will be rejected.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required and ready to receive the work.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 FABRICATION

A. Fabricate trim, moldings, bases and frames to the dimensions and profiles shown. Route and groove the backside of members to be applied to flat surfaces, except for members with ends exposed in the finished work.

B. Condition wood materials to the average prevailing humidity conditions in the installation areas prior to installing.

C. Backprime wood with scheduled finish material exposed on the exterior or, to high the moisture and high relative humidities on the interior.

D. Comply with the requirements of Section 09900 for primers and their application.

3.3 INSTALLATION

A. Discard items which are unsound, warped, bowed, twisted, improperly treated, not adequately seasoned or are too small to fabricate work with a minimum number of joints or optimum jointing arrangements, or which are of defective manufacturer with respect to surfaces, sizes or patterns.

B. Install work in accordance with AWI, AWQS, Section 1700 - Installation of Woodwork.

C. Install the work plumb, level and straight without distortions. Shim as required using concealed shims. Install to a tolerance of 1/8" in 8'-0" for plumb and level countertops; and with 1/64" maximum offset in flush adjoining surfaces; 1/32" maximum offsets in revealed adjoining surfaces.

D. Scribe and cut the work to fit adjoining work. Refinish cut surfaces or repair damaged finish at cuts. Provide a neat, tight joint where work specified in this Section adjoins other work.

E. Anchor work items to nailers or blocking or directly to the substrate using concealed fasteners, to the extent possible.

F. Install standing and running trim with the minimum number of joints possible, using full-length pieces (from maximum length lumber available) to the greatest extent possible. Stagger joints in adjacent and related members. Cope at returns, miter at corners to produce tight fitting joints with full surface contact throughout the length of joints. Use scarf joints for end-to-end jointing.

G. Secure finish carpentry work to anchorage devices or blocking built-in or directly attached to substrates. Secure to grounds, stripping and blocking with countersunk, concealed fasteners and blind nail as required for a complete installation. Except where prefinished matching fastener heads are required, use fine finishing nails for exposed nailing, countersink and fill flush with the finished surface. Match the final finish where a transparent finish is indicated.

H. Apply sealant at all joints between finish carpentry work and adjacent walls and flooring to prevent intrusion by vermin and moisture into concealed spaces.

I. Install hardware in accordance with the manufacturer's published instructions.

J. Install shelving units, standards and brackets at locations indicated on the Drawings.

K. Finish: AWI quality standard. Leave finish carpentry in a paint-ready condition for final finishing by the painting applicator.

3.4 ADJUSTING AND TESTING

A. Section 01700 - Execution Requirements: Adjusting and testing the installed work.

B. Adjust installed work.

C. Test the installed work for rigidity and ability to support loads.

D. Adjust joinery for uniform appearance.

E. Touch-up shop-applied finishes to restore damaged and soiled areas.

F. Repair damaged and defective work wherever possible to eliminate defects functionally and visually; where repairs cannot be made to the satisfaction of the Owner=s representative, replace the finish cabinetry.

G. Adjust moving or operating parts to function smoothly and correctly.

3.5 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect finish carpentry work for plumb, level, alignment and secure attachment.

3.6 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Clean exposed and semi-exposed surfaces.

3.7 PROTECTION

A. Installer shall advise the Contractor and painting applicator of procedures required to protect the finish carpentry during the remainder of the construction period to ensure that the work will be without damage and deterioration at the time of final acceptance, and will be comparable to the final finish scheduled for the work.

B. Installer shall return to the Project prior to substantial completion, repair any damage to the work, and readjust the hardware.

END OF SECTION

SECTION 06400

ARCHITECTURAL WOODWORK

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Wood faced casework and trim.

2. Plastic laminate faced casework and shelving.

3. Plastic laminate countertops.

4. Solid polymer fabrications.

5. Marble and Granite countertops.

6. Wood shelving.

7. Preparation for installation and connection of utilities.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 06100 - Rough Carpentry: Blocking and backing plates in walls for anchorage.

2. Section 06200 - Finish Carpentry: Adjustable shelving.

3. Section 06640 - Solid Polymer Fabrications: Countertops.

4. Section 09110 - Non-Load Bearing Steel Framing: Blocking and backing plates.

5. Section 09900 - Painting: Woodwork finishes.

6. DIVISIONS 15 and 16: Service fittings and connections.

1.2 DESCRIPTION OF WORK

A. The extent of architectural woodwork is indicated on the Drawings and as specified herein, and includes providing, fabricating and installing all wood faced and plastic laminate faced architectural woodwork, trim and countertops, wood shelving, installations and utility connections.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American National Standards Institute (ANSI):

1. ANSI A135.4 - Basic Hardboard.

2. ANSI A208.1 - Mat Formed Wood Particleboard.

C. Americans with Disabilities Act Accessibility Guidelines (ADAAG):

1. Accessibility Guidelines for Building and Facilities.

2. Accessibility Guidelines for Schools.

D. Architectural Woodwork Institute (AWI):

1. AWI AWQS - Architectural Woodwork Quality Standards, 6th Edition,

[Premium] [Custom] Grade, except as otherwise indicated.

E. National Electric Manufacturer's Association (NEMA):

1. NEMA LD3 - High Pressure Decorative Laminates.

F. United States Department of Commerce Product Standard (PS):

1. PS 1 - Construction and Industrial Plywood.

2. PS 20 - American Softwood Lumber Standard.

1.4 DESIGN INTENT

A. It is the design intent that similar woodwork throughout the Project match. Coordinate work between the separate installers providing similar woodwork to ensure that the design intent is achieved to the satisfaction of the Owner=s representative.

1.5 DEFINITIONS

A. Exposed Surfaces: The exposed portions of woodwork, including surfaces visible when doors and drawers are closed. Bottoms of woodwork more than 4'-0" above the floor shall be considered as exposed. Visible members in open cases or behind glass doors also shall be considered as exposed. The front and both sides of all storage cabinets shall be considered as exposed, even when one or both side panels are against a wall or an adjacent cabinet.

B. Semi-exposed Surfaces: Semi-exposed portions of woodwork includes members behind opaque doors, such as shelves, dividers, interior face of ends, wood back, drawer sides, backs and bottoms, and the inside face of doors. Tops of woodwork 6'-6" or more above the floor shall be considered as semi-exposed.

C. Unexposed Surfaces: Unexposed portions of woodwork includes sleepers, web frames, dust panels and other surfaces not usually visible after installation.

1.6 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Fabricator=s specifications and installation instructions for each item of factory-fabricated woodwork, wood veneer counter tops, finish hardware and finish coating products.

    a. Wood veneers and finishes.

    b. Data for hardware and accessories indicating the material, type, function, attachment and finish.

2. Shop Drawings: Show the location of each item on dimensioned plans, sections, elevations, and large scale details. Indicate materials used, wood species, component profiles, assembly methods, joint details, fastening methods, accessory listings, hardware location and schedule of finishes. Submit for the following:

    a. Cabinet work, base and overhead.

    b. Counter work, base and overhead.

    c. Shelving units.

    d. Vanities.

    e. Submit fabricators product information including Shop Drawings for fabricator=s standard units.

3. Samples: For each species and cut or pattern of architectural woodwork:

    a. General:

        1). Two 12" x 12" solid wood and plywood or hard board samples with factory-applied transparent or opaque finish for each finish system and color required.

        2). Two samples of each countertop material.

        3). One unit of each type and finish of cabinet hardware.

    b. Initial Samples: Unless specific products are scheduled, submit 2" x 2", minimum, size samples of the complete range of colors, patterns, and finishes available for initial selection.

    c. Final Samples:

        1). Color, Pattern and Finish Samples: Submit 6" x 6" final samples matching those initially selected.

        2). Fused Joint Sample: On project products that would least likely obscure joints, submit 6" x 10" samples showing fused joint work.

4. Assurance / Control Submittals:

    a. Fabricator=s certificate that the products meet or exceed the specified requirements.

b. Documentation of experience indicating compliance with the specified qualifications requirements.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Warranty: Submit a written Warranty with forms completed in the name of the Owner and registered with the fabricator.

1.7 COORDINATION

A. Pre-Installation Meeting: Convene a Pre-Installation Meeting at the Project Site prior to the delivery of architectural woodwork materials to the Site.

1. Require attendance of the Contractor, Architect, Owner=s representative, and representatives of the installer of finish carpentry, other finishes, painting and related mechanical and electrical work.

2. Review coordination and environmental controls required for proper installation, and ambient conditions in areas to receive the work.

3. Review preparation and installation procedures, and the coordination and scheduling required with related work.

B. Support Work:

1. For support work not indicated in the Contact Documents, coordinate the requirements with other installers, in a timely manner.

2. Provide work as necessary to ensure that all work has proper framing, backing and reinforcing supports to ensure secure and solid installations.

1.8 QUALITY ASSURANCE

A. Qualifications:

1. Fabricator: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

B. Quality Standards:

1. Woodwork shall comply with the requirements of AWI AArchitectural Woodwork Quality Standards Illustrated@, Eighth Edition, 200, except where more stringent requirements are specified herein.

C. Style: Fabricate, as indicated, utilizing the following:

1. [Conventional Flush Construction with face frame.]

2. [Conventional Flush Construction without face frame.]

3. [Flush Overlay Construction.]

4. [Reveal Overly Construction.]

5. Wood faced casework - [Premium] [Custom] grade.

6. Countertop, casework and shelving - [Premium] [Custom] grade.

7. Wood shelving - [Premium] [Custom] grade.

1.9 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Package architectural woodwork in water-tight containers for transport to the Project Site to prevent damage, water damage, soiling and deterioration and for storage in a location other than inside the building, if necessary.

C. Do not store woodwork on the Project Site for a long period of time. If, due to unforseen circumstances, the woodwork must be stored in other than the installation areas, store only in areas meeting the requirements specified for the installation areas.

D. Do not deliver woodwork until wet work, grinding, painting and similar operations which could damage, soil or deteriorate the woodwork has been completed in the installation areas, and humidity has been stabilized.

E. Deliver products to the Project Site in the fabricator=s original, new, unopened packaging, crates or containers.

1.10 JOB CONDITIONS

A. The fabricator of woodwork shall determine the optimum moisture content and required temperature and humidity conditions.

B. The installer shall advise the Contractor of the temperature and humidity requirements for the architectural woodwork installation areas. Do not install woodwork until the required temperature and relative humidity has been stabilized and will be maintained in the installation areas.

C. Stabilize temperature and humidity in installation areas, as necessary, to maintain the moisture content of the installed woodwork within a 1.0% tolerance of optimum, from the date of installation throughout the remainder of the construction period.

D. Unless instructed otherwise by the Installer, maintain the spaces to receive woodwork between 65E F and 80E F, with a relative humidity of 50% or less for 72 hours prior to, during and after installation until the date of Substantial Completion.

1.11 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Fabricator=s Warranty: Provide fabricator=s standard Warranty against defects in product materials and workmanship.

PART 2 PRODUCTS

2.1 WOOD FACED CASEWORK AND TRIM

A. AWI, [premium] [custom] grade, natural finish.

B. Trim and Solid Stock: Solid, kiln dried, [premium] [custom] grad, wood species as selected.

C. Core Stock: 3/4" plywood or medium density melamine particleboard, veneer finish at exposed faces, melamine or matching veneer finish at semi-exposed faces, outside and inside drawers, cabinet backs, shelves, etc.

D. Species and Cut: Lumber and veneer for transparent and opaque finish shall be as indicated herein or in the Finish Schedule, interior drawings and details, or as selected.

E. Factory Finished: Casework shall be factory finished per AWI 1500, System #5, catalyzed polyurethane, satin medium rubbed effect, filled finish.

F. Backpriming: Back prime the work with a single coat of spar varnish or other acceptable sealer for fabricated units to be installed as an exterior component or where against portland cement plaster, gypsum plaster or against an exterior facing wall of concrete or masonry. Ensure that the sealer does not contaminate surfaces requiring a transparent finish.

2.2 PLASTIC LAMINATE FACED CASEWORK AND SHELVING

A. Core Stock: Material shall be 45 pound density hard board, industrial grade.

1. Minimum core thickness shall be 3/4" except:

a. Hidden cabinet backs may be 1/4" thick hardboard.

b. Exposed backs and drawer bottoms may be 1/4" thick.

c. Drawer sides may be 1/2" thick.

d. Backs of free standing cabinets may be 1/2", 5/8" or 3/4" thick, as indicated or required.

e. Cabinet bases (toe spaces) may be solid kiln-dried wood, unfinished for finish applications by others.

f. Shelf thickness shall be 1" for any shelf over 36" long.

2. Laminated Plastic. Where Plam is indicated for exterior cabinet finish, all visible exposed faces and edges shall be covered with laminated plastic, unless otherwise specified herein. Provide backer as necessary to balance plastic laminate installation at concealed locations.

a. Fabricators: Subject to compliance with the Project requirements, fabricators offering products which may be incorporated into the work include the following:

1). Formica Corporation.

2). Nevamar Corporation.

3). Wilsonart International.

b. High-Pressure Decorative Laminate: NEMA LD-3, GP-50, General Purpose:

1). Nominal 0.050" thick for horizontal and high usage exposures.

2). 0.028" thick for vertical and medium usage exposures.

3). 0.020" thick, liner grade, for all semi-exposed faces inside drawers, doors, backs, shelves, etc.

4). Color(s) as selected.

c. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

3. Laminated Plastic Adhesive: Type recommended by the laminated plastic manufacturer; bonded by machine application and pressure of not less than 100 pounds per square inch.

4. Edge Treatment: Top edges of drawer sides and drawer backs; edge of doors, fixed panels, visible frame parts and drawer face tops and edges shall be matching laminate faced or shall be resilient polyvinylchloride 0.024" thick, machine bonded with hot melt glue, factory edges trimmed, superfinished, buffed and polished.

2.3 PLASTIC LAMINATE COUNTERTOPS

A. Plastic Laminate Tops:

1. Core thickness of countertop substrate shall be 3/4" or 1" as indicated. Backsplash core shall be 3/4" or 1/2" in two-piece countertop applications.

2. Finish wear surfaces, including all edges, shall be 0.050" plastic; velvet or satin finish, pattern or solid color, as selected from the manufacturer=s standards.

3. Underside of decks and back side of backsplashes shall have 0.02" balance sheet bonded to the substrate whether or not the countertop is in Awet@ or Adry@ usage.

4. Backsplash to deck joints shall be shoulder rabbited, glued, mechanically fastened, and sealed during assembly with a silicone compound; backsplash color shall be compatible with the deck color.

5. Transverse deck joints shall be spaced as far apart as material limitations allow, shall be job sealed during installation with silicone compound, and shall be securely drawn together with concealed mechanical joint fasteners.

6. Where noted on the Drawings, chemical-resistant countertop surfacing with solid-core edge banding shall be used when severe resistance to reagents is required.

7. Use acid-resistant plastic laminate at Science Laboratories, Art Rooms and adjacent Storage Room counters.

2.4 SOLID POLYMER FABRICATIONS

A. Provide fabrications of cast solid polymer material composed of acrylic polymer with mineral fillers and pigments where indicated. Material shall not be coated or laminate to substrates. Superficial damage to a depth of 1/64" shall be repairable by sanding or polishing. Products by:

1. Avonite Surfaces.

2. DuPont Corian.

B. Size:

1. Width / Height: Fabricator=s standards of size best meeting the project requirements. Backsplash to be 4" in height, unless otherwise indicated.

2. Thickness:

a. Horizontal surfaces - 3/4" minimum.

b. Vertical surfaces - 1/2" minimum; backsplashes - 3/4".

C. Finish: Polished, unless otherwise indicated. Top, backsplash and fascia shall be one-piece. Color, edge detail and pattern shall be as selected from the fabricator=s standards.

D. Color / Pattern: The basis of design is products by Avonite or approved comparable color / pattern.

E. Related Materials:

1. Panel Adhesive: Fabricator=s standard specifically recommended for the Project application. Adhesives used at installations exposed to water or high humidity conditions to be water-resistant type.

2. Joint Adhesive: Fabricator=s standard capable of fusing each joint and creating inconspicuous and non-porous joints.

3. Sealant: Fabricator=s recommended mildew resistant, FDA / UL recognized silicone sealant, in colors custom matched to each component where sealant is required.

4. Mounting Hardware: Provide mounting hardware including sink / bowl clips, inserts and fasteners for the attachment of undermount sinks and lavatories.

5. Anchorage Devices: Fabricator=s approved clips, inserts, and anchorage devices . Ferrous products to be hot-dipped galvanized. Do not use metal types not specifically approved by the fabricator for their products.

F. Fabrication:

1. Factory fabricate components to the greatest extent possible, to the sizes and shapes indicated, in accordance with the approved Shop Drawings. Where indicated, factory fabricate side and back splashes with 1/2" cove at intersections.

2. Form joints between components using the fabricator=s standard acrylic joint adhesive. Joints shall be inconspicuous, non-porous, and reinforced with strips of

solid polymer material in accordance with the fabricator=s printed instructions.

3. Tolerances:

   a. Variation of component size: +/- 1/8".

   b. Location of openings: +/- 1/8" from the required location.

4. Provide factory cutouts for plumbing and accessories as indicated. Reinforce heated or cooled cutouts in accordance with the Approved Shop Drawings and the fabricator=s printed instructions.

5. Cut an finish components edges with clean returns. Round edges of cutouts to 1/8" radius. Round corners of cutouts with 1/2" minimum radius. Use router to form all cutouts. Provide thick edges where indicated using strips of solid polymer material and fabricator=s acrylic joint adhesive. All joints to be inconspicuous and non-porous. All exposed surfaces to have a uniform finish and gloss.

6. Countertop Joint Layout: Provide a monolithic look to the greatest extent possible. Where joints in the work is required due to fabrication limitations or required for proper performance of the product, work with the Owner=s representative to establish satisfactory joint locations.

2.5 MARBLE AND GRANITE COUNTERTOPS

A. Thickness shall be 3/4", minimum.

B. Edge detail shall be as selected.

C. Top, backsplash and fascia shall be a color and pattern selected from the fabricator=s standards. Location of joints shall be shown on shop drawings.

2.6 WOOD SHELVING

A. Softwood plywood, PS 1, graded in accordance with AWI.

B. Veneer cover core sides and ends with plastic laminate, color as selected.

C. Cover medium density particleboard with factory-applied finish, as selected.

D. Dimensions: 3/4" thick x depth shown on the Drawings x maximum possible length.

2.7 CABINET HARDWARE AND ACCESSORY MATERIALS

A. General: Provide complete cabinet hardware and accessory materials associated with the architectural woodwork, except for units specified as Adoor hardware@ in other Sections of these Specifications.

B. Hardware References: Except as otherwise indicated, comply with ANSI A156.9 AAmerican National Standard for Cabinet Hardware@.

C. Cabinet Door Hardware: Provide hinges and pulls of the types indicated, to accommodate each door size and style. Hinges concealed AEuropean@ style; Pulls - EPCO DP-418 x 3-
1/2@ wire pull or as indicated or approved.

1. Each cabinet door up to 36" in height shall have one pair of hinges; up to 48" in height, 1-1/2 pair hinges; over 48" in height, two pair of hinges. Each cabinet shall be equipped with sound dampening cushions to minimize noise.

D. Drawer Hardware: Provide slides and pulls of the types indicated, to accommodate each drawer size and style.

1. Equip each drawer with side-mounted, full-extension, ball-bearing, nylon roller drawer slides with a load capacity of 75 pounds per pair; provide Astay-closed@ feature for lift out removal.

E. Locks: Provide standard pin-type or disc-type (five pins or discs) tumbler locks, keyed individually, except as otherwise indicated.

F. Shelf Supports: Where shelving is indicated as Aadjustable@, provide pin-type or slotted-type standards and brackets of a type required to support shelves with a uniform load of 40 pounds per square foot; recessed for premium construction, surface-mounted for custom and economy construction.

2.8 ACCESSORIES

A. Adhesive: Type recommended by AWI to suit the application.

B. Fasteners: Size and type to suit the application.

C. Bolts, Nuts, Washers, Lags, Pins and Screws: Of the size and type to suit the application.

D. Concealed Joint Fasteners: Threaded, hot-dipped galvanized steel.

E. Sealant: Manufacturer=s recommended mildew resistant, FDA / UL recognized silicone sealant in colors custom matched to each component where sealant is required.

F. Anchorage Devices: Fabricator=s project approved clips, inserts, and anchorage devices. Ferrous products to be hot-dipped galvanized. Do not use metal types not specifically approved by the fabricator for their products.

2.9 FABRICATION

A. Field Measurements:

1. Before proceeding with the fabrication of architectural woodwork products, obtain field measurements and verify dimensions.

B. Wood Products:

1. Fabricate architectural woodwork products to the dimensions, profiles and details indicated, with construction and materials complying with the referenced standards of the specified AWI grades. Where necessary for fitting at the Project Site, provide reasonable allowance for scribing, trimming and fitting. Pre-cut openings, where possible, to receive hardware and mechanical and electrical work.

2. Conceal all anchorage devices, except where decorative fasteners are approved.

C. Fire-Retardant Treatment:

1. Where fire-retardant wood is specified or otherwise indicated, provide materials which comply with AWPA standards for pressure impregnation with fire-retardant chemicals, and which have a flame spread rating of not more than 25 when tested in accordance with UL 723 or ASTM E 84, and show no increase in flame spread and significant progressive combustion upon continuation of the test for an additional twenty (20) minutes.

2. Where treated items are exposed to the exterior or to high humidity or are to have a transparent stain or sealer finish, provide appearance grade materials which show no change in the fire hazard classification when subjected to standard rain test per UL 790 or ASTM B 2898.

3. Use fire-retardant treatment which will not bleed through or adversely affect the type of finish indicated, and which does not require brush treatment of field made end cuts to maintain the fire-hazard classification.

D. Products Scheduled for Transparent Finish:

1. Treatment color shall be compatible with products scheduled for a transparent finish. Provide samples of treatment with finish applied for review.

2. Where a transparent finish is indicated, use the type of treatment and species which permits milling of the lumber after treatment without altering the indicated fire-hazard classification, as determined by fire testing.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required and ready to receive the work.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Condition woodwork to the average prevailing humidity conditions in the installation areas before installing.

B. Install concrete inserts and similar anchoring devices to be built into substrates well in advance of the time the substrates are to be built.

C. Prior to the installation of architectural woodwork, examine shop fabricated units for completion, and complete work as required, including back priming and removal of packing.

3.3 INSTALLATION

A. Set and secure fixtures in place at the locations indicated on the Drawings.

B. Cabinets and countertops shall be installed by factory-trained personnel, or by personnel experienced in installing the type of countertops and splashes required.

C. Install the work plumb, level, true and straight with no distortions. Shim as required using concealed shims.

D. Scribe and cut work to fit adjoining work; refinish cut surfaces or repair damaged finishes at cuts in strict accordance with the fabricator=s instructions.

E. Secure woodwork to anchorage devices or blocking built-in or directly attach to substrates. Secure to grounds, stripping and blocking with countersunk, concealed fasteners and blind nail as required for a complete installation. Except where prefinished matching fastener heads are required, use fine finishing nails for exposed nailing, countersink and fill flush with the woodwork surface. Match the final finish where transparent finish is indicated.

F. Casework: Install without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete the installation of hardware and accessory items as indicated. Maintain the indicated veneer sequence matching of casework with transparent finish.

G. Secure fixtures to the floor using appropriate angles and anchorages.

H. Countertops: Anchor securely to base units and other supports as indicated, in strict accordance with the fabricator=s instructions.

I. Wood Storage Shelving: Complete the assembly of units and install in the locations indicated, including hardware and accessories, as indicated.

J. Finish: AWI quality standard. Leave woodwork in paint ready condition for final finishing by the painting applicator.

K. Apply sealant at all joints between architectural woodwork and adjacent floor and walls.

3.4 CONSTRUCTION

A. Interface with Other Work:

1. Coordinate the installation sequence of fixtures with the trades providing utilities to the units.

B. Tolerances:

1. Fabrication: Variation of Components Size: + 1/8". Location of Openings: + 1/8" from the required location.

2. Installation: 1/8" in 8'-0" for plumb and level, including countertops, and with 1/64", maximum, offset in flush adjoining surfaces; 1/32" maximum offsets in revealed adjoining surfaces.

C. Finishing:

1. Repair damaged and defective woodwork wherever possible to eliminate defects functionally and visually. Where not possible to repair to the satisfaction of the Owner=s representative, replace the woodwork.

2. Touch-up shop applied finishes to restore damaged and soiled areas.

3. Adjust joiner for a uniform appearance.

4. Complete the finishing work specified as work of this Section, to whatever extent not completed in the shop or prior to installation of the woodwork.

3.5 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting the installed work.

B. Lubricate and make final adjustment of moving and operating parts for smooth and correct operation.

3.6 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect woodwork installations for flush, plumb, level, alignment and secure attachment to substrates.

3.7 CLEANING

A. Section 01700 - Execution Requirements: Cleaning and protection of installed work.

B. Clean casework, counters, shelves, hardware, fittings and fixtures.

C. Clean woodwork on exposed and semi-exposed surfaces.

3.8 PROTECTION

A. Installer shall advise the Contractor and paint applicator of the procedures required to protect the woodwork during the remainder of the construction to ensure that the work will be without damage and deterioration at the time of final acceptance.

B. Installer shall return to the Project prior to substantial completion, repair any damage to the work and readjust the hardware.

END OF SECTION

SECTION 06650

SOLID POLYMER FABRICATIONS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Countertops.

2. Work surfaces.

3. Vanities.

4. Window sills.

5. Preparation for installation and connection of utilities.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 06400 - Architectural Woodwork: Support for countertops, work surfaces and vanities.

2. Section 07900 - Joint Sealers: Sealants for joints.

3. Section 09110 - Non-Load Bearing Steel Framing: Blocking and backing plates in walls.

4. Section 09250 - Gypsum Board: Adjacent wall substrate.

5. Section 12305 - Science Casework and Laboratory Equipment: Support for countertops.

6. Division 15 - Plumbing Fixtures.

7. Division 16 - Wiring Devices.

1.2 DESCRIPTION OF WORK

A. The extent of Solid polymer fabrications work is indicated on the Drawings and as specified herein, and includes providing, fabricating and installing cast synthetic polymer fabrications, splashes, inlays, adhesive, sealant, mounting accessories and preparation for installation of plumbing fixtures, and mechanical and electrical services by other trades.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced.

Publications are referred to in the text by basic designation only. Comply with the applicable standards of the following, as referenced herein.

B. American National Standards Institute (ANSI):

1. ANSI Z124.3 - Plastic Lavatories.

2. ANSI Z124.6 - Plastic Sinks.

C. American Society for Testing and Materials (ASTM):

1. ASTM C 501 - Test Method for Relative Resistance to Wear of Unglazed Ceramic Tile by the Taber Abraser.

2. ASTM D 256 - Test Methods for Determining the Izod Pendulum Impact Resistance of Plastics.

3. ASTM D 570 - Test Method for Water Absorption of Plastics.

4. ASTM D 638 - Test Method for Tensile Properties of Plastics.

5. ASTM D 696 - Test Method for Coefficient of Linear Thermal Expansion of Plastics Between -30E C and 30E C With a Vitreous Silica Dilatometer.

6. ASTM D 785 - Test Method for Rockwell Hardness of Plastics and Electrical Insulating Materials.

7. ASTM D 790 - Test Method for Flexural Properties of Unreinforced and Reinforced Plastics and Electrical Insulating Materials.

8. ASTM D 2583 - Test Method for Indentation Hardness of Rigid Plastics by Means of a Barcol Impressor.

9. ASTM E 84 - Test Method for Surface Burning Characteristics of Building Materials.

10. ASTM G 21 - Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

11. ASTM G 155 - Practice for Operating Xenon Arc Light Apparatus for Exposure of Non-Metallic Materials.

D. Americans with Disabilities Act Accessibility Guidelines (ADAAG):

1. Accessibility Guidelines for Buildings and Facilities.

2. Accessibility Guidelines for Schools

E. National Electrical Manufacturers Association (NEMA)@:

1. NEMA LD3 - High Pressure Decorative Laminates.

F. National Fire Protection Association (NFPA):

1. NFPA 255 - Method of Test for Surface Burning Characteristics of Building Materials.

G. Underwriters Laboratories, Inc. (UL):

1. UL 723 - Test for Surface Burning Characteristics of Building Materials.

H. U. S. Environmental Protection Agency (EPA):

1. Method 24 - Determination of Volatile Matter Content.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer=s current product literature for each product indicated.

2. Shop Drawings: Show the location of each item, dimensioned plans, elevations, large scale details, construction joint locations, termination points, attachment devices and other components. Show locations and sizes of furring, blocking, including concealed blocking and reinforcement specified in Section 09110. Show locations and sizes of cutouts and hole for plumbing fixtures, faucets, soap dispensers, waste receptacle and other items to be installed in the solid surface.

3. Samples:

a. Initial Samples: Unless specific products are scheduled, submit 2" x 2", minimum, size samples of the manufacturer=s complete range of colors, patterns, and glosses for initial selection.

a. Final Samples:

1). Submit two (2) 6" x 6" final samples matching the color, patten and gloss of those initially selected.

2). Fused Joint Sample: Submit 6" x 10" samples showing fused joint work.

3). One sample or each will be retained at the Project Site as the standard for the work.

4. Assurance / Control Submittals:

a. Manufacturer=s certificate that the products meet or exceed the specified requirements.

b. Manufacturer's Material Safety Data Sheets (MSDS).

c. Manufacturer=s / Fabricator=s certification that the products supplied comply with applicable federal and local regulations controlling the use of volatile organic compounds (VOC).

d. Manufacturer's Instructions indicating procedures and conditions

requiring special attention, and cautionary procedures required during fabrication.

e. Documentation of experience indicating compliance with the specified qualifications requirements.

f. Signed copy of the Fabricator=s certificate, acknowledging that he / she has been trained and approved by the manufacturer.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Warranty: Provide a written special Warranty with forms completed in the name of the Owner and registered with the fabricator.

C. Maintenance Data: Submit Manufacturer=s care and maintenance data, including repair and cleaning instructions.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Fabricator / Installer: Certified by the manufacturer, and has successfully completed fabrications of the type required for this Project, and has been continuously engaged in this type of work for not less than five (5) years.

B. Field Measurements: When possible, take field measurements prior to the preparation of Shop Drawings and fabrication to ensure proper fitting of the work, otherwise, indicate field measurements on the final Shop Drawings.

C. Installation to be by the Fabricator of the products, for single source responsibility.

1.6 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Package products in packages, crates or containers for transport to the Project Site to prevent damage, water damage, soiling and deterioration.

C. Deliver sheets, fabricated items, materials and components to the Project Site in the fabricator=s original, new, unopened, undamaged packages, crates or containers with identification labels intact.

D. Do not deliver products until wet work, grinding, painting and similar operations have been completed in the installation areas.

E. If, due to unforeseen circumstances, the fabrications must be stored in other than the installation areas, store only in areas meeting the requirements specified for the installation areas.

1.7 JOB CONDITIONS

A. The Installer shall advise the Contractor of the temperature requirements for the installation areas.

B. Do not install the fabrications until the required temperature has been stabilized and will be maintained in the installation areas.

1.8 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Special Warranty:

1. Submit a written Warranty jointly signed by the solid polymer manufacturer and the fabricator certifying that the products and the installation is free of defective materials and workmanship, and will repair or replace any defective component or the fabrication, in whole or in part, as necessary to restore the product to its original intended state and integrity.

2. Warranty Period: Ten (10) years from the date of Substantial Completion.

1.9 MAINTENANCE

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Provide manufacturer=s maintenance kit for finishes.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Avonite Surfaces by Aristech Acrylics LLC..

2. Corian by DuPont, Inc.

B. Section 01600 - Product Requirements: Product Options: Substitutions: Not permitted.

2.2 MATERIALS

A. General:

1. Studio Collection by Avonite.

2. D Series Corian by DuPont.

B. Description:

1. Non-porous, homogeneous material maintaining the same composition throughout, with a composition of polyester or acrylic polymer, aluminum trihydrate filler and pigment.

2. Thickness: 3/4", unless shown otherwise specified.

3. Colors and patterns, as selected, from the manufacturer=s full line of standard colors and patterns

4. Adhesive: Water-based adhesive as recommended by the polymer manufacturer for the substrate and conditions.

5. Sealant: Mildew-resistant, FDA-compliant as recommended by the manufacturer; color to match the solid surface material.

2.3 FABRICATION

A. General:

1. Factory fabricate by a solid polymer manufacturer=s certified fabricator.

2. Comply with the details shown for profile and construction of fabrications. Where not otherwise shown, comply with the manufacturer=s written instructions.

3. Provide separate countertops for installation on casework or other support systems, as indicated.

3. Measurements: Before proceeding with fabrications required to be fitted to other construction, obtain measurements and verify the dimensions and Shop Drawings details, as required for an accurate fit. Where measuring substrates before fabrication would delay the project, proceed with the fabrication and provide sufficient borders and edges to allow for subsequent scribing and trimming for an accurate fit.

4. Fabricate from single piece material, except where the required length exceeds the maximum length produced by the manufacturer. Locate joints at even intervals through the material, aligned with other adjacent joints, and as approved on the final Shop Drawings. Form joints using the manufacturer=s recommended adhesives for a smooth even appearance with matching color for an inconspicuous appearance. Provide joints of an equal or greater strength than the material being joined.

5. Pre-Cut Openings: Pre-cut openings in fabrications, wherever possible, to receive plumbing fixtures, electrical work and similar items. Locate the openings accurately, and use templates or roughing-in diagrams for the proper size and shape. Smooth edges of cutouts and, where located in countertops and similar exposures, seal the edges of cutouts with a water-resistant material.

6. Cutouts for sinks and lavatories shall be smooth and uniform without saw marks. The top and bottom of openings shall be finished smooth. Where edges are exposed, fabricate with 1/16" radius; 1/4" radius at cutouts, or as indicated.

7. Fabricate to accommodate plumbing fixtures, trim and drains.

A. Countertops and Work Surfaces:

1. Fabricate tops from 3/4" thick material with 1/2" thick x 6" high splashes and 2" skirts, unless otherwise indicated. Include 3/4" thick solid support braces with aluminum angle clips for interconnection of components.

C. Vanities:

1. Fabricate tops from 3/4" thick material with 1/2" thick x 6" high splashes and 4" skirt, unless otherwise indicated.

D. Window Sills:

1. Provide sizes and profiles as detailed. Where joints are required, locate at the center of openings or at the center line of window mullions.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General:

1. Comply with manufacturer=s recommendations.

2. Cure fabrications for 24 hours, minimum, before exposure to moisture or pressure.

3. Install the work plumb, level, true and straight with no distortions. Shim as required, using concealed shims. Install to a tolerance of 1/64" in 8'-0" for plumb and level; and with 1/32" maximum offsets in revealed adjoining surfaces.

4. Scribe and cut work to fit adjoining work. Refinish cut surfaces and repair damaged finish at cuts.

B. Anchorage:

1. Anchor fabrications to anchors or blocking built-in or directly attached to substrates as detailed. Secure to grounds, stripping and blocking with concealed fasteners as required for a complete installation.

2. Securely anchor countertops to base units and other support systems as indicated.

C. Countertops, Work Surfaces and Vanities:

1. Anchor units to supports using concealed fasteners. Do not use continuous adhesive application. Field cut as required for plumbing fixtures and fittings. Plumbing fixtures, trim, drains, and connections are specified in Division 15. At recesses, install loose splashes with adhesive. Seal joints and perimeter with matching acrylic sealant as specified in Section 07900 - Joint Sealers, except at Vanities, use matching mildew-resistant silicone sealant as specified in Section 07900.

D. Window Sills:

1. Anchor window sills to substrate with non-staining adhesive as recommended by both stool and adhesive manufacturer. Cut and trim to fit with joints only at approved locations. Make seamless joints. Fill joints between stools and other materials with acrylic sealant as specified in Section 07900.

3.3 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting the installed work.

B. Repair soiled, damaged and defective fabrications wherever possible to eliminate defects functionally and visually; where not possible to repair properly, replace the fabrications.

3.4 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect installations for level, inconspicious joints, tight fit to adjacent surfaces and secure attachment to substrates.

3.5 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Clean exposed and semi-exposed surfaces.

C. Remove adhesives, sealants and other stains.

3.6 PROTECTION

A. The Fabricator / Installer shall advise the Contractor of the protection and maintained conditions necessary to ensure that the work will be without damage or deterioration at the time of final acceptance.

END OF SECTION

SECTION 07110

WATERPROOFING

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Below grade walls waterproofing.

2. Existing below grade walls affected by new construction waterproofing.

3. Planters waterproofing.

4. Concrete parking and traffic decks waterproofing.

5. Horizontal roof slabs supporting earth waterproofing.

6. Split concrete slabs waterproofing.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Substrate for waterproofing.

2. Section 04230 - Reinforced Unit Masonry: Substrate for waterproofing.

3. Section 04400 - Natural Stone: Damnproofing under natural stone.

4. Section 07190 - Water Repellents (Sealer): Water repellents and slurry coat dampproofing.

5. Section 09300 - Tile: Dampproofing under ceramic and quarry tile flooring.

1.2 DESCRIPTION OF WORK

A. The extent of each type of waterproofing is indicated on the Drawings and as specified herein, and includes providing and installing all waterproofing materials. Similar work used as an exposed finish is excluded by definition and, if required, is specified as roofing, flooring, special coating or other appropriate category.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society for Testing and Materials (ASTM):

1. ASTM C 642 - Test Method for Water Absorption.

2. ASTM D 56 - Test Method for Flash Point by Closed Cup Tester.

3. ASTM D 3960 - Practice for Determining Volatile Organic Compound (VOC) Content of Paints and Related Coatings.

4. ASTM E 514 - Test Method for Water Penetration and Leakage Through Masonry.

C. U. S. Environmental Protection Agency (EPA):

1. Method 24 - Determination of Volatile Matter Content.

1.4 SUBMITTALS

A. Section 01330 - Submittals: Procedures for submittals.

1. Product Data: Submit manufacturer=s specifications, recommendations for water repellents for each surface specified, performance data, surface preparation and application instructions, precautions for materials which can contaminate the system**,** limitations to coating, protection and cleaning instructions and VOC content. Include recommendations for sealing penetrations, cracks and control, construction and expansion joints. Submit color charts for products required to be integrally colored.

2. Shop Drawings: Indicate details critical to water tightness of the membrane, including, but not necessarily limited to, membrane transitions / terminations at perimeters, drains, sleeves and other penetrating elements.

3. Samples: For each type of waterproofing system, submit a 8-1/2" x 11" board sample of each complete system. Where the membrane is a layered system, expose at least 1" of each succeeding layer. Top coats to be provided with Project required colors as selected.

4. Assurance / Control Submittals:

a. Manufacturer=s certificate that the products meet or exceed the specified requirements.

b. Manufacturer's Material Safety Data Sheets (MSDS).

c. Manufacturer=s certification that the products supplied comply with applicable federal and local regulations controlling the use of volatile organic compounds (VOC).

d. Manufacturer's Instructions indicating procedures and conditions requiring special attention, and cautionary procedures required during application.

e. Documentation of experience indicating compliance with the specified qualifications requirements.

C. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Warranty: Submit a written special Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience, and has a record of successful in-service performance.

2. Applicator: Company experienced in applying the types of waterproofing required for this Project for not less than five (5) years, and is acceptable to the primary waterproofing materials manufacturer. Employees assigned to the Project shall have been trained by an approved waterproofing materials manufacturer.

B. Mockup: Apply water repellent to a mockup, either partial or full coverage, as directed, before proceeding with the application. Comply with the application requirements contained herein.

C. Regulatory Requirements: Comply with applicable rules and regulations of the pollution-control regulatory agency having jurisdiction regarding volatile organic compounds (VOC) and use of hydrocarbon solvents.

D. General: Obtain the primary materials from a single manufacturer. Provide secondary materials only as recommended by the manufacturer of the primary materials.

E. Manufacturer=s Technical Representative:

1. The primary waterproofing materials manufacturer to make a Technical Representative available to monitor the on-going work to ensure proper application of the waterproofing system. The manufacturer must maintain the same Technical Representative for the duration of the Project.

2. Pre-Application Review: Prior to the start of work and the purchase of any materials, the Manufacturer=s Technical Representative, who is to certify each application, shall visit the Project Site, review existing conditions, and review the Contract Document for appropriateness of the requirements with the specified manufacturer=s system including, but not necessarily limited to membrane requirements, substrate preparation, membrane terminations, reinforcements, flashing conditions, penetrations, including multiple penetration requirements, joints required and treatment and protection of the membrane.

3. Certification: After the Manufacturer=s Technical Representative=s review, submit written certification of the appropriateness of the requirements, or submit other or additional specific recommendations, if any, to assure that the specified system is appropriate for the use intended and complete in scope to assure its intended performance. This should be coordinated with the Shop Drawing Submittal.

4. Substrate Certification: Submit the Technical Representative=s written certification of compliance that the prepared substrate is in conformance with requirements necessary for the system installation. Certification of the substrate is to be accomplished just prior to the start of application of the membrane system.

5. Technical Representative=s Field Review of Work:

a. Number of Site Visits: Submit the manufacturer=s recommended minimum number of times the Technical Representative is to field review the work to ensure success of the installation. Indicate when such visits are to be made.

b. Field Reports: For each visit, the Technical Representative shall submit a detailed Field Report assessing each application. Field Reports to indicate the date, time of day, length of each visit, weather condition during the visit, condition of the substrate at the time of application, application procedures, and other important aspects that affect success of the application. Submit Reports within seven (7) days after each Site visit.

F. Performance Requirements: It is required that the waterproofing membrane be watertight, and not deteriorate in excess of the limits published by the membrane manufacturer.

1.6 COORDINATION

A. Pre-Application Conference: Prior to start of the application of materials, meet at the Project Site with the Owner=s representative, Architect, Contractor, Applicator and subcontractors whose work penetrates the surfaces to be waterproofed. Review the conditions, methods and procedures necessary for application of the work, including inspections of the areas of work, requirements of the Specifications and the manufacturer=s literature; review submittals and schedules.

B. Tolerances / Finish of Substrates: Coordinate with other trades providing substrates over which the waterproofing is scheduled for the required tolerances, conditions and finish of the substrates necessary to ensure successful application of the work of this Section. Coordinate in a timely manner so other trades can implement their requirements in accordance with the Job Schedule. Submit documentation of the coordination, including the date of the coordination, with whom coordinated, and the requirements specified.

C. Control Joints: Control joints are indicated on the Drawings. Where additional or other configuration for control joints is required in substrates other than what is currently required to ensure success of each membrane application, submit the requirements to the Owner=s representative for review, and arrange with the substrate installer for installation of such control joints.

1.7 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements. Transport, handle, store, and protect the products.

B. Deliver products to the Project Site in the manufacturer=s original, new and unopened packages or containers with seals and labels intact; dry and undamaged, bearing the product name, color, manufacturer=s lot number, directions for use and precautionary labels.

C. Store materials not in actual use, in tightly covered containers. Maintain containers used in the storage of materials, in a clean condition, free of foreign materials and residue.

D. Store materials in a well ventilated area, and in compliance with the manufacturer=s published instructions.

E. Store and handle materials to prevent deterioration and damage due to moisture,

temperature changes, contaminants, and other causes.

F. Protect against fire hazards and spontaneous combustion.

G. Keep storage areas neat and orderly. Remove waste daily.

H. Take all precautions to ensure that workmen and the work areas are adequately protected from health hazards resulting from handling, mixing and application of the materials.

1.8 JOB CONDITIONS

A. Proceed with the waterproofing work only after the substrate construction and penetrating work has been completed.

B. Environmental Requirements: Do not apply products under any of the following conditions, except with the written recommendation of the manufacturer:

1. Substrate surfaces cured less than thirty (30) days.

2. Surfaces not dry for a minimum of 24 hours.

3. Rain predicted within 24 hours.

1.9 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Special Warranty:

1. Provide a joint and severable written Warranty signed by the waterproofing materials manufacturer, Contractor and the Applicator, agreeing to repair or replace defective materials and workmanship, defined to include leakage of water, ruptures caused by cracking substrate up to 1/16", abnormal aging or deterioration of materials, and other failures of membranes to perform as required within the warranty period. Warranty shall include responsibility for removal and replacement of other work which conceals the waterproofing membrane.

2. During the warranty period, repairs and replacements required because of acts of God and other events beyond the Contractor=s / Applicator=s control, and which exceed the performance requirements, shall be completed by the Contractor / Applicator and paid for by the Owner at the prevailing rates.

3. Warranty Period: Five (5) years from the date of Substantial Completion of the waterproofing work.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Urethane Polymers International (UPI).

2. Carlisle Coatings and Waterproofing, Inc. (CCW).

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 SYSTEM

A. The following specifications are based on Urethane Polymers International products to establish quality.

B. Other acceptable manufacturer=s systems shall be equivalent.

2.3 WATERPROOFING MATERIALS

A. WP-1 (for vertical and horizontal surfaces below grade, masonry backer walls and inside planters): Single component, fluid-applied, modified elastomeric waterproof membrane, UPI System BG-7011-90 Mil by Urethane Polymers or approved equal; 90 mils thickness for walls and vertical surfaces.

B. WP-2 (for horizontal roof slabs supporting earth or paving and split slab construction): UPI System BG-7011-R-90 Mil or approved equal.

C. WP-3 (for exposed concrete parking and vehicular traffic decks): Single component, moisture-curing, polyurethane elastomeric membrane UPI Uradek System #70-S for parking stalls; Uradek System #70-H or approved equal for entrances, ramps and drives.

D. Caulking Compound: Single component, polyurethane as recommended by the primary waterproofing materials manufacturer.

E. Aggregate: As recommended by the manufacturer and approved by the Owner=s representative.

F. Other materials as recommended by the manufacturer of the prime materials.

2.4 PROTECTION / DRAINAGE BOARD

A. Composite structure of a molded, three-dimensional, high impact-resistant polymeric sheet with a filter fabric bonded to the open side. ACCW MiraDRAIN 6000" as manufactured by Carlisle Coatings or approved equal.

1. Attach panels to the substrate with an adhesive recommended by the manufacturer.

2.5 MISCELLANEOUS MATERIALS

A. Parge Coat: Where the manufacturer requires a portland cement parge coat over rough or porous substrates, the Contractor shall provide such parge coat as required at no additional cost. Failure of the parge coat or the absence of a parge coat will be considered as failure of the membrane system to perform as the parge coat is a required condition for the membrane=s success over substrates requiring a parge coat.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before

starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

1. Verify that joint sealants are installed and cured.

2. Verify that surfaces to be coated are dry, clean, and free of efflorescence, oil, and other matter detrimental to application of the coating.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean substrate surfaces of projections and substances detrimental to the work, acid etch smooth surfaces, fill all voids to comply with recommendations of the prime materials manufacturer. Stripe coat all cracks up to 1/16" wide, rout and patch cracks larger than 1/16".

B. Moisture Content Testing: Just prior to application, test substrates with an electronic moisture meter. Do not proceed until the moisture content is within the manufacturer's acceptable tolerances.

C. Protection of Other Work: Do not allow liquid or mastic compounds to enter and clog drains, sleeves or conductors. Prevent spillage and migration onto other surfaces of the work by masking or otherwise protecting the adjoining work.

3.3 INSTALLATION

A. General: Comply with the manufacturer's instructions, except where more stringent requirements are shown or specified, and except where Project conditions require extra precautions or provisions to ensure satisfactory performance of the work.

B. Thickness Testing: Monitor mil thickness application by a monitoring method recommended by the Manufacturer=s Technical Representative for each specific system.

C. Reinforcement: Unless otherwise acceptable, or as otherwise recommended, in writing, by the Manufacturer=s Technical Representative, reinforcement is to be provided as follows and in the manner indicated:

1. Material: Manufacturer=s recommended elastomeric sheet and / or polyester fabric fully encapsulated in the primary membrane coating of a thickness equal to the total thickness required for the primary membrane, unless otherwise recommended by the manufacturer, and has been reviewed and approved on submittals.

2. Transitions: At transitions from vertical to horizontal, at inside and outside corners, and at other similar transitions that are not expansion / control joints, penetrations, or cracks, embed reinforcement of a width that extends 6", minimum, onto each surface on each side of the intersection.

3. Expansion / Control Joints: Embed reinforcement of a width necessary to extend the material 6", minimum, on each side of the joint, plus additional materials, as necessary, to accommodate movement of the joint. Small joints are to be bridged

over backer rods placed in the joints. Reinforcement is to be looped down into the joints with backer rod placed in the loop.

4. Penetrations: 36" square reinforcement, but not less than necessary to extend out in all directions from the penetration a distance of 12", minimum, beyond the flange of each penetration.

a. Pipes, Conduits, and Similar Components: Construct a form fitting elastomeric boot 6", minimum, in height and with an integral elastomeric flange extending 6", minimum, onto the wall or deck. The boot shall be fully adhered to the penetrating element and fully encapsulated at the interface with the wall or deck. Apply 36" square reinforcement material over this, fully encapsulated in the primary membrane material.

b. Cracks: Encapsulated reinforcement of a width necessary to extend the material 6", minimum, on each side of the crack.

3.4 APPLICATION

A. WP-1: Prime coat the substrate surface at the rate of 250 - 300 sq. ft. / gallon. Apply with rollers, two or more coats of (30 dry mils) at the rate of 4.5 gallons / 100 sq. ft. to produce 90 dry mils total thickness at vertical surfaces. Allow 18 hours curing time between coats.

1. Attach Protection / Drainage Boards to all vertical and horizontal surfaces with adhesive per the manufacturer=s recommendations. Set panels with the fabric toward the earth side. Lap fabric a minimum of 2". Install at below grade walls and retaining walls. Lap fabric at the top of the highest course and embed in waterproofing to ensure that loose material cannot enter and accumulate behind the protection / drainage board. Backfill against boards with approved material.

B. WP-2: Apply a surface conditioner to concrete substrates in accordance with the manufacturer=s instructions. Apply membrane in three (3) applications at a rate to provide a continuous monolithic coating of 30 dry mils, average thickness per coat, and 90 mils total thickness. Provide flashing in accordance with the manufacturer=s standard details. Where protection board is required, embed into the membrane to ensure good bond. Place protection boards in a staggered pattern and butt boards tightly together.

C. WP-3: Prime and apply a 30 mil thick coating to cover and overlap shrinkage cracks, integral flashings, caulked expansion joints and construction joints. Apply a 25 mil base coat, 25 mil intermediate coat, and two (2) 10 mil top coats to produce 70 mils total thickness, exclusive of aggregate. Broadcast aggregate in the first top coat.

3.5 MEMBRANE TESTING

A. Water Test: Conduct water containment tests to ensure that the membranes are watertight.

B. Horizontal Membranes: For installations where the primary membrane is horizontal, contain waterproofed areas in a manner to prevent 2", minimum, depth of water from escaping by damming any open perimeters and sealing the drains.

C. Pan Membranes: For installations where the primary membrane forms a continuous container with the bottom and all vertical sides enclosed, such as planters, seal the drains and fill the container to within 1@ of the top termination of the membrane.

D. Method of Containment: Dams, seals, and other methods used to contain water should be

capable of fully containing water for the period of time required. The method of containment should not damage the adjacent work.

E. Period of Containment: 48 hours without loss of water, except for that by natural evaporation, and without evidence of failure in the membrane in any manner.

F. Report: Submit a report of tests to the Owner=s representative indicting the location of the test, date and time of the test, weather conditions and results.

3.6 PROTECTION

A. Contractor=s Operations: The Contractor to verify the kinds of operations that will be conducted around or over installed membranes. The Owner=s representative will advise the Contractor of the measures that must be implemented to ensure that the membranes will be without damage at the time of Substantial Completion.

B. Buried Installations: At the time of backfill / fill, at the time of installation of irrigation and landscaping over buried membranes, and at any other time where the Contractor=s operations may have an adverse effect on a buried membrane system, the Manufacturer=s Technical Representative shall observe to ensure that the Contractor=s operations are being conducted in a manner that will protect the membranes from damage.

3.7 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect installations for tight and waterproof joints and proper thickness of membrane applications.

3.8 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Clean all spills. Do not leave splatters or drips.

C. Do not allow seepage of waterproofing through joints.

END OF SECTION

SECTION 07120

FLUID-APPLIED URETHANE ROOFING

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Fluid-applied, elastomeric polyurethane membrane roofing system for new and existing, exposed concrete roof slabs.

2. Walking surfaces over concrete roof slabs.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Substrate for roofing materials.

1.2 DESCRIPTION OF WORK

A. The extent of fluid-applied waterproofing over new and existing concrete roof slabs, including walking surfaces is indicated on the Drawings and as specified herein, and includes providing and applying all the required products.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society for Testing and Materials (ASTM):

1. ASTM C 501 - Test Method for Relative Resistance to Wear of Unglazed Ceramic Tile by the Taber Abraser.

2. ASTM C 957 - Specification for High-Solids Content, Cold Liquid-Applied Elastomeric Waterproofing Membrane With Integral Wearing Surface.

3. ASTM D 412 - Test Methods for Vulcanized Rubber and Thermoplastic Elastomers - Tension.

4. ASTM D 624 - Test Methods for Tear Strength of Conventional Vulcanized Rubber and Thermoplastic Elastomers.

5. ASTM D 822 - Practice for Filtered Open-Flame Carbon-Arc Exposures of Paint and Related Coatings.

6. ASTM D 903 - Test Method for Peel or Stripping Strength of Adhesive Bonds.

7. ASTM D 1004 - Test Method for Tear Resistance (Graves Tear) of Plastic Film and Sheeting.

8. ASTM D 2240 - Test Method for Rubber Property - Durometer Hardness.

9. ASTM E 96 - Test Methods for Water Vapor Transmission of Materials.

C. National Roofing Contractors Association (NRCA):

1. Roofing and Waterproofing Manual.

D. Underwriters Laboratories Inc.:

1. UL 790 - Test Method for Fire Test of Roof Coverings.

E. U. S. Environmental Protection Agency (EPA):

1. Method 24 - Determination of Volatile Matter Content.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Provide data for primer, membrane roofing, flexible flashings, joint and crack sealants and temperature range for application of the waterproofing membrane.

2. Shop Drawings: Sequence drawings and details for special conditions not covered by the manufacturer’s standard details.

3. Samples: Not less than 6" x 6" in size showing the applied thickness, texture and color.

4. Manufacturer’s Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

5. Assurance / Control Submittals:

a. Manufacturer’s certificate that the products meet or exceed the specified requirements.

b. Manufacturer's Material Safety Data Sheets (MSDS).

c. Manufacturer’s certification that the products supplied comply with applicable federal and local regulations controlling the use of volatile organic compounds (VOC).

d. Manufacturer's instructions indicating procedures and conditions requiring special attention, and cautionary procedures required during application.

e. Documentation of experience indicating compliance with the specified qualifications requirements.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Warranty: Submit a written special Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing aromatic and aliphatic urethane roofing systems materials with a minimum of five (5) years documented experience in high temperature, high UV and high humidity environments.

2. Authorized Applicator: Company specialized in, and has successfully completed applications of the same or similar type of materials for not less than five (5) years.

   a. Applicator shall be specifically approved as a factory-authorized Applicator, in writing, by the roofing system manufacturer.

   b. Submit the manufacturer's written approval and certification of the Applicator.

   c. Applicator's equipment and training shall conform to the manufacturer's standards.

   d. As applicable, assign work closely associated with waterproofing, including, but not limited to, waterproofing accessories, flashing in connection with waterproofing, expansion joints in membranes, and insulation and protection courses in membranes, to the waterproofing Applicator for undivided responsibility.

   e. Applicator shall conform strictly to the manufacturer's Quality Assurance Program requirements.

B. Source Quality Control: Obtain the primary waterproofing materials from a single manufacturer. Provide secondary materials only as recommended by the primary materials manufacturer.

C. Manufacturer's Technical Representative:

1. The primary waterproofing materials manufacturer to make a Technical Representative available to monitor the on-going work to ensure proper application of the roofing system. The manufacturer must maintain the same Technical Representative for the duration of the Project.

2. Pre-Application Review: Prior to the start of work and the purchase of any materials, the Manufacturer's Technical Representative, who is to certify each application, shall visit the Project Site, review existing conditions, and review the Contract Document for appropriateness of the requirements with the specified manufacturer's system including, but not necessarily limited to, the substrate and application conditions.

3. Certification: After the Manufacturer's Technical Representative's review, submit written certification of the appropriateness of the requirements, or submit other or additional specific recommendations, if any, to assure that the specified system is appropriate for the use intended and complete in scope to ensure its intended performance. This should be coordinated with the Shop Drawing Submittal.

4. Substrate Certification: Submit the Technical Representative's written certification of compliance that the prepared substrate is in conformance with requirements necessary for application of the system. Inspection and certification of the substrate is to be accomplished just prior to the start of application of the membrane system.

5. Technical Representative's Field Review of Work:

a. Number of Site Visits: Submit the manufacturer's recommended minimum number of times the Technical Representative is to field review the work to ensure success of the application. Indicate the stages of work when such visits are to be made.

b. Field Reports: For each visit, the Technical Representative shall submit a detailed Field Report assessing each application. Field Reports to indicate the date, time of day, length of each visit, weather conditions during the visit, condition of the substrate at the time of application, application procedures, and other important aspects that affect success of the application. Submit Reports within seven (7) days after each Site visit.

D. Regulatory Requirements: Comply with the applicable rules and regulations of the EPA and the local pollution control regulatory agency having jurisdiction regarding volatile organic compounds (VOC) and the use of hydrocarbon solvents.

E. Performance Requirements: It is required that the fluid-applied waterproofing membrane be watertight, and not deteriorate in excess of the limits published by the membrane manufacturer.

F. Caution: Do not apply fluid-applied waterproofing membrane to on-grade slabs, split slabs with buried membrane or on slabs over unvented metal pans without prior approval of the roofing membrane manufacturer.

1.6 COORDINATION

A. Pre-Application Conference: Prior to start of the application of materials, meet at the Project Site with the Owner's representative, Architect, Contractor, Applicator and subcontractors whose work penetrates the surfaces to be roofed. Review the conditions, methods and procedures necessary for application of the work, including inspection of the areas of work, requirements of the Specifications and the manufacturer's literature; review submittals and schedules.

1.7 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store, and protect the products.

B. Deliver products to the Project Site in the manufacturer's original, new and unopened packages and containers with seals and labels intact; dry and undamaged, bearing the product name, color, manufacturer's lot number, directions for use and precautionary labels.

C. Store materials not in actual use, in tightly covered containers. Maintain containers used in the storage of materials, in a clean condition, free of foreign materials and residue.

D. Store materials in a well ventilated area, and in compliance with the manufacturer's written instructions.

E. Keep storage areas neat and orderly. Remove waste daily.

F. Protect against fire hazards and spontaneous combustion.

G. Take all precautions to ensure that workmen and the work areas are adequately protected from health hazards resulting from handling, mixing and application of the materials.

1.8 JOB CONDITIONS

A. Proceed with the work only after the substrate construction and penetrating work has been

completed.

B. Proceed with the work only when existing and forecasted weather conditions will permit work to be performed in accordance with the manufacturer's recommendations. Do not apply products under the following conditions:

1. Substrate surfaces have cured less than thirty (30) days.

2. Rain is predicted within 24 hours.

3. Surfaces have not been dry for a minimum of 24 hours.

C. Provide adequate ventilation to prevent the accumulation of hazardous fumes during the application of solvent-based components in enclosed spaces; maintain ventilation until the coatings have thoroughly cured.

D. Warn personnel against breathing vapors and contact of materials with the skin and eyes.

E. Ensure that workmen wear the appropriate approved respiratory gear and protective clothing.

F. Ensure that all gas flames and electrical apparatus are shut down during the coating application and curing.

1.9 SAFETY / COORDINATION

A. All application, material handling and associated equipment shall conform to, and be operated in conformance with OSHA safety requirements.

B. Manufacturer's Material Safety Data Sheets (MSDS) shall be read, understood and the instructions adhered to.

C. A sufficient number of filled and operating fire extinguishers meeting current standards must be on the roof deck at all times during application of the roofing materials.

1.10 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Special Warranty:

1. Provide a written joint and severable Warranty signed by the roofing materials manufacturer, Contractor and Applicator, agreeing to repair or replace defective materials and workmanship, defined to include leakage of water, ruptures caused by cracking substrate up to 1/16", abnormal aging or deterioration of materials, and other failures of the membrane to perform as required within the warranty period. Warranty shall include responsibility for removal and replacement of other work which conceals the membrane waterproofing.

2. During the warranty period, repairs and replacements required because of acts of God and other events beyond the Contractor's / Applicator's control, and those which exceed the performance requirements, shall be completed by the Contractor / Applicator and paid for by the Owner at the prevailing rates.

3. Warranty Period: Five (5) years from the date of Substantial Completion of the roofing work.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Urethane Polymers International, Inc.

2. Carlisle Coatings & Waterproofing.

B. Section 01600 - Product Requirements: Product Options: Substitutions not permitted.

2.2 SYSTEM

A. The following specifications are based on Urethane Polymers International, AM-C-Thane 4556 - 60 Mil@ system to establish quality.

B. Other acceptable manufacturer's systems shall be equivalent.

2.3 ELASTOMERIC ROOFING MATERIALS

A. Primer: UI-7012 water-based, or UI-7112 solvent-based, Epoxy-Polyamide, low viscosity, two-component primer / sealer; as recommended by the membrane manufacturer.

B. Base Membrane: UI-7013 single-component, high-adhesion, moisture-cured, polyurethane membrane. Meet or exceed the following typical properties:

Property	Typical Value	Test Method
Composition	Aromatic Urethane	
Weight Solids	86 +/- 2%	
VOC Content	Less than 200 gm / l	
Hardness, Shore A	65 +/- 5	ASTM D 2240
Tensile Strength	900 +/- 100 psi	ASTM D 412
Ultimate Elongation	650 +/- 100%	ASTM D 412
Tear Resistance	150 +/- 25 lbs / in.	ASTM D 1004
Weather Resistance	Slight checking@ 500 hours	ASTM D 822
Adhesion to Concrete	30 pli	ASTM D 903

C. Elastomeric Membrane: UI-7013-HT, single component, high tensile strength, moisture-cured, liquid elastomeric polyurethane. Meet or exceed the following typical properties:

Property	Typical Value	Test Method
Composition	Aromatic Urethane	
Weight Solids	81 +/- 2%	
VOC Content	Less than 250 gm / l	
Hardness, Shore A	80 +/- 5	ASTM D 2240
Tensile Strength	2500 +/- 250 psi	ASTM D 412
Ultimate Elongation	450 +/- 50%	ASTM D 412
Tear Resistance	250 +/- 50 lbs / in.	ASTM D 1004
Weather Resistance	Slight chalk @ 1,000 hrs.	ASTM D 822
Adhesion to Base Coat	30 pli	ASTM D 903

D. Top Coat: UI-7016-HS, single-component, high tensile strength, abrasion-resistant, weather-resistant, aliphatic polyurethane. Meet or exceed the following typical performance properties:

Property	Typical Value	Test Method
Composition	Aliphatic, Saturated Polyester Urethane	
Weight Solids	75 +/- 2%	
VOC Content	Less than 250 gm / l	
Hardness, Shore A	90 +/- 5	ASTM D 2240
Tensile Strength	3500 +/- 300 psi	ASTM D 412
Ultimate Elongation	250 +/- 50%	ASTM D 412
Tear Resistance	300 +/- 50 lbs / in.	ASTM D 1004
Water Permeability	Less than 0.1 Perm	ASTM E 96 / E 96M
Weather Resistance	No chalking @ 2000 hrs.	ASTM D 822
Abrasion Resistance	Negligible change, CS-17 wheels, 1000 cycles, 1,000 gm. load	ASTM C 501
Color	White, or as selected	

2.4 ACCESSORIES

A. Flexible Flashing: 45-60 mils, thickness neoprene sheet or non-woven reinforcing fabric, or as recommended by the roofing materials manufacturer.

B. Embedded Flashing / Reinforcing: Non-woven fabric as recommended by the roofing materials manufacturer.

C. Joint and Crack Sealant: One- or two-component polyurethane compound, as recommended by the roofing membrane manufacturer.

D. Caulking Compound: One- or two-component polyurethane compound as approved by the roofing membrane manufacturer.

E. Aggregate: Rounded, non-angular, pre-blended 20 / 30 mesh, flint shot silica, ground glass, Monterey sand, or equivalent washed and kiln-dried aggregate; free of foreign materials; hard and stable to atmospheric conditions.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

1. Roofing Applicator, Manufacturer’s Technical Representative and the Owner’s Representative must jointly examine the substrates and conditions under which the roofing work is to be done.

2. Verify that substrate surfaces are durable, free of matter detrimental to adhesion and application of the roofing materials.

3. Verify that substrate surfaces are smooth, free of honeycomb and pitting, and not detrimental to full contact bond of the waterproofing materials.

4. Verify that items which penetrate surfaces to receive the roofing are installed and secured in-place.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 CONDITION OF CONCRETE SURFACES

A. Concrete surfaces shall have a steel troweled finish, free of fins, ridges, voids and air entraining holes.

B. Cured at least 28 days or until completely dry by the water curing method. Curing compounds or chemical curing agents shall not be used without prior approval of the roofing manufacturer.

C. Surfaces shall be sloped for proper drainage.

D. Saw-cut control joints and / or expansion joints shall have been properly installed at strategic locations throughout the field of the deck.

E. Required crickets and drains shall be cast monolithic with the main roof deck.

F. Concrete decks poured over precast T's, planks or slabs, shall have control joints placed directly over all corresponding joints and openings in the precast units.

G. Coordinate with Section 03300 - Cast-In-Place Concrete.

3.3 PREPARATION

A. Finish voids, rock pockets and excessively rough surfaces with epoxy grout or grind to match the unrepaired areas.

B. Apply bond breaker per the manufacturer's recommendations, fill voids and seal joints with polyurethane sealant; pay particular attention to construction joints.

C. Clean, prime, install backing rod and caulk all expansion and contraction joints with elastomeric polyurethane sealant.

D. Repair of concrete cracks and spalls:

1. All cracks over 1/16" in width and all moving cracks less than 1/16" in width shall be routed out to 1/4" minimum, width and depth, and filled flush with polyurethane elastomeric sealant.

2. Joints less than 1/2" in width and all caulked cracks shall be stripe-coated with a 30 mil preparatory coat of Base Membrane for a width of 3" on either side of the crack.

3. Apply 45 to 60 mil thick neoprene flashing or non-woven reinforcing fabric over all cracks as recommended by the membrane manufacturer.

E. Treatment of Roof Penetrations:

1. Caulk around and along the perimeters of duct and pipe penetrations with

polyurethane elastomeric sealant.

2. Apply a 3/4" cant of sealant around all pipes, drains and vertical junctions.

3. Apply 30 mils of polyurethane membrane coating 6" vertically, 6" horizontally on surfaces around roof penetrations.

F. Correct ponding water locations for smooth flow into roof drains; use epoxy topping where required to build up slopes.

G. Clean concrete substrate of projections and substances detrimental to the work.

H. Thoroughly clean and dry concrete surfaces free of laitance, surface contaminants and cleaning residue. Clean and prepare surfaces to receive roofing in accordance with the manufacturer's published instructions.

I. Protect adjacent surfaces not scheduled to receive roofing. Mask off surfaces to effectively prevent spillage and overspray of liquid materials outside the membrane area.

J. Protect landscaping, property, personnel and vehicles from over spray and drift.

3.4 FLASHING REINFORCEMENT

A. Install all required metal and neoprene flashings and fabric flashing reinforcement; install all sealant cants.

B. Deliver all metal shop primed, then field prime with Epoxy Primer prior to coating with the Base Membrane. Prime metal surfaces which exhibit adhesion difficulties first with a zinc chromate type of epoxy primer.

C. Base Membrane is used as an adhesive for polyester reinforcing fabric. Reinforcing fabric shall be laid into wet Base Membrane with roller, brush or broad blade knife. Fabric shall be laid relaxed, smooth and wrinkle-free; over-coat with Base Membrane.

D. Coat flashings and polyester reinforcing fabric with Base Coat and Top Coat with each application.

3.5 APPLICATION

A. The roofing Applicator shall have the sole right of access to specific areas of the roof for the time required to complete the application and to effect adequate cure.

B. Comply with the manufacturer’s instructions, except where more stringent requirements are shown or specified, and except where the Project conditions require extra precautions or provisions to ensure satisfactory performance of the work.

C. Start application of the waterproofing membrane only in the presence and with the advice of the Manufacturer’s Technical Representative.

D. Stir and mix separately packaged components using a mixing paddle on a slow speed drill motor, in accordance with the manufacturer’s instructions. Protect the components from sun and rain.

E. Apply uniform coatings of waterproofing to substrates and surfaces indicated to receive membrane.

F. Apply coatings by spray, squeegee or roller.

G. Primer:

1. Apply Primer at the approximate rate of 250 sq. ft. per gallon. Allow primer to dry until tack-free. Within 16 hours of primer application, apply Base Coat. If the base coat cannot be applied within 16 hours then re-prime the surfaces.

H. Base Membrane:

1. Apply Base Membrane in one uniform coat at the rate of 60 to 65 sq. ft. per gallon, minimum, or as needed to obtain a minimum dry film thickness of 20 mils. Allow 16 to 48 hours curing time before applying the next coat. Do not apply coating over joints greater than 1/2" in width.

I. Elastomeric Membrane:

1. Apply in one uniform coat at the approximate rate of 60 to 65 sq. ft. per gallon, minimum, or as needed to obtain an average dry film thickness of 18 mils. Allow 16 hours curing time before applying the next coat.

2. If the preceding layers of membrane become dirty or contaminated or lose their surface tack, wipe clean with xylene immediately before applying the next coating.

3. Apply a second coat of Elastomeric Membrane in one uniform coat at the rate of 100 sq. ft. per gallon, or as needed to obtain an average dry film thickness of 12 mils.

4. At locations shown on the Drawings, or if not shown, as directed, while the second coat is still fluid, uniformly broadcast aggregate onto the coating at the rate of 25 lbs. per 100 sq. ft.

5. Allow 16 to 36 hours curing time before applying the next coat.

J. Top Coat:

1. Apply one uniform coat at the rate of 100 sq. ft. per gallon, minimum, to obtain an average dry film thickness of 10 mils, and to completely encapsulate the aggregate.

2. For walkway surfaces and around roof-mounted equipment, provide aggregate additive for a tough non-slip surface. Apply in colors and patterns as designated by the Architect.

K. Spray coats over flashings; embed with fabric when plastic flashings are spanning voids greater than 3/4".

L. The application of membrane waterproofing materials shall be continued up onto vertical surfaces 6", minimum, and over the tops of fascias and parapets. Apply extra thickness waterproofing material at corners, intersections, angles, cants, penetrations and over cracks.

M. If waterproofing is applied on unscheduled surfaces, remove immediately by a method approved by the membrane manufacturer.

N. The overall dry film thickness of the completed waterproofing system, exclusive of aggregate, shall average 60 mils.

O. Permit the membrane to cure under conditions which will not contaminate or deteriorate the waterproofing materials. Block off all traffic and protect the membrane from physical damage.

P. Remove protective coverings.

3.6 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection and testing.

B. Inspect the fluid-applied roofing application.

C. Test for required dry film thickness.

3.7 PROTECTION

A. Section 01700 - Execution Requirements: Protection of the applied work.

B. Do not permit traffic on the membrane during the first 24 hours after application and no heavy traffic within four (4) days after the final coat has been applied, or until accepted by the Owner’s representative.

C. Do not permit traffic over unprotected or uncovered membrane.

END OF SECTION

SECTION 07190

WATER REPELLENTS (SEALER)

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Surface preparation and application of clear penetrating water repellent coating to the following exposed surfaces:

a. WR-1: Exterior and interior concrete walks and floors.

b. WR-2: Slurry coating for dampproofing vertical walls.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-in-Place Concrete: Sealers and curing agents.

2. Section 04400 - Natural Stone: Sealers and curing agents.

3. Section 07900 - Joint Sealers: Joint fillers and sealers.

4. Division 7 Sections - Roofing and Waterproofing.

1.2 DESCRIPTION OF WORK

A. The extent of each type of waterproofing work is indicated on the Drawings and as specified herein, and includes providing and applying waterproofing on concrete surfaces. Similar work used as an exposed finish is excluded by definition and, if required, is specified as roofing, flooring, special coating or other appropriate category.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society for Testing and Materials (ASTM):

1. ASTM C 642 - Test Method for Water Absorption.

2. ASTM D 56 - Test Method for Flash Point by Closed Cup Tester.

3. ASTM D 3960 - Practice for Determining Volatile Organic Compound (VOC) Content of Paints and Related Coatings.

4. ASTM E 514 - Test Method for Water Penetration and Leakage Through
. . Masonry.

C. U. S. Environmental Protection Agency (EPA):

1. Method 24 - Determination of Volatile Matter Content.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer=s specifications, recommendations for water repellents for each surface specified, surface preparation and application instructions, precautions for materials which can contaminate the system**,** limitations to coating, protection and cleaning instructions. Include recommendations for sealing penetrations, cracks and control, construction and expansion joints. Submit color charts for products required to be integrally colored.

2. Shop Drawings: Indicate details critical to water tightness of the membrane, including, but not necessarily limited to, membrane transitions / terminations at perimeters, drains, sleeves and other penetrating elements.

3. Samples: 16" x 16" samples of each substrate indicated to receive water repellent with the specified repellent treatment applied to half of each sample.

4. Assurance/Control Submittals:

a. Manufacturer=s certification that the materials specified are recommended by the manufacturer for the applications indicated.

b. Manufacturer=s certificate that the products meet or exceed the specified requirements.

b. Manufacturer's Material Safety Data Sheets (MSDS).

c. Manufacturer=s certification that the products supplied comply with applicable federal and local regulations controlling the use of volatile organic compounds (VOC).

d. Manufacturer's Instructions indicating procedures and conditions requiring special attention, and cautionary procedures required during application.

e. Documentation of experience indicating compliance with the specified qualifications requirements.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Warranty: Submit a written special Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience, and has a record of successful in-service performance.

2. Applicator: Company experienced in applying the types of waterproofing required for this Project for not less than five (5) years, and is acceptable to the primary waterproofing materials manufacturer.

B. Mockup: Apply water repellent to a mockup, either partial or full coverage, as directed, before proceeding with the application. Comply with the application requirements contained herein.

C. Regulatory Requirements: Comply with applicable rules and regulations of the pollution-control regulatory agency having jurisdiction regarding volatile organic compounds (VOC) and use of hydrocarbon solvents.

1.6 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store, and protect the products.

B. Deliver products to the Project Site in the manufacturer=s original, new and unopened packages or containers with seals and labels intact; dry and undamaged, bearing the product name, color, manufacturer=s lot number, directions for use and precautionary labels.

C. Store materials not in actual use, in tightly covered containers. Maintain containers used in the storage of materials, in a clean condition, free of foreign materials and residue.

D. Store materials in a well ventilated area, and in compliance with the manufacturer=s published instructions.

E. Store and handle materials to prevent deterioration and damage due to moisture, temperature changes, contaminants, and other causes.

F. Protect against fire hazards and spontaneous combustion.

G. Keep storage areas neat and orderly. Remove waste daily.

H. Take all precautions to ensure that workmen and the work areas are adequately protected from health hazards resulting from handling, mixing and application of the materials.

1.7 JOB CONDITIONS

A. Environmental Requirements: Do not apply products under any of the following conditions, except with the written recommendation of the manufacturer:

1. Substrate surfaces cured less than thirty (30) days.

2. Surfaces not dry for a minimum of 24 hours.

3. Rain predicted within 24 hours.

4. Windy conditions such that the repellent might be blown onto vegetation or onto substrates not intended to be coated.

1.8 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Special Warranty:

1. Provide a joint and severable written Warranty signed by the water repellent materials manufacturer, Contractor and the Applicator, agreeing to repair or replace defective materials and workmanship, defined to include leakage of water, ruptures caused by cracking substrate up to 1/16", abnormal aging or deterioration of materials, and other failures of membranes to perform as required within the warranty period. Warranty shall include responsibility for removal and replacement of other work which conceals the waterproofing membrane.

2. During the warranty period, repairs and replacements required because of acts of God and other events beyond the Contractor=s / Applicator=s control, and those which exceed the performance requirements, shall be completed by the Contractor / Applicator and paid for by the Owner at the prevailing rates.

3. Warranty Period: Five (5) years from the date of Substantial Completion of the water repellent work.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Tamms Industries.

2. Hydrozo, Inc.

3. Thoro System Products.

4. Textured Coatings of America.

5. Pecora Corp.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS

A. WR-1: Silane, clear penetrating water repellent. A monomeric compound containing approximately 40% alkylalkoxysilane with alcohol, ethanol, mineral spirits, water, or other proprietary solvent carrier.

1. Baracade Silane 40 by Tamms Industries.

2. Concrete and Masonry Sealer by Thoro Consumer Products.

3. Hydrozo Silane 40 VOC by Hydrozo, Inc.

4. Klere-Seal 940S VOC by Pecora Corp.

5. Rainstopper RS1750W by Textured Coatings of America.

B. WR-2: Crystalline, applied as a slurry coat.

1. Xypex Concentrate by Xypex Chemical Corp. or approved equal.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting work.

B. Verification of Conditions: Verify that the field measurements, surfaces, substrates and conditions are as required, and ready to receive work.

1. Verify that joint sealants are installed and cured.

2. Verify that surfaces to be coated are dry, clean, and free of efflorescence, oil, and other matter detrimental to application of the coating.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the Work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean substrate surfaces of substances that might interfere with penetration or performance of the water repellent. Remove loose particles and foreign matter. Remove oil and foreign substances with a cleaning agent which will not affect the coating.

B. Scrub surfaces with water, rinse and let dry.

C. Test for moisture content according to the manufacturer=s instructions to ensure that the surfaces are sufficiently dry.

D. Test the pH level according to the manufacturer=s instructions to ensure chemical bond to the silicate minerals.

E. Protect adjacent surfaces not scheduled to receive coating. Protect landscaping, property, and vehicles from over spray and drift. If applied on unscheduled surfaces, remove immediately, by an approved method.

F. Prior to the start of application, properly seal joints and cracks in movement with an elastomeric joint sealant acceptable to the sealant manufacturer. Non-movement cracks greater than 1/64" in width must be filled with a suitable patching material.

G. Do not apply water repellent until sealants in joints adjacent to surfaces to receive water repellent treatment have been installed and cured.

1. Water repellent work may precede sealant application only if the sealant adhesion and compatibility have been tested and verified using substrate, water repellent, and sealant materials identical to those used in the work.

2. Prior tp performing the water repellent work, including bulk purchase or delivery of products to the Project Site, prepare a small application in an unobtrusive location to demonstrate the final visual, physical and chemical effect of the planned application.

3.3 APPLICATION

A. Prepare materials in accordance with the manufacturer=s printed instructions for the Project conditions. Consult a manufacturer=s technical representative if the printed recommendations are not applicable to the Project conditions.

B. Apply coating in accordance with manufacturer's instructions, using the appropriate method and coverage rate.

C. WR-1:

1. Apply a heavy-saturation spray coating of the water repellent on surfaces indicated for treatment using low-pressure spray equipment. Comply with the manufacturer=s instructions and recommendations using airless spraying procedure unless otherwise indicated.

2. Apply a second saturation spray coating, repeating the first application. Comply with the manufacturer=s instructions for limitations on drying time between coats and after rainstorm wetting of surfaces between coats.

3. Remove protective coverings from adjacent surfaces.

D. WR-2:

1. Mix Xype Concentrate in accordance with the manufacturer=s instructions. Apply with a bristle-brush to a uniform thickness of 1/16".

2. Apply a second coat after the first coat has reached initial set but is still Agreen@.

3. Lightly re-water, as necessary, to counteract drying.

4. Wet cure surfaces in accordance with the manufacturer=s instructions. Do not thoroughly wet concrete surfaces with water to saturate the surfaces; remove excess water before application.

3.4 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect for complete and consistent coverage and waterproofing capability.

3.5 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Clean all spills. Do not leave splatters or drips.

END OF SECTION

SECTION 07210

BUILDING INSULATION

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Semi-rigid insulation at underside of roofs at interior spaces.

2. Board insulation for split slabs and under decks.

3. Batt insulation at exterior stud walls of air conditioned spaces and at interior stud walls for sound control.

4. Semi-rigid board insulation at shafts and chases.

5. Exposed wall and ceiling insulation at Mechanical Rooms.

6. Spray-applied thermal and acoustical insulation for exposed ceilings.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Substrate for installation of insulation.

2. Section 09110 - Non-Load Bearing Steel Framing: Support for installation of insulation.

1.2 DESCRIPTION OF WORK

A. The extent of each type of building insulation is indicated on the Drawings and as specified herein, and includes providing and installing thermal, acoustical and spry-on insulation, and safing and smoke stops.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society for Testing and Materials (ASTM):

1. ASTM C 518 - Test Method for Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.

2. ASTM C 612 **-** Specification for Mineral Fiber Block and Board Thermal Insulation.

3. ASTM C 665 - Specification for Mineral-Fiber Blanket Thermal Insulation for Light Frame Construction and Manufactured Housing.

4. ASTM D 5113 - Test Method for Determining Adhesion Attack of Rigid Cellular Foam.

5. ASTM E 84 - Test Method for Surface Burning Characteristics of Building Materials.

6. ASTM E 119 - Test Method for Fire Tests of Building Construction and Materials.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer=s product specifications and installation instructions for each type of insulation and vapor barrier material required. Indicate product characteristics, performance criteria and limitations.

2. Assurance / Control Submittals:

a. Manufacturer's certificate that the products meet or exceed the specified requirements.

b. Documentation of experience indicating compliance with the specified qualifications requirements.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

3. Use adequate number of skilled workmen, thoroughly trained and experienced in the necessary crafts and are completely familiar with the specified requirements and methods for proper performance of the work of this Section.

B. Regulatory Requirements: Conform to the flame spread and smoke developed requirements of the local authority having jurisdiction.

1.6 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Deliver products to the Project Site in the manufacturer=s original, unopened packages, containers or bundles, bearing brand name, identification of the manufacturer, and material identification.

C. Store inside, under cover, and in a manner to keep dry.

D. Protect from weather, direct sunlight, moisture, surface contamination, and damage from construction traffic and other causes.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. CertainTeed.

2. Owens-Corning.

3. Dow Chemical.

4. Manville-Schuller International.

5. International Cellulose Corporation.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 THERMAL INSULATION

A. Concealed Glass Fiber Insulation Boards: Unfaced glass fiber thermal insulation, semi-rigid boards, friction-fit, 48" x 96" x 2-1/2" thick, R-13 or as indicated, ASTM C 612, Type 1A and 1B. Maximum flame spread rating 25, maximum smoke developed 50 when tested in accordance with ASTM E 84. AType 703" by Owens-Corning or approved equal.

B. Polystyrene Insulation Boards: High density extruded polystyrene foam insulation, 48" x 96" x 1-1/2" thick, R-5.6, square edge, 1/2" x 1/4" drainage channels on bottom long edge, for installation over waterproofing membrane. Plaza Deck STYROFOAM Brand PLAZAMATE Insulation by Dow Chemical Co.

C. Concealed Wall Batt Insulation: Unfaced glass fiber thermal insulation, friction-fit, 16" or 24" widths as required x 3-1/2" thick, ASTM C 665, Type I. R-11 when tested in accordance with ASTM C 518. Maximum flame spread 10, maximum smoke developed 10 when tested in accordance with ASTM E 84. AThermal Batt Insulation@ by Owens-Corning or approved equal.

2.3 ACOUSTICAL INSULATION

A. Concealed Noise Barrier Batt Insulation: Unfaced glass fiber acoustical insulation, friction-fit, 16" or 24" widths as required x 3-1/2" thick, ASTM C 665, Type I. Maximum flame spread 10, maximum smoke developed 10 when tested in accordance with ASTM E 84. ASound Attenuation Batts@ by Owens-Corning or approved equal.

B. Chase Wall Insulation: Unfaced glass fiber acoustical insulation, semi-rigid, friction-fit, 24" x 96" x 1-1/2", ASTM C 665, Type I. R-5.8 when tested in accordance with ASTM C 518. ASTM E 119 for 1-hour fire rated partitions. Maximum flame spread 20, maximum smoke developed 20 when tested in accordance with ASTM E 84 and UL 723. AShaftwall Insulation@ by Owens-Corning or approved equal.

C. Exposed Generator Room Walls and Ceiling: FRK (foil) faced glass fiber thermal insulation, semi-rigid, 1-1/2" thick, ASTM C 612, Type 1A and 1B. Maximum flame spread 25, maximum smoke developed 50 when tested in accordance with ASTM E 84. AType 703@ by Owens-Corning or approved equal.

2.4 SPRAY-ON INSULATION

A. Exposed Thermal-Acoustical Spray-Applied Cellulose: Textured fibered cellulose with chemical binder and adhesives, mildew and mold treated, spray-applied, 3" thick, R-4.5 per inch, NRC of 1.0, Class I. Class AA@ flame spread rating per ASTM E 84. FMRC Category I. AK-13" by International Cellulose Corp. or approved equal. Color as selected.

B. Exposed Acoustical Spray Applied Cellulose: Textured fibered cellulose with chemical binder, mildew and mold treated, spray applied. NRC .90 at 1" thick, AK-13 fc@ by International Cellulose Corp. or approved equal. Color as selected.

2.5 OTHER MATERIALS

A. Insulation Anchors: Impaling pin-type with 2" diameter flat anchor head and wire spindles,
self- locking holding washers; designed for adhesive application to the underside of roof decks. Adhesive as supplied or approved by the insulation manufacturer.

B. Provide other materials, not specifically described but required for a complete and proper installation, as recommended by the insulation manufacturer.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that the areas, surfaces, substrates and conditions are as required, and ready to receive the work.

1. Board Insulation:

a. Verify that the substrate and adjacent materials are dry and ready to receive the insulation and adhesive.

b. Verify that the insulation boards are dry, unbroken and free of damage.

2. Batt Insulation:

a. Verify that the adjacent materials are dry and ready to receive the installation.

b. Verify that mechanical and electrical services within the walls have been installed, are properly placed, and has been tested.

3. Spray-applied Insulation:

a. Verify that the substrate and adjacent surfaces are dry and ready to receive the insulation.

b. Verify that all equipment is operating properly.

A. Remove or protect against projections in the construction framing which might damage or prevent the proper installation or application of materials.

B. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install the work of this Section in strict accordance with the original design, requirements of government agencies having jurisdiction, and the manufacturer=s recommended installation procedures as approved. Anchor all components firmly into position.

3.3 INSTALLATION - ROOF INSULATION

A. Apply with stick pins, adhesively secured to the underside of the roof. Provide a minimum of 8 pins per 4' x 8' board and 6 pins per 4' x 4' board, spaced per the manufacturer=s instructions. Butt all edges and ends of insulation tightly.

3.4 INSTALLATION - SPLIT SLABS AND UNDER DECKS

A. Set in an approved waterproof roof coating in accordance with the manufacturer=s recommendations. Protect insulation from weathering, sunlight and traffic until the top deck has been placed.

3.5 INSTALLATION - WALL INSULATION

A. Install batt insulation in accordance with the manufacturer=s instructions, without gaps or voids.

B. Wall Insulation: Friction fit for installation within metal framing. Carry around water and and waste piping, electrical junction boxes, outlets, conduit and other elements to ensure a complete acoustical barrier.

C. Trim insulation neatly to fit the spaces. Use batts free of damage. Fit insulation tight in the spaces and tight to the exterior side of mechanical and electrical services within the plane of the insulation.

D. When faced, install the insulation with the factory-applied membrane facing the warm side of the building space. Lap ends and side flanges of the membrane. Attach insulation in place to the framing. Tape seal butt ends and lapped side flanges. Tape seal tears and cuts in the membrane.

3.6 INSTALLATION - MECHANICAL ROOM WALLS AND CEILINGS

A. Install with impaling pins; bend prongs of pins inward so they are not a hazard. Tape joints. Stop insulation 4" from light fixtures and heat producing equipment.

3.7 INSTALLATION - SPRAY-APPLIED INSULATION

A. Apply by authorized applicator utilizing authorized fiber machines and nozzles for control of the fiber / binder ratio. Prime or seal surfaces before applying as required by the insulation manufacturer. Apply the manufacturer=s standard fire-retardant mildew-resistant overspray.

3.8 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect work for proper thickness, secure attachment to the substrate and in accordance with the manufacturer=s instructions.

END OF SECTION

SECTION 07620

SHEET METAL FLASHING AND TRIM

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Metal base flashings and counter flashings.

2. Penetration flashing.

3. Built-in metal scuppers.

4. Gutters.

5. Downspouts.

6. Miscellaneous sheet metal accessories.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Substrate for securing flashing.

2. Section 04230 - Reinforced Unit Masonry: Substrate for securing flashing.

3. Section 07410 - Preformed Metal Roofing: Substrate for securing flashing.

1.2 DESCRIPTION OF WORK

A. The extent of each type of flashing and sheet metal work is indicated on the Drawings and as specified herein, and includes providing and installing flashings, metal scuppers, gutters, downspouts and miscellaneous accessories.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Iron and Sheet Institute (AISI):

2. ASTM A 361 - Steel Sheet, Zinc-Coated (galvanized) by the Hot-Dip Process for Roofing and Siding.

3. ASTM A 527 / A 527M - Steel Sheet, Zinc-Coated (Galvanized) by the Hot-Dip Process, Lock-Forming Quality.

4. ASTM A 653 - Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

5. ASTM A 792 / A 792M - Specification for Steel Sheet, 55% Aluminum-Zinc Alloy-Coated by the Hot Dip Process.

6. ASTM B 32 - Specification for Solder Metal.

7. ASTM B 209 - Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

8. ASTM B 221 - Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles and Tubes.

9. ASTM B 370 - Specification for Copper Sheet and Strip for Building Construction.

10 ASTM B 486 - Specification for Paste Solder.

11. ASTM C 920 - Specification for Elastomeric Joint Sealants.

E. International Code Council:

1. International Building Code (IBC), 2009.

F. Metal Building Manufacturer=s Association (MBMA):

1. Metal Building Systems Manual.

G. National Roofing Contractors Association (NRCA):

1. The NRCA Roofing and Waterproofing Manual.

H. Sheet Metal and Air Conditioning Contractors National Association (SMACNA):

1. Architectural Sheet Metal Manual.

I. Society for Protective Coatings (formerly Structural Steel Painting Council):

1. SSPC-Paint 12 - Cold-Applied Asphalt Mastic (Extra Thick Film).

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer=s product specifications, gauges and thickness, installation instructions and general recommendations for each specified sheet

material and fabricated product.

2. Shop Drawings: Show layout, joining, profiles, and anchorage of fabricated work, including valley flashings, major counter flashings, trim / fascia units, gutters, downspouts, scuppers and expansion joint systems; layouts at 1/4" scale, details at 3" scale.

3. Samples: Submit 8" square samples of the specified sheet materials that will be exposed as finished surfaces.

4. Assurance / Control Submittals:

a. Manufacturer=s certificate that the products meet or exceed the specified requirements.

b. Calculations indicating that the products and anchorage satisfies the performance requirements.

c. Documentation of experience indicating compliance with the specified qualifications requirements.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Warranty: Submit a written limited Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Fabricator: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

1.6 DESIGN AND PERFORMANCE CRITERIA

A. Thermal Movement:

1. The completed metal roofing and flashing system shall be capable of withstanding expansion and contraction of components caused by changes in temperature without buckling, producing excess stress on the structure, anchors or fasteners, or reducing performance ability.

2. The interface between panels and clips shall provide for a minimum of 3" of thermal movement in each direction along the longitudinal direction.

3. The location of metal roofing rigid connectors shall be designed to meet the job conditions by the metal roof system manufacturer.

B. Wind Load Requirements:

1. Provide the capacity to withstand the following loading requirements:

a. Design, fabricate and install to resist combined positive and negative

windloading in accordance with IBC 2009, Section 1609 with a Vmph or 170, qs of 74.0 psf, exposure [B] [C] [D], and importance factor of [1.0] [1.25] [1.5], as applicable per ASCE 7.

1.7 FACTORY TESTS

A. The manufacturer shall have conducted tests on previously manufactured sheets of the same type and finish as proposed for this project to assure conformance. Sheets shall have passed the following tests:

1. Salt Spray: Withstand a salt spray test for a minimum of 1,000 hours in accordance with ASTM B 117, including the scribe requirement in the test. Immediately upon removal of the panel from the test, the coating shall have receive a rating of 10 with no blistering, as determined by ASTM D 1654, Rating Schedule No. 1.

2. Formability: When subjected to a 180 degree bend over a 1/8" diameter mandrel (3/8" diameter mandrel for coatings 4 mils or greater in thickness) in accordance with ASTM D 522, the exterior coating film shall show only slight microchecking of the exterior film, and no loss of adhesion.

3. Accelerated Weathering: Withstand a weathering test of 2,000 hours, minimum, in accordance with ASTM G 152 or ASTM D 2565 without cracking, peeling, blistering, loss of adhesion of the protective coating, or corrosion of the base metal. Protective coating that can be readily removed from the base metal with a penknife blade or similar instrument shall be considered as an indication of the loss of adhesion.

4, Chalking Resistance: After a 2,000 hours weatherometer test, the exterior coating shall not chalk greater than No. 8 rating when measured in accordance with ASTM D 4214.

5. Color Change: After a 2,000 hours weatherometer test, the exterior color change shall not exceed 2 NBS units when measured in accordance with ASTM D 2244.

6. Abrasion Resistance for Color Coating: When subjected to the falling sand test in accordance with ASTM D 968, the coating system shall withstand a minimum of 100 liters of sand before appearance of the base metal.

7. Humidity: When subjected to a humidity cabinet test in accordance with ASTM D 2247 for 1,000 hours, a scored panel shall show no signs of blistering, cracking, creepage, or corrosion.

8. Fire Hazard: Factory-fabricated sheets shall be 30 to 70 at an angle of 60 degrees, when measured in accordance with ASTM D 523.

1.8 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store, and protect the products.

B. Protect components during fabrication, shipment, storage, handling, and erection from mechanical abuse, stains, discoloration and corrosion.

C. Inspect materials upon delivery to the Project Site. Reject and remove physically damaged and marred materials.

D. Store materials off the ground, providing for drainage; under cover providing for air circulation; protected from wind, foreign material contamination, mechanical damage, cement, lime and other corrosive substances.

E. Prevent contact with materials which may cause discoloration or staining.

F. Handle materials to prevent damage to surfaces, edges and ends of sheet metal items. Damaged materials shall be rejected and removed from the Project Site.

1.9 JOB CONDITIONS

A. Coordinate the work of this Section with interfacing and adjoining work for the proper sequencing of each installation.

B. Determine that work of other trades will not hamper or conflict with necessary fabrication and storage requirements.

C. Ensure the best possible weather resistance and durability of the work, and protection of materials and finishes.

1.10 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Limited Warranty:

1. Manufacturer's Warranty against checking, crazing, peeling, chalking, fading and adhesion.

2. Warranty Period:

a. Manufacturer=s twenty (20) years Warranty covering refinishing of the finish coating from the date of Substantial Completion.

b. Installer=s two (2) years Warranty covering the installation and watertightness from the date of Substantial Completion.

PART 2 PRODUCTS

2.1 SHEET METAL FLASHING AND TRIM MATERIALS

A. Stainless Steel: AISI Type 302 / 304, #6 satin finish, 24 gauge, soft except where hard temper is required for forming or performance. ASTM 167.

B. Aluminum Sheet: Prefinished aluminum alloy sheet, .032" thickness except as otherwise indicated, temper appropriate to the end use. ASTM B 209. Exposed aluminum shall have a baked-on, factory-applied color coating of polyvinylidene fluoride (PVF2) or other equivalent fluorocarbon coating per AMA 605.2, applied after the metal substrates have been cleaned and pretreated. Finish coating dry-film thickness shall be 1.0 - 1.3 mils. Color as selected.

C. Zinc-Coated Steel: Commercial quality with 0.20% copper, ASTM A 653, except ASTM A 527 for lock-forming, G90 hot-dip galvanized, mill phosphatized where indicated for painting, 26 gauge except as otherwise indicated.

2.2 MISCELLANEOUS MATERIALS AND ACCESSORIES

A. Metal Accessories: Provide sheet metal clips, straps, anchoring devices and similar accessory units as required for installation of the work, matching or compatible with the product material being installed, non-corrosive, size and gauge as required for performance.

B. Reglets: Metal or plastic units of the type and profile indicated, compatible with the flashings indicated, non-corrosive.

C. Fasteners: Same metal as the flashing / sheet metal or stainless steel, as recommended by the sheet manufacturer. Match finish or exposed heads with the material being fastened.

D. Solder: For use with steel; provide 50 - 50 tin / lead solder with rosin flux. ASTM B 32.

E. Adhesives: Type recommended by the flashing sheet manufacturer for waterproof / weather-resistant seaming and adhesive application of flashing sheet and substrate.

F. Elastic Flashing Filler Rods: Closed-cell polyethylene or other soft closed-cell material recommended by the elastic flashing manufacturer as filler under flashing loops to ensure movement with minimum stress on the flashing sheet.

G. Mastic Sealant: Polyisobutylene; non-hardening, non-skinning, non-drying, non-migrating sealant.

H. Elastomeric Sealant: Generic type as recommended by the manufacturer of the metal or fabricator of the components being sealed.

I. Gutter and Conductor-Head Guards: .032" aluminum or 20 gauge bronze or non-magnetic stainless steel mesh, or fabricated units, with salvaged edges and non-corrosive fasteners. Select materials for compatibility with the gutters and downspouts.

J. Unit Plumbing Vent: Integral stack pipe flashing with elastomeric base, for flat or pitched roof applications, size as required by the pipe size.

K. Protective Backing Paint: Bituminous.

2.3 FABRICATED UNITS

A. General Material Fabrication: Shop fabricate work to the greatest extent possible. Comply with the details shown, and with the applicable requirements of SMACNA AArchitectural Sheet Metal Manual@, and other recognized industry practices. Fabricate for waterproof and weather-resistant performance, with expansion provisions for running work; sufficient to permanently prevent leakage, damage and deterioration of the work. Form work to fit the substrates. Comply with the material manufacturer=s instructions and recommendations. Form exposed sheet metal work without excessive oil-canning, buckling and tool marks, true to line and levels as indicated, with exposed edges folded back to form hems.

B. Flashings, Counter Flashings, Copings, Expansion Joints, Scuppers: Fabricate from 20 oz. / sq. ft. copper sheet unless otherwise indicated.

C. Aluminum Gutter: .075" conforming to ASTM B 221 with baked-on, factory-applied color coating of polyvinylidene fluoride (PVF2) or other equivalent fluorocarbon coating per AMA 605.2, applied after the metal substrates have been cleaned and pretreated. Finish coating dry-film thickness shall be 1.0 - 1.3 mils. Color as selected.

D. Downspouts: Fabricate from .032" aluminum; form in continuous lengths.

E. Seams: Fabricate non-moving seams in sheet metal as flat-lock type. For metal other than aluminum, tin the edges to be seamed, form seams, and solder. Form aluminum seams with epoxy seam sealer; rivet joints for additional strength where required.

F. Expansion Provisions: Where lapped or bayonet-type expansion provisions cannot be used, or would not be sufficiently water / weatherproof, form expansion joints of intermeshing hooked flanges, not less than 1" deep, filled with mastic sealant, concealed within the joints.

G. Sealant Joints: Where movable, non-expansion type joints are indicated or required for proper performance of the work, form the metal to provide for proper installation of elastomeric sealant in accordance with SMACNA standards.

H. Separations: Provide for the separation of metal from non-compatible metal or corrosive substrates by coating concealed surfaces at locations of contact, with a bituminous coating or other permanent separation as recommended by the manufacturer / fabricator.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

1. Verify that roof openings, curbs, pipes, sleeves, ducts, and vents through the roof are solidly set, reglets in place, and nailing strips located.

2. Verify that roofing termination and base flashings are in place, sealed, and secure.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Install starter and edge strips, and cleats before starting the installation.

B. Install concrete inserts, reglets and similar anchoring devices to be built into substrates and walls prior to the time the flashing installation is to begin.

C. Install surface-mounted reglets true to lines and levels. Apply sealant along the top of reglets.

3.3 INSTALLATION

A. Comply with the manufacturer=s installation instructions and recommendations, and with SMACNA AArchitectural Sheet Metal Manual@.

B. Fit flashings, gutters, and downspouts tight in place, make corners square, surfaces true and straight in planes, and lines accurate to the profiles.

C. Anchor units securely in place by the methods indicated, providing for thermal expansion of metal units.

D. Secure work in place using concealed fasteners where possible.

E. Set units true to line and level as indicated.

F. Install work with laps, joints and seams to be permanently watertight and weatherproof.

G. Install reglets to receive counter flashings in a manner and by the methods indicated. Where shown in concrete, furnish reglets to the concrete trade for installation as the work of Sections of Division 3. Where shown in masonry, furnish reglets to the masonry trade for installation as the work of Division 4 Sections.

H. Install counterflashings in reglets, either by shape-in seal arrangement, or by wedging in place and filling the reglet with mastic or elastomeric sealant, as indicated, depending on the degree of sealant exposure.

I. Expansion and Contraction: Provide expansion and contraction joints at not more than 30 foot intervals. Space joints evenly and as approved.

J. Install elastic flashings in accordance with the manufacturer=s recommendations. Where required, provide for movement at joints by forming loops or bellows the full width of the flashing. Locate cover or filler strips at joints to facilitate complete drainage of water from the flashings. Seam adjacent flashing sheets with adhesive, seal and anchor edges in accordance with the manufacturer=s recommendations.

K. Install continuous gutter guards on gutters. Provide hinged units to swing open for cleaning the gutters. Install beehive type strainer-guards at conductor heads, removable for cleaning downspouts.

3.4 ISOLATION REQUIREMENTS

A. Where stainless steel or aluminum is to be installed directly on cementitious or wood substrates, install a course of paper slip sheet and a course of polyethylene underlayment.

B. Concrete Contact: Coat the underside of sheet metal over horizontal concrete surfaces, with asphaltum cement.

C. Dissimilar Metals: Insulate the juncture between dissimilar metals with a heavy coat of insulating film. Where drainage from a dissimilar metal passes over aluminum, paint the dissimilar metal with a non-lead pigmented paint.

D. Wood Contact: Isolate sheet metal from cedar, redwood, oak and acid-treated lumber by means of an unbroken 6 mil polyethylene construction sheet, or a heavy coating of metal protective paint.

3.5 PROTECTION

A. The Installer shall advise the Contractor of required procedures for surveillance and protection of the flashings and sheet metal work during the remainder of the construction, to ensure that the work will be without damage or deterioration, other than natural weathering, at the time of Substantial Completion.

3.6 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting the installed work.

B. Touch-up exposed fasteners using paint furnished by the metal manufacturer, and matching the exposed metal surface finish.

C. Touch-up minor abrasions and scratches in surface finishes.

D. Scratches, abrasions and minor surface defects to the finish may be repaired in accordance with the manufacturer=s printed instructions. Replace items which cannot be repaired.

3.7 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspection the installations for proper support, alignment, watertight and weatherproof.

3.8 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Remove excess sealants as approved by the metal manufacturer.

C. Clean exposed metal surfaces to remove all substances which might cause corrosion or metal or deterioration of finishes.

D. Leave the entire installation in a clean condition on the date of Substantial Completion.

END OF SECTION

SECTION 07840

FIRESTOPPING

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes

1. Firestop sealant and safing insulation for the following locations:

a. All pipes, ductwork, conduit and other penetrations through a fire-rated walls, floor assemblies and roof assemblies.

b. Head of wall firestopping at full-height, fire-rated partitions.

c. Closure of penetrations for acoustic purposes.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Substrate for firestopping.

2. Section 04230 - Reinforced Unit Masonry: Substrate for firestopping.

3. Section 07210 - Building Insulation: Wall and roof insulation.

4. Section 07900 - Joint Sealers: Non-firestopping joint sealers.

5. Section 09250 - Gypsum Board: Substrate for firestopping.

1.2 DESCRIPTION OF WORK

A. The extent of each type of firestopping is indicated on the Drawings and as specified herein, and includes providing and installing fire safing at penetrations thru fire-rated assemblies, roofs and head of wall firestopping at full-height, fire-rated partitions.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society for Testing and Materials (ASTM):

1. ASTM C 612 - Specification for Mineral Fiber Block and Board Thermal Insulation.

2. ASTM E 84 - Test Method for Surface Burning Characteristics of Building Materials.

3. ASTM E 119 - Test Methods for Fire Tests of Building Construction and Materials.

4. ASTM E 136 - Test Method for Behavior of Materials in a Vertical Tube Furnace at 750E C.

5. ASTM E 814 - Test Method for Fire Tests of Through-Penetration Fire Stops.

6. ASTM E 2307 - Test Method for Determining Fire Resistance of Perimeter Fire Barrier Systems Using Intermediate-Scale, Multi-story Test Apparatus.

C. Underwriters' Laboratories, Inc. (UL):

1. UL 1479 - Tests of Through-Penetration Firestops.

2. UL 2079 - Tests for Fire Resistance of Building Joint Systems.

1.4 DEFINITIONS

A. Firestopping: Sealing materials and assemblies installed in spaces between building materials to prevent movement of smoke, heat, gasses, and fire through wall openings.

1.5 SYSTEM DESCRIPTION

A. Firestopping Materials: ASTM E 119, ASTM E 814, UL 1479 to achieve the fire rating indicated on the Drawings.

1.6 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures of submittals.

1. Product Data: Manufacturer=s specifications for each joint firestop sealer, grout and safing insulation product required, including instructions for joint preparation and joint sealer application for insulation installation, product characteristics, performance, and limitations.

2. Assurance / Control Submittals:

a. Manufacturer's certificate that the products meet or exceed the specified requirements and are suitable for the intended use.

b. Certified Test Reports showing compliance with the specified performance values, including r-values (aged values for plastic insulations), densities, compression strengths, fire performance characteristics, perm rating, water absorption ratings an similar properties.

c. Product Test Reports for each type of joint firestop sealer evidencing compliance with requirements.

d. Documentation of experience indicating compliance with the specified qualifications requirements.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Warranty: Provide a written special Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.7 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Installer: Company that has successfully completed at least three (3) sealer applications similar in type and size within the last three (3) years, and is approved by the manufacturer for this type of installation.

B. Pre-Installation Meeting: Prior to beginning the installation of materials, meet at the Project Site with the Owner=s representative, Contractor, Installer and subcontractors of the affected trades. Review conditions, methods and procedures necessary for proper installation of the work, including inspections of areas of work, requirements of theSpecifications, and the manufacturer=s literature; review submittals and the installation schedule.

1.8 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Deliver products to the Project Site in the manufacturer's original, unopened containers or packages with labels intact, identifying the manufacturer, product name and designation, expiration date for use, pot life, curing time, and mixing instructions for multi-component materials.

C. Store and handle materials in compliance with the manufacturer=s recommendations to prevent deterioration and damage due to moisture, high or low temperatures, contaminants or other causes.

D. Protect insulations from physical damage from becoming wet or soiled.

1.9 JOB CONDITIONS

A. Environmental Requirements:

1. Maintain the manufacturer=s recommended minimum temperature before, during, and for 3 days after installation of the materials.

2. Keep products away from heat, open flame, sparks, and other sources of ignition until curing is complete.

3. Install only when adequate ventilation is provided.

4. Do not proceed with installation of firestop joint sealers when ambient and substrate conditions are outside the limits permitted by the manufacturer when substrates are wet due to rain, condensation, or other causes.

5. Do not proceed with installation of firestop joint sealers until contaminants capable of interfering with adhesion has been removed from the joint substrates.

1.10 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Special Warranty:

1. Contractor to warrant that the firestopping systems will provide a permanent installation.

2. Warranty Period: Life of the building.

PART 2 PRODUCTS

2.1 FIRE-RESISTANT JOINT SEALERS

A. Firestop materials shall have been tested with and shall be in compliance with the minimum requirements of ASTM E 814, UL 1479, and UL 2079, as applicable. Products used shall be as listed below, as suitable for the intended application and as required to produce the fire rating shown on the Drawings and to conform to the Firestopping Schedule at the end of this Section.

B. General: Provide manufacturer=s standard fire-stopping sealants, with the necessary accessory materials, having fire resistance ratings indicated, as established by testing identical assemblies per ASTM E 814 by Underwriters Laboratories Inc. or other testing and inspecting agency acceptable to the authorities having jurisdiction.

2.2 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering firestopping materials which may be incorporated into the work include the following:

1. Nelson Firestop Products.

2. Hilti, Inc.

3. The RectorSeal Corp.

4. Specified Technologies, Inc. (STI).

5. 3M Fire Protection Products.

6. Tremco Firestop Systems.

B. Section 01600 - Product Requirements: Product Options: Substitutions not permitted.

2.3 MATERIALS

A. Intumescent Latex or Acrylic Sealant: Single-component, intumescent, latex or acrylic formulation.

1. LBS by Nelson Firestop.

2. FS ONE or CP 606 by Hilti.

3. Metacaulk 950 or 1000 by RectorSeal.

4. SpecSeal SSS100 by STI.

5. CP 25WB+ by 3M.

6. TREMstop WBM by Tremco.

B. Intumescent Solvent-Release-Curing Sealant: Single component, intumescent, synthetic-polymer based, non-sag grade.

1. CP 25 N/S by 3M.

2. TREMstop WBM by Tremco.

C. Intumescent Wrap / Strip: Single-component, elastomeric sheet with aluminum foil on one face.

1. WRS by Nelson Firestop.

2. CP 645 Wrap Strip by Hilti.

3. Metacaulk Wrap Strip by RectorSeal.

4. SpecSeal SSWRED Wrapstrip by STI.

5. FS-195+ Wrap / Strip by 3M.

6. TREMstop WS by Tremco.

D. Intumescent Putty: Single-component, non-hardening, dielectric.

1. FSP by Nelson Firestop.

2. CP 618 Putty Stick or CP 617/ 617L Putty Pad by Hilti.

3. CP 645 Wrap Strip by Hilti.

4. CP 658 Firestop Plug by Hilti.

5. Metacaulk Fire Rated Putty by RectorSeal.

6. SpecSeal Putty by STI.

7. Moldable Putty+ by 3M.

E. Silicone Sealant: Single-component, moisture-curing, silicone-based elastomeric, non-sag grade.

1. CLK N/S by Nelson Firestop.

2. CP 601S by Hilti.

3. Metacaulk 835 by RectorSeal.

4. SpecSeal PEN 300 by STI.

5. 2000+ Silicone by 3M.

6. FRYE SIL by Tremco.

F. Silicone or Polyurethane Foam: Two-component, liquid elastomer that, when mixed,

expands and cures in place to produce a flexible, non-shrinking foam.

1. SpecSeal PEN 200 by STI.
2. 2001 Silicone RTV Foam by 3M.
3. CP 620 Fire Foam by Hilti.

G. Intumescent Collar: Factory-fabricated, intumescent collar.

1. PCS by Nelson Firestop.
2. CP 642 or CP 643 by Hilti.
3. Metacaulk Pipe Collar by RectorSeal.
4. SpecSeal SSC Collars by STI.
5. Plastic Pipe Device by 3M.
6. TREMstop D by Tremco.

H. Intumescent Composite Sheet, Pillows and Mortar or Blocks: Products used to firestop large openings.

1. CPS by Nelson Firestop.
2. FS 657 Fireblocks by Hilti.
3. CP 637 Firestop Mortar by Hilti.
4. CP 675T Firestop Board by Hilti.
5. SpecSeal SSB Pillows and SpecSeal SSM Firestop Compound by STI.
6. CS-195+ Composite Sheet by 3M.
7. TREMstop PS by Tremco.

I. Sprayable Fire-Rated Mastic: Products used to firestop construction joints.

1. CP 672 Speed Spray by Hilti.
2. SpecSeal Elastomeric Spray by STI.
3. Firedam Spray by 3M.

J. Packing Material: Manufacturer's standard mastic, putty, ceramic fiber blanket, or mineral wool to be used as fill or backing material for firestopping.

1. FSB or Mineral Wool by Nelson Firestop.
2. Mineral Wool by Hilti.
3. Fire Safing or Backer Rod by RectorSeal.

4. Mineral Wool by STI.

5. FireMaster Mastic, FireMaster Putty, or FireMaster Bulk by 3M.

6. Cerablanket by Tremco, Canada.

7. CP 777 Speed Plugs by Hilti (preformed mineral wool designed for top of wall fluted metal deck packing material).

K. Safing and Smoke Stop: Thermafiber Safing Insulation, 4" thick, 4 pcf high melt point, mineral wool, unfaced and thermafiber Smoke Stop System with Smoke Seal compound as required for the use and location.

L. Accessory Materials for Fire-Stopping Sealants: Provide forming, joint fillers, packing and other accessory materials required for installation of fire-stopping sealants as applicable to the installation conditions indicated.

2.4 FIRE INSULATING MATERIALS

A. General: Provide insulating materials which comply with the requirements indicated for materials, compliance with the referenced standards, and other characteristics.

B. Semi-Refractory Fiber Board Safing Insulation: Semi-rigid boards designed for use as a firestop at openings between edge of slab and exterior wall panels at the top of rated walls as shown; produced by combining semi-refractory mineral fiber manufactured from slag with thermosetting resin binders to comply with ASTM C 612, passing ASTM E 136 for combustion characteristics; R-value of 4.0 at 75E F, melting point exceeding 2000 degrees F. Supports to be 26 gage galvanized steel.

1. Manufacturer=s of Semi-Refractory Fiber Insulation:

a. Johns Manville Corp.

b. 3M.

c. United States Gypsum Co.

C. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, and conditions are as required, and ready to receive the work.

C. With the Installer present, examine surfaces to receive joint sealers for compliance with requirements for joint configuration, installation tolerances and other conditions affecting joint sealer performance.

D. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions

have been corrected.

3.2 PREPARATION

A. Clean joints immediately before installing joint sealers to comply with recommendations of the joint sealer manufacturer and the following requirements:

1. Remove all foreign materials from joint substrates which could interfere with adhesion of the joint sealer, including dust; paint, except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by the sealant manufacturer; old joint sealers; oil; grease; waterproofing; water repellents; water; and surface dirt.

B. Clean concrete, masonry, unglazed surfaces of ceramic tile and similar porous joint substrate surfaces by brushing, grinding, blast cleaning, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with the joint sealer.

C. Remove loose particles remaining from the cleaning operations by vacuuming or blowing out the joints with oil-free compressed air.

D. Remove laitance and form release agents from concrete.

E. Prime joint substrates where recommended by the joint sealer manufacturer based on preconstruction joint sealer-substrate tests or prior experience. Apply primer to comply with joint sealer manufacturer=s recommendations. Confine primers to areas of the joint sealer bond. Do not allow spillage or migration onto adjoining surfaces.

F. Place hangers or damming devices in penetrations to hold firestopping materials in place, where necessary.

3.3 INSTALLATION

A. General:

1. Comply with the manufacturer=s printed installation instructions applicable to the product and application required, except where more stringent requirements apply.

2. Comply with the manufacturer=s recommendations for protection during installation.

B. Install firestopping at penetrations of fire-rated walls by sleeves, piping, ductwork, conduit and other items in accordance with the manufacturer's published instructions. Follow the manufacturer=s chart for the appropriate material for use to achieve the required fire rating in the various locations.

C. Install sealant, including forming, packing, and other accessory materials to fill openings around mechanical and electrical services penetrating walls and floors to provide fire-stops with the fire-resistance ratings indicated for wall and floor assemblies in which the penetrations occur. Comply with the installation requirements established by testing and inspecting agency.

D. At full-height fire-rated walls / partitions: Protect all fire safing insulation by installing a 22 gage galvanized sheet metal closure at the top and bottom, for protection of the fire safing insulation. Tool exposed surfaces of mortar or sealants. Where plastic pipes penetrate

floors, provide a galvanized steel sleeve around the pipes and fire stop sealant within the sleeve.

E. At openings between exterior walls and floors / roofs, install fire safing insulation per the manufacturer=s instructions.

3.4 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. The Owner=s representative will inspect firestopping installations. Do not cover installations by other construction until the Owner=s representative has completed an inspection.

3.5 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Clean excessive fill material and sealants adjacent to openings and joints as the work progresses by methods and with cleaning materials approved by the manufacturers of the firestopping products and of products in which openings and joints occur.

3.6 PROTECTION

A. Protect joint sealers and insulation from contact with contaminating substances and from damage resulting from construction operations or other causes so they are without damage at the time of Substantial Completion.

B. If damage or deterioration does occur, cut out and remove the damaged or deteriorated joint sealers and make repairs indistinguishable from the original installations.

3.9 FIRESTOPPING SCHEDULE

A. Provide firestopping complying with the UL assemblies specified below:

Penetration	Assembly	Nelson	Hilti	RectorSeal	STI	3M	Tremco
Metal Pipe	CMU Wall 8" Thick or Less	CAJ1224 or CAJ1203	CAJ1149 or CAJ1155 or	CAJ1114 or CAJ1115	CAJ1079 or CAJ1217	CAJ1001 or CAJ1009	CAJ1179 or CAJ1187
	Gypsum Board Partition	WL1083 or WL1030	WL1054 or WL1058	WL1026 or WL1034	WL1049 or WL1079	WL1003 or WL1009	WL1020 or WL1051
Non-Metallic Pipe	CMU Wall 8" Thick or Less	CAJ2086	CAJ2110 or CAJ2109	CAJ2021 or WJ2025	CAJ2064 or CAJ2045	CAJ2005	CAJ2082 or FA2024
	Gypsum Board Partition	WL2071	WL2098 or WL2078	WL2015 or WL2104	WL2093 or WL2029	WL2002 or WL2005	WL2083 or WL2082
Cable Tray	CMU Wall 8" Thick or Less	CAJ8049 or CAJ4033	CAJ4035 or CAJ4017	CAJ8043	CAJ4020 or CAJ4029	CAJ4003 or CBJ4020	CAJ4007 or WJA4005

	Gypsum Board Partition	WL4003	WL4011 or WL4019	N/A	WL4005 or WL4008	WL4004	WL3043 or WL3044

END OF SECTION

SECTION 07900

JOINT SEALERS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Sealants.

2. Backing.

3. Substrate preparation.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Sealant used in conjunction with concrete work.

2. Section 04230 - Reinforced Unit Masonry: Sealant used in conjunction with masonry work.

3. Section 05800 - Expansion Control : Sealant for waterproofing expansion joints.

4. Section 06400 - Architectural Woodwork: Sealant to prevent vermin and moisture penetration into concealed spaces.

5. Section 06650 - Solid Polymer Fabrications: Sealant to prevent vermin and moisture penetration into concealed spaces.

6. Section 07110 - Waterproofing: Sealant for waterproofing concrete work.

7. Section 07120 - Fluid-Applied Urethane Roofing: Sealant for waterproofing roofing applications.

8. Section 07125 - Fluid-Applied Elastomeric Roofing (Acrylic): Sealant for waterproofing roofing applications.

9. Section 07190 - Water Repellents (Sealer): Sealant for waterproofing concrete walks and floors.

10. Section 07250 - Fireproofing: Sealants used in fireproofing.

11. Section 07410 - Preformed Metal Roofing: Sealant for waterproofing metal roofing systems.

12. Section 07415 - Exterior Wall Panel System: Sealant for waterproofing metal wall systems.

13. Section 07620 - Sheet Metal Flashing and Trim: Sealant for weatherproofing metal roofing and flashings.

14. Section 07724 - Roof Hatch: Sealant for waterproofing roof hatch installations.

15. Section 07840 - Firestopping: Sealants for use in fire-rated assemblies.

16. Section 08100 - Hollow Metal Doors and Frames: Sealants for weatherproofing door and window frame perimeters and thresholds.

17. Section 08310 - Access Doors and Panels: Sealant to close joint where metal edge trim meets adjacent surfaces.

18. Section 08330 - Overhead Coiling Doors: Sealants for weatherproofing door frame perimeters and thresholds.

19. Section 08400 - Entrances, Storefronts and Windows: Sealants for weatherproofing frame perimeters and thresholds.

20. Section 08800 - Glass and Glazing: Sealants and compound for glass and glazing installations.

21. Section 09250 - Gypsum Board: Sealant for back of control joints and to close joint where edge trim meets adjacent surfaces; acoustical sealants.

22. Section 09300 - Tile: Sealants for tile and threshold installations.

23. Section 09510 - Gypsum Board: Sealant to close joint where edge trim meets vertical surfaces.

24. Section 10200 - Louvers and Vents: Sealants to close joint where metal edge trim meets vertical surfaces.

25. Section 10500 - Metal Lockers: Sealant to close joint where metal edge trim meets vertical surfaces.

26. Section 10810 - Toilet Accessories: Sealants to prevent moisture penetration into concealed areas.

27. Section 12305 - Science Casework and Laboratory Equipment: Sealant to prevent vermin and moisture penetration into concealed spaces.

28. Section 14240 - Hydraulic Elevators: Sealant to prevent moisture penetration into concealed spaces.

29. Section 14245 - Traction Elevators: Sealant to prevent moisture penetration into concealed spaces.

30. Section 14560 - Chutes: Sealant to prevent moisture penetration into concealed spaces.

1.2 DESCRIPTION OF WORK

A. The extent of joint sealers work is indicated on the Drawings and as specified herein, and includes providing and installing sealants, complete. The principal item of work is the

sealing of openings and joints indicated, specified, and as required to make the entire building weatherproof and watertight.

B. This Section contains general specifications for sealants throughout the Project. The specific use for joint sealants is indicated in the Sealant Schedule at the end of this Section.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society for Testing and Materials (ASTM):

1. ASTM C 717 - Terminology of Building Seals and Sealants.

2. ASTM C 834 - Specification for Latex Sealants.

3. ASTM C 920 - Specification for Elastomeric Joint Sealants.

4. ASTM C 1193 - Guide for Use of Joint Sealants.

5. ASTM C 1299 - Guide for Use in Selection of Liquid-Applied Sealants.

6. ASTM D 1056 - Specification for Flexible Cellular Materials - Sponge or Expanded Rubber.

1.4 SUBMITTALS

A. Section 01330 - Submittals: Procedures for submittals.

1. Product Data: Manufacturer=s specifications, recommendations, handling, installation and curing instructions for each type of sealant and associated miscellaneous material required. Include chemical characteristics, performance criteria, substrate preparation, limitations, color availability and VOC content.

2. Samples: 2" long of each color required for each type of sealant exposed to view.

3. Assurance / Control Submittals:

a. Manufacturer=s certificate that the products meet or exceed the specified requirements.

b. Manufacturer's Material Safety Data Sheets (MSDS).

c. Manufacturer=s certification that the products supplied comply with applicable federal and local regulations controlling the use of volatile organic compounds (VOC).

d. Manufacturer's Instructions indicating procedures and conditions requiring special attention, and cautionary procedures required during application.

e. Documentation of experience indicating compliance with the specified qualifications requirements.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Warranty: Provide a written special Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

1.6 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Deliver products to the Project Site in the manufacturer's original, new, unopened packages or containers, dry and undamaged with seals and labels intact, identifying the product and manufacturer, product designation, date of manufacture, lot number, shelf life, curing time, and mixing instructions, if applicable.

C. Handle and store materials to prevent deterioration and damage due to moisture, temperature changes, contaminants and other causes.

D. Store materials not in actual use out of the weather until ready for use. Maintain packages and containers in a clean condition, free of foreign materials and residue.

E. Store materials in a ventilated area, and in compliance with the manufacturer=s printed instructions.

F. Keep storage areas neat and orderly.

G. Protect against fire hazards and spontaneous combustion.

H. Take all necessary precautions to ensure that workmen and the work areas are adequately protected from health hazards resulting from handling, mixing and installation of the materials.

1.7 JOB CONDITIONS

A. Environmental Requirements: Install sealants only during the manufacturer's recommended temperature ranges and weather conditions for proper application and cure. Consult the manufacturer if a sealant cannot be applied under the recommended conditions.

1.8 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Special Warranty:

1. Submit a joint and severable written Warranty signed by the sealant manufacturer and the Installer certifying that the products and installation is free of defective

materials and workmanship and agreeing to repair or replace sealants and accessories which fail because of loss of cohesion or adhesion, which do not cure properly or are improperly installed.

2. Warranty Period: Three (3) years from the date of Substantial Completion.

PART 2 PRODUCTS

2.1 MATERIALS

A. General Performance Requirements: Select materials for compatibility with the joint surfaces to be encountered and other indicated exposures, and except as otherwise indicated, select modulus of elasticity and hardness or grade recommended by the manufacturer for each application indicated.

B. Where exposed to foot traffic, select materials of sufficient strength and hardness to withstand stiletto heel traffic without damage or deterioration of the sealant system.

C. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Urethanes:

a. Two-Part Urethane: Self-Leveling, ASTM C 920, Type M, Grade P, Class 25.

1) Chem-Calk 550 by Bostik.

2) Vulkem 245 by Tremco (formerly Mameco International, Inc.)

3) Vulkem 255 FM by Tremco.

4) Urexpan NR-200 by Pecora Corporation.

5) Sikaflex 2c SL by Sika Group.

b. Two-Part Urethane: Non-Sag, ASTM C 920, Type M, Grade NS, Class 25.

1) Chem-Calk 500 by Bostik.

2) Sonolastic NP 2 by Sonneborn Building Products

3) Vulkem 227 by Tremco.

4) Dynatrol II by Pecora.

5) Sikaflex-2c NS EX Mix by Sika.

c. One-Part Urethane: Self-Leveling, ASTM C 920, Type S, Grade P, Class 25.

1) Vulkem 45 by Tremco.

2) Sonolastic SL1 by Sonneborn.

3) Urexpan NR-201 by Pecora.

d. One-Part Urethane: Non-Sag, ASTM C 920, Type S, Grade NS, Class 25.

1) Chem-Calk 900 by Bostik.

2) Sonolastic NP 1 by Sonneborn.

3) Vulkem 116 by Tremco.

2. Silicones:

a. One-Part Silicones: ASTM C 920, Type S, Grade NS, Class 25. Vertical Surfaces Only.

1) 795 Silicone Building Sealant Structural Glazing, Glazing and Weatherproofing Sealant by Dow Corning. (colors only)

2) Construction 1200 Sealant by General Electric Company.

3) 999-A Silicone Building and Glazing Sealant by Dow Corning.

4) 864 Architectural Silicone by Pecora.

b. One-Part Silicones: ASTM C 920, Type S, Grade NS, Class 25.

1) 786 Mildew Resistant Silicone Sealant by Dow.

2) Sanitary 1700 Silicone Sealant by General Electric.

3) 898 Sanitary Mildew Resistant Silicone Sealant by Pecora.

3. Acrylics, Latex:

a. One-Part Acrylic Latex, Non-Sag, ASTM C 834.

1) Chem-Calk 600 by Bostik.

2) LC-130 Liquid Nails Caulk Window and Door Acrylic Latex by Macco Adhesives.

3) AC-20 Acrylic Latex Caulking, Non-Sag by Pecora.

4) Sonolac Acrylic Latex Caulk by Sonneborn.

4. Acoustical Sealants:

a. AC-20 FTR Fire and Temperature Rated Acoustical and Insulation Sealant by Pecora.

b. Sheetrock Acoustical Sealant by United States Gypsum Co.

5. Butyls:

a. One-Part Butyl, Non-Sag, FS TT-S-1657.

1) Chem-Calk 300 Butyl Rubber Caulk by Bostik.

2) BC-158 Butyl Rubber Caulk by Pecora.

6. Preformed Compressible & Non-Compressible Fillers:

a. Backer Rod - Closed cell polyethylene foam:

1) Chem-Rod / Closed by Bostik.

2) Expand-O-Foam by Williams Products.

3) HBR Backer Rod by Nomaco, Inc.

4) Sonofoam Closed-Cell Backer Rod by Sonneborn.

b. Backer Rod - Open cell polyurethane foam:

1) Denver Foam by Backer Rod Manufacturing.

2) Foam Pack II by Nomaco.

c. Neoprene compression seals:

1) WA and WE Series by Watson Bowman Acme.

d. Butyl Rod: Kirkhill Rubber Co.

7. Paving Sealants:

a. Two-Part Urethane: Self-Leveling, ASTM C 920, Type M, Grade P, Class 25.

1). Vulkem 202 by Tremco. (Jet Fuel Resistant) (FS SS-S-200E, Type H only).

2). NR-300 Urexpan by Pecora (FS SS-S-200E).

b. One-Part Urethane: Self-Leveling, ASTM C 920, Type S, Grade P, Class 25.

1). SONOMETRIC 1 Sealant by Sonneborn (FS SS-S-200E).

2). Vulkem 45 by Tremco.

D. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MISCELLANEOUS MATERIALS

A. Joint Cleaner: Provide the type of joint cleaning compound recommended by the sealant manufacturer for the joint surfaces to be cleaned.

B. Joint Primer / Sealer: Type of joint primer / sealer recommended by the sealant manufacturer for the joint surfaces to be primed or sealed.

C. Bond Breaker Tape: Polyethylene tape or other plastic tape as recommended by the sealant manufacturer, to be applied to the sealant contact surfaces where bond to the substrate or joint filler must be avoided for proper performance of the sealant. Provide self-adhesive tape where applicable.

D. Sealant Backer Rod: Compressible rod stock of polyethylene foam, polyethylene jacketed polyurethane foam, butyl rubber foam, neoprene foam or other flexible, permanent, durable non-absorbable material as recommended by the sealant manufacturer for compatibility with the sealant.

E. Masking tape and similar accessories as necessary to protect adjacent surfaces from damage.

2.3 COLORS

A. Generally use sealant colors to match the color of the material in which the joint is located. Select from the manufacturer=s standard colors.

B. Where a joint occurs between two materials of differing colors and the Contractor cannot determine which material to match, contact the Owner=s representative for a decision.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

1. Verify that joint widths are in conformance with the sealant manufacturer=s allowable limits.

2. Verify that contaminants capable of interfering with adhesion have been cleaned from joints.

3. Verify that joints has been properly prepared.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 JOINT PREPARATION

A. Prepare and size joints in accordance with the manufacturer's instructions.

B. Clean joint surfaces immediately before installation of sealant. Remove dust, dirt, laitance, unsecured coatings, mortar, moisture and other substances which could interfere with bond of sealant or caulking compounds using a solvent or abrasion as recommended by the manufacturer. Remove loose materials and foreign matter which could impair adhesion of the sealant.

C. Etch concrete and masonry joint surfaces as recommended by the sealant manufacturer.

D. Roughen vitreous and glazed joint surfaces as recommended by the sealant manufacturer.

E. Prime or seal joint surfaces where indicated, and where recommended by the sealant manufacturer.

F. Verify that the sealant is suitable for the substrate.

G. Verify that joint backing and release tapes are compatible with the sealant.

H. Verify that the sealant is paintable if a paint finish is indicated.

3.3 INSTALLATION

A. Install in accordance with the manufacturer=s printed instructions, except where more stringent requirements are shown or specified, and except where the manufacturer=s technical representative directs otherwise. Perform the work in accordance with ASTM C 1193 for latex base sealants.

B. Prime or seal joint surfaces where recommended by the sealant manufacturer. Do not allow the primer or sealer to spill or migrate onto adjoining surfaces.

A. Set joint filler units at the proper depth or position to coordinate with other work, including the installation of bond breakers, backer rods and sealants. Do not leave voids or gaps between the ends of joint filler units.

B. Install sealant backer rods, except where shown to be omitted or recommended to be omitted by the sealant manufacturer for the application indicated.

C. Install pre-formed compressible and non-compressible fillers in accordance with the manufacturer's published instructions.

D. Install bond breaker tape where indicated and where required by the manufacturer=s recommendations to ensure that elastomeric sealants will perform properly.

E. Employ only proven installation techniques which will ensure that the sealants are deposited in uniform, continuous ribbons without gaps or air pockets, foreign embedded matter, ridges and sags, with complete Awetting@ of joint bond surfaces equally on both sides.

F. Except as otherwise indicated, fill sealant rabbet to a slight concave surface, slightly below the adjoining surfaces. Where horizontal joints are between a horizontal surface and a vertical surface, fill the joint to form a slight cove so the joint will not trap moisture and foreign matter.

G. Dry tool joints. Do not use soap, water or solvent to tool the joints.

H. Seal joints before adjacent surfaces are waterproofed or painted.

I. Install sealants to the depths shown or, if not shown, as recommended by the sealant manufacturer, but within the following general limitations, measured at the center (thin) section of the bead:

1. For sidewalks, pavements and similar joints sealed with elastomeric sealants and subject to traffic and other abrasions and indentation exposures, fill the joints to a

depth equal to 75% of the joint width, but not less than 3/8" deep or more than 1/2" deep.

2. For normal moving joints sealed with elastomeric sealants not subject to traffic, fill joints to a depth equal to 50% of the joint width, but not less than 1/4" deep or more than 2" deep.

3. For joints sealed with non-elastomeric sealants, fill the joints to a depth in the range of 75% to 125% of the joint width.

L. Epoxy Floor Joint Sealant: Install sealant at floor construction and control joints in accordance with the manufacturer's published instructions.

3.4 SPILLAGE

A. Protect materials surrounding the work of this Section from damage and disfigurement. Do not allow sealants to overflow or spill onto adjacent surfaces, or to migrate into the voids of adjoining surfaces.

B. Recess exposed edges of exposed joint fillers slightly behind the adjoining surfaces, unless otherwise shown, so the compressed units will not protrude from the joints.

C. Bond ends of joint fillers together with an adhesive or Aweld@ by other means recommended by the manufacturer to ensure a continuous watertight and airtight installation.

3.5 CURING

A. Cure sealants in compliance with the manufacturer's published instructions.

3.6 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect sealant work for proper installation, depth and adhesion.

3.7 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Remove excess and spillage of sealants promptly as the work progresses using the materials and methods recommended by the sealant and substrate manufacturers.

C. Clean adjoining surfaces to eliminate evidence of spillage without damage to the adjoining surfaces and finishes.

3.8 SEALANT SCHEDULE

A. Exterior Joints:

1. Perimeters of exterior openings where frames and other penetrations meet the exterior face of the building; precast concrete, concrete, concrete masonry, polymer reinforced concrete:

a. Sealant No. 2.1, C.1.b

2. Expansion and control joints in exterior surfaces of cast-in-place concrete walls and precast architectural wall panels:

   a. Sealant No. 2.1, C.1.b

   b. Sealant No. 2.1, C.1.d

   c. Material No. 2.1, C.6.a

3. Expansion and control joints in exterior surfaces of unit masonry walls, polymer reinforced concrete and metal panels:

   a. Sealant No. 2.1, C.1.b

4. Coping joints, coping-to-facade joints, cornice and wash, and horizontal surface joints not subject to foot or vehicular traffic:

   a. Sealant No. 2.1, C.1.b

   b. Sealant No. 2.1, C.1.d

5. Exterior joints in horizontal wearing and non-wearing surfaces:

   a. Sealant No. 2.1, C.1.a

   b. Sealant No. 2.1, C.1.c

   c. Material No. 2.1, C.6.a

6. Paving joints and curb:

   a. Sealant No. 2.1, C.1.d
   b. Sealant No. 2.1, C.2.a

7. Setting bed for thresholds and saddles:

   a. Sealant No. 2.1, C.1.c

8. Painted metal lap and flashing joints:

   a. Sealant No. 2.1, C.2.a

B. Interior Joints:

1. Seal the interior perimeters of exterior openings.

2. Expansion and control joints on the interior of exterior cast-in-place concrete walls.

3. Expansion and control joints on the interior of exterior precast, architectural wall panels.

4. Expansion and control joints on the interior of exterior surfaces of unit masonry walls.

5. Perimeters of interior aluminum and hollow metal frames.

6. Interior masonry vertical control joints and intersecting unit masonry walls; masonry-to-masonry, masonry-to-concrete.

7. For all of the above interior joints:

    a. Sealant No. 2.1, C.1.b

    b. Sealant No. 2.1, C.1.d

    c. Sealant No. 2.1, C.1.a (for pre-finished materials only).

8. Exposed interior control joints in drywall and concealed joints:

    a. Sealant No. 2.1, C.3.a

    b. Sealant No. 2.1, C.4

    c. Sealant No. 2.1, C.4.c

    d. Sealant No. 2.1, C.6.a

9. Joints at the top of non-load-bearing unit masonry walls at the underside of cast-in-place concrete:

    a. Sealant No. 2.1, C.1.b

    b. Sealant No. 2.1, C.1.d

10. Perimeters of architectural woodwork: overhead cabinets, base cabinets, vanities, countertops, shelving, etc.:

    a. Sealant No 2.1, C.2.b

11. Perimeters of suspended acoustical ceilings where edge trim meets vertical surfaces:

    a. Sealant No. 2.1, C.2.b

12. Perimeters of toilet / bath fixtures: mirrors, sinks, urinals, tubs, vanities, waterclosets, accessories, etc.:

    a. Sealant No. 2.1, C.2.b

13. Interior expansion and control joints in floor surfaces exposed to foot traffic:

    a. Sealant No. 2.1, C.1.a

    b. Sealant No. 2.1, C.1.c

    c. Material No. 2.1, C.6.a

14. Interior saw-cut contraction joints in exposed concrete floors exposed to forklift traffic:

    a. Sealant No. 2.1 C.7

15. Interior non-moving joints, including control, contraction, and construction joints in interior floor slabs exposed to heavy duty traffic:

    a. Sealant No. 2.1, C.7

16. Painted metal lap joints:

    a. Sealant No. 2.1, C.2

C. Glass and Glazing:

1. Structural Glazing.

    a. Sealant 2.1, C.2.a

2. General Purpose Glazing.

    a. Sealant 2.1, C.2.b

3. End Damming.

    a. Sealant 2.1, C.5

END OF SECTION

SECTION 08100

HOLLOW METAL DOORS AND FRAMES

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Steel doors.

2. Steel door frames.

3. Steel window frames.

4. Door vision panels.

5. Louvers.

6. Accessories.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Substrate for anchorage.

2. Section 04230 - Reinforced Unit Masonry: Substrate for anchorage.

3. Section 08210 - Wood Doors: Doors installed in steel frames.

4. Section 08710 - Door Hardware: Hardware coordination.

5. Section 08800 - Glass and Glazing: Glass installed in vision panels in doors and steel window frames.

6. Section 09900 - Painting: Field painting and finishing of frames and doors.

1.2 DESCRIPTION OF WORK

A. The extent of standard steel doors and frames work is indicated on the Drawings and Schedule and as specified herein, and includes providing and installing exterior entrance and storefront assemblies, designed and fabricated to comply with the requirements for system performance characteristics below, as demonstrated by testing of the manufacturer=s corresponding stock systems in compliance with the test methods designated.

B. Door hardware is specified in Section 08710.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society of Civil Engineers (ASCE):

1. ASCE / SEI 7 - Minimum Design Loads for Buildings and Other Structures.

C. American Society for Testing and Materials (ASTM):

1. ASTM A 153 / A 153M - Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

2. ASTM A 568 / A 568M - Specification for Steel, Sheet, Carbon, Structural, and High-Strength, Low-Alloy, Hot-Rolled and Cold-Rolled, General Requirements for.

3. ASTM A 653 / A 653M - Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by Hot-Dip Process.

4. ASTM A 1008 / A 1008M - Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable.

5. ASTM A 1011 / A 1011M - Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.

6. ASTM D 2201 - Practice for Preparation of Zinc-Coated and Zinc-Alloy-Coated Steel Panels for Testing Paint and Related Coating Products.

7. ASTM E 90 - Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements.

8. ASTM E 330 - Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.

9. ASTM E 413 - Classification for Rating Sound Insulation.

D. Americans with Disabilities Guidelines (ADAAG):

1. Accessibility Guidelines for Buildings and Facilities.

E. Door Hardware Institute (DHI):

1. DHI - The Installation of Commercial Steel Doors and Steel Frames, Insulated Steel Doors in Wood Frames and Builder's Hardware.

F. International Code Council:

1. International Building Code (IBC), 2009.

G. Steel Door Institute (SDI):

1. SDI-100 - Standard Steel Doors and Frames.

2. SDI-105 - Recommended Erection Instructions for Steel Frames.

H. National Fire Protection Association (NFPA):

1. Standard No. 80 - Standard for Fire Doors and Other Opening Protectives.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Identify door and frame materials, gauges, configurations, location of cutouts, hardware reinforcement, fire-rating and finish.

2. Shop Drawings: Include elevations of each door type, details of each frame type, conditions at openings, details of construction, location and installation requirements of reinforcements and finish hardware, and details of joints and connections. Show anchorages and accessory items. Indicate door elevations, internal reinforcement, closure method, sidelights, and cutouts for louvers and vision panels.

3. Schedule: Provide for doors and frames using the same reference numbers for details and openings as those used on the Drawings.

4. Samples: Full range of color samples for selection. Two (2) 6" x 6", minimum, of each color and texture selected from factory-finished doors and frames.

5. Assurance / Control Submittals:

a. Certificates:

1) Manufacturer=s Certificate that the products meet or exceed the specified requirements.

2) Manufacturer=s certification that hot-dip galvanizing for doors and frames comply with the requirements.

3) Manufacturer=s certification that oversized fire-rated frame and door assemblies have been constructed with materials and methods equivalent to the requirements for labeled construction.

b. Calculations indicating that exterior doors, frames and anchorages satisfy the performance requirements.

c. Documentation of experience indicating compliance with the specified qualifications requirements.

B. Section 01780 - Closeout Submittals: procedures for closeout submittals.

1. Warranty: Submit a written special Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing work of this Section with a minimum of five (5) years documented experience.

3. Provide frames and doors complying with Steel Door Institute, SDI-100 ARecommended Specifications: Standard Steel Doors and Frames@ and as specified herein.

B. Performance Requirements:

1. Provide the capacity to withstand the following loading requirements for exterior units:

a. Design and install to resist combined positive and negative windloading in accordance with IBC 2009, Section 1609 with a Vmph of 170, qs of 74.0 psf, exposure [B] [C] [D],and importance factor [1.0] [1.25] [1.5], as applicable per ASCE 7.

2. Fire-Rated Assemblies: Provide fire-rated doors investigated and tested as fire door assemblies, complete with type of hardware to be used. Identify each fire door with recognized testing laboratory labels indicating the applicable fire-rating. Construct and install assemblies to comply with NFPA, Standard No. 80, and as herein specified.

1.6 DELIVERY, STORAGE AND PROTECTION

A. Section 01600 - Product Requirements: Transport, handle, store, and protect the products.

B. Deliver hollow metal work cartoned or crated for protection during transit and storage.

C. Provide additional sealed plastic wrapping for factor-finished doors.

D. Deliver products to the Project Site in the manufacturer=s original, unopened packages, dry and undamaged with seals and labels intact.

E. Inspect products for damage. Minor damages may be repaired provided the finish items are equal, in all respects, to new work, and acceptable to the Owner=s representative; otherwise remove and replace the damaged items.

F. Store under cover in dry, weathertight conditions. Place units on 4" high wood sills or store otherwise in a manner to prevent rust and damage. Provide 1/4" space between stacked doors to allow for air circulation. Avoid the use of non-ventilated plastic or canvas shelters. If the cardboard wrapper becomes wet, remove the carton immediately.

G. Break seals to permit ventilation.

1.7 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout.

B. Special Warranty:

1. Provide a written Warranty, signed by the door manufacturer, and the door installer agreeing to repair or replace doors that do not meet the requirements, or that fail in materials or workmanship.

2. Warranty Period: Two (2) years from the date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering items which may be incorporated in the work include the following:

1. Amweld Building Products.

2. Ceco Door Products.

3. Republic Doors and Frames.

4. Steelcraft.

5. Curries.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS

A. Hot-Rolled Steel Sheets and Strip: Commercial quality carbon steel, pickled and oiled, complying with ASTM A 1011 / A 1011M and ASTM A 568 / A 568M.

B. Cold-Rolled Steel Sheets: Commercial quality carbon steel, complying with ASTM A 1008 / A 1008M and ASTM A 568 / A 568M.

C. Galvanized Steel Sheets: Zinc-coated carbon steel sheets of commercial quality, complying with ASTM A 653 / A 653M, ASTM D 2201, G60 zinc coating, mill phosphatized.

D. Supports and Anchors: Fabricate of not less than 18 gage galvanized sheet steel.

E. Inserts, Bolts and Fasteners: Manufacturer=s standard units, hot-dip galvanized complying with ASTM A 153 / A 153M, Class C or D, as applicable.

2.3 FABRICATION

A. Fabricate units rigid, neat in appearance, and free from defects, warp, twist and buckle. Fit and assemble units in the manufacturer=s plant. Fabricate KD or welded. Clearly identify work that cannot be permanently factory-assembled before shipment to assure proper assembly at the Project Site.

B. Weld the exposed surface of joints continuously; grind, dress, and make joints smooth, flush and invisible. When prime painted, the use of metallic filler to conceal manufacturing defects is not acceptable.

C. Fabricate exposed faces of doors and panels, including stiles and rails of non-flush units

from only cold-rolled steel.

D. Fabricate frames, concealed stiffeners, reinforcement, edge channels, louvers and molding from either cold-rolled or hot-rolled steel (fabricator=s option); galvanized.

E. Fabricate doors, panels and frames from galvanized sheet steel. Close top and bottom edges of doors as an integral part of the door construction or by the addition of inverted steel channels.

F. Exposed Fasteners: Unless otherwise indicated, provide countersunk flat Phillips head for exposed screws and bolts; galvanized.

G. Sound-Rated (Acoustical) Assemblies:

1. Where shown or scheduled, provide frame and door assemblies which have been fabricated as sound-reducing type, tested in accordance with ASTM E 90 and classified in accordance with ASTM E 413.

2. Unless otherwise indicated, the minimum sound rating for acoustical assemblies shall be STC 33.

H. Door Hardware Preparation:

1. Prepare doors and frames to receive mortised and concealed finish hardware in accordance with final Finish Hardware Schedule and templates provided by the hardware supplier. Comply with applicable requirements of ANSI A115 series specifications for door and frame preparation for hardware.

2. For concealed overhead door closers, provide space, cutouts, reinforcing and provisions for fastening in the top rail of doors or heads of frames, as applicable.

3. Reinforce doors and frames to receive surface-applied hardware. Drilling and tapping for surface-applied finish hardware may be done at the Project site.

4. Locate finish hardware as shown on final Shop Drawings or, if not shown, in accordance with ARecommended Locations for Builder=s Hardware, Apublished by the Door and Hardware Institute and ADA Accessibility Guidelines.

I. Prepare frame for silencers. Provide three single rubber silencers for single doors; two single silencers on the frame head at double doors without mullions.

J. Equip frames with one welded-in floor anchor in each jamb. Furnish a minimum of three (3) steel jamb anchors and two (2) head anchors for field insertion at a maximum of 24" o.c. Anchors shall be of the proper type for particular construction involved (i.e., masonry, concrete, metal framing, etc).

K. Factory install louvers and vision panels in prepared openings.

L. Shop Painting:

1. Clean steel surfaces of mill scale, rust, oil, grease, dirt, and other foreign materials before application of paint.

2. Clean, treat and paint exposed surfaces of steel doors, louvers and frames including galvanized surfaces.

3. Apply one shop coat of rust-inhibitive enamel or primer paint, either air-dryed or baked-on, of even consistency, and suitable as a base for the specified finish paint.

2.4 STANDARD STEEL FRAMES

A. Provide galvanized steel frames for doors, transoms, sidelights, borrowed lights, windows and other openings of the types and styles shown on the Drawings.

B. Exterior Frames including sidelights, if required:

1. Cold-rolled steel; factory mitered corners and full-welded construction; 2" face, jamb dept as required or as shown on the Drawings; galvanized to ASTM D 2201.

2. 14 gage for exterior frames and other frames wider than 48".

3. 18 gage for all other frames.

C. Interior Frames:

1. Cold-rolled steel; 2" face, jamb depth as required or as shown on the Drawings.

2. 16 gage.

3. Fire-rated frames per NFPA, Standard No. 80.

D. Silencers: Except on weatherstripped frames, drill stops to receive three (3) silencers on the strike jambs of single-swing frames and two (2) silencers on the heads of double-swing frames. Install plastic plugs to keep holes clear during construction.

E. Plaster Guards: Provide 26 gage, steel plaster guards or mortar boxes welded to the frames at the back of door hardware cutouts where mortar or other materials might obstruct hardware operation.

F. Anchors: Equip frames with one welded-in floor anchor in each jamb. Furnish a minimum of three (3) steel jamb anchors and two (2) head anchors for field insertion at a maximum or 24" o.c.. Anchors shall be of the proper type for the particular construction involved, i.e., concrete, masonry, metal framing, etc. Conceal fastenings unless indicated otherwise.

2.5 STANDARD STEEL DOORS

A. Exterior Doors: Extra Heavy-Duty, Grade III per SDI-100, 1-3/4" thick, types and styles as indicated on the Drawings; top edge closed flush; 14 gage cold-rolled steel, galvanized to ASTM D 2201; insulated core.

B. Interior Doors: Standard-duty, Grade I per SDI-100, 1-3/4" thick, types and styles as indicated on the Drawings; top edge closed flush; 16 gage cold-rolled steel. Fire-rated UL labeled where indicated or required by the Building Code.

C. Fire-Rated Doors: Per NFPA, Standard No. 80.

D. Vision Panels: Laminated glass in metal frames as required by the fire-rating. Install removable steel stops on the room side of the doors.

E. Louvers:

1. Exterior: Weatherproof, stationary, where shown on the Drawings. Construct of AZ@ shaped, 16 gage, hot-dip galvanized steel blades. Space blades not more than 1-1/2" o.c.. Provide removable 1/4" stainless steel wire mesh screen at the interior face of doors, in formed metal frame with removable clips. Provide insect screens at lovers in exterior doors.

2. For fire-rated openings, provide tightly fitted, spring-loaded, automatic closing louvers with operable blades equipped with a fusible link; arranged so metal overlaps metal at every joint.

3. Provide louvers complying with UL or NFPA standards only, and factory-applied in doors.

4. Interior (Non-fire-rated): Roll-formed, 20 gage, galvanized steel, inverted AY@ blades; sight-proof; prime painted for field applied finish paint; size as indicated on the Drawings.

2.6 CORE CONSTRUCTION

A. Provide one of the following types of core construction (Contractor=s option):

1. Kraft Honeycomb: Phenolic treated.

2. Polyurethane: Foamed-in-place or laminated. 20 psi strength, 1.8 pcf density, 1/2" maximum voids in any direction. Strength of bond between the core and the steel face sheets shall exceed strength of core so delamination will not occur during operating conditions.

3. Polystyrene: Rigid core of polystyrene foam board, 1500 psf compressive strength, 18 psi shear strength. Strength of the bond between the core and the steel face sheets shall exceed strength of core so that delamination will not occur under operating conditions.

4. Vertical Steel Stiffeners: 22 gage vertical steel stiffeners, spaced 6" apart and spot welded to the face sheets at 6" on center. Insulate the spaces between stiffeners with loose fill insulation the full height of the door.

2.7 PROTECTIVE COATINGS

A. Bituminous Coating: Apply fibered asphalt emulsion at grout filled frames.

B. Primer: Exposed surfaces shall be cleaned, treated with Bonderite chemical and given one baked-on shop coat of grey synthetic primer.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

C. Report in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install standard steel doors, frames and accessories in accordance with the final Shop Drawings, the manufacturer=s published instructions, as herein specified, and at the locations shown on the Drawings.

B. Door Installations:

1. Fit hollow metal doors accurately in frames, within clearances specified in SDI-100.

2. Install fire-rated doors with the clearances specified in NFPA, Standard No. 80.

C. Frame Installations:

1. Comply with the provisions of SDI-105 ARecommended Erection Instructions for Steel Frames@, unless indicated otherwise.

2. Except for frames located at in-place concrete or masonry and at drywall installations, place frames prior to construction of the enclosing walls. Set frames accurately in position, plumbed, aligned, and braced securely until permanent anchors are set. After the wall construction is completed, remove temporary braces and spreaders leaving the surfaces smooth and undamaged.

3. At in-place concrete construction, set frames and secure to adjacent construction with machine screws and masonry anchorage devices.

4. In masonry construction, locate wall anchors at the hinge and strike levels. Building-in of anchors and grouting of frames is specified in Division 4 and as shown on the Drawings..

5. In steel framed partitions, install wall anchors at the hinge and strike levels. In open steel stud partitions, place studs in wall anchor notches and wire tie. In closed steel stud partitions, attach wall anchors to studs with tapping screws.

6. Install fire-rated frames with clearances specified in NFPA, Standard No. 80.

D. Field Finish: Field paint door, frames, louvers and vision panel frames as specified in Section 09900 - Painting.

3.3 CONSTRUCTION

A. Interface with Other Work:

1. Coordinate frame installations for size, location, and the particular construction involved.

2. Coordinate with the door opening construction, door frames, door hardware, door

louver and vision panel glazing installation.

B. Site Tolerances:

1. Maximum Diagonal Distortion: 1/16" measured with straight edge from corner to corner.

3.4 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting the installed work.

B. Immediately after installation, sand smooth any rusted or damaged areas of the prime coat and touch-up with a compatible air-drying primer.

C. Check and readjust operating door hardware items. Leave steel doors and frames undamaged and in complete and proper operating condition.

D. Adjust hardware for smooth and balanced door and window movement.

3.5 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect metal door, frame and window installations, alignment, attachment to structure, and operation.

3.6 CLEANING

A. Section 01700 - Execution Requirements: Cleaning installed Work.

B. Immediately prior to final inspection, remove protective plastic wrappings from prefinished doors.

C. Wipe down all doors and frames before final acceptance inspection.

END OF SECTION

SECTION 08210

WOOD DOORS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Flush solid core wood doors with wood veneer.

2. Flush solid core wood doors with plastic laminate face.

3. Flush hollow core wood doors with veneer face.

4. Paneled wood doors with solid wood stiles, rails and panels.

5. Furnishing and installation of louvers in wood doors.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 06200 - Finish Carpentry: Wood door frames.

2. Section 08710 - Door Hardware: Hardware coordination for wood doors.

3. Section 08800 - Glass and Glazing: Glass installed in wood doors.

4. Section 09900 - Painting: Field painting of wood doors.

1.2 DESCRIPTION OF WORK

A. The extent of the wood doors work is indicated on the Drawings and Schedules and as specified herein, and includes providing and installing standard hollow core and solid core wood doors, panel doors and louvers.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society of Civil Engineers (ASCE):

1. ASCE / SEI 7 - Minimum Design Loads for Buildings and Other Structures.

C. Americans with Disabilities Act Accessibility Guidelines (ADAAG):

1. Accessibility Guidelines for Buildings and Facilities.

D. National Electrical Manufacturers Association (NEMA):

1. NEMA LD-3 - High Pressure Decorative Laminates.

E. Architectural Woodwork Institute (AWI):

1. Architectural Woodwork Quality Standards, Guide Specifications and Quality Certification Program.

2. AWI 1300 - Architectural Flush Doors.

F. International Code Council:

1. International Building Code (IBC), 2009.

G. National Wood Window and Door Association (NWWDA):

1. I.S.-1. AIndustry Standard for Wood Flush Doors@.

H. National Woodwork Manufacturers Association (NWMA).

1. ACare and Finishing of Wood Doors@.

I. Woodwork Institute (WI):

1. AManual of Millwork@ - Designations for wood door grades and core construction.

1.3 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Door manufacturer=s product data, specifications and installation instructions for each type of door. Include details of core and edge construction, and louvers, if any, and similar components.

2. Shop Drawings: Indicate locations and size of each door, elevation of each kind, details of construction, locations and extent of hardware blocking, swings, and other pertinent information. Indicate cutouts for vision panels and louvers, if any.

2. Samples: For review and approval of color and texture only. Compliance with other requirements is the exclusive responsibility of the Contractor. Submit the following:

a. 8" x 10" representative finished veneer sheet for each available flitch to be used for face veneer of transparent finished doors.

b. 3" x 10" solid wood strips of species to be used for exposed edges, trim and other solid wood components.

3. Assurance / Control Submittals:

c. Manufacturer=s certificate that the products meet or exceed the specified requirements.

d. Documentation of experience indicating compliance with the specified qualifications requirements.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Special Warranty: Submit written special Warranty forms completed in the name of the Owner and registered with the manufacturer.

1.4 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

B. Obtain doors from a single manufacturer to ensure uniformity in quality of appearance and construction, unless approved otherwise.

C. Mark each door with NWWDA, Wood Flush Door Certification Hallmark certifying compliance with applicable requirements of ANSI / NWWDA I.S.-1. For manufacturer=s not participating in the NWWDA Hallmark Program, a certification of compliance may be substituted for marking of the individual doors.

D. Perform Work in accordance with AWI 1300 for Custom Grade doors.

F. Performance Requirements:

1. Fabricate and install to withstand the following loading requirements for exterior units:

a. Combined positive and negative windloading in accordance with IBC 2009, Section 1609 with a Vmph of 170, qs of 74.0 psf, exposure [B] [C] [D], and importance factor of [1.0] [1.25] [1.5}, as applicable per ASCE 7.

1.5 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect doors from damage, soiling and deterioration.

B. Ship doors individually wrapped.

C. Deliver products to the Project Site in the manufacturer=s original, unopened packaging, dry and undamaged with seals and labels intact.

D. Comply with the AOn-Site Care@ recommendations of NWMA pamphlet ACare and Finishing of Wood Doors@ and with the manufacturer=s instructions.

E. Store under cover in dry, weathertight conditions.

1.6 COORDINATION

A. Design Intent: It is the intent of the design that similar woodwork throughout the Project match. Coordinate work between the separate installers providing similar woodwork to ensure that the design intent is achieved to the satisfaction of the Owner=s representative.

B. Pre-Construction Meetings: Prior to the purchase and fabrication of materials and prior to installation of the scheduled work, conduct meetings with the various related woodwork

installers to coordinate efforts to achieve the design intent. Participants to include the Contractor, finish carpentry installer, architectural woodwork installer, painting applicator and the Owner=s representative.

1.7 JOB CONDITIONS

A. Condition doors to the average prevailing humidity in the installation areas prior to installation.

1.8 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Special Warranty:

1. Provide a written Warranty, signed by the door manufacturer agreeing to repair or replace doors that do not meet the requirements, or that fail due to delamination of veneer, warping beyond the specified installation tolerances, defective materials or telegraphing of the core construction.

2. Warranty Period:

a. Exterior Doors: Two (2) years from the date of Substantial Completion.

b. Interior Doors: Life of the installation.

c. Stile and Rail Doors: Fabricator=s special warranty for two (2) years against defects in materials and workmanship including, but not limited to, defects against warpage and wracking.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Cal-wood Door Div., Timberland Industries.

2. Eggers Industries, Architectural Door Div.

3. Mohawk Flush Doors, Inc.

4. Weyerhaeuser Co.

5. SUN-DOR-CO.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS

A. Solid Core Wood Doors (interior doors): AWI 1300.

1. Type: Institutional, flush, solid core wood, AWI, [premium] [custom] grade.

2. Thickness: As indicated on the Drawings.

3. Core: Mat-formed wood particleboard with closed grain hardwood stiles, commercial Standard CS 236-66, Type 1, Density AC@, Class 1. Minimum 30 pounds per cubic foot density. Mineral core with UL label for fire-rated doors.

4. Face Finish: Veneer shall be premium grade sliced hardwood for doors with a transparent finish; custom grade, medium density overlay for doors scheduled for paint finish; conform to commercial standard CS35; minimum, 1/8" thick. Wood species as selected. Plastic laminate where indicated.

5. Stiles and Rails: One piece hardwood stiles and top and bottom rails with wood species to match the face veneer. Where door closers are specified, the top rail width shall be doubled.

   a. The bottom rail of a transom panel shall run the full width of the panel.

6. Plastic Laminate: High pressure laminate. Color and texture as selected.

B. Hollow Core Wood Doors:

1. Type: Institutional, flush hollow core, AWI, [premium] [custom] grade.

2. Thickness: As indicated on the Drawings.

3. Core: Expanded corrugated core with wood lock blocks.

4. Face Finish: Veneer shall be premium grade, plain sliced hardwood for doors with a transparent finish; custom grade, medium density overlay for doors scheduled for paint finish. Wood species as selected.

5. Plastic Laminate: High pressure laminate. Color and texture as selected.

C. Panel Doors:

1. Type: Custom fabricated, solid wood construction. AWI, [premium] [custom] grade.

2. Stiles, Rails and Panels: Fabricated from clear, kiln dried solid lumber core with sliced veneer faces and edges as scheduled and solid trim pieces as required. Wood species as scheduled or selected. Vertical stiles shall be of the same species and color as the face veneer.

D. Louvered / Half-Louvered Doors: Minimum 1-3/8" thick; conform to NWWDA, I.S.-6.

E. Louvers:

1. Wood: Door manufacturer=s standard solid wood louvers of the same species as the door face veneer, unless indicated otherwise and of the size, type and profile shown. Factory install in prepared openings.

F. Transom and Side Panels: Where transom or side panels are shown in the same framing system as wood doors, provide panels which match the quality and appearance of the associated wood doors, unless otherwise indicated. Fabricate matching panels with the same construction, exposed surfaces and finish as specified for the associated doors.

G. Adhesive: Type 1, waterproof bond.

2.3 FABRICATION

A. Fabricate non-fire-rated doors in accordance with AWI 1300.

B. Furnish and install lock blocks at lock edge, and at the top of doors for closer hardware reinforcement.

C. Bond edge banding to the core.

D. Factory machine doors for door hardware in accordance with the hardware requirements and dimensions. Do not machine for surface hardware.

E. Factory install louvers in prepared openings.

F. Factory fit doors for the frame opening dimensions identified on the approved Shop Drawings.

G. Doors may be provided pre-fitting, set in frames and ready for installation in rough openings.

H. Before delivery of doors to the Project Site, shop-prime all wood surfaces per Section 09900 - Painting.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

C. Installer must examine door frames and verify that the frames are the correct type and have been installed as required for the proper hanging of corresponding doors.

D. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Condition doors to average prevailing humidity in the installation areas prior to hanging.

B. Install wood doors in accordance with the manufacturer=s instructions and as shown.

C. Install non-fire-rated doors in accordance with AWI Quality Standards requirements.

D. Job Fit Doors: Align doors to the frames for proper fit and uniform clearance at each edge and machine for hardware. Seal cut surfaces after fitting and machining.

1. Bevel non-fire rated doors 1/8" in 2" at lock and hinge edges.

E. Machine cut doors for the hardware. Install the door hardware specified in Section 08710.

F. Clearance: For non-fire rated doors provide a clearance of 1/8@ at jambs and heads, 1/8" at meeting stiles for pairs of doors, and 3/16" from the bottom of the door to the top of decorative floor finish or covering. Where thresholds are shown or scheduled, provide 1/4" clearance from the bottom of the door to the top of the threshold.

G. Tolerance: Conform to AWI 1300 for requirements for maximum diagonal warp.

H. Install door louvers plumb and level.

I. Job Site Finished Doors: For requirements for finishing wood doors, louvers and vision panel frames see Section 09900 - Painting.

3.3 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting and cleaning the installed work.

B. Rehang or replace doors which do not swing or operate smoothly.

3.4 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect door installations for alignment, hardware installations and door operation.

3.5 PROTECTION

A. Section 01700 - Execution Requirements: Protecting the installed work.

B. Implement procedures for the protection of installed wood doors from damage and deterioration until final acceptance.

C. Refinish or replace doors damaged during installation as directed by the Owner=s representative.

END OF SECTION

SECTION 08310

ACCESS DOORS AND PANELS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Access door and frame units.

2. Wall- and ceiling-mounted locations.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Substrate for anchorage.

2. Section 04230 - Reinforced Unit Masonry: Substrate for anchorage.

3. Section 09110 - Non-Load Bearing Steel Framing: Wall and ceiling framing for attachment of units.

4. Section 09250 - Gypsum Board: Adjacent wall and ceiling finish material.

5. Section 09900 - Painting: Field painting of door and frame units.

1.2 DESCRIPTION OF WORK

A. The extent of access door work is indicated on the Architectural, Mechanical, Plumbing and Electrical Drawings and as specified herein, and includes providing and installing access doors where access to mechanical, plumbing and electrical items is required, whether or not the access doors are shown on the Drawings.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society for Testing and Materials (ASTM):

1. ASTM A 153 / A 153M - Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

2. ASTM A 568 / A 568M - Specification for Steel, Sheet, Carbon, Structural, and High-Strength, Low-Alloy, Hot-Rolled and Cold-Rolled, General Requirements for.

3. ASTM A 653 / A 653M - Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by Hot-Dip Process.

4. ASTM A 1008 / A 1008M - Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable.

5. ASTM A 1011 / A 1011M - Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.

6. ASTM D 2201 - Practice for Preparation of Zinc-Coated and Zinc-Alloy-Coated Steel Panels for Testing Paint and Related Coating Products.

C. National Fire Protection Association (NFPA):

1. Standard No. 80 - Standard for Fire Doors and Other Opening Protectives.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer=s technical data and installation instructions for each type of access door assembly, including setting drawings, templates, instructions and directions for installation of anchorage devices.

2. Shop Drawings: Indicate the location, size, type, finish, hardware, and details of adjoining work for all access door units.

3. Schedule: Indicate all doors by type, size, rating and location keyed to the Drawings.

4. Assurance / Control Submittals:

a. Manufacturer's certificate that products meet or exceed the specified requirements.

b. Documentation of experience indicating compliance with the specified qualifications requirements.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Project Record Documents: Accurately record the location of all access units.

2. Warranty: Submit a written special Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

B. Fire-Resistance Ratings: In all Corridor walls, rated partitions and ceilings, provide access door assemblies with panel door, frame, hinge, and latch from a manufacturer listed in Underwriter=s Laboratories, Inc; AClassified Building Materials Index@ for 90 minutes

rating.

1. Provide UL label on each fire-rated access door.

C. Size Variation: The selected manufacturer=s standard units may vary in size slightly from the sizes indicated herein. Secure the Owner representative=s approval for sizes that differ from the units specified.

D. Coordination: Furnish inserts and anchoring devices which must be built into other work for the installation of access doors. Coordinate delivery with other trades to avoid delaying the work.

1.6 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store, and protect the products.

B. Deliver products to the Project Site in the manufacturer=s original, unopened packaging, dry and undamaged with seals and labels intact.

C. Handle and store to prevent damage to frames, panels and operating mechanisms.

1.7 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout.

B. Special Warranty:

1. Provide a written Warranty, signed by the manufacturer, and the Installer agreeing to repair or replace doors and panels that do not meet the requirements, or that fail in materials or workmanship.

2. Warranty Period: Two (2) years from the date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. J. L. Industries, Inc.

2. Karp Associates, Inc.

3. Larsen=s Manufacturing Co.

4. Milcor (Gibraltar Building Products).

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 ACCESS DOORS

A. General: Manufacturer=s standard fully-welded steel construction. Provide units with

means for anchoring properly to the adjacent construction.

B. Non-Fire-Rated Units:

1. Doors:

a. Flush Units: 14 gage, minimum.

b. Recessed Units: 18 gage, minimum.

2. Hinges: Stainless steel, piano or pin type, concealed and continuous, 175 degrees opening, constant force closure, spring type.

3. Operation: Flush screw driver slot for quarter turn cam latch with welded steel access sleeves at recessed panel doors.

C. Fire-Rated Units: As required for the fire-rating, but not less than the following:

1. Doors: Steel-faced, insulated core panel, 20 gage minimum.

2. Hinges: Stainless steel, piano or pin type, concealed and continuous, 175 degrees opening, constant force closure with spring or other self-closing mechanism.

3. Operation: Flush screw driver slot for quarter turn cam latch.

D. Unit Construction Types:

1. Non-Fire-Rated:

a. Flush: Flush door with bead to give the unit a frameless appearance.

b. Recessed: Recessed door to allow installation of acoustical tile, gypsum board or similar finish into the recess to provide a concealed appearance. Units for plaster or mortarbed to have integral expanded metal lath.

c. Universal: Flush door with exposed frame, Exposed flange of frame not to exceed 1" in width.

2. Fire-Rated: Flush insulated door with exposed frame. Exposed flange of frame not to exceed 1" in width, unless approved otherwise.

2.3 FABRICATION

A. General: Fabricate each access door assembly as an integral unit, complete, with all necessary parts, and ready for installation.

B. Steel Access Doors and Frames: Fabricate units of continuous welded steel construction. Fill and grind welds smooth and flush with adjacent surfaces. Fabricate units square. Furnish attachment devices and fasteners of the type required to secure the units to the adjacent substrate. All doors in fire-rated assemblies shall have been tested and have a Class B, 1-1/2 hour fire-rating label attached.

C. Frames and Flanges:

1. Fabricate frames from 16 gage steel, minimum, with exposed flanges approximately 1" in width around the perimeter of the frame for units to be installed in the following construction types, except as noted:

    a. Exposed concrete.

    b. Exposed masonry.

    c. Gypsum board.

    d. Plaster.

    e. Ceramic tile.

    f. Wood paneling, flush type with wood inlay to match the adjacent panel.

2. For installation in masonry construction, fabricate frames with adjustable metal masonry anchors.

3. For installation in plaster finish, fabricate frames with galvanized expanded metal lath, and exposed casing bead welded to the perimeter of the frame.

D. Access doors and frames for installation in concrete, masonry, plaster and ceramic tile shall be flush, stainless steel; #4 satin finish: Model DSC-214M by Karp Associates or approved equal.

E. Access doors for installation in gypsum board shall be concealed frame, recessed; finish as selected: Model KDW by Karp Associates or approved equal.

F. For recessed panel doors, provide access sleeves for each locking device. Furnish plastic grommets. Install in a hole cut thru the finish material.

G. Finish: Phosphate treated and shop painted with the manufacturer=s standard rust inhibitive primer.

2.4 ACCESSORIES

A. Anchorage Devices:

1. Devices of the type required to secure units to the abutting structure.

2.5 SCHEDULE

A. General: Where not otherwise indicated, provide access doors in accordance with the following:

1. Size: As required to comfortably achieve the purpose for which access is required.

2. Types:

    a. Flush: In non-public areas that are not restrooms, conference rooms or offices.

    b. Recessed: In all public areas, restrooms, conference rooms and offices.

c. Universal: In exposed concrete and masonry surfaces.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

1. Verify that rough openings for the units are correctly located and properly sized.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install units in accordance with the manufacturer's published instructions, where indicated on Drawings, and where required for access.

B. Coordinate with mechanical, plumbing and electrical trades and other work requiring access.

C. Position units to provide convenient access to concealed work requiring access.

D. Set frames in position accurately and securely attached to supports with face panels plumb and level in relation to the adjacent finish surfaces.

E. Field paint surfaces exposed to view. See Section 09900 - Painting.

F. Built-in anchors and grouting of frames in concrete and masonry is included in Sections of Divisions 3 and 4.

3.3 PROTECTION

A. Institute and maintain protective measures and take other precautions necessary to ensure that all assemblies will be without damage and deterioration at the time of final acceptance.

3.4 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting the installed work.

B. Adjust hardware and panels after installation for proper operation.

C. Remove and replace panels and frames that are warped, bowed, twisted or otherwise damaged.

3.5 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect installed units for location, alignment, plumb, level, attachment to framing, and operation.

3.6 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Clean the units before final acceptance inspection.

END OF SECTION

SECTION 08330

OVERHEAD DOORS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Service doors.

2. Counter doors.

3. Fire doors.

4. Grilles.

5. Sectional doors.

6. Electric motors.

7. Accessories.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Substrate for attachment of doors.

2. Section 04230 - Reinforced Unit Masonry: Substrate for attachment of doors.

3. Section 09110 - Non-Load Bearing Steel Framing: Framing for attachment and support of doors.

1.2 DESCRIPTION OF WORK

A. The extent of overhead coiling doors work is indicated on the Drawings and as specified herein, and includes providing and installing electrically-operated overhead coiling doors, fire doors, grilles, upward acting sectional doors, manually-operated counter doors, hoods and electric motors. Provide complete operating door assemblies including curtains, guides, counterbalance mechanisms, hardware, operators, motors and all installation accessories.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society of Civil Engineers (ASCE):

1. ASCE / SEI 7 - Minimum Design Loads for Buildings and Other Structures.

C. American Society for Testing and Materials (ASTM):

1. ASTM D 2201 - Practice for Preparation of Zinc-Coated and Zinc-Alloy-Coated Steel Panels for Testing Paint and Related Coating Products.

2. ASTM E 176 - Standard Terminology of Fire Standards.

3. ASTM E 330 - Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.

4. ASTM E 1996 - Specification for Performance of Exterior Windows, Curtain Walls, Doors, and Impact Protective Systems Impacted by Windborne Debris in Hurricanes.

D. International Code Council:

1. International Building Code (IBC), 2009.

E. National Fire Protection Association (NFPA):

1. NFPA 80 - Standard for Fire Doors and Other Opening Protectives.

2. NFPA 101 - Life Safety Code.

3. NFPA 252 - Standard Methods for Fire Tests of Door Assemblies.

F. Underwriters Laboratories, Inc.

1. UL 10B - Standard for Safety Fire Tests for Door Assemblies.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Submit manufacturer's product data for doors, grilles, motors, and assemblies, roughing-in diagrams, and installation instructions for each type and size of overhead door and grille. Include operating instructions and maintenance information.

2. Shop Drawings: Submit for special components and installations which are not fully dimensioned or detailed in the manufacturers data sheets.

3. Samples: Representative samples of finish, when requested by the Architect.

4. Assurance / Control Submittals:

a. Manufacturer=s certificate that the products meet or exceed the specified requirements.

b. Calculations indicating that the system and anchorages satisfies the Performance Requirements.

c. Documentation of experience indicating compliance with the specified qualifications requirements.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Operation and Maintenance Manual.

2. Warranty: Provide a written special Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience. Installer shall be trained and approved by the fire door manufacturer with trained supervisory personnel observing and directing the work.

B. Furnish each overhead door as a complete unit produced by a single manufacturer, including hardware, accessories, tracks, mountings, and installation components.

C. Inserts and Anchorages: Furnish inserts and anchoring devices which must be set in concrete or built into masonry for proper installation of the units. Provide setting drawings, templates, instructions and directions for the installation of anchorage devices. Coordinate delivery with other work to avoid Project delay.

1. See Section 03300 - Cast-In-Place Concrete and 04230 - Reinforced Unit Masonry for the installation of inserts and anchorage devices.

D. Performance Requirements:

1. Provide the capacity to withstand the following loading requirements for exterior units:

a. Design and install to resist combined positive and negative windloading in accordance with IBC 2009, Section 1609 with a Vmph of 170, qs of 74.0 psf, exposure [B] [C] [D], and importance factor of [1.0] [1.25] [1.5], as applicable per ASCE 7.

E. Fire Door Assemblies: Where called for, furnish fire door assemblies which comply with NFPA No. 80, and have been fire tested, rated and labeled in accordance with ANSI / ASTM E 176. Furnish each door with a metal U.L. label as evidence of the rating, with the label indicating the fire rating in hours of duration of exposure to fire, and a letter designation of location for which the assembly is designed.

F. Automatic Closing: Where called for, provide automatic closing, smoke actuated device and governor. Fabricate the governor unit to be inoperative during normal door operations. Design a release mechanism for easy resetting. Fabricate the unit to permit manual lifting of the curtain for emergency exit after automatic closing, with the curtain returning to the closed position when released.

G. Unless otherwise acceptable to the Architect, furnish all overhead door units by one manufacturer for the entire Project.

1.6 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Deliver products cartoned or crated for protection during transit and storage.

C. Provide additional sealed plastic wrapping for factor-finished doors.

D. Deliver products to the Project Site in the manufacturer=s original, unopened, new cartons or crates, dry and undamaged with seals and labels intact.

E. Inspect products for damage. Minor damages may be repaired provided the finish items are equal, in all respects, to new work, and acceptable to the Owner=s representative; otherwise remove and replace the damaged items.

F. Store under cover in dry, weathertight conditions.

G. Break seals to permit ventilation.

1.7 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout.

B. Special Warranty:

1. Provide a joint and severable written Warranty signed by the door manufacturer, Contractor and the Installer, agreeing to repair or replace defective materials and workmanship within the warranty period. Warranty shall include responsibility for removal and replacement of other work which may conceal overhead coiling door parts.

2. During the warranty period, repairs and replacements required because of acts of God and other events beyond the Contractor=s / Installer=s control, and those which exceed the performance requirements, shall be completed by the Contractor / Installer and paid for by the Owner at prevailing rates.

3. Warranty Period: Twp (2) years from the date of Substantial Completion of the door installation.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Atlas Door Co. & Solar Screens.

2. The Cookson Co., Inc.

3. Kinnear Div., Harsco Corp.

4. North American Overhead Door.

5. Overhead Door Corp.

6. Southwestern Steel Rolling Door Co.

7. Windsor Door Co., Div. Ceco Corp.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS AND CONSTRUCTION

A. Service Doors: Provide the sizes, and material configurations as shown on the Drawings and as required to meet the Performance Requirements for exterior units. Each door shall be [manually-operated by hand chain operator] [electrically-operated, mechanism fully enclosed, U.L. listed, three button control, of sufficient capacity to operate the door at a speed of 1 foot per second, with emergency hand chain operator and electrical interlock]. Provide a cylinder locking device, master keyable, operable from inside.

B. Counter Doors: Provide sizes, configurations, automatic closing, with label as scheduled. Standard push-up operation with interior slide bolts for locking. Provide for master keyable cylinder locking devices operable from the interior side of the opening.

C. Fire Doors: Provide sizes, material configuration, automatic closing, and with label as scheduled. Standard push-up operation, governor controlled descent.

D. Door Curtain: Fabricate overhead coiling door curtains of interlocking slats designed and fabricated to meet the performance requirements, of continuous length for the full width of the door without splices. Unless otherwise indicated, provide slats of the material gage recommended by the door manufacturer for the size and type of door required, and as follows:

1. Steel Door Curtain Slats: Structural quality, cold-rolled galvanized steel (interior) or stainless steel with #4 finish sheets (exterior), as scheduled, manufacturer's standard "flat-face" slats.

2. Endlocks: Stainless steel or malleable iron castings galvanized after fabrication, secured to the curtain slats with galvanized rivets. Provide locks on alternate curtain slats for curtain alignment and resistance against lateral movement.

3. Windlocks: Stainless steel or malleable iron casting secured to the curtain slats with galvanized rivets. Unless otherwise recommended by the door manufacturer, provide windlocks on doors exceeding 16 feet in width. Space windlocks at approximately 24" o.c. along both edges of the curtain.

4. Bottom Bar: Two angles, each not less than 1-1/2" x 1-1/2" x 1/8" thick, galvanized or stainless steel to suit the type of curtain slats.

5. Weather Seal: Replaceable flexible vinyl or neoprene gasket between angles as a
weather seal and cushion bumper for manually-operated doors, unless shown as an overlapping joint.

6. Curtain Jamb Guides: Fabricate curtain jamb guides of steel angles, or channels and angles with sufficient depth and strength to retain the curtain loading. Build-up units with 3/16" thick stainless steel sections, or steel galvanized after fabrication. Provide slotted bolt holes for track adjustment.

a. Where applicable secure continuous wall angles to wall framing with 3/8" bolts, minimum, at not more than 30" o.c., unless closer spacing is recommended by the door manufacturer. Extend wall angles above the door opening heads to support coil brackets, unless shown otherwise. Locate anchor bolts on exterior wall guides to be concealed when the door is in the closed position. Provide removable stops on guides to prevent over-travel of the curtain, and a continuous bar for holding wind-locks, if provided.

2.3 GRILLES

A. Curtain: Straight grid design, 5/16" solid aluminum rods at approximately 2" o.c. vertically with connecting links at 9" o.c. horizontally.

B. Windlocks and Endlocks: Continuous end links or retainers as standard with the grille manufacturer.

C. Bottom Bar: Aluminum, extruded rectangular tube.

D. Guides: Extruded aluminum channel guides with pile gaskets each side, each guide.

E. Finish: Clear anodized, or as selected.

2.4 SECTIONAL DOORS

A. Door Sections: Fabricate sections of rails and stiles heavy-duty galvanized steel to produce a minimum door thickness of 2", but not less than required to meet the Performance Requirements for exterior units. Provide stiles and rails of the size recommended by the door manufacturer for the size and type of door required. Deflection of doors in the horizontal position shall not to exceed 1/120 of the door width. Panels to be 24 gauge, minimum. Style and design as selected by the Architect.

B. Track: 3", angle-mounted. Secure tracks to meet the Performance Requirements.

C. Hinges and fixtures: 14 gauge galvanized steel; full-floating, ball-bearing rollers with hardened steel races. Roller size shall be adequate for the design requirements.

D. Bottom Weatherstrip: Aluminum.

E. Glass Sections: Glazing sections as indicated on the Drawings.

F. Lock: Galvanized, single-unit, inside mechanism, installed for operation as required by the location.

G. Operation: Electric motor, manufacturer=s standard.

H. Finish: Factory painted with polyester top coat over epoxy primer. Field applied finish coat. Color as selected.

2.5 COUNTERBALANCING MECHANISM

A. Counterbalance doors by means of adjustable steel helical torsion spring, mounted around a steel shaft, in a spring barrel, and connected to the door curtain with the required barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.

B. Counterbalance Barrel: Fabricate the spring barrel of hot-formed structural quality carbon steel, welded or seamless pipe, of sufficient diameter and wall thickness to support roll-up of the curtain without distortion of the slats. Limit the barrel deflection to not more than 0.03" per ft. of span under full load.

1. Provide spring balance of one or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of the curtain, with uniform adjustment accessible from outside the barrel. Provide cast steel barrel plugs to secure the ends of springs to the barrel and shaft.

2. Fabricate torsion rod for the counterbalance shaft of case-hardened steel, of the required size to hold fixed spring ends, and to carry the torsional load.

C. Brackets: Provide manufacturer's standard design mounting brackets, either cast iron or cold-rolled steel plate with bell mouth guide groove for the curtain.

2.6 HOOD

A. Form to entirely enclose the coiled curtain and operating mechanism at the opening head, and act as a weather seal. Contour to suit the end brackets to which the hood is attached. Roll and reinforce top and bottom edges for stiffness.

B. Provide closed ends for surface-mounted hoods, and any portion of the between-jamb mounting projecting beyond the wall face. Provide intermediate support brackets as required to prevent sag.

C. Fabricate steel hoods of not less than 24 gauge stainless steel for exterior, or hot-dip galvanized steel sheet with G90 zinc coating for interior-mountings, complying with ASTM D 2201. (phosphate treat before fabrications.)

D. Provide automatic drop baffle to prevent passage of smoke and flame.

2.7 ELECTRIC OPERATION

A. Motor Operator:

1. Operation Speed: 1 foot per second operation or other speed recommended by the door manufacturer, as acceptable to the Owner=s representative.

2. Motor Type: High-starting torque, reversible, Class A insulated electric motors with overload protection, sized by the door manufacturer to move the door in both directions, from any position, and including limit switches not affected by motor removal, and disconnection for emergency manual operation. Provide pre-wired units coordinated with the external electrical system.

3. Remote Electrical Control Station: Key control switch. Constant pressure on switch moves door in either controlled direction, including after stopping at any point in travel upon release of pressure on the switch.

4. Enclosure: NEMA 1 enclosures for motor and control.

5. Governor: Type to control door descent when automatic closing mechanism is activated at the rate of 2 feet per second.

6. Automatic Reversing Control: Electrically-actuated automatic bottom bar extending full width of the door.

7. Emergency Manual Release: Manufacturer's standard emergency release to partially open the door for emergency exit.

2.8 SECURITY

A. Motor Operated Assemblies: Self-lock gearing.

B. Locking: Interior-mounted slide bolts, lockable by cylinder, at both jambs on the coil side.

2.9 PAINTING

A. Shop clean and prime ferrous metal and galvanized surfaces, exposed and unexposed, except faying and lubricated surfaces, with the door manufacturer's standard rust inhibitive primer.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

1. Verify all required dimensions, especially the finished floor or counter top to the underside of the overhead support, by actual measurement.

2. Verify track layout, especially the finished floor or counter top to the underside of overhead support, by actual measurement.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install doors and operating equipment complete with all necessary hardware, jamb and head mold strips, anchors, inserts, hangers, and equipment supports in accordance with the approved Shop Drawings, manufacturer's instructions, and as required to meet the Performance Requirements.

B. Install fire-rated doors to comply with NFPA 80.

3.3 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting the installed work.

B. Upon completion of the installation, including work by other trades, lubricate, test and adjust the doors to operate easily, free from warp, twist and distortion, and fitting weathertight for the entire perimeter.

C. Test the operation of automatic closing fire doors, including response to the actuation of a smoke detection device.

3.4 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect the installations for alignment, level, plumb, secure attachment to the substrates, and operation.

3.5 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Remove protective material from pre-finished aluminum surfaces.

C. Clean exposed to view parts as recommended by the manufacturer.

D. Remove excess sealant by a method acceptable to the sealant manufacturer.

END OF SECTION

SECTION 08400

ENTRANCES, STOREFRONTS, DOORS AND WINDOWS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Aluminum exterior and interior entrances.
2. Aluminum storefronts.
3. Aluminum sidelites.
4. Aluminum flush doors.
5. Aluminum sliding doors.
6. Tempered glass doors.
7. Aluminum windows, fixed and operable.
8. Glass and glazing in-fill and vision panels.
9. Door hardware.
10. Window hardware.
11. Perimeter sealants.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Substrate for anchorage.
2. Section 04230 - Reinforced Unit Masonry: Substrate for anchorage.
3. Section 07900 - Joint Sealers: Sealants for a weatherproof installation.
4. Section 08710 - Door Hardware: Hardware not specified in this Section.
5. Section 08800 - Glass and Glazing: Glazing for entrances, storefronts, sidelites, doors and windows including those specified herein to be factory-glazed.
6. Section 09110 - Non-Load Bearing Steel Framing: Non-structural framing for adjacent wall and ceiling finishes.
7. Section 09250 - Gypsum Board: Adjacent wall and ceiling finish material.

8. Section 09900 - Painting: Field painting of components.

1.2 DESCRIPTION OF WORK

A. The extent of the work of this Section is indicated on the Drawings and Schedules and as specified herein, and includes providing and installing aluminum exterior and interior doors, entrances, storefronts, sidelites, flush doors, tempered glass doors, sliding doors and operable and fixed windows; tubular aluminum sections, shop-fabricated, factory-finished; glass and glazing in-fill; related flashings; anchorage and attachment devices; hardware; sealants.

B. Provide complete operating door assemblies including door curtains, guides, hardware, operators, motors, and installation accessories. Coordinate with other hardware requirements in Section 08700.

C. The systems are standard units to the shapes indicated, combined with extruded sections to create the profiles indicated.

D. Provide assemblies that have been designed and fabricated to comply with requirements of the system performance characteristics below, as demonstrated by testing the manufacturer's corresponding stock systems in accordance with the test methods designated.

E. Preparation of openings, structural support, access panels, finish and trim for openings, construction of storage pockets and painting shall be furnished and installed under other Sections herein.

M. National Association of Architectural Metal Manufacturers (NAAMM):

1. Metal Finishes Manual for Architectural and Metal Products.

N. SSPC: Society for Protective Coatings (formerly Structural Steel Painting Council):

1. Paint 12 - Cold-Applied Asphalt Mastic (Extra Thick Film).

1.4 PERFORMANCE TESTING

A. General:

1. Perform tests on complete assembly mock-ups. Comply with the requirements indicated below. Perform tests prior to the start of fabrication.

2. Where the manufacturer's standard system complies with the requirements, and has been tested in accordance with the specified tests, provide certification by the manufacturer showing compliance with such tests.

B. Air Infiltration: Air infiltration rate shall not exceed 0.15 cfm / sq. ft. and 0.37 cfm / ft. of crack length when tested at a static air pressure differential of 6.24 psf when tested per ASTM E 283.

C. Static Water Resistance: Specimen shall be subjected to a static pressure of 10.0 psf with a water spray application rate of 5 gph / sq. ft. for a duration of 15 minutes. No uncontrolled leakage is allowed. Tested per ASTM E 331.

D. Seismic Performance at Design Displacement:

1. For buildings 4-stories and higher.

2. The middle row of the anchors shall be shifted parallel to the plane of the wall for a distance of 0.75" in one direction, held for 10 seconds, then back to center, then the other direction 0.75", held for 10 seconds, then back to center. Visual observations shall be made at 1/4" displacements in both directions.

3. The test shall be repeated two additional times with no failure or gross permanent distortion of the anchors, frames or glass. Glazing gaskets may not disengage and weather seals shall not fail.

E. Cyclic Water Resistance: Sliding doors shall be subjected to four (4) test cycles, with each cycle consisting of a static pressure of 12.0 psf with a water spray application of 5 gph / ft for a duration of 5 minutes each, and a 1 minute duration with pressure released but water application continuously applied. No uncontrolled leakage is allowed. Tested per ASTM E 547.

F. Forced Entry Resistance: ASTM F 588 or ASTM F 842, performance level 10.

G. Uniform Load: No deflection in excess of L / 175 of the span of any framing member at a structural test load equal to 1.5 times the specified design windload; no glass breakage or permanent set in the framing members in excess of 0.2% of their clear spans with a static air design load of 20 psf applied in the positive and negative directions in accordance with ASTM E 330.

H. Component Structural Tests: Perform operating, hardware, sash rail rigidity and other tests called for by AAMA AVoluntary Guide Specification for Aluminum Architectural Windows".

1.5 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer’s technical product data, specifications, standard details, and installation recommendations for the components required. Provide component dimensions; describe components within the assembly, anchorage and fasteners, glass and glazing in-fill, hardware, and internal drainage details.

2. Shop Drawings: Drawings for fabrication and installation of the required systems; indicate the system dimensions, framed opening requirements, tolerances, and affected related work; include plans, elevations, detailed sections of typical composite members, hardware mounting heights, reinforcement, and expansion and contraction joint locations. Show anchors, hardware and other components not included in the manufacturer’s Product Date; include glazing details.

3. Samples:

a. Aluminum Extrusions: Two (2) samples of each required aluminum finish on 12" long sections of the extrusion shapes required for the system.

b. The Architect reserves the right to require additional samples which show fabrication techniques, workmanship of component parts, design of the hardware and other exposed auxiliary items.

c. Glazing: Submit samples per Section 08800 - Glass and Glazing.

4. Assurance / Control Submittals:

a. Manufacturer's certification or test reports certifying that the products have been tested and comply with the performance testing requirements.

b. Calculations indicating that the system and anchorages meet the Performance Requirements and the Building Code indicate anchor spacing. Indicate the number and placement of weld-in anchors and supplemental steel jamb and frame reinforcing, as necessary.

c. Certification that the door system meets the performance design criteria in accordance with the following:

i. ANSI A 156.10.

ii. NFPA 101.

iii. UL 325.

iv. IBC - 2009.

d. Documentation of experience indicating compliance with the specified qualifications requirements.

f. Manufacturer’s Operation and Maintenance Data..

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Manufacturer’s Operation and Maintenance Manual.

2. Warranty: Submit a written special Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.6 COORDINATION

A. Pre-Installation Meeting: Convene a Pre-Installation Meeting at the Project Site prior to beginning the work of this Section.

1. Require attendance of the Contractor, Owner’s representative, Architect, and representative of the Installer.

2. Review the coordination required for proper installation.

3. Review preparation and installation procedures, and the coordination and scheduling required with other related work.

B. Check Shop drawings for other work to confirm that adequate provisions are made for locating and installing doors in compliance with the requirements.

1.7 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer:

a. Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

b. Company capable of providing field service representation during installation, approving an acceptable installer, and approving the installation.

2. Installer:

a. Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

b. Company with supervisory staff trained and approved by the door manufacturer and with the trained supervisory personnel observing and directing the work.

c. Company capable of providing field service after installation.

B. Performance Requirements:

1. Provide assemblies capable of withstanding the wind loads and thermal movements based on testing of the manufacturer's standard units in assemblies similar to those indicated for this Project.

2. Provide the capacity to withstand the following wind loading requirements:

a. Design, fabricate and install to resist combined positive and negative windloading in accordance with ASCE 7, Chapter 6 with a Vmph of 170, qs of 74.0 psf, exposure C and Importance Factor of 1.0.

3. Thermal Movement:

a. Provide for thermal movement resulting from the following maximum change in ambient and surface temperatures to prevent buckling, opening of joints, over stressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base engineering calculations on surface temperatures of the materials due to both solar heat gain and nighttime heat loss.

i. Ambient temperature range: 120E F.

ii. Materials surface: 180E F.

C. Furnish complete units produced by a single manufacturer, including hardware, accessories, tracks, mountings, and installation components.

D. Unless otherwise acceptable to the Architect, furnish all units and assemblies for the entire Project by one manufacturer.

E. Design Criteria: The Drawings are based on Kawneer's standard aluminum entrance, storefront, sidelite, sliding door and operable and fixed window systems. Other manufacturer's standard system of similar and equivalent nature may be acceptable when the difference does not materially detract from the design concept or required performance, as judged solely the Architect. The plans, elevations and details show the spacing of members as well as profiles and similar dimensional requirements, and the entrance, storefront, sidelights, and door and windows work.

1.8 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store, and protect the products.

B. Protect finished aluminum surfaces with a strippable coating. Do not use adhesive papers or sprayed coatings which bond when exposed to sunlight or weather.

C. Pack, box, ship, unload, store and protect products in a manner to avoid breakage, abuse, damage and defacement.

D. Deliver products to the Project Site in the manufacturer's original, unopened protective packaging.

E. Store inside, protected from weather.

F. Stack vertically on edge to provide for water drainage and air circulation.

G. Break seals to permit ventilation.

1.9 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Special Warranty:

1. Provide a joint and severable written Warranty signed by the manufacturer, Contractor and Installer, certifying that the products and installation is free of defective materials and workmanship, and agreeing to repair or replace any defective component, or the system, in whole or in part, as necessary, to restore the product to its original intended state and integrity. Warranty shall include responsibility for removal and replacement of other work which may conceal door parts.

2. Warranty Period: Two (2) years from the date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Kawneer Company, Inc. components are referenced within this Section to establish the level of quality required.

2. Alternate Manufacturers: Subject to compliance with the Project requirements, alternate manufacturers offering the specified items which may be incorporated in the work include the following:

a. Bradham Aluminum Corp.

b. Century Manufacturing.

c. United States Aluminum.

d. Oldcastle Glass Engineered Products.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS AND ACCESSORIES

A. Aluminum Members: Alloy and temper as recommended by the manufacturer for strength, corrosion resistance, and application of the required finish; ASTM B 221 for extrusions, ASTM B 209 for sheets and plates.

B. Steel Sections: ASTM A 36 / A 36M; shaped to suit the mullion sections.

C. Reinforcement: Where fasteners screw-anchor into aluminum less than 0.125" thick, reinforce the interior with aluminum or non-magnetic stainless steel to receive the screw threads, or provide standard non-corrosive pressed-in splined grommet nuts.

D. Brackets and Reinforcements: Manufacturer's high-strength aluminum units where feasible, otherwise, non-magnetic stainless steel. Steel reinforcing shapes to be stainless steel or hot-dip galvanized steel complying with ASTM A 123 / A 123M.

E. Concealed Flashings: Dead-soft stainless steel, 26-gauge minimum, or extruded aluminum, 0.062" minimum, of an alloy and type selected by the manufacturer for compatibility with other components.

F. Anchors: Drill-in expansion bolts or weld-in type with in-place steel anchors welded to steel plates anchoring the frame.

G. Fasteners:

1. Aluminum, non-magnetic stainless steel, or other materials warranted by the manufacturer to be non-corrosive, and compatible with aluminum components.

2. Do not use exposed fasteners for the attachment of hardware, except where unavoidable and where clearly noted on submittal shop drawings.

3. Provide Phillips flat-head machine screws for exposed fasteners. Finish shall match the finish of the adjoining metal.

H. Glass and Glazing Materials: Provide glass and glazing materials which comply with the requirement of Section 08800 - Glass and Glazing, including for doors and windows specified to be factory-glazed.

I. Weatherstripping: Provide compression-type weatherstripping at the perimeter of each operating sash; manufacturer's standard replaceable stripping of either molded neoprene gaskets complying with ASTM D 2000, or molded PVC gaskets complying with ASTM D 2287, or molded neoprene gaskets complying with ASTM C 509, Grade 4.

J. Sealant and Backing Materials: Unless otherwise indicated for sealants required within fabricated window units, provide a type recommended by the product manufacturer for the joint size and movement, to remain permanently elastic, non-shrinking and non-migrating. Comply with Section 07900 - Joint Sealers, for installation of sealants and backing materials.

2.3 FABRICATION

A. Sizes and Profiles: The sizes for units, including profile requirements, shall be as indicated and as required to meet the Performance Requirements. Any variable

dimensions are indicated, together with maximum and minimum dimensions required to achieve the design requirements and coordination with other work.

B. Field Measurement: Wherever possible take field measurements prior to the preparation of Shop Drawings and fabrication to ensure proper fitting of the work. Proceed with fabrication and coordination, as necessary, when the taking of field measurements might delay the work.

C. Prefabrication: To the greatest extent possible, complete fabrication, assembly, finishing, hardware application, and other work before shipment to the Project Site. Disassemble components only as necessary for shipping and installation.

1. Pre-glaze door and window units to the greatest extent possible, in coordination with the installation and hardware requirements.

2. Do not drill and tap for surface-mounted hardware items until the time of installation at the Project Site.

3. Perform fabrication operations, including cutting, fitting, forming, drilling and grinding of metal work in a manner to prevent damage to exposed finish surfaces. For hardware, perform these operations prior to the application of finishes.

4. Fabricate framing for glazing from the inside, except for large plates of glass which may be glazed from the outside.

D. Glazing: Provide for the following edge clearances:

	Single Glazed
Nominal edge cover (bite)	5/16"
Minimum nominal edge clearance	1/8"
Minimum face clearance	1/8"

1. Glass must be edge blocked to prevent contact with the metal framing.

E. Reinforcing: Install reinforcing, as necessary, to meet the Performance Requirements.

F. Welding: Comply with AWS recommendation to avoid discoloration; grind exposed welds smooth and restore mechanical finish.

G. Continuity: Maintain accurate relationship of planes and angles, with hairline fit at contacting members.

H. Fasteners: Conceal fasteners wherever possible.

I. Weatherstripping: For exterior doors and windows, provide compression weatherstripping against fixed stops, at other edges provide sliding weatherstripping retained in adjustable strip mortised into door edges.

J. Structural Silicon Sealant: As recommended by the manufacturer.

2.4 ALUMINUM ENTRANCES

A. Doors: Standard Aluminum Entrance, Series [350 Medium Stile] [500 Wide Stile[swing door by Kawneer. Size as indicated on the Drawings.

1. Vertical Stile: [3-1/2"] [5"], single piece.

2. Top Rail: [3-1/2"] [5"], single piece.

3. Bottom Rail: 6-1/2", single piece.

B. Door Hardware:

1. Section 01310 - Project Management and Coordination: Verification of hardware components specified in Section 08710 - Door Hardware.

2. Door Hinges: Door manufacturer's standard butt hinges, US32D finish.

3. Offset Pivots: Where indicated provide top**,** intermediate and bottom offset pivots; assemblies complying with ANSI A 156.4, Grade 1 requirements; cast aluminum-alloy, baked epoxy finish to match the door finish; door manufacturer's standard.

4. Concealed Overhead Closers: Single-acting manual, with built-in door stop, 105% hold open; door manufacturer's standard. ADAAG compliant.

   a. Force for pushing or pulling open interior doors shall not exceed 5-pounds.

   b. For push button operated openers see 08710.

5. Push / Pulls and Panic Hardware: Standard to the door manufacturer, directly mounted on the glass.

   a. CP-II Push and CO-9 Pull by Kawneer. Finish to match door. Use where an exit device and / or exterior trim is not specified.

6. Deadlocks: Three-point locks, located in the bottom rail.

7. Door Locking Devices (where noted in Section 08710): Adams Rite MS+1890 deadbolt / latch, double cylinder operation. Finish: 628.

8. Exit Devices: Concealed vertical rods with crash bar doggable; exterior mortise trim. Clear #17 finish for exterior / exit doors.

   a. Latch shall release when subject to a 15-pound force.

9. Three-point Lock: #4015 foot bolt and #4085 head bolt by Adams Rite.

10. Flush Bolt: Top and bottom flush; surface-mounted in the nose of the door stile.

11. Automatic Door Bottoms: 3/4" mortise type; Pemko #420 AVL.

12. Floor-Mounted Holder: Rubber cushioned stop with door-mounted holder; door manufacturer's standard.

13. Weatherstripping (Exterior doors only): As selected from the manufacturer's standards.

   a. Head and Jamb: Replaceable wool, polypropylene, or nylon wool pile with aluminum strip backing, recessed in the frame; AAMA 701.2.

b. Sill: Semi-rigid polymeric material on aluminum anodized to match the door; EPDM sweep strip; 38-560 by Kawneer.

14. Thresholds: Weatherproof, 4" or 6", as detailed, mill-finished aluminum, standard for offset pivots; cut as required for carpet or tile adaptation as detailed. ADAAG compliant.

15. Other Hardware: As described in the door manufacturer's literature, as specified or as required.

16. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.5 ALUMINUM STOREFRONTS

A. Provide a system combined with extruded aluminum sections, to the profiles indicated; designed to meet the Performance Requirements.

B. Storefront Framing System: Trifab Versa Glaze 451 / 451T by Kawneer, 2" x dimension shown, extruded aluminum; minimum wall thickness of 0.080"; flush glazed.

C. Column Covers: 0.040" aluminum by Kawneer. Finish to match the storefront system.

D. Receptor Channel: Model No. 450-038 and 65-025 by Kawneer; finish to match the storefront system.

E. Provide aluminum entrances fabricated to comply with the elevations and details shown on the Drawings.

2.6 ALUMINUM FLUSH DOORS

A. Doors: Kawneer Standard Flushline Series.

1. Face Sheets: 0.062" embossed aluminum.

2. Core: 3 lb. / cu. ft. density, foamed-in-place polyurethane, 1/8" thick tempered hardboard backing at each face, bonded to the core.

3. Reinforcement: Internally for the installation of hardware.

4. Trim: Beveled edge aluminum extrusion around the entire door perimeter and the perimeter of glass and louver openings to receive the skin and hardboard.

5. Weatherstripping: Woodpile around the entire door perimeter.

6. Vision lites and Louvers: As indicated on the Drawings.

B. Hardware:

1. See Section 08710 - Door Hardware.

2. Supplemental Flush Door Storm Hardware: Provide intermediate barrel bolts at 30" o.c. to latch doors greater than 7'-0" in height, and at the center of door heads and sills to secure doors greater than 42" in width.

C. Frames: Trifab VG (Versa Glaze) 450 by Kawneer.

2.7 TEMPERED GLASS DOORS

A. Glass doors and framing system; factory-glazed with 1/2" thick tempered glass, minimum, or as required to meet the Performance Requirements.

B. Glass: Brite Vue glass by Oldcastle Glass Co.
C. Hardware: As provided by the door manufacturer.

1. Push / Pulls: Manufacturer’s standard, as selected.

2.8 ALUMINUM WINDOWS AND SLIDING DOORS

A. General: The drawings and following paragraphs define the operating arrangement for the types of sash (ventilators) required in the window units, and specify the minimum provisions for each type. The Drawings indicate which panels of each window unit are operable sash and which are fixed. Where two or more types of operating sash are included in the same window unit, the operation of each is indicated, and the unit is considered a "Combination Window".

Provide the following:

1. High rise sill with subsill sill pan at each sliding door and window.

2. Swing limiters set at 4" at all operating sashes.

3. Insect screens with maximum opening at the lock side of the operating sashes unless indicated otherwise.

B. Fixed Window Units: All joints of frames shall be butt type construction, neatly secured at each corner with integral screw ports; 3-1/8" main frame depth, 0.078" nominal wall thickness. Commercial line 7225 Non-Thermal, HC90 by Kawneer.

C. Casement Window Units: Out-swinging, interior glazed. 7225 Non-Thermal, HC90 by Kawneer.

D. Projecting Window Units: Out-swinging, top-hinged, unless otherwise noted, 2-1/4" frame depth; horizontal pivoting with extruded 360 degree aluminum pivots; concealed limit stop and removable key handle lock at each vent; interior glazed. 7225 Non-Thermal, HC90 by Kawneer.

E. Horizontal Sliding Window Units: Commercial high performance quality, stainless steel roller assemblies, locks and keepers, two-piece compensating head detail; 4" frame depth with interior insect screens; interior glazed. Series 7330 by Kawneer.

F. Vertical Sliding Units: Commercial high performance quality, stainless steel roller assemblies, two factory-installed sash balances for each operating sash, locks and keepers, two-piece compensating head detail; 4" frame depth with interior insect screen; interior glazed. Series 7330 by Kawneer.

G. Sliding Aluminum and Glass Doors: Two-piece compensating channel subheads and jambs; heavy-duty interlocks and horizontal muntins, factory-glazed. HPS High Performance Sliding [60] [80] [100] [120] by Kawneer.

H. Hardware:

1. Locking handles, cases, keepers, catches and fasteners shall be of a corrosion-resistant material compatible with aluminum.

2. Hardware shall meet AAMA tests and be suitable for its intended use.

2.9 GLASS AND GLAZING MATERIALS

A. Glazing: As specified in Section 08800 - Glass and Glazing.

B. Double wet glaze with Dow 995, or approved equal.

2.10 SEALANT

A. Sealant and Backing Materials:

1. Perimeter Sealant: Type as specified in Section 07900 - Joint Sealers.

2. Sealant Used Within the System (Not for Glazing): Type as specified in Section 07900 - Joint Sealers.

2.11 HARDWARE

A. General: Provide the manufacturer's standard heavy-duty hardware units, as indicated, scheduled, or as required for the operation of each door and window, as recommended by the manufacturer for the service required; finish to match the frame unless otherwise indicated.

2.12 FINISHES

A. Exposed Aluminum Surfaces:

1. Clear anodized or as selected from the manufacturer's standard finishes.

2. Polyvinylidine fluoride, (Kynar) or equal as selected from manufacturer's standard colors.

B. Maintain same color range on doors, frames and other components. Do not mix light and dark shades within an assembly.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

1. Verify that related work performed under other Sections has been completed, and is in accordance with approved Shop Drawings.

2. Verify that openings are dimensionally within allowable tolerances, plumb, level,

clean and provide for proper anchoring.

C. Report in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install doors and windows, complete, with all necessary hardware, jamb and head mold strips, anchors, inserts, hangers, and equipment supports in accordance with approved Shop Drawings, manufacturer's instructions, to meet the Performance Requirements, and as specified herein.

B. Attach to the structure to permit sufficient adjustment to accommodate construction tolerances and other irregularities.

C. Anchor and weld securely in place; provide alignment attachments and shims to permanently fasten systems and units to the building structure. Anchorages shall be concealed.

D. Comply with AWS recommendation to avoid discoloration; grind exposed welds smooth and restore the mechanical finish.

E. Align assemblies and units plumb, level and true to line, without warp or rack of framing members, doors, windows and panels. Maintain assembly dimensional tolerances; align with adjacent work.

F. Install sill flashings with turned up edges and ends; seal to adjacent work to form a water tight dam.

G. Install compensating channels at door and window heads where indicated.

H. Ensure water drainage away from glazing.

I. Coordinate the attachment and seal of perimeter air and vapor barrier materials.

J. Provide thermal isolation where components penetrate or disrupt the building insulation. Pack fibrous insulation in shim spaces at the perimeter of assemblies and units to maintain continuity of the thermal barrier.

K. Install hardware using templates provided, and in accordance with the installation requirements in Section 08710 - Door Hardware.

L. Drill and tap frames, doors and windows and apply surface-mounted hardware items in compliance with the hardware manufacturer’s instructions and templates. Use concealed fasteners wherever possible.

M. Set sill members, thresholds and other members in a bed of sealant, as indicated, or with joint fillers or gaskets, as indicated, to provide a weathertight installation. Coordinate the installation with wall flashings and other components of the work. Comply with the requirements of Section 07900 - Joint Sealers.

N. Apply sealants to provide a watertight installation at all joints and intersections and at all opening perimeters. Install perimeter sealants and backing materials in accordance with the installation requirements of Section 07900 - Joint Sealers.

O. Set thresholds in a bed of mastic, and secure.

P. Refer to Section 08800 - Glass and Glazing for the installation of glass and other panels shown to be glazed into doors, windows and framing, and not pre-glazed by the manufacturer.

Q. Separate aluminum and other corrodible metal surfaces from sources of corrosion and electrolytic action at points of contact with other metals. Isolation Requirements:

1. Dissimilar Metals: Where aluminum surfaces are in contact with, or fastened to dissimilar metals except stainless steel, zinc or zinc coating, protect aluminum from the dissimilar metal. Where aluminum contacts another metal, paint the dissimilar metal with epoxy paint. Where drainage from a dissimilar metal passes over aluminum, paint the dissimilar metal with a non-lead pigmented paint.

2. Cementitious Materials: Paint aluminum where in contact with mortar, concrete or other cementitious material, with an alkali-resistant coating such as heavy-bodied bituminous paint or epoxy paint.

3. Wood Contact: Isolate aluminum from cedar, redwood, oak and acid-treated lumber by means of unbroken 6-mil polyethylene construction sheet or a heavy coating of metal-protective paint.

4. Surfaces in contact with sealants after installation shall not be coated with any type of protective material.

3.3 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting installed work.

B. Adjust operating hardware to function properly, without binding, and to prevent tight fit at contact points and weatherstripping.

C. Doors operation shall meet ADAAG requirements for opening force.

D. Repair damaged finishes to match the original finish.

3.4 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field testing and inspection.

B. Inspect installations for alignment, level, plumb, secure attachment to the structure, and smooth and proper operation.

C. On-Site Tests:

1. If the units do not appear to meet air or water infiltration requirements, the Owner, may require on-site tests shall be conducted for both air and water infiltration, with the door manufacturer’s representative present. The Owner’s representative will select the unit(s) to be tested. If such unit(s) fail to meet the specified air and water requirements, the reason for failure shall be jointly determined.

2. Tests shall be conducted in accordance with AAMA 101-88.

3. The responsible Contractor shall correct tested units that do not meet the specified requirements, and all units with similar deficiencies, at no additional cost

to the Owner.

4. The cost for all successful tests, both original and retest shall be paid by the Owner. All unsuccessful tests, both original and retest, shall be paid for by the responsible Contractor.

5. The testing shall be done by an AAMA-accredited testing agency, selected by the Owner's representative and the manufacturer, and shall be employed by the responsible Contractor.

3.5 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Remove protective material from pre-finished aluminum surfaces.

C. Promptly after the installation of glass and sealants, clean the completed system, inside and out, exercise care to avoid damage to coatings and finishes.

D. Remove excess glazing and joint sealants, dirt, and other substances from aluminum surfaces by a method acceptable to the sealant manufacturer.

E. Wash down exposed surfaces with a solution of mild detergent in warm water, applied with soft, clean wiping cloths. Take care to remove dirt from corners. Wipe surfaces clean and dry.

3.6 PROTECTION

A. Implement and maintain protective measures, and take other precautions necessary to ensure that all assemblies will be without damage and deterioration at the time of Substantial and Final Completion.

END OF SECTION

SECTION 08560

STORM PROTECTION

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Removable storm panels.

2. Accordion shutters.

3. Hinged aluminum shutters.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Substrate for supporting storm protection.

2. Section 04230 - Reinforced Unit Masonry: Substrate for supporting storm protection.

1.2 DESCRIPTION OF WORK

A. The extent of storm protection work is indicated on the Drawings and Schedules and as specified herein, and includes providing and installing products applied to exterior doors, windows, storefronts and open areas in buildings.

B. Take field measurements prior to the preparation of Shop Drawings and fabrication of the protection units.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society of Civil Engineers (ASCE):

1. ASCE / SEI 7 - Minimum Design Loads for Buildings and Other Structures.

C. American Society for Testing and Materials (ASTM):

1. ASTM B 633 - Specification for Electrodeposited Coatings of Zinc on Iron and Steel.

2. ASTM B 766 - Specification for Electrodeposited Coatings of Cadmium.

3. ASTM E 330 - Test Method for Structural Performance of Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.

4. ASTM E 1996 - Specification for Performance of Exterior Windows, Curtain Walls, Doors, and Impact Protective Systems Impacted by Windborne Debris in Hurricanes.

D. International Code Council:

1. International Building Code (IBC), 2009.

1.4 SYSTEM PERFORMANCE

A. Provide storm protection units with materials and assemblies to conform to the Building Code, Wind Load requirements for storm panels / shutters for external application, except where more stringent requirements are indicated.

B. Performance Requirements:

1. Provide the capacity to withstand the following loading requirements:.

a. Design and install to resist combined positive and negative windloading in accordance with IBC 2009, Section 1609 with a Vmph of 170, qs of 74.0 psf, exposure [B] [C] [D], and importance factor of [1.0] [1.25] [1.5], as applicable per ASCE 7.

2. Heights above ground level are indicated on or can be calculated from the Drawings.

1.5 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer's product literature and specifications describing the storm protection products, including color selections and finishes.

2. Shop Drawings: Show elevations of units, full size profiles of frame and track members; thickness of metal; sizes, types, materials, finishes, and location of fasteners; type, material and location of operating hardware, mullion details; and details of installation, including connection and relationship to other work.

a. Include a schedule showing the location of units for each size and type.

3. Samples: Submit two (2) each pieces of the assemblies, and the required finish on 6" long sections of typical frame members, plus a 12" x 12" sample of the panel itself.

4. Test Reports: Submit certified laboratory test reports evidencing that storm panels of the type indicated comply with the performance requirements.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Seaview Shutters Inc., Miami, FL. (represented by AMS, Guam).

2. Willard Shutter Company, Inc., Miami, FL (represented by KB Enterprises, Guam).

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS

A. Provide alloys complying with ANSI / AAMA 1002.10 and as recommended by the aluminum producer for the forming and fabricating process used by the manufacturer and for the type of finish required.

B. Other Materials: Where metals other than aluminum are standard with the manufacturer for concealed reinforcing, concrete inserts, fasteners and hardware, use stainless steel or other non-corrosive materials which are compatible with aluminum. Electroplate steel, if used for reinforcing members, with zinc or cadmium coating complying, respectively, with ASTM B 633 or B 766. For exposed fasteners match the color and finish of the metal material being fastened.

C. Non-Metalic Spacers: Provide the manufacturer's standard vinyl, rubber or high density polyurethane spacers, not less than 1/8" thick, to separate storm shutters from contact with metal prime windows.

2.3 REMOVABLE STORM PANELS

A. Headers and Sills: Slip-in type, and made of extruded aluminum alloy 6063-T5.

B. Structural Panels: Roll-formed from aluminum alloy 3003-H16, of a thickness to withstand the positive and negative forces applied on the spans required, but not less than 0.065". Panels shall be designed to allow nesting for storage with T&G edges for interlocking of erected panels at 12"o.c..

C. Clips and Wing Nuts: Stainless steel, standard with the manufacturer.

D. Reinforcing Tubes and Frames, Door Angel Frames and Stops: Sizes and shapes, and fabricated as detailed, extruded aluminum alloy 6063-T5.

E. Aluminum Mill Finish: For panels, angles, tubes, embedded items, and removable base and head members.

F. Anodized Finish: Match the finish of the adjacent windows for base and head members which are to remain permanently in-place.

2.4 ACCORDION SHUTTERS

A. Headers and Sills: 0.125" thick extruded aluminum alloy 6063-TS.

B. Shutters: Extruded aluminum blades of extruded aluminum alloy 6063-TS with stainless steel carriage, nylon rollers and nylon guides; top and bottom locking rods with stainless steel thumb screws. Provide end closure pieces securely attached to the wall.

C. Finish: All aluminum materials to be finish color as selected by the Architect from the manufacturer=s standards.

2.5 HINGED ALUMINUM SHUTTERS

A. Provide hinged aluminum shutters as indicated and detailed on the Drawings. Aluminum

panel doors shall be custom fabricated for exterior use.

B. Provide two (2) recessed flush bolts at the top and two (2) flush bolts at the bottom for each
panel, with dust proof floor strikes. Track shall be standard to the manufacturer.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with the manufacturer's instructions for the installation of storm shutters.

B. Set storm units plumb, level and without distortion, securely fastened to, and aligned with the prime windows.

C. Fasten to allow for expansion and contraction without damage to the window members or pullout of fasteners. Fasten members required to be in a fixed position, as detailed; for those that are required to be removable, verify the connectors and inserts, and fabricate accordingly.

D. Position storm panels main frame so it does not contact the prime window frame, or install a non-metallic spacer between the prime window and the storm shutter and frame.

E. Provide weepholes in sill tracks. Size the holes to effectively permit the drainage of rain water collecting between closed storm shutters and the windows they protect.

F. Isolation Requirements:

1. Wood Contact: Isolate sheet metal from cedar, redwood, oak and acid-treated lumber by means of unbroken 6-mil polyethylene construction sheet or a heavy coating of metal-protective paint.

2. Dissimilar Metals: Insulate the juncture between dissimilar metals with a heavy coating of insulating film.

3. Concrete Contact: Coat the underside of sheet metal over horizontal concrete surfaces with an ashpaltum cement.

3.3 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect for plumb, level and secure attachment to substrates, where applicable.

3.4 ADJUSTING AND CLEANING

A. Section 01700 - Execution Requirements: Adjusting and Cleaning the installed work.

B. Adjust inserts, and hardware to provide a tight fit at contact points, for smooth operation, and for a weathertight closure.

C. Clean surfaces promptly after installation, exercising care to avoid damage to the finish of new and existing surfaces.

END OF SECTION

SECTION 08710

DOOR HARDWARE

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Finish Hardware items required for swing, sliding and folding doors, except special types of unique and non-matching hardware specified in the same Section as the doors and windows.
2. Hinges.
3. Locks, latches and bolts.
4. Push / Pull units.
5. Exit devices. (Panic Hardware).
6. Closers.
7. Stops, holders and bumpers.
8. Thresholds.
9. Weatherstripping.
10. Miscellaneous hardware.
11. Electronic Access Control.

B. Related Documents: The Contract Documents, as defined in Section 01110 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

C. Related Sections:

1. Section 06100 - Rough Carpentry: Rough hardware.
2. Section 06100 - Rough Carpentry: Installation of finish hardware.
3. Section 06400 - Architectural Woodwork: Cabinet hardware.
4. Section 08100 - Hollow Metal Doors and Frames: Hardware for metal doors.
5. Section 08210 - Wood Doors: Hardware for wood doors.
6. Section 08400 - Entrances, Storefronts, Doors, and Windows.

1.2 DESCRIPTION OF WORK

A. The extent of the finish hardware work is indicated on the Drawings and as specified herein, and includes furnishing and installing all finish hardware, trim, attachments and fastenings specified complete and proper. Under this Section include all hardware that is not specified in other Sections, whether or not such hardware is herein scheduled.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American National Standards Institute (ANSI);
1. ANSI A117.1 - Specifications for Making Buildings and Facilities Accessible to and Usable by Physically Handicapped People.

2. ANSI A156.1 - National Standard for Butts and Hinges.
3. ANSI A156.2 - National Standard for Locks and Lock Trim.
4. ANSI A156.3 - National Standard for Exit Devices.
5. ANSI A156.4 - National Standard for Closers.
6. ANSI A156.5 - Standard for Auxiliary Locks and Associated Products.
7. ANSI A156.6 - National Standard for Architectural Door Trim.
8. ANSI A156.13 - National Standard for Mortise Locks & Latches.
9. ANSI A156.16 - Standard for Auxiliary Hardware.

C. American Society for Testing and Materials (ASTM):

1. ASTM E 283 - Test Method for Determining Rate of Air Leakage Through Exterior Windows, Curtain Walls and Doors.

D. Americans with Disabilities Act Accessibility Guidelines (ADAAG):

1. Accessibility Guidelines for Buildings and Facilities.

E. Door Hardware Institute (DHI):

1. Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames.

F. National Fire Protection Association (NFPA):

1. NFPA 80 - Standard for Fire Doors and Other Opening Protectives.
2. NFPA 101 - Life Safety Code.
3. NFPA 252 - Standard Methods for Fire Tests of Door Assemblies.

G. Underwriters Laboratories (UL):

1. UL 10B - Standard for Safety Fire Tests for Door Assemblies.
2. UL 305 - Panic Hardware.

1.4 HARDWARE FOR FIRE DOORS AND EXIT DOORS

A. Provide all hardware necessary to meet the requirements of NFPA No. 80 for fire doors and NFPA No. 101 for exit doors, as well as other requirements specified, even if such hardware is not specifically mentioned in the “Hardware Schedule”. Such hardware shall bear a UL label.

1.5 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer’s technical product data for each item of hardware. Include information necessary to show compliance with requirements, instructions for installation, and maintenance of operating parts and finishes.

2. Hardware List: Prepare and submit three (3) copies of a Hardware List for review. One (1) copy will be returned. The List shall identify each hardware item by manufacturer, manufacturer’s catalog number, and the exact location in the work. Indicate applicable scheduled door data, including the door numbers shown on the Drawings, the number of doors, hand of operation with an explanation of how the hand is determined, and indicate the active leaf where a pair of doors are required. Indicate hardware finishes.

a. Fastening Data: Indicate and clearly highlight “exposed on surface of hardware” fasteners, and through fastenings which would be exposed on the opposite door face when other than Phillips flat-head devices are proposed.

b. The Hardware List shall be in a suitable form to facilitate ready review by the Owner’s representative. Acceptance of the List will not relieve the Hardware Supplier from the responsibility for furnishing the job complete.

3. Catalog Cuts: Submit three (3) catalog cuts of every item to be furnished. One (1) copy will be returned. Show all finishes, sizes, catalog numbers and pictures, include information necessary to show compliance with the requirements, instructions for installation, and maintenance of operating parts and finishes. Explain all abbreviations fully.

4. Mounting Locations: Submit mounting locations data for each type of hardware required.

5. Hardware Schedule: Submit a Hardware Schedule as indicated below. Coordinate hardware with the doors, frames and related work to ensure proper size, thickness, backset, hand, function and finish.

a. Final Hardware Schedule Content: Based on the finish hardware indicated, organize a Hardware Schedule into "Hardware Sets", indicating a complete designation of every item required for each door. Provide the following information:

1). Type, style, function, size and finish of each hardware item.
2). Name and manufacturer of each item.
3). Fastenings and other pertinent information.
4). Location of the hardware set cross-referenced to the Drawings, both on the Floor Plans and Door Schedule.
5). Explanation of all abbreviations, symbols, codes, etc. contained in the Hardware Schedule.
6). Mounting locations for hardware.
7). Door and frame sizes and materials.
8). Keying and master keying information.

b. Submittal Sequence: Submit the Hardware Schedule at the earliest possible date, particularly where acceptance of the Schedule must precede the fabrication of other work (e.g., aluminum frames) critical to maintaining the Project Construction Schedule. Include with the Schedule, product data, samples, Shop Drawings of other work affected by the finish hardware, and other information essential for a coordinated review of the Schedule. Acceptance of the Hardware List does not relieve the Hardware Supplier from the responsibility of furnishing the job complete for its intended purpose.

6. Keying Schedule: Submit with the final Hardware Schedule. Door designations to be the same as those on the Drawings.

7. Samples: Prior to submittal of the Final Hardware Schedule, and prior to ordering of the finish hardware, submit one (1) sample of each type of exposed hardware, as selected, with the required finish, including fasteners, and tagged with a full description for coordination with the Hardware Schedule.

a. Samples will be returned to the supplier. Units which are acceptable and remain undamaged through submittal, review and field comparison procedures may, after final check of the operation, be used in the work, within limitations of the keying coordination requirements.

B. Maintenance Related Items: Provide one (1) set of adjusting tools, two (2) sets of Maintenance Manuals, including lubrication requirements, parts list, manufacturers contact for ordering replacement parts and basic installation instructions for locksets, door closers, floor hinges and panic devices to the Owner's representative. Provide four (4) blanks for each key type.

1.6 QUALITY ASSURANCE

A. Perform work in accordance with the following requirements:

1. ANSI A117.1
2. NFPA 80.
3. NFPA 101.
4. NFPA 252.
5. UL 10B.
6. UL 305.
7. ADAAG.

B. Regulatory Requirements:

1. Conform to the Building Code for requirements applicable to fire-rated doors and frames.
2. Conform to ADAAG for operation, mounting heights, and location of accessories.

C. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

D. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

E. Supplier: A recognized architectural finish hardware supplier, who has been furnishing hardware to similar projects for a period of not less than five (5) years, and who employs an experienced architectural hardware consultant (AHC) for the preparation of Hardware Schedules, and consultation about project hardware requirements.

F. Obtain each type of hardware (latch and lock sets, hinges, closers, etc.) from a single manufacturer.

1.7 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Supplier to deliver the appropriate hardware, at the proper time and to the proper location (shop or Project Site) for installation.

C. Deliver products to the Project Site in the manufacturer's original, unopened packages, dry and undamaged, bearing the manufacturer's name and identification of the hardware item.

D. Retain the manufacturer's original packaging. Ensure that the products are complete,

including basic installation instructions. Label each product separately to be readily identifiable with the products indicated in the Hardware Schedule.

E. Supplier to identify sets with the appropriate hardware set number.

F. Contractor to catalogue the delivered hardware and store in a secure lockable enclosure, i.e. room, storage cabinet, etc.; store off the ground and on shelving. Set up procedures for limited access to the locked storage.

G. Store products in their original protective packaging to prevent soiling, wetting and physical damage to materials, finishes and operating mechanisms.

H. Handle to prevent damage to finish surfaces.

I. Maintain protective covers on all units until installation has been completed. Remove coverings during final clean-up.

PART 2 PRODUCTS

2.1 HARDWARE, GENERAL

A. Comply with ANSI / BHMA 156 Series standards applicable to the type and grade of hardware required.

B. Hardware Characteristics: Requirements for design, grade, function, finish, size and other distinctive qualities of each type of finish hardware are indicated in the Hardware Schedule at the end of this Section.

C. Complete Assemblies: Scheduled hardware indicates the primary types and quality of hardware required and is not necessarily descriptive of all the components required. Provide standard accessory components, as necessary, to complete the assembly for a fully functional unit when installed. Provide finishes matching the primary unit where accessory components are exposed-to-view.

D. Anchorage Devices: Furnish with each hardware type required.

1. Types: Wood and machine screws and other appropriate anchorage devices applicable to the type of substrate the item is to be fastened to. Do not provide exposed through-bolts or nuts unless clearly noted on the Hardware Schedule submittal, and approved by the Architect.
2. Head Style: Phillips flat-head devices.
3. Finish: Match the finish of the primary fastened hardware.

E. Finish of Hardware: The finish of hardware shall be as stated herein below. Special care shall be taken to coordinate the finish of the various manufacturers to insure a uniform acceptable finish throughout. The finish of all hardware shall match the finish of the locksets, unless otherwise specified.

F. Hardware manufacturers are listed, within each item Article below, for each hardware item to establish a standard of quality, and minimum functional requirements.

2.2 HINGES

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the followings, as specified below:

1. Hager.
2. McKinney.
3. Stanley.
4. Henry Soss.

B. Material:

1. Door Butts: Hinges shall be full mortise, template type, unless half mortise hinges are required; stainless steel. Hinges shall have non-rising loose pins, ball or oilite bearings, and flat button tips with matching plugs, except where otherwise specified. Provide hinges with stainless steel pins; steel pins with steel hinges; non-removable pins (NRP) for exterior and public interior exposures, non-rising for non-security exposure.

2. Where necessary to keep the door leaf clear of walls, casings, jambs or reveals in the door opening, furnish wide throw hinges of an approved type shall be furnished. For out-swinging doors, hinges shall have a set screw in the barrel to prevent removal of the pin when the door is closed. All doors over 7'-6" tall shall have one extra hinge for each additional two (2) feet of height, or fraction thereof.

3. Ball Bearing Type: Swaged, inner leaf beveled, square corners.

4. ANSI 156.1, Grade 1.

2.3 LOCKS, LATCHES AND BOLTS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the followings, as specified below:

1. Yale.
2. Corbin Russwin.
3. Schlage.
4. Best.
5. Sargent.

B. Materials:

1. Lock Uniformity: Except where otherwise specified, all locksets, latchsets, padlocks, cylinders and component parts, as specified hereinunder, shall be by one manufacturer. All internal parts of locksets, latchsets, padlocks and cylinders shall be brass or stainless steel to resist corrosion, and shall be marine function for exterior doors; US 32D finish.

2. Lockset Style: All hardware shall have lever handles with rose.

3. Locksets: ANSI A156.2, Series 4000 Grade 1, with removable cores.

4. Mortise Locks and Latches: ANSI / BHMA A156.13, Series 1000, Operational Grade 1, Security Grade 2; equip with 6-pin tumbler; 2-3/4" backset; keyed alike, or as approved. Levers and roses shall have screwless shanks, and no exposed fasteners.

5. Bored Locks and Latches: ANSI / BHMA A156.2, Series 4000, Grade 1. Locks for exterior doors shall have threaded roses or concealed machine screws.

6. Latch Sets: Provide release by turning lever, closing door, or turning emergency release key through a hole in the outside knob.

7. Cores: All lockset shall have removable cores to facilitate easy replacement.

   a. To maintain the established existing master key system, all cylinder, locksets and padlocks shall be furnished with keyways to match the keyway of record.

   b. Furnish with construction cores for use during construction and until Substantial Completion, or until a portion of the work has been accepted by the Owner and the Owner's representative has directed the cores to be change out.

8. Hospital Latches: Push / pull latchsets similar and equal to Glynn-Johnson HL6; ½" throw, 2-3/4" backset, to 161 cutout. Cover approximately 2-1/2", covers and handles of stainless steel, BHMA 630 finish, engraved "PUSH" and "PULL" on handles, push handle pointing up, pull handle pointing down.

9. Combination Locks: Heavy-duty, mechanical combination locksets with five pushbuttons, standard sized knobs, 3/4" deadlocking latch, 2-3/4" backset. Lock shall be operated by pressing two or more of the buttons in unison or individually in the proper sequence. The inside knob shall always operate the latch. Provide a keyed cylinder on the interior to permit setting the combination.

10. Strikes: ANSI Strikes, 1-1/4" x 4-7/8". All lock strikes shall have a curved lip of sufficient length to protect the trim and jamb, and shall be furnished with wrought box strikes with extended lip for latch bolts, except open strike plates may be used in wood frames. Provide dustproof strikes for foot bolts.

11. Door Bolts: ANSI / BHMA 156.16. Provide dustproof strikes for bottom bolts, except for doors having metal thresholds. Automatic latching flush bolts: ANSI / BHMA A156.3, Type 25.

12. Door Hardware: Hand of lock shall be as shown on the Drawings. If the door hand is changed during construction, the Contractor shall make the necessary changes in the hardware at no additional cost to the Owner.

13. Lever Handles: All latch and locksets shall have lever handles with a rose. Lever handles for exit devices shall meet the test requirements of ANSI / BHMA A156.13 for mortise locks. Provide knurled or abrasive-coated lever handles for doors accessible to blind persons, and those which lead to dangerous areas.

C. Keying, General:

1. All locksets, padlocks and cylinders shall be keyed, master keyed and grand master keyed at the factory where records shall be established and maintained, as directed.

   a. All master keys and grand master keys shall be identified with a registry number, not stamped with "Master" or the letter "M".

   b. Individual room keys shall not be stamped with a key cut, but with a plain identification number only.

2. Maintain a security system to ensure that keys used during construction will not open doors after occupancy.

3. Provide three (3) keys for each lockset.

4. A Keying Schedule will be provided after the initial Hardware Schedule submittal. Keyed alike and master keying will be finalized at that time.

5. Furnish exterior door lock sets with removable I/C core cylinders and cylinder guards.

6. Restrict the distribution of construction keys. Maintain a record of all persons who receive keys and provide a copy of the record to the Owner's representative upon request.

7. When directed by the Owner's representative, remove the construction cores, install permanent cores, and return the construction cores to the manufacturer.

2.4 PUSH / PULL UNITS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the followings, as specified below:

1. H. B. Ives.
2. Quality Hardware Manufacturing Co., Inc.
3. Trimco.
4. Rockwood.

B. Materials: ANSI A156.6 for 0.050 inch thickness.

2.5 EXIT DEVICES (PANIC HARDWARE)

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the followings, as specified below:

1. Corbin Russwin.
2. Yale.
3. Von Duprin.
4. Adams Rite.
5. Monarch.
6. Sargent.

B. Materials:

1. Exit Devices: ANSI / BHMA A156.3,Grade 1. Provide adjustable strikes for rim type and vertical rod devices. Provide open back strikes for pairs of doors with mortise and vertical rod devices.

2. Exit Locks With Alarm: ANSI / BHMA A156.5, Type E0431 (with full-width horizontal actuating bar) for single doors: Type E0431 (with actuating bar) or E0471 (with actuating bar and top and bottom bolts, both leaves active) for pairs of doors, unless otherwise specified. Provide terminals for connection to a remote indicting panel. Provide outside control key. Coordinate with the electrical subcontractor.

3. All exposed metal shall match the hardware.

4. Size and mount the units as indicated or, if not indicated, to comply with the manufacturer's recommendations for the exposure condition. Reinforce the substrate as recommended.

5. ANSI A156.3 Exit Device and Trim, Grade 1, surface-mounted vertical rod device with dust-proof strike at the head and threshold.

2.6 CLOSERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the followings, as specified below:

1. LCN.
2. Norton.
3. Sargent.
4. Corbin Russwin.
5. Rixon-Firemark.
6. Yale.
7. Dorma.

B. Materials and features:

1. ANSI A156.4, Grade 1.
2. ANSI A117.1.
3. Non-Sized; adjustable 1-5.
4. 180 degree door opening.
5. Heavy-duty parallel arm.
6. Standard cover.
7. Exposed metal to match the hardware.
8. Mounting: Hinge face mounting. Do not mount closers on the exterior side of doors.
9. Size and mount units as indicated or, if not indicated, comply with the manufacturer's recommendations for the exposure condition. Reinforce the substrate as recommended.
10. Provide drop brackets, mortise shoes, and long arms, as required.
11. Closers attached to mineral core or particle filled doors shall be installed with sex bolts.
12. Closers to be installed to allow the door to swing as shown on the Drawings.
13. All closers shall be ADAAG type, adjustable for spring setting, latch and sweep speed, and backcheck.

2.7 STOPS, HOLDERS AND BUMPERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the followings, as specified below:

1. H. B. Ives.
2. Quality Hardware Manufacturing Co., Inc.
3. Trimco.
4. Dor-O-Matic.
5. Glenn-Johnson.

B. Materials:

1. Dome floor stops, Convex wall stops, Kick-down door holders for each door panel.

2. Door Stop Mounting: Utilize the appropriate anchor method for the substrate encountered (plastic anchor, drywall anchor, expansion shield).
3. Provide resilient grey rubber bumpers.
4. Adjust the height of floor stops to suit the undercut of the adjacent door, and for out-swinging exterior doors.

2.8 THRESHOLDS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the followings, as specified below:

1. Pemko.
2. National Guard.
3. Reese.
4. Wooster.
5. Zero.

B. Thresholds by type:

1. Type as scheduled or indicated, or where not shown provide a manufacturer's standard aluminum threshold, with standard cast or extruded non-slip profile. For out-swinging exterior doors use vinyl or silicone rubber inserts in the face of the stop. 2005V profile by Pemko, or as approved; non-slip.

2. Thresholds shall be one-piece, continuous the full width of the doorway. Provide latch track thresholds for doors with vertical rod exit devices.

3. Where not indicated, the dept of the flat portion of the threshold to be not less than the door frame depth.

4. End Returns: Mitered and returns where ends would otherwise be exposed; of material / finish to match the primary threshold unit.

5. Height: As indicated, except do not exceed 1/2" in height where handicapped access is required. Comply with ADAAG.

6. Method of fastening: Provide the manufacturer's special concealed fastener system for installation for single units.

7. Sealant: For thresholds, single component, urethane complying with Section 07900 - Joint Sealers.

2.9 WEATHERSTRIPPING

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the followings, as specified below:

1. Pemko.
2. Reese.
3. Zero.

B. Continuous Adhesive-Applied Jamb & Head Weatherstripping: Continuous at jambs and head. Air leakage of weatherstripped doors shall not exceed 0.5 CFM of air per square foot or door when tested in accordance with ASTM E 283. Pemko PK88BL, or approved equal.

2.10 LIGHT PROOFING AND SOUNDPROOFING

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the followings, as specified below:

1. National Guard.
2. Pemko.
3. Zero.

B. A set shall include adjustable door stops at the head and jambs of doors, and an automatic door bottom of extruded aluminum, anodized finish, surface-applied, with vinyl fin seals between the plunger and housing. Door stops shall have a solid neoprene tube, silicone rubber, or closed-cell sponge gasket. Door bottoms shall have an adjustable operating rod and silicone rubber or closed-cell sponge neoprene gasket. Door stops shall be mitered at the corners.

2.11 MISCELLANEOUS HARDWARE

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the followings, as specified below:

B. Products:

1. Smoke Seals: Fire-tested, continuous at jambs and head; PK 55 by Pemko, or approved equal, color as selected.

2. Bottom Sweep: 307 by Pemko, or approved equal, color as selected.

3. Overlap Astragal: 18 gauge minimum, but not less than required for the tested assembly provided for; 357 by Pemko, or approved equal, color as selected.

4. Split Astragal for doors: 18 gauge minimum, but not less than required for the tested assembly provided for; 309 by Pemko, or approved equal, color as selected.

5. Door Rain Drips: Extruded aluminum, not less than 0.08" thick, approximately 1-1/2" high x 5/8" projection, as selected. Align the bottom with the bottom edge of the door.

6. Overhead Rain Drip: Extruded aluminum, not less than 0.08" thick, approximately 1-1/2" high x 2-1/2" projection, with length equal to the overall door frame width. Align the bottom with the door frame rabbet; 346 by Pemko, or approved equal, color as selected.

2.12 ELECTRONIC ACCESS CONTROL SYSTEM

A. Complete working installation of Wiegand Integrated Centralized Access Control System including control panels; control workstation; cabling, support materials, connectors, hardware; control readers; QC12 ElectroLynx hinges; online and mobile dashboards; and user credentials.

B. Access Control Workstation as required by manufacturer.

C. Access Control Reader & Hardware: UL Listed Exterior Grade Series 4000 Bored lock, Rim Exit Device, and Surface Vertical Rod Exit Device. ANSI/BHMA A156.2, A156.3 Grade 1, Fail Secure, 12VDC, cylinder override, low-profile proximity reader with multi-color LED indicator, Request to Exit sensor, and Door Position Switch, B Lever Trim, and weatherseal gasketing.

D. Credentials: Blank White Printable Proximity Card, 4,000 total.

2.13 SUBSTITUTIONS

A. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.14 FABRICATION

A. Finish and Base Material Designations: Number indicate BHMA Code or nearest traditional U.S. commercial finish.

B. Where base material and quality of the finish are not otherwise indicated, provide at least commercially recognized marine quality as specified in the applicable Federal Specifications.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

1. Verify that doors and frames are ready to receive the work, and that dimensions are as instructed by the manufacturer.

C. Report in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until unsatisfactory the conditions have been corrected.

3.2 INSTALLATION

A. Where not specified under other Sections to be performed by the manufacturer or supplier, machine, fit and drill wood and metal doors, and frames.

B. Prepare doors of the various types to receive hardware, using templates and instructions provided with the hardware items for on-site work.

C. Install each hardware item in compliance with the manufacturer's instructions and recommendations.

D. Wherever cutting and fitting is required to install hardware onto or into surfaces which are later to be painted or finished in another way, coordinate the hardware removal, storage

and reinstallation, or the application of surface protection with the finishing work specified in Section 09900 - Painting. Do not install / reinstall surface-mounted items until the finishes have been completed on the substrates.

E. Set units level, plumb and true to line and location. Adjust and reinforce the attachment substrate as necessary for proper installation and operation.

F. Drill and countersink units not factory-prepared for anchorage fasteners, flush with the fastened surface. Space fasteners and anchors in accordance with industry standards.

G. Set thresholds for exterior doors in a full bed of sealant to ensure waterproof integrity.

3.3 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting the installed work.

B. Adjust and check each operating item of hardware and each door to ensure proper operation and function of every unit. Replace units which cannot be adjusted to operate freely and smoothly for their intended application.

C. Adjust door control devices to compensate for the final operation of cooling and ventilating equipment.

D. Door operation shall meet ADAAG requirements for opening force.

E. Adjust operating hardware to provide a tight fit at contact points and weatherstripping, for smooth operation and weathertight closure.

F. Lubricate moving components and hardware.

G. Final Adjustment: Wherever hardware installation is made more than one month prior to acceptance or occupancy of a space or area, return to the work during the week prior to acceptance or occupancy, and make a final check and adjustment of all hardware items.

3.4 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect hardware installations for proper locations, heights, level, plumb, square, attachment to the substrate and opening force.

3.5 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Clean adjacent surfaces soiled by the hardware installation.

C. Clean operating items as necessary to restore proper function and finish of the hardware and doors.

3.6 TRAINING

A. Instruct the Owner’s personnel in the proper adjustment and maintenance of hardware items and finishes during final adjustment of the hardware.

3.7 HARDWARE SCHEDULE

A. Door Material Types:

AL	Aluminum	OHC	Overhead Coiling
FLDG	Folding Grille	SCWD	Solid Core Wood
GATE	Chain Link Gate	SLGL	Sliding Glass
HCWD	Hollow Core Wood	WD	Wood
HM	Hollow Metal		

HW-1 Exterior Exit Double Doors

Hinges	3 pairs		
Exit Device	2 ea		
	1 ea	F84 Lever	
	1 ea	Dummy Trim	
Closer	2 ea	Surface mount interior	Alum
Weatherstripping	continuous	By Door Manufacturer	
Threshold	continuous	As indicated	Alum
Astragal			Alum
Rain Drip			Alum

Electronic Access Control

HW-1A Exterior Exit Single Doors

Same as HW-1 but for single doors.

HW-2 Typical Storage / Utility / Private Doors

Hinges	1-1/2 pairs		
Lockset	1	F86 Function	US26D
Closer	1 ea	Surface mount interior	Alum
Weatherstripping	continuous		
Kick Plate			US26D
Threshold	continuous	At Exterior Doors	Alum
Astragal		At Exterior Doors	Alum
Rain Drip		At Exterior Doors	Alum

Electronic Access Control where required

HW-3 Typical Classroom / Office Doors

Hinges	1-1/2 pairs		
Lockset	1	F88 Function	US26D
Closer	1 ea	Surface mount interior	Alum
Weatherstripping	continuous	By Door Manufacturer	
Kick Plate			US26D

HW-3a Typical Shared Classroom Doors

Hinges	1-1/2 pairs	By Manufacturer	
Lockset	1	F80 Function	US26D
Closer	1 ea	Surface mount interior	Alum
Weatherstripping	continuous	By Door Manufacturer	

HW-4 Typical Multiple Occupant Restroom Doors / SPED Restrooms

Hinges	1-1/2 pairs	By Manufacturer	
Deadbolt	1	474 Function	US26D
Closer	1 ea	Surface mount interior	Alum
Weatherstripping	continuous	By Door Manufacturer	
Threshold	continuous	At Exterior Doors	Alum
Astragal		At Exterior Doors	Alum
Rain Drip		At Exterior Doors	

HW-5 Typical Private Restroom Doors

Hinges	1-1/2 pairs		
Lockset	1	F76A Function	US26D
Closer	1 ea	Surface mount interior	Alum
Weatherstripping	continuous	By Door Manufacturer	
Threshold	continuous	As indicated	Alum
Astragal			Alum
Rain Drip			Alum

HW-6 Double-Egress Doors

Hinges	3 pairs		
Exit Device	2 ea		
	2 ea	F84 Lever	
Closer	2 ea	Surface mount interior	Alum
Astragal	2 ea		Alum
Weatherstripping	continuous	By Door Manufacturer	

END OF SECTION

SECTION 08800
GLASS AND GLAZING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Glazing for entrances and storefronts.

2. Glazing for curtain walls.

3. Glazing for sliding doors.

4. Glazing for window units.

5. Interior partitions relites.

6. Fire-rated glazing.

7. Low-E glazing

8. Glass blocks.

9. Glazing sealant installation.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 01811 - Sustainable Design and Construction Procedures

2. Section 06200 - Finish Carpentry: Wood frames for interior glazing.

3. Section 07900 - Joint Sealers: Sealants for waterproofing glazing installations.

4. Section 08100 - Hollow Metal Doors and Frames: Glazing in metal doors and sidelites.

5. Section 08210 - Wood Doors: Glazing in wood doors, transoms and sidelites.

6. Section 08330 - Overhead Doors: Glazing in sectional doors.

7. Section 08400 - Entrances, Storefronts and Windows: Glazing installations.

8. Section 08420 - Aluminum Doors and Windows: Glazing in doors and windows.

9. Mirrors are specified in Section 10810 - Toilet Accessories.

1.2 DESCRIPTION OF WORK

A. The extent of glass and glazing work is indicated on the Drawings and Schedules and as

specified herein, and includes providing and installing glazing for exterior and interior doors and windows, safety glass, interior relites, glass blocks, sealants and miscellaneous glazing materials.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society of Civil Engineers (ASCE):

1. ASCE / SEI 7 - Minimum Design Loads for Buildings and other Structures.

C. American National Standards Institute (ANSI):

1. ANSI Z97.1 - Safety Performance Specifications and Methods of Test for Safety Glazing Material Used in Buildings.

D. American Society for Testing and Materials (ASTM):

1. ASTM C 920 - Specification for Elastomeric Joint Sealants.

2. ASTM C 1036 - Specification for Flat Glass.

3. ASTM C 1048 - Specification for Heat-Treated Flat Glass - Kind HS, Kind FT Coated and Uncoated Glass.

4. ASTM E 1996 - Specification for Performance of Exterior Windows, Curtain Walls, Doors, and Impact Protective Systems Impacted by Windborne Debris in Hurricanes.

5. ASTM F 1233 - Test Method for Security Glazing Materials and Systems.

E. Flat Glass Marketing Association (FGMA):

1. FGMA - Glazing Manual and Glazing Sealing Systems Manual.

F. National Fire Protection Agency (NFPA):

1. NFPA 257 - Standard on Fire Tests for Window and Glass Block Assemblies.

G. International Code Council:

1. International Building Code (IBC), 2009:

H. U. S. Consumer Product Safety Commission, CPSC 16 CFR, Part 1201 - Safety Standard for Architectural Glazing Materials.

1.4 CONSTRUCTION

A. Interface with Other Work: Coordinate glazing with the installation of exterior aluminum entrances, storefronts, curtain walls, doors and windows as specified in Section 08410 hollow metal doors and windows specified in Section 08100; wood doors and windows specified in Section 08210.

1.5 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data:

a. Submit two (2) copies of the manufacturer=s catalogs, including specifications and installation instructions for all glass products to be used and for glazing sealant and compound, gasket and miscellaneous materials required.

b. Glass: For each type of glass provide structural, physical and environmental characteristics, size limitations, special handling and installation requirements.

c. Glazing compound: Provide chemical, functional, and environmental characteristics, limitations and special application requirements.

d. Manufacturer=s engineering design to meet the performance requirements.

2. Calculations indicating glazing satisfaction of performance requirements

3. Samples:

a. Glass: Two (2) samples 6" x 6" in size for each type of glazing, illustrating tinting, and finish of the glazing material. Label each sample indicating kind, quality and manufacturer as follows:

1) Tinted float glass.

2) Laminated glass.

3) Tempered glass.

4) Low-e glass.

5). Patterned glass.

b. Glass Blocks: Two (2) full size units.

c. Glazing Sealants: Three (3) copies of the manufacturer=s standard color selection.

4. Assurance / Control Submittals:

a. Manufacturer's certificate that the products meet or exceed the specified requirements.

b. Calculations indicating that the materials satisfy the performance requirements.

c. Documentation of experience indicating compliance with the specified qualifications requirements.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Warranty: Submit a written Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.6 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

B. Performance Requirements:

1. Provide the capacity to withstand the following loading requirements for exterior units:

a. Design and install to resist combined positive and negative windloading in accordance with IBC 2009, Section 1609 with a Vmph of 170, qs of 74.0 psf, exposure [B] [C] [D], and importance factor [1.0] [1.25] [1.5], as applicable per ASCE 7. Size for areas of discontinuity and worst case scenario to be experienced by the building.

b. Height of windows and door units above the ground level are indicated on the Drawings or can be calculated from the Drawings.

C. Identification: Provide labels where safety glazing is required. Each unit of tempered glass shall be permanently identified by the manufacturer. The identification shall be etched or ceramic fired on the glass and shall be visible after the glazing has been installed. Label per NFPA 80.

D. Grading and Labeling: Grade and label each light stating the quality and grade of the glass and the manufacturer=s name and brand designation. Leave labels intact until removal is directed by the Owner=s representative. Label each individual glazing unit for fire-rated doors and windows in accordance with NFPA 80-1-7.4. Listing marks shall be visible after installation.

E. Perform the work in accordance with the FGMA, Glazing Manual.

F. All exterior glazing shall be wet sealed glazing gaskets and permited only for interior work.

1.7 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store, and protect the products.

B. Comply with the manufacturer=s instructions for shipping, handling, storing and protecting glass and glazing products.

C. Deliver products to the Project Site in the manufacturer=s original, unopened packaging or crates.

D. Exercise exceptional care to prevent edge damage to the glass, rainbowing, discoloration

and damage to and deterioration of coatings, if any, on the glass.

1.8 JOB CONDITIONS

A. Pre-installation: Meet with the Glazier and other trades affected by the glass installation prior to beginning installation. Do not perform work under adverse weather or job conditions. Install liquid sealants only when the temperature is within the lower or middle one third of the temperature range recommended by the manufacturer.

1.9 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Special Warranty:

1. Provide a manufacturer=s written Warranty against cracking, breakage, staining, rainbowing, discoloration and for replacement.

2. Warranty Period: Two (2) years from the date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Falconer Glass Industries, Inc.

2. Guardian Industries.

3. PPG Industries.

4. Libby-Owens-Ford.

5. Pilkington.

6. Viracon, Inc.

7. Oldcastle Glass.

8. National Glass Blocks.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 GLAZING MATERIALS

A. Standards:

4. Prime Glass: FS DD-G-451, ASTM C 1036.

5. Safety Glass: CPSC 16 CFR 1201.

6. Heat-Treated Glass: FS DD-G-1403, ASTM C 1048.

B. Float / Plate Glass: Type 1, quality q3, thickness as required to meet the performance requirements, but not less than 3/16", clear unless otherwise indicated. Curved or straight as indicated.

C. Laminated Safety and Security Glass: Standard two-ply laminated glass with minimum 0.060" Saflex interlayer. Thickness as required to meet the Performance Requirements or security criteria for the location, height and use or as indicated, but not less than 3/8". Where glazing is double pane, the laminate shall be installed as the exterior lite. Tint color as selected.

1. Impact Loads: Comply with South Florida Building Code, Section 2315 and 3513.

D. Tempered Glass: Heat treated to strengthen the glass in bending to not less than 4.5 times the annealed strength, edges seamed, thickness as required to meet the performance requirements (3/16" thick, minimum). Exposed edges in the finished work shall be polished. Tint color as selected.

1. Where indicated as AFree of Tong Marks@, provide tempered glass produced by manufacturer=s special process which eliminates tong marks.

E. Tempered Low-E: Hard coating on surface 4. Tint color as selected from manufacturer=s standards.

F. Polished Wired Glass or Patterned Wire Glass: Type II, minimum 1/4-inch thick, Class 1, Form 1, quality q11, clear and polished both faces. Pattern as selected.

1. Fire Rating: Provide glass listed and labeled by UL Afire resistance@ complete with steel channel stops.

G. Interior Fire Rated: Fire glass/mullion glazing system with pyrostop safety rated glass.

H. Patterned Glass: Tempered glass with screen-printed, ceramic frit fused pattern.

1. PPG / DecoTherm.

2. Viracon, Viraspan.

3. Approved equal.

2.3 GLASS BLOCKS

A. Glass Blocks: 8" x 8" x 4" thick or as indicated, partially evacuated hollow units. Style, pattern and color as selected from the manufacturer=s standards.

:

2.4 GLAZING SEALANT

A. Silicone: Single component, elastomeric, chemical curing; capable of water immersion without loss of properties; non-bleeding, non-staining, non-sag; cured Shore A hardness of 15 - 25. Color black.

2.5 MISCELLANEOUS GLAZING MATERIALS

A. Cleaners, Primers and Sealers: Type recommended by the glazing sealant or gasket

manufacturer.

B. Setting Blocks: Neoprene of EPDM, 70 to 90 Shore A durometer hardness; compatible with the glazing sealant used.

C. Spacers: Neoprene of EPDM, 40 to 50 Shore A durometer hardness; self adhesive on one side; compatible with the glazing sealant used.

D. Filler Rods: Closed cell or waterproof jacketed foam rod of polyethylene, butyl, neoprene, polyurethane, or vinyl; compatible with the glazing sealant used.

2.6 GLASS BLOCK GLAZING ACCESSORIES

A. Panel reinforcement: Two (2) parallel 9 gage wires either at 1-5/8" or 2" on center with electrically welded cross wires at regular intervals, galvanized after welding.

B. Expansion Strips: Fibrous glass or polyethylene foam, 3/8" thick.

C. Panel Anchors: 20 gage perforated steel strips, 24" long x 1-3/4" wide, galvanized after perforating.

D. Sealant: Sealant No. 1 or No. 3 per Section 07900.

E. Backer Rods: Polyethylene foam, neoprene or equal as approved by the sealant manufacturer.

F. Mortar Materials: Type S in accordance with ASTM C 270 with integral type water-repellant added to the mortar mix.

G. Portland Cement: Type 1 in accordance with ASTM C 150.

H. Lime: Type S in accordance with ASTM C 207.

I. Sand: Clean, white quartzite type, essentially free of iron compounds; for thin joints in accordance with ASTM C 144.

J. Integral Type Water-repellant: Stearate as recommended by the glass block manufacturer.

PART 3 - EXECUTION

3.1 STANDARDS AND PERFORMANCE

A. Watertight and airtight installation of each glass product is required, except as otherwise shown. Each installation must withstand normal temperature changes, wind loading, and impact loading (for operating sash and doors), without failure including loss or breakage of glass, failure of sealants or gaskets to remain watertight and airtight, deterioration of glazing materials, and other defects in the work.

B. Protect glass from edge damage during handling and installation, and subsequent operation of glazed components of the work. During installation, discard units with significant edge damage or other imperfections.

C. Glazing channel dimensions, as indicated and specified, are intended to provide for the necessary bite on the glass, minimum edge clearances, and adequate sealant thickness

with reasonable tolerances. Adjust as required by the job conditions at the time of installation. Do not reduce the manufacturer=s recommended minimum edge bite on the glass.

D. Comply with the combined recommendations and technical reports by manufacturers of the glass and glazing products used in each glazing channel, and with recommendations of the Flat Glass Marketing Association, AGlazing Manual@, except where more stringent requirements are indicated.

E. Inspect each piece of glass just prior to installation, and discard any which have observable edge damage or face imperfections.

F. Provide safety glass for all glazed panels within 48" of a door and where glazed panels are less than 60" above any floor or any walking surface and elsewhere where required by the Building Code, performance data or as indicated.

G. Clean glazing channels and other framing members to receive glass just prior to glazing. Remove coatings which are not firmly bonded to the substrate. Remove lacquer from metal surfaces where elastomeric sealants are used.

H. Apply primer or sealant to joint surfaces where recommended by the sealant manufacture.

3.2 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

1. Verify that openings for glazing are correctly sized and within tolerance.

2. Verify that surfaces of glazing channels or recesses are clean, free of obstructions that may impede moisture movement and that weeps are clear and ready to receive the glazing.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.3 PREPARATION

A. Clean contact surfaces with solvent and wipe dry.

B. Seal porous glazing channels or recesses with substrate compatible primer or sealer.

C. Prime surfaces scheduled to receive sealant.

3.4 GLAZING INSTALLATION

A. Place setting blocks of the proper size in sill rabbet; locate at 1/4th the glass width from each corner; set blocks in a thin course of heel and toe compound, if any.

B. Install spacers of the proper size and spacing inside and out for glass sizes larger than 50 united inches, except where gaskets or pre-shimmed tape is used. Provide 1/8", minimum

bite of spacers on the glass and use a thickness slightly less than the final compressed thickness of the tape.

C. Set each unit of glass in each series in uniformity with other pieces in pattern, draw, bow, and other visually perceptible characteristics.

D. Provide for the following edge clearances (bite):

	Single glazed
Nominal edge cover (bite)	5/16"
Minimum nominal edge clearance	3/16"
Minimum face clearance	3/16"

E. Glass must be edge blocked to prevent contact with metal framing.

F. Provide glazing sealant as required for the particular glazing application. Coordinate with other Sections herein for material compatibility. Glazing gaskets are permitted only for interior locations.

G. Prevent exudation of the sealant or compound by forming voids or installing filler rods in channels at the heel of jambs and heads, except as otherwise indicate and depending on the light size, thickness and type of glass, and in compliance with the manufacturer=s recommendations.

H. Provide filler rod where sealants are used in the following locations:

1. Head and jamb channels.

2. Tinted glass over 75 united inches in size.

3. Clear glass over 125 united inches in size.

I. Do not leave voids in sill channels except as specifically indicated or recommended by the glazing manufacturer. Force sealant into the channel to eliminate voids and to ensure complete Awetting@ or bond of the sealant to the glass and channel surfaces.

J. Do not allow the sealant to close the weeps of aluminum framing.

K. Tool exposed surfaces of glazing liquids and compounds to provide a substantial Awash@ away from the glass.

L. Clean and trim excess glazing materials from glass and stops or frames promptly after installation; eliminate stains and discolorations.

M. Install pressurized tape and gaskets to protrude slightly out of the channel to eliminate dirt and moisture pockets.

3.5 GLASS BLOCK INSTALLATION

A. Verify that channels, chases and panel anchors have been provided at heads and jambs for panel support within openings.

B. Cover the sill area with a heavy coat of asphalt emulsion. Allow the emulsion to dry before placing mortar. Adhere expansion strips to jambs and head. Make certain that expansion strips extend to the sill. Maintain a uniform joint width of 1/4" plus or minus 1/8". All mortar

joints must be full and not furrowed. Steel tools should not be used to tap blocks into position.

C. Install reinforcing at 16" o.c. horizontally and in joints immediately above and below all openings within panels. Run the reinforcing continuously from edge to edge of panels. Lap reinforcing not less than 6" where necessary to use more than one length. Do not bridge expansion joints with reinforcing. Install reinforcing as follows:

1. Place lower half of mortar in bed joint. Do not furrow. Press panel reinforcing into place. Cover panel reinforcing with upper half of mortar bed and trowel smooth. Do not furrow.

2. Strike joints smooth while mortar is still plastic and before final set. Rake out all spaces requiring sealant to a depth equal to the width of the spaces. Remove surplus mortar from the faces of glass blocks and wipe dry. Tool joints smooth and concave before mortar takes final set.

3. After final mortar set, install packing tightly between glass block panel and head construction. Apply sealant evenly in the head and jamb recesses in accordance with the manufacturer=s instructions.

3.6 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect the preparation for and installation of glazing.

3.7 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Remove non-permanent labels after glazing has been completed and clean glass surfaces.

C. Wash and polish glass on both surfaces not more than four (4) days prior the date scheduled for inspections intended to establish the date of Substantial Completion for each area of the Project. Wash with a solution of mild detergent in warm water applied with soft, clean wiping cloths. Take care to remove dirt from corners. Wipe surfaces clean and dry.

3.8 PROTECTION

A. Section 01700 - Execution Requirements: Protection of the installed work.

B. Protect exterior glass from breakage immediately upon installation by use of crossed streamers attached to framing and held away from the glass. Do not apply markers directly to the glass surface.

C. Remove and replace glass which has been broken, chipped, cracked, abraded or damaged in other ways during the construction period, including by natural causes, accidents and vandalism.

END OF SECTION

SECTION 09110

NON-LOAD-BEARING STEEL FRAMING

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Interior non-load-bearing steel partition framing.

2. Metal furring.

3. Interior suspended steel ceiling framing.

4. Blocking and backing plates.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 05500 - Metal Fabrications: Backing plates.

2. Section 06100 - Rough Carpentry: Wood blocking.

3. Section 07210 - Building Insulation: Wall insulation.

4. Section 07900 - Joint Sealers: Sealants.

5. Section 09250 - Gypsum Board: Wall finish.

1.2 DESCRIPTION OF WORK

A. The extent of non-load-bearing steel framing work is indicated on the Drawings and as specified herein, and includes providing and installing interior partition framing, suspended ceiling framing, furring and metal blocking and backing plates in walls and ceilings.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society for Testing and Materials (ASTM):

1. ASTM A 641 - Standard Specification for Zinc-Coated (Galvanized) Carbon Steel Wire.

2. ASTM C 645 - Specification for Non-Structural Steel Framing Members.

3. ASTM C 754 - Specification for Installation of Steel Framing Members to Receive Screw-Attached Gypsum Panel Products.

4. ASTM C 840 - Standard Specification for Application and Finishing of Gypsum Board.

5. ASTM C 954 - Specification for Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Steel Studs from 0.033-inch (0.84 mm) to 0.112- inch (2.84 mm) in Thickness.

6. ASTM D 226 - Standard Specification for Asphalt-Saturated Organic Felt Used in Roofing and Waterproofing.

7. ASTM D 2201 - Standard Practice for Preparation of Zinc-Coated and Zinc-Alloy-Coated Steel Panels for Testing Paint and Related Coating Products.

8. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.

9. ASTM E 90 - Standard Test Method for Laboratory Measurements of Airborne Sound Transmission Loss of Building Partitions and Elements.

10. ASTM E 413 - Classification for Rating Sound Insulation.

11. ASTM E 119 - Standard Test Method for Fire Tests of Building Construction and Materials.

C. Gypsum Association

1. GA-600 - Fire Resistance Design Manual.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data:

a. Framing Members: Standard materials and finish, product criteria, sizes and lengths, load charts and limitations.

b. Fasteners and Anchorage Devices: Standard materials and finish, sizes and load charts.

2. Shop Drawings:

a. Indicate prefabricated work, component details, framing layout, framed openings, anchorage to the structure, type and location of fasteners and accessories or items required of other related work.

b. Indicate the method of securing studs and framing to tracks, splicing, suspension, blocking / backing plates for support of items specified in other Sections and reinforcement of framing connections.

c. Indicate details associated with fireproofing and acoustical seals.

d. Indicate location of blocking and backing plates required for installation of other work.

3. Samples:

a. If requested, two (2) 6" long sections of each shape required.

4. Assurance / Control Submittals:

a. Documentation of experience indicating compliance with the specified qualifications requirements.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

1.6 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Protect metal framing materials from corrosion, deformation and other damage during delivery, storage and handling.

C. Deliver products to the Project Site in the manufacturer=s original, unopened packages, containers or bundles bearing the brand name and identification of the manufacturer.

D. Store and protect the metal framing with a weatherproof covering; ventilate to avoid condensation.

E. Store, handle and install to prevent bending.

1.7 JOB CONDITIONS

A. Maintain environmental conditions (temperature, humidity and ventilation) within the limits recommended by the manufacturer. Do not install products under environmental conditions outside the manufacturer=s absolute limits.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Unimast Incorporated.

2. Dale Industries.

3. National Gypsum Company (Gold Bond Building Products).

4. Clark Steel Framing Systems.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS

A. Unimast Incorporated framing component designations are used within this Section to establish quality and to identify the framing types.

B. Interior Non-Load-Bearing Partition Framing: ASTM C 645 and D 2201; galvanized sheet steel, channel shaped, punched for utility access, depth as indicated on the Drawings, gages as indicated below, unless indicated otherwise on the Drawings.

1. 212ST20 - 2-1/2" Studs - Unbraced Length 13 Feet or Less: Minimum 20 gage; Minimum 18 gage where greater than 13 feet.

2. 358ST22 - 3-5/8" Studs - Unbraced Length 18 Feet or Less: Minimum 22 gage; Minimum 20 gage where greater than 18 feet and for Fiberock or Cement Board.

3. 600ST22 - 6" Studs - Unbraced Length 25 Feet or Less: Minimum 22 gage: Minimum 20 gage where greater than 25 feet and for Fiberock or Cement Board.

4. Bridging - Same depth and gage as the studs.

C. Partition Floor Tracks and Runners: ASTM C 645 and D 2201; galvanized sheet steel, channel shaped, solid web, same depth and gage as the studs.

1. 22 Gage Studs: CR22 x stud size.

2. 20 Gage Studs: CR20 x stud size.

D. Slip-Type Top Tracks: Provide one of the following:

1. Deflection Track: Steel sheet top runner, manufactured to prevent the cracking of finishes applied to interior partition framing resulting from deflection of the structure above; in thickness not less than the studs and in a width to accommodate the depth of the studs.

2. Double Runner System: ASTM C 645 runner; inside runner with 2" deep flanges, in thickness not less than that indicated for the studs and fastened to the studs; outer runner sized to friction fit inside the inside runner.

3. Single Long-Leg Runner System: ASTM C 645 runner with 2" deep flanges, in thickness not less than that indicated for the studs, installed with studs friction fit into the runner and with bridging located within 12" of the top of the studs.

E. Partition Framing Fasteners: Corrosion-resistant, self-drilling, self-tapping steel screws.

1. 22 Gage Framing: ASTM C 1002; 3/8", Type S, pan head.

2. 20 Gage and Heavier Framing: ASTM C 954; 5/8", Types S-12, low-profile head.

F. Partition Floor Track Anchorage Device: Low velocity, powder-actuated drive pins; minimum 0.140" shank diameter x 1-1/2" shank length with 7/8" diameter washer.

1. DX 451 System using X-DNI Pins with R23 washers by Hilti.

2. Ramset / Red Head System using 4700SD Pins by ITW Ramset / Redhead.

G. Wall Furring: ASTM C 645 and D 2201; galvanized sheet steel.

1. Studs: ST22 - 2-1/2" deep, 22 gage.
2. Studs: ST20 - 3-5/8" deep, 20 gage.

3. Hat-Shaped Channels: 7/8" deep x 1-1/2" wide, 25 gage.

4. AZ@ Furring Channels: 1-1/2" deep, 25 gage.

5. Clip Angles: 2" x 2" x 1/4" less than stud width, 16 gage.

.

H. Wall Furring to Concrete or Masonry Fasteners: Hex head sleeve anchors; minimum 1/4" diameter x minimum 1-1/8" embedment.

1. Slv Anch H X 5/16 X 2-1/2 by Hilti.

2. Dynabolt HN-1413 by ITW Ramset / Redhead.

I. Furring Channel to Masonry or Concrete Fasteners: Low velocity, powder-actuated drive pins of size to suit the application.

J. Suspended Interior Ceiling and Soffit Framing:

1. Wire Hangers: ASTM A 641 / A 641M, Class 1 zinc coating, soft temper, 0.162" diameter.

2. Flat Hangers: Galvanized steel sheet, 1" x 3/16" x length required.

3. Stud Hangers: ASTM C 645; cold rolled, galvanized sheet steel, channel shaped, cross braced, minimum 20 gage.

4. Carrying Channels: ASTM C 645; cold rolled, galvanized sheet steel, channel shaped, minimum 20 gage.

5. Furring Channels: ASTM C 645; galvanized, hat-shaped, 7/8" deep x 1-1/2" wide, 25 gage.

6. Tie Wire: ASTM A 641 / A 641M, Class 1 zinc coating, soft temper, 0.0625" diameter.

7. Curved Ceiling: Pre-Engineered notched main beam system with Peakform, SuperLock, ScrewStop, SimpleCurve. Provide RC2 clips, XL cross tees, Impact Isolation and Main Beam adapter clips, channel molding, and edge beads.

K. Flat Straps and Backing Plates: ASTM D 2201; galvanized sheet steel, 22 gage, minimum.

L. Isolation Strips at Exterior Walls and Suspended Concrete Floors: ASTM D 226; asphalt-saturated organic felt, Type I (No. 15 asphalt felt), non-perforated.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

1. Verify that building framing components are ready to receive the work.

2. Verify that rough-in utilities are in-place and properly located where required.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 INSTALLATION - PARTITION FRAMING

A. Install framing and fasteners in accordance with the manufacturer's published instructions and ASTM C 754.

B. Install tracks / runners at floors, ceilings, and structural walls and columns where steel framing abuts.

1. Install asphalt felt between tracks / runners and wall / floor where framing is installed directly against exterior walls and floor slabs.

C. Metal Stud Spacing: 16" on center, maximum.

D. Align stud web openings horizontally; install horizontal bridging at 5' o.c., maximum.

E. Extend partition framing full height to structural supports or substrates above suspended ceilings, except where partitions are indicated to terminate below suspended ceilings.

F. Install studs so flanges point in the same direction.

G. Splice studs with an 8" nested lap, minimum; fasten each stud flange with a minimum of two (2) screws.

H. Construct corners using a minimum of three (3) studs.

I. Install double studs at wall openings and door jambs, maximum 2" from each side and at the top of openings.

J. Extend vertical jamb studs through suspended ceilings and attach to the underside of the structure above.

K. Frame other openings, in the same manner as for doors.

L. Place studs 2", minimum, from abutting walls.

M. Install intermediate studs above and below openings to match the wall stud spacing.

N. Fasten studs adjacent to door frames, partition intersections and corners to the top and

bottom runner flanges in double-stud fashion.

1. Securely fasten studs to jamb and head anchor clips of doors and borrowed light frames.

2. Place a cut-to-length section of runner horizontally with the web-flange bent at each end; fasten with a minimum of two (2) fasteners per flange.

3. Position a cut-to-length stud (extending to the top runner) at vertical panel joints over door and window headers.

O. Allow for deflection of roof or floor slabs.

1. Leave 1/2" gap between the top end of studs and the top track.

P. Framing Fastening: Fasten framing in accordance with the manufacturer's published instructions and the schedule below, unless indicated otherwise on the Drawings.

Connection	Fasteners
Floor and Top Track to Concrete	1 pin at 32" on center
Partition Stud to Floor Track	1 screw each side, each flange
Partition Stud to Top Track	1 screw each side, each flange in slotted hole to allow slab deflection
Plates and Straps to Studs	2 screws
Stud Web to Stud Web	2 screws
Runner to Header	1 screw at 16" on center, maximum 6" from each end

Q. Install framing, blocking and backing plates between studs for the attachment of work by other trades.

R. Install batt insulation in walls and ceilings, where indicated on the Drawings and as specified in Section 07210 - Building Insulation.

3.3 INSTALLATION - FURRING

A. Furring Channels:

1. Vertically spaced at 16" on center, maximum; attach to concrete and masonry surfaces with hammer set or powder-driven fasteners, staggered 24" o.c. on opposite flanges.

2. Nest channels 8" at splices and anchor with two (2) fasteners in each flange.

B. Wall Furring:

1. Secure top and bottom runners to the structure in a manner to permit minor slab deflection.

2. Space metal furring at 16" on center, maximum.

3.4 INSTALLATION - CEILING AND SOFFIT FRAMING

A. Suspend ceiling hangers directly from the building structure.

1. Install hangers plumb and free from contact with other objects within the ceiling plenum.

2. Where other construction within the ceiling plenum interferes with the typical hanger spacing, install supplemental suspension members and hangers in the form of trapezes or equivalent devices. Size supplemental suspension members and hangers to support the imposed ceiling loads.

3. Secure wire hangers by looping and wire-tying, either directly to the structure or to inserts.

4. Do not suspend framing from ducts, pipes or conduits.

5. Keep hangers and braces 2" clear of ducts, pipes and conduits.

B. Install framing per ASTM C 754.

1. Install framing components in the sizes and spacing indicated on the Drawings, but not less than that required by the referenced standards.

C. Wire-tie furring channels to support the framing.

D. Attach perimeter wall track or angle where the suspension system meets vertical surfaces. Mechanically join the main beam and cross-furring members to each other and fit furring into the wall track.

E. Install compression struts and sway bracing system with tie wires as indicated on the Drawings, and as required by the Building Code.

1. Provide hanger wires splayed 45 degrees within 3" of the intersection between main runners and cross runners, and at each light fixture.

2. Provide compression struts and splayed hanger wire sway bracing as follows:

a. Within 6 feet of walls.

b. At 12 feet on centers, maximum.

F. Install steel framing components for suspended ceilings so members for attachment of finish panels are level to within 1/8" in 12 feet measured lengthwise and transversely.

G. When the ceiling system provides lateral support for permanent or relocatable partitions, the connection, ceiling system and lateral force bracing shall be sized and installed to support the reaction force of the partitions.

3.5 INSTALLATION - BLOCKING AND BRIDGING

A. Screw attach wood blocking / metal backing plates between studs for the support of surface-mounted items for:

1. Plumbing fixtures.

2. Wall cabinets.

3. Toilet accessories.

4. Hardware.

5. Architectural woodwork.

6. Grab bars.

7. Writing / Bulletin boards.

8. Fire extinguishers and fire extinguisher cabinets.

9. Other items requiring backing for attachment.

B. Provide bridging between opposite sides of plumbing cavity walls at a maximum of 36" o.c., vertically.

3.6 CONSTRUCTION

A. Interface with Other Work:

1. Coordinate the erection of studs at openings and with door and window frames.

2. Coordinate the installation of anchors, supports and blocking for mechanical, electrical and building accessory items installed within the framing.

B. Site Tolerances:

1. Maximum Variation From True Position: 1/8" in 10 ft.

.

2. Maximum Variation From Plumb: 1/8" in 10 ft.

3.7 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect metal framing erection, placement, spacing, seismic joints, expansion joints, fasteners and connections.

END OF SECTION

SECTION 09250

GYPSUM BOARD

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Gypsum board.

2. Cement board.

3. Gypsum sheathing.

4. Accessories.

5. Joint treatment.

6. Finishing.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 06100 - Rough Carpentry: Wood framing and blocking for attachment of gypsum board.

2. Section 07210 - Building Insulation: Sound attenuation blankets.

3. Section 07900 - Joint Sealers: Acoustical sealants.

4. Section 09110 - Non-Load Bearing Steel Framing: Metal framing for attachment of gypsum board.

5. Section 09200 - Lath and Plaster: Finish for gypsum sheathing.

6. Section 09300 - Tile: Ceramic wall finish on gypsum board.

7. Section 09900 - Painting: Field paint finish on gypsum board.

1.2 DESCRIPTION OF WORK

A. The extent of gypsum board work is indicated on the Drawings and Schedules and as specified herein, and includes providing and installing gypsum board for all applications, cement fiber board, gypsum sheathing, galvanized and PVC trim, accessories and the finishing of installations exposed to view.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced.

Publications are referred to in the text by basic designation only.

B. American Society for Testing and Materials (ASTM):

1. ASTM C 475 - Specification for Joint Compound and Joint Tape for Finishing Gypsum Board.

2. ASTM C 630 - Specification for Water-Resistant Gypsum Backing Board.

3. ASTM C 840 - Specification for the Application and Finishing of Gypsum Board.

4. ASTM C 954 - Specification for Steel Drill Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Steel Studs From 0.033 inches (0.84 mm) to 0.112 inches (2.84 mm) in Thickness.

5. ASTM C 919 - Practice for Use of Sealants in Acoustical Applications.

6. ASTM C 1002 - Specification for Steel Self-Piercing Topping Screws for the Application of Gypsum Panel Products or Metal Plaster Bases to Wood Studs or Steel Studs.

7. ASTM C 1280 - Specification for Application of Gypsum Sheathing.

8. ASTM C 1325 - Specification for Non-Asbestos Fiber-Mat Reinforced Cement Substrate Sheets.

9. ASTM C 1396 - Specification for Gypsum Board.

10. ATM D 3678 - Specification for Rigid Poly (Vinyl Chloride) (PVC) Interior-Profile Extrusions.

11. ASTM E 119 - Test Methods for Fire Tests of Building Construction and Materials.

C. Gypsum Association (GA):

1. GA-201 - Gypsum Board for Walls and Ceilings.

2. GA-214 - Recommended Specification for Levels of Gypsum Board Finish.

3. GA-216 - Recommended Specifications for the Application and Finishing of Gypsum Board.

4. GA-600 - Fire Resistance Design Manual.

.

D. International Code Council:

1. International Building Code (IBC), 2009.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer=s product specifications and installation instructions for each gypsum drywall component, including other data required to show compliance with these specifications.

12. Assurance / Control Submittals:

a. Manufacturer=s certificate that the products meet or exceed the specified requirements.

b. Documentation of experience indicating compliance with the specified qualifications requirements.

c. Test Reports from recognized testing laboratories, upon request.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

B. Fire-Resistance Ratings: Where gypsum drywall systems with fire-resistance ratings are indicated, provide materials and installations which are identical to those of applicable assemblies tested per ASTM E 119 by a fire testing laboratory acceptable to the authorities having jurisdiction.

1. Provide fire-resistance rated assemblies identical to those indicated by reference to GA File No. S in GA AFire Resistance Design Manual@ or to design designations in U.L. AFire Resistance Directory@ or in listing of other testing and agencies acceptable to the authorities having jurisdiction.

C. Single-Source Responsibility: Obtain gypsum board products from a single manufacturer, or from manufacturer=s recommended by the prime manufacturer of the gypsum board.

1.6 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Deliver products to the Project Site in the manufacturer=s original, unopened, undamaged packages, containers, or bundles bearing the brand name with identification labels intact.

B. Store materials inside and under cover; keep dry; protect from weather, direct sunlight, surface contamination, corrosion and damage from construction traffic and other causes.

D. Neatly stack gypsum boards flat to prevent sagging.

E. Handle to prevent damage to edges, ends and surfaces.

F. Protect corner beads and trim from being bent and damaged.

1.7 JOB CONDITIONS

A. Environmental Requirements, General: Comply with requirements of the referenced gypsum board application standards and recommendations of the gypsum board

manufacturer for environmental conditions before, during and after installation.

B. Ventilation: Ventilate building spaces as required to remove water in excess of that required for the drying of joint treatment materials immediately after application. Prevent drafts during hot, dry weather to avoid excessively rapid drying.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. United States Gypsum Co.

2. National Gypsum Company (Gold Bond Building Products).

3. Georgia-Pacific.

4. Domtar Gypsum.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 GYPSUM BOARD MATERIALS

A. General:

1. Provide boards where called for on the Drawings in lengths to minimize the number of end-to-end butt joints.

2. United States Gypsum (Sheetrock) designations are used in this Section to identify gypsum board and accessory types, unless otherwise noted.

B. Standard Gypsum Board: ASTM C 1396; natural finish, paper faces, 1/2" at ceilings and over wall furring, 5/8" thick at walls unless noted otherwise, 48" width, maximum practical length to meet conditions; ends square cut, tapered edges.

1. Provide where gypsum board is called for unless otherwise indicated.

C. Fire-Resistant Gypsum Wallboard: Type X, ASTM C 1396; paper faces, 2" at ceiling, or 5/8" thick at walls, 48" width, maximum practical length to meet conditions; ends square cut, edges tapered; providing at least 1-hour fire-retardant rating when tested in accordance with ASTM E 119.

1. Provide where a fire-resistance rating is required.

D. Water-Resistant Gypsum Backing Board: ASTM C 630; 2" at ceiling and over wall furring, and 5/8" thick at walls, 48" width, maximum practical length to meet conditions; ends square cut; edges tapered; ends and edges straight and solid. Board consisting of a non-combustible water-resistant gypsum core, surfaced on face and back with green treated water-repellent paper bonded to the core. Suitable for receiving paint or wallpaper and in compliance with IBC.

1. Provide at ceilings and walls in showers, toilets and other wet areas not scheduled for tile finish.

E. Impact / Penetration-Resistant Gypsum Board: Type X, ASTM C 1396, 5/8" thick, 48" width, maximum practical length to meet the conditions, ends square cut; edges tapered; gypsum core with additives to enhance fire resistance; 1-hr fire-retardant rating when tested in accordance with ASTM E 119; surfaced with paper on the front, back and long edges; 0.30" GE Lexan film bonded to the back side to enhance impact / penetration resistance without penetration.

1. Provide at Corridor walls where indicated and other locations subject to high abuse.

F. Tile Backing Board: 5/8" thick; inorganic fiberglass mat with moisture-resistant gypsum core; paperless; heat-cured acrylic coating; Fiberock, or approved equal.

1. Provide at shower and toilet room walls scheduled to receive ceramic tile finish and for interior ceiling application at exposed structure locations.

G. Cement Board: High density, glass fiber reinforced, 1/2" thick x 26" or 48" width; Durock Cement Board as manufactured by United States Gypsum or approved equal.

1. Provide at shower and toilet room walls scheduled to receive ceramic tile finish, and
at ceilings and walls exposed to the weather.

H. Gypsum Sheathing: ASTM C 630, 5/8" thick x 48" width x maximum practical length to meet conditions; ends square cut; edges tapered; ends and edges straight and solid. Weather and sag resistant for exterior applications, water repellent paper faces suitable for painting or plastering.

1. Provide at ceilings and walls exposed to the weather.

I. Solid Shaftliner: 1" thick x 23-7/8" or 47-3/4" width, Type X core, ASTM C 1396, moisture-resistant paper faces.

1. Provide at fire-rated shaft and chase walls, as indicated.

2.3 FASTENERS

A. Metal Framing: ASTM C 1002, Type S, Phillips-head recess, bugle head, corrosion-resistant, self-drilling, self-tapping, fine thread steel screws.

1. One Layer 1/2@ board: 1" long.

2. One Layer 5/8" board: 1-1/8" long.

2.4 TRIM ACCESSORIES

A. General: Install vinyl plastic accessories at exterior work and work in high humidity and non-air-conditioned spaces. Use galvanized accessories at interior air conditioned, normally humidity areas.

B. Plastic Accessories: High-Impact PVC plastic; ASTM D 3678, including corner beads, stop beads, casing beads, trim beads, baseboard and ceiling beads; as manufactured by Plastic Components, Inc. or approved equal.

C. Galvanized Accessories:

1. Edge Trim: Galvanized steel casing.

   a. AL@ shape for tight abutment at edges; Sheetrock Brand, No. 200-B.

   b. AJ@ shape at other locations; Sheetrock Brand, No. 200-A.

2. Corner Beads: Galvanized steel corner beads, Sheetrock Brand, Dur-A-Bead Metal Corner Bead.

3. Control Joint: Roll-formed zinc; Sheetrock Brand, Zinc Control Joint.

D. Pre-finished Corners: Pre-finished inside corner reinforcement as manufactured by ULTRAFLEX or approved equal.

2.5 JOINT TREATMENT MATERIALS

A. General: Type recommended by the gypsum board manufacturer for the application, except as otherwise indicated; ASTM C 475.

B. Reinforcing Tape: Cross-fibered paper with high tensile strength, roughened surface, accurate center crease; Sheetrock Brand, Heavy Drywall Joint Tape.

C. Joint Compound:

1. Single Grade: Multi-purpose grade for the entire application.

2. Two Grades:

   a. Interior and Exterior Work: Use chemically-setting, powder compound type for bedding and filling; Sheetrock Brand, Durabond Joint Compound or Easy Sand Lightweight Setting Type Joint Compound.

   b. Topping: Use ready-mixed, lightweight, vinyl formulation or vinyl powder; Sheetrock Brand, Lite Taping Joint Compound.

D. Water-Resistant Joint Compound: Special water-resistant type for treatment of joints, fastener heads and cut edges of water-resistant backing boards.

2.6 MISCELLANEOUS MATERIALS

A. General: Provide auxiliary materials of the type and grade recommended by the gypsum board manufacturer.

B. Adhesives: Commercial adhesives; ASTM C 557.

1. Laminating: Special adhesive or joint compound specifically recommended by the gypsum board manufacturer for laminating gypsum boards.

2. Water-Resistant: Type I, organic adhesive for ceramic tile; ANSI A136.1.

C. Blocking and backing Plates: Provided by the trade responsible for Section 09110; located by the appropriate trade or as indicated below.

1. Casework and Other Trades: 14 gage galvanized steel, minimum; 3" wide x length required.

2. Plumbing: Size as required for the relevant wall-hung fixture.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates, blocking and backing plates and conditions are as required, and ready to receive the work.

C. Report, in writing, prevailing conditions that will adversely affect the satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 PRE-INSTALLATION MEETING

A. Prior to commencing work, meet on-site with the Owner=s representative and all concerned trades to review the work required by this Section.

3.3 GENERAL REQUIREMENTS

A. Install in accordance with reference standards, manufacturer=s instructions, product technical bulletins, product catalog and product carton instructions and as required to comply with seismic requirements.

B. Install supplementary framing, blocking and bracing at terminations in gypsum board assemblies to support fixtures, equipment, heavy trim, grab bars, toilet accessories, cabinetry, furnishings and similar construction.

C. Install metal framing and gypsum board to enclose all pipes, ducts, conduit, etc. which would otherwise be exposed in finished areas, regardless of whether or not furring is shown or indicated on the Drawings.

D. Enclosures to receive recessed light fixtures in fire-rated ceilings shall conform to U.L. requirements for materials and assemblies. Provide U.L. Design No. P251 enclosures over all types of recessed lights.

E. Defects which appear in the work due to faulty workmanship and / or materials, shall be repaired and refinished with materials and in a manner to meet the requirements of this Section.

3.4 GYPSUM BOARD INSTALLATION REQUIREMENTS

A. Application and Finishing Standards: Install in accordance with manufacturer=s published instructions, GA-201, GA-216 and ASTM C 840.

B. Install sound attenuation blankets as indicated, prior to the application of gypsum boards unless the blankets can be readily installed after the boards have been installed.

C. Locate exposed end-to-end butt joints as far as possible from the center of walls and ceilings, and stagger not less than 1'-0" in alternate courses.

D. Install ceiling boards in the direction and in a manner that will minimize the number of end-to-end butt joints and avoid end joints in the central area of each ceilings. Stagger end joints at least 1'-0".

E. Install wall / partition boards vertically to avoid end-to-end butt joints to the extent possible. Use boards of maximum practical lengths; where applicable stagger end joints. Cut and saw all openings; do not core and punch. Apply edge bead to all exposed edges and outside corners.

F. Install exposed gypsum board with face side out. Do not install imperfect, damaged or damp boards. Butt boards together for a light contact at edges and ends with not more than 1/16" open space between boards. Do not force boards into place.

G. Locate either edge or end joins over supports, except in horizontal applications or where intermediate supports or gypsum board back-blocking is provided behind end joints. Position boards so both tapered edge joints abut, tapered edges against tapered edges and mill-cut ends against mill-cut or field-cut ends. Do not place tapered edges against cut edges or ends.

H. Stagger vertical joint over different studs on opposite sides of partitions.

I. Attach gypsum boards to supplementary framing and blocking provided for additional support at openings and cutouts.

J. Isolate perimeter of non-load bearing gypsum board partitions at structural abutments. Provide 1/4" to 1/2" space and trim edges with AJ@ type, semifinished, edge trim. Seal joints with acoustical sealant.

K. Form control joints and expansion joints with space between edges of boards prepared to receive trim accessories.

L. Space fasteners in boards in accordance with referenced standards and manufacturer=s recommendations, except as otherwise indicated.

3.5 GYPSUM BOARD INSTALLATION METHODS

A. Single Layer Applications:

1. Install single layer gypsum board in the most economical direction, with edges and ends attached to firm bearing surfaces; panel ends aligning and parallel with framing members.

2. Apply gypsum board on walls and partitions vertically unless indicated otherwise, and provide sheet lengths that will minimize the number of end-to-end butt joints.

3. Apply gypsum board on furring with no end joints. Locate edge joints over furring members.

4. Apply gypsum board on ceilings prior to application on walls and partitions, to the greatest extent possible.

5. Treat cut edges, holes, fastener heads and joints, including those at angle intersections in water-resistant gypsum board, cement board and gypsum sheathing at exterior ceilings and soffits with the specified joint compound. Treat prior to installation.

6. Do not align panel joints with edges of openings.

B. Wall Tile Base: Where gypsum board is the base for thin-set ceramic tile and similar rigid applied wall finishes, install paperless tile backing boards.

C. Showers, tubs and similar Awet@ areas: Install paperless tile backing boards. Apply with uncut long edges at the bottom of the work, and space 1/4" above fixture lips. Seal ends, cut edges and penetrations of each piece with water-resistant adhesive or, where recommended by the backing board manufacturer, with water-resistant joint compound.

D. Double Layer Applications: Install gypsum backing board as the base layer and exposed gypsum board for the face layer.

1. Apply base layer on ceilings prior to application of the base layer on walls / partitions; apply face layers in the same sequence. Offset joints between layers at least 10". Apply base layers at right angles to supports unless indicated otherwise.

2. Apply base layer and face layer on walls / partitions [vertically] [horizontally] with joints of the base layer over supports and face layer joints offset at least 10" with base layer joints.

3. Apply base layer on furring members [vertically] [horizontally] and the face layer either [vertically] [horizontally] with vertical joints offset at least one furring member. Locate edge joints of the base layer over furring members.

E. Single Layer Fastening Methods: Secure boards to supports as follows:

1. Install fasteners from the center of the panel field toward the ends and edges. Install fasteners 3/8" from ends and edges of panels, and as follows:

a. Ceiling: 12" on center, perimeter and field.

b. Walls: 12" o.c. in the field of walls and 8" o.c. at vertical joints.

F. Double Layer Fastening Methods: Apply base layer of gypsum board and face layer to the base layer as follows:

1. Fasten both the base layer and face layer to supports separately with screws.

G. One-Hour Fire-Rated Chase Walls: Install framing studs, shaftliner and face layers in strict accordance with the manufacturer=s instructions and the Building Code

H. Sound-Rated Walls: Where work is indicated, including double layer work and work on resilient furring, seal the work at perimeters, control and expansion joints, openings and penetrations with a continuous bead of acoustical sealant including a bead at both faces of partitions.

1. Comply with the manufacturer=s recommendations for location of beads, and close off sound-flanking paths around and through the work, including sealing of partitions above acoustical ceilings. Provide sound insulation at ceilings where walls do not extend to the slab above.

I. Acoustical Sealant Application: Comply with the details indicated or if not indicated, comply with applicable published recommendations of the AGypsum Construction Handbook@ by the United States Gypsum Company.

J. Inspection of Acoustical Partitions: Gypsum board partitions with a STC rating of 52 or higher shall not be closed and finished until inspected and approved by the Owner=s representative.

K. Shower Room Ceilings: Install paperless gypsum board in accordance with the manufacturer=s instructions. Reinforce all joints with glass mesh tape and coat the entire surface with a recommended compound to provide a smooth, even finish over the entire surface.

3.6 GYPSUM BOARD TRIM INSTALLATION

A. General: Where feasible, use the same fasteners to anchor trim accessory flanges as used to fasten the gypsum boards to supports. Otherwise, fasten flanges by nailing or stapling in accordance with the manufacturer=s instructions and recommendations.

B. Install plastic corner beads at external corners. Use the longest practical lengths. Place edge trim where panels abut dissimilar materials.

C. Install plastic edge trim wherever the edge of gypsum board would otherwise be exposed or semi-exposed. Provide the type with face flanges to receive joint compound except where semi-finishing type is indicated. Install AL@ trim where work is tightly abutted to other work and install special kerf-type where other work is kerfed to receive the long leg of AL@ trim. Install AJ@ trim where the edge is exposed, revealed, gasketed, or sealant-filled (including expansion joints).

D. Install semi-finishing trim where indicated, and where exterior gypsum board edges are not covered by applied moldings or indicated to receive trim with face flanges covered with joint compound.

E. Install plastic edge trim or pre-finished internal corners where indicated on wall panels at junctures with ceilings.

F. Install control joints where indicated.

3.7 GYPSUM SHEATHING INSTALLATION

A. Install gypsum sheathing in accordance with the manufacturer=s instructions, GA-201, GA-216 and GA-600.

1. Install single layer gypsum sheathing horizontally, with edges butted tight, tongue up with attachment to firm bearing.

B. Provide construction control joints at a maximum of 30 feet o.c., at inside corners and at all intersections.

1. Install sheathing with 1/4" space between the edge of the sheathing and adjacent walls, beams, columns, and fascia construction.

C. Install screws at 12" o.c., maximum, to secure sheathing to the supporting substrate.

D. Protect all exposed gypsum cores at perimeter edges and penetrations by covering the core with trim.

E. Place edge trim where sheathing abuts dissimilar materials. Use longest practical lengths.

3.8 JOINT TREATMENT

A. Reinforce interior and exterior corners at ceiling and wall surfaces.

B. Apply 2" wide coated glass fiber tape at cement backer board corner joints.

C. Install control joints the full height of partitions consistent with the lines of building spaces, with 1/4" gap between panels. Apply sealant at the back of the joint and a control joint accessory at the face.

D. Apply 3" wide initial coating of joint compound, press tape firmly into the compound; wipe off excess compound. Apply a second coat of joint compound with tools of sufficient width to extend beyond the joint center approximately 4". Draw the joint compound down to a smooth even plane.

E. Sand after the second and third applications of joint compound. Do not raise the nap of the paper when sanding.

F. Feather coats onto adjoining surfaces with a maximum camber of 1/32" in 12".

G. After drying or setting, sand or sponge joints, edges, and corners, eliminating high spots and excessive compound to produce a smooth finish surface.

H. Prepare surfaces to receive subsequent finishes to a height of 6" above the finished ceiling.

3.9 GYPSUM BOARD FINISHING

A. General:

1. Refer to Sections on painting, coatings and interior design documents for decorative finishes to be applied to gypsum board work. Apply treatment at gypsum board joints (both directions), flanges of trim accessories, penetrations, fastener heads, surface defects and elsewhere as required to prepare the work for decoration.

2. Prefill open joints and rounded or beveled edges, if any; use the type of compound recommended by the manufacturer.

3. Apply joint tape at joints between gypsum boards except where a trim accessory is indicated. Apply joint compound in three (3) coats (not including prefill of openings in the base); sand between the last two coats and after the last coat.

B. Skim Coat: Wherever gypsum board is to receive eggshell, semigloss or gloss paint finish, apply a thin skim coat of joint compound over the entire gypsum board surface, after the three-coat joint and fastener treatment has been completed and is dry.

C. Base for Acoustical Tile: Where gypsum board is indicated as the base for adhesively-applied acoustical tile, install tape and two (2) coats compound treatment, without sanding.

D. Paperless Tile Backing Board or Cement Board Base for Ceramic Tile:

1. Comply with recommendations of the backing board manufacturer for the treatment of joints behind ceramic tile.

2. In areas to be tiled, treat fastener heads with water-resistant joint compound. Fill tapered edges in gypsum panels with water-resistant joint compound, embed joint tape firmly and wipe off excess compound; follow immediately with a second coat of water-resistant joint compound over the taping coat; do not crown the joint. Fold and embed tape in all interior corners to form true angles.

3. In areas not to be tiled, treat fastener heads and embed tape as indicated above using water-resistant joint compound but finish with two (2) coats of the joint compound used for regular gypsum board work.

3.10 GYPSUM BOARD FINISH LEVELS

A. Apply finish in accordance with the manufacturer's published instructions and GA-214 Finish Levels.

1. Level 1: All joints and interior angles shall have tape embedded in joint compound. Surfaces shall be free of excess joint compound. Tool marks and ridges are acceptable.

a. Application: In plenum areas above ceilings, in attics, in mechanical rooms, in areas where the assembly is generally concealed and in other areas not normally exposed to view. Accessories not required unless shown or required by the rating. Where a fire-resistance rating is required for the gypsum board assembly, the details of construction shall be in accordance with reports of the fire tests of assemblies that have met the fire-rating requirement.

2. Level 2: Embed tape and apply a separate first coat of joint compound to the tape, fasteners and trim flanges.

a. Application: Where panels are the substrate for tile.

3. Level 3: Embed tape and apply separate first and fill coats of joint compound to the tape, fasteners and trim flanges.

a. Application: At surfaces scheduled to receive medium- or heavy-textured finishes or heavy wall coverings before painting.

4. Level 4: Embed tape and apply separate first, fill and finish coats of joint compound to the tape, fasteners and trim flanges.

a. Application: At panel surfaces in mechanical and electrical spaces not exposed to public view.

5. Level 5: Embed tape in joint compound at all joints and interior angles and apply three (3) separate coats of joint compound over all joints, angles, fastener heads and accessories. A thin skim coat of joint compound or a material manufactured especially for this purpose shall be applied to the entire surface. The surface shall be smooth and free of tool marks and ridges. Prepared surfaces shall be coated with a primer / sealer prior to the application of finish paint. Refer to Specification Section 09900 - Painting.

a. Application: For use where gloss, semi-gloss, enamel and non-textured flat paints are specified, or where severe lighting conditions occur. Generally in all public areas exposed to view, except where noted otherwise, to provide a uniform surface and minimize the possibility of

joints telegraphing and fasteners showing.

3.11 CONSTRUCTION

A. Interface with Other Work:

1. Coordinate the installation of firestopping materials specified in Section 07840 at penetrations through fire-resistive rated gypsum board walls, partitions and ceilings.

2. Coordinate the installation of joint sealers specified in Section 07900 at penetrations of non-fire-restive rated walls, partitions and ceilings.

3.12 PROTECTION

A. Protect other work and finishes from damage by the gypsum board work.

B. Provide protection and maintain conditions which will ensure that the gypsum board work will be without damage and deterioration at the time of Substantial Completion.

3.13 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect the installed work for alignment, attachment to the structure, backing plates and openings for installations by other trades.

3.14 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Clean and remove all debris from the Project Site.

C. Leave the entire Project clean.

END OF SECTION

SECTION 09300

TILE

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Floor tile and base tile.

2. Quarry floor and base tile.

3. Ceramic wall tile, shapes and trim units.

4. Porcelain floor tile.

5. Stair tile.

6. Marble threshold.

7. Mortar and grout.

8. Sealer.

9. Metal edge strips.

10. Waterproofing membrane.

11. Tile feature strips and patterns set in paving.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Substrate for application.

2. Section 04230 - Reinforced Unit Masonry: Substrate for application.

3. Section 09250 - Gypsum Board: Substrate for application.

4. Section 07900 - Joint Sealers: Sealant at tile penetrations and dissimilar materials.

1.2 DESCRIPTION OF WORK

A. The extent of the tile work is indicated on the Drawings and Schedules and as specified herein, and includes providing and installing floor, base and wall units made from clay and other ceramic materials, marble thresholds, waterproofing membrane under tile, metal edge strips, mortar and grout, sealing of expansion and other joints, and feature strips, patterns and accent tiles.

B. Definition: The term Atile@ includes ceramic surfacing units and trim made from clay or

other ceramic materials.

C. Joint sealants are specified in Section 07900 - Joint Sealers.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American National Standards Institute (ANSI):

1. ANSI A108.4 - Installation of Ceramic Tile with Organic Adhesives or Water Cleanable Tile-Setting Epoxy Adhesive.

2. ANSI A108.5 - Installation of Ceramic Tile with Dry-Set Portland Cement Mortar or Latex-Portland Cement Mortar.

3. ANSI A108.10 - Installation of Grout in Tilework.

4. ANSI A118.1 - Specifications for Dry-Set Portland Cement Mortar.

5. ANSI A118.4 - Specifications for Latex-Portland Cement Mortar.

6. ANSI A118.6 - Specifications for Standard Cement Grouts for Tile Installation.

7. ANSI A136.1 - Organic Adhesives for Latex Portland Cement Mortar.

8. ANSI A137.1 - Specification for Ceramic Tile.

C. American Society for Testing and Materials (ASTM):

1. ASTM C 373 - Test Method for Water Absorption, Bulk Density, Apparent Porosity, and Apparent Specific Gravity of Fired Whiteware Products.

2. ASTM C 482 - Test Method for Bond Strength of Ceramic Tile to Portland Cement Plaster.

3. ASTM C 485 - Test Method for Measuring Warpage of Ceramic Tile.

4. ASTM C 499 - Test Method for Facial Dimensions and Thickness of Flat, Rectangular Ceramic Wall and Floor Tile.

5. ASTM C 501 - Test Method for Relative Resistance to Wear of Unglazed Ceramic Tile by the Taber Abraser.

6. ASTM C 502 - Test Method for Wedging of Flat, Rectangular Ceramic Wall and Floor Tile.

7. ASTM C 648 - Test Method for Breaking Strength of Ceramic Tile.

8. ASTM C 650 - Test Method for Resistance of Ceramic Tile to Chemical Substances.

9. ASTM C 1028 - Test Method for Determining the Static Coefficient of Friction of Ceramic Tile and Other Like Surfaces by the Horizontal Dynamometer Pull-Meter Method.

D. Americans with Disabilities Act Accessibility Guidelines (ADAAG):

1. Accessibility Guidelines for Buildings and Facilities.

E. Tile Council of America, Inc. (TCA):

1. Handbook for Ceramic Tile Installation.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer=s technical information and installation instructions for the materials required.

2. Shop Drawings: Layout drawings and details for proper installation of the work.

3. Samples:

a. Initial Selection:

1) Manufacturer=s color charts of actual tiles or sections of tile showing the full range of colors, textures and patterns available for each type of tile indicated.

2) Grout and accessories requiring color selection.

b. Final Selection:

1) Full size samples of each type of tile and each color and texture selected.

2) Full size samples of each type of trim, accessory, and for each color.

3) Marble thresholds, 6" long.

4) Stair tread and nosing, full size.

5) Metal edge strip, 6" long.

4. Mock up:

a. Waterproof membrane.

b. 30 SF of tile for pattern and joint width conformation.

c. Expansion and control joints and metal edge strip installations.

5. Assurance / Control Submittals:

a. Manufacturer=s certificate that the products meet or exceed the specified requirements.

b. Documentation of experience indicating compliance with the specified

qualifications requirements.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Extra Products: Provide extra products as specified herein below.

1.5 COORDINATION

A. Pre-Installation Meeting: Convene a Pre-Installation Meeting at the Project Site prior to beginning the work of this Section.

1. Require attendance of the Contractor, Owner=s representative, Architect, and all impacted trades.

2. Review coordination and environmental controls required for proper installation and ambient conditions in the areas to receive tile work.

3. Review preparation and installation procedures, and the coordination and scheduling required with the related work.

1.6 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

B. Provide materials from a single source for each type and color of tile, grout, setting material and accessory.

1.7 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store, and protect the products.

B. Deliver tile and setting material to the Project Site in the manufacturer=s original, unopened cartons, bearing the name of the manufacturer, the certification mark of the Tile Council of America, and ready for use.

C. Store materials under cover in a manner to prevent damage and contamination.

D. Prevent damage and contamination of materials by water, foreign matter and other causes.

1.8 JOB CONDITIONS

A. Environmental Requirements:

1. Maintain adequate lighting for the installation of tile work. Lighting level shall be equal to permanent lighting level designed for areas receiving the tile work.

2. Maintain sufficient ventilation in areas where the work of this Section is being performed to allow the ceramic tile to properly set.

3. Maintain environmental conditions and protect the work during and after installation to comply with the referenced standards and the manufacturer=s printed recommendations.

1.9 MAINTENANCE

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Extra Products: Upon completion of the installation, deliver to the Owner=s representative, replacement materials from the same production run as the installed materials; 2% of the total amount of each size, style and color.

PART 2 PRODUCTS

2.1 GENERAL

A. ANSI Standard For Ceramic Tile: Comply with ANSI A137.1 for the types and grades of tile indicated.

B. ANSI Standard For Tile Installation Materials: Comply with the ANSI Standard referenced with the installation products and materials indicated.

C. Colors, Texture and Patterns: For tile and other products requiring the selection of colors, surface textures and other appearance characteristics, provide products to match the characteristics indicated or, if not otherwise indicated, as selected from the manufacturer=s standards.

D. Mounting:

1. Where factory-mounted tile is required, provide back or edge mounted tile assemblies as standard with the manufacturer, unless another mounting method is indicated.

2. Where tile is indicted for installation in pools, fountains or at exterior or in wet areas, do not use back or edge mounted tile assemblies unless the tile manufacturer specifies that such type of mounting is suitable for that kind of use and has been successfully used on other projects.

E. Trim Units: Provide tile trim units to match the characteristics of the adjoining flat tile and to comply with the following requirements:

1. Size: As indicted, coordinate with the sizes and coursing of the adjoining flat tiles, where applicable.

2. Shapes: As follows, selected from the manufacturer=s standard shapes:

a. Base for Portland Cement Mortar Installations: Coved.

b. Base for Thinset Mortar Installations: Coved.

c. Wainscot Cap for Thinset Mortar Installations: Surface bullnose.

d. External Corners for Thinset Installations: Surface bullnose.

e. Internal Corners: Internal cove with cap angle designed to member with

the stretcher shapes.

f. Stair tread with nosing.

F. Coefficient of Friction (COF): ADAAG recommends a 0.6 or higher coefficient or higher in dry conditions to meet ADAAG requirements. Typically the COF is indicated in a wet and a dry number under those conditions for the average of the test results. In a situation where there is a potential for water, the tile should meet the COF of 0.6 or higher under wet conditions. ADAAG recommendation for COF on a ramped surface is 0.8. Static coefficient of friction tests are performed according to ASTM C 1028.

2.2 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturer's offering products which may be incorporated into the work include the following:

1. Tile:

a. Daltile Median

b. Approved Substitution

2. Mortar and Grout:

a. Hydroment by Bostik.

b. LATICRETE.

c. MAPEI, Corp.

3. Latex-Portland Cement Mortar and Grout:

a. ProSpec (formerly Bonsal).

b. Hydroment by Bostik.

c. LATICRETE.

d. Summitville Tiles, Inc.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.3 TILE, GENERAL

A. Tile: ANSI A137.1.

1. Stain Resistance, CTI Stain Test: Unstainable.

2. Surface Water Absorption, ASTM C 373: 0.5% Max.

3. Abrasive Wear, ASTM C 501: 100.

4. Breaking Strength, ASTM C 648: 250 lbs.

5. Bond Strength, ASTM C 482: 50 psi.

6. Facial Dimension (range), ASTM C 499: 1.5% Max.

7. Range of Thickness, ASTM C 499: 0.04" Max.

8. Warpage (Diagonal), ASTM C 485: ∀0.75% Max.

9. Wedging, ASTM C 502: 1% Max.

10. Chemical Resistance, ASTM C 650: Unaffected.

11. Coefficient of Friction, ASTM C 1028:

    a. Dry > 0.7.

    b. Wet > 0.6.

12. Scratch Hardness, Moh's Scale: ≥ 8.

2.4 QUARRY TILE

A. Dal-Tile, quarry tile, 4" x 8", or size and shape as selected.

B. Color as selected.

2.5 PORCELAIN CERAMIC TILE.

A. 12" x 24" porcelain wall and floor tile.

B. Color as selected.

2.6 WATERPROOF MEMBRANE

A. Liquid Applied Membrane: Thin, load-bearing, flexible waterproofing system, self-curing liquid rubber polymer, cold-applied with integral reinforcing fabric to form a seamless membrane.

B. LATICRETE #9235 Waterproofing Membrane by LATICRETE or approved equal.

2.7 MISCELLANEOUS MATERIALS

A. Metal Edge Strip: Brass or stainless steel, as selected; 1/8" wide at the top edge with integral provision for anchorage to mortar bed or substrate, unless otherwise indicated. Style to be as indicated, or appropriate to the use; as manufactured by Schluter Systems, or approved equal. Style to be as appropriate for the use intended

B. Wall Access Panel: Schluter-REMA by Schluter Systems or approved equal.

C. Adhesives: Water-resistant organic; ANSI A136.1.

D. Water: Clean and potable.

E. Reinforcing Mesh: 2" x 2", 16 gauge, galvanized, welded wire.

F. Tile / Grout Sealer: Non-flammable, water-soluble, penetrating methyl siliconate clear solution, stain-resistant, matte sealer.

G. Tile, Grout and Masonry Cleaner: As approved by the tile, grout and sealer manufacturers.

H. Floor Transition Strip: Aluminum Square, Tee, and Reducer shapes as required.

2.10 MORTAR AND GROUT MIX

A. Mix and proportion mortar and grout materials in strict accordance with the manufacturer's instructions.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates slope to drains and conditions are as required, and ready to receive the work.

1. Examine areas to be covered for surface contamination which requires correction before work begins.

C. Report in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Do not use sealers or curing compounds on concrete slabs to be covered with tile. Slabs shall be covered and wet cured for a minimum of seven (7) days. Surfaces to receive tile installed by the thin set method shall have a wood float finish, be true to within 1/8" in 10 feet, and pitched to drains where required.

B. Areas requiring fill, patching or leveling shall be prepared by the General Contractor. Do not use gypsum or asphalt leveling compounds.

C. Seal substrate surface cracks with filler.

D. Clean substrate surfaces to remove dust, dirt, mortar, etc.

E. Surfaces to be covered shall be left clean, free of dust, plaster, sealer or curing compounds and form oil. Any such contamination shall be removed by the responsible trade.

F. Prepare substrate surfaces for adhesive installation in accordance with adhesive manufacturer's instructions.

G. Protect surrounding work from damage or disfiguration.

H. Vacuum clean existing substrate and damp clean.

I. Wet down or wash and remove excess water from dry or dusty concrete or masonry surfaces just prior to the application of pavers.

3.3 INSTALLATION

A. Installation Methods: Install ceramic tile in accordance with the TCA, AHandbook for Ceramic Tile Installation@, ANSI A108.4, and ANSI A108.5.

B. Waterproof Membrane: Install waterproof membrane for all elevated slab floors exposed to water or wind blown rain. For example, install at elevated slabs where Showers, Baths, Kitchens, washing and other wet activities occur; and at terraces and roofs over interior spaces.

1. Contractor shall obtain architect or owner=s representative approval of membrane prior to proceeding with the work.

C. Installation by Thick Bed Method:

1. Spread mortar to approximately one-half the desired bed thickness, then place reinforcing mesh. Lap mesh 3", minimum, and place additional mortar over the mesh to bring the bed to the desired thickness. Rod and compact mortar with a steel trowel. The setting bed shall be, minimum, 1-1/2" thick.

a. Note: The setting bed may be reduced to a nominal 1" thickness and the reinforcing omitted when bonding directly to concrete slabs or a load-bearing membrane.

2. Before placing tile on a green or wet screed bed, apply a slurry of bond coat to the mortar bed using a flat trowel.

3. Tile shall be placed in the wet slurry coat before the surface dries, or apply a slurry bond coat applied to the back of each tile just prior to placing the tile on the bed.

4. Before the mortar takes initial set, place and beat each tile into place with a wooden block or rubber mallet to embed it and to even the surface.

5. Maintain uniform joint widths.

6. The surface shall be pitched to drains, where indicated, or as required.

7. On hardened screed or mortar bed, tiles may be installed by the thin set method if proper tolerances are provided.

D. Installation by Thin Set Method:

1. Apply mortar with a notched trowel using a scraping motion to work the material into good contact with the substrate to be covered. A trowel having notches approximately 1/4" x 3/8" is recommended for pavers. Apply only as much mortar as can be covered within 30 minutes, or while the surface is still tacky.

2. Trowel a small quantity of mortar onto the back of each piece of tile. Set the tile in place and tap with a small beating block to ensure 100% full bedding and a true surface.

3. Align tile to provide uniform joints and then allow to set until firm.

4. Clean excess mortar from the surface of tiles with a wet cloth or sponge while the mortar is still fresh.

E. Mortar:

1. Machine Mixing: Mortar mixer shall be the rotating blade type. Place mixing liquid in the mixer, start the machine and add sand, then cement. Mix only long enough to wet out the batch. Stop the mixer and dump the mortar promptly. Do not overmix.

2. Hand Mixing: Pre-mix the dry ingredients (sand and cement). Place mixing liquid in a clean container or mixing box, add the dry materials and mix. Adjust the amount of liquid or dry materials to obtain the proper consistency.

F. Joints: 1/8" width for tiles less than 12"; 3/16" for tiles to 25"; 1/4" for quarry tile.

G. Expansion and Control Joints:

1. Existing joints in concrete subfloors must be carried through the tile and shall conform to the architectural details.

2. Expansion joints shall be installed where tile abuts restraining surfaces, such as perimeter walls, curbs, columns, corners, etc.

3. Interior installations shall have expansion joints spaced a maximum of 30 feet o.c. in both directions. Exterior areas shall have expansion joints spaced a maximum of 15' in both directions. Expansion joints shall be raked out or cut through the setting bed to the supporting slab or structure below.

H. Edge Strips: Install at transitions to other flooring materials, for control joints, or as indicated.

I. Grouting and Pointing Joints:

1. Joints shall be grouted or pointed with Latex-Portland Cement Grout or Epoxy Grout.

2. Joints shall be packed full and free of voids and pits. Tool or rake as specified.

3. Excess mortar shall be cleaned from the surface of tiles with water and a damp sponge as the work progresses, while the mortar is fresh and before it hardens.

J. Provide a slope in tile setting material as required to slope surfaces at floor transitions and floor drains.

K. Lay tile to the pattern indicated. Do not interrupt the tile pattern through wall openings.

L. Cut and fit tile to penetrations through the tile leaving a sealant joint space. Form corners and bases neatly. Align floor, base, and wall joints.

M. Place tile joints uniform in width, subject to variance in the tolerance allowed in the tile size. Make joints watertight, without voids, cracks, excess mortar or excess grout.

N. Sound the tile after setting. Replace hollow sounding units.

O. Expansion, Contraction, Control Joints and Separation: Install tile and a pair of metal edge strips in accordance with the applicable TCA Handbook methods. Keep joints free of adhesive, mortar, and grout; seal. Refer to Section 07900 - Joint Sealers.

P. Allow tile to set for a minimum of 48 hours prior to grouting.

Q. Grout tile joints in accordance with ANSI A108.10.

R. Caulk plumbing penetrations thru floor tiles and plumbing and electrical penetrations thru wall tiles.

S. Apply sealant to the junction of tile and dissimilar materials and at the junction of dissimilar planes as specified in Section 07900 - Joint Sealers. Apply in strict accordance with the manufacturer=s instructions.

T. Install metal edge strips at transitions to other flooring materials, and where tile edges are exposed. Lock solidly into the setting bed.

3.4 INSTALLATION SCHEDULE

A. Paver Tiles: Install by thick (mortar) bed method. Place waterproof membrane under exterior pavers with occupiable space below. Apply sealer per manufacturer=s instructions.

B. Quarry Tiles: Install by thin set on hardened thick bed method at Freezer floors; thick bed method at Kitchens; thin set at Bars. Place waterproof membrane at Dishwashing, garbage areas and exterior spaces over structural slabs and other wet areas.

C. Ceramic Tiles: Install by thin set or thick (mortar) bed method. Place waterproofing membrane at Baths, Shower Rooms, areas on structural slabs subject to wind blown water and other wet areas.

3.5 TOLERANCE

A. Maintain an even and flat plane with variation not to exceed 1/8" in 8 feet. Adjacent tile shall be flush with no protruding or recessed tile edges. The tiles shall be cut neatly and fit to built-in work, penetrations, corners, changes in elevations and other variations.

3.6 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect installations for joint widths, alignment, edge treatments, sound bonding to the substrates.

3.7 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Upon the completion of placement and grouting, clean all ceramic tile surfaces free of foreign matter.

C. Remove excess mortar and grout from floor, base, and wall surfaces without damaging the surfaces.

D. Clean unglazed tiles with acid solutions only when permitted by the tile and grout manufacturer=s printed instructions, but not sooner than fourteen (14) days after installation. Protect metal surfaces, cast iron and vitreous plumbing fixtures from the effects of acid cleaning. Flush surfaces with clean water before and after cleaning.

E. Clean tile only with cleaning materials recommended by tile and grout manufacturers.

F. Remove hardened grout film or haze using Laticrete TC-500, Grout and Masonry Cleaner.

1. Saturate grout joints with water, then dampen the surface with the cleaner.

2. Allow to soak 15 - 30 minutes and then use a power scrubbing machine with a coarse texture nylon pad to remove the grout film.

G. Clean unglazed pavers by sprinkling fine sand (30 - 60 mesh) over the surface before scrubbing.

1. Caution: Do not use sand on soft glazed tiles.

H. Do not use acid type cleaners on colored grout joints.

I. Leave finished installations clean and free of cracked, chipped, broken, un-bonded and otherwise defective work.

3.8 PROTECTION

A. When recommended by the tile manufacturer, apply a protective coat of neutral protective cleaner to the completed floor and wall tiles.

B. Protect installed tile work with kraft paper or other heavy covering to prevent staining, damage and wear.

C. Prohibit foot and wheel traffic from tiled floors for at least seven (7) days after grouting has been completed.

D. Immediately before final inspection, remove the protective coverings and rinse the neutral cleaner from the tile surfaces.

E. Before final inspection, remove protective coverings and rinse neutral cleaner from the tile surfaces.

END OF SECTION

SECTION 09510

ACOUSTICAL CEILINGS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Suspended metal grid ceiling system.

2. Perimeter trim.

3. Acoustical ceiling panels, suspended.

4. Acoustical ceiling panels, adhered to substrate.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 07900 - Joint Sealers: Caulking of joints between perimeter trim and vertical surfaces.

2. Section 15850 - Air Outlets and Inlets: Air diffusion devices in the ceiling system.

3. Section 16510 - Interior Luminaires: Light fixtures attached to the ceiling system.

1.2 DESCRIPTION OF WORK

A. The extent of acoustical ceilings work is indicated on the Drawings and as specified herein, and includes providing and installing suspended metal ceiling grid, perimeter trim, acoustical panels, hanger devices, sealants and accessories for complete adhered and suspended ceiling systems.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society for Testing and Materials (ASTM):

1. ASTM A 641 - Specification for Zinc-Coated (Galvanized Carbon Steel Wire.

2. ASTM C 635 - Specification for Manufacture, Performance, and Testing of Metal Suspension Systems for Acoustical Tile and Lay-in Panel Ceilings.

3. ASTM C 636 - Practice for Installation of Metal Ceiling Suspension Systems for Acoustical Tile and Lay-in Panels.

4. ASTM D 1779 - Specification for Adhesive for Acoustical Materials.

5. ASTM E 84 - Test Method for Surface Burning Characteristics of Building Materials.

6. ASTM E 400 - Test Method for Analysis of Ores, Minerals, and Rocks by the Fire Assay Preconcentration Optical Emission Spectroscopy.

7. ASTM E 413 - Classification for Rating Sound Insulation.

8. ASTM E 580 - Practice for Application of Ceiling Suspension Systems for Acoustical Tile and Lay-In Panels in Areas Requiring Seismic Restraint.

9. ASTM E 795 - Practices for Mounting Test Specimens During Sound Absorption Tests.

10. ASTM E 1264 - Classification for Acoustical Ceiling Products.

C. International Building Code (IBC):

1. Applicable edition in the Project jurisdiction.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer=s product specifications and installation instructions for each suspension system and type of seismic brace, and each acoustical ceiling material required; certified laboratory test reports and other data as necessary to show compliance with these Specifications.

2. Shop Drawings: Four (4) sets of accurate layout drawings based on actual field measurements. Indicate all mechanical and electrical items, access panels and other items to be installed in the finished ceiling including seismic bracing locations.

3. Samples:

a. Two 6" x 6" square samples of each acoustical unit required, showing the full range of exposed pattern, texture and color to be expected in the finished work.

b. Two 12" long samples of each exposed runner.

c. Two 12" long samples of each edge molding.

4. Assurance / Control Submittals.

a. Manufacturer=s certificate that the products meet or exceed the specified requirements.

b. Documentation of experience indicating compliance with the specified qualifications requirements.

5. Maintenance Information: Manufacturer=s recommendations for cleaning and refinishing acoustical units, including precautions against materials and methods which may be detrimental to finishes and acoustical performance.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Warranty: Submit a written special Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.5 COORDINATION

A. Coordinate layout and installation of the suspension system components and acoustical ceilings with other work supported by or penetrating through the ceilings, including light fixtures, HVAC equipment, fire-suppression system components, and partition systems, if any.

B. Furnish layouts for inserts, clips and other supports required to be installed by other trades for support of acoustical ceilings.

1. Furnish concrete inserts, steel deck hanger clips and similar devices to other trades for installation well in advance of the time needed for the coordination of other work.

C. Interface with Other Work:

1. Schedule the installation of acoustical units after all interior wet work has been completed.

2. Install after all major above ceiling work has been completed.

3. Coordinate the location of hangers with other work.

4. Do not install acoustical units until after the building has been enclosed, dust generating activities have ceased, overhead work is complete, tested and approved and the air conditioning system is operational.

1.6 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience; acceptable to the manufacturer as shown by a current written statement from the suspension system manufacturer.

C. Fire Performance Characteristics: Provide acoustical ceiling components identical to those tested for the following fire performance characteristics, according to the ASTM test method indicated, by UL or other testing and inspecting agency acceptable to authorities having jurisdiction. Identify the acoustical ceiling components with appropriate marking by the testing and inspecting agency.

1. Surface Burning characteristics: Tested per ASTM E 84.

a. Flame Spread: 25 or less.

b. Smoke Developed: 50 or less.

D. Fire Resistance Ratings: As indicated by reference to the design designation in UL "Fire Resistance Directory" or "FM Approval Guide" for floor, roof or beam assemblies in which acoustical ceilings function as a fire protective membrane, tested per ASTM E 119.

E. Fire-Rated Ceilings: Provide protection materials for lighting fixtures and air ducts to comply with the requirements indicated for a rated assembly; conform to UL requirements for materials and assemblies. Provide UL Design No. P 251 enclosures over all types of recessed lights.

F. Limitations: The ceiling and suspension system shall be installed with vertical and lateral seismic bracing as required by the building code. Ceilings shall not support materials or other building components. Ductwork, grilles, light fixtures, plumbing and like work shall have their own support system and shall not use the ceiling system or ceiling suspension wires for support.

1.7 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Deliver products to the Project Site in the manufacturer=s original, unopened containers, dry and undamaged, with the brand name and type clearly marked.

C. Store under cover in dry, weathertight conditions.

D. Protect against damage from moisture, direct sunlight, surface contamination and other causes.

E. Handle acoustical ceiling units carefully to prevent chipping of edges and damage to the units in any way.

1.8 JOB CONDITIONS

A. Do not install acoustical ceiling units until the space has been enclosed and weatherproof, wet work in the space is completed and nominally dry, work above the ceiling is complete, and ambient conditions of temperature and humidity will be continuously maintained at values near those indicated for final occupancy.

B. Maintain a uniform temperature range of 60E - 85E F and relative humidity of no more than 70%, continuously, prior to, during and after installation.

1.9 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Special Warranty:

1. Provide a written Warranty jointly signed by the manufacturer and the installer certifying that the products and the installation is free of defective materials and workmanship and will repair or replace any defective component or the system, in whole or in part, as necessary to restore the product to its original intended state and integrity.

2. Warranty Period: Ten (10) years from the date of Substantial Completion, subject to conditions.

1.10 MAINTENANCE

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Extra Materials: Provide not less than 5% of each type, size and color of acoustical ceiling panels, from the same manufacturer as the materials installed.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Suspension System: Subject to compliance with the Project requirements, manufacturers offering specified items which may be incorporated into the work include the following:

1. Armstrong Building Products (Armstrong World Industries, Inc.).

2. Chicago Metallic Corp.

3. USG Interiors, Inc. (USG Corp.).

B. Acoustical Panels: Subject to compliance with the Project requirements, manufacturers offering the specified items which may be incorporated into the work include the following:

1. Armstrong World Industries, Inc.

2. USG Interiors.

3. Celotex Building Products Division (CertainTeed).

C. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 METAL CEILING GRID SUSPENSION SYSTEMS, GENERAL

A. Standard for Metal Suspension Systems: Intermediate duty, hot-dipped galvanized steel suspension grid of the type and finish indicated; comply with applicable requirements of ASTM C 635.

B. Edge Moldings and Trim: Metal or extruded plastic of the types and profiles indicated, or if not indicated, provide manufacturer=s standard molding for edges and penetrations of the ceiling which fits with the type of edge detail and suspension system indicated.

1. For lay-in panels with reveal edge details, provide a stepped edge molding which forms a reveal of the same depth and width as that formed between the edge of panels and flanges at exposed suspension members.

2. For circular penetrations of the ceiling, provide edge moldings fabricated to the diameter required to fit the penetration exactly.

C. Finishes and Colors: Provide manufacturer=s standard finish for the type of system indicated, unless otherwise required. For exposed suspension members and accessories with painted finish, provide the color indicated or, if not otherwise indicated, as selected from the manufacturer=s full range of standard colors.

1. High Humidity Finish: Comply with ASTM C 635 requirements for ACoating Classification for Severe Environment Performance@.

D. Attachment Devices: Size for five (5) times the design load indicated in ASTM C 635, Table 1, Direct Hung.

1. Concrete Inserts: Inserts formed from hot-dipped galvanized sheet steel and designed for attachment to concrete and for embedment in concrete, with holes or loops for attachment of hanger wires.

2. Surface Devices: Standard, hot-dipped galvanized, angle hangers, shot stud attached to concrete ceilings.

E. Hanger Wire: Galvanized carbon steel wire, ASTM A 641, soft temper, prestretched, Class 1 coating, sized for three (3) times the hanger design load indicated in ASTM C 635, Table 1, Direct Hung; not less than 12 gage for vertical hangers and lateral sway bracing.

F. Stiffner Braces: Manufacturer=s standard vertical struts or attachment to hanger wires to hold the suspension system in place during seismic events.

G. Hold-Down Clips for Non-Fire-Rated Ceilings: For exterior ceilings and for interior ceilings with lay-in panels weighing less than one pound per square foot, provide hold-down clips spaced at 2'-0" o.c. on all cross tees.

2.3 EXPOSED METAL CEILING GRID SYSTEM

A. Intermediate duty, hot-dipped galvanized steel, exposed AT@; 15/16" wide; one-hour fire rated; plug-in positive-lock connections, locking tee ends, main tees punched with cross tee and hanger wire holes, stabilizer bars, clips and splices, baked on paint finish; ASTM C 635. Color white, unless selected otherwise.

1. Model:

a. Prelude XL 15/16", Exposed Tee System by Armstrong.

b. 1200 Seismic System by Chicago Metallic Corp.

c. Donn Brand DX / DXL System by USG.

2. Moldings: [Angle] [Shadow] molding with exposed flange to match the grid system. Color to match the grid.

3. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.4 CONCEALED METAL CEILING GRID SYSTEM

A. Intermediate duty, hot-dipped galvanized steel, concealed, 15/16" wide, one-hour fire rated; plug-in positive lock connections, locking tee ends; ASTM C 635.

1. Model:

a. Prelude Concealed Tee System by Armstrong.

b. Donn Brand DXL, Concealed Ceiling Suspension System by USG.

2. Moldings: [Angle] [Shadow].

3. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.5 ACOUSTICAL CEILING UNITS, GENERAL

A. Standard for Acoustical Ceiling Units: Provide manufacturer=s standard units of the configuration indicated which are prepared for the mounting method designated and which comply with the requirements of ASTM E 400, including those indicated by reference to type, form, pattern, grade, noise reduction coefficient (NRC), ceiling attenuation class (CAC), light reflectance (LR), edge detail, and joint detail, if any.

1. Mounting Method for Measuring NRC: No. 7 (mechanically mounted on special metal support), ASTM E 400 mounting per ASTM E 795.

B. Sound Attenuation Performance:

1. Provide acoustical ceiling units with ratings for ceiling attenuation class (CAC) values of the range indicated as determined in accordance with ASTM E 413.

2. Provide acoustical ceiling units with ratings for ceiling sound attenuation class (STC) of the range indicated as determined according to AMA 1-II ACeiling Sound Transmission Test by Two-Room Method@ with ceilings continuous at partitions and supported by a metal suspension system of a type appropriate for ceiling units of the configuration indicated (concealed for tile, exposed for panels).

C. Colors, Textures, and Patterns: Provide products to match the appearance characteristics indicated or, if not otherwise indicated, as selected from the manufacturer=s standard colors, surface textures, and patterns available for acoustical ceiling units and exposed metal suspension system members of the quality designated.

2.6 ACOUSTICAL CEILING UNITS

A. General: The following product type numbers in parenthesis are those used on the Drawings.

B . (ACT-1): Mineral fiber, fire-resistant, Class A: flame spread 25 or less per ASTM E 1264, R-1.6, weight 1.0 lbs / sf, factory-applied vinyl latex paint finish, medium texture, non-directional, NRC .50 -.60, CAC 30 - 40, LR 0.80, angled tegular edge, 24" x 24" x 5/8". Color as selected.

1. Cortega, #816 by Armstrong.

2. Sandrift by USG.

3. Natural Fissured by Celotex.

4. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

C. (ACT-2): Mineral fiber, fire-resistant, Class A: flame spread 25 or less per ASTM E 1264, R-1.6, weight 0.9 lbs / sf, factory-applied vinyl latex paint finish, medium texture, non-directional, NRC .45-.55, CAC 30 - 40, LR 0.80, beveled edge, for concealed spline installations, 12" x 12" x 5/8". Color as selected.

1. Cortega, #745 by Armstrong.

2. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

D. (ACT-3): Ceramic and mineral fabric composite, fire resistant, Class A: flame spread 25 or

less per ASTM E 1264, R-1.4, weight 1.40 lbs / sf, scrubbable factory-applied vinyl plastic paint, sag resistant, fine fissured, perforated, NRC .50 -.60, CAC 35 - 39, LR 0.80, square edge, lay-in, 24" x 24" x 5/8". Color white.

1. Ceramaguard #607 by Armstrong.

2. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.7 MISCELLANEOUS MATERIALS

A. Tile Adhesive: Type recommended by the tile manufacturer, bearing UL label of Class 0 - 25 flame spread; comply with ASTM D 1779.

B. Tile Fasteners: Cadmium plated, type recommended by the tile manufacturer, length for not less than 1/2" penetration of substrate.

C. Acoustical Sealant: Resilient, non-staining, non-shrinking, non-hardening, non-skinning, non-drying, non-sag sealant intended for interior sealing of concealed construction joints.

1. Tremco Acoustical sealant by Tremco Global Sealants.

2. USG Acoustical Sealant by United States Gypsum Co.

3. Chem-Calk 600 by Bostik.

4. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

1. Verify that the layout of hangers will not interfere with other work.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Layout:

1. Locate the system on room axes according to the Reflected Ceiling Plan, as indicated on the Drawings, or establish layout to balance the border tile widths at opposite edges of each ceiling. Avoid the use of less than 1/2 width units at borders.

2. Where the acoustical ceiling continues thru a wall opening, continue the established pattern without interruption. One row of panels may be cut to less than full size, if necessary, to establish the pattern in the adjoining room.

B. Substrate Testing: Before installing adhesively applied tile on wet-placed substrates such as cast-in-place concrete or plaster, test and verify that the moisture level is below the tile manufacturer=s recommended limits.

C. Prior to installation, store acoustical units for 24 hours, minimum, at the same temperature and relative humidity as the space where the materials are to be installed.

3.3 INSTALLATION - GENERAL

A. Install materials in accordance with the manufacturer=s printed instructions, ASTM C 635 and ASTM C 636, in compliance with governing regulations, fire-resistance rating requirements as indicated, and industry standards applicable to the work.

3.4 INSTALLATION - CEILING SUSPENSION SYSTEM

A. General:

1. Install the suspension system with hangers supported only from the building structural members. Locate hangers not less than 6" from each end and spaced at 4'-0" o.c. along each carrying channel or direct-hung runnner, unless otherwise indicated.

2. Install metal hanger tabs and clips attached to the structure above where required for the attachment of suspension wires.

3. Secure wire hangers by looping and wire-tying, either directly to the structure or to inserts, eye-screws, or other devices which are secure, appropriate for the substrate, and which will not deteriorate or fail with age or temperature change.

4. Install hangers plumb and free from contact with insulation, ductwork and other objects within the ceiling plenum which are not part of the supporting structure or ceiling suspension system. Where ducts or other equipment prevent the regular spacing of hangers, reinforce the nearest affected hangers and related carrying channels to span the extra distance. Splay hangers only where required to miss obstructions and offset resulting horizontal force by bracing. Where carrying members are spliced, avoid visible displacement of the face plane of adjacent members.

5. Install edge molding of the type indicated, at the perimeter of acoustical ceiling areas, at the intersection of the ceiling and vertical surfaces and at locations where necessary to conceal the edges of acoustical units. Use the longest practical lengths. Provide edge molding at junctions with other interruptions. Secure at 16" o.c., maximum.

6. Screw-attach moldings to the substrate at intervals not over 16" o.c. and not more than 3" from ends; level with the ceiling suspension system. Miter corners accurately and connect securely.

7. Rivet cross tee's to the edge molding at 48" o.c., typical.

8. In areas larger than 144 sq. ft., rivet the cross tees on two adjacent walls per ASTM E 580.

9. Do not support components on the main runners or cross runners if the weight causes the total dead load to exceed the allowable limits. Do not eccentrically

load the system or produce rotation of runners.

10. Install the system level, in a uniform plane, and free of twists, warp, dents, scratches, stains and other defects. Variation from Flat and Level Surface: 1/8" in 12 feet.

11. Caulk between the edge molding and adjacent vertical surfaces.

B. Vertical Support System:

1. Suspension wires shall be 12 gage, minimum, galvanized, attached to main runners at 4'-0" o.c., maximum, spacing in both directions.

2. Each wire shall be anchored to the structure above with a device capable of supporting 75 pounds, minimum.

3. Wires supporting fixtures shall be capable of supporting four (4) times the fixture weight.

4. Suspension wires shall not hang more than 1:6 out of plumb, unless counter sloping wires are provided.

5. Wires shall not be attached to or bend around interfering work such as piping, conduits or ductwork. Trapeze or equivalent devices shall be used where obstructions interfere with direct suspension. Trapeze shall be suspended back-to-back, 1-1/2" cold formed channels, minimum, for spans up to 6 feet.

C. Horizontal Support System:

1. Lateral support systems for ceilings shall be shown in detail on the Shop Drawings.

2. Adequacy of the system shall be demonstrated by calculations, and / or test results, including adequacy of main runner intersection connections. Tests shall show a capacity of twice the calculated load to provide a safety factor.

3. Provisions shall be made for possible differential movement between ceilings and side walls. The terminal ends of each main and each cross runner shall be wire supported. Wall trim angles shall not provide the primary support for runners.

4. Lateral support of ceilings shall not be provided by the angle trim, and runners shall not be riveted to the wall trim.

D. Lateral Force Bracing: Provide cross-bracing for ceilings greater than 144 sq. ft. in area.

1. Where substantiating calculations are not provided, horizontal restraints shall be provided by four No. 12 gage wires secured to a main runner within 2" of a cross runner intersection and splayed 90 degrees from each other at an angle not exceeding 45 degrees from the plane of the ceiling. A strut fastened to the main runner shall extended up to and be fastened to a structural member supporting the roof or floor above. The strut shall be adequate to resist the vertical force induced by the bracing wires. These horizontal restraint points shall be placed 12 feet o.c. in both directions with the first point within 6 feet of each wall. Attachment of the restraint wires to the structure shall be adequate for the load imposed.

3.5 INSTALLATION - ACOUSTICAL PANELS

A. Arrange acoustical units and orient directionally patterned units, if any, in the manner shown on the Drawings. If not indicated, install units with the pattern running in one direction only, as approved by the Owner=s representative.

B. Fit the acoustical units in place free of damaged edges, dents, scratches, stains and other defects; install level and in a uniform plane.

C. Hold Down Clips: For fire-rated and security areas, install clips spaced at 2'-0" o.c. on all cross tees. Do not install clips at panels for access and at one panel in each corner of a room.

D. Mark access panels with a black adhesive dot.

3.6 INSTALLATION - ACOUSTICAL PANELS ADHERED TO SUBSTRATE

A. Install acoustical panels in accordance with the panel manufacturer=s recommendations.

B. Apply adhesive in accordance with the adhesive manufacturer=s printed directions, unless directed otherwise.

C. Spread only enough adhesive to permit the installation of acoustical panels before initial set.

D. Scribe panels to walls, columns, junction boxes, and other appurtenances as necessary to produce tight joints.

3.7 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect the ceiling grid suspension system installation, connections to the structure, edge moldings and acoustical panel placement.

3.8 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting the installed work.

B. Adjust the grid for alignment and level.

C. Adjust the acoustical panels for proper fit within the grid.

3.9 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Clean exposed surfaces of the ceiling grid, perimeter trim, and acoustical panels.

C. Comply with the manufacturer=s instructions for cleaning and touch-up of minor finish damage.

D. Remove and replace work which cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION

SECTION 09624

FLUID-APPLIED ATHLETIC FLOORING

PART 1 GENERAL

1.1 SUMMARY

A. Sections Includes:

1. Fluid-applied athletic flooring.

2. Games lines.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Substrate for flooring.

2. Section 11480 - Athletic Equipment: Volleyball floor sleeves.

1.2 DESCRIPTION OF WORK

A. The extent of athletic flooring work is indicated on the Drawings and Schedules and as specified herein, and includes providing and installing fluid-applied flooring materials, transition strips, as necessary, and games striping.

B. Floor inserts for volleyball are to be provided and installed under Section 11480 - Athletic Equipment.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society for Testing and Materials (ASTM):

1. ASTM C 501 - Test Method for Relative Resistance to Wear of Unglazed Ceramic Tile by the Taber Abraser.

2. ASTM D 412 - Test Method for Vulcanized Rubber and Thermoplastic Rubber and Thermoplastic Elastomers - Tension.

3. ASTM D 471 - Test Method for Rubber Property - Effect of Liquids.

4. ASTM D 575 - Test Method for Rubber Properties in Compression.

5. ASTM D 2240 - Test Method for Rubber Property - Durometer Hardness.

6. ASTM D 2632 - Test Method for Rubber Property - Resilience by Vertical Rebound.

7. ASTM E 84 Test Method for Surface Burning Characteristics of Building Materials.

1.4 SUBMITTALS

A. Section 01300 - Submittal Procedures: Procedures for submittals.

1. Product Data: Data describing physical and performance characteristics, textures and colors.

2. Samples: Submit cured samples of adequate size to show the applied thickness, texture, color and game striping.

3. Manufacturer=s Instructions. Complete instruction for application of athletic flooring system including any precautions or special handling instructions required to comply with OSHA 29 CFR 1910 - Subpart Z and the manufacturer=s material safety data sheets.

4. Manufacturer=s Installation Instructions: Indicate special procedures and perimeter conditions requiring special attention.

5. Assurance / Control Submittals:

a. Manufacturer=s certificate that the products meet or exceed the specified requirements.

b. Documentation of experience indicating compliance with the specified qualifications requirements.

6. Maintenance Data: Printed instructions for cleaning and maintenance.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Warranty: Provide special Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of ten (10) years documented experience.

2. Installer: Installation to be performed by a factory-approved applicator who has completed at least three (3) projects of similar size and complexity. Provide a written statement from the manufacturer that the installer is acceptable.

B. Manufacturer=s Material Safety Data Sheets: Submit manufacturer=s material safety data sheets for coatings, solvents, and other potentially hazardous materials.

1.6 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements; Transport, handle, store and protect the products.

B. Deliver products to the Project Site in the manufacturer=s original, unopened bags and containers, dry, undamaged, clearly labeled with the name of the manufacturer, type of

material, batch number and the date of manufacture.

C. Store the materials away from fire, sparks and smoking areas, and within temperature and humidity ranges recommended by the manufacturer.

1.7 JOB CONDITIONS

A. Concrete substrate to receive the athletic surfacing shall have cured for a minimum of sixty (60) days and shall have been free of water not less than seven (7) days. The moisture content shall be acceptable to the manufacturer.

B. Temperature in the area of installation must average a minimum of 65E F for one (1) week before, during, and for 72 hours after completion.

1.8 PROTECTION

A. Protect adjacent surfaces not scheduled to receive the athletic flooring by masking or other means to protect those surfaces from the flooring materials.

1.9 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Special Warranty:

1. Submit a written Warranty jointly signed by the manufacturer and the installer certifying that the products and the installation is free of defective materials and workmanship and agreeing to replace or repair any defective component or the system, in whole or in part, as necessary to restore the product to its original intended state and integrity.

2. Warranty Period: Three (3) years from the date of Substantial Completion.

1.10 MAINTENANCE

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Maintenance Data: Maintenance procedures, recommended maintenance materials and suggested schedule for cleaning.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Robbins Sports Surfaces: Pulastic and Durathon.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS

A. Product shall be a monolithic, fluid-applied, smooth surface, skid-resistant, pigmented finish, interior athletic flooring system. Materials shall be from a single manufacturer.

B. Primer: As recommended by the manufacturer to penetrate into pores of the substrate, and bond with the floor surfacing matrix to form a permanent monolithic bond between the substrate and the matrix.

C. Floor Surfacing: Poured urethane monolithic athletic flooring with a pigmented, flat wear surface. The system shall be designed for application in multiple coats.

D. Physical Properties: After curing, the complete system shall have the following properties when tested in accordance with the test methods listed for each property:

1. Tensile Strength: 860 psi, minimum, per ASTM D 412.

2. Elongation at Break: 300%, minimum, per ASTM D 412.

3. Hardness: 55 - 60 Shore A-2 per ASTM D 2240.

4. Resiliency: 25.0 Impact per ASTM D 2632.

5. Compression Set at 50%: Immediate recovery to 98% or more per ASTM D 575.

6. Compression Modulus at 10%: 120 psi per ASTM D 575.

7. Temperature Stability: No change in resiliency from -3E F to + 120E F per ASTM D 742.

8. Abrasion Resistance: 0.25 gram weight loss per kilo at 5,000 cycles with CS 17 wheel.

9. Moisture Absorption: Less than 1% by weight per ASTM D 471.

10. Fungus Resistance: Completely resistant per MIL-1-31D.

11. Flammability: Less than 150 per ASTM E 84 or 0.66 average watts / cm2 flooring radiant panel test per ASTM E 648.

12. Smoke Generated: 83 flaming per ASTM E 662.

E. Components:

1. Adhesive: Two-component polyurethane.

2. Base Mat (resilient): Granulated rubber mat containing polyurethane binder; 9 mm thickness.

3. Base Mat Sealer: Two-component polyurethane.

4. Elastomeric Resin: Polyurethane elastomeric; 2 mm thickness.

5. Coating: Pigmented finish.

6. Gameline Paint: Polyurethane per flooring manufacturer=s recommendation; compatible with the athletic flooring materials.

F. Transition Strip: Provide an appropriate, continuous transition strip along all edges where the flooring abuts a different floor covering material or unfinished concrete.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrate and conditions are as required, and ready to receive the work.

1. Concrete substrate shall have a steel trowel finish and level tolerance of +/- 1/8" (3 mm) in 10 feet.

2. Verify that moisture content of the substrate meets the flooring manufacturer=s requirements.

C. Report, in writing, prevailing condition that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

A. Apply no curing agents or sealers to the concrete substrate.

B. Fill concrete construction joints with the flooring manufacturer=s approved polyurethane caulking.

C. Remove all dirt, dust, debris, and other loose particles by sweeping or vacuum cleaning.

D. Begin installation only after the work of all other trades, except the bleacher installation, if any, has been completed.

3.3 MIXING

A. Use equipment authorized by the flooring manufacturer to provide mixing and metering of the resin components to the specified ratio.

B. Proportion and mix the athletic floor surfacing components in accordance with the manufacturer=s printed instructions.

3.4 INSTALLATION

A. Apply primer, resin, coatings and game lines in accordance with the manufacturer=s printed instructions and the following requirements:

1. Primer: Apply primer uniformly over the entire area to receive athletic floor surfacing using clean rubber squeegees or clean steel trowels. Do not allow the primer to collect in depressions. Allow the primer to dry thoroughly before the next coat is applied.

2. Resin: Apply one lift of resin to one-half the total surfacing thickness required. Allow proper curing time. Apply a second lift of resin to complete the total thickness. Allow proper curing time. Provide a total finish floor thickness of approximately 11 mm. Each lift of resin shall be placed in one continuous

operation without divider strips or cold joints.

3. Coatings: Apply a top wear coat uniformly covering all surfaces after the resin has cured. Apply at the maximum recommended thickness.

4. Provide transitions as indicated and ensure flush match with adjoining flooring.

5. Game Lines: Apply game lines paint in accordance with the manufacturer=s printed instructions

B. Prohibit smoking, open flames, sparks from electrical equipment or any other source in the area during installation.

C. Clean up and remove unused materials and empty containers from the Project Site.

3.5 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect flooring for level.

C. Inspect game lines for correct width and alignment.

D. Inspect for correct playing courts sizes.

3.6 PROTECTION

A. The finished surface shall set for a period of one (1) week, minimum, before traffic is allowed on the flooring.

B. Protect the finished flooring from damage by covering with building paper or plywood, when necessary, or other effective means until final acceptance

C. Change the air handling system filters one (1) week after the athletic floor work has been completed.

END OF SECTION

SECTION 09650

RESILIENT FLOORING

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Vinyl composition tile.

2. Sheet vinyl flooring.

3. Resilient edge strip.

4. Rubber base.

5. Accessories.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Substrate for resilient flooring.

2. Section 09250 - Gypsum Board: Substrate for rubber base.

3. Section 09680 - Carpet: Floor finish for rubber base.

1.2 DESCRIPTION OF WORK

A. The extent of resilient flooring work is indicated on the Drawings and Schedule and as specified herein, and includes providing and installing adhesively applied vinyl composition tile, sheet vinyl flooring, resilient edge strips, rubber base and resilient accessories.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society for Testing and Materials (ASTM):

1. ASTM E 648 - Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source.

2. ASTM E 662 - Test Method for Specific Optical Density of Smoke Generated by Solid Materials.

3. ASTM F 1066 - Specification for Vinyl Composition Floor Tile.

4. ASTM F 1303 - Specification for Sheet Vinyl Floor Covering with Backing.

5. ASTM F 1861 - Specification for Resilient Wall Base.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Technical data and installation instructions for each type of resilient flooring and accessory.

a. Two boxes - 2" x 2" samples of each type, color and pattern in the specified group of the manufacturer selected for each type of resilient flooring required.

b. 12" x 12" samples of sheet flooring.

c. Samples of available colors for resilient edge strip.

d. One chain of available colors for rubber base selection.

3. Final Samples: Submit for final selection.

a. 2 - full-size samples of vinyl tile.

b. 2 - 12" x 12" samples of sheet flooring.

c. 2 - 6" long sections of resilient edge strip.

d. 2 - 6" long sections of rubber base.

4. Assurance / Control Submittals:

a. Manufacturer’s certificate that the products meet or exceed the specified requirements.

b. Documentation of experience indicating compliance with the specified qualifications requirements.

5. Maintenance Instructions: Submit two (2) copies of the manufacturer’s recommended maintenance practices for each type of resilient flooring and accessory required.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

B. Regulatory Requirements:

1. Critical Radiant Flux in Accordance with ASTM E 648: More than 0.45 watts per square centimeter.

2. Specific Optical Smoke Density in Accordance with ASTM E 662: Less than 450.

C. Where possible, provide each type of resilient flooring and accessories as the products of a single manufacturer, including recommended primers, adhesives, and sealants.

1.6 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Deliver products to the Project Site in the manufacturer's original, unopened cartons and containers, each bearing the name of the product and manufacturer, project identification, and shipping and handling instructions.

C. Store the materials in a dry space, protected from the weather, with ambient temperatures maintained between 50E and 90E F.

D. Store on a flat surface.

1.7 JOB CONDITIONS

A. Environmental Requirements:

1. Do not install flooring over concrete slabs until the slabs have been cured and are sufficiently dry to achieve bond with the adhesive, as determined by the manufacturer’s recommended bond and moisture tests.

2. Store materials in the area of installation for at least 48 hours prior to beginning installation.

3. Maintain the ambient temperature required by the adhesive manufacturer, not less than 72E F, for three days prior to, during, and for 48 hours after installation.

4. Install flooring and accessories only after other finishing operations, including painting, have been completed.

5. Provide adequate temporary ventilation during installation.

1.8 MAINTENANCE

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Extra Materials: At completion of the installation deliver to the Project Site extra materials from the same manufactured lot as the materials installed in the following quantities:

1. Not less than 2% of each type, size and color of flooring.

2. Not less than 2% of each type and color of base.

3. Submittal of extra accent tiles is not necessary.

C. Maintenance Data: Submit two (2) copies of manufacturer’s recommended maintenance practices for each type of flooring and accessory required, recommended maintenance materials and suggested schedule for cleaning.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering the specified items which may be incorporated into the work include the following:

1. Tile:

a. Armstrong Floor Products (Armstrong World Industries, Inc.).

b. Azrock.

c. Tarkett.

2. Sheet Vinyl:

a. Armstrong Floor Products (Armstrong World Industries, Inc.).

b. Azrock.

c. Tarkett.

3. Resilient Edge Strip:

a. Armstrong Floor Products.

c. Roppe.

d. Burke Mercer.

4. Rubber Base:

a. Armstrong Floor Products.

b. Roppe.

c. Burke Mercer.

B. Colors, patters and sizes shall be selected from the manufacturer's standards.

C. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS

A. Vinyl Composition Tile:12" x 12" x 1/8" gauge composition tile; resistant to alkali, grease and oils and able to withstand static loads of 125 psi; ASTM F 1066; marbleized design as follows:

1. (VCT-1):

a. Standard Excelon, Imperial Texture by Armstrong.

b. Cortina Colors & Classics by Azrock.

c. Standard, Expressions by Tarkett.

2. (VCT - 2):

a. Standard Excelon, Imperial Texture by Armstrong.

b. Cortina Colors & Classics by Azrock.

c. Standard, Expressions by Tarkett.

3. Color: As selected. Accent tile (VCT-2) shall be a color contrasting with the field tile color.

B. Rubber Flooring Tile: 19-11/16” x 19-11/16” Smooth Finish 3/16” thickness.

1. Roppe Marbleized colors per Architect’s selection.
2. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

C. Resilient Edge Strip: Homogeneous vinyl, tapered or bullnose edge, 1/8" thick x not less than 1" wide x length required or roll length. Color as selected.

D. Rubber Base (RB-1): Type TP, 4” high, 1/8" thick, topset; standard coved toe at resilient flooring, toeless at carpet; matching end stops and preformed corner units; roll length; ASTM F 1861. Color as selected.

2.3 ACCESSORIES

A Subfloor Filler: Latex underlayment mixed with undiluted latex liquid, furnished by or as recommended by the resilient flooring manufacturer as follows:

1. Levelayer I by Dayton Superior Corporation.

2. No. 345 by W.W. Henry Company.

3. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

B. Concrete Slab Primer: Non-staining type as recommended by the resilient flooring manufacturer.

C. Adhesive: As recommended by the resilient flooring manufacturer for the specific material and substrate conditions; clear color.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

D. Start of the flooring installation shall indicated acceptance of the subfloor conditions and full responsibility for the completed work.

3.2 PREPARATION

A. Prepare the substrate for product installation in accordance with the manufacturer's published instructions.

B. Remove existing floor finishes and prepare substrate as recommended by the resilient flooring manufacturer.

C. Remove curing compounds not compatible with the adhesive. Avoid organic solvents.

D. Remove ridges, bumps and other irregularities in the substrate.

E. Fill cracks, joints, holes and depressions with a subfloor filler and leveler recommended by the flooring manufacturer to achieve a smooth, flat, hard surface, with no more than 1/8" variation from plane within 10 feet in any direction.

F. Prohibit traffic until the filler has cured.

G. Broom clean and vacuum surfaces to be covered by resilient flooring; inspect the subfloor.

H. Perform bond and moisture tests on concrete slabs to determine that concrete surfaces are sufficiently cured, dried and are ready to receive the flooring Utilize a bond test recommended by the flooring manufacturer. Ensure that moisture content of the concrete substrate does not exceed 3% as measured by the Calcium Carbide Hygrometer Procedure or 5% by normal Protimeter.

I. If bond test is negative, surface the existing floor with latex underlayment as recommended by the manufacturer.

J. Apply concrete slab primer, if recommended by the flooring manufacturer, prior to the application of adhesive. Apply in compliance with the manufacturer’s instructions.

3.3 INSTALLATION - GENERAL

A. Install resilient flooring using the methods indicated, and in strict compliance with the manufacturer’s recommendations.

B. Maintain subfloor reference marks, penetrations, and openings that are in place or plainly marked for future cutting by repeating on the finished flooring. Use chalk or other non-permanent marking device.

C. Cut flooring to and fit around all permanent fixtures, built-in furniture, cabinets, pipes, and outlets. Cut edges, and fit and scribe to walls and partitions after the field flooring has been installed.

D. Extend flooring into toe spaces, door rabbets, closets and similar openings.

E. Tightly cement flooring to the subbase without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, or other surface imperfections.

F. Install flooring on covers for telephone and electrical ducts, and other such items that occur within finished floor areas; maintain overall continuity of colors and patterns with pieces of flooring installed in the covers. Tightly cement edges to the perimeter of the floor around the covers and to the covers.

G. Hand roll flooring at the perimeters of each covered area to ensure proper adhesion.

3.4 INSTALLATION - VINYL COMPOSITION & RUBBER TILE FLOORING

A. Install the resilient tile flooring in accordance with the manufacturer's published instructions.

B. Prime concrete slabs in contact with the ground with cut-back type primer as recommended by the flooring manufacturer. Work the primer with a non-absorptive base completely into the surface. Primer shall be thoroughly dry before applying adhesive.

C. Apply adhesive in accordance with the adhesive manufacturer’s printed directions, unless specified or directed otherwise. Apply only cut-back adhesive to primed concrete surfaces.

D. Spread only enough adhesive to permit the installation of floor materials before initial set.

E. Open only the number of floor tile cartons for the quantity of material required to cover each area. Mix tile pieces to ensure that noticeable shade variations do not occur within any one area.

F. Install tile flooring in a checker board pattern, or as indicated. Start in the center of the room or area and work from the center towards the edges. Vary edge width as necessary to maintain full-size tiles in the field, but no edge tile shall be less than 1/2 the field tile size, except where irregular shaped rooms or conditions make it impossible. Keep tile lines and joints square, symmetrical, tight, and even; keep each floor in a true, level plane, except where indicated as sloped.

G. Locate accent tiles where shown, or if not shown locate per Architect’s instructions.

H. Scribe flooring to walls, columns, cabinets, floor outlets, and other appurtenances accurately for tight joints.

I. Where flooring continues through a wall opening, continue the established pattern without interruption. One row of tiles may be cut to less than full size, if necessary, to establish the pattern in the adjoining room.

J. Where an adjacent floor finish is dissimilar, terminate the resilient flooring at the centerline of openings or centerline of doors in the closed position.

K. Press installed flooring with a 150 pound resilient flooring roller to attain full adhesion.

3.5 INSTALLATION - RESILIENT EDGE STRIP

A. Install edge strips at unprotected and exposed edges where resilient flooring terminates and where flooring terminates at points higher than the contiguous finished flooring, except at doorways where thresholds are located.

B. Place resilient edge strips tightly butted to the resilient flooring. Secure with adhesive to the flooring and substrate.

3.6 INSTALLATION - RUBBER BASE

A. Install rubber base in accordance with the manufacturer's published instructions.

B. Apply rubber base to walls, columns, pilasters, casework and other permanent fixtures in

rooms or areas where base is required. Install the base in lengths as long as practicable. Maintain a minimum measurement of 18" between joints. Install true to line, level and with tight vertical joints. Scribe and fit accurately to and around permanent fixtures, equipment and bases.

C. Use preformed units at external corners and exposed ends. Miter or cope inside corners.

D. Install on solid backing; firmly adhere to walls, floor surfaces and permanent fixtures, except carpet throughout the length of each piece, with continuous contact at horizontal and vertical surfaces.

E. On masonry surfaces, or other similar irregular surfaces, fill voids along the top edge of wall base with the manufacturer's recommended adhesive filler material.

F. Roll the installation per the manufacturer's instructions.

3.7 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect the resilient flooring and base installation, pattern, layout and attachment to the substrate.

3.8 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Remove excess adhesive and other surface blemishes from the floor finish, base and wall surfaces without damage; use neutral type cleaners recommended by the flooring manufacturer.

C. Just prior to final inspection, thoroughly clean the flooring, edge trims and base.

D. Apply polish and buff. Use the type of polish, number of coats, and buffing procedures in compliance with the flooring manufacturer's instructions.

3.9 PROTECTION

A. Protect installed flooring with heavy Kraft paper or other covering until final acceptance inspection.

END OF SECTION

SECTION 09841

ACOUSTICAL WALL TREATMENT

PART 1 GENERAL

1.1 SUMMARY

A. Sections includes:

1. Acoustical wall-mounted panels with factory-applied finish.

2. Concealed mounting hardware.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Wall substrate.

2. Section 04230 - Reinforced Unit Masonry: Wall substrate.

3. Section 09250 - Gypsum Board: Wall substrate.

1.2 DESCRIPTION OF WORK

A. Extent of acoustical wall treatment work is indicated on the Drawings and Schedule and as specified herein, and includes providing and installing acoustical treatment to wall surfaces.

B. The intent of this Section is to outline the requirements for acoustical wall treatment, not to provide complete details for materials and installations. Manufacturer=s approved specifications, details and installation instructions shall govern.

C. The materials and installations shall meet the requirements of the applicable International Building Code and local Fire Code.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society of Testing and Materials (ASTM):

1. ASTM C 423 - Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.

2. ASTM E 84 - Test Method for Surface Burning Characteristics of Building Materials.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Indicate product characteristics, performance criteria, sound absorption rating and installation instructions.

2. Samples: One (1) 12" x 12" of each type, pattern and color required. Patterned samples shall be of sufficient size to show the complete pattern.

3. Assurance / Control Submittals:

a. Manufacturer=s certificate that the products meet or exceed the specified requirements.

b. Documentation of experience indicating compliance with the specified qualifications requirements.

4. Cleaning and Maintenance Instructions: Two (2) copies of the manufacturer=s printed instructions for cleaning and maintenance.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Warranty: Submit a written special Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in installing the work of this Section with a minimum of five (5) years documented experience.

3. Work shall be done by experienced installers working under a qualified supervisor.

B. Regulatory Requirements: Comply with the insulation flame spread and smoke developed requirements of the Environmental Protection Agency (EPA) and local authorities having jurisdiction.

1.6 DELIVERY, STORAGE AND HANDLING

A. Section - 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Deliver products to the Project Site in the manufacturer=s original, unopened packaging, clearly marked with the manufacturer=s name, brand name, size and other relevant information.

C. Storage:

1. In a secure, dry, clean, watertight and well ventilated location.

2. In a flat position, and protected from damage, soiling and accumulation of moisture.

3. Re-seal packaging immediately after completion of verification inspection.

4. Do not re-open packaging until immediately prior to installation.

1.7 JOB CONDITIONS

A. Environmental Requirements: Do not install the wall panels unless a constant temperature of at least 65 degrees F is maintained for 72 hours before, during and for 48 hours after installation.

1.8 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Special Warranty:

1. Provide a written Warranty, signed by the panel manufacturer and the panel installer agreeing to repair or replace panels that do not meet the requirements or that fail in materials or workmanship.

2. Warranty Period: Five (5) years from the date of Substantial Completions.

1.9 MAINTENANCE

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Maintenance Data: Maintenance procedures, recommended maintenance materials and suggested schedule for cleaning.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Armstrong World Industries.

2. Acoustical Products.

3. Panel Solutions, Inc.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS

A. Model:

1. Soundsoak 85 by Armstrong.

2. Silentspace W-106 by Acoustical Products.

3. PS-80 by Panel Solutions.

B. Description:

1. Material: Rigid fiberglass; pre-finished with bonded woven fabric face; fabric returned to the back of the panel. Manufacturer must ensure a flat, wrinkle-free surface and tailor-fitted corners.

2. Edge: Resin hardened, square.

3. Size: As shown on the Drawings x 1" thick. Pre-size panels in the manufacturer=s plant as detailed on the Drawings, verified by exact field measurements taken by the Contractor.

4. Density: 6-7 pounds / cubic foot.

5. Fire Rating: Class A Flame Spread rating of 25 or less.

6. NRC: 0.80 on Type AA@; mounting in accordance with ASTM C 423.

7. Insulation Value: R-4.09, minimum.

8. Color and Pattern: As selected.

C. Attachment: As approved and compatible with the substrate.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

C. Prior to starting the work, verify that all fabric materials are free of defects, fading, and stains, and that all required accessories are available.

D. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install panels in accordance with the manufacturer's specifications and installation instructions.

B. Provide all necessary accessories, furring channels, clips, molding, anchors, fasteners and other miscellaneous hardware for a complete installation.

C. Fit panels in place free of damage and other defects.

D. Install panels level, plumb, in a uniform plane, and free from twist, warp, dents and chips.

E. Install without gaps and voids.

3.3 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting the installed work.

B. Adjust out of alignment panels for plumb, level and flush appearance.

3.4 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect installation for acceptable appearance and secure attachment.

3.5 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Damaged, soiled or discolored materials installed shall be cleaned to their original condition or replaced at no additional cost to the Owner.

C. Clean exposed surfaces per the manufacturer=s instructions with materials recommended by the panel manufacturer.

3.6 PROTECTION

A. Protect the panels from damage after installation. If damage occurs, remove and replace the entire unit.

END OF SECTION

SECTION 09860

GRAFFITI RESISTANT COATING

PART 1 GENERAL

1.1 SUMMARY

A. Water repellent compounds specified herein are clear, deep-penetrating, non-film forming, non-silicone or urethane, non-yellowing, heavy duty, chemical water repellent solutions. Water repellant is to be applied on exterior walls from grade to top of wall where “Graffiti Resistant coating” is called for on drawings.

B. Related work specified elsewhere includes but may not be limited to:

1. Section 01012: Preferred Purchasing

2. Section 03410: Prestressed/Precast Concrete Hollow Core Walls (if applicable)

3. Section 03470: Tilt Up Panels (if applicable)

4. Section 04230: Reinforced Unit Masonry (if applicable)

5. Section 07180: Water Repellent

6. Section 09836: Textured Surface Coating (if applicable)

7. Section 09900: Painting (if applicable)

1.2 PREFERRED PURCHASING

A. Unless noted otherwise, Contractor and all subcontractors are encouraged to purchase all products listed in this specification section from White Cap Construction Supply. For more information, refer to Section 01012.

1.3 QUALITY ASSURANCE

A. A firm with not less than three (3) years of successful experience in application of water repellents of type required on substrates similar to those of this project. The firm shall be approved by the manufacturer of the repellent for installation of their product.

B. Manufacturers having products similar in function to the one named may request approval of their products for substitution. Approval must be requested 10 days prior to bidding. Any substitution allowed will be by written addendum issued by the Architect of Record.

1.4 JOB CONDITIONS

A. Weather and substrate conditions: Do not proceed with application of water repellent when ambient temperature is less than 50 deg. F. Or when substrate surfaces have been cured for less than a period of 2 months, or when rain or temperatures below 40 deg. F. Are predicted for a period of 24 hours, or earlier than 3 days after surfaces become wet from rainfall or other moisture sources.

B. Inspection by manufacturer's representative of subsurface conditions is required. Obtain written approval from representative before proceeding with work.

1.5 WARRANTY

A. The material and workmanship in this application shall be warranted jointly under a single document to Home Depot, signed by the manufacturer and applicator of materials. The applicator shall warrant workmanship for a period of two (2) years, and the manufacturer shall warrant against water intrusion for a period of five (5) years from date of Grand Opening.

PART 2 PRODUCTS

2.1 ACCEPTABLE PRODUCTS

A. Rainguard Products Company: VandlGuard Non-Sacrificial Graffiti Coating System

PART 3 EXECUTION

3.1 EXAMINATION

A. Installer and manufacturer's representative are to examine the substrate to which the repellent is to be applied. They are to report any condition that is detrimental to the application and function of the repellent system to the Architect of Record prior to start of application.

3.2 PREPARATION

A. Clean substrate of substances that might interfere with penetration/adhesion of water repellents. Test for moisture content, in accordance with repellent manufacturer's instruction, to ensure that surface is sufficiently dry.

B. Protect adjoining work, including sealant bond surfaces, from spillage or blow-over of repellent. Cover adjoining surfaces where possible.

C. Surfaces shall be free of defects such as dirt, dust, grease, efflorescence, paint and any other foreign material. Verify that new concrete surfaces have sufficient cure and moisture content is acceptable.

1. Beginning of application means acceptance of substrate.

D. When applying coating over painted surfaces, paint must be fully chemically cured prior to application of the repellent. Installer shall perform several test patches on each side of the building prior to application. If the test patch turns yellow over a 48-hour period, paint has not fully cured and application of the repellant cannot commence.

3.3 SCAFFOLDING

A. Provide scaffolding and use as necessary to insure all exposed surfaces are completely covered with primer and finish coats to insure the integrity of the wall and so as to provide the specified warranty.

3.4 CONTRACTOR'S RESPONSIBILITY

A. Contractor shall be responsible to insure that ALL surfaces receiving subsequent finish or coatings are prepared in accordance with manufacturer's recommendations. Contractor and his subcontractors shall of the manufacturer inspect and approve the surface preparation prior to application of his product. Contractor shall advise Architect of Record immediately, in writing, of any incompatibilities between materials or surfaces. Commencement of application implies acceptance of the surface and shall constitute waiver by the respective contractor and general contractor to any claim of incompatibility.

3.5 APPLICATION

A. Apply coating material in accordance with the manufacturer’s current technical data sheet for general information, application instructions and coverage rates.

B. Apply coating only when moisture content of surfaces is within manufacturer’s recommended limits.

C. Material shall be applied by high-volume, low-pressure spray equipment at a maximum pressure of 60 psi.

D. Apply 3 coats at rate not exceeding that recommended by manufacturer for surface being coated.

E. Comply with manufacturer’s recommendations for drying time between coats.

F. Finish coats shall be smooth, free of streaks, laps or pile-up of coating, skipped or missed areas.

G. Make edges of coating adjoining other materials or colors clean and sharp without overlapping.

END OF SECTION

SECTION 09900

PAINTING

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Interior and exterior paint systems.

2. Schedule of Items to be painted.

3. Painting Treatments Schedule.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

1.2 DESCRIPTION OF WORK

A. The extent of the work of this Section is indicated on the Drawings and Schedules and as specified herein, complete, and includes cleaning and preparation of all interior and exterior surfaces to be painted or finished, and finishing of all interior and exterior surfaces, unless hereinafter excluded.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society for Testing and Materials (ASTM):

1. ASTM E 84 - Test Method for Surface Burning Characteristics of Building Materials.

1.4 GENERAL

A. The term "Paint" as used herein, means all coating systems materials, including primers, emulsions, enamels, stains, sealers and fillers, and other applied materials whether used as primer, intermediate coat or finish coat.

B. The following categories of work are included under other Sections of these Specifications:

1. Shop Priming: Unless otherwise specified, shop priming of ferrous metal items is included under various Sections of structural steel, metal fabrications, hollow metal doors and frames, and similar items.

2. Unless otherwise specified, shop priming of fabricated components such as architectural woodwork, wood casework and shop-fabricated or factory-built mechanical and electrical equipment or accessories is included under other Sections.

1.5 SUBMITTALS

A. Section 01300 - Submittal Procedure: Procedures for submittals.

1. Product Data: Submit for each type of paint specified.

a. Manufacturer=s technical information including paint analysis, and application instructions for each material proposed for use.

b. Painting Schedule listing the surfaces to be painted with cross reference to the specific painting and finishing system, and application. Identify each paint material by manufacturer's catalog number and general classification.

2. Samples:

a. Prior to beginning the painting work, the Architect will furnish color chips for surfaces to be painted. Use representative colors when preparing samples for review. Submit samples of color and texture only for the Architect=s review. Provide a listing of materials and application for each coat of each finish sample.

b. Provide two (2) samples of each color and material on 8" x 12" hardboard, with texture to simulate actual conditions. Re-submit samples as requested by the Architect until acceptable color, sheen, and texture is achieved.

c. Provide two (2) 8" x 12" samples of natural and stained wood finish on actual wood surfaces. Label and identify each as to location and application.

d. Provide two (2) 8 " x 12" samples of masonry for each type of finish and color on concrete masonry, showing the filler, prime coat and finish coats.

3. Mock-Up: On actual wall surfaces and other interior and exterior building components, duplicate the paint finish of the prepared samples. Provide full-coat finish samples on at least 80 sq. ft. of surface, as directed, until the required color, sheen and texture is obtained; simulate the final lighting conditions for review of the work in-place.

4. Assurance / Control Submittals:

a. Manufacturer's certificate that the products meet or exceed the specified requirements.

b. Documentation of experience indicating compliance with the specified qualifications requirements.

c. Manufacturer's Material Safety Data Sheets (MSDS) for each paint type specified.

1.6 COORDINATION

A. Pre-Application Meeting: Convene a Pre-Application Meeting at the Project Site prior to beginning the painting work.

1. Require attendance of the Contractor, Owner=s representative, Architect, representatives of the paint subcontractor and other finish products, and the mechanical and electrical trades.

2. Review coordination and environmental controls required for the proper application and ambient conditions in the areas to receive paint.

3. Review preparation and installation procedures, and the coordination and scheduling required with the painting work.

1.7 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Applicator: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

B. Regulatory Requirements:

1. Surface Burning Characteristics in Accordance with ASTM E 84 for Class I or A finish:

a. Flame Spread (Non-Combustible Surfaces): Less than 25.

b. Smoke Density (Non-Combustible Surfaces): Less than 450.

2. Provide paint and coating materials that conform to Federal, and local Government restrictions for volatile organic compounds (VOC) content.

C. Codes and Standards: The work and materials shall conform to regulations of the Fire Department, safety color coding in conformance with OSHA and all other regulatory ordinances having jurisdiction. Conform to the most stringent requirements of the authorities having jurisdiction.

D. Single Source Responsibility: Provide primers and other undercoat paint products by the same manufacturer as the finish coats. Use only thinners approved by the paint manufacturer, and use only within the recommended limits.

E. Coordination of Work: Review other Section of these Specifications in which prime paints are to be provided to ensure compatibility of the total coating system for various substrates. Upon the request of other trades, furnish information or characteristic of the finish materials provided for use, to ensure that compatible prime coats are use.

1.8 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store, and protect the products.

B. Deliver products to the Project Site in the manufacturer=s original, new and unopened packages and containers bearing the following information:

1. Manufacturer=s name.

2. Name or title of the material.

3. Manufacturer=s lot number and date of manufacture.

4. Contents by volume for major pigment and vehicle constituents.

5. Color name and number.

6. Thinning or reducing instructions.

7. Application instructions including surface preparation and coverage.

8. Drying time.

9. Cleanup requirements.

C. Store products, not in actual use, in tightly covered containers, off the ground and under cover. Maintain containers used in the storage of paint, in a clean condition, free of foreign materials and residue.

D. Store paint materials at a maximum ambient temperature of 90E F, in a ventilated area, and in compliance with the manufacturer's published instructions.

E. Keep storage areas neat and orderly. Remove oily rags and waste daily.

F. Protect against fire hazards and spontaneous combustion.

G. Take all precautions to ensure that workmen and the work areas are adequately protected from health hazards that might result from handling, mixing and application of paints.

1.9 JOB CONDITIONS

A. Environmental Requirements:

1. Do not apply paint during rain, fog or mist when the relative humidity exceeds 85%, or to damp or wet surfaces, unless otherwise permitted by the paint manufacturer=s printed instructions.

2. Apply paint finishes only when the moisture content of the surfaces to be coated is within the manufacturer's acceptable range for the type of finish to be applied.

3. Painting may be continued during inclement weather if the areas and surfaces to be painted are enclosed and within the humidity limits specified, and allowed by the paint manufacturer=s printed instructions.

4. Do not apply paint in areas where dust is being generated.

5. In areas being painted provide a lighting level of, at least 80 foot-candles, measured at mid-height of the surface being painted.

1.10 MAINTENANCE

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Extra Materials:

1. Upon completion of the work, provide replacement materials from the same production run as the materials applied. Provide 2% of each, but not less than one (1) quart, nor more than ten (10) gallons of each type, color and sheen.

2. Label each container with the color, type and texture, in addition to the manufacturer's label.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Frazee Paint & Wallcovering.

2. Benjamin Moore & Co.

3. Sherwin-Williams Co.

4. Olympic Stains.

5. Watco Co.

6. ZAR by United Gilsonite Laboratories.

7. JASCO.

8. Thoro Systems Products.

9. PPG Amercoat (formerly Ameron Protective Coatings).

10. Textured Coatings of America, Inc. (TEX-COTE).

11. Rain Products Company.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS

A. Material Quality:

1. Manufacturer=s best quality grade of the various types of coatings, and suitable for the intended purpose, as regularly manufactured by acceptable paint materials manufacturers. Materials not displaying the manufacturer=s identification as a standard, best-grade product will not be acceptable.

a. Proprietary names used to designate colors or materials are not intended to imply that the products of the named manufacturers are required to the exclusion of equivalent products by other manufacturers.

B. Color Pigments:

1. Pure, non-fading, applicable types to suit the substrates and service indicated. Manufacturer shall confirm that exterior applied pigments will not fade when exposed to UV light.

2. All exterior colors and interior deep tone colors shall be ground-in at the factory. Shop mixing is not permitted.

3. Colors to be as selected by the Architect, and subject to modification on the Project Site at the Architect=s discretion.

4. Lead content in pigment, if any, is limited to not more than 0.06%, based on the total non-volatile (dry film) of paint by weight. This limitation extends to interior surfaces and those exterior surfaces, such as stairs, decks, porches, railings, windows, and doors which are readily accessible to children.

C. Paint:

1. Ready-mixed, pigments fully-ground, maintaining a soft paste consistency, capable of readily and uniformly dispersing to a complete homogeneous mixture.

2. Provide good flowing and brushing properties, and capable of drying or curing free of streaks and sags.

D. Primers and Undercoaters: Produced by the same manufacturer as the intermediate and finish coats.

E. Paint Accessory Materials: Linseed oil, shellac, turpentine and other materials not specifically indicated herein, but required to achieve the finishes specified to be of high quality, and by an approved manufacturer.

2.3 PAINT SYSTEMS

A. (EAE) Exterior Acrylic Emulsion: A 100% acrylic latex, water-thinned coating with extra mildewcide, flat finish, #203 Duratec and #266 Epotilt acrylic-epoxy sealer by Frazee, or Loxon acrylic primer with A-100, 100% exterior acrylic latex by Sherwin-Williams.

B. (EAHE) Exterior Acrylic High Build Emulsion: A high-build, heavy-bodied, water-based, acrylic emulsion with 67% solids conforming to Federal Spec # TTC 00555B, paragraph 4.4.7. Thorocoat by Thoro Systems Products, smooth finish. Finish with two (2) coats of Thoroglaze or other sealer recommended by the manufacturer. Primer to be as recommended by the manufacturer for the Project conditions.

C. (TC) Textured Coating: Tex-Cote XL-70 primer and top coat system by Textured Coatings of America. Texture as selected by the Architect.

D. (AFE) Interior Acrylic Flat Emulsion Copolymer: 100% acrylic latex, water thinned, washable, velvet flat finish, #002 Majestic by Frazee.

E. (AEE) Interior Acrylic Eggshell Enamel: 100% acrylic, water thinned, semi-gloss enamel, #022 Lo-Glo by Frazee.

F. (LOAE) No VOC Interior Acrylic Paint: Envirokote Interior Low Odor, flat, eggshell or semi-gloss as noted, with Envirokote primer by Frazee.

G. (AREM) Alkyd Resin Enamel for Interior and Exterior Metal: 628 Aro-plate II SG, semi-gloss with 661 metal primer by Frazee.

H. (AREW) Alkyd Resin Enamel for Exterior Wood: 372 wood undercoat with two coats of 352 Classic House and Trim Gloss Enamel, semi-gloss by Frazee.

I. (EPC) Epoxy Paint for Cementitious Materials: Polyamide epoxy coating system, two-component coating self-priming, semi-gloss, Amerlock 400 by PPG Americoat.

J. (EPM) Epoxy Paint for Metal: 561 acrylic metal primer with Aro-Gard 542 finish coats, two-component coating, semi-gloss by Frazee. Prepare metal with JASCO Prep and Primer.

K. (RIP) Rust Inhibitive Primer: Alkyd mineral spirit thinned, satin finish primer; #661 metal prime, rust preventive alkyd primer by Frazee.

L. (BF) Block Filler: Acrylic block filler; #262 acrylic block filler by Frazee.

M. (PS) Primer Sealer: PVA vinyl acrylic resin, water-thinned, flat finish primer, #061 Aqua Seal interior PVA Sealer by Frazee.

N. (PSU) Polyurethane: Clear finish exterior polyurethane varnish, Satin; ZAR #203.

O. (WS) Wood Stain: Olympic semi-transparent wood stain or ZAR transparent interior stain as selected by the Architect.

P. (CWF) Clear Wood Finish: Oil alkyd resin, satin or hand rub finish, Deft Clear Wood Finish.

Q. (DO) Wood Sealer: Watco Danish Oil finish, exterior formula where exposed to wind blown water.

R. (CS) Concrete Stain: Lithochrome stain in water solution by Scofield Co.

S. (TEC) Cementitious Sealer: Elasto-grip FC, waterborne modified polyamine epoxy by Tnemec.

T. (TEC) Concrete Coating: Enviro-crete 156, modified waterborne acrylate by Tnemec.

U. (GRC) Graffiti Resistant Coating: Water repellant, clear, deep-penetrating, non-film forming, non yellowing, heavy duty chemical water repellant solution. VandiGuard non-sacrificial graffiti coating system.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory and timely execution of the work of this Section. State, in writing, any anticipated problems with using

the specified coating systems on substrates primed by others. Do not proceed with the work until the unsatisfactory conditions have been corrected in a manner acceptable to the Applicator.

D. Starting the painting work will be construed as the Applicator=s acceptance of the surfaces and condition within any particular area.

3.2 SURFACE PREPARATION

A. Do not paint over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions otherwise detrimental to the formation of a durable paint film.

B. Perform preparation and cleaning procedures in accordance with the paint manufacturer's published instructions, and as herein specified, for each substrate condition.

1. Provide barrier coats over incompatible primers, or remove and reprime as necessary.

2. Remove hardware, hardware accessories, machined surfaces, plates, lighting fixtures, and similar items in place and not to be field painted, or provide surface-applied protection prior to surface preparation and painting operations. Remove, if necessary, for complete painting of items and adjacent surfaces. Following completion of the painting of each space or area, reinstall all removed items.

3. Clean surfaces to be painted before applying paint or surface treatment. Remove any oil or grease prior to mechanical cleaning.

4. Program cleaning and painting so contaminants from the cleaning process do not fall onto wet, newly painted surfaces.

C. Ferrous Metals: Clean ferrous surfaces not galvanized or shop-coated, of oil, grease, dirt, loose mill scale, and other foreign substances by solvent or mechanical cleaning.

1. Touch-up shop-applied prime coats where damaged or bare, when required by other Sections of these Specifications. Clean and touch-up with the same type of shop primer.

D. Galvanized Surfaces: Remove oil and other surface contaminants with a non-petroleum based solvent. Apply a coat of etching primer if required by the paint manufacturer.

E. Cementitious Materials: Prepare cementitious surfaces of concrete, concrete blocks, cement plaster and cement-asbestos board to be painted by removing efflorescence, chalk, dust, dirt, grease and oils, and by roughening as required to remove glaze. Wash concrete surfaces scheduled to be painted with a commercial solution of muriatic acid, or other etching cleaner. Flush with clean water to neutralize the acid, and allow to dry before painting.

1. Determine the alkalinity and moisture content of surfaces to be painted by performing the appropriate tests. If surfaces are found to be sufficiently alkaline to cause blistering and burning of the finish paint, correct the condition before starting the application of paint.

2. Do not paint over surfaces where the moisture content exceeds that permitted in the manufacturer's printed instructions.

3. Clean floor surfaces, scheduled to be painted, with a commercial solution of

muriatic acid, or other etching cleaner. Flush the floor with clean water to neutralize the acid, and allow to dry before painting.

F. Wood: Clean wood surfaces to be painted of dirt, oil, and other foreign substances with scrapers, mineral spirits, and sandpaper, as necessary. Sandpaper smooth, finished surfaces exposed to view, and remove dust. Scrape and clean small, dry, seasoned knots, and apply a thin coat of white shellac or other recommended knot sealer before application of the prime coat. After priming, fill holes and imperfections in finish surfaces with putty or plastic wood filler. Sandpaper smooth when dry.

1. Prime, stain, or seal wood required to be field painted, immediately upon delivery to the Project Site. Prime ends, edges, faces, undersides, and backsides of such wood, including cabinets, counters, cases and paneling.

2. When a transparent finish is required, use spar varnish for backpriming.

3. Backprime paneling on interior partitions where masonry, plaster, or other wet wall construction occurs on the backside.

4. Seal tops, bottoms, and cut-outs of unprimed wood doors with a heavy coat of varnish or equivalent sealer immediately upon delivery to the Job Site.

G. Gypsum Board: Fill minor defects with filler compound. Spot prime defects after repair.

3.3 MATERIALS PREPARATION

A. Mix and prepare painting materials in accordance with the manufacturer=s printed instructions.

B. Maintain containers used in mixing and application of paint in a clean condition, free of foreign materials and residue.

C. Stir materials before application to produce a mixture of uniform density, and stir as required during application. Do not stir surface film into the material. Remove the film and, if necessary, strain the material before using.

3.4 APPLICATION

A. General:

1. Apply paint products in accordance with the manufacturer's written directions using applicators and techniques best suited for the substrate, type of material being applied, and texture required.

2. Paint finishes are scheduled. Provide prime coats compatible with the finish paints to be used.

3. Apply additional coats, when the undercoats, stains, or other conditions show through the final coat, until the paint film is of uniform finish, color, and appearance. Give special attention to ensure that surfaces, including edges, corners, crevices, welds, and exposed fasteners receive a dry film thickness equivalent to that of flat surfaces.

4. Paint surfaces behind movable equipment and furniture the same as similar exposed surfaces. Paint surfaces behind permanently fixed equipment and furniture with prime coat only before final installation of the item.

5. Paint the back sides of access panels, and removable or hinged covers to match the exposed surfaces.

6. Finish exterior doors on tops, bottoms and side edges the same as the exterior faces.

7. Paint tops, edges, and bottoms of wood and hollow metal doors: .

8. Sand lightly between each succeeding enamel and varnish coat.

9. Omit the first coat (primer) on metal surfaces which have been shop-primed and touch-up painted, unless otherwise indicated.

10. Apply each coat slightly darker than the preceding coat, unless otherwise approved by the Owner=s representative. Sand surfaces lightly between coats, as necessary to achieve the specified finish.

11. Do not apply finishes on surfaces that are not dry.

12. The number of coats and the film thickness required is the same regardless of the application method. Do not apply succeeding coats until the previous coat has cured, as recommended by the paint manufacturer.

13. Paint the interior surfaces of ducts, where visible through registers or grilles, with a flat, non-specular black paint.

14. Apply block filler to concrete masonry units at the rate necessary to provide complete coverage with pores filled.

B. Scheduling Painting: Apply first coat material to surfaces that have been cleaned, pre-treated or otherwise prepared for painting as soon as practicable after preparation and before subsequent surface deterioration.

1. Allow sufficient time between successive coatings to permit proper drying. Do not re-coat until the paint has dried to where it feels firm, does not deform or feel sticky under moderate thumb pressure, and the application of another coat of paint does not cause lifting or loss of adhesion of the undercoat.

C. Minimum Coating Thickness: Apply materials at not less than the manufacturer's recommended spread rate to provide a total dry film thickness or, if not indicated, as recommended by the coating manufacturer.

D. Prime Coats: Apply a prime coat of material required to be painted or finished and has not been prime coated by others.

1. Re-coat primed and sealed surfaces where there is evidence of suction spots or unsealed areas in the first coat, to ensure a finish coat with no burn-through or other defects due to insufficient sealing.

E. Stipple Enamel Finish: Roll and re-distribute paint to an even and fine texture. Leave no evidence of rolling such a laps, irregularity in texture, skid marks, or other surface imperfections.

F. Pigmented (Opaque) Finishes: Completely cover surfaces to provide an opaque, smooth surface of uniform finish, color, appearance, and coverage. Cloudiness,

spotting, holidays, laps, brush marks, runs, sags, ropiness and other surface imperfections are not acceptable.

G. Transparent (Clear) Finishes: Use multiple coats to produce a glass-smooth surface film of an even luster. Provide a finish free of laps, cloudiness, color irregularity, runs, brush marks, orange peel, nail holes, and other imperfections.

1. Provide a satin finish for final coats, unless otherwise indicated.

H. Surfaces To Be Painted: Except where natural finish of material is specifically noted as a surface to not be painted, paint exposed surfaces whether or not colors are designated. Where items or surfaces are not specifically mentioned, paint the same as similar adjacent materials, or areas. If color or finish is not designated, the Architect will select from the manufacturer=s standard colors or finishes.

I. Equipment in Finished Rooms: Unless otherwise authorized, paint wall grilles and diffusers, door louvers, panel board fronts and other equipment having a factory-finish, occurring in rooms other than storage, mechanical and custodial.

J. Do not paint over any code-required labels, such as Underwriter=s Laboratories and Factory Mutual, or any other equipment identification, performance rating name, door label or nomenclature plates.

K. Paint exposed interior and exterior plumbing, heating and electrical equipment, apparatus, conduits, pipes and fittings, supports and hangers and all other unfinished surfaces of the mechanical and electrical work.

1. Work includes field painting of exposed bare and covered pipes and ducts (including color coding), and of hangers, exposed steel and iron work, and primer or factory-painted metal surfaces of equipment installed under the mechanical and electrical work, except as otherwise indicated.

L. Mechanical and Electrical Work: Painting of mechanical and electrical work includes those items exposed in mechanical equipment rooms, in occupied spaces, and equipment on roofs.

1. Exposed Mechanical: Items to be painted include, but are not limited to, the following:

a. Factory pre-painted diffusers at public spaces.

b. Ductwork insulation.

c. Piping, pipe hangers and supports.

d. Sprinkler covers and piping.

e. Heat exchangers.

f. Motors, mechanical equipment and supports.

g. Tanks.

h Accessory items.

2. Exposed Electrical: Items to be painted include, but are not limited to the following:

a. Panel boards in public spaces.

b. Speaker grilles.

c. Conduit and fittings.

d. Switchgear.

e. Rooftop equipment.

M. Roof Flashings: Paint all exposed roof flashings that are not stainless steel or factory-finished.

N. Completed Work: Match the approved samples for color, sheen, texture and coverage. Remove, re-finish or re-paint work not in conformance with the specified requirements.

O. The following categories of work are not included as part of field-applied painting work.

1. Concealed Surfaces: Unless otherwise indicated, painting is not required on surfaces such as walls or ceilings in concealed areas and generally inaccessible areas, foundation spaces, furred areas, utility tunnels, pipe spaces, duct shafts and elevator shafts.

2. Finished Metal Surfaces: Unless otherwise indicated, metal surfaces of prefinished aluminum, anodized aluminum, stainless steel, chromium plate, copper, bronze and similar finished materials do not require finish painting.

3. Operating Parts: Unless otherwise indicated, moving parts of operating units, mechanical and electrical parts, such as valve and damper operators, linkage, sinkage, sensing devices, motor and fan shafts will not require finish painting.

3.5 MECHANICAL AND ELECTRICAL EQUIPMENT

A. Replace identification markings on mechanical and electrical equipment, if painted over or spattered.

B. Paint conduit and electrical equipment occurring in finished areas where exposed to public view, color and texture to match the adjacent surfaces.

C. Paint front, back and all edges of plywood backboards for electrical equipment before installing, and mounting the equipment.

3.6 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. The Owner reserves the right to invoke the following material testing procedures at any time, and any number of times during the field painting work:

1. Engage the services of an independent testing laboratory to sample the paint being used. Samples of materials delivered to the Project Site will be taken, identified and sealed, and certified in the presence of the Contractor.

2. A testing laboratory will perform appropriate tests for any or all of the following characteristics: abrasion resistance, apparent reflectivity, flexibility, washability, absorption, accelerated weathering, dry opacity, accelerated yellowness, re-coating, skinning, color retention, alkali resistance and quantitative materials analysis.

3. If the test results show that the material being used does not comply with the specified requirements, the Contractor may be directed to stop the painting work, remove the non-complying paint, pay for the testing, re-paint surfaces where the rejected paint has been applied, and remove the rejected paint from the previously painted surfaces if, upon re-painting with the specified paint, the two coatings are not compatible.

B. Inspect painting and coating applications for the scheduled materials, color, sheen, texture, thickness, and coverage.

3.7 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. As work proceeds, and upon completion, promptly remove paint where spilled, splashed, and spattered.

C. During progress of the work keep the premises free from any unnecessary accumulation of tools, equipment, surplus materials, and debris.

D. Remove from the site discarded paint materials, rubbish, cans and rags at the end of each work day.

E. Collect waste, cleaning cloths, and materials which may constitute a fire hazard, place in closed metal containers, and remove from the site daily.

F. Upon completion of the work leave the premises neat and clean. Clean metal door and window frames, glass, and other paint-spattered surfaces. Remove spattered paint by proper methods of washing and scraping, taking care to not scratch or otherwise damage finished surfaces.

3.8 PROTECTION

A. Protect the work of other trades, whether to be painted or not, against damage by the painting and finishing work.

B. Place AWet Paint@ signs as required as a warning of newly painted surfaces.

C. Remove temporary protective wrappings provided by other trades for the protection of their work, after completion of the painting operations.

D. Upon completion of the work of other trades, touch-up and restore all damaged and defaced painted surfaces.

E. Correct any damage by cleaning, repairing or replacing and re-painting, as acceptable to the Owner=s representative.

F. Repair any damage resulting from inadequate and unsuitable protection.

3.9 SCHEDULE OF ITEMS TO BE PAINTED

A. Refer to the Drawings and Painting and Finishing Schedule at the end of this Section for designated finishes. Paint finish shall be provided for, but not limited to, the following items:

1. Interior: All interior surfaces as scheduled on the Drawings including, but not limited to:

a. Wood and hollow metal doors and frames.

b. Metal opening frames and trim.

c. Gypsum board.

d. Exposed concrete and plaster.

e. Steel rails and guards.

f. Exposed mechanical ductwork , hangers and supports, if the exposed structure is shown on the Drawings to be painted.

g. Exposed piping, hangers and supports, if scheduled on the Drawings to be painted.

h. Exposed conduit, hangers and supports, if scheduled on the Drawings to be painted.

I. Exposed structure including decking, joists, girders, beams, bridging, and miscellaneous metal fabrications, if scheduled on the Drawings to be painted.

.

j. Exposed structural columns.

k. Metal stair stringers and handrails.

l. Exposed wood trim.

2. Exterior: All exterior surfaces including, but not limited to:

a. Wood and hollow metal doors and frames.

b. Metal opening frames and trim.

c. Metal flashings, if exposed from ground level, and downspouts, other than stainless steel.

d. Pipe bollards.

e. Steel rails and guards.

f. Roof hatches.

g. Concrete and plaster walls, soffits, fascia, ceilings, beams and columns.

h. Structural steel decking, joists, beams and columns.

B. Do not paint the following Items:

1. Aluminum, brass, bronze, stainless steel and chrome-plated steel.

2. Pre-finished items, such as cabinetry, toilet compartments, acoustical ceiling materials, and mechanical and electrical equipment.

3. UL, FM, and other Code required labels.

4. Equipment identification, performance ratings, and name plates.

5. Finish hardware.

6. Toilet accessories.

3.10 PAINTING TREATMENTS SCHEDULE

General: The paint abbreviations below refer to those noted above in PART 2, MATERIALS.

NO.	LOCATION	MATERIALS
1	Exterior and Interior Metal including factory prefinished items scheduled for field finish	Shop Coat: As specified in other Sections Prime Coat: (RIP) Finish: Two coats (AREM)
2	Exterior Plaster, Concrete and Masonry where noted for paint including: Fascia, Soffits, Walls of Buildings, Exposed Concrete Beams, Exposed Concrete Retaining Walls	Prime Coat: Manufacturer=s Representative Finish: Two coats (EAE)
3	Exterior Plaster and Concrete where noted for Textured Coating (other than Special Coating per Section 09800) including: Fascia, Soffits, Walls of Building, exposed Concrete Beams, exposed Concrete Retaining Walls	Prime Coat: As recommended by manufacturer Finish: (EAHE) system or Prime Coat: XL-70 primer Finish: (TC)
4	Exterior Wood	Wood Stain: Two coats (WS) or Prime and Two coats (AREW)
5	Interior Smooth Concrete and Gypsum Board, where scheduled	Prime Coat: (PS) Finish: Two coats (AEE) or (AFE)

6	Interior Masonry, where scheduled	Prime Coat: (BF) Finish: Two coats (AEE) or (AFE)
7	Interior Wood for opaque finish including Wood Doors	Prime Coat: Manufacturer recommended primer Finish: Two coats (AEE) or (AFE)
8	Interior Hardwood, natural finish, including Doors, Door and Window Frames and Relights, Panels and all Trim, Wood-Faced Casework	Finish: Two coats (DO) or two coats (WS) with sanding sealers Sealer: Two coats (PSU) or Finish: Three coats (CWF)
9	Interior Concrete, Masonry and Gypsum Board, where noted for epoxy.	Prime Coat: As recommended by manufacturer Finish: Two coats (EPC)
10	Maintenance coating for interior smooth Concrete, Masonry, Gypsum Board and Wood	Prime Coat: As recommended by manufacturer Finish: (LOAE) Coats as required for coverage
11	Interior Metal including factory pre-finished items scheduled for painting	Prime Coat: (RIP) except where pre-finished Finish: Two coats (AREM)
12	Interior Metal where noted for epoxy	Prep Coat: JASCO Prep and Primer Prime Coat: Aro-Gard 561 primer Finish: Two coats (EPM)
13	Graffiti Resistant Coating over specified paint system.	Finish: Three coats (GRC)
14	Stained concrete or plaster: (CS) per manufacturer=s recommendation.	
15	Sealed concrete or plaster:	Finish: Three coats (TEC) or per manufacturer=s recommendation

END OF SECTION

SECTION 10125

WRITING / BULLETIN BOARDS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Metal framed writing boards.

2. Metal framed bulletin boards.

3. Metal framed combination writing / bulletin boards.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 09110 - Non-Load Bearing Steel Framing: Framing and plates within walls for attachment of boards.

2. Section 09250 - Gypsum Board: Wall substrate.

1.2 DESCRIPTION OF WORK

A. The extent of the writing and bulleting boards work is indicated on the Drawings and as specified herein, and includes providing and installing marker boards, tack boards and combination marker and tack boards, chalk and map rails, mounting devices and accessories for complete systems.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society of Testing and Materials (ASTM):

1. ASTM E 84 - Test Method for Surface Burning Characteristics of Building Materials.

2. ASTM B 221 - Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

C. Americans with Disabilities Act Accessibility Guidelines (ADAAG):

1. Accessibility Guidelines for Buildings and Facilities.

2. Accessibility Guidelines for Schools.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer’s data substantiating that the board materials comply with the requirements indicated. Provide individual panel weight for board units.

2. Shop Drawings: Indicate each type of writing and bulletin board required, including sections of typical trim members, accessories, and dimensioned elevations; show anchors, grounds reinforcement, accessories, layout, and installation details.

3. Samples: Provide samples of each product for the selection of colors, patterns and textures, and for verification of compliance with the requirements indicated.

a. Manufacturer’s color charts with the full range of colors available for each type of writing board and bulletin board required.

b. Actual sections of the board finish.

4. Assurance / Control Submittals:

a. Manufacturer’s certificate that the products meet or exceed the specified requirements.

b. Documentation of experience indicating compliance with the specified qualifications requirements.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Warranty: Submit a written Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.5 QUALITY ASSURANCE

A. Design Criteria: The Drawings indicate sizes, profiles, and dimensional requirements of the writing and bulletin boards. Boards by manufacturers other than those listed below having equal performance characteristics with deviations from the indicated dimensions and profiles may be considered provided the deviations do not change the design concept or intended performance.

B. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

1.6 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Deliver products to the Project Site in the manufacturer=s original, unopened protective packaging.

C. Do not deliver boards to the Project Site until the building has been enclosed, other work within the areas where the boards are to be installed is substantially complete, and the

areas are ready for installation of the boards.

D. Protect the boards from damage during delivery, handling, storage and installation.

1.7 JOB CONDITIONS

A. In the areas to receive boards, maintain a constant temperature of at least 65E F or 72 hours before, during and for 48 hours after completion of the installation.

B. Do not install the boards until the air conditioning system has been put into service.

1.8 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Special Warranty:

1. Provide a manufacturer's written Warranty, agreeing to replace boards that do not retain their original writing and erasing qualities, become slick or shiny, or exhibit crazing, cracking or flaking. Bulletin boards shall not warp or crumble.

2. Warranty Period: Ten (10) years from the date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Claridge Products and Equipment, Inc.

2. Greensteel.

3. Best-Rite Manufacturing.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS

A. Writing / Bulletin Boards: The design is based on models by Claridge Products and Equipment.

C. Models including the following:

1. Types:
   a. Writing Boards: Durocite Series 2, Type D; framed 1/2" treated hardboard; 48" high x width indicated, by Claridge.

   b. Cork Bulletin Boards: Cork Bulletin Board Series 2, Type CO; 48" high x width indicated, by Claridge.

   c. Combination Writing / Bulletin Boards: Durocite Series 2, Type H; framed 1/2" treated hardboard, 48" high x width indicated; writing board with two (2) 48" x 48" wide cork bulletin boards at each end, by Claridge.

2. Writing Surface: Marker type. Color as selected.

3. Chalk Rail: Required, with end stops.

4. Frame: Aluminum, clear satin anodized.

5. Cork Bulletin Board: 1/8" single-layer mounted, seamless, sanded for natural appearance.

6. Map Rail and Hooks: 2 map hooks for each 4 linear feet of map rail.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that the surfaces, substrates and conditions are as required, and ready to receive the work.

C. Verify that interior moisture and temperature approximates normal occupied conditions.

D. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install boards in accordance with the manufacturer's published instructions and at the locations shown on the Drawings.

B. Secure boards to blocking provided under Section 09110 Non-Load Bearing Steel Framing.

C. Mount boards plumb and level.

3.3 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect installations for square, plumb, level and secure attachment to the structure.

C. Verify that all required accessories have been provided and installed.

3.4 CLEANING

A. Section 01700- Execution Requirements: Cleaning the installed work.

B. Break in writing boards only as recommended by the manufacturer.

C. Clean surfaces in accordance with the manufacturer=s recommendations and with approved materials.

END OF SECTION

SECTION 10156

PHENOLIC TOILET PARTITIONS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Solid polymer toilet partitions.

2. Solid polymer urinal screens.

3. Solid polymer dressing compartments.

4. Institutional hardware.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Substrate for attachment.

2. Section 04230 - Reinforced Unit Masonry: Substrate for attachment.

3. Section 06100 - Rough Carpentry: Backing plates within walls for partition attachment.

4. Section 09110 - Non-Load Bearing Steel Framing: Framing and plates within walls for partition attachment.

5. Section 10810 - Toilet Accessories: Coordinate compartment installation with subsequent accessories installation.

1.2 DESCRIPTION OF WORK

A. The extent of the phenolic toilet partitions work is indicated on the Drawings and as specified herein, and includes providing and installing floor-mounted / overhead braced toilet compartments, urinal screens, dressing compartments, hardware and accessories necessary for a complete and functional system.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society for Testing and Materials (ASTM):

1. ASTM A 167 - Specification for Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet and Strip.

C. Americans with Disabilities Act Accessibility Guidelines (ADAAG):
   1. Accessibility Guidelines for Buildings and Facilities.

   2. Accessibility Guidelines for Schools.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

   1. Product Data: Manufacturer=s detailed technical data for materials, fabrication, and installation, including catalog cuts of anchors, hardware, fastenings and accessories.

   2. Shop Drawings: Fabrication and erection drawings of toilet partitions, urinal screens, and dressing compartments assemblies not fully described in the manufacturer=s product drawings, templates, and instructions for anchorage devices built into other work; partitions layout plan, elevations, dimensions, door swings, details of floor and wall supports and connections.

   3. Samples: Not less than 2" x 3" of the actual solid polymer material, for selection of finishes, colors and patterns.

   4. Assurance / Control Submittals:

      a. Manufacturer=s certificate that the products meet or exceed the specified requirements.

      b. Documentation of experience indicating compliance with the specified qualifications requirements.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

   1. Warranty: Provide written limited Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.5 COORDINATION

A. Coordinate plumbing rough-in locations with Division 15 Installer to ensure proper location and fitting of the work.

B. Furnish inserts and anchorages which must be built into other work for the installation of toilet partitions, screens and related work. Coordinate deliver with other work to avoid delay.

C. Coordinate with the installation of toilet accessories, as scheduled.

1.6 QUALITY ASSURANCE

A. Qualifications:

   1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

   2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

B. Take field measurements prior to the preparation of Shop Drawings and fabrication, where possible, to ensure proper fitting of the work. Allow for adjustments within the specified tolerances whenever taking field measurements before fabrication might delay the work.

C. Conform to ADAAG for access and operation of compartment doors and hardware by the handicapped.

1.7 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store, and protect the products.

B. Protect partitions, screens, hardware, accessories and other items during transit, delivery, storage and handling to prevent damage, soiling and deterioration.

C. Do not deliver products until wet work, grinding and similar operations which could damage, soil or deteriorate the materials has been completed in the installation areas.

D. If the partitions and screens must be stored in other than the installation areas, store only in areas meeting the same requirements as specified for the installation areas.

1.8 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Limited Warranty:

1. Submit manufacturer=s Limited Warranty against breakage and corrosion, and agreeing to replace products which are defective in materials or workmanship.

2. Warranty Period: Fifteen (15) years from the date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Bobrick Washroom Equipment, Inc.

2. Accurate Partitions Corp.

3. Sanymetal (Crane Plumbing Co.).

4. Santana Products, Inc.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS

A. Panels, Doors, Pilasters and Screens:

1. Solid plastic, fabricated from High Density Polyethylene (HDPE) containing a minimum of 50% recycled material manufactured under high pressure forming a single component section.

2. Water-resistant, graffiti-resistant, non-absorbent.

3. 1" thick, unless otherwise indicated.

4. Self-lubricating surface that resists marking by pens, pencils and other writing instruments.

5. All panels, doors, pilasters and screens to be shipped from the manufacturer with a special protective plastic covering.

6. Characteristics:

   a. Dual component compression molded High Density Polyethylene (HDPE) of solid virgin resin materials in colors that extend throughout the material.

   b. Panels, doors, pilasters and screens shall have recycled material (HDPE) as the core material.

   c. Use material that has been selected for surface flatness and smoothness. Exposed surfaces that exhibit seam marks, roller marks, discoloration, telegraphing of core, or other imperfections on the finished units are not acceptable.

B. Pilaster Shoes: Type 302 / 304 stainless steel, 3" high minimum, and 18 gage, No. 4 satin finish, ASTM A 167.

C. Stirrup Brackets: Manufacturer=s heavy-duty design for attaching panels to walls and pilasters, stainless steel, anodized aluminum or chromium-plated non-ferrous cast alloy, to match the hardware finish.

D. Style: Floor-Mounted / Overhead-Braced, 1080 DuraLine Series by Bobrick.

E. Provide colors and patterns as selected from the manufacturer=s full line of standard colors and patterns.

2.3 PARTITIONS AND SCREENS

A. Shall be solid plastic with Type 304 stainless steel hardware throughout. All hardware shall be concealed on the inside of compartments.

B. Style: Floor-Mounted, DuraLine Series 1083 by Bobrick.

2.4 DRESSING COMPARTMENTS

A. Floor-Mounted / Overhead-Braced, solid phenolic partitions. Panels, doors, and pilasters to be 1" thick; Type 304, 18-8 stainless steel hardware, satin finish. DuraLine Series 1080 by Bobrick.

B. Wall-Mounted, 1" thick solid phenolic benches with stainless steel supports, satin finish. Series 1080 by Bobrick.

2.5 HARDWARE AND ACCESSORIES

A. Manufacturer=s heavy-duty operating hardware and accessories;; stainless steel; Institutional Series.

1. Hinges shall be integral hinge system. Pilasters to be machined to accept door and hinge mechanisms. The hinge mechanism to consists of a 2 piece 1/2" diameter nylon pin with ACam Action@ and a 3/16" stainless steel pin inserted into the lower portion of the pilaster and door. A one piece 1/2" diameter, 4" long nylon pin to be inserted into the top portion of the pilaster and door. Door closures to be factory set to accommodate all conditions and to allow for positive opening and closing action, free of impediment.

2. Door Pull and Wall Stop: Type 304 cast stainless steel.

3. Door latch housing fabricated from heavy aluminum extrusion (6364-T5 alloy) with clear anodized finish, surface-mounted and thru-bolted to the door with one-way sex bolts. Slide bolt and button shall be heavy aluminum.

4. Door strike and keeper fabricated from heavy aluminum extrusion (6364-T5 alloy) with clear anodized finish, wrap around flange, surface-mounted and thru-bolted to the pilaster with one-way sex bolts. Strike shall be 6" in length.

5. Coat Hooks: Combination coat hook and bumper fabricated from Type 304 stainless steel.

6. Finish: Stainless steel, No. 4 satin.

B. Overhead Bracing: Continuous extruded heavy-duty; mill finish;18 gauge stainless steel brackets.

C. Anchorage and Fasteners: Manufacturer=s standard exposed fasteners of stainless steel, chromium-plate steel, or brass finished to match the hardware; theft-resistant heads and nuts. Use stainless steel concealed anchors.

1. Steel Plate Reinforcement: Carbon steel, prepared for fasteners; 1/8" thick.

D. Add one (1) additional coat hook on the inside of handicapped accessible stalls and stalls with out-swinging doors.

2.6 FABRICATION

A. General:

1. Comply with the details shown for profile, layout and construction of compartments, screens and other items. Where not otherwise shown, comply with the manufacturer=s written instructions.

2. Furnish standard panels, doors, pilasters and screens fabricated from the partition system specified, unless otherwise indicated. Furnish units with cutouts, drilled holes, and internal reinforcement to receive partition-mounted hardware and accessories, as shown.

3. Pre-Cut Openings: Fabricate with pre-cut openings, wherever possible, to receive hardware and accessories. Locate openings accurately and use templates or roughing-in diagrams for the proper size and shape. Smooth the edges of

cutouts and seal edges of cutouts with a water-resistant material. Provide radiused machined edges and bottom burn strip.

4. Fabricate from single piece material, except where the required length exceeds the maximum length fabricated by the manufacturer. Locate joints at even intervals through the material, aligned with other adjacent joints, and as approved on the final Shop Drawings. Form joints using the manufacturer=s recommended adhesive for a smooth even appearance of matching color and inconspicuous appearance. Provide joints of equal or greater strength than the material being joined.

B. Floor-Mounted / Overhead-Braced Partitions: Partitions, Doors and Pilasters: Flush type, manufacturer=s standard. Stainless steel bracing assembly, manufacturer=s standard, anchored to each pilaster and to the wall. Furnish 3/8" galvanized steel leveling devices to permit structural connection to the floor. Furnish a shoe at each pilaster to conceal the anchorages.

C. Doors: Unless otherwise indicated, furnish 24" wide in-swinging doors for standard toilet stalls and 32" wide (clear opening width) out-swinging doors for stalls equipped for use by the handicapped.

D. Floor-Mounted Urinal Screens: Panels and pilasters of the same construction and finish as the partitions. Furnish 3/8" galvanized steel leveling devices, welded to 11 gauge steel core. Furnish a shoe at each pilaster to conceal the anchorages.

2.7 FINISHES

A. Panels, Doors, Pilasters and Screens: Single color as selected from the manufacturer=s standard colors. Submit for selection as required above.

B. Overhead Bracing: Mill finish.

C. Stainless Steel: No. 4 bright directional polish.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work, including spacing of plumbing fixtures, and location of built-in framing and backing plates.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with the manufacturer=s recommended procedures and installation sequence.

B. Install partitions plumb, level, straight, square, secure and rigid in accordance with the manufacturer=s published instructions, and as shown on the Drawings.

C. Floor-Mounted / Overhead-Braced Partitions:

1. Set pilasters with anchorages having not less than 2" penetration into structural floors, unless otherwise recommended by the partition manufacturer.

2. Secure pilasters to the floor with the anchorage devices provided.

3. Level, plumb and tighten the installation with the anchorage devices furnished.

4. Secure overhead braces to pilasters with not less than two (2) fasteners per face.

5. Hang doors and adjust so tops of doors are parallel with the overhead brace when the doors are in the closed position.

D. Floor-Mounted Urinal Screens:

1. Set pilasters with anchorages having not less than 2" penetration into structural floors, unless otherwise recommended by the partition manufacturer.

2. Set units in accordance with the manufacturer=s instructions for secure support, and to resist lateral impact.

3. Anchor panels to walls with two (2) panel brackets and to vertical upright pilasters anchored to the floor.

4. Attach units with heavy-duty concealed anchoring devices, as recommended by the manufacturer, and to suit the wall construction.

5. Secure panels to built-in devices using concealed fasteners.

6. Level, plumb and tighten the installation with the anchorage devices furnished.

E. Secure panels to walls with not less than two (2) stirrup brackets attached near the top and bottom of the panels. Locate wall brackets so holes for wall anchorages occur in masonry or tile joints, where occurs. Secure panels to pilasters with not less than two (2) stirrup brackets located to align with the stirrup brackets at the wall. Secure panels in position with the manufacturer=s recommended anchoring devices.

F. Attach panels and pilasters to brackets with through sleeve, tamper-proof bolts and nuts.

G. Locate head rail joints at the center line of pilasters.

H. Provide adjustment for floor variations with screw jacks through steel saddles integral with the pilaster.

I. Conceal floor fastenings with stainless steel shoes.

J. Provide clearance of not more than 1/2" between pilasters and panels, and not more than 1" between panels and walls.

K. Align the hardware to provide uniform clearance at vertical edges of doors, not exceeding 3/16".

L. Install door bumper coat hooks on partitions or walls.

M. Provide hardware at handicapped accessible compartments in compliance with ANSI A117.1.

N. Install one (1) additional wall-mounted bumper at handicapped accessible stall doors and out-swinging doors.

3.3 CONSTRUCTION

A. Interface With Other Work:

1. Coordinate the placement of support framing and backing plates in walls.

B. Site Tolerances:

1. Maximum Variation from True Position: 1/4".

2. Maximum Variation From Plumb: 1/8".

3.4 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting the installed work.

B. Adjust and lubricate hardware for proper operation after installation.

C. Adjust hardware for uniform clearance at the vertical edge of doors.

D. Adjust adjacent components for consistency of line and plane.

E. In-Swinging Doors: Adjust hinges to locate doors approximately 30 degrees from the closed position when unlatched.

F. Out-Swinging Doors (and entrance swing doors): Adjust hinges to gently return doors to the fully closed position.

G. Restore damaged and soiled areas per the manufacturer=s recommendations.

H. Repair damaged and defective components, where possible, to eliminate defects functionally and visually. Where not possible to repair to the satisfaction of the Owner=s representative, replace the damaged units.

3.5 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect installations for plumb, level, alignment, square, secure and rigid.

3.6 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Remove protective masking.

C. Clean exposed and semi-exposed surfaces using materials and by methods recommended by the partitions manufacturer.

D. Clean hardware, fittings and accessories.

3.7 PROTECTION

A. Provide protection, as necessary, to prevent damage during the remainder of the construction to ensure that the work will be without damage and deterioration at the time of final acceptance.

END OF SECTION

SECTION 10190

CUBICLE CURTAIN SYSTEM

PART 1 GENERAL

1.1 SUMMARY

A. This Section includes:

1. Cubicle curtain tracks, carriers and curtains.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 06100 - Rough Carpentry: Blocking.

2. Section 09110 - Non-Load Bearing Steel Framing: Backing plates.

3. Section 09250 - Gypsum Board: Finished walls and ceilings.

4. Section 09510 - Acoustical Ceilings: Finished ceilings.

1.2 DESCRIPTION OF WORK

A. The extent of the cubicle curtain system work is indicated on the Drawings and as specified herein, and includes providing and installing curtain tracks, carriers, hangers, curtains and all accessories necessary for a complete and operational curtain track system.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. National Fire Protection Association (NFPA):

1. NFPA 701 - Standard Methods of Fire Tests for Flame Propagation of Textiles and Films.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Copies of manufacturer=s detailed technical data for materials, fabrication and installation of cubicle curtain tracks and curtains specified herein.

Include catalog cuts of fittings, anchors, fastenings and accessories.

2. Shop Drawings: Show layout and types of cubicles, sizes of curtains, number of carriers, anchorage details, and conditions requiring accessories. Indicate dimensions taken from field measurements.

3. Samples: Full-size units of each type of the following products:

   a. Curtain Fabric: 12" square swatch or larger samples as required to show the complete pattern repeat; from the same dye lot used for this Project, with the specified treatments applied. Mark the top and face of the material.

   b. Mesh Top: Not less than 4" square.

   c. Curtain Track: Not less than 4" long.

   d. Curtain Carrier: Full-size units.

4. Cubicle Schedule: Use same room designations as shown on the Drawings.

5. Assurance / Control Submittal:

   a. Manufacturer=s certificate that the products meet or exceed the specified requirements.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

1.6 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Deliver products to the Project Site in the manufacturer=s original, unopened packaging.

C. Handle to prevent damage to tracks, carriers and curtains.

D. Store to prevent damage to the materials, finishes and operating mechanisms.

1.7 JOB CONDITIONS

A. Environmental Limitations: Do not install curtains until areas where the products are to be installed are enclosed and weatherproof, wet work in the spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are stabilized and maintained at the levels indicated for the Project when occupied for its intended use.

B. Field Measurements: Where the track is indicated to fit to other construction, verify the dimensions of other construction by field measurements before fabrication and indicate the measurements on the Shop Drawings.

C. Coordinate the fabrication schedule with the construction progress to avoid delaying the work.

1.8 MAINTENANCE

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Maintenance Data: For tracks and curtains; include in the Maintenance Manuals specified in Division 1.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Cubicle Curtain Factory, Inc.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 CURTAIN TRACKS

A. Cubicle Curtain Factory designations are used within this Section to establish the quality and to identify the products required.

B. Extruded Aluminum Track, No. 1200: 1-3/8" wide x 3/4" high aluminum track.

C. Suspended Extruded Aluminum Track, No. 1100: 1-3/8" wide x 3/4" high aluminum track.

D. Curved Track: Factory fabricated 12" radius bends, minimum.

E. Finish: White baked enamel, or as selected.

2.3 ACCESSORIES

A. Fabricate connectors, end caps, coupling sleeves, wall brackets, filler caps, ceiling flanges, suspension tubing, studs and other accessories from same material and with the same finish as the track; manufacturer=s standards..

1. Suspended Track Support: Not less than 1" o.d. aluminum tubing.

2. End Stop: Removable.

B. No. 12 Curtain Carriers: Two (2) nylon rollers, nylon axle and tangle free nylon swivel stem with chrome-plated steel hooks.

C. Exposed Fasteners: Stainless steel.

D. Concealed Fasteners: Stainless steel.

2.3 CURTAINS

A. Curtain Fabric: Manufacturer's standard curtain fabric with the following characteristics:

1. Fiber Content: 100% polyester.

2. Launderable to a temperature of not more than 160E F.

3. Inherently and permanently flame resistant, and identical to that which has

passed NFPA 701 when tested by a testing and inspecting agency acceptable to the authorities having jurisdiction.

4. Pattern: As selected from the manufacturer's full range of available fabrics.

5. Color: As selected from the manufacturer's full range of available colors.

B. Mesh: No snag, tightly woven selvedge, 1-1/4" fire-retardant; grommet band at the top edge; white or beige color nylon mesh 70% open (1/2@ diagonal).

E. Curtain Grommets: #2 two-piece, rolled-edge, rustproof, nickel-plated brass; spaced not more than 6" on centers and machined into top hem.

2.5 FABRICATION

A. Fabricate curtains to comply with the following requirements:

1. Width: Equal to track length from which the curtain is hung, plus 20% added fullness.

2. Length: Equal to the floor-to-ceiling height, with 20" mesh top, and 10" above the finished floor at the bottom.

3. Mesh: Mesh serged to the face fabric, turned and stitched with double needle lock stitch no less than 1/2@ in width.

4. Bottom and Side Hems: Double folded 1-1/2@ and sewn with double needle lock stitch.

5. Vertical Seams: Serged together and sewn with double needle lock stitch not less than 1/2@ wide.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install tracks level and plumb, and in compliance with the manufacturer's written instructions. Provide tracks fabricated from one continuous length up to 18 feet.

B. Track: Surface-mounted. Fasten at intervals of not less than 24" o.c. Fasten supports at each splice and tangent point of each corner. Center fasteners in the track to ensure unencumbered carrier operation. Attach track to the ceiling as follows:

1. Mechanically fasten directly to the bottom of concrete decks with anchor screws.

2. Mechanically fasten directly to finished gypsum board ceilings with toggle bolts.

3. Mechanically fasten to suspended ceiling grid with screws.

4. Mechanically fasten to furring through suspended ceiling with screw and tube spacer.

C. Suspended Track Mounting: Install track with suspended supports at intervals of not more than 48". Fasten supports at each splice and tangent point of each corner. Secure ends of track to wall with flanged fittings or brackets.

D. Track Accessories: Install end caps, connectors, end stops, coupling and joining sleeves, and other accessories as required for a secure and operational installation.

E. Curtain Carriers: Provide curtain carriers at 6" o.c. along the full length of the curtain.

F. Curtains: Hang on each track.

3.3 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting the installed work.

B. Adjust track and carriers for smooth operation.

3.4 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect the installation for proper alignment, attachment to backing or structure, and operation.

3.5 DEMONSTRATION

A. Train the Owner's personnel to adjust, operate, and maintain safety (loading of the units).

1. Train Owner's maintenance personnel on procedures and schedules for changing and cleaning the curtains.

END OF SECTION

SECTION 10200

LOUVERS AND VENTS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Fixed aluminum wall louvers.

2. Bird screens.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Substrate for attachment of units.

2. Section 04230 - Reinforced Unit Masonry: Substrate for attachment of units.

3. Section 07900 - Joint Sealers: Perimeter sealant at louver and vent frames.

1.2 DESCRIPTION OF WORK

A. The extent of the louvers and vents work is indicated on the Drawings and as specified herein, and includes providing and installing louvers and vents with bird screens, anchor devices, flashings and sealants necessary for complete and weather-tight installations.

B. The work of this Section does not include providing and installing louvers for doors specified in Sections 08100 and 08210.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society of Civil Engineers (ASCE):

1. ASCE / SEI 7 - Minimum Design Loads for Buildings and Other Structures.

C. American Society for Testing and Materials (ASTM):

1. ASTM B 221 - Aluminum-Alloy Extruded Bars, Rods, Wire, Shapes, and Tubes.

2. ASTM E 330 - Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference.

3. ASTM E 1996 - Specification for Performance of Exterior Windows, Curtain Walls, Doors, and Impact Protective Systems Impacted by Windborne Debris in Hurricanes.

D. International Code Council:

1. International Building Code (IBC), 2009.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Provide data describing the design characteristics, maximum recommended air velocity, design free area, materials and finishes.

2. Shop Drawings: Indicate louver layout plan and elevations, openings and clearance dimensions, tolerances; head, jamb and sill details; blade configuration, screens, blankout areas, and frames.

4. Samples: When requested, submit 6" X 6" square of each required finish. Prepare samples on metal of the same gage and alloy as that to be used in the work. Where color variations are to be expected, submit two (2) or more samples showing the limits of such variations.

5. Assurance / Control Submittals:

a. Manufacturer's certificate that the Products meet or exceed the specified requirements.

b. Calculations indicating that the products and anchorages satisfy the performance requirements.

c. Documentation of experience indicating compliance with the specified qualifications requirements.

1.5 COORDINATION

A. Verify size, locations and placement of louver units prior to fabrication, wherever possible.

B. Coordinate with the mechanical subcontractor for size and location of required louvers and vents.

C. Where size or location of louvers or vents differ with the Drawings, notify the Owner=s representative.

1.6 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

B. Performance Requirements:

1. Provide capacity to withstand the following loading requirements for exterior units:

a. Design and install to resist combined positive and negative windloading in accordance with IBC 2009, Section 1609 with a Vmph of 170, qs of 74.0 psf, exposure [B] [C] [D], and importance factor of [1.0] [1.25] [1.5], as

applicable per ASCE 7.

b. Height of louver units above ground level are indicated on or can be calculated from the Drawings.

1.7 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Protect finished aluminum surfaces with a strippable coating. Do not use adhesive papers or sprayed coatings which bond when exposed to sunlight or weather.

C. Deliver product to the Project Site in the manufacturer=s original, unopened protective packaging.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. The Airolite Co.

2. Airline Products, Nystrom Building Products.

3. Construction Specialties, C/S Louvers.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS

A. Aluminum: ASTM B 221, extruded shapes.

B. Bird Screen: 1/4" x 1/4" mesh, aluminum, set in aluminum frame.

2.3 ACCESSORIES

A. Fasteners and Anchors: Stainless steel.

B. Flashings: Of the same material as the louver frame.

C. Sealants: As specified in Section 07900 - Joint Sealers.

2.4 FABRICATION

A. Louver Panel Thickness: 6" deep; face measurements as shown on the Drawings.

B. Louver Blade Design: Weatherproof, minimum material thickness of 0.081"; integral and lateral rain water stops positioned on the blades.

C. Louver Frame: Channel shape, mechanically fastened corner joints, minimum material thickness of 0.081".

D. Head and Sill Flashings: Extruded to the required shapes, single length, in one piece per

location.

E. Screens: Install screen mesh in shaped frames, reinforce corner construction, shop install to the louvers with non-ferrous fasteners.

2.5 FINISH

A. Exposed Aluminum Surfaces: Clear anodized or as selected from the manufacturer=s standard finishes.

B. Maintain same color range within each unit. Do not mix light and dark shades within an assembly.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

C. Report in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install louver assemblies in accordance with the manufacturer's published instructions.

B. Install louvers level, plumb, free of rack and securely attached to the structure.

C. Install flashings and align louver assemblies to ensure that moisture sheds from the flashings, and to the exterior.

D. Secure louvers in opening framing with concealed fasteners as required to meet the Performance Requirements.

E. Install perimeter sealant in accordance with Section 07900 - Joint Sealers.

3.3 ISOLATION REQUIREMENTS

A. Dissimilar Metals: Where aluminum surfaces are in contact with, or fastened to dissimilar metals except stainless steel, zinc or zinc coating, the aluminum shall be protected from the dissimilar metal. Where aluminum contacts another metal, paint the dissimilar metal with epoxy paint. Where drainage from a dissimilar metal passes over aluminum, paint the dissimilar metal with a non-lead pigmented paint.

B. Cementitious Materials: Paint aluminum where in contact with mortar, concrete, masonry or other cementitious material, with an alkali-resistant coating such as heavy-bodied bituminous paint or epoxy paint.

C. Wood Contract: Isolate aluminum from cedar, redwood, oak and acid-treated lumber by means of unbroken 6-mil polyethylene construction sheet or a heavy coating of

metal-protective paint.

D. Surfaces in contact with sealants after installation need not be coated with any type of protective material.

3.4 PROTECTION

A. Protect the finish from damage during construction by the use of temporary protective coverings approved by the manufacturer.

3.5 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting the installed work.

B. Remove protective covering at project completion or when directed by the Owner=s representative.

C. Restore finishes damaged during installation and construction so no evidence of the corrective work remains.

D. Return items which cannot be refinished in the field to the shop, make the necessary alterations, and refinish the entire unit, or provide a new unit.

3.6 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect the installations for correct location, alignment and elevation, plumb, level, true to line, free of rack and secure attachment and anchorage.

3.7 CLEANING

A. Section 01700 - Execution Requirements: Cleaning installed work.

B. Immediately prior to final inspection, remove protective wrappings.

C. Wipe down all louver blades and frames before final acceptance.

END OF SECTION

SECTION 10260

WALL AND CORNER GUARDS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Wall Rails.

2. Corner Guards.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Wall substrate.

2. Section 04230 - Reinforced Unit Masonry: Wall substrate.

3. Section 09250 - Gypsum Board: Wall substrate.

4. Section 09110 - Non-Load Bearing Steel Framing: Substrate framing for attachment of products.

1.2 DESCRIPTION OF WORK

A. The extent of the wall and corner guards work is indicated on the Drawings and as specified herein, and includes providing and installing pre-molded corner guards and wall rails with all mounting accessories for complete installations.

1.3 REFERENCES

A. American Society for Testing and Materials (ASTM):

1. ASTM E 84 - Test Method for Surface Burning Characteristics of Building Materials.

B. National Fire Protection Association (NFPA):

1. NFPA 101 - Life Safety Code.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer=s product literature; style, texture and color options.

2. Shop Drawings:

a. Indicate layout, terminations, mounting heights, method of attachment and other applicable details.

b. Installation details.

3. Samples: Two (2) 12" long, full-size samples, illustrating type, texture and color.

4. Assurance / Control Submittals:

a. Manufacturer=s Instructions: Include installation template, attachment devices, and procedures for the care of finished surfaces.

b. Documentation of experience indicating compliance with the specified qualifications requirements.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Warranty: Submit a written limited Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

B. Single Source Responsibility: Obtain all wall protection system components from a single manufacturer.

1.6 DELIVERY, STORAGE AND HOLDING

A. Section 01600 - Product Requirement: Transport, handle, store and protect the products.

B. Deliver products to the Project Site in the manufacturer=s original, unopened protective packaging.

C. Identify the contents, manufacturer, brand name, and applicable standards.

D. Store in the original packaging, off the ground, and under protective covers.

E. Handle to prevent damage.

1.7 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Limited Warranty:

1. Provide a written Warranty jointly signed by the manufacturer and the installer certifying that the products and the installation is free of defective materials and workmanship and will repair or replace any defective component, in whole or in part, as necessary to restore the product to its original intended state and

integrity.

2. Warranty Period: Five (5) years from the date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Koroseal Wall Protection Systems.

2. Pawling Corp.

3. C/S Acrovyn.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS

A. Corner Guard: Surface-mounted, adhesive-applied, 90 degrees, 0.093" rigid vinyl, 3" wings. Class A fire-rating. Color as selected from manufacturer=s standards.

B. Wall Rails: 5-1/2" flat profile, full-length vinyl bumper and continuous aluminum retainer, reinforced rigid plastic returns and inside and outside corners; 3" projection, 1-1/2" gripping area. Class A fire-rating. ADAAG compliant. Color as selected from manufacturer=s standards.

C. Fire Performance Characteristics: Comply with ASTM E 84.

1. Flame Spread: 25 or less.

2. Smoke Developed: 450 or less.

2.3 FASTENERS AND OTHER MATERIALS

A. Provide non-corrosive fasteners as recommended by the manufacturer; clips, and mounting devices compatible with the product material and finish; concealed or of same color and finish as the components they secure where exposed to view.

B. Other materials, not specifically described but required for a complete and proper installation; shall be as selected, and subject to approval.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirement: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates, and conditions are as required, and ready to receive the work.

1. Examine walls, structure, and other areas scheduled to receive the products for conditions that will affect the quality and execution of the work.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install wall products in accordance with the manufacturer=s published instructions.

B. Install products at locations shown or scheduled. Securely mount with concealed theft-resistant fasteners. Attach to substrates in accordance with the manufacturer=s instructions.

C. Install field-cut corner guard lengths from top of wall base to align with the top of door frames.

D. Cooperate with other trades for attachment to finish surfaces.

E. Install products level and plumb.

F. Comply with ADAAG for wall rail mounting height.

3.3 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect locations, mounting heights and attachments to verify that installations comply with the Drawings and ADAAG.

3.4 ADJUSTING AND CLEANING

A. Section 01700 - Execution Requirements: Adjusting and cleaning of installed work.

B. Remove and dispose of all debris, crates and equipment upon completion of the work.

C. Remove excess adhesive from wall surfaces in accordance with the manufacturer=s instructions.

D. Adjust wall rails for level and alignment.

E. Touch-up surfaces damaged during installation; use matching finish.

F. Wipe down surfaces before final acceptance inspection.

END OF SECTION

SECTION 10350

FLAGPOLES

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Ground-mounted flagpoles.

2. Truck, halyards, and accessories.

3. Flags.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Concrete bases.

2. Section 07900 - Joint Sealers: Sealant for base.

1.2 DESCRIPTION OF WORK

A. The extent of flag pole work is indicated on the Drawings and as specified herein, and includes providing and installing foundations, ground-mounted flag poles with manually-operated winch, halyards, flags and all necessary accessories for complete flag pole assemblies.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society of Civil Engineers (ASCE):

1. ASCE / SEI 7 - Minimum Design Loads for Buildings and Other Structures.

C. American Society for Testing and Materials (ASTM):

1. ASTM B 241 - Specification for Aluminum and Aluminum-Alloy Seamless Pipe and Seamless Extruded Tube.

D. International Code Council:

1. International Building Code (IBC), 2018:

1.4 SYSTEM DESCRIPTION

A. Performance Requirements. Fabricate and install to withstand the following loading requirements:

1. Wind Loads: According to IBC 2018, Section 1609 and ASCE 7:

   a. Basic Wind Speed: 195 mph; qs of 86.0 psf

   b. Exposure Category: C

   c. Risk Category: Per IBC 2018, Table 1604.5

   d. Occupancy Category: Per IBC 2018, Table 1604.5

   e. Importance Factor: Per ASCE 7

   f. Terrain Factor: Calculated per ASCE 7

2. Seismic Loads: According to IBC 2018, Section 1613 and ASCE 7

   a. Seismic Design Category: D

   b. Seismic Importance Factor: Per ASCE 7

1.5 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer's technical data and installation instructions for the type of poles required.

.

2. Shop Drawings: Indicate detailed dimensions, jointing (if any), anchor requirements, imposed loads, and support system.

3. Foundation design drawings and calculations.

4. Samples: Finished metal for poles and accessories, if requested.

5. Assurance / Control Submittals:

   a. Manufacturer's certificate that the products meet or exceed the specified requirements.

   b. Calculations indicating that the system and anchorage satisfies the performance requirements.

   c. Documentation of experience indicating compliance with the specified qualifications requirements.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Warranty: Submit a written standard Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.6 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

B. Provide each flagpole as a complete unit, produced by a single manufacturer, including fittings, accessories, bases and anchorage devices.

C. Provide flagpoles and installations to meet the performance requirements herein. Use heavy pipe sizes, if required, for the flagpole type, height and wind load required.

D. Fabricate poles and ship to the Project Site in one piece, if possible. If more than one piece is necessary, provide snug fitting, precision joints with self-aligning, internal splicing sleeve arrangement for weather tight, hairline joints.

E. Design flagpole foundations under direct supervision of a registered Professional Structural Engineer licensed to practice in the jurisdiction where Project is located; experienced in the design of flagpole supports.

1.7 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store, and protect the products.

B. Spiral wrap each pole with heavy Kraft paper or other protective covering. Ship in a hard fiber tube or other protective container.

C. Deliver products to the Project Site in the manufacturer’s original packaging.

D. Store flagpoles and accessories to prevent damage to or soiling of the materials, finishes and operating mechanisms.

1.8 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Manufacturer’s Warranty: Provide manufacturer’s standard warranty against defects in product materials and workmanship.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering the specified items which may be incorporated into the work include the following:

1. American Flagpole, Inc., Division of Kearney-National Inc.

2. Eder Flag Manufacturing Company, Inc.

3. Concord Industries, Inc.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS

A. Flagpole: Commercial, tapered, ground-set, 6063-T6 wrought aluminum alloy, ASTM B 241.

1. Outside Butt Diameter: 6" or as determined by the manufacturer based on the exposure, height and design wind load criteria.

2. Outside Tip Diameter: 3-1/2".

3. Nominal Wall Thickness: As required to resist the wind loading.

4. Nominal Height: 40' - 0" measured from the top of the pole to the ground.

5. Mounting: Ground-mounted to a base and concrete foundation.

B. Truck Assembly: Stainless steel; stainless steel ball bearings, revolving, non-fouling, with cast aluminum cleats.

C. Halyard: Stainless steel aircraft cable with two (2) chrome plated bronze swivel snaphooks, plastic covered counterweight, and beaded sling.

D. Collar: Manufacturer's standard; finish to match the pole.

E. Foundation Sleeve: 16 gauge steel, galvanized corrugated tube with 3/16" thick steelbase plate and support plate, 3/4" diameter x 18" long ground spike, and steel centering wedges.

F. Ball: Manufacturer's standard flush seam ball, size as indicated, or if not indicated, to match the pole butt diameter, gold cast aluminum steel, finish to match the pole shaft or as selected.

G. Flags: One U.S. and one local jurisdiction; size: 4' x 6'.

H. Concrete: Specified in Section 03300 - Cast-in-Place Concrete.

I. Internal Halyard System: Manually-operated, geared winch with control stop device and removable handle. Provide stainless steel braided aircraft cable and concealed revolving truck assembly with plastic coated counter balance and sling; reinforced, flush access door secured with a cylinder lock.

2.3 FINISH

A. Clear satin brush aluminum

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

C. Report in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Excavate for concrete foundations to neat, clean lines in undisturbed soil. Provide forms where required due to unstable soil conditions. Remove wood, loose soil, rubbish and other foreign matter from the excavations; moisten the earth before placing concrete.

B. Coat metal sleeve surfaces below grade and surfaces in contact with dissimilar materials with a heavy coat of bituminous paint.

3.3 INSTALLATION

A. Install flagpoles in accordance with the manufacturer's written instructions, in compliance with the Shop Drawings, and to meet the performance requirements.

B. Install a foundation plate and centering wedges for flagpole bases; set in concrete base and fasten. Fill foundation tube sleeve with sand and compact.

C. Provide positive lightning ground for each flagpole installation.

3.4 ERECTION

A. Site Tolerances:

1. Maximum Variation From Plumb: 1"

3.5 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect flagpole installations and accessories for plumb and proper operation.

3.6 ADJUSTING AND CLEANING

A. Section - 01700 - Execution Requirements: Adjusting and cleaning of the installed work.

B. Clean flagpole surfaces immediately prior to erection.

C. Adjust operating devices for smooth halyard and flag function.

END OF SECTION

SECTION 10436

SIGNAGE

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Accessible signage.
2. Directional signage.
3. Tactile exit signs.
4. Elevator signs.
5. Exit enclosure signs.
6. Instructional signage.
7. Room identification signage.
8. Occupant load signs.
9. Fire fighting equipment signs.
10. Fire wall signs.
11. Floor and roof design load signs.
12. Dedication plaque.
13. Exterior signage.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Substrate for attachment.
2. Section 04230 - Reinforced Unit Masonry: Substrate for attachment.
3. Section 09250 - Gypsum Board: Substrate for attachment.
4. Sections of DIVISION 16 - Electrical: Requirements for lighted signs.

1.2 DESCRIPTION OF WORK

A. The extent of signage work is indicated on the Drawings and as specified herein, and includes providing and installing all interior and exterior signage, and all attachment

accessories.

B. Signage mounting height shall comply with ADAAG.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. Americans with Disabilities Act Accessibility Guidelines (ADAAG):

1. Accessibility Guidelines for Buildings and Facilities.

2. Accessibility Guidelines for Schools.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer=s product data and mounting details.

2. Shop Drawings:

a. Indicate sign styles, lettering font, foreground and background colors, locations, and overall dimensions of each sign.

b. Provide installation details.

3. Samples: Two (2) signs, full size, illustrating the type, style, letter font, colors and method of attachment, when requested.

4. Assurance / Control Submittals:

a. Manufacturer=s certificate that the products meet or exceed the specified requirements.

b. Installation templates, attachment devices, and procedures for the care of finished surfaces.

c. Documentation of experience indicating compliance with the specified qualifications requirements.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittal.

A. Warranty: Provide a written standard Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store, and protect the products.

B. Deliver products to the Project Site in the manufacturer's original, unopened protective packaging bearing the manufacturer=s name, contents, brand name, and applicable standards.

C. Handle to prevent damage to surfaces and edges.

D. Store in the manufacturer=s original packaging, off the ground and under protective covers.

1.7 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Manufacturer=s standard for materials and workmanship.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with project requirements, manufacture's offering products which may be incorporated into the work include the following:

1. Mohawk Sign Systems, Inc.

2. APCO Graphics Inc.

3. ASI-Modulex.

4. Best Sign Systems, Inc.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 SIGNAGE

A. Mohawk Sign Systems, Series 200A, is used as the standard for design and quality.

1. Construction: Signs shall be of one-piece construction. Added-on and / or engraved characters are not acceptable. Text shall be accompanied by Grade 2 braille.

2. Design and Location: Comply with ICC A117.1 requirements for visual characters and include the International Symbol of Accessibility.

3. Tactile characters / symbols: Raised 1/32" from the sign plate face.

4. Font: Times Roman Extra Black, upper and lower case.

5. Pictographs: AGA Symbol Signs repro art developed for the U.S. Department of Transportation to be used whenever possible.

2.2.1 ACCESSIBLE SIGNAGE

A. Accessible Signage: Post signage, including the International Symbol of Accessibility at the following locations:

1. Accessible entrances when not all entrances are accessible.

2. Accessible dressing, fitting and locker rooms where not all such rooms are accessible.

3. Accessible areas of refuge.

4. Exterior areas for assisted rescue.

5. Other locations required by the Building Code.

B. Directional Signage: Signage, including the International Symbol of Accessibility, indicating the route to the nearest like accessible element at the following locations:

1. Inaccessible building entrances.

2. Inaccessible public toilets and bathing facilities.

3. Elevators not serving an accessible route.

4. At each toilet and bathing room indicating the location of the nearest family or assisted-use toilet or bathing room, where provided.

5. At exits and exit stairways serving a required accessible space, but not providing an approved accessible means of egress.

C. Tactile Exit Signs: Provide AEXIT@ sign complying with ICC A117.1 adjacent to each door to exit discharge, exit passageway, exit ramp, exit stairway, area of refuge and exterior area for assisted rescue. Text shall read as follows:

a.. At doors providing access to an area of refuge from an adjacent floor area - AAREA OF REFUGE@.

b. At doors proving access to an exterior area for assisted rescue - AEXTERIOR AREA FOR ASSISTED RESCUE@.

D. Elevator Signs: Provide an approved pictorial sign of standard design adjacent to each elevator call station on all floors to read - AIN FIRE EMERGENCY, DO NOT USE ELEVATOR. USE EXIT STAIRS@.

E. Exit Enclosure Signs: Provide at each floor landing in exit enclosures connecting more than three (3) stories. Designate the floor level, terminus of the top and bottom of the enclosure and identification of the stair or ramp. Signage shall state the story of, and direction to, the exit discharge and availability of roof access from the enclosure for the fire department. Comply with the following:

1. Size shall be a minimum 8" X 8".

2. Letters designating the identification of the stair enclosure shall be a minimum of 2" in height.

3. All other lettering and numbers shall be a minimum of 1" in height.

4. Characters and background shall have a non-glare finish. Characters shall contrast in color with their background, with either light characters on a dark background or dark characters on a light background.

5. Locate 5 feet above the floor landing in a position readily visible when the doors are in the open and closed positions.

6. Floor level identification signs in tactile characters complying with ICC A117.1 shall be located at each floor level landing, adjacent to the door leading from the enclosure into the corridor.

F. Instructional Signage: In areas of refuge and exterior areas for assisted rescue, instructions on the use of the area under emergency conditions shall be posted. Instructions shall include all of the following:

1. Persons able to use the exit stairway do so as soon as possible, unless they are assisting others.

2. Information on planned availability of assistance in the use of stairs or supervised operation of elevators and how to summons such assistance.

3. Directions for use of the two-way communications system, where provided.

2.2.2 ROOM SIGNS

A Room Identification Signs: Provide wall-mounted signs at each door opening and where indicated on the Drawings.

1. Type A Signs: Size 4A x 6" (typical) at Room entrances indicating room number and name, including braille.

2. Type P Signs: Size 8" x 8" at Toilet Room doors, including the international symbols for Boys / Men, Girls / Women, including braille.

3. Type B Signs: Size 2" x 4" (typical) at secondary spaces, indicating room name only.
4. Type C Signs: Size 10" x 10" (typical) directional signs, including braille.

B Occupant Load Signs: Provide an approved legible permanent sign indicating the occupant load for all assembly occupancies. Post in a conspicuous place, near the main exit or exit access doorway from the room or space.

C. Floor and Roof Design Load Signs: Where live loads for floors or roofs, or portion thereof, have been designed to exceed 50 psf, post such design load signs in a conspicuous place in that part of each story or roof in which they apply.

2.2.3 FIRE SIGNS

A Fire Fighting Equipment Signs: Cabinets containing fire fighting equipment such as standpipes, fire hoses, fire extinguishers or fire department valves shall be identified in an approved manner by a permanently attached sign with letters not less than 2" high in a color that contrasts with the background color, and indicating the equipment contained

therein.

B Fire Wall Signs: Post effective and permanent signs or stenciling along fire walls, fire barriers, fire partitions, smoke barriers and smoke partitions and any other walls required to have protected openings and penetrations. Such identification shall:

1. Be located in accessible concealed floor, floor-ceiling and attic spaces.

2. Be repeated at intervals not exceeding 30 feet horizontally along the wall or partition.

3. Include lettering not less than 1/2" in height to read - AFIRE AND / OR SMOKE BARRIER - PROTECT ALL OPENINGS@ or other similar wording.

2.3 EXTERIOR SIGNAGE

A. Subject to compliance with project requirements, manufacture's offering products which may be incorporated into the work include the following:

1. Gemini, Inc.

2. Metal Arts.

3. Metallic Arts.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

C. Metal Signage:

1. Size: [8"] [12"] [15"] [36"] height; stroke, depth, and average width per manufacturer=s standard for the size and letter style selected.

2. Material: Cast aluminum.

3. Finish: [Satin] [Baked enamel] [Anodized]; color as selected.

4. Letter Style: As selected.

5. Mounting: Projected Spacer Mount with aluminum tube spacers.

6. Lettering / Name: To be provided.

7. Location: Mount in location shown or as directed.

D. Manufacturer to provide layout template.

2.4 DEDICATION PLAQUE

A. Metal Plaque:

1. Size: [16" x 20"] [18" x 18"].

2. Material: Bronze.

3. Letter Style: Times and Times Bold, engraved copy and logo, color filled, satin

finish, straight edge borders.

4. Mounting: Concealed.

5. Locations: Mount in locations, as directed.

B. Owner to provide sample of graphics, Contractor to prepare the artwork.

2.5 FASTENERS AND OTHER MATERIALS

A. Provide non-corrosive fasteners, hangers, and mounting devices compatible with the sign material and finish. Concealed or of the same color and finish as the components they secure where exposed to view.

B. Other materials, not specifically described but required for a complete and proper installation shall be as selected, and subject to approval.

C. Sign face surfaces shall not be deformed, distorted or discolored by the attachment of fasteners.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

1. Examine walls, doors, ceilings and other areas scheduled to receive signs for conditions that would affect quality and execution of the work. Notify the Owner=s representative if a sign will be obscured from view at any location.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install signage in accordance with the manufacturer's published instructions, and with ADAAG.

B. Install sign units and components at the locations shown or scheduled, securely mounted with concealed, theft-resistant fasteners.

C. Install level, plumb, and at the proper height. Cooperate with other trades for the attachment of sign units to finish surfaces.

D. Installations shall withstand normal wear and tear.

E. Exterior installations shall withstand environmental actions of wind and rain, and normal wear and tear.

3.3 CONSTRUCTION

A. Interface with Other Work:

1. Furnish full-size spacing templates for individually bundled letters and numbers for coordination with the work of other trades.

2. Furnish wiring diagrams for illuminated signs for coordination with the electrical trade for service to lighted units.

3.4 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting installed work.

B. Adjust signage, as necessary, for proper mounting height, plumb, level and secure attachment.

3.5 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect signage locations, attachments, and messages to verify that the installations conforms to the Drawings or information provided.

3.6 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Remove protective materials from surfaces.

C. Wipe clean before final acceptance inspection.

END OF SECTION

SECTION 10500

METAL LOCKERS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Double-tier locker units with hinged doors.

2. Benches

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-in-Place Concrete: Base for metal lockers and wall substrate for attachment.

2. Section 04230 - Reinforced Unit Masonry: Wall substrate for attachment.

3. Section 07900 - Joint Sealers: Sealants around perimeter of lockers.

4. Section 09110 - Non-Load Bearing Steel Framing: Wall structure for attachment.

5. Section 09250 - Gypsum Board: Wall finish.

1.2 DESCRIPTION OF WORK

A. The extent of the metal lockers work is indicated on the Drawings and as specified herein, and includes providing and installing double-tier, heavy-duty lockers, trim, sloped tops, locking mechanisms, accessories and benches.

B. Lockers shall provide for accessibility by the handicapped and shall comply with ADAAG.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society for Testing and Materials (ASTM):

1. ASTM D 609 - Practice for Preparation of Cold-Rolled Steel Panels for Testing Paint, Varnish, Conversion Coatings, and Related Coating Products.

2. ASTM D 2201 - Practice for Preparation of Zinc-Coated and Zinc-Alloy-Coated Steel Panels for Testing Paint and Related Coating Products.

C. Americans with Disabilities Act Accessibility Guidelines (ADAAG):

1. Accessibility Guidelines for Buildings and Facilities.

2. Accessibility Guidelines for Schools.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer=s product literature describing locker types, sizes, construction, accessories and colors.

2. Shop Drawings: Show lockers in detail, indicate layout, dimensions, details of fabrication and method of installation, fillers, base and accessories. Include plans, elevations, sections, and attachments to other work. Provide numbering sequence information. Verify critical dimensions affecting installation.

3. Assurance / Control Submittals:

a. Manufacturer=s certificate that the products meet or exceed the specified requirements.

b. Documentation of experience indicating compliance with the specified qualifications requirements.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Operation and Maintenance Data: Manufacturer=s recommendations for maintenance and cleaning.

2. Warranty: Provide a written standard Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store, and protect the products.

B. Protect products from water, dust and humidity damage during delivery, handling, storage and installation.

C. Do not deliver products to the Project Site until the building is enclosed and ready for their installation.

D. Deliver products to the Project Site in the manufacturer's original, unopened protective packaging.

E. Identify contents, manufacturer, brand name, and applicable standards.

F. Store products in a location protected from the weather and construction operations.

G. Protect adjacent work and materials from damage during installation of the lockers. Damaged work shall be repaired or replaced as determined by the Owner=s representative.

1.7 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Warranty:

1. Manufacturer=s standard for materials and workmanship.

2. Warranty Period: Two (2) years from the date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturer's offering products which may be incorporated into the work include the following:

1. Lyon Metal Products, Inc.

2. MEDART Locker Co.

3. Penco Products, Inc.

4. Republic Storage Systems, Inc.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 STANDARD LOCKERS

A. Type: Double-Tier, Heavy-Duty, ventilated, with tops sloped.

B. Frames: Minimum 16 gauge galvanizes steel channels or 12 gauge galvanized steel angles, with welded corners ground smooth and integral door stops. Provide minimum 16 gauge horizontal members between doors of double tier lockers to ensure rigidity.

C. Backs and Sides: Minimum 20 gauge galvanized steel sheet, except 16 gauge for exposed ends on non-recessed lockers, minimum. Flange back on vertical edges and sides where they intermember with backs, making double flanged rear corners.

D. Tops, Bottoms and Shelving:16 gauge galvanized steel flanged edges.

E. Doors: One-piece, 14 gauge galvanized steel sheet, flanged at all edges, reinforced to prevent springing. Ventilate door with perorations the full height.

F. Hinges: Heavy-duty galvanized, not less than 0.050" thick steel, full loop, five knuckle tight pin, 2" high. Weld to the inside of frame and secure to the door with not less than two (2) factory-installed fasteners, completely concealed and tamperproof when the door is closed.

G. Latching positive, automatic, prelocking, pry-resistant latch and pull with rubber silencers - chrome plated, vandalproof, lift-up handle with strike and hole for padlock and two-point latching.

H. Locks:

1. Type 1 - For padlocks to be furnished by others.

2. Type 2 - For coin-operated locks.

I. Hooks: Cadmium plated steel or cast aluminum. One (1) double prong center hook and three (3) single prong wall hooks.

J. Sloping Tops: 16 gauge galvanized steel sheet, approximately 25 degrees pitch, with closers at exposed ends and finished to match the lockers; at Type 1 only.

K. Trim: Manufacturer=s standard for recessed installations, finish to match the lockers.

L. Fasteners: Cadmium, zinc, or nickel plated steel, vandal-resistant, concealed on the front of lockers and frames; manufacturer=s standard.

M. Base: As shown on the Drawings, or as selected.

N. Number Plates: Manufacturer=s standard non-ferrous metal number plates with numerals not less than 3/8" high; attach to the door with matching fasteners. Number lockers in the sequence directed by the Architect.

O. Size: 15" wide by 15" deep, two tiers high at 36" each.

P. Finish:

1. Corrosion Resistant Finish

a. All doors, frames and parts cleaned and treated with a multi step detergent / iron phosphate coating, cold water rinsed and sealed with an environmentally sound non-chrome treatment.

b. Prime Coat: Modified epoxy applied through a electronically charged dip process.

c. Finish Top Coat: High solids polyester paint applied over the prime coat through an electrostically charged spray process.

2. Finish Color: As selected from the manufacturer=s standard colors.

2.3 ADAAG COMPLIANT LOCKERS

A. Provide lockers designated for handicapped use at a ratio of 5% of the total number of lockers.

B. Lockers for the handicapped shall have recessed handles and shall be single tier, or the lower opening of a double tier locker.

C. Locker bottom shall be a minimum of 9" above the finished floor, or an extra shelf shall be

installed at 9" above the floor.

D. Single tier lockers shall have a shelf 48" above the finished floor.

E. Doors shall have an appropriate symbol sign attached.

2.4 FABRICATION

A. Fabricate lockers square, rigid, and without warp, with metal faces flat and free of dents and distortion. Weld frames together, weld, bolt, or rivet other joints and connections as standard with the manufacturer. Grind exposed welds flush.

B. Finish: Chemically pretreat with degreasing and phosphotizing process. Apply baked-on enamel finish to all exposed and concealed surfaces, except plates and non-ferrous metal. Color as selected from the manufacturer=s standard colors.

2.5 BENCHES

A. Type: Laminated wood top with one (1) coat deep penetrating sealer and two (2) coats heigh impact lacquer. Top-mounted to trapezoidal aluminum or stainless steel pedestals with holes for permanent installation.

B. Size: 9-1/2" wide x 1-1/4" thick x length shown on the Drawings.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

C. Report in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Field Measurements: Take field measurements prior to the preparation of Shop Drawings, and fabrication of special components, when possible, to ensure proper fitting of the work. Allow for adjustment and fitting of trim and filler panels whenever taking of field measurements to prevent fabrication from delaying the work.

3.3 INSTALLATION

A. Install metal lockers and benches at the locations and in the configurations shown on the Drawings. Locate and install ADAAG lockers.

B. Install in strict accordance with the manufacturer=s instruction.

C. Install lockers plumb, level, rigid, and flush.

D. Space fastenings about 48" o.c., unless otherwise recommended by the manufacturer. Install through back-up reinforcing plates where necessary to avoid metal distortion.

Conceal fasteners.

E. Provide metal filler panels for closure to adjacent surfaces factory finished to match the lockers.

F. Install trim where indicated; use concealed fasteners to provide flush, hairline joints with

adjacent surfaces.

G. Anchor benches to the floor with stainless steel bolts.

3.4 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting the installed work.

B. Adjust doors and latches to operate easily without binding.

C. Verify that integral locking devices operate properly.

D. Touch-up marred finishes. Use only materials and procedures recommended or furnished by the manufacturer. Replace units which cannot be restored to a factory like finish.

3.5 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect the installation of lockers, attachment to substrates, and alignment with adjacent finishes.

3.6 CLEANING

A. Section 01700 - Execution requirements: Requirements for cleaning the installed work.

B. Clean locker surfaces prior to final acceptance inspection.

END OF SECTION

SECTION 10520

FIRE PROTECTION SPECIALTIES

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Fire extinguishers.

2. Mounting brackets.

3. Fire hose cabinets.

4. Mounting brackets.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Substrate for attachment.

2. Section 04230 - Reinforced Unit Masonry: Substrate for attachment.

3. Section 09110 - Non-Load Bearing Steel Framing: Wall framing for attachment of extinguishers and cabinets .

4. Section 09250 - Gypsum Board: Adjacent wall finish.

1.2 DESCRIPTION OF WORK

A. The extent of the fire protection work is indicated on the Drawings and as specified herein, and includes providing and installing fire extinguisher cabinets, fire extinguishers, fire hose cabinets with hoses, and all mounting brackets, devices and accessories.

B. Fire protection shall comply with the Building Code, and regulations of the governing authorities having jurisdiction.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. National Fire Protection Association (NFPA):

1. NFPA 10 - Portable Fire Extinguishers.

C. Underwriters Laboratories, Inc. (UL):

1. UL 299 - Dry Chemical Fire Extinguishers.

D. Americans with Disabilities Act Accessibility Guidelines (ADAAG):

1. Accessibility Guidelines for Buildings and Facilities.

2. Accessibility Guidelines for Schools.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer=s specifications, data and list of items.

a. Extinguishers: Type, operational features, color.

b. Extinguisher: Type, materials, construction, features, finish, color and attachment method.

c. Fire Hose Cabinets: Type, materials, construction, features, finish, color and attachment method.

2. Shop Drawings: Show fabrication and installation details including anchorage and interface with adjacent materials.

3. Assurance / Control Submittals:

a. Documentation of experience indicating compliance with the specified qualifications requirements.

1.5 COORDINATION

A. Coordinate support and opening requirements with other trades.

1.6 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

B. Regulatory Requirements: Conform to NFPA 10 and the local governing authorities having jurisdiction for extinguisher locations and mounting heights.

C. Obtain products from one fire protection specialty manufacturer.

D. Portable fire extinguishers to be UL-listed and bear a UL Alisting mark@ for the type, rating and classification of extinguisher indicated.

1.7 DELIVERY, STORAGE AND HANDLING

A. Section - 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Deliver products to the Project Site in the manufacturer=s original, unopened protective packaging.

C. Store to prevent damage to materials, finishes and operating mechanisms.

PART 2 PRODUCTS

2.1 GENERAL

A. Provide extinguisher and holder only where AFE@ is shown on the Drawings. Provide cabinet and extinguisher where AFEC@ is shown. Provide hose cabinet where AFHC@ is shown.

2.2 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. J.L. Industries, Inc.

2. Larsen's Manufacturing Company.

3. Potter Roemer - Fire Protection Equipment.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.3 MATERIALS

A. (FE-1) Fire Extinguisher (at light hazard areas): Multipurpose dry chemical, UL 299; UL-rated 4-A:60:B:C; 10 lb. nominal capacity; cylinder with pressure gage and hose. Finish as selected.

1. J.L. Industries: Cosmic Series.

2. Larsen=s: MP Series.

3. Potter Roemer: 3002-3020.

B. (FE-2) Fire Extinguisher (at Kitchens and Mechanical Rooms): Surface-mounted; Halotron; 15-1/2 lbs. nominal capacity; cylinder with pressure gage**,** nozzle and wall mounting bracket. Finish as selected.

1. J.L. Industries: Mercury Series.

2. Larsen=s: HT Series.

3. Potter Roemer: 3101-3115.

C. (FE-3) Fire Extinguisher (at Parking Garages): Surface-mounted; regular dry chemical; 20 lbs. nominal capacity; cylinder with pressure gage, hose and wall mounting bracket. Finish as selected.

1. J.L. Industries: Galaxy Series.

2. Larsen=s: DC Series.

3. Potter Roemer: 3302-3320.

D. Mounting Bracket: Device necessary for holding extinguishers and hoses in place. Designed to prevent the accidental dislodging of extinguisher. Size as required for the type and capacity of extinguisher specified; screw attached to the wall. Fire extinguisher manufacturer=s recommended standard type. Enameled steel finish.

E. Identification Sign. As approved by Fire Department.

F. Fire Extinguisher and Fire Hose Cabinets:

1. General: Manufacturer=s standard fully welded construction with exposed to view (including inside the cabinet) welds ground smooth and blended with the adjacent surfaces. Miter and weld perimeter door frames.

2. Door Lock: Self contained keyed cylinder lock assembly with internal cabinet trip lever. Key cabinets alike and provide ten (10) keys.

3. Pulls: 5/16" diameter x 4" c.c. x 1-1/8" projection wire (rod) aluminum pull.

4. Door Hinge: Continuous piano type.

5. Decal: Instruction decal on face of door.

6. Finishes: Exposed-to-view exterior and interior surfaces of cabinets and doors, interior tub, and door pull. Finish shall be manufacturer=s standard:

a. [Baked enamel coating.]

b. [Polyester coating.]

c. [Stainless steel.]

d. [Anodized aluminum.]

7. Identification: Copy to read AFire Extinguisher@ or AFire Hose@, or such other copy necessary to indicate the primary fire device therein each unit. Letter style to be selected from manufacturer=s standards.

G. (FEC-1) Fire Extinguisher and Cabinet: Fully-recessed, 3/8" flat trim, horizontal duo panel style with 1/8" Solargray glass with block letters. Tub: 9" x 24" x 4" or as approved. ADAAG compliant.

1. J.L. Industries: 1525.

2. Larsen=s: AL-C 2409-R.

3. Potter Roemer: 7340.

H. (FEC-2) Fire Extinguisher and Cabinet: Semi-recessed, 1-1/4" square edge trim; formed

aluminum frame and door with rolled edges; 1/8" thick clear acrylic bubble door with block letters. Tub: 9" x 24" x 4" or as approved. ADAAG compliant.

1. J.L. Industries: Clear VU Series, Model No. 1527.

2. Larsen's: AL-C 2409-6R.

4. Potter Roemer: Loma Series, Model No. 7342.

I. (FEC-3) Fire Extinguisher and Cabinet: Surface-mounted, door / frame, clear acrylic bubble door with block letters. Tub: 11-1/2" W x 26-1/2" H x 4" D or as approved. ADAAG compliant.

1. J.L. Industries: SMB Series.

2. Larsen=s: AL-C 2409-SM.

3. Potter Roemer: 7344.

J. (FHC) Fire Hose Cabinet: Semi-recessed, formed aluminum frame and door, solid door panel; [1-1/4" square edge] [2-1/2" rolled edge]. Cabinet size 38" x 26" x 8" or as approved. Include fire hose and fire department valve. ADAAG accessible.

1. J.L. Industries: [6426] [6427]

2. Larsen=s: AL-HC2638-RK

3. Potter Roemer: 1000 Series;

K Fire Hose Rack Assembly: For one man operation. 1-1/2" FM-approved hose and valve with single jacket lined hose. UL-rated industrial fog nozzle, pin rack and cast brass coupling, angle valve with escutcheon and nipple. Rated 100 GPM at 65 psi at nozzle. Hose length as selected.

1. J.L. Industries: 3000 Series.

2. Guardian Fire Equipment, Inc.: 3000 Series.

3. Potter Roemer: 2500 Series.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

1. Verify that rough openings for cabinets are correctly sized and located.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install brackets, cabinets and extinguishers in accordance with the manufacturer's published instructions.

B. Coordinate anchorage, support and opening requirements with other installers.

C. Install in locations and at the mounting heights indicated and as required by applicable regulations of the governing authorities having jurisdiction.

D. Securely fasten mounting brackets and fire equipment cabinets to the structure; mount square, level and plumb.

E. Mount brackets so the height of the top of extinguishers is in compliance with ADAAG or not more than 60" above the finished floor.

F. Install identification signage approved by Fire Department where not part of equipment.

G. Do not install defective or damaged units that can not be restored or repaired to the satisfaction of the Owner=s representative.

H. Turn over lock keys to the Owner=s representative.

3.3 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect brackets installations for secure attachment and for plumb.

C. Inspect cabinet installations for secure attachment and for plumb, level, square and flush.

3.4 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Touch-up abraded paint coatings with matching paint.

C. Clean units of dirt, stains, and mars without damage to the finishes.

.

END OF SECTION

SECTION 10810

TOILET ACCESSORIES

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Toilet accessories.

2. Attachment hardware.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 06100 - Rough Carpentry: Placement of backing and blocking for attachment of accessories.

2. Section 09110 - Non-Load Bearing Steel Framing: Placement of backing plate reinforcement for attachment of accessories.

3. Section 10156 - Phenolic Toilet Partitions: Substrate for mounting toilet accessories.

4. Section 10165 - Plastic Laminate Toilet Partitions: Substrate for mounting toilet accessories.

1.2 DESCRIPTION OF WORK

A. The extent of toilet accessories work is indicated on the Drawings and as specified herein, and includes providing and installing the various accessory types, locks, keys and miscellaneous attachment hardware.

B. Mounting heights for toilet accessories shall comply with ADAAG, as applicable.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society for Testing and Materials (ASTM):

1. ASTM A 123 - Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

2. ASTM A 167 - Specification for Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip.

3. ASTM A 366 - Specification for Steel, Carbon, Cold-Rolled, Commercial Quality.

C. Americans with Disabilities Act Accessibility Guidelines (ADAAG):

1. Accessibility Guidelines for Buildings and Facilities.

2. Accessibility Guidelines for Schools.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer=s catalog and data for each accessory describing size, finish, details of function and attachment method.

2. Samples: Submit one (1) sample of each item and model specified, if requested.

3. Manufacturer=s recommended maintenance and operating instructions, parts manual and keys for each item and lock.

4. Assurance / Control Submittals:

a. Manufacturer's certificate that products meet or exceed the specified requirements.

b. Documentation of experience indicating compliance with the specified qualifications requirements.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Deliver accessories Schedule, keys and Parts Manual for Owner=s permanent records. Provide two (2) sets of the following items of manufacturer=s literature:

a. Technical Data sheets for each accessory item.

b. Service and Parts Manuals.

c. Name of a local representative to be contacted in the event of need for field service or consultation.

2. Warranty: Submit a manufacturer=s special Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

B. Regulatory Requirements: Comply with Americans with Disabilities Act Accessibility Guidelines (ADAAG). Verify mounting heights and clearances prior to installation.

C. All accessories alike shall be the product of a single manufacturer.

D. Keyed (tumbler lock) accessories shall be keyed alike except for coin receiving boxes on vending equipment.

1.6 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect products.

B. Deliver products to the Project Site in the manufacturer=s original, unopened protective packaging, labeled bearing the manufacturer's name and the type of accessory.

C. Store materials in their original protective packaging to prevent soiling, wetting and physical damage.

D. Handle to prevent damage to finish surfaces.

E. Maintain protective covers on all units until installation has been completed. Remove coverings during final clean-up.

1.7 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Special Warranty:

1. Provide a written Warranty signed by the manufacturer certifying that the products are free of defective materials and workmanship and agreeing to replace or repair any defective item, in whole or in part, as necessary to restore the product to its original intended state and integrity.

2. Warranty Period:

a. Stainless Mirror Frames: Fifteen (15) years against corrosion.

b. Plate Glass Mirrors: Fifteen (15) years against silver spoilage.

c. Tempered Glass Mirrors: Five (5) years against silver spoilage.

d. Laminated Glass: Five (5) years against silver spoilage.

e. Hand Dryers: Ten (10) years.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering the specified items which may be incorporated into the work include the following:

1. American Specialties, Inc.

2. Bobrick Washroom Equipment, Inc.

3. Bradley Corp.

4. GOJO Corporation

5. San Jamar Oceans Corporation

6. TC Corporation

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS

A. Sheet Steel: ASTM A 366.

B. Galvanized Sheet Steel: ASTM A 366, ASTM A 123 to 1.25 ounces per square foot.

C. Stainless Steel Sheet: ASTM A 167, Type 304.

D. Expansion Shields: Fiber, lead or rubber as recommended by the accessory manufacturer for the component and substrate.

E. Fasteners, Screws and Bolts: Hot-dip galvanized, tamper-proof. The finish of exposed fasteners shall match the finish of the item secured.

2.3 MANUFACTURED UNITS

A. TA-1 Liquid Soap Dispenser:

1. Model Numbers:

a. American Specialties: 9343.

b. Bobrick: B-2112.

c. Bradley: 6542.

2. Description: Surface-mounted, horizontal tank-type dispenser for all-purpose liquid soap. 22 gage, Type 304 satin finish stainless steel container; drawn one-piece seamless body; mounting bracket attached to back plate for attachment to wall plate; concealed, vandal-resistant mounting. Unbreakable, clear acrylic refill indicator window; lockable hinged stainless steel lid for top filling; special key. Capacity: minimum, 40 ounces. Molded plastic push button and spout. Corrosion resistant to most soaps and detergents. ADAAG compliant.

TA-1A Touch Free Foam Soap Dispenser

1. Model Number:

a. GoJo TFX 5362.02

b. TC #450017

2. Description: Surface mounted foaming hand soap dispenser. Refillable. Battery operated automatic touch free dispenser, with skylight window. ADA compliant. 1200 mL refills.

3. Refills: Provide two (2) additional refill packets for each soap dispenser

B. TA-2 Mirror with Stainless Steel Frame:

1. Model Numbers:

f. American Specialties: 0600.

g. Bobrick: B-290 Series.

h. Bradley: 780 Series.

2. Description: 1/4" polished, tempered glass mirror. One-piece, roll-formed, 18 gage, Type 304 satin finish stainless steel angle frame; mitered corners welded, ground and polished. Concealed hanging bracket locked into top and bottom of frame with tamper-proof set screws. One piece water-resistant back attached to frame with theft-resistant locking device. Manufacturer=s standard size, as indicated.

C. TA-3 Stainless Steel Mirror:

1. Model Numbers:

a. American Specialties: 0600.

b. Bobrick: B-290 Series.

c. Bradley: 780 Series.

2. Description: Same as TA-2 except with Type 304 polished stainless steel mirror.

D. TA-4 Combination Paper Towel Dispenser and Waste Receptacle:

1. Model Numbers:

a. American Specialties: 0469.

b. Bobrick: B-3944.

c. Bradley: 234.

2. Description: Recessed, 22 gage, Type 304 satin finish stainless steel, all-welded cabinet. 22 gage, satin finish stainless steel, drawn and beveled one-piece seamless flange. 22 gage, Type 304 satin finish stainless steel dispenser door secured to cabinet with full-length stainless steel piano hinge; semi-concealed tumbler lock. 22 gage, Type 304 satin finish stainless steel dispenser; rounded towel tray with hemmed opening. Capacity: 600 C-fold or 800 multi-fold paper towels. 22 gage, Type 304 satin finish stainless steel waste receptacle; all edges hemmed; secured to cabinet with tumbler lock. Capacity: 12 gallons. Interior hooks for optional vinyl liner. ADAAG compliant.

E. TA-5 Paper Towel Dispenser:

1. Model Numbers:

a. American Specialties: 0215.

b. Bobrick: B-2621.

c. Bradley: 252.

2. Description: Surface-mounted, 22 gage, Type 304 satin finish stainless steel, all-welded cabinet. Hemmed opening towel tray. 22 gage, Type 304 satin finish stainless steel door, secured to cabinet with full-length stainless steel piano hinge; tumbler lock. Capacity: 200 C-fold or 275 multi-fold paper towels. ADAAG compliant.

TA-5A Automatic Paper Towel Dispenser

1. Model Numbers:

a. San Jamar Oceans Tear-N-Dry

b. Kimvery KP-02

2. Description: Touchless towel dispensing system with automatic portion control to dispense, adjustable sheet length setting. Battery operated, dispenser automatically operates with user=s motion. For rolls 8" wide x 8 2" diameter and 4" diameter stub roll with lock.

3. Refills: Provide six (6) refill rolls for each towel dispenser.

F. TA-6 Waste Receptacle:

1. Model Numbers:

a. American Specialties: 0828.

b. Bobrick: B-279.

c. Bradley: 357

2. Description: Surface-mounted; 22 gage, Type 304 satin finish stainless steel. Top and bottom edges hemmed. Minimum 6.5 gallons capacity. Hooks for re-useable vinyl liner.

G. TA-7 Electric Hand Dryer:

1. Model Numbers:

a. American Specialties: 0195.

b. Bobrick: B-7507.

c. Bradley: 2899-28.

2. Description: One piece cast-iron housing, high gloss porcelain enamel finish; acid-resistant; automatic sensor. 4" projection, maximum. ADAAG compliant.

H. TA-8 Touchless Paper Towel Dispenser:

1. Model Numbers:

a. Bradley: 2490.

b. Maintex, Inc: enMotion.

2. Description: Surface-mounted, automatic touchless paper towel dispenser. Battery operated; high impact translucent plastic door; roll towels; key-activated spring lock.

I. TA-9 Sanitary Napkin / Tampon Dispenser:

1. Model Numbers:

a. American Specialties: 0468.

a. Bobrick: 3500 Series.

b. Bradley: 4017 Series.

2. Description: Semi-recessed, 18 or 22 gage, Type 304 satin finish stainless steel cabinet. 18 gage, Type 304 satin finish stainless steel door attached to cabinet with full-length stainless steel piano hinge held closed with two (2) tumbler locks keyed alike with manufacturer=s other accessories. 22 gage stainless steel internal coin box secured by separate lock; keyed differently from door locks. Coin mechanism convertible, replaceable in the field without removing cabinet; factory installed coin operation denomination to be determined. Body and door of welded construction with burr-free edges; no exposed fasteners or welded seams. Provide collar, as necessary, for semi-recessed mounting. Capacity: 30 napkins and 27 tampons, minimum. ADAAG compliant.

J. TA-10 Partition-Mounted, Dual Access Sanitary Napkin / Tampon Disposal:

1. Model Numbers:

a. American Specialties: 0472 (for two compartments) / 0473 (for single end compartment).

b. Bradley: 4721-15 (for two compartments) / 4722-15 (for single end compartment).

2. Description: Partition-mounted dual napkin disposal; serves two compartments. 22 gage, Type 304 satin finish stainless steel flanges; one-piece seamless construction, 1" wide with 1/4" return, adjustable for partitions thickness. 22 gage, Type 304 satin finish stainless steel cabinet. All welded construction with one flange welded to cabinet. 22 gage, Type 304 satin finish stainless steel, self-closing push flap door on each side; heavy-duty, full-length, spring loaded, stainless steel piano hinges; doors operate independently. 22 gage, Type 304 stainless steel waste container with tumbler locks keyed alike with manufacturer=s other accessories; hemmed finger grip, removable from one side only. Capacity: 1.5 gallons. Body and doors welded construction; burr-free beveled edges. International graphic waste symbol affixed to doors. ADAAG compliant.

End compartment unit similar but recess-mounted in side wall.

K. TA-11 Toilet Seat Cover Dispenser:

1. Model Numbers:

   a. American Specialties: 0477SM.

   b. Bobrick: B-221.

   c. Bradley: 583.

2. Description: Surface-mounted; 22 gage, Type 304 satin finish stainless steel; all welded construction. Capacity 250 single or half-fold seat covers.

L. TA-12 Multi-Roll Tissue Dispenser:

1. Model Numbers:

   a. American Specialties: 9030.

   b. Bobrick: B-2888.

   c. Bradley: 5402.

2. Description: Surface-mounted; 22 gage, Type 304 satin finish stainless steel cabinet. All welded construction. 18 gage drawn, one-piece, Type 304 satin finish stainless steel door, pivot hinge and tumbler lock. 18 gage stainless steel dispensing mechanism, inner housing and cam. Heavy-duty, one-piece, theft-resistant, molded ABS spindles. Holds 2 standard core 5-1/4" diameter tissue rolls. Reserve roll automatically drops in-place when bottom roll is depleted.

M. TA-13 Toilet Grab Bar:

1. Model Numbers:

   a. American Specialties: 3100 Series, Type - 56.

   b. Bobrick: B-5837.

   c. Bradley: 832 Series.

2. Description: Heavy-duty, 1-1/4" diameter, horizontal, 1-1/2" wall clearance. 18 gage, Type 304 satin finish stainless steel. Concealed screw attached mounting and anchorage. 3" flange; 11 gage, Type 304 satin finish stainless steel. Minimum 900 pounds supporting capacity. Length as indicated, ADAAG compliant.

N. TA-14 Robe Hooks:

1. Model Numbers:

   a. American Specialties: 7345.

   b. Bobrick: B-6727.

   c. Bradley: 9124.

2. Description: Double robe hook, Type 304 satin finish stainless steel. Concealed mounting. 4" wide bar with end hooks. Projects 1-5/8", minimum, from wall.

O. TA-15 Shower Curtain Rod / Hooks / Curtain:

1. Model Numbers:

a. American Specialties: 1214 / 1200-SHU / 1200-V.

b. Bobrick: B-6107 / 204-1 / 204-3.

c. Bradley: 953 / 9536 / 9537.

2. Description: Heavy-duty, 20 gage, 1" diameter, Type 304 satin finish stainless steel rod; screw anchored attachment; length as required. Stainless steel hooks for 1" rod. 8 gage, flame-resistant, anti-bacterial vinyl fabric shower curtain, length as required; color white.

P. TA-16 Soap Dish:

1. Model Numbers:

a. American Specialties: 7404.

b. Bobrick: B-4380.

2. Description: Recessed, heavy-duty, one-piece construction, drawn and seamless. 22 gage, Type 304 satin finish stainless steel.

Q. TA-17 Shower / Tub Grab Bar:

1. Model Numbers:

a. American Specialties: Series 3100, Type-02.

b. Bobrick: B-5806 Series.

c. Bradley: 832 Series.

2. Description: 1-1/4" diameter, diagonal, 1-1/2" wall clearance. 18 gage, Type 304 satin finish stainless steel. Peened grip. Concealed screw attached mounting and anchorage. 3" flange; 11 gage, Type 304 satin finish stainless steel. Minimum 900 pounds supporting capacity. Length as indicated. ADAAG compliant.

R. TA-18 Shower Seat:

1. Model Numbers:

a. American Specialties: 8206.

b. Bobrick: B-5181.

c. Bradley: 9569.

2. Description: Reversable, folding seat. Type 304 satin finish stainless steel frame, legs, flanges and bracket. 1/2" thick solid phenolic slatted seat; self-locking mechanism. Color as selected. ADAAG compliant.

3. Provide one at each accessible Shower.

S. TA-19 Corner Shower Seat:

1. Model Numbers:

a. American Specialties: 0010.

b. Bradley: 954.

2. Description: Folding, corner-mounted; Type 304 satin finish stainless steel seat, support brackets and retainer clip. Secured to one wall with full length stainless steel piano hinge and other wall by bracket. Retainer clips to hold seat upright. Channel formed edges. Size: 15" x 15".

T. TA-20 Mop Holder:

1. Model Numbers:

a. American Specialties: 1315.

b. Bobrick: B-224.

2. Description: 18 gage, Type 304 satin finish stainless steel. 8" deep shelf with return. 36" long. 4 rubber mop holders, 3 rag hooks; rod below shelf.

2.4 MANUFACTURED UNITS FOR APARTMENT BATHROOMS (ATA)

A. ATA-1 Medicine Cabinet, Recessed:

1. Model Number:

a. American Specialties: 0952.

b. Bobrick: B-398.

c. Bradley: 175.

2. Description: Recessed, satin finish stainless steel cabinet. Swing door with 1/4" plate glass mirror. 20 gage cabinet and mirror frame. 3 stainless steel adjustable shelves. Full-length heavy-duty stainless steel piano hinge, magnetic catch. Approximately 16" W x 26" H x 3-5/8" D.

3. One each Bathroom.

B. ATA-2 Towel Bar:

1. Model Number:

a. American Specialties: 7360.

b. Bobrick: B-673.

c. Bradley: 9055.

2. Description: 3/4" square, heavy-gage, Type 304 bright polished stainless steel tubing. 22 gage, Type 304 stainless steel flanges and support arms. 16 gage, concealed stainless steel mounting brackets. All welded construction. Secured with stainless steel locking set-screws. 16 gage, Type 304 stainless steel wall plates. 3-1/4" projection, minimum; length as shown.

3. One each Bathroom.

C. ATA-3 Toilet Tissue Holder:

1. Model Number:

a. American Specialties: 7305.

b. Bobrick: B-685.

c. Bradley: 5085.

2. Description: Surface-mounted, bright polished stainless steel, standard size tissue holder. Chrome-plated plastic spindle.

3. One each watercloset.

D. ATA-4 Toilet Grab Bar:

1. Model Number:

a. American Specialties: 3100 Series, Type 56.

b. Bobrick: B-5837.

c. Bradley: 832 Series.

2. Description: See TA-13.

3. One each watercloset.

E. ATA-5 Shower / Tub Grab Bar:

1. Model Number:

a. American Specialties: 3100 Series, Type-02**.**

b. Bobrick: B-5806 Series.

c. Bradley: 832 Series.

2. Description: See TA-17.

3. One each Shower / Bathtub.

F. ATA-6 Shower Curtain Rod / Hooks / Curtain:

1. Model Number:

   a. American Specialties: 1214 / 1200-SHU / 1200-V.

   b. Bobrick: B-6107 / 204-1 / 204-3.

   c. Bradley: 953 / 9536 / 9537.

2. Description: See TA-15.

3. One each Shower / Bathtub.

G. ATA-7 Towel Pin:

1. Model Number:

   a. American Specialties: 7301.

   b. Bobrick: B-677.

   c. Bradley: 9315.

2. Description: 10 gage, Type 304 stainless steel cap welded to support arm. 22 gage, Type 304 stainless steel flange and support arm. 16 gage concealed stainless steel mounting bracket. All welded construction. Secured with stainless steel set-screws. 16 gage, Type 304 stainless steel wall plate. 3-3/8", minimum projection. Bright polished finish. ADAAG compliant.

3. One each Bathroom.

H. ATA-8 Shower Seat:

1. Model Number:

   a. American Specialties: 8205-R / L.

   b. Bobrick: B-517 / 518.

2. Description: 1-1/2@ thick, foam padded, fold-down seat. White / off-white water-resistant naugahyde cover on enclosed 1/2" thick marine grade plywood base. Stainless steel frame and mounting brackets; self-locking mechanism. Right or left hand to suit conditions. ADAAG compliant.

3. One each Shower.

I. ATA-9 Soap Dish, Recessed:

1. Model Number:

   a. American Specialties: 0398.

   b. Bobrick: B-4390.

   c. Bradley: 940.

2. Description: Recessed, heavy-duty, stainless steel dish with bar. 19 gage, Type 304 stainless steel. Drawn and beveled, one-piece, seamless construction. 22 gage, Type 304 stainless steel retaining clip. 3/16" thick, Type 304 stainless steel bar. Matte polished finish.

3. One each Shower / Bathtub.

2.5 FABRICATION

A. Weld and grind smooth joints of fabricated components.

B. Form exposed surfaces from single sheet of stock, free of joints. Form surfaces flat without distortion. Maintain surfaces without scratches and dents.

C. Fabricate grab bars of tubing, free of visible joints, return to wall with end attachment flanges.

D. Shop assemble components and package complete with fittings and anchors.

E. Provide steel anchor plates, adapters and anchor components necessary for secure installation.

F. Back paint components where in contact with building finishes to prevent electrolysis.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

1. Verify that wall openings for recessed accessories are correctly located and of proper dimensions.

2. Verify that attachment blocking and backing plates are in place, plumb and level, and in the correct location for attachment of accessories.

4. Check areas to receive surface-mounted accessories for conditions that would affect quality and execution of the work.

5. Verify spacing of plumbing fixtures and toilet partitions that affect installation of accessories.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Deliver inserts and rough-in frames to the Project Site for scheduled installation.

B. Provide and use templates and rough-in measurements as required.

3.3 INSTALLATION

A. Install fixtures, accessories, and items in accordance with the manufacturer's instructions, ADAAG and as indicated on the Drawings.

B. Install at the locations and heights indicated or as required, plumb and level, securely and rigidly anchored to the substrate.

C. Install manufacturer=s recommended anchor system for all grab bars.

D. Conceal evidence of drilling, cutting and fitting on adjacent finishes.

E. Fit flanges of accessories snug to wall surfaces. Provide caulking in gaps between 90 degrees return flanges and finish wall surface after accessories are installed.

3.4 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting the installed work.

B. Adjust accessories for proper operation.

C. Verify that mechanisms function smoothly.

3.5 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect accessories to ensure secure attachment to the substrates, proper locations and mounting heights in compliance with ADAAG.

3.6 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Remove temporary labels and protective coatings.

C. Clean and polish exposed surfaces prior to final inspection.

END OF SECTION

SECTION 11061

THEATRE SYSTEMS

PART 1 GENERAL

1.1 REFERENCE TO OWNER'S GENERAL CONDITIONS

A. The Owner's General Conditions shall be considered part of this Specification. Unless this Section contains statements, which are more definitive or more restrictive than those contained in the Owner's General Conditions, this Specification shall not be interpreted as waiving or overruling any requirements expressed in the General Conditions.

1.2 RELATED DOCUMENTS

A. Theater Systems (TS) Drawings.

B. Audio Visual (AV) Drawings.

C. Section 11063 – Orchestra Shell.

D. Division 1 – General Requirements:

1. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

E. Division 5 – Metal Fabrication:

1. The Metal Fabrication Contractor shall provide the work as specified in Division 5 and the Structural Drawings. Including: steel framing and supports for theatrical rigging systems.

2. Steel shown on the Structural drawings will be provided by the Structural Contractor.

F. Division 16 – Electrical:

1. The Electrical Contractor shall provide the work as specified in Division 16, as indicated on the TS drawings, and as specified herein.

2. Electrical infrastructure (electrical j-boxes, conduit, etc.) for Theatre Systems is shown on theatre systems drawings and shall be the responsibility of the Division 16 Electrical Contractor.

1.3 DEFINITIONS

A. The following shall serve as general identifiers as specified herein:

1. Owner – Guam Department of Education.

2. Theatre Consultant – D.L. Adams Associates, Ltd.

3. Architect – Taniguchi Ruth Makio Architects (TRMA).

4. Contractor – The Contractor is the firm submitting a proposal to furnish and install the Work as defined within this Specification.

5. Project – The Project is the Theatre Systems installation in the facilities of the Simon Sanchez High School Auditorium.

6. Work – The term “Work” means all construction and services specified within this document. The Work includes all related labor, materials, equipment, and services provided, or to be provided, by the Contractor to fulfill the proposal’s obligations.

7. Drawings – The term “Drawings” means all Theatre Systems Drawings and associated sketches, details, riser diagrams, etc.

B. As used in the Drawings and Specifications for the Work, certain non-technical words and phrases shall be understood to have specific meanings as follows, regardless of indications to the contrary in the General Conditions or other documents governing the Work:

1. “Furnish” – Purchase and deliver to the project site complete with every necessary appurtenance and support, all as part of the Theatre Systems Work. Purchasing shall include payment of all sales taxes and other surcharges as may be required to assure that purchased items are free of all liens, claims, or encumbrances.

2. “Install” – Unload at the delivery point at the site and perform every operation necessary to establish secure mounting and correct operation at the proper location in the project, all as part of the Work.

3. “New” – Manufactured within the past year and never used.

4. “Provide” – Furnish and Install.

C. Regardless of their usage in codes or other industry standards, certain words or phrases as used in the Drawings or Specifications for the Work, shall be understood to have the specific meanings as described to them in the following list:

1. “Circuit” – Any specific run of circuitry.

2. “Circuitry” – Any Work which consists of wires, cables, raceways, and/or specialty wiring method assemblies complete with associated junction boxes, pull boxes, outlet boxes, joints, couplings, splices, and connections except where limited to a lesser meaning by specific description.

3. “Concealed” (as applied to circuitry) – Covered completely by building materials, except for penetrations (by boxes and fittings) to a level flush with the surface as necessitated by functional or specified accessibility requirements.

4. “Exposed” (as applied to circuitry) – Not covered in any way by building materials.

5. “NIC” – Not in Contract.

6. “Normal Work Conditions” – Locations within building confines that are not damp, wet, or hazardous and that are not used for air handling.

7. “OFE” – Owner Furnished Equipment.

8. “Patch Panel” – A System of terminal blocks, patch cords, and backboards that facilitate administration of cross-connecting cables.

9. “Raceway” – Any pipe, duct, extended enclosure, or conduit (as specified for a particular System) which is used to contain wires, and which is of such nature as to require that the wires be installed by a “pulling in” procedure.

10. “Standard” (as applied to wiring devices) – Not of a separately designated individual type.

11. “Wiring” – see “Circuitry.”

D. Additional Terms:

1. The term “shall” is mandatory; the term “will” is informative; the term “should” is advisory.

2. Where the word “conduit” is used without specific reference to type, it shall be understood to mean “raceway.”

3. The term “custom” indicates systems or components that shall be designed and fabricated by the Contractor based on the drawings and specifications.

4. The term “future” indicates systems or components that will be added to the system later but shall be provisioned for now.

5. The term “equal” indicates systems or equipment that is of the same size, color, design, function, efficiency, etc. as of that specified.

6. Reference to “U.L. (Materials Construction) Standards” shall mean the “Standards for Safety” published by Underwriters Laboratories, Inc.

1.4 SCOPE OF WORK

A. General:

1. The Work as described herein shall be furnished and installed by one (1) firm alone.

2. The Contractor is responsible for furnishing the Theatre Systems in order that a single contractor has the responsibility of coordinating these sub-systems into an integrated theatrical presentation facility. This coordination is a major responsibility of the Contractor.

3. The Contractor shall furnish and install all equipment Theatre Systems described herein.

4. The Contractor shall provide all Work as may be required to make a complete and fully functioning system of that which may not be fully defined in the Contract Documents.

5. The Contractor shall verify the completeness of the parts list and furnish necessary accessories to execute the intent of the plans and specifications.

6. The Specifications and Drawings shall be read and used together; system features which are mentioned in one are not necessarily shown in the others. It shall be understood that the Equipment Lists, Specifications and Drawings are complementary. Where there are conflicts within the documents, request clarification from Architect.

7. The project documentation is, in general, diagrammatic and/or developed to communicate design intent. The Contractor shall coordinate the installation of all devices and/or equipment with the Owner prior to installation based on the existing field conditions.

8. The Contractor shall coordinate all installed items with associated trades (electrical, mechanical, structural, audio visual, telecom, etc.) including all necessary cable pass-thrus and structural needs/requirements.

9. The Contractor shall provide all software programming required to provide fully operational systems.

10. The Contractor shall provide all equipment and software programming required to provide fully operational systems.

11. The Contractor shall coordinate the specific programming requirements of the Theatre Performance Lighting Control System with a designated Owner representative, including touchscreen layouts and page navigation. All programming written for this project shall be the property of the Owner and shall be provided to the Owner upon completion.

B. Related Work by Others:

1. Furnishing and installation of load wiring, raceway, pull-boxes, plywood backboards (provided under Electrical Work).

2. Furnishing and installation of dedicated lighting distribution panels and relay panels.

3. Electrical terminations of relay feeds and relay load wiring.

4. Installation and termination of building network systems.

5. Cutting, patching, and painting of walls, unless damaged performing the Work described herein.

6. Equipment and materials provided and installed by others, unless otherwise shown in this Section or the Drawings, shall include but are not limited to:

a. Electrical Outlets.

b. Load Wiring.

c. Conduit, Raceway and Cable Tray.

d. Junction Boxes.

e. Telecommunications Outlets.

C. Coordinated Work:

1. Contractor shall coordinate with Electrical Contractor on raceway/junction box locations for Theatre Systems equipment and routing of load wiring, and all control and power raceway from equipment, terminal and pull boxes to system equipment racks. Contractor shall coordinate to verify the appropriate raceways are in place.

2. Coordinate control system requirements, relating to house lighting fixtures/drivers/DMX addressing, etc., with Electrical Contractor prior to installation.

3. Coordinate with related trades to schedule the Work and ensure a complete installation in accordance with the schedule outlined by the Owner.

4. Coordinate all IP device requirements with the Telecom Contractor, Owner, and General Contractor.

5. Coordinate all building network connectivity requirements with the Telecom Contractor and Owner.

1.5 GENERAL CONDITIONS

A. The Contractor represents that they are familiar with and have expertise in the Work of this nature and scope.

B. The Contractor shall comply with all the regulations, including safety regulations of national, city, local, and other government agencies having jurisdiction concerning the work of the Contractor. The Contractor shall give all notices and comply with all laws, ordinances, codes, rules, and regulations bearing on the conduct of the Work. If the Contractor performs any work, which is contrary to such laws, ordinances, codes, rules, and regulations, they shall make all changes for compliance and bear all associated costs.

C. The Contractor shall be responsible to provide and maintain a storage facility. If this storage facility is required to be on-site it shall be the Contractor's responsibility to coordinate the size and spatial requirements with the Owner. The Contractor shall assume full responsibility for the storage facility and all contents, unless otherwise indicated by the Owner.

D. The Contractor shall provide all protection necessary to safeguard their work from damage by their operations and the operations of others. Unless the Contractor proves to the Owner’s satisfaction that the Work has been damaged by others, the Contractor shall promptly repair, adjust, and clean all defective installations and bear all associated costs.

E. All the Contractor's work shall be tested and inspected by all authorities having jurisdiction and in accordance with all Specifications. The Contractor shall coordinate and cooperate fully and shall provide at no additional cost to the Owner, manpower, drawings, facilities, scaffolds, etc. to reasonably assist the inspectors.

F. The Owner reserves the right to furnish any materials necessary for the Project.

G. All permits required for any part of the Contractor's work shall be procured and paid for by the Contractor. The Contractor shall determine all permits required and transmit this information to the Owner. If it is determined that the Contractor’s work falls reasonably within another party’s permit (General Contractor, Electrical Contractor, etc.) the Contractor shall not be required to procure additional permits provided written authorization is provided to the Contractor by the party holding the permit.

H. The Contractor, upon receiving notice from Owner that the Contractor has furnished inferior, improper, or unsound work or materials (including equipment), or Work or materials at variance with that which is specified, will, within twenty-four (24) hours, proceed to remove such work or materials and make good all other work or materials damaged thereby, and, at the option of the Owner, the Contractor shall immediately replace such work or materials with work or materials as specified. The removal, replacement, and repair shall be performed at such times and with manpower sufficient, in the judgment of the Owner, to avoid disturbance to occupants, or other ongoing work for the Project.

1. If the Contractor does not remove such unsound Work within a reasonable time, the Owner may remove it and may store the material at the expense of the Contractor. If the Contractor does not pay the expenses of such removal within ten (10) days' time thereafter, the Owner may, upon written notice, sell such materials at auction or at private sale and shall account for the net proceeds thereof, after deducting all the costs and expenses that should have been borne by the Contractor and all expenses of the sale.

2. The Owner shall always have the authority, until final completion and acceptance of the Work, to inspect and reject work and materials which in its judgment are not in conformity with the Drawings and Details, Room Data Sheets and Specifications, and its decision in regard to character and value of Work shall be final and conclusive on both contracting parties. If the Owner permits said Work or materials to remain, the Owner shall be allowed the difference in value or shall at its election have the right to have said Work or materials repaired or replaced, as well as the damage caused thereby, at the expense of the Contractor, at any time within one (1) year after the completion of the entire project, or within such longer period as may be covered by any guaranty; and neither payments made to the Contractor, nor any other acts of the Owner, shall be construed as evidence of acceptance, waiver, or estoppels.

3. Any expense incurred by the Owner in connection with the foregoing, shall be borne by the Contractor, and the Owner may withhold money due to the Contractor or recover money already paid to the Contractor, to the extent of such expense.

I. The Drawings for the Work utilize symbols and schematic diagrams that have no dimensional significance. The Work shall be installed to fulfill the diagrammatic intent expressed on the Drawings, field layouts, and shop drawings of all trades.

J. The Drawings show diagrammatically the suspension locations, controls, etc. So far as possible, the drawings show the arrangement of the equipment which will fit into the spaces available without interference.

K. The system Drawings generally indicate how the system equipment is to be integrated with other parts of the building. The Contractor shall determine exact locations by job measurements, by checking the requirements of other trades and by reviewing all contract documents.

L. Whenever job measurements, analysis of the drawings and specifications, or progress of other trades indicates that the various systems cannot be installed without significant deviation from the intent of the contract, the Architect/Owner shall be notified immediately.

M. Certain details appear on the Drawings for the Work that are specified with regard to the dimensioning and positioning of the Work. These are intended only for general information purposes. They do not obviate field coordination for individual items of the indicated Work.

N. Information as to general construction and architectural general construction and architectural features and finishes shall be derived from the structural and architectural drawings and specifications and may require ongoing coordination with the Architect and/or Construction Team.

O. The Work called for under this Contract shall be carried on simultaneously with the Work of other trades and Owner functions in such a manner as to not delay the overall progress of the construction project. The Contractor is responsible for all coordination of the Work with other trades.

P. Include in the Work all necessary supervision and issuing of all coordination information to any other trades who are supplying work to accommodate the Theatre Systems installation. For items of equipment which are to be installed but not purchased as part of the Work, the Work shall include:

1. Coordination of delivery. Deliver materials in manufacturer's original unopened containers with manufacturer's labels attached. Do not deliver material until spaces to receive them are clean, dry, and ready for their installation. Ship to jobsite only after roughing-in, painting and other finishing work has been completed, installation areas are ready to accept Work.

2. Unloading from delivery trucks. Do not deliver or install materials until spaces are enclosed and weather tight, wet work in spaces is complete and dry, HVAC system is operating, and maintaining ambient temperature at occupancy levels and normal humidity levels during the remainder of the construction period.

3. Safe handling and field storage up to the time of permanent placement in the project.

4. Correction of any damage to the item(s) caused by the Contractor.

5. Mounting in place and connection(s) as specified.

Q. Items which are to be installed, but not purchased as part of the Work shall be carefully examined upon delivery to the project. Claims that any of these items have been received in such condition that their installation will require procedures beyond the reasonable scope of the Work will be considered only if presented in writing within one (1) week of the date of delivery to the project of the items in question. The Work includes all procedures necessary to put in satisfactory operation all items for which no claims have been submitted as outlined above.

1.6 SUMMARY

A. This Section includes the following Theatre Systems:

1. Motorized Rigging Systems.

2. Dead-Hung Rigging Systems.

3. Drapery and Tracks.

4. Theatrical Lighting and Control System.

5. Performance Lighting Instruments and Accessories.

1.7 SYSTEMS DESCRIPTIONS AND FUNCTIONS

A. Provide all necessary labor, materials, equipment, accessories, transportation, and services required for the installation of a totally integrated technical Theatre System consisting of the following:

1. Variable speed motorized hoists shall be provided for the following battens including integrated relay power and DMX control:

a. One (1) Front of House Electric.

b. Four (4) Stage Electrics.

c. Three (3) Orchestra Shell Ceiling Panels.

2. Motorized hoists shall be provided for two (2) spare line sets without power and data.

3. Dead-Hung rigging for the following positions in the Stage House including all hanging hardware and fittings required for a complete installation:

a. Grand Valance.

b. Grand Drape.

c. Projection Screen.

d. Border 1-4.

e. Leg Sets 1-6.

f. Midstage Traveler.

g. Upstage Traveler.

h. Scrim.

i. Cyclorama.

4. Drapery and Track:

a. The following drapery shall be provided:

1) Grand Valance.

2) Grand Drape.

3) Borders 1-4.

4) Leg Sets 1-6.

5) Midstage Traveler.

6) Upstage Traveler.

7) Scrim.

8) Cyclorama.

b. The following tracks shall be provided:

1) Grand Drape.

2) Leg Sets 1-6.

3) Midstage Traveler.

4) Upstage Traveler.

5) Scrim.

6) Cyclorama.

B. Theatrical lighting system including house and theatrical lighting dimming and control shall be provided with the following features:

1. Performance lighting relay circuits will be distributed to the following locations and will be terminated into Twistlock connectors for performance lighting equipment and work lights.

a. Front of House Electric (1).

b. Stage Electrics (4).

c. Orchestra Shells (3).

d. Tormentor Positions (2).

e. Stage Floor Boxes (6).

2. Theatrical Lighting Control Network: DMX512/lighting network control interfaces shall be distributed on the lighting pipe battens, distribution boxes, around the stage, and at the control booth position for lighting console and control of LED fixtures, intelligent lights, foggers, etc.

3. A network-based architectural control system shall be provided:

a. Button control panels shall be provided at all main entry and technical booth entry doors. These entry stations will provide simple on/off control of general house lighting and stage batten work lighting. The presets programmed in these stations will be optimized for general daily use.

b. A wall-mounted LCD control panel shall be located downstage left at the Stage Manager's station. The panel will provide preset lighting configurations/set-ups using a combination of house and performance lighting for simple presentations, lectures, or recitals.

1) A minimum of ten (10) presets of programming shall be provided for theatrical use on the LCD control panel, and all lighting circuits will be individually accessible (including a graphic slider and an on/off button for each relay) from the panel for creating/saving user-defined presets. Additionally, twenty (20) preset buttons shall appear on the interface for end user customization.

2) The "splash screen" shall have an image provided by/approved by the Owner and shall be password protected.

3) The record button shall be password protected to prevent unauthorized changes to the programming.

4) The time-of-day clock shall be programmed to shut all lighting off after hours. Time of day programming shall be coordinated with the Owner. Provide override button on the LCD panels that will time-out at 3:00AM, or as coordinated with the Owner

4. A portable, wireless desktop touchscreen LCD control panel with docking station shall be provided in the lighting control booth and can be used at the in-house mix position. This touchscreen shall mirror the features of the Stage Manager's touchscreen.

C. Performance Lighting Console: A professional lighting control console designed for venues using a combination of conventional and LED lighting. In addition to keypad commands, the faders provide hands-on control of intensity and can be used to set manual levels and edit recorded cues and submasters. On demand moving light controls are available to facilitate using conventional accessories like LED fixtures, moving mirror heads, color scrollers, gobo rotators, moving lights, etc.

D. Emergency Lighting: UL1008-rated transfer switches shall be provided for house lighting circuits requiring emergency power. 0-10V or DMX control bypass shall also be provided for these circuits as required.

E. Performance Lighting Fixtures:

1. A professional quality LED performance lighting fixture package, including wash light fixtures, ellipsoidal spotlights, and cyclorama fixtures, shall be provided.

2. All fixtures will be equipped with power cables with Twistlock plugs, c-clamps, safety cables, and color frames, and barn doors (if appropriate).

3. LED work light fixtures shall be provided on stage electric line sets.

1.8 QUALITY ASSURANCE

A. Contractor's Responsibility:

1. The Work of this Section will be contracted to a single firm, referred to herein as the Contractor, for undivided responsibility.

2. The qualification requirements of the Contractor are identified in Article 1.9.

B. Minimum Performance Requirements: To meet the minimum performance requirements, the Contractor shall be responsible for the following:

1. Each component's conformance with the exemplary equipment's published specifications and other requirements as stated herein.

2. Electrical Components: Listed and labeled per NFPA 70, Article 100 by a testing agency acceptable to authorities having jurisdiction.

3. Safety: The Theatre Systems shall conform to all applicable code requirements and shall be in conformance with ESTA and USITT industry standards of operation and practices for Theatre Systems. All materials and arrangements shall comply with applicable performance requirements.

4. Detailed checking of each item of equipment provided, each portion of the installation, and of the complete installation to find and remedy any defects therein.

5. The initial adjustment of all electronic control systems, and, under the direction of the Architect/Owner, making the final adjustment of these items.

6. If so directed by the Architect/Owner, Contractor shall make final adjustments to control systems and alignment of equipment. To establish a definitive standard of performance, the systems and/or related components specified herein shall be as manufactured, supplied, and installed by the contractors listed and the exemplary equipment manufacturers listed in this specification.

C. Drapery Fire-Test-Response Characteristics:

1. Provide stage drapery with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or a testing and inspecting agency acceptable to authorities having jurisdiction.

2. Flame-Resistance Ratings: Passes NFPA 701.

D. Rigging Systems, Minimum Standards of Safety, the following factors shall be used:

1. Cables and Fittings: 8:1 Safety Factor.

2. Cable D/d ratio: Sheave tread diameter is the minimum D/d ratio per the "Wire Rope User Manual" or recommended by the wire rope manufacturer.

3. Steel: 1/5 of yield strength or per AISC Specification.

4. Bolts: Minimum SAE J429 Grade 5 (ISO R898 Class 8.8), zinc plated.

E. Motorized Hoist Systems: To ensure a uniform installation and single responsibility, the motorized hoist systems shall be the product of one (1) manufacturer.

F. Applicable Standards and Codes:

1. American Society of Civil Engineers (ASCE): ASCE 7 - Minimum Design Loads for Buildings and Other Structures.

2. American Standards for Testing and Materials (ASTM):

a. ASTM A 36/A 36M – Standard Specification for Carbon Structural Steel.

b. ASTM 120 – Specification for black and hot dipped zinc coated, (galvanized) steel pipe for ordinary use.

c. ASTM A 500 – Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.

d. ASTM A513 – Standard Specification for Electric-Resistance-Welded Carbon and Alloy Steel Mechanical Tubing.

e. ASTM A1011 – Standard Specification for Steel, Sheet, and Strip, Hot Rolled, Carbon, Structural, High-Strength Low Alloy, High-Strength Low Alloy with Improved Formability, and Ultra High Strength.

f. ASTM B85 – Standard Specification for Aluminum Alloy Die Castings.

g. ASTM B209 – Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

h. ASTM B221 – Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

i. ASTM B429 – Specification for Aluminum-Alloy Extruded Structural Pipe and Tube.

j. ASTM C423 – Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.

k. ASTM E84 – Standard Test Method for Surface Burning Characteristics of Building Materials.

l. ASTM E 413 – Classification for Rating Sound Transmission.

3. International Building Code (IBC).

4. American Society of Mechanical Engineers (ASME).

5. United States Institute for Theatre Technology (USITT).

6. National Electric Code (NEC).

7. NFPA International (NFPA): NFPA 701: Fire Tests for Flame-Resistant Textiles and Films.

8. ANSI B18.2.1&2 – Specification for square and hex bolts and nuts.

9. Any and all applicable local governmental codes.

10. ANSI E1.6-1-2021 – Entertainment Technology – Powered Hoist Systems.

G. Code Compliance: All products and work shall be superior or equal to that which is required by governing codes, ordinances, rules, and regulations.

H. All bid proposals shall be based on materials, equipment, and installation as herein specified. All deviations and exceptions to the specifications must be approved by addendum.

I. Contractor's Qualifications:

1. The Contractor shall have at least one (1) full-time senior staff member, having five (5) years minimum experience as a Theatrical Systems installer who will be assigned to this installation. The senior staff member shall:

a. Provide all technical liaison between the Contractor and the Architect/Owner.

b. Be responsible for supervision of all technical and engineering work required to execute the contract, and, in particular, approve and sign all shop drawings.

c. Represent the Contractor at all meetings and conferences and be present at the job site for final inspection.

d. Be at the site during the entire installation period.

e. The Contractor project supervisor shall hold Entertainment Technician Certification Program (ETCP) Certified Rigger – Theatre Certification.

J. Qualifications of Contractors:

1. All Contractors desiring to submit bids for the Work specified herein must be Qualified in writing to the Architect/Owner not less than ten (10) days prior to the bid opening.

2. Bids submitted by Contractors who have not been qualified will not be accepted.

1.9 SUBMITTALS

A. Submittals shall be in accordance with Division 1 requirements.

B. Contractor Qualification Statement: contractors wishing to bid on the Work specified herein shall submit for approval, brochures bound in flexible binders containing a statement of the Contractor's qualifications. As a minimum, this submittal shall include the following:

1. A list of theatres of comparable size and scope (including motorized systems) to that described herein, completed by the Contractor in the last five (5) years. Show project name and address, year of completion and the name and telephone number of a person to contract who is a representative of the Owner or User.

2. A personal resume of formal education and experience of the qualified staff engineer who would direct the work.

3. A description of the Contractor's capabilities and facilities for assembly, shop fabrication, repair, and servicing of theatre equipment.

4. Certification(s) from the lighting control system manufacturer(s) certifying that the Contractor’s software programmers have been factory trained and are qualified to perform the installation.

5. Certification(s) from the motorized rigging hoist system manufacturer(s) certifying that the Contractor’s software programmers have been factory trained and are qualified to perform the installation.

6. The Contractor shall provide proof that the project supervisor holds ETCP Certified Rigger – Theatre Certification.

7. The Contractor must state if they intend to utilize a subcontractor and provide said subcontractor's name and address. The subcontractor shall comply with all the same rules, regulations, laws, codes, licenses, etc., as required by the Contractor and as specified herein. The Owner reserves the right to approve or disapprove any subcontractor proposed by Contractor.

8. Provide a personal resume of formal education and experience of the qualified senior staff member who would direct the Work.

C. Shop Drawing Submittals: Show fabrication and installation details for the performance lighting system, stage drapery, rigging assemblies, motors, etc. At a minimum, shop drawing submittals shall include the following and shall be submitted as a single package:

1. A complete bill of material showing list of equipment to be provided, with quantities, including those items which are to be fabricated by the Contractor.

2. A complete set of manufacturers' equipment specifications with detailed technical information describing and illustrating all components and materials to be used in the installation of the systems. This set shall include items listed by manufacturer and model number and any other components needed to provide a complete functional system.

3. Provide manufacturer's specification sheets for each type of product indicated.

4. Plans, elevations, details, and assembly drawings.

5. Assembly drawings shall include all major components deemed necessary for review. All assemblies shall include weights, dimensions, (where applicable), loads, and structural attachment methods.

6. Include information required for coordination of work by other trades.

7. Operating clearances.

8. Locations of equipment components, switches, and controls. Differentiate between manufacturer-installed and field-installed wiring.

9. Complete rigging schematics including dimensions, weights, capacities, and loads imposed by all components shall be provided.

10. Requirements for supporting all rigging equipment. Verify capacity of each track and rigging component to support loads.

11. One-line diagrams/schematic diagrams shall be submitted for the motorized rigging system and theatrical lighting system. Wiring diagrams shall show power, signal, and control wiring.

12. Lighting Control Systems User interface navigation. This shall include page-by-page graphics and descriptions of functions for each page and each programmable button.

13. The data furnished by the Contractor shall be sufficient to enable the Architect/Owner to determine whether the equipment, materials, and installation the Contractor proposes to furnish comply with the requirements of this specification.

14. Contractor shall provide other information or materials requested by the Architect/Owner when there is question of compliance with the intent of the drawings and specifications.

D. Samples for Initial Selection:

1. The Contractor shall submit samples and color cards of drapery fabrics for color selection and approval.

2. Include color charts showing the full range of colors, textures, and patterns available, together with a 12" square sample (any color) of each type of fabric.

3. All samples shall be tagged, identifying grade, weight, color, manufacturer, and use.

E. Product Certificates and Data:

1. Manufacturer's data sheets on each product to be used, including:

a. Provide test results by certified independent testing laboratory indicating compliance with performance requirements.

b. Rated capacities, construction details, material descriptions, dimensions of individual components, profiles, and finishes.

c. Delivery, storage, handling, installation instructions, and recommendations.

d. Notarized test certificates from the manufacturer on each reel of wire rope documenting the minimum breaking strength.

e. Maintenance instructions and recommendations.

F. Coordination Drawings: Project-specific Coordination Drawings, indicating the following items drawn and coordinated with each other. Include information required by Installers of each item to coordinate the Work. Include the following:

1. Relationship of items shown on separate Shop Drawings.

2. Dimensions and required clearances of adjacent or related work.

3. Order of assembly of separate items.

4. Information required for interface with other trades and components, including mechanical, electrical, and communication work.

G. Warranty: Sample of special warranty.

H. Closeout Submittals:

1. As-Built Drawings:

a. Full size drawings shall be submitted to the Owner after final acceptance. These are to be fully revised by the start-up and installation personnel to reflect the actual finished installation. The as-built drawing set is to be 100% complete including all schematics, details, and bills of material necessary to maintain and repair all the systems.

b. Each drawing shall be stamped and dated "As-Built Drawing."

c. Any revisions or modifications during the warranty period will require that the "As-Built Drawings" be updated.

2. Warranty: Submit manufacturer's warranty.

I. After the final punch list has been completed, submit the following:

1. Operation Manual: Provide the following in a neatly bound binder with tabbed dividers between sections:

a. Title Page.

b. Table of Contents.

c. Description of each system including key features and operational concepts.

d. Setup diagrams and instructions to use in typical situations as directed by the Owner.

e. Single-line block diagrams showing all major system components.

f. Manufacturer's operation manuals and information sheets for equipment intended for operation by system users.

g. A sheet of web links to relevant industry resources such as:

1) Catalog cut sheets of all purchased equipment.

2) Product manufacturer training.

3) Test certificates from manufacturers.

4) Recommended Spare Parts List.

h. Key schedule cross-referencing all keys to their respective functions and extra copies of all keys required to open or operate equipment specified in this section.

2. Maintenance Manual: Provide the following in a neatly bound binder with tabbed dividers between sections:

a. Title Sheet.

b. Table of Contents.

c. Company name, address, telephone number, e-mail address, website, and contact name for system service or maintenance.

d. System Description.

e. Listing of all equipment and materials with names of manufacturers and model numbers or part numbers.

f. Product manufacturer's warranties and a typed one (1) year system warranty explicitly covering all materials and labor.

g. Manufacturer's service manuals for all major equipment items.

h. A recommended preventative maintenance schedule with reference to the applicable pages in the manufacturer's maintenance manuals. Where the manufacturer provides inadequate information, provide the information necessary for proper maintenance.

i. Drapery care, cleaning, and storage instructions.

j. Provide a working copy of the latest version of all software required to operate or configure the systems specified herein.

k. All software shall be fully documented, and that documentation included.

l. Software shall be furnished on a USB solid state memory drive attached to the binder.

m. All user definable software configurations and/or programming shall become the sole property of the Owner. This includes all source code, source code copyrights, and related documentation.

n. PDF drawings of all system assembly drawings necessary to perform maintenance on the systems.

o. PDF manuals shall contain all items listed above with hyperlinks as applicable. Manuals shall be organized with bookmarks and section titles for quick reference.

p. Recommended inspection and maintenance schedules for rigging systems.

3. Provide two (2) copies of the recorded Manuals to document the instruction and training in accordance with Article 3.6, D on thumb drives to the Owner.

4. As-Built Drawings: Maintain a full set of shop drawings at the project site marked up to indicate actual locations of equipment, boxes, and other items called for in this section. After the final site visit, compile the mark-ups into an electronic set of as-built drawings in AutoCAD or Revit and provide to the General Contractor, Architect, and Owner.

J. Field Quality Control Reports: Documenting inspections and demonstrations of installed products and equipment.

1.10 PROJECT CONDITIONS

A. Field Conditions: The Contractor shall examine all attachment areas and conditions under which the theater equipment is to be installed. Notify the General Contractor in writing of any conditions detrimental to the proper and timely completion of the Work.

B. Field Measurements: Verify actual dimensions of openings and construction contiguous with drapery, rigging, and openings by field measurements before fabrication and indicate measurements on Shop Drawings.

C. The drawings show diagrammatically the front-of-house and stage electrics, control panels, etc. So far as possible, the drawings show the arrangement of the equipment which will fit into the spaces available without interference.

1. Coordinate installation and location of blocking and supports as requested.

2. Verify openings, clearances, storage requirements, and other dimensions relevant to the installation and final application.

3. Where applicable, coordinate locations of electrical junction boxes.

D. The system drawings are approximately to scale and generally indicate how they are to be integrated with other parts of the building. The Contractor shall determine exact locations by job measurements, by checking the requirements of other trades and by reviewing all contract documents.

E. The Contractor is responsible for monitoring the progress of other trades to prevent out of sequence installation of equipment.

F. Whenever job measurements, analysis of the drawings and specifications, or progress of other trades indicates that the various systems cannot be installed without significant deviation from the intent of the contract, the Architect/Owner shall be notified immediately. Work in the general area shall cease until a resolution to the question has been approved.

1.11 WARRANTY

A. Provide a written one (1) year warranty, signed by the Contractor, due on the date of the final acceptance.

B. Include the following provisions:

1. Warranty all equipment and the installation to be free of faulty workmanship.

2. Warranty all components and materials to be free of defects for a period of one (1) year from the date of final acceptance.

3. Paint and exterior finishes, fuses, and lamps are excluded from above warranty, except when damage or failure results from defective materials or workmanship covered by the warranty.

C. Any manufacturer's warranties that exceed a period of one (1) year shall be transferred to the Owner for the remaining life of the warranty.

1.12 MAINTENANCE SERVICE CONTRACT WARRANTY

A. Provide a written Maintenance Service Contract that contains the following:

1. Replacement and/or repair of defective materials or faulty workmanship within seventy-two (72) hours of discovery at no cost to the Owner during the period of the warranty.

2. Maintenance Service Contract shall be for a period of one (1) year from the final acceptance date.

3. Service shall consist of at least one (1) visit six (6) months and one (1) visit eleven (11) months after final acceptance for checking the equipment and making any necessary adjustments.

4. If, during this period, any system component is out of service for more than one (1) week due to unavailability of parts or service, Contractor shall supply and install an identical component. If an identical component is not available, an equivalent component shall be substituted, but only with the approval of the Owner.

PART 2 PRODUCTS

2.1 MATERIALS

A. General:

1. All components shall be fabricated to resist rust and corrosion. Consideration of the job site environment during installation and storage will dictate measures to ensure that all equipment is free of rust at the time of final acceptance. Rust appearing during Warranty period shall be corrected by the Contractor at no expense to the Owner.

2. All metal parts shall be free from rust, dirt, and welding spatter. All new weldments or other metal components shall receive a coat of rust inhibitor primer prior to component assembly. All assemblies shall receive a finish coat of paint.

3. All materials shall be new and of first quality.

4. All equipment shall be of a bolt-up construction whenever possible. Equipment which must be welded in place shall have a welded sub-base which is bolted to the base so that the assembly may be removed for servicing by loosening bolts between the base and sub-base.

B. Manufacturer:

1. For all equipment, materials, and products not identified by part number and manufacturer, performance specifications which are published in the most recent manufacturers' data sheets available at the time of bidding this contract shall be applicable to the present work as though fully written herein.

2. For equipment, materials, and products not identified by part number and manufacturer, Contractor may select items which conform to the functional and/or technical specifications. For all such items, the Contractor shall submit for approval all technical data which is available from the supplier or manufacturer. Acceptability for use in the systems shall be determined by the Architect/Owner. Such items shall be installed only after receipt of written approval.

C. Hardware:

1. All hardware (bolts, nuts, washers, etc.) shall be zinc or similarly plated, manufactured in the United States of America, and SAE J429 Grade 5 or better.

2. All bolts shall be of sufficient length to extend a minimum of two (2) full threads beyond their nut.

3. Self-locking nuts shall be used except where specific engineering reasons dictate the use of other styles. All nuts which are not self-locking shall have an appropriate lock washer.

4. J-bolts shall not be used for any application to the rigging system.

5. Turnbuckles shall be drop forged and galvanized, and conform to ASTM F-1145 Type 1, Grade 1. All turnbuckles shall have jam nuts. Turnbuckles shall be moused after adjustment to prevent loosening.

6. All screw pin anchor shackles shall be drop forged, galvanized, and moused with 18 to 20-gauge copper wire from the eye in the bolt to the body of the shackle.

7. All compressible swage or "Nicopress" fittings shall be crimped exactly according to manufacturer's recommendations. Quantity and spacing of crimps shall be according to manufacturer's recommendations. All swage tools must be calibrated prior to beginning work. A go/no-go type gauge shall be used to measure crimps at the beginning of calibration and after every fifty (50) cables are terminated. Ensure that tool calibration is maintained. The dead ends of cables shall be trimmed within 3/8" of swages. Only copper sleeves shall be used. Aluminum is not acceptable.

8. Acceptability for use in the systems shall be determined by the Architect/Owner. Such items shall be installed only after receipt of written approval.

D. Wire Rope Cables:

1. All wire rope cables shall be 7 x 19 stranded utility cable, meeting Federal Specification RR-W-410E, sized as required, and with breaking strengths as follows:

   a. 1/8” diameter – 2,000 pounds

   b. 3/16” diameter – 4,200 pounds

   c. 1/4” diameter – 7,000 pounds

   d. 5/16” diameter – 9,800 pounds

   e. 3/8” diameter – 14,400 pounds

2. All lift cables shall be new and free of kinks and burrs. All defective runs of cable shall be replaced regardless of what caused the defect. Damaged or deformed cable shall not be used.

3. The Contractor shall secure notarized test certificates from the manufacturer on each reel of cable documenting the minimum breaking strength. These certificates shall be part of the manual catalog.

4. All wire rope rigging shall be installed to prevent abrasion against any part of the building construction or other equipment.

E. Substitutions:

1. Accompany any request for substitution with manufacture-measured data proving the equivalence of the proposed substitute in quality and performance. The Architect and Owner shall be the final judge of the acceptability of submitted substitution.

2. Substitution requests must be submitted in accordance with Section 01605 requirements and will be reviewed after bid award.

2.2 MOTORIZED STAGE RIGGING

A. The motorized stage rigging includes support for the following:

1. Front of House performance lighting electric.

2. Stage performance lighting electrics.

3. Orchestra shell ceiling units.

4. Spare line sets.

B. General:

1. Hoists shall be the Prodigy P1 with Compression Tube as manufactured by Electronic Theatre Controls (ETC).

2. Hoists shall be purpose-designed and fabricated for overhead lifting of theatre lights, equipment, drapery, and scenic elements, whether used on stage, in the auditorium or other places of public assembly where people shall move beneath the suspended or moving load. The systems shall incorporate mechanical, electrical and safety features that shall be inherent to this equipment; they shall provide an engineered, efficient device for overhead lifting. The mechanical, electrical, and safety features of this hoisting and control system shall establish the standard of quality, performance, and safety by which hoisting systems of other manufacture shall be evaluated.

3. Each hoist shall be fully tested under full rated load throughout its full travel distance with all its lift lines terminated to the hoist before the hoist is shipped from the manufacturer. Only hoists that successfully pass the following pre-shipment testing shall be sent to any job site. Hoists that are not tested as a complete system with the wire rope and loft blocks that will install with the hoist in the field shall not be acceptable. Testing shall include:

    a. Hoist operation.

    b. Hoist/motor speed.

    c. Lift line terminations under load.

    d. Braking and stopping under load.

    e. Load cell functions.

    f. Slack line detection.

    g. Position sensing.

    h. Hoist noise.

4. A record of testing and its results shall be available for review at the manufacturer’s facility.

5. A copy of all testing results must be furnished by the Theatre Contractor to the Architect/Owner representative at the time of system commissioning.

6. Paint as required under this section shall be the manufacturer's standard finish and color except as noted.

7. All equipment items shall be new and conform to applicable provisions of Underwriters' Laboratories (UL), American Standards Association (ASA), American National Standards Institute (ANSI), National Fire Protection Association (NFPA) Life Safety Code 01, National Electric Code (NEC) and PLASA.

8. Where acceptable equipment items are specified by catalog number only, device shall meet all published manufacturer's specifications. Where quantities or sizes are not given, refer to drawings. Where two (2) or more products are listed, Contractors may use either, at their discretion. Equipment shall not be substituted without specific written approval by the Architect under the substitution paragraphs of these specifications.

9. All pipe battens shall be fabricated from 1-1/2” I.D. schedule 40 pipe.

10. All turnbuckles and cable clips shall be drop forged.

11. All turnbuckles and clips, tracks, chains, and other items of incidental hardware shall be furnished plated or painted. Wire rope shall be galvanized. Fasteners, chain, and other miscellaneous hardware shall be zinc plated.

12. All materials used in this project shall be new, unused, and of the latest design. Refurbished materials are not permitted.

13. In order to establish minimum standards of safety, a minimum factor of 10 shall be required for all equipment and hardware used on this project. In addition, the following factors shall be used:

    a. Cables and fittings: 10-design factor.

    b. Cable bending ratio: 26-times diameter.

    c. Maximum fleet angle: 2-degrees.

    d. Steel: 1/5 of yield.

    e. Bearings: 2-times required load at full for 2,000 hours.

C. Hoists:

1. Each wire rope lift line shall adhere to a design factor of 10:1 with an ultimate strength of 4,200-pounds. All load path components between the building structure and the batten shall exceed the breaking strength of the wire rope. The motor brake shall be rated at least at 125% of the motor torque.

2. Weight Capacity:

    a. Fixed speed hoists shall be capable of supporting 1,500-pound capacity in standard configuration. Speed of fixed speed hoists shall be 30-fpm.

    b. Variable speed hoists shall be capable of supporting 1,200-pound capacity in standard configuration. Speed of variable speed hoists shall range from 30-fpm to 90-fpm.

    c. See line set schedule in TS drawings for more information.

3. The hoist shall include the following features:

    a. A Powerhead containing the following elements: the gear motor, motor brake, load brake, limit switches operating electronics, load cell, slack line detector, absolute position sensors, cable drum assembly, and wire rope.

    b. A Compression Tube with beam clamps, cable management system, loft blocks, lift line and lift line terminations Right Angle Cable Adjuster (RACA) that prevents hoist system lateral forces from transferring to the building. Hoists or hoisting systems that impose a lateral load on the building shall not be acceptable.

    c. The hoist shall incorporate a built-in load cell.

    d. The hoist shall incorporate a built-in slack line sensor.

    e. The hoist shall include the emergency contactor built into the hoist.

    f. Hoists that do not include built-in load cell, built-in slack line detection, and an emergency contactor shall not be acceptable.

g. Hoists that do not use absolute position encoders shall not be acceptable.

h. Pipe batten and power/control distribution strip.

4. The hoist shall be manufactured from UL Listed components and shall be UL Listed and tested as a complete system (not just UL listed parts).

D. Powerhead:

1. The Powerhead shall be a fully enclosed, powder coated sheet metal housing that shall prevent contact with moving and electrical parts and shall provide protection against dirt, dust, and debris.

2. Hoist assemblies that do not have metal housings prohibiting access to moving parts shall not be acceptable.

3. For setup and maintenance, the following functions shall be available from the Powerhead: power and operating switches, address setting knobs, limit switch setting knobs, limit switch override button, indicators for power, status, and communication. Each of these functions shall be clearly labeled.

E. Gearmotor and Motor Break:

1. The gear motor and motor brake shall be an integral unit from a single manufacturer. It shall operate on 480 Volt, 60 Hz, 3-phase current.

2. The motor brake shall be integral to the gear motor and shall be capable of holding 125% of the motor full load torque.

3. The motor brake shall be spring actuated to apply and hold braking force.

4. The motor brake shall be magnetically released and held open upon actuation.

F. Load Brake:

1. Fixed Speed Hoists:

a. The rotary disk load brake shall bring the moving load to a complete stop and shall hold the load in position in the event of a mechanical failure of the motor, motor brake, or gearbox.

b. Noise from the load brake shall be minimally audible at any time in the operational cycle.

c. Normal hoist operation shall not be limited by heat or noise caused by the load brake.

d. The load brake shall be electrically released when the load is moving in the up direction. The load brake shall always be engaged when the load has stopped moving either up or down.

2. Variable Speed Hoists:

a. The rotary disk load brake shall open upon activation of hoist movement and shall close after the load has come to a stop; it shall hold the load in position.

b. Noise from the load brake shall be minimally audible at any time in the operational cycle.

c. Normal hoist operation shall not be limited by heat or noise caused by the load brake.

d. The load brake shall be electrically released when the load is moving either up or down. The load brake shall always be engaged when the load has stopped moving either up or down.

G. Wire Rope Drum: The drum shall be capable of wrapping up to eight (8) 3/16” diameter 7 x 19 galvanized aircraft (utility) wire rope lift lines up to 50’-0” long in a compact manner. They shall be managed by a wire rope (cable) keeper integral to the Powerhead. The drum design shall prevent wire rope from tangling or crossing over itself.

H. Limit Switch: A limit switch assembly shall be mounted within the Powerhead for hard “normal” and “ultimate” end of travel limits. Hard end of travel limits shall be set/adjusted at the time of installation aided by an indicator light visible on the bottom panel of the Powerhead cover. Any system that indicates that the limit has been set by audible or tactile means only shall not be acceptable.

I. Load Sensor/Load Profiling: A load sensor shall be built into the Powerhead to create a profile of the actual load on the hoist as it travels through its normal cycle. The profile may be changed by “re-training” the profiling system whenever the suspended load is changed on the batten by activating a key-switch operated training cycle on the motor controller. The load sensor shall continuously monitor the load when load sensing is turned on.

1. In cases where an acoustic ceiling piece is in conflict with a border drape and must hold the weight of the drapery while in position, the load sensor shall allow the drapery to be cradled on the ceiling piece and the extra weight shall not prevent the hoist from lifting the piece to the desired position.

J. Position Sensor: A position sensing system shall be built into the Powerhead to provide accurate position information. The system shall consist of two (2) absolute sensor types that provide accurate position information for each batten at power-up of the system. Hoisting systems that require re-homing shall not be acceptable. Incremental encoders shall not be acceptable for position readout purposes.

K. Slack Line Detector: The slack line detector shall be built into the Powerhead. When a slack line condition in excess of 15” develops in a lift line, the slack line detector shall remove power from the hoist. The batten shall be allowed to move only in the upward direction to allow removal of the cause of the slack line fault.

L. Local User Interface to Powerhead:

1. User interface at the Powerhead control panel at the rear of the hoist shall include:

a. Hoist Up/Down Control.

b. Limit Switch override buttons (tool accessible).

c. Address switches.

d. Status LED’s.

M. Information Storage Within Powerhead:

1. Record of severe fault conditions with date and time stamp.

2. Record of E-stops, overloads, moves, and power cycles.

3. Record of travel distance and peak loads since installation/inspection

4. Hoist systems that do not record the above data shall not be acceptable.

N. Compression Tube and Beam Clamps:

1. The Compression Tube shall be a continuous channel of extruded aluminum engineered in conjunction with the beam clamps to neutralize rigging-generated lateral forces on the building.

2. The Compression Tube shall support the system loft blocks.

3. Compression Tube sections shall be joined into a continuous assembly by a pair of dedicated splicing plates at each tube joint.

4. The Compression Tube shall be installed only by means of dedicated beam clamps that allow the Compression Tube to snap into place and to fractionally move horizontally under load.

5. Beam clamps shall be capable of attaching to horizontal beams, joists, truss flanges, or flat steel plates measuring from 1/4" thick up to 1” thick and from 4” wide up to 14” wide placed no more than 14’-0” apart.

6. Hoists must be mounted on 3/8” x 6” wide or larger steel if deemed sufficient by a structural engineer. Support structures must be deemed sufficient by a structural engineer to support any forces imposed by the hoisting systems. Beam clamps shall accommodate up to 1/2" vertical misalignment.

7. Mounting brackets as required per manufacturer's standards. Mounting points not to exceed 14’-0” on center.

8. Motorized line sets shall not be mounted to a truss with a 2-degree or higher slope. If mounting plane is 2-degrees or greater from plumb to the floor, leveling brackets shall be added to all beam clamps.

O. Loft Blocks:

1. Each loft block shall be an assembly of steel side plates, a wire rope idler, sheave, bearings, shaft locked against rotation and support hardware. Each loft block shall be inserted into the slot on the bottom of the Compression Tube. The blocks shall be positioned no closer than 4’-0” from each other, unless muled.

2. Loft block sheaves shall measure 5” in diameter and contain a pair of press fit sealed ball bearings. Lift lines shall travel in a groove shaped and sized for 3/16” diameter wire rope per the latest edition of the Wire Rope Users’ Manual as published by the Wire Rope Technical Board. The loft block sheave shall be concentric about the hub and shall be evenly balanced for ease of rotation.

3. An idler shall be incorporated into the top assembly of the loft block to guide and support lift lines as they pass the block.

4. Hoisting systems requiring the loft blocks to be mounted directly to the facility structure shall not be accepted for this project.

P. Lift Line Terminations:

1. Each lift line shall be terminated in the Powerhead via a standard copper oval compression sleeve installed/crimped at the factory.

2. Lift lines shall be terminated at the load hanger with a low-profile Right Angle Cable Adjuster (RACA), thimble, and copper oval compression sleeve. The RACA and cable terminations at the batten shall be installed at the time of hoist installation.

3. Batten trim shall be adjustable up to 6” via the RACA.

4. Systems utilizing turnbuckles or chain to trim the batten shall not be accepted for this installation.

Q. Hangers:

1. Raceway hangers shall be specially shaped flat bar that shall support the wire rope termination hardware and secure the raceway and the pipe batten.

R. Cable Management for Electrics:

1. The load circuits and control wiring shall be fed to the distribution trough by a built-in cable management system that allows flat feeder cable to fold and store along the top of the connector strip.

2. At high trim, the entire system shall be stored in 30” of vertical space from the bottom of the mounting steel to the horizontal centerline of the batten.

3. The cable management system shall be integral to the hoist system.

4. The cable management system shall be UL LISTED.

5. The flat cable shall meet the physical as well as thermal requirements of UL for 20 Amp loads. Up to four (4) flat cables may be fed from each end of the distribution system to provide power for twenty-four (24) circuits from each end of the system for a maximum of forty-eight (48) total circuits.

6. Each flat cable shall include one (1) ground wire and one (1) data cable plus an individually insulated hot and an individually insulated neutral conductor for each of six (6), 120 Volt, 20 Amp circuits.

7. The connector strip shall be built as specified by Theatre Consultant.

8. Flat cable shall pass through a strain relief before entering a termination box at the designated end of the raceway. Within the raceway all wiring shall be attached at the factory to a terminal block. The flat cable, internal wiring and all components shall meet UL requirements and appropriate National Electrical Codes (NEC).

9. Hoisting systems utilizing cable management systems from third-party vendors shall be fully integrated into the hoisting system without additional structural changes or changes to the QuickTouch controller. Electrics line set hoisting systems that do not fully integrate cable management in the hoisting system and controller shall not be acceptable for this installation. Cable management systems that are not UL LISTED shall not be accepted for this installation.

10. A Helix cable management system is acceptable for use in the stage orchestra shell line sets. Any other cable management systems that utilize cable cradles, cable reels, or locate feeder or data cables outside the off-stage edges of the electrics batten shall not be acceptable for this project.

S. Pipe Batten:

1. The pipe batten shall be 1-1/2” I.D. schedule 40 grade A, truss batten, seamless pipe fabricated in the largest possible lengths without splices. Battens of greater length shall be spliced by means of 0.120 x 1 9/16 diameter DOM tube 18” long with 9” of tube inserted into each half of the splice. The tight-fitting splice tube shall be held in place by a pair of 3/8” x 2-1/2” Grade 5 hex bolts on each side of the joint. The bolts shall pass through the pipe at an angle of 90-degrees to each other. There shall be two (2) bolts on each side of the joint spaced 1” and 8” from the joint. Alternatively, one (1) pair of bolts on one (1) side of the joint may be replaced with either plug welds or tight-fitting steel rivets. Pipes shall be straight and painted flat black.

2. A safety-yellow batten cap shall be installed at each end of each pipe batten.

3. The manufacturer shall provide up to four (4) self-adhesive labels for each batten on which the rated batten load shall be written by the installer.

T. Power and Control Distribution (PCD):

1. Each hoist shall receive power and control via a pair of 8’-0”-long cables extending from the Powerhead to the source outlets. Receptacles shall be installed in a sheet metal junction box or trough with outlets. Each outlet shall be located no more than 6’-0” away from the rear face of each hoist.

2. Each Powerhead shall include a power cord hardwired to the hoist with an appropriately sized grounded twist-lock connector at the PCD end and a removable control cable with a circular 9-pin connector at each end. An appropriately rated 3-phase breaker in the PCD is included. The wiring and connectors shall be barriered between high and low voltage.

3. The power/distribution channel shall be UL LISTED for this application.

U. Control System:

1. General:

a. The controller shall be purpose-designed and fabricated to manage and operate motors specifically designed for overhead lifting.

b. The System shall incorporate mechanical, electrical and safety features that shall be inherent to this equipment and shall provide an engineered, efficient device to control the equipment.

c. The controller shall support up to twenty-four (24) motors.

d. The controller shall provide one (1) connection for motor communication, supporting up to twenty-four (24) motors per connection.

e. The control system shall consist of a surface, panel, or rack mounted primary controller and up to three (3) optional external E-stop stations.

f. The controller shall be UL Listed and shall be fabricated from UL Listed components.

g. The Emergency Stop and Hold-To-Run (Dead-Man) signals between the control station and the motor starters or drives in the motors shall be hard wired 24 Volt signals.

1) One (1) physical, industrial heavy-duty pushbuttons shall create a “dead-man” signal. The "dead-man" operation is required, so that the operator must be at the console and pressing a button to initiate and continue motion.

2) Systems that rely on software and bus communications to transmit signals shall not be acceptable.

3) For safety, movement initiated from the touchscreen shall not be permitted.

4) Systems that allow motors to run without an operator actively present at the console shall not be permitted

h. The system shall not contain any permanently moving components (like hard drives or fans) and shall be maintenance free and completely quiet during operation.

i. The control system shall only employ the controller, a power and control distribution infrastructure and the motors. A system that requires separate drive cabinets or motor-starters shall not be acceptable.

2. Mechanical:

a. The controller shall support wall mount installations.

b. The wall mount bracket shall be mountable independently from the control station. It shall be possible to run in and terminate all wires on connectors with the installed wall bracket

1) The entire control panel shall be easy to connect to the wall bracket. All electrical connections shall be made via touch safe connectors.

2) A system that relies on directly terminated building wires to the control system shall not be acceptable.

c. The wall mount bracket shall be flush with the wall.

d. A lockable cover shall be provided.

e. The face panel shall be printed with labeling that identifies the function of each of the buttons on the control station.

f. The face panel shall identify the system as a controller for stage rigging.

3. Electrical:

a. The controller shall require no discrete wiring connections; all wiring shall be terminated into a wall mounted bracket.

b. The controller shall run on 24V DC power.

4. Functional:

a. User Interface:

1) The control system shall include one (1) illuminated and dimmable “GO” button.

b. Emergency Stop (E-Stop):

1) The E-stop shall be an NFPA-79 compliant mushroom head button with an illuminated ring surrounding the button.

2) During normal operation the E-stop button shall be in the out position. An E-stop can be activated via this button by firmly pressing the button in. The button shall latch and immediately cause all motors in the system to stop motion.

3) To continue system operation, the E-stop button must be cleared at the station where it was pressed by twisting the button to release the latch. The E-stop must be acknowledged at the control station where it was activated before any new movement can occur.

4) The operator shall acknowledge the end of an E-stop condition. At that time the control system shall initiate an automatic self-test of the system safety functions including safe opening of all E-stop contactors.

5) The illuminated ring around the E-stop button shall change intensity depending on whether the system is moving or not. The transition between low and high intensity shall be a smooth fade. The intensity levels shall be adjustable at the time of installation or service.

6) The illuminated ring around the E-stop button shall blink in case of an E-stop condition.

7) In addition to the E-stop station at the main control panel, up to six (6) external E-stop stations may be connected to the system. Each external E-stop station shall operate in the same way as the primary E-stop at the control panel.

8) The LCD screen shall report the E-stop as an E-stop condition.

9) The report shall indicate if the activated E-stop was the internal one, the one on the remote control, or one of the external stations.

10) The E-stop system shall be completely hard-wired. A system that relies on software or bus system to transmit E-stop signals shall not be acceptable for this installation.

11) The E-stop signal shall be provided in parallel to all E-stop contactors in the motors. A single E-stop contactor failure shall only affect a single motor.

12) Serial wiring of the E-Stop signal from motor to motor shall not be acceptable.

c. LCD Screen:

1) A 7” industrial grade backlit graphic LCD display shall communicate system information in symbols, colors, and human readable text.

2) The control system shall employ an ambient light sensor and proximity sensor for automatic wakeup of the LCD display.

3) Intensities of all indicator lights and LCD intensity shall be dimmable and shall automatically adjust based on ambient light conditions. Intensity changes shall happen in smooth slow fades.

4) If the control system is not used for a pre-determined time, the intensities shall dim further down. If the proximity sensor is actuated, the intensities shall automatically dim up again.

5) The screen shall employ a multi-touch sensor that allows for gesture control of zooming and scrolling.

6) Display language shall be English.

7) A flexi-channel filter shall support selection of all motors or a subset.

d. User Access Levels:

1) The controller shall provide a minimum of six (6) access levels with differentiated functionality: Power User, Administrator, Panel Preset User, Panel Preset Operator, Installer, and Inspection.

2) These levels shall be unlocked by a username and pin code.

3) It shall be possible to call the manufacturer to retrieve a 3-day temporary access code for Power User, Administrator, Panel Preset User, and Panel Preset Operator.

e. Operation:

1) Upon completion of the startup sequence the display shall indicate that the system is “OK” or shall provide specific information should a fault occur in the self-test.

2) Fault conditions shall be reported in human readable text. Any system that reports fault conditions in a pattern of illuminated lights or a series of blinking lights shall not be acceptable for this installation.

3) The LCD display shall provide the motor name and number, its current position above the floor, the amount of weight suspended from the batten, preset position recorded, as well as a bar graph scale that shows the current position of the motor and the current weight suspended by the motor.

4) Fault conditions shall be displayed in red or orange, depending on the severity of the condition.

5) Position readout and position entry shall be in feet and inches.

6) The weight readout shall be user selectable from pounds.

f. Manual Operation:

1) In manual operation, it shall be possible to select one (1) or multiple motors and then directly move the selected motors by the means of the joystick.

2) The user shall have the ability to change the name of a motor.

3) The user shall have the ability to add a comment for each motor.

4) The user shall have the ability to store trims heights for the following levels: High trim (soft upper limit), Low trim (soft lower limit), eight (8) intermediate trims, and two (2) system-wide trims.

5) These trims shall be usable as references in presets.

6) The user shall have the ability to directly enter a numeric target position.

g. Preset Operation:

1) The system shall provide the capability to store up to 999 presets with numbers ranging from 1 to 999.

2) The user shall be able to add individual motors with specific positions to each preset.

3) Presets shall support user naming from the controller face panel.

4) Presets shall provide a user comments field for free text entry of notes on a per preset basis.

5. System Diagnostics and Monitoring:

a. Upon energization of the control system shall automatically perform a series of diagnostic tests that assures the proper functionality of all system safety functions. Should an error in the safety functions be determined, the controller shall report back a fault condition on the LCD display and shall identify the nature of the fault in human readable text form.

b. Should the controller be continuously energized, the system shall automatically perform a series of diagnostic tests every thirty (30) days to determine if there are any problems with any portion of the motor control system safety features. In the event of a problem, the controller shall report back a fault condition on the LCD display and shall identify the nature of the fault in readable text form.

c. The automatic self-tests shall include a complete test of all Emergency Stop contactors for their respective ability to turn off.

d. Eleven (11) months after a system inspection has been performed, the system shall remind the user to schedule a full system maintenance/inspection. The reminder shall remain visible in the system until it is turned off by the factory authorized and trained inspector.

e. All faults and failures shall be displayed on the control station as a color indication of the respective motor and additionally as clear text.

f. The system inspection reminder shall show the number of days remaining until the system inspection, or the number of days the inspection is overdue.

g. A failure of a hoist's load cell, position encoders or a wiring issue shall be automatically detected during machine standstill and motion.

h. Motor, brake resistor, or drive over-temperature shall be detected and shall stop the hoist.

i. The motor direction shall be detected and the system shall automatically be stopped if the command direction differs from the actual movement direction.

j. A failure of the hoist's chain between the drum and the limits shall create a fault condition and stop the motor.

k. The number of simultaneous moving motors shall be limited in the control system in order to reduce the maximum dynamic load to the building structure:

1) The system shall only allow one (1) motor to move at a time.

2) The system shall trip out the control system if more than the allowed number of motors are about to start to move.

3) This system shall react before the motors start to move to avoid even the initial startup load impact.

4) The setting for this limit shall allow a granularity of one (1) motor increment.

5) This system shall be executed in pure hardware.

6) This system shall have redundant software back up.

7) Systems that solely rely on software to achieve this function shall not be acceptable.

l. Monitoring and Motor History:

1) The system shall automatically track system and motor history.

2) Each fault condition shall be logged with a time and date stamp. Logging of the motor events shall continue to function while the main control station is turned off or while the motor is not connected to the rest of the system.

3) The control system shall keep a record of the distance traveled and peak load for each motor. There shall be separate entries of this data for "Since the last inspection" and "Since time of manufacture."

4) The data shall be accessible during inspection. It shall be downloadable in a Microsoft Excel readable file format.

5) A control system that does not provide logging shall not be acceptable.

6. Configuration:

a. Configuration software shall allow easy and simple configuration of the system by factory trained and authorized installers.

7. Inspection:

a. Configuration software shall allow annual inspection of the control system functions by a factory trained and authorized inspector:

1) The inspection software shall automatically provide inspection relevant data to the inspector, such as peak load and travel distance.

2) The software shall guide the inspector through a number of inspection tasks.

3) The software shall automatically recognize safety relevant signals (E-stop, Limit Switches).

b. The inspection software shall automatically fill in an inspection report and generate a PDF file that can be stored on a USB thumb-drive.

c. The inspection report shall include a 2D barcode that encodes a copy of the inspection data and a checksum that can be utilized to validate the inspection report.

V. The basis of design is:

1. Hoists: ETC Prodigy P1500E and V1000S.

2. Motor Power and Control Interfaces:

a. PCD-F (front of house and stage right boxes).

b. PCD25-4-F-3 R-_ (stage left raceway).

3. Motor Control Station with surface-mount box, and locking cover: ETC QT+12, ETC QT-SBB-LG, and QT-D-LG.

4. E-Stop: ETC ES-BS.

5. Alternate manufacture is approved with proof of equivalence.

2.3 DEAD-HUNG RIGGING SUSPENSION SYSTEM

A. The dead-hung stage rigging suspension system includes support for the following:

1. Grand Valance Batten.

2. Grand Drape Batten.

3. Projection Screen Batten.

4. Border 1-4 Battens.

5. Leg Sets 1-6 Battens.

6. Midstage Traveler Batten.

7. Upstage Traveler Batten.

8. Scrim.

9. Cyclorama.

B. The rigging system is to be suspended from the structure steel in the stagehouse and 1/4", 7 x 19 stranded, galvanized, utility cable or 1/4" black proof coil chain. The cable or chain should be securely fastened to the steel as to support the intended loads with a minimum of 3:1 safety factor. If utility cable is used, it should be fastened to the structure in such a manner as to prevent kinking or damage to the cable. See TS drawings for details of construction.

1. If utility cable is used, it shall be fastened to the structure in such a manner as to prevent kinking or damage to the cable.

2. Refer to line set schedule on TS drawings.

C. Each pipe batten shall have suspension points on a maximum of 10’-0” intervals.

D. Bridle battens shall be used on both off-stage pick points of battens to shorten the distance of cantilever from pick point to end of batten. Maximum cantilever shall be 2’-0”. Bridle battens shall be suspended by a pipe clamp along the center point. Pipe clamps shall be used to suspend the batten from the bridle batten. Refer to detail in TS drawings for more information.

E. Each drapery track shall have suspension points not exceeding maximum allowable intervals per manufacturer’s recommendations.

F. When using utility cable, the load end of the cable shall pass through the end link of a 4/0 passing link trim chain, by means of a properly sized thimble. The load end of the cable shall be swaged with a copper compressible swage or "Nicopress" fitting, spaced as recommended by the manufacturer. The trim chain shall be 36” long, wrapped twice around the batten, and be fitted with a 1/4" bolt-type shackle, Crosby No. G-2130, or attached directly to the batten or track clamp using the 1/4" bolt-type shackle.

G. Pipe Battens:

1. Refer to line set schedule on TS drawings.

2. The pipe material shall be 1-1/2” I.D., schedule 40 black steel pipe.

3. All pipes shall be primed and painted with two (2) coats of flat black paint.

4. A 2” wide, red stripe shall be painted around the pipe at its center and shall be centered on the stage centerline.

5. 2’-0” at each end of the battens shall be painted yellow.

6. Pipes shall be suspended from structural steel of stagehouse requiring the following suspension elements:

a. Rated, adjustable beam clamp.

b. Jaw and jaw moused turnbuckle.

c. 1/4" wire rope thimble, Crosby #G-411.

d. 1/4" 7 x 19 stranded utility cable.

e. 1/4” copper compression sleeve.

f. See TS drawings for details of construction.

7. Pipe Clamp:

a. Shall be sized to hold 1-1/2” I.D., schedule 40 black iron pipe.

b. Shall have a working load of 1,250-pounds.

c. Shall be colored black.

d. Shall fully wrap/enclose pipe.

e. Acceptable products:

1) The Light Source Mega-Batten Clamp, MBATB.

2) Approved equal.

2.4 DRAPERY

A. General:

1. Furnish and install the following in the Stage:

a. Grand Valance.

b. Grand Drape.

c. Borders 1-4.

d. Leg Sets 1-6.

e. Midstage Traveler.

f. Upstage Traveler.

g. Scrim.

h. Cyclorama.

2. Provide drapery per line set schedule included in TS drawings.

3. Provide fabrics of each type and color from same dye lot.

4. The Contractor shall furnish notarized affidavits certifying that such fabrics have been tested in accordance with NFPA 701, Standard Method of Fire Tests for Flame Resistant Textiles and Fibers, and that such fabrics have been used exclusively in the draperies and fabrics furnished, if required by the Architect.

B. Drapery Fabrics:

1. All drapery fabrics shall be inherently flame retardant. The Contractor shall furnish notarized affidavits certifying that such fabrics have been tested in accordance with NFPA 701, Standard Method of Fire Tests for Flame Resistant Textiles and Fibers, and that such fabrics have been used exclusively in the draperies and fabrics furnished, if required by the Architect. Spray processing is not acceptable.

2. Polyester Velour; Grand Valance and Grand Drape:

   a. Napped fabric of 100% polyester weighing not less than 25 oz./linear yard with pile height approximately 75 mils.; inherently and permanently flame resistant; 54” width.

   b. Exemplary Products: KM Fabrics, Inc.; Crescent, or approved equivalent.

   c. Color: to be selected by Architect from manufacturer’s standard color options.

3. Polyester Velour; All Other Drapery:

   a. Napped fabric of 50% polyester weighing not less than 22 oz./linear yd., with pile height approximately 75 mils; inherently and permanently flame resistant; 54” width.

   b. Exemplary Products: Milliken Encore, or approved equivalent.

   c. Color: Black

4. Polyester Lining:

   a. 100% polyester fabric; inherently and permanently flame resistant; 54” minimum width.

   b. Exemplary Products: Avora Lining, or approved equivalent.

   c. Color: per batten schedule

5. Sharkstooth Scrim: Open-weave, seamless, lightweight gauze fabric.

   a. 100% polyester, inherently flame-resistant resin coated scrim: 35’-0” width.

   b. Color: Black

6. Muslin Cyclorama: Sheer plain-woven fabric.

   a. 100% cotton, seamless, weighing 99.2oz./linear yard.; flame resistant, 30’-0” width.

   b. Color: Natural

C. Fabrication:

1. The Contractor shall furnish notarized affidavits certifying that such fabrics have been tested in accordance with NFPA 701, Standard Method of Fire Tests for Flame Resistant Textiles and Fibers, and that such fabrics have been used exclusively in the draperies and fabrics furnished, if required by the Architect.

2. All drapery shall have a permanently attached label in a location that is visible and convenient for identification by the Authority Having Jurisdiction after installation. The label shall include the name of the manufacturer, product or style of fabric, date of manufacture, list of fire tests, testing agency, and identification that the fabric is inherently and permanently flame resistant.

3. Synthetic Velour, Lining, and Scrim: A cloth statement shall be sewn to the hem of each velour drape and lining with the following information printed on it:

> CERTIFICATE OF FLAME RETARDANCE: This is to certify that the total yards of material as supplied by_____, Mill Order No.____, Invoice Number _____, dated ___, consisting of pieces, is inherently flame retardant. The material was tested by the laboratory for satisfactory results before the shipment went forward. Certified by: _____

4. Cyclorama: A cloth statement shall be sewn to the header of the cyclorama drape with the following information printed on it:

> CERTIFICATE OF FLAME RETARDANCE: This is to certify that the total yards of material as supplied by_____, Mill Order No._____, Invoice Number_____, dated _____, consisting of pieces was flameproofed by the immersion process through pressure rollers. The flameproofing chemicals were applied in accordance with the instructions of the manufacturer and tested by the laboratory for satisfactory results before the shipment went forward. Certified by: _____

5. General:

   a. Draperies are to be stitched with thread matching the color of the drapery using a single needle lock stitch.

   b. Provide vertical seams unless otherwise indicated. Arrange vertical seams so they do not fall on faces of pleats. Do not use fabric cuts less than one-half (1/2) width.

   c. Vertical Hems: Provide vertical hems not less than 2” wide, and not less than 4” wide at borders, valance, teasers, and tormentors, with not less than a 1” tuck, and machine sew with no selvage material visible from front of drape. Sew open ends of hems closed.

   d. Leading edge turnbacks at the center and off-stage edges: Provide turnbacks formed by folding back not less than 12” of face fabric, with not less than a 1” tuck, and secure by sewing turnbacks vertically.

   e. Top Hems: Reinforce top hems by double-stitching 3”-wide heavy polyester webbing, to top edge on back side of curtain with not less than 2” of face fabric turned under.

   f. Pleats:

      1) Grand Valance and Grand Drape: Provide 100% fullness in drapery, exclusive of turnbacks and hems, by sewing additional material into 6” double-stitched box pleats sewn flat and spaced at 12” on center along top hem reinforcement.

      2) All other velour drapery: Provide 50% fullness in drapes.

g. Grommets: Brass, No. 4:

1) Grand Drape and Grand Valance (if not black): Provide brass No. 4 grommets.

2) Black Drapery: Provide brass or aluminum grommets with black finish.

3) Scrim and Cyclorama: Place 12” on center and 1” from corner of drapes; for ties, snap hooks, or S-hooks.

4) Pleated Drapes: Centered on each box pleat and 1” from corner of drape; for snap hooks or S-hooks.

h. Bottom Hems:

1) For flat drapes without fullness, provide a 4” lined hem with a pocket that allows the sliding of a pipe or conduit stiffener into the bottom of the drape, and provide a concealing flap of same fabric in front of pocket and made 2” longer than the bottom edge of the pocket.

2) For drapery with fullness:

a) For draperies that do not hang to the floor, provide hems not less than 3” deep with 3/4" weight tape. Sew open ends of hems closed.

b) For floor-length drapery, provide hems not less than 6” deep with separate, interior, heavy canvas weight pockets equipped with #105 tape weights. Stitch weight pockets so tape weight rides 2” above finished bottom edge of curtain. Sew open ends of hems closed. The tape weights shall be tacked to the pocket every 3’-0” and secured at each end to prevent bunching.

i. Velour Drapery: Fabricate with the fabric nap down.

j. Lining:

1) Provie lining per the line set schedule.

2) Lining shall be in the same fullness as the face fabric and finished 2” shorter than face fabric.

3) Sew or otherwise securely attach lining to top hem of face fabric. Attach lining to face fabric along side seams with 4” twill tape.

4) Linings shall hang free at the bottom and shall be weighted with #90S tape weights.

k. S-Hooks: Track Manufacturer's standard heavy-duty plated-wire hooks, not less than 2” long, shall be provided for each grommet of all the track-mounted drapery.

l. Tie Lines: No. 4 or No. 4-1/2 cord or braided soft cotton tape, black or white to best match curtain; not less than 5/8”-wide by 36” long, shall be threaded through grommets of all pipe-hung draperies.

m. Scrim:

1) Fabricate from scrim curtain fabric, seamless, and sewn flat.

2) Provide 6” x 7’-0” pipe pockets at bottom with a 6” gap between sections of pocket for ease of pipe installation, with a 6” flap of same fabric in front of pocket.

3) Provide double-stitched, 3” polyester webbing at top with not less than No. 2 brass grommets spaced at 12” on center and 1” from corner of curtain.

4) Provide not less than a 2” double-folded side hem and a 4” bottom hem.

5) Provide heavy tape-weight in bottom hem.

6) Provide a 3/4" pipe batten, threaded and coupled every 10’-0”, for pipe pocket.

n. Cyclorama:

1) Fabricate from cyclorama curtain fabric, seamless and sewn flat and selvage to the rear.

2) Provide 6” x 7’-0” pipe pockets at bottom with a 6” gap between sections of pocket for ease of pipe installation, with a 6” flap of same fabric in front of pocket.

3) Provide heavy tape-weight in bottom hem.

4) Provide not less than a 2” double-folded side hem and a 4” bottom hem.

5) Along the sides, 4” wide by 18” long sections of jute webbing shall be sewn into turnbacks centered on the location of grommets inserted at 24” on center along each side.

6) Pocket shall contain an interior lining of canvas.

7) Provide a 3/4" pipe batten, threaded and coupled every 10’-0”, for pipe pocket.

2.5 DRAPERY TRACK

A. Stage Traveler Track:

1. The Grand Drape track, Midstage Traveler track, and Upstage Traveler track shall be manually operated, bi-parting and suspended from dead-hung pipe battens.

2. The track lengths shall be as indicated on the line set schedule in the TS drawings.

3. The traveler tracks shall be suspended from the battens by ceiling brackets. The traveler tracks shall be attached to the brackets along its length per the manufacturer's requirements.

4. Bi-parting traveler tracks shall have a 2’-0” minimum overlap at the center of the proscenium opening.

5. The traveler tracks shall be complete with all necessary accessories and hardware, including carriers, pulleys, hand lines, rubber bumpers, pipe or hanging clamps, and adjustable floor blocks to suit curtain fabrication.

6. End and floor block: One (1) dead-end, single-wheel pulley; one (1) live-end, double-wheel pulley; and one (1) adjustable, floor block; each with not less than 6” molded-nylon- or glass-filled-nylon-tired ball-bearing sheave enclosed in steel housing. Provide pulleys with steel housing finished to match track and with bracket for securing off-stage curtain end.

   a. Floor block shall have a minimum of 5” diameter.

7. Operating hand line locations shall be coordinated with the Owner. Provide a heavy-duty detachable floor block that secures to a plate fastened to the stage-left floor to maintain proper tension on operating lines. Steel housing shall be painted black.

8. Provide with cord operating line consisting of manufacturer's standard 3/8” diameter, stretch-resistant operating cord consisting of braided synthetic-fiber jacket over solid, synthetic-fiber, linear filaments.

9. End stops shall be provided at each track end and each carrier shall be equipped with a free-moving swivel and sufficient trim chain to accommodate a drapery clip-hook.

10. ADC Model 380 exemplifies the requirements described herein.

B. Straight Track:

1. The six (6) leg set drapes, scrim, and cyclorama shall be of walk-along type operation.

2. Leg Set Tracks:

   a. Leg Set 1 shall have two (2) track sections as indicated on the line set schedule in the TS drawings. Tracks shall have a 2’-0” minimum overlap at the center of the proscenium opening

   b. Leg Sets 2-6 shall have one (1) track section as indicated on the line set schedule in the TS drawings.

3. The track lengths shall be as indicated on the line set schedule in the TS drawings.

4. The track shall be manually operated, walk-along, and suspended from the batten above. The track shall be suspended from the batten along its entire length at intervals per the manufacturer's requirements.

5. The tracks shall be complete with all necessary accessories and hardware, including carriers, hand lines, rubber bumpers, and pipe or hanging clamps.

6. End stops shall be provided at each track end and each carrier shall be equipped with a free-moving swivel and sufficient trim chain to accommodate a drapery clip-hook.

7. Pull cord shall be provided at leading and trailing edge track carriers to assist with the movement of the drapery without handling the drapery.

8. ADC Model 384-N exemplifies the requirements described herein.

2.6 THEATRICAL LIGHTING AND CONTROL SYSTEM

A. General:

1. Principle items of equipment are identified herein by manufacturer and part number. Alternate manufacturers and part numbers are given in instances where equivalence has been determined.

2. Alternate manufacturers shall provide system equivalent to that described herein, and which meet the same performance capabilities as the equipment listed in this Section.

3. For items identified by manufacturer and part number, performance specifications which are published in the most recent manufacturer's data sheets available at the time of bidding shall be applicable to the present Work as though fully written out herein.

4. For items not identified by manufacturer and part number, Contractor may select items which conform to the functional and/or technical specifications. For all such items, Contractor shall submit for approval all technical data which is available from the manufacturer.

5. Acceptability for use in the relay system shall be determined by the Electrical Engineer. Such items shall be installed only after receipt of written approval by the Electrical Engineer.

B. Architectural Lighting Control System:

1. The Theatrical Lighting Control System shall be reconfigurable through software, requiring no hardware changes, and fully digital in operation.

2. The system shall be capable of controlling individual relays via patchable zones.

3. The system shall support LCD touchscreen and pushbutton stations.

4. The system shall provide “snapshot” recording of lighting control console output data to a preset on stations.

5. The architectural lighting control system shall have capability for uploading and downloading system software configurations.

6. The architectural lighting control system shall interface with a fire alarm system contact closure signal to trigger house lighting to “ON” in an emergency.

C. Relay and Distribution Equipment shall include the following major components:

1. House Light Entry Stations.

2. Backstage Light Entry Stations.

3. Touchscreen Station.

4. Performance Lighting Control Console.

5. DMX Networking Equipment.

6. Performance Lighting Relay Panelboard.

7. Distribution Equipment.

D. Relay and Distribution Equipment: The manufacturers and their products listed below exemplify systems with equipment and components meeting the basic requirements and intent of this specification:

DESCRIPTION	MFR	MODEL	QTY
Relay Panel	ETC	IQ48	1
w/ Surface-mount Door	ETC	IQ Door 120-48S	1
w/ 200A Main Breaker	ETC	IQ-MB200A65K	1
w/ Mains Feed Tap Kit	ETC	IQ-TAP	1
w/ Contact Input	ETC	IQ-CI	1
w/ Ride-Thru Option	ETC	IQ-RTO	2

PART 3 EXECUTION

3.1 COORDINATION

A. The Contractor shall coordinate this work with the other electrical work and the work of other trades

3.2 SITE INSPECTION

A. All site conditions shall be verified before beginning the Work. All work required to properly install and secure items in place shall be provided. Any cutting or drilling of existing structural work shall be done only with prior approval.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 WORKMANSHIP

A. The Contractor shall provide a trained foreman who shall supervise the installation of all Theatre Systems. All Work shall be done by mechanics skilled in their trade and in accordance with accepted shop drawings.

3.4 INSTALLATION

A. Installation of all equipment shall be true to plumb, line, or level. All material, hardware, supports, and other items required for a complete and correct installation shall be supplied.

B. The Contractor shall do all cutting and patching necessary for proper installation of the system and shall repair any damage done by himself or his workmen. Any required penetration of slabs of CMU walls shall be made by a cutting method rather than by a concussive method.

C. Any required penetration of slabs or CMU walls shall be made by a cutting method rather than by a concussive method.

D. Install Work neatly, with boxes, equipment, etc. plumb and square. Keep the job adequately always staffed. Designate a field supervisor to be present on the job site and in responsible charge during all phases of installation and check out. Maintain same supervisor throughout the execution of the Work unless circumstances beyond the control of the Contractor intervene. Install the system in cooperation with other trades to achieve coordinated progress and satisfactory results. Watch for conflicts with work of other trades on the job. Execute without claim for extra payment, moderate moves or changes as are necessary to accommodate other equipment or preserve symmetry and pleasing appearance.

E. Locate all apparatus requiring adjustments, cleaning, or similar attention so that it will be accessible.

F. All supporting structures and enclosures supplied by the Theatre Contractor, not having a standard factory paint finish, shall be painted. Paint specifications and color shall be supplied by the Architect.

G. Clearly, logically, and permanently mark switches, connectors, jacks, receptacles, cables, and cable terminations.

H. Etch, engrave, silk screen, or apply in a similar permanent manner all legends and markings on all custom panels and receptacle plates. Embossed tape, presstype, etc., are not acceptable.

I. The equipment specified herein must be capable of operation in environments of normal humidity, dust, and temperature. Contractor should avoid installing equipment where extreme environmental conditions can occur and shall be responsible for protection of equipment and related wiring from such conditions.

J. The Contractor shall take precautions to prevent electromagnetic and electrostatic hum. Install the equipment to provide safe operation. Provide ventilation as required to maintain equipment within the manufacturer's specified temperature limits.

K. Provide all cables necessary for interconnection of permanently mounted equipment. Use terminations required to achieve full function of equipment as specified herein.

3.5 SYSTEM START UP, OWNER'S INSTRUCTION, AND COMMISSIONING

A. A theatrical lighting system factory representative shall provide initial inspection, troubleshooting, and checkout of the theatrical lighting system prior to its being energized.

B. When all Work is complete and equipment is adjusted for suitable operation, the Contractor shall schedule an inspection by the Architect/Owner. All workmen required to operate the equipment and to perform any adjustments and tests that may be required shall be provided. During the scheduled test period, no other work will be done in the stage, auditorium, or shop areas. Any equipment failing to meet approval shall be repaired or replaced and the inspection rescheduled with complete testing repeated until approval and final acceptance.

3.6 INSTRUCTION AND TRAINING

A. A minimum of six (6) hours of instruction in equipment operations, safety procedures, and maintenance shall be furnished for the motorized rigging. Training shall be divided into two (2), three-hour sessions

B. A minimum of two (2) hours of instruction in equipment use and maintenance shall be furnished for the drapery systems.

C. A minimum of twelve (12) hours of instruction in equipment operation and maintenance shall be furnished for the theatre lighting system. Training shall be divided into four (4), three-hour sessions.

D. All training sessions shall be recorded by the Contractor. Contractor shall provide two (2) thumb drives with copies of the training video to the Owner. Contractor shall supply the equipment necessary to record the training sessions.

E. During the training, the participants shall be given opportunities for "hands-on" experience with operating the controls. There shall be demonstrations using the systems themselves as aids. Personnel for instruction and training for the Theatre Systems shall be designated by the Owner.

END OF SECTION

SECTION 11063

ORCHESTRA SHELL

PART 1 GENERAL

1.1 REFERENCE TO OWNER'S GENERAL CONDITIONS

A. The Owner's General Conditions shall be considered part of this Specification. Unless this Section contains statements, which are more definitive or more restrictive than those contained in the Owner's General Conditions, this Specification shall not be interpreted as waiving or overruling any requirements expressed in the General Conditions.

1.2 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

B. Theater Systems (TS) Drawings

C. Section 11061 Theatre Systems for rigging requirements for support of the Orchestra Shell Ceiling system specified in this Section

D. Division 16 – Electrical:

1. The Electrical Contractor shall provide the work as specified in Division 16, as indicated on the TS drawings, and as specified herein.

2. Wiring sections for requirements for wiring of integral lighting units mounted in Orchestra Shell ceiling.

1.3 RELATED WORK

A. Architect/Owner shall coordinate with Electrical Contractor on raceway/junction box locations for Orchestra Shell equipment and routing of load wiring, and all control and power raceway from equipment, terminal and pull boxes to system equipment racks.

B. All load wiring terminations shall be provided by Division 16 Electrical Contractor.

C. Structural supports for the Orchestra Shell, as shown on the Structural drawings, shall be the responsibility of the Division 5 Structural Contractor.

D. Equipment and materials provided and installed by others, unless otherwise shown in this Section or the Drawings, shall include but are not limited to:

1. Electrical Outlets.

2. Load Wiring.

3. Conduit, Raceway, and Cable Tray.

4. Junction Boxes.

1.4 DEFINITIONS

A. The following shall serve as general identifiers as specified herein:

1. Owner – Guam Department of Education.

2. Theatre Consultant – D.L. Adams Associates, Ltd.

3. Architect – Taniguchi Ruth Makio Architects (TRMA).

4. Contractor – The Contractor is the firm submitting a proposal to furnish and install the Work as defined within this Specification.

5. Project – The Project is the Orchestra Shell installation in the facilities of the Simon Sanchez High School Auditorium.

6. Work – The term “Work” means all construction and services specified within this document. The Work includes all related labor, materials, equipment, and services provided, or to be provided, by the Contractor to fulfill the proposal’s obligations.

7. Drawings – The term “Drawings” means all Theatre Systems Drawings and associated sketches, details, riser diagrams, etc.

B. As used in the Drawings and Specifications for the Work, certain non-technical words and phrases shall be understood to have specific meanings as follows, regardless of indications to the contrary in the General Conditions or other documents governing the Work:

1. “Furnish” – Purchase and deliver to the project site complete with every necessary appurtenance and support, all as part of the Theatre Systems Work. Purchasing shall include payment of all sales taxes and other surcharges as may be required to assure that purchased items are free of all liens, claims, or encumbrances.

2. “Install” – Unload at the delivery point at the site and perform every operation necessary to establish secure mounting and correct operation at the proper location in the project, all as part of the Work.

3. “New” – Manufactured within the past year and never used.

4. “Provide” – Furnish and Install.

C. Regardless of their usage in codes or other industry standards, certain words or phrases as used in the Drawings or Specifications for the Work, shall be understood to have the specific meanings as described to them in the following list:

1. “Circuit” – Any specific run of circuitry.

2. “Circuitry” – Any Work which consists of wires, cables, raceways, and/or specialty wiring method assemblies complete with associated junction boxes, pull boxes, outlet boxes, joints, couplings, splices, and connections except where limited to a lesser meaning by specific description.

3. “Concealed” (as applied to circuitry) – Covered completely by building materials, except for penetrations (by boxes and fittings) to a level flush with the surface as necessitated by functional or specified accessibility requirements.

4. “Exposed” (as applied to circuitry) – Not covered in any way by building materials.

5. “NIC” – Not in Contract.

6. “Normal Work Conditions” – Locations within building confines that are not damp, wet, or hazardous and that are not used for air handling.

7. “OFE” – Owner Furnished Equipment.

8. “Patch Panel” – A System of terminal blocks, patch cords, and backboards that facilitate administration of cross-connecting cables.

9. “Raceway” – Any pipe, duct, extended enclosure, or conduit (as specified for a particular System) which is used to contain wires, and which is of such nature as to require that the wires be installed by a “pulling in” procedure.

10. “Standard” (as applied to wiring devices) – Not of a separately designated individual type.

11. “Wiring” – see “Circuitry.”

D. Additional Terms:

1. The term “shall” is mandatory; the term “will” is informative; the term “should” is advisory.

2. Where the word “conduit” is used without specific reference to type, it shall be understood to mean “raceway.”

3. The term “custom” indicates systems or components that shall be designed and fabricated based on the drawings and specifications.

4. The term “future” indicates systems or components that will be added to the system later but shall be provisioned for now.

5. The term “equal” indicates systems or equipment that is of the same size, color, design, function, efficiency, etc. as of that specified.

6. Reference to “U.L. (Materials Construction) Standards” shall mean the “Standards for Safety” published by Underwriters Laboratories, Inc.

1.5 SCOPE OF WORK

A. General:

1. The Work as described herein shall be furnished and installed by one (1) firm alone.

2. The Contractor shall furnish and install all equipment described herein, unless noted otherwise.

3. The Contractor shall provide all Work as may be required to make a complete and fully functioning system of that which may not be fully defined in the Contract Documents.

4. The specifications and drawings shall be read and used together, system features which are mentioned in one are not necessarily shown in the others. It shall be understood that the specifications and drawings are complementary.

5. The detailed information contained herein and on the drawings is deemed to be correct and accurate; however, the Contractor is held responsible for installing complete working systems.

6. The Contractor shall verify the completeness of the parts list and furnish necessary accessories to execute the intent of the plans and specifications.

7. The project documentation is, in general, diagrammatic and/or developed to communicate design intent.

8. The Contractor shall coordinate all installed items with associated trades (electrical, mechanical, structural, audio visual, telecom, etc.) including all necessary cable pass-thrus and structural needs/requirements.

B. Coordination Work: Coordinate with related trades to schedule the Work and ensure a complete installation in accordance with the schedule outlined by the Owner.

1.6 GENERAL CONDITIONS

A. The Contractor represents that they are familiar with and have expertise in the Work of this nature and scope.

B. The Contractor shall comply with all the regulations, including safety regulations of national, city, local, and other government agencies having jurisdiction concerning the work of the Contractor. The Contractor shall give all notices and comply with all laws, ordinances, codes, rules, and regulations bearing on the conduct of the Work. If the Contractor performs any work, which is contrary to such laws, ordinances, codes, rules, and regulations, they shall make all changes for compliance and bear all associated costs.

C. The Contractor shall be responsible to provide and maintain a storage facility. If this storage facility is required to be on-site it shall be the Contractor's responsibility to coordinate the size and spatial requirements with the Owner. The Contractor shall assume full responsibility for the storage facility and all contents, unless otherwise indicated by the Owner.

D. The Contractor shall provide all protection necessary to safeguard their work from damage by their operations and the operations of others. Unless the Contractor proves to the Owner’s satisfaction that the Work has been damaged by others, the Contractor shall promptly repair, adjust, and clean all defective installations and bear all associated costs.

E. All the Contractor's work shall be tested and inspected by all authorities having jurisdiction and in accordance with all Specifications. The Contractor shall coordinate and cooperate fully and shall provide at no additional cost to the Owner, manpower, drawings, facilities, scaffolds, etc. to reasonably assist the inspectors.

F. The Owner reserves the right to furnish any materials necessary for the Project.

G. All permits required for any part of the Contractor's work shall be procured and paid for by the Contractor. The Contractor shall determine all permits required and transmit this information to the Owner. If it is determined that the Contractor’s work falls reasonably within another party’s permit (General Contractor, Electrician, etc.) the Contractor shall not be required to procure additional permits provided written authorization is provided to the Contractor by the party holding the permit.

H. The Contractor must state if they intend to utilize a subcontractor and provide said subcontractor's name and address. The subcontractor shall comply with all the same rules, regulations, laws and codes, licenses, etc. as required by the Contractor and as specified herein. The Owner reserves the right to approve or disapprove any subcontractor proposed by Contractor.

I. The Contractor, upon receiving notice from Owner that the Contractor has furnished inferior, improper, or unsound work or materials (including equipment), or work or materials at variance with that which is specified, will, within twenty-four (24) hours, proceed to remove such work or materials and make good all other work or materials damaged thereby, and, at the option of the Owner, the Contractor shall immediately replace such work or materials with work or materials as specified. The removal, replacement, and repair shall be performed at such times and with manpower sufficient, in the judgment of the Owner, to avoid disturbance to occupants, or other ongoing work for the Project.

1. If the Contractor does not remove such unsound Work within a reasonable time, the Owner may remove it and may store the material at the expense of the Contractor. If the Contractor does not pay the expenses of such removal within ten (10) days' time thereafter, the Owner may, upon written notice, sell such materials at auction or at private sale and shall account for the net proceeds thereof, after deducting all the costs and expenses that should have been borne by the Contractor and all expenses of the sale.

2. The Owner shall have the authority at all times, until final completion and acceptance of the Work, to inspect and reject work and materials which in its judgment are not in conformity with the Drawings and Details, Room Data Sheets and Specifications, and its decision in regard to character and value of Work shall be final and conclusive on both contracting parties. If the Owner permits said Work or materials to remain, the Owner shall be allowed the difference in value or shall at its election have the right to have said Work or materials repaired or replaced, as well as the damage caused thereby, at the expense of the Contractor, at any time within one (1) year after the completion of the entire project, or within such longer period as may be covered by any guaranty; and neither payments made to the Contractor, nor any other acts of the Owner, shall be construed as evidence of acceptance, waiver, or estoppels.

3. Any expense incurred by the Owner in connection with the foregoing, shall be borne by the Contractor, and the Owner may withhold money due to the Contractor or recover money already paid to the Contractor, to the extent of such expense.

J. The Drawings for the Work utilize symbols and schematic diagrams that have no dimensional significance. The Work shall be installed to fulfill the diagrammatic intent expressed on the Drawings, field layouts, and shop drawings of all trades.

K. The system Drawings generally indicate how the system equipment is to be integrated with other parts of the building. The Contractor shall determine exact locations by job measurements, by checking the requirements of other trades and by reviewing all Contract Documents.

L. Whenever job measurements, analysis of the drawings and specifications, or progress of other trades indicates that the various systems cannot be installed without significant deviation from the intent of the contract, the Architect/Owner shall be notified immediately.

M. Certain details appear on the Drawings for the Work that are specified with regard to the dimensioning and positioning of the Work. These are intended only for general information purposes. They do not obviate field coordination for individual items of the indicated Work.

N. Information as to general construction and architectural general construction and architectural features and finishes shall be derived from the structural and architectural drawings and specifications and may require ongoing coordination with the Architect and/or Construction Team.

O. The Work called for under this Contract shall be carried on simultaneously with the Work of other trades and Owner functions in such a manner as to not delay the overall progress of the construction project. The Contractor is responsible for all coordination of the Work with other trades.

P. Coordination of Delivery:

1. Deliver materials in manufacturer's original unopened containers with manufacturer's labels attached. Do not deliver material until spaces to receive them are clean, dry, and ready for their installation. Ship to jobsite only after roughing-in, painting and other finishing work has been completed, and installation areas are ready to accept work

2. Handle and install materials to avoid damages.

3. Unloading from delivery trucks. Do not deliver or install materials until spaces are enclosed and weather tight, wet work in spaces is complete and dry, HVAC system is operating, and maintaining ambient temperature at occupancy levels and normal humidity levels during the remainder of the construction period.

Q. Include in the Work all necessary supervision and issuing of all coordination information to any other trades who are supplying work to accommodate the Orchestra Shell installation. For items of equipment which are to be installed but not purchased as part of the Work, the Work shall include:

1. Unloading from delivery trucks.

2. Safe handling and field storage up to the time of permanent placement in the project.

3. Correction of any damage to the item(s) caused by Contractor.

4. Mounting in place and connection(s) as specified.

R. Items which are to be installed, but not purchased as part of the Work shall be carefully examined upon delivery to the project. Claims that any of these items have been received in such condition that their installation will require procedures beyond the reasonable scope of the Work will be considered only if presented in writing within one (1) week of the date of delivery to the project of the items in question. The Work includes all procedures necessary to put in satisfactory operation all items for which no claims have been submitted as outlined above.

1.7 SUMMARY

A. Drawings and specifications describe a full stage Orchestra Shell system consisting of mobile orchestra shell towers and adjustable orchestra shell ceilings suspended from motorized battens.

1.9 PERFORMANCE REQUIREMENTS

A. Acoustical Panel Sound Transmission: Provide Orchestra Shell system comprised of acoustical shell panels having the following sound transmission requirements: Sound Transmission Class (STC): 20 per ASTM E 413:

1.10 QUALITY ASSURANCE

A. Contractor’s Qualifications: The Work of this Section will be contracted to the same firm contracted for Section 11061, referred to herein as the Contractor, for undivided responsibility.

B. Qualification of Contractors:

1. Refer to Specification Section 11061.

2. Experienced in installation of the Work of this section and acceptable to the manufacturer.

C. Minimum Performance Requirements: To meet the minimum performance requirements, the Contractor shall be responsible for the following:

1. Each component's conformance with the exemplary equipment’s published specifications and other requirements as stated herein.

2. Safety: The rigging system shall conform to all applicable code requirements and shall be in conformance with ESTA and USITT industry standards of operation and practices for rigging systems. All materials and arrangements shall comply with applicable performance requirements.

3. Detailed checking of each item of equipment provided, each portion of the installation, and of the complete installation to find and remedy any defects therein.

D. Source Limitations: Obtain all products from a single manufacturer through one (1) source providing a comprehensive material and installation package.

E. Manufacturer Qualifications: Minimum five (5) years' experience in manufacture of similar products in use in similar environments, including project size, complexity, and with the production capacity to meet the construction and installation schedule.

F. Electrical Components: Listed and labeled per NFPA 70, Article 100 by a testing agency acceptable to authorities having jurisdiction.

G. Regulatory Requirements: Where components are indicated to comply with accessibility requirements, comply with the U.S. Architectural & Transportation Barriers Compliance Board's "Americans with Disabilities Act (ADA) and Architectural Barriers Act (ABA) Accessibility Guidelines for Buildings and Facilities".

H. Field Welding: Conform to ASME standards. Welders employed to be certified and recertified within previous six (6) months for position, rods, and types of steel used in all rigging systems.

I. All bid proposals shall be based on materials, equipment and installation as herein specified. Any and all deviations and exceptions to the specifications must be approved by addendum.

1.11 SUBMITTALS

A. Submittals shall be in accordance with Division 1 requirements.

B. Contractor Qualification Statement: The Contractor shall be the same as the Contractor selected from Specification Section 11061.

C. Product Data: Manufacturer's data sheets on each product to be used, including:

1. Provide test results by certified independent testing laboratory indicating compliance with performance requirements.

2. Rated capacities, construction details, material descriptions, dimensions of individual components, profiles, and finishes.

3. Delivery, storage, handling, and installation instructions and recommendations.

4. Maintenance instructions and recommendations.

5. Acoustical testing data demonstrating minimal compliance with required acoustical performance criteria.

D. Shop Drawings:

1. A copy of the Bill of Material shall be included with the submission for approval.

2. Submit component and project specific installation drawings, cut sheets, and schedules showing all information necessary to fully explain the design features, appearance, function, fabrication, installation, and use of system components in all phases of operation. Submit for approval before beginning any fabrication, installation, or erection.

3. Include fabrication and installation details. Distinguish between factory and field work.

4. Include plans, elevations, sections, attachments, and work by other trades.

5. Include wiring diagrams when applicable.

6. Indicate seismic bracing and fastening requirements as applicable.

7. Indicate coordination of related overhead components, including structural elements, drapery, rigging, lighting, ductwork, piping, and sprinklers.

8. Contractor shall provide other information or materials requested by the Architect or Owner when there is question of compliance with the intent of the drawings and specifications

E. Verification Samples: Exposed Finishes and Finish Materials: Not less than 4” x 4”, for each type, color, pattern, surface, and material selected.

F. Closeout Submittals:

1. Operation and Maintenance Data: For adjusting, repairing, and replacing components and accessories.

2. Troubleshooting guide.

3. Warranty: Submit manufacturer's warranty.

4. As-Built Drawings:

a. Full size drawings shall be submitted to the Owner after final acceptance. These are to be fully revised by the start-up and installation personnel to reflect the actual finished installation. The as-built drawing set is to be 100% complete including all schematics, details, and bills of material necessary to maintain and repair all of the systems.

b. Each drawing shall be stamped and dated "As-Built Drawing.”

c. Any revisions or modifications during the warranty period will require that the "As-Built Drawings" be updated.

5. Manuals:

a. Instructions and Maintenance manuals shall be submitted prior to final acceptance. These will be checked for accuracy and completeness before delivery of the manuals to the Owner.

b. Manuals shall consist of the following:

1) System Description.

2) User Operating Instructions.

3) User Maintenance Instructions for each of the systems.

4) Regular maintenance requirements and contact information for future service and information.

5) Catalog cut sheets of all purchased equipment.

6) Test certificates from manufacturers.

7) Recommended Spare Parts List.

8) PDF drawings of all system assembly drawings necessary to perform maintenance on the systems.

9) PDF manuals shall contain all items listed above with hyperlinks as applicable. Manuals shall be organized with bookmarks and section titles for quick reference.

6. Provided two (2) copies of the video recorded to document the instruction and training in accordance with Article 3.7.

1.12 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's original unopened containers with manufacturer's labels attached. Do not deliver material until spaces to receive them are clean, dry, and ready for their installation. Ship to jobsite only after roughing-in, painting, and other finishing work has been completed, installation areas are ready to accept work.

B. Handle and install materials to avoid damage.

1.13 PROJECT CONDITIONS

A. Field Conditions: The Contractor shall examine all attachment areas and conditions under which the Orchestra Shell is to be installed. Notify General Contractor in writing of any conditions detrimental to the proper and timely completion of the Work.

B. Field Measurements: Verify actual dimensions of openings and construction contiguous with the rigging and openings by field measurements before fabrication and indicate measurements on Shop Drawings.

C. The system drawings are to scale and generally indicate how they are to be integrated with other parts of the building. The Contractor shall determine exact locations by job measurements, by checking the requirements of other trades and by reviewing all contract documents.

D. The Contractor is responsible for monitoring the progress of other trades to prevent out of sequence installation of equipment.

E. Whenever job measurements, analysis of the drawings and specifications, or progress of other trades indicates that the various systems cannot be installed without significant deviation from the intent of the contract, the Architect and Owner shall be notified immediately.

F. Environmental Limitations: Do not deliver or install materials until spaces are enclosed and weather tight, wet work in spaces is complete and dry, HVAC system is operating and maintaining ambient temperature at occupancy levels during the remainder of the construction period.

1.14 WARRANTY

A. Special Warranty: Manufacturer's written warranty indicating manufacturer’s intent to repair or replace Orchestra Shell system components that fail in materials or workmanship within two (2) years from date of Substantial Completion. Failures are defined to include, but are not limited to, the following:

1. Fracturing or breaking of unit components which results from normal wear and tear and normal use other than vandalism.

2. Delamination or other failures of glue bond of components.

3. Warping of components not resulting from leaks, flooding, or other uncontrolled moisture or humidity.

4. Failure of unit to perform acoustically in accordance with manufacturer's published data

PART 2 PRODUCTS

2.1 ORCHESTRA SHELL SYSTEM

A. Basis of Design: Orchestra Shell system design is based upon product of the manufacturer below. Provide basis of design product, or approved equivalent:

1. Wenger Corporation, Owatonna, MN, USA; Telephone: (800) 493-6437.

2. Basis of design: Maestro Acoustical Shell - Full stage Orchestra Shell system consisting of mobile acoustical shell towers and adjustable acoustical shell ceiling units.

3. Alternates must be submitted for approval prior to bid.

B. Materials:

1. Aluminum Extruded Bars, Profiles, and Tubes: ASTM B 221 (ASTM B 221M), 6063T alloy.

2. Steel Tube: ASTM A 500, hot formed steel tubing.

3. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, commercial steel, Type B.

4. Low pressure laminate (LPL), Thermally fused polyester resin impregnated paper.

5. Veneer-Faced Panel Products (MDF core): Meets all CARB-2 requirements for formaldehyde emissions.

6. Hardboard: AHA A135.4, Class 1 Tempered – formaldehyde free.

7. Thermally-fused polyester surfacing that meets performance requirements of NEMA LD 3 for VGS grade.

8. High-Pressure Decorative Laminate: NEMA LD 3, Grade VGS: HPDL with urea formaldehyde-free adhesive

C. Acoustical Panel Sound Transmission: Provide Orchestra Shell system comprised of acoustical shell panels having the following sound transmission requirements: Sound Transmission Class (STC): Minimum 20 per ASTM E 413.

D. Orchestra Shell Panels, General: Manufacturer's standard stressed-skin composite Orchestra Shell panels, with a minimum of STC 20 to meet performance requirements, designed to mix and blend sound and reflect a maximum range of audible frequencies to both audience and performers.

1. Core: 1-1/2” -thick honeycomb core material shall have an open geometric pattern with cell walls vertical to panel skins and defined by alternating straight and sine wave layers. Height of sine wave shall be 1/2"; wall thickness shall correspond to 60-pound kraft. Bonding of core material to panel faces shall be with permanently cured formaldehyde free urethane adhesive. Foam core materials and contact adhesives shall not be permitted.

2. Face, Wilsonart High Pressure Plastic Laminate-Faced Panel: Material and finish as indicated, with no exposed fasteners. This panel assembly shall have a minimum of STC 20.

3. Back: 1/8”-thick hardboard stressed skin, black.

4. Panel Edge Frame: Straight panel edges are reinforced with extruded aluminum edge frame.

5. Acclimate panel face and back materials in a temperature and humidity-controlled environment so that they reach appropriate equilibrium condition prior to lamination to improve dimensional stability of finished laminated panels.

   a. Documentation of specified process must be available for review.

E. Mobile Orchestra Shell Towers: Free-standing, self-supporting, movable towers for stage back and side walls. Towers consist of acoustical shell panels in rigid, diagonally braced vertical steel frame, with center panel and two (2) hinged wing panels, in nesting configuration minimizing required storage space. Wing panel on tower equipped with latching hardware and stage access door where indicated. Counterweighted tower base with adjustable front leveling pads concealed by removable access panel:

1. Tower Size: 10’-0” wide; consisting of one (1) 4’-0” center panel and two (2) 3’-0” wing panels. Refer to TS drawings for tower heights.

2. Tower Panel Radius: 8’-0”.

3. Tower Panel Face Finish: High-pressure laminate.

4. Door and Wing Panel Hardware:

   a. Hinges: steel tube with self-lubricating sintered bronze bearings which pivot on a 5/16” diameter steel pin that are designed for silent operation and requiring no replacement parts. Metal-on-metal hinges without self-lubricating materials on towers are not acceptable.

   b. Slide-lock mechanism, pull handle, and adjustable wing stay.

5. Tower Frame: Tubular steel vertical tower frames with welded steel structure.

6. Stage Tower Transporter: Wheeled mover shall be a one-stroke lifting design using mechanical leverage to lift the tower. The wheeled mover shall incorporate casters that are a minimum of 6” in diameter. A wheeled mover requiring a hydraulic pump shall not be accepted.

F. Orchestra Shell Adjustable Ceiling: Orchestra Shell ceiling shall consist of adjustable-angle acoustical shell ceiling panels supported by integral steel frame, suspended from motorized stage rigging pipe battens, and stored in fly-loft in vertical position.

1. Ceiling Panel Size and Configuration: As indicated on drawings.

2. Ceiling Panel Radius: 10’-0”.

3. Suspended from motorized truss batten, provided in Section 11061.

4. Hanger Arms: The integral steel frame provides the structure to allow 1” square, 11-gauge steel hanger arms to be located next to the stage rigging cables, which

is the strongest point to support the weight of the ceiling assembly. Hanger arms that are located more than 2” from the rigging cables are not acceptable.

5. Ceiling Performance Angle Adjustment: Poly strap with adjustable length allows the ceiling to be easily set into the performance position. The strap is adjustable to preferred angles in approximately 1-degree increments from 0- to 45-degrees.

6. Provide instructions pertaining to safe handling of overhead panels.

7. Ceiling panels shall not damage drapery (borders) when being raised to performance position.

    a. Downstage ceiling panel shall incorporate a protective cover/barrier on back side of shell, as needed, to prevent frame from damaging border drapery when deployed ceiling panel is raised/lowered.

G. Integrated LED Light Fixture: The fixture shall be the Lieto Acoustic Shell Fixture by the Wenger Corporation.

1. If providing alternate fixture for approval, submit a proposed fixture layout and photometric point by point calculations generated by an industry accepted computer modeling platform e.g. AGI32 that demonstrates a minimum of 100 foot candles and a uniformity ratio no greater than 3:1 (Max:Min) within the shell for review in accordance with Division 1 procedures.

2. The orchestra shell manufacturer shall provide and install lighting required by this section based on its photometric performance, the required characteristics of the lighting fixtures and other features of the installation including interconnections and all requirements as expressed herein.

3. All orchestra shell lighting scope described herein shall be completed by the orchestra shell manufacturer for a complete and operating system.

H. Lighting Layout:

1. Ceiling panels shall include integral, recessed lighting fixtures with attributes as specified below that appropriately spaced across each ceiling row and interconnected providing power and control to each individual lighting fixture. Lighting fixtures layout indicated on drawings is for concept only.

2. The provided array of Orchestra Shell lighting fixtures shall combine to create a uniform, diffuse distribution of lighting across the entirety of the performance area below that is defined as that located within the footprint of the orchestra shell enclosure.

I. Lighting Fixture Attributes:

1. Individual lighting fixtures shall provide the following features and performance characteristics:

    a. Correlated Color Temperature (CCT): 3000 degrees Kelvin.

    b. Color Rendering Index (CRI): 80.

    c. Minimum Rated LED Life (L70): 70,000 Hours.

    d. Cooling Fans: Not Allowed.

e. Noise Criteria (maximum allowed): NC-17.

2. Fixtures must be designed so that they can be independently aimed from below the ceiling panel without requiring the use of tools. The fixture's total adjustable three-axis range of motion shall be a minimum of 30 degrees.

3. Fixtures shall be available with trim rings on the face side of the panels for a clean installation and to shield, cover and limit visibility around the fixture.

4. Fixtures shall use DMX512 (ANSI E1.11) controlled drivers that dim smoothly to 1 percent light output without visible stepping, flash, or flicker.

5. Fixtures shall be individually addressable using - Remote Device Management (RDM - ANSI E1.20) control standards. Fixtures shall maintain all RDM connection and functionality regardless of whether fixtures are in their "playing" position (horizontal orientation) or "storage" position (vertical orientation.)

6. Fixtures shall produce no Ultra-Violet (UV) or Infra-Red (IR) radiation or Radio Frequency Interference (RFI.)

7. Fixtures shall be flicker free and suitable for use with video.

8. Fixtures shall include a safety cable.

9. Fixture depth shall be minimal such that the presence of the lighting fixture(s) does not increase the stored depth of the ceiling row.

10. Fixtures shall be listed, carry the label of a nationally recognized testing laboratory and shall be RoHS compliant.

J. Lighting Performance:

1. Photometric Performance:

a. A minimum intensity level 100 foot-candles* *average illuminance measured 30 inches (762 mm) above the stage floor.

b. Uniformity ratio (max:min): Less than 3.0:1.

c. Uniformity ratio (avg:min): Less than 2.5:1.

2. Each fixture shall be located and aimed so as to minimize light "scalloping" on the tower walls.

3. Lighting Fixture Schedule - Lighting fixture description including fixture manufacturer, fixture model, output wattage, beam spread, lumens produced, produced CCT and CRI, accessories, IES filename, Light Loss Factor (LLF) setting.

K. Control, Wiring and Interconnections:

1. Each fixture shall be equipped with an integral, electronic tilt switch that shall maintain all RDM connection and functionality at all times regardless of whether fixtures are in their "playing" position (horizontal orientation) or "storage" position (vertical orientation.)

2. Lighting Control System Data Cabling (DMX512):

a. DMX512 lighting control system data cables shall be provided by the shell manufacturer to facilitate the interface of the orchestra shell lighting with the stage lighting system infrastructure.

b. DMX512 lighting control system cabling to the ceiling row (provided under another Section) shall be by a theatrically rigged connection direct to the first lighting fixture in that ceiling panel's row.

c. Orchestra shell manufacturers shall provide DMX512 control data system jumper cables of required length(s) using the fixtures' RJ45 or 5-Pin XLR connectors to daisy-chain control to each of the panel's orchestra shell lighting fixtures.

d. Fixtures shall be provided with on-board, software selectable, 120 ohm, DMX512 terminator resistor capability.

e. Secure, dress and organize all data cables to ensure that they do not snag or catch adjacent rigging equipment, scenery, and draperies.

3. Electrical Power:

a. Each ceiling panel's lighting fixture array shall receive its power (provided under another Section) via a theatrically rigged, "strain-relieved" connection terminated at the ceiling panel's junction box.

b. Jumper cables with PowerCon style connectors shall be used to daisy-chain supply of electrical power from the junction box to each fixture in turn, on the ceiling panel.

c. Organize, secure and dress all power cables to ensure that they do not snag or catch adjacent rigging equipment, scenery and drapery.

4. Warranty: The fixture shall carry a five-year warranty against defects in materials and workmanship. Warranty coverage shall commence at project "acceptance," not with factory shipment. See the Wenger warranty card for service contact information, specifics and Integrated Lighting: Manufacturer's standard UL-approved fixtures located as indicated.

L. Stage Rigging and Battens: Rigging and battens supporting orchestra shell ceiling, and all associated hardware are part of the Work of Section 11061.

M. Finishes:

1. Steel Finish: Immediately after cleaning and pretreating, electrostatically apply thermosetting TGIC polyester powder coating or wet paint.

2. Provide a plastic laminate finish.

3. Provide tiles of available colors to for review and selection.

4. Color shall be chosen by Architect/Owner.

PART 3 EXECUTION

3.1 COORDINATION

A. The Contractor shall coordinate this Work with the other electrical work and the work of other trades.

3.2 SITE INSPECTION

A. Examine jobsite conditions for compliance with requirements for installation tolerances, including required overhead clearances, and other existing conditions affecting installation and performance of acoustical shells. Proceed with unit installation upon correction of unsatisfactory conditions.

B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work. If preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

C. Proceed with installation only after correction of unsatisfactory conditions.

3.3 WORKMANSHIP

A. The Contractor shall provide a trained foreman who shall supervise the installation of Orchestra Shell system. All work shall be done by mechanics skilled in their trade and in accordance with accepted shop drawings.

3.4 ORCHESTRA SHELL INSTALLATION

A. Orchestra Shell Installation: Install orchestra shell components in accordance with manufacturer's written instructions.

1. Position all components accurately as indicated on Drawings and true, plumb, and level.

2. Note any deviations required to adjust for field obstructions and report to required persons to incorporate changes into as-built drawings.

3. Installation supervisor shall be a currently certified ETCP Rigger for Theatre.

4. Utilize only qualified riggers for installation, trim, and adjustment.

5. Clean and touch up all field welds and abraded paint finishes with matching materials.

6. Erect Orchestra Shell towers in location indicated in coordination with Owner's personnel to verify components are complete and operational.

7. Move tower units to their storage location after approval of assembled Orchestra Shell.

3.5 INSTALLATION OF INTEGRATED CONTROLS FOR LIGHTING

A. Install in accordance with manufacturer's instructions.

B. On-site project management services shall be provided by a direct ETCP certified employee of the Theatre Contractor.

C. On-site turn-on, programming, troubleshooting, and owner instruction services shall be provided by technician(s) trained and certified by each equipment manufacturer.

D. Equipment shall be installed per plans and specifications. Equipment shall be aligned, adjusted, and trimmed for the most efficient operations, the greatest safety, and for the best visual appearance.

E. Inspect installed work to verify compliance with requirements. Verify that electrical work complies with manufacturer's submittals and written installation requirements. Perform installation and startup checks as recommended by manufacturer. Prepare inspection reports and submit to Architect.

3.6 ORCHESTRA SHELL CLEANING INSTALLATION

A. Clean surfaces. Touch up marred finishes or replace damaged components that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by manufacturer.

B. Repair or replace defective work as directed by Architect/Owner upon inspection.

C. Protect installed products from damage, abuse, dust, dirt, stain, or paint until completion of project. Do not permit use during construction.

3.7 INSPECTION AND TESTING

A. Powered rigging shall be tested. Each hoist shall be operated over five full continuous cycles at 1.25 times its full working load at full speed and travel distance. The emergency stop function shall be tested at 100 percent WLL in both the ascending and descending directions.

1. Demonstrate that all over travel limit switches have been correctly set for the actual field conditions of the specific project.

2. If it applies to the project, demonstrate that all position encoders have been correctly set for the actual field conditions of the specific project.

B. Signage with basic operating instructions and warnings shall be posted in the area where the equipment shall be operated. Signage shall be in conformance with ANSI-Z535.

3.8 TRAINING AND DEMONSTRATION

A. When all Work is complete and equipment is adjusted for suitable operation, the Contractor shall schedule an inspection by the Architect/Owner. All workmen required to operate the equipment and to perform any adjustments and tests that may be required shall be provided. During the scheduled test period, no other work will be done in the stage or auditorium areas. Any equipment failing to meet approval shall be repaired or replaced and the inspection rescheduled with complete testing repeated until approval and final acceptance.

B. Train Owner's personnel to assemble, adjust, operate, and maintain Orchestra Shell Towers and Orchestra Shell Ceiling units.

C. Training shall be video recorded and provided by the Contractor. Contractor shall provide two (2) thumb drives to the Owner each with copies of the training video saved on them. Contractor shall supply the equipment necessary to record the training session(s). Training shall include:

1. Specific instruction to safely move towers and ceiling shells in proximity to dead-hung draperies and line sets.

2. To prevent damage to dead-hung draperies, include instruction to fold back and tie off the off-stage sections of Borders #1 and #2 to be even with ceiling shell footprint, allowing for movement of downstage towers into position.

END OF SECTION

SECTION 11132

PROJECTION SCREENS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Ceiling-mounted, manual roll-down, front projection screens.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 05500 - Metal Fabrications: Structural steel supports.

2. Section 06100 - Rough Carpentry: Blocking for screen support.

3. Section 09110 - Non-Load Bearing Steel Framing: Ceiling framing.

4. Section 09250 - Gypsum Board: Adjacent ceiling and / or wall finish.

5. Section 09510 - Acoustical Ceilings: Adjacent ceiling finish.

1.2 DESCRIPTION OF WORK

A. The extent of projection screens work is indicated on the Drawings and as specified herein, and includes providing and installing front projection, ceiling-mounted, manual roll-down screens, case, mounting accessories and all components for a complete installation.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. Society of Motion Picture and Television Engineers (SMPTE):

1. SMPTE RP 94-2000 - Gain Determination of Front Projection Screens.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer=s product data and mounting details.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Warranty: Submit a manufacturer=s standard Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

B. Single Source Responsibility: Obtain all projection screens required from a single manufacturer, as complete units, including the necessary mounting hardware, anchorage and accessories.

C. Mildew-Resistance: Provide mildew-resistant screen fabric as determined by Federal Standard 191A / 5760.

1.6 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements. Transport, handle, store and protect the products.

B. Deliver products to the Project Site in the manufacturer=s original, unopened protective packaging.

C. Do not deliver projection screens to the Project Site until the building has been enclosed, other work within the spaces where the screens are to be installed is substantially complete, and installation of the screens is ready to take place.

D. Store screens to prevent damage to the materials, finishes and operating mechanisms.

E. Handle to prevent damage to screen surfaces and operating mechanisms.

1.7 JOB CONDITIONS

A. Environmental Requirements:

1. In the area to receive the screens, maintain a constant temperature of at least 65 degrees F for 72 hours before, during and for 48 hours after completion of the installation.

2. Do not install the screens until the air conditioning system has been put into service.

1.8 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Manufacturer=s Warranty:

1. Provide a written Warranty, signed by the screen manufacturer agreeing to repair or replace screens that do meet the requirements, or that fail in materials or workmanship.

2. Warranty Period: Two (2) years from the date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Model ÂB@ by Da-Lite Screen Co.

3. Luma Series by Draper Inc.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS

A. General: Provide manufacturer=s standard front projection, ceiling-mounted, manual roll-down units consisting of screen, case, mounting accessories and other components as required for a complete installation and complying with the requirements indicated for the screen surface.

B. Viewing Surface of Screen: Comply with the following requirements for the type of viewing surface:

1. Matt white color, mildew-resistant, glass beaded viewing surface with masking borders; seamless.

2. Bottom of the fabric shall be mounted into a metal strip in a tubular steel slat with plastic endcaps, baked enamel finish to match the case. Provide a pull handle.

3. Spring roller with positional catch.

4. Size of viewing surface: [60" x 60"].

5. Mounting: Ceiling surface-mounted.

C. Screen Case: 22 gage steel with flat back and endcaps, white finish. Surface ceiling-mount utilizing the manufacturers recommended system for the Project conditions.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

1. Verify that structural blocking and supports, if required, are in place and correctly located.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install projection screens at the locations indicated and in compliance with the screen manufacturer=s instructions.

B. Install screens with screen cases in position and relationship to the adjoining work as indicated, securely anchored to the supporting substrate, and in a manner which provides for smooth operation with plumb and straight vertical edges and a plumb, flat viewing surface when the screen is lowered.

C. Securely anchor to the building structure. Provide alternating diagonal wire bracing at each end of the screen housing. Provide seismic bracing.

3.3 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting the installed work.

B. Adjust the operating mechanism for smooth operation

3.4 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect the screen installations for alignment, attachment to the structure, and operation.

3.5 PROTECTION

A. Protect the projection screens from damage after installation. If damage occurs, remove and replace the damaged components or replace the entire unit, as required to restore the unit to it=s original, undamaged condition.

END OF SECTION

SECTION 11134

AUDIO-VIDEO SYSTEMS

PART 1 GENERAL

1.1 REFERENCE TO OWNER'S GENERAL CONDITIONS

A. The Owner's General Conditions s0hall be considered part of this specification. Unless this section contains statements, which are more definitive or more restrictive than those contained in the Owner's General Conditions, this specification shall not be interpreted as waiving or overruling any requirements expressed in the General Conditions.

1.2 RELATED DOCUMENTS

A. Division 1 – General Requirements:

1. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

B. Division 5 – Metal Fabrication:

1. The Metal Fabrication Contractor shall provide the work as specified in Division 5 and the Structural Drawings. Including: steel framing and supports for AV Systems equipment.

2. Steel shown on the Structural drawings will be provided by the Structural Contractor.

C. Division 16 – Electrical:

1. The Electrical Contractor shall provide the work as specified in Division 16, as indicated on the AV drawings, and as specified herein.

2. Electrical infrastructure (electrical j-boxes, conduit, etc.) for audio-video equipment is shown on AV Systems drawings and shall be the responsibility of the Division 16 Electrical Contractor.

1.3 DEFINITIONS

A. The following shall serve as general identifiers as specified herein.

1. Owner – Guam Department of Education (GDOE).

2. Consultant – D. L. Adams Associates, Ltd.

3. Architect – Taniguchi Ruth Makio Architects (TRMA).

4. Contractor – The Contractor is the firm submitting a proposal to furnish and install the Work as defined within this Specification.

5. Project – The Project is the Audio-Video Systems design and installation for the Simon Sanchez High School Expansion.

6. Work – The term “Work” means all construction and services specified within this document. The Work includes all related labor, materials, equipment, and services provided, or to be provided, by the Contractor to fulfill the proposal’s obligations.

7. Drawings – The term “Drawings” means all Audio-Video Systems Drawings and associated sketches, details, riser diagrams, etc.

B. As used in the Drawings and Specifications for the Work, certain non-technical words and phrases shall be understood to have specific meanings as follows, regardless of indications to the contrary in the General Conditions or other documents governing the Work.

1. “Furnish” – Purchase and deliver to the project site complete with every necessary appurtenance and support, all as part of the Audio-Video Systems Work. Purchasing shall include payment of all sales taxes and other surcharges as may be required to assure that purchased items are free of all liens, claims, or encumbrances.

2. “Install” – Unload at the delivery point at the site and perform every operation necessary to establish secure mounting and correct operation at the proper location in the project, all as part of the Work.

3. “New” – Manufactured within the past year and never used.

4. “Provide” – Furnish and Install.

C. Regardless of their usage in codes or other industry standards, certain words or phrases as used in the drawings or specifications for the Work, shall be understood to have the specific meanings as described to them in the following list:

1. “Audio-Video Closet” – The enclosed area or room specifically designated for the routing, termination, and/or cross connecting of Audio-Video Systems cable (i.e. riser cable) to other Audio-Video Systems cable and/or equipment.

2. “AV” – Audio-Video

3. “AVC” – Audio-Video Systems Contractor.

4. “AV System(s)” – Audio-Video System(s), includes all components contained herein that work in conjunction to create and completely integrated and fully functioning system as described within the Drawings and Specifications

5. “AV Systems Control Room” and/or “AV Systems Headend” – The enclosed area or room specifically designated for the routing, termination, and/or cross connecting of audio and video system cable (i.e., riser cable) to other audio or video system cable, and/or equipment and racks.

6. “Circuit” – Any specific run of circuitry.

7. “Circuitry” – Any Work which consists of wires, cables, raceways, and/or specialty wiring method assemblies complete with associated junction boxes, pull boxes, outlet boxes, joints, couplings, splices, and connections except where limited to a lesser meaning by specific description.

8. “Concealed” (as applied to circuitry) – Covered completely by building materials, except for penetrations (by boxes and fittings) to a level flush with the surface as necessitated by functional or specified accessibility requirements.

9. “Exposed” (as applied to circuitry) – Not covered in any way by building materials.

10. “NIC” – Not in Contract

11. “Normal Work Conditions” – Locations within building confines that are not damp, wet, or hazardous and that are not used for air handling.

12. “OFE” – Owner Furnished Equipment

13. “Patch Panel” – A System of terminal blocks, patch cords, and backboards that facilitate administration of cross-connecting cables.

14. “Raceway” – Any pipe, duct, extended enclosure, or conduit (as specified for a particular System) which is used to contain wires and which is of such nature as to require that the wires be installed by a “pulling in” procedure.

15. “Riser” – Shall refer to the portion of the installation that transmits between building floors (or between Audio-Video Systems rooms), also referred to as “Backbone Cabling”.

16. “Standard” (as applied to wiring devices) – Not of a separately designated individual type.

17. “System” – See “AV Systems”

18. “Wiring” – see “Circuitry”

D. Additional Terms:

1. The term “shall” is mandatory; the term “will” is informative; the term “should” is advisory; and the term “provide” means furnish and install.

2. Where the word “conduit” is used without specific reference to type, it shall be understood to mean “raceway”.

3. The term “custom” indicates systems or components that shall be designed and fabricated by the Contractor based on the drawings and specifications.

4. The term “future” indicates systems or components that will be added to the system later but shall be provisioned for now.

5. The term “equal” indicates systems or equipment that is of the same size, color, design, function, efficiency, etc. as of that specified.

6. Reference to “U.L. (Materials Construction) Standards” shall mean the “Standards for Safety” published by Underwriters Laboratories, Inc

1.4 SCOPE OF WORK

A. General:

1. The work as described herein shall be furnished and installed by one firm alone, hereafter referred to as the AV Contractor. The AV Contractor shall furnish and install all equipment, and audio/video signal and control wiring for the AV Systems described herein. The Contractor further agrees that they shall provide all Work as may be required to make a complete and fully functioning system of that which may not be fully defined in the Contract Documents.

2. The specifications and drawings shall be read and used together; system features which are mentioned in one are not necessarily shown in the others. In case of conflict between the drawings and specifications, request clarification. It shall be understood that the Equipment Lists, Specifications and Drawings are complementary. Where there are conflicts within the documents, the overall design intent shall govern.

3. The work provided shall be complete and the systems shall be fully operational as shown on audio video system "AV" drawings and described herein.

4. Equipment not mentioned herein nor shown on drawings but necessary to meet the requirements of this section shall be provided without claim for additional payment.

5. The project documentation is, in general, diagrammatic and/or developed to communicate design intent. The Contractor shall coordinate the installation of all devices and/or equipment with the Owner prior to installation based on the existing field conditions.

6. The AV Contractor shall coordinate all installed items with associated trades (electrical, mechanical, Telecom, etc.) including all necessary cable pass-thrus and structural needs/requirements.

7. The AV Contractor shall provide all software programming required to provide fully operational systems.

8. AV Contractor shall conduct a frequency audit of the site prior to selection of wireless operating frequencies. Select frequencies such that systems are free of interference. Include an intermodulation interference analysis. Coordinate frequencies and specific transmitter/receiver selection using professional wireless audio systems software.

9. The AV Contractor shall coordinate the specific programming requirements of the AV Control System with a designated Owner representative. All programming written for this project shall be the property of the Owner and shall be provided to the Owner upon completion.

1.5 GENERAL CONDITIONS

A. The Contractor represents that they are familiar with and have expertise in the Work of this nature and scope.

B. The Contractor shall comply with all the regulations, including safety regulations of national, city, local and other government agencies having jurisdiction concerning the work of the Contractor. The Contractor shall give all notices and comply with all laws, ordinances, codes, rules, and regulations bearing on the conduct of the Work. If the Contractor performs any work, which is contrary to such laws, ordinances, codes, rules and regulations, they shall make all changes for compliance and bear all associated costs.

C. The Contractor shall be responsible to provide and maintain a storage facility as required. If this storage facility is required to be on-site it shall be the Contractor's responsibility to coordinate the size and spatial requirements with the General Contractor. The Contractor shall assume full responsibility for the storage facility and all contents, unless otherwise indicated by the Owner.

D. The Contractor shall provide all protection necessary to safeguard their work from damage by their operations and the operations of others. Unless the Contractor proves to the Owner's satisfaction that the Work has been damaged by others, the Contractor shall promptly repair, adjust, and clean all defective installations and bear all associated costs.

E. All the Contractor's work shall be tested and inspected by all authorities having jurisdiction and in accordance with all specifications. The Contractor shall coordinate and cooperate fully and shall provide at no additional cost to the Owner, manpower, drawings, facilities, scaffolds, etc. to reasonably assist the inspectors.

F. The Owner reserves the right to furnish any materials necessary for the Project.

G. All permits required for any part of the Contractor's work shall be procured and paid for by the Contractor. The Contractor shall determine all permits required and transmit this information to the Owner. If it is determined that the Contractor's work falls reasonably within another party's permit (General Contractor, Electrician, etc.) the Contractor shall not be required to procure additional permits provided written authorization is provided to the Contractor by the party holding the permit.

H. The Contractor must state if they intend to utilize a subcontractor and provide said subcontractor's name and address. The subcontractor shall comply with all the same rules, regulations, laws and codes, licenses, etc. as required by the Contractor and as specified herein. The Owner reserves the right to approve or disapprove any subcontractor proposed by Contractor.

I. The Contractor, upon receiving notice from Owner/Architect that the Contractor has furnished inferior, improper or unsound work or materials (including equipment), or work or materials at variance with that which is specified, will, within 24 hours, proceed to remove such work or materials and make good all other work or materials damaged thereby, and, at the option of the Owner, the Contractor shall immediately replace such work or materials with work or materials as specified. The removal, replacement, and repair shall be performed at such times and with manpower sufficient, in the judgment of the Owner, so as to avoid disturbance to occupants, or other ongoing work for the Project.

1. If the Contractor does not remove such unsound Work within a reasonable time, the Owner may remove it and may store the material at the expense of the Contractor. If the Contractor does not pay the expenses of such removal within ten (10) days' time thereafter, the Owner may, upon written notice, sell such materials at auction or at private sale and shall account for the net proceeds thereof, after deducting all the costs and expenses that should have been borne by the Contractor and all expenses of the sale.

2. The Owner shall have the authority, at all times, until final completion and acceptance of the Work, to inspect and reject work and materials which in its judgment are not in conformity with the Drawings and Details, Room Data Sheets and Specifications, and its decision in regard to character and value of Work shall be final and conclusive on both contracting parties. If the Owner permits said Work or materials to remain, the Owner shall be allowed the difference in value or shall at its election have the right to have said Work or materials repaired or replaced, as well as the damage caused thereby, at the expense of the Contractor, at any time within one (1) year after the completion of the entire project, or within such longer period as may be covered by any guaranty; and neither payments made to the Contractor, nor any other acts of the Owner, shall be construed as evidence of acceptance, waiver, or estoppels.

3. Any expense incurred by the Owner in connection with the foregoing, shall be borne by the Contractor, and the Owner may withhold money due to the Contractor or recover money already paid to the Contractor, to the extent of such expense.

J. The Drawings for the Work utilize symbols and schematic diagrams that have no dimensional significance. The Work shall be installed to fulfill the diagrammatic intent expressed on the Drawings, field layouts, and shop drawings of all trades.

K. Certain details appear on the Drawings for the Work that are specified with regard to the dimensioning and positioning of the Work. These are intended only for general information purposes. They do not obviate field coordination for individual items of the indicated Work.

L. Information as to general construction and architectural general construction and architectural features and finishes shall be derived from the structural and architectural drawings and specifications and may require ongoing coordination with the Architect and/or Construction Team.

M. The Work called for under this Contract shall be carried on simultaneously with the Work of other trades and Owner functions in such a manner as to not delay the overall progress of the construction project. The Contractor is responsible for all coordination of the Work with other trades and Owner.

N. Include in the Work all necessary supervision and issuing of all coordination information to any other trades who are supplying work to accommodate the Audio-Video Systems installation. For items of equipment which are to be installed but not purchased as part of the Work, the Work shall include:

1. Coordination of delivery

2. Unloading from delivery trucks

3. Safe handling and field storage up to the time of permanent placement in the project

4. Correction of any damage to the item(s) caused by the Contractor

5. Mounting in place and connection(s) as specified

O. Items which are to be installed, but not purchased as part of the Work shall be carefully examined upon delivery to the project. Claims that any of these items have been received in such condition that their installation will require procedures beyond the reasonable scope of the Work will be considered only if presented in writing within one (1) week of the date of delivery to the project of the items in question. The Work includes all procedures necessary to put in satisfactory operation all items for which no claims have been submitted as outlined above.

1.6 SUMMARY

A. Applicable Locations:

1. Dance Classroom

2. Music Classrooms (Choir and Band)

3. Gymnasium

4. Auditorium

5. Library Media Room

B. System Summary:

1. The audio-video systems included herein shall provide high-quality audio and video playback suitable to support the theatrical and teaching uses while still maintaining user-friendly control interfaces.

1.7 System Descriptions and Functions:

A. Dance Classroom:

1. General:

a. The Dance Classroom system shall be designed for high-fidelity audio playback and an HD capable video system for educational/teaching presentations.

2. Classroom AV Network:

a. A dedicated audio video network shall be provided, to be shared between the Dance Classroom and Music Classrooms. It shall be the responsibility of the AV Contractor to configure the AV network for the optimal transmission of digital audio, digital video, and control system protocols.

b. The network shall have a POE+ network switch located in the AV Classroom Equipment Rack. It shall be the responsibility of the AV Contractor to supply all necessary switch accessories to meet the network and power performance requirements of the AV equipment specified herein.

c. AV Contractor shall coordinate exact network switch with Owner IT and DSP, network video, and control manufacturers before ordering.

d. Network switch included in the equipment list is included as basis of design only. AV Contractor is responsible for providing and install switches that meet or exceed all network equipment requirements.

e. All network cabling provided by the AV Contractor shall adhere to the applicable Category 6A standards. AV Contractor shall provide test reports prior to system checkout documenting compliance with applicable standards for all installed network cables.

3. Audio:

    a. A Digital Signal Processor (DSP) shall be provided in the AV Classroom Equipment Rack, to be shared between the Dance Classroom and Music Classrooms. The DSP shall control audio routing, equalization, and level of the playback loudspeakers in each room.

    b. The Dance Classroom shall have wall mounted loudspeakers to provide stereo playback to the classroom as well as a ceiling-suspended subwoofer to extend the program frequency response. The subwoofer shall be resiliently mounted to reduce structure-borne vibration. AV Contractor to select mounting per subwoofer specifications and exact mounting detail. Submit for review.

    c. The Dance Classroom shall have consumer level stereo inputs as well as a Bluetooth connection for stereo playback of audio sources.

    d. A portable ALS system shall be provided by the Owner to be shared between the Dance and Music Classrooms.

4. Video Presentation System:

    a. A wide screen (WUXGA) laser video projector with a zoom lens shall be mounted from the ceiling in the Dance Classroom and shall have a minimum brightness of 7,000 Lumens.

    b. A motorized, tab-tensioned projection screen shall be provided at the teaching wall of the Dance Classroom. The screen shall be 16:10 format with a 165” diagonal and an ambient light rejecting surface. A low-voltage screen switch shall be located on the wall of a support space adjacent to the Classroom.

    c. The system shall have video inputs for connection of portable video sources, such as laptop computers, via a wall-mounted input plate.

    d. Video shall be transmitted to the video projector via a digital video transmission system.

5. Control System:

    a. A control system shall be provided to integrate and simplify equipment controls and user functions. The central controller shall be located in the AV Classroom Equipment Rack and be shared between the Dance and Music Classrooms.

    b. A 7” touchscreen controller shall be provided on the wall of the Dance Classroom.

    c. The control system shall monitor all equipment that provides bidirectional feedback and report any failures or errors to an Owner designated representative. Coordinate communication method (e-mail, etc.) with Owner.

    d. Provide control app mirroring touchscreen for Owner-provided portable devices, if any. Coordinate use of Owner wireless network and access permissions with Owner IT if desired by Owner.

e. The control system shall accept a contact closure signal from the fire alarm system (provided by others) to mute the audio system. A contact closure signal from the Emergency Paging System (provided by others) shall be connected to the DSP and shall mute audio when the paging system is used for emergency pages.

f. The touchscreen control shall include, but not be limited to the following:

1) Fully develop touchscreen options and layouts through the process described herein.

2) General:

a) Power the system on/off (note: provide shutdown conformation).

b) PIN or password lock, if requested by Owner.

3) Video Page:

a) Video source selection.

b) Video source device remote control.

c) Power the video projector on/off (Note: automatically turn on display when a video source is selected. Turn off display and cool down projector if required when the system is turned off. Provide separate display on/off control).

d) Lower/raise the motorized projection screen (note: automatically lower the screen when a video source is selected. Raise screen when the system is turned off. Provide a separate control to raise/lower/stop screen).

e) Video mute.

4) Audio Page:

a) Classroom audio consumer input line level and Bluetooth volume level and mute.

b) Video program audio level and mute.

5) Service Page (PIN lock service page):

a) Indicate projector hours.

b) Provide service contact information.

c) Display monitored devices errors.

d) Monitor UPS battery replacement schedule.

6. Support Equipment:

a. The shared DSP, amplifier(s), network switch and accessories shall be provided in a central wall-mounted AV Classroom Equipment Rack located in Storage A223E.

B. Music Classroom, Typical of (2):

1. General:

a. Music Classrooms shall include the Band and Choir Classrooms.

b. The Music Classroom systems shall be designed for high-fidelity audio playback, recording, and HD capable video display for educational/teaching presentations. The systems shall include tie lines and interface connections for a portable recording rack.

2. AV Network:

a. A dedicated audio video network shall be provided, to be shared between the Dance Classroom and Music Classrooms. It shall be the responsibility of the AV Contractor to configure the AV network for the optimal transmission of digital audio, digital video, and control system protocols.

b. The network shall have a POE+ network switch located in the AV Classroom Equipment Rack. It shall be the responsibility of the AV Contractor to supply all necessary switch accessories to meet the network and power performance requirements of the AV equipment specified herein.

c. AV Contractor shall coordinate exact network switch with Owner IT and DSP, network video, and control manufacturers before ordering.

d. Network switch included in the equipment list is included as basis of design only. AV Contractor is responsible for providing and install switches that meet or exceed all network equipment requirements.

e. All network cabling provided by the AV Contractor shall adhere to the applicable Category 6A standards. AV Contractor shall provide test reports prior to system checkout documenting compliance with applicable standards for all installed network cables.

3. Audio:

a. A Digital Signal Processor (DSP) shall be provided in the AV Classroom Equipment Rack, to be shared between the Dance Classroom and Music Classrooms. The DSP shall control audio routing, equalization, and level of the playback loudspeakers in each room.

b. The Music Classrooms shall have wall mounted loudspeakers located on the teaching wall to provide stereo playback to the classrooms.

c. The Music Classrooms shall have consumer level stereo inputs as well as a Bluetooth connection for stereo playback of audio sources.

d. Music Classrooms shall have microphone connections in the ceiling. A permanently suspended stereo pair of recording microphones shall be rigged from the ceiling in an XY stereo recording pattern.

e. Tie lines to Practice Rooms associated with each Music Classroom shall be provided to a tie plate in each Music Classroom.

f. A portable ALS system shall be provided by the Owner to be shared between the Dance and Music Classrooms.

4. Video Presentation System:

   a. A wide screen (WUXGA) laser video projector with a zoom lens shall be mounted from the ceiling in each Music Classrooms and shall have a minimum brightness of 7,000 Lumens.

   b. A motorized, tab-tensioned projection screen shall be provided at the teaching wall of each Music Classrooms. The screen shall be 16:10 format with a 165” diagonal and an ambient light rejecting surface. A low-voltage screen switch shall be located on the wall of a support space adjacent to the Classrooms.

   c. The system shall have video inputs for connection of portable video sources, such as laptop computers, via a wall-mounted input plate.

   d. Video shall be transmitted to the video projector via a digital video transmission system.

5. Control System:

   a. A control system shall be provided to integrate and simplify equipment controls and user functions. The central controller shall be located in the AV Classroom Equipment Rack and be shared between the Dance and Music Classrooms.

   b. A 7” touchscreen controller shall be provided on the wall of the Music Classrooms.

   c. The control system shall monitor all equipment that provides bidirectional feedback and report any failures or errors to an Owner designated representative. Coordinate communication method (e-mail, etc.) with Owner.

   d. Provide control app mirroring touchscreen for Owner-provided portable devices, if any. Coordinate use of Owner wireless network and access permissions with Owner IT if desired by Owner.

   e. The control system shall accept a contact closure signal from the fire alarm system (provided by others) to mute the audio system. A contact closure signal from the Emergency Paging System (provided by others) shall be connected to the DSP and shall mute audio when the paging system is used for emergency pages.

   f. The touchscreen control shall include, but not be limited to the following:

      1) Fully develop touchscreen options and layouts through the process described herein.

      2) General:

         a) Power the system on/off (note: provide shutdown conformation).

         b) PIN or password lock, if requested by Owner.

3) Video Page:

a) Video source selection.

b) Video source device remote control.

c) Power the video projector on/off (Note: automatically turn on display when a video source is selected. Turn off display and cool down projector if required when the system is turned off. Provide separate display on/off control).

d) Lower/raise the motorized projection screen (note: automatically lower the screen when a video source is selected. Raise screen when the system is turned off. Provide a separate control to raise/lower/stop screen).

e) Video mute.

4) Audio Page:

a) Classroom audio consumer input line level and Bluetooth volume level and mute.

b) Video program audio level and mute.

5) Service Page (PIN lock service page):

a) Indicate projector hours.

b) Provide service contact information.

c) Display monitored devices errors.

d) Monitor UPS battery replacement schedule.

6. Support Equipment:

a. The shared DSP, amplifier(s), network switch and accessories shall be provided in a central wall-mounted AV Classroom Equipment Rack located in Storage A223E.

7. Portable Recording Rack:

a. A Portable Recording Rack shall allow for recording either stand-alone or interfacing with the Music Classrooms. All recording equipment will be stored within the Portable Recording Rack.

b. The recording system shall be capable simultaneous recording to SD card as well as to USB devices.

c. A 16-channel digital console capable of multitrack recording with a USB interface shall be provided and mounted on the Portable Recording Rack.

d. Connection plates on the Portable Recording Rack will provide all necessary interconnects to easily allow the system to connect with the permanent infrastructure within the Music Classrooms.

e. Tie lines to Practice Rooms associated with each Music Classroom shall be provided to a tie plate in each Music Classroom.

1) Personal headphone system hubs shall be provided in the AV Classroom Equipment Racks for each Music Classroom.

2) A minimum of six (6) personal monitor mixing stations with headphones shall be provided.

f. Two (2) small-diaphragm condenser microphones and 2 large diaphragm condenser microphones shall be provided for recording.

g. An assortment of loose cable shall be provided to connect equipment for standalone or classroom integrated recordings.

C. Gymnasium:

1. General:

a. The Gymnasium AV system shall be designed for high quality audio reinforcement for sporting events, presentations, and ceremonies. The system shall have the ability, through presets, to support multiple room configurations.

b. An AV Gymnasium Equipment Rack located in a support room near the Gymnasium will house all head-end processing, amplification, and network equipment.

c. Power distribution and sequencing shall be provided in the AV Gymnasium Equipment Rack.

2. AV Network:

a. An AV network shall be provided. It shall be the responsibility of the AV Contractor to configure the AV network for the optimal transmission of digital audio and control system protocols.

b. The Gymnasium AV network shall consist of one (1) POE+ network switch located in the AV Gymnasium Equipment Rack. It shall be the responsibility of the AV Contractor to supply all necessary switch accessories to meet the network and power performance requirements of the AV equipment specified herein, including software and licenses.

c. All network cabling provided by the AV Contractor shall adhere to the applicable Category 6A standards. AV Contractor shall provide test report prior to system checkout documenting compliance with applicable standards for all installed network cables.

d. Network jacks shall be distributed to the bleacher input plates in the Gymnasium for connection of the portable touchscreen controller or other networked devices.

3. Control System:

a. A control system using the DSP as the central controller shall provide a graphical user interface for equipment controls and user functions, including flexible routing, control, and monitoring with individual outputs and levels for all loudspeaker zones.

b. Two (2) touchscreen controllers shall be provided. One (1) shall be permanently mounted on the plan north wall of the Gymnasium and one (1) shall be portable. The wall-mounted touchscreen shall have a locking cover.

c. The control system shall monitor all equipment that provides bidirectional feedback and report any failures or errors to an Owner designated representative. Coordinate communication method (e-mail, etc.) with Owner.

d. Provide control app mirroring touchscreen for Owner-provided portable devices. Coordinate use of Owner wireless network and access permissions with Owner IT.

e. The control system shall accept a contact closure signal from the fire alarm system (provided by others) to mute the audio system. A contact closure signal from the Paging System (provided by others) shall be connected to the DSP and shall mute audio when the paging system is used for emergency pages.

f. On system power, all equipment shall be turned on. Provide power sequencing. Generally, audio amplifier shall be turned on last and turned off first. When a power-off command is sent, all equipment shall be powered off, with the exception of network switches and DSP devices. The network switches, DSP, and PoE touchscreens shall remain powered-on through UPS power.

g. Control system functions described herein are minimum requirements and additional controls and control functionality is required to be added upon direction from Owner or consultant.

h. The touchscreen control shall include, but not be limited to the following:

1) Fully develop touchscreen options and layouts through the process described herein.

2) General

a) Power the system on/off (note: provide shutdown confirmation).

b) PIN or password lock, if requested by Owner.

3) Audio Page

a) Loudspeaker zone control and presets.

b) Microphone level control and mute.

c) Wireless Microphone level controls and mute.

d) Bluetooth pairing, level control, and mute.

4) Service Page (PIN lock service page, if requested by Owner)

a) Provide service contact information.

b) Display monitored devices errors. Also display a popup at startup if errors are present.

c) Monitor UPS battery replacement schedule.

4. Audio System:

a. The sound system shall have the ability to be zoned into east and west halves of the Gymnasium, as well as control of individual bleacher and floor zones within each half, per selectable presets. AV Contractor to configure zoning in coordination with Consultant and Owner.

b. Bleacher loudspeakers shall be permanently mounted below the open web ceiling joists and aimed to provide coverage to the bleachers while avoiding energizing the Gymnasium floor.

c. Distributed floor loudspeakers shall be permanently mounted below the open web ceiling joists and provide a uniform coverage of the entire playing area.

d. Ceiling mounted subwoofers shall be permanently mounted below the open web ceiling joists in the Gymnasium.

e. Bleacher input plates with microphone and consumer audio inputs shall be located at the east and west bleacher fronts. A Gymnasium wall input plate with microphone and consumer audio inputs shall be located on the plan north wall.

f. Two (2) announcer microphones with associated PTT microphone bases and announcer headsets shall be provided for connection at the bleacher and wall input plates. Two (2) wired microphones shall be provided with microphone stands and loose cables.

g. A Bluetooth receiver with remote antenna shall be mounted to the Gymnasium ceiling structure above mid-court for full Bluetooth coverage. Device pairing will be handled via the touchscreen control system.

h. Two (2) wireless microphone receivers shall be provided in the AV equipment rack.

1) Bodypack transmitters with lavalier microphones and handheld transmitters with condenser microphone heads shall be provided for all receivers.

2) Two (2) active wireless microphone antennas with mounts shall be mounted to the underside of the Gymnasium structure. Antenna distribution shall be provided in the AV Gymnasium Equipment Rack. Appropriate antenna cable and in-line power supplies shall be provided to minimize cable loss.

i. A digital media player with Bluetooth, auxiliary, and USB inputs will be provided in the AV Gymnasium Equipment Rack for playback of digital media and prerecorded material (national anthem, music, advertisements, etc.).

j. An ADA-compliant assistive listening system (ALS) will be provided. The system will consist of an RF transmitter with an antenna remotely located on the Gymnasium ceiling structure, body pack receivers, earphones, and telecoil neck loops (for use with hearing aids).

D. Auditorium

1. The Auditorium and backstage support area AV systems shall consist of but not be limited to the following subsystems, equipment, and functionality.

a. Dedicated Audio Video Network:

1) A dedicated audio video network shall be provided. It shall be the responsibility of the AV Contractor to configure the AV network for the optimal transmission of digital audio, digital video, and control system protocols. AV Contractor shall coordinate all IP addresses and network protocols with Owner IT staff.

2) The AV network shall consist of a POE+ network switch located in the AV Amplifier Rack. It shall be the responsibility of the AV Contractor to supply all necessary switch accessories to meet the network and power performance requirements of the AV equipment specified herein. AV Contractor shall coordinate exact network switch with Owner IT and DSP, network video, and control manufacturers before ordering network switch. The network switch included in the equipment list is included as basis of design only, AV Contractor is responsible for providing and installing switches that meet or exceed all network equipment requirements.

3) The dedicated AV network shall employ a network video distribution system within the Auditorium allowing all Auditorium network video sources to be routed to all network video outputs.

4) A network connection shall be provided between the Auditorium and Music Classroom switches, allowing video sources Auditorium video sources to be routed to video outputs in the Music Classrooms.

5) The AV Contractor shall coordinate with switch manufacturer for support as required to properly configure the AV network, including remote or on-site manufacturer switch configuration, as necessary.

6) All network cabling provided by the AV Contractor shall adhere to the applicable Category 6A standards. AV Contractor shall provide test reports prior to system checkout documenting compliance with applicable standards for all installed network cables.

b. Video System:

1) A wide screen (WUXGA) video projector with a zoom lens shall be mounted in a motorized projector lift located in the Auditorium house. The projector shall be a laser projector with a minimum brightness of 20,000 lumens. The projector lift shall have a minimum of three stops, a storage position, an optimal projection position, and a service position.

2) A 226” diagonal 16:10 widescreen format video projection screen shall be provided and installed by the AV Contractor in the stage rigging on a dedicated batten. AV Contractor shall coordinate screen location, mounting requirements, and requirements of marked rigging stops for screen height with Theatre Contractor.

3) Include infrastructure for future scenic projection capabilities in the Auditorium Stage area.

4) Video inputs shall be in the downstage left stage floor box, the Stage Manager’s rack, and at the mix position for connection of a portable video source, such as a laptop computer. All Auditorium inputs shall be connected via the Auditorium network video distribution system as sources to all network video destinations.

5) A Blu-Ray player shall be provided at the AV Stage Manager’s Rack.

6) Video shall be transmitted to the video projector and other displays via a digital video transmission system.

7) A PTZ camera shall be located on the rear wall of the Auditorium house. The camera will provide POV video to the Auditorium network video distribution system.

8) Confidence monitors shall be provided at stage left and stage right locations. Confidence monitors shall share a common source from the Auditorium network video distribution system but shall have individual on/off control.

9) Video displays shall be provided in backstage areas. Backstage video displays shall have a common source from the Auditorium network video distribution system. Displays shall be in both dressing rooms and Back Stage.

10) Video displays shall be distributed throughout the Lobby to provide POV camera or program video content to Lobby occupants.

11) Video from the Auditorium shall be distributed to the Music Classrooms and the Lobby digital signage video displays.

c. Audio System:

1) The audio system shall provide high quality dynamic sound reinforcement for theatrical productions, music performances, and presentations. The system shall allow for the playback of prerecorded audio material and the audio recording of events.

2) The main sound reinforcement system shall have a center main loudspeaker array permanently mounted below the forestage canopy, dedicated sub bass loudspeakers permanently mounted above the main cluster, and delay fill loudspeakers permanently mounted below the Auditorium ceiling.

3) Amplifiers and a main central network digital signal processor (DSP) shall be provided in the AV Amplifier rack. The DSP shall provide mixing for the simple system and distribution, equalization, and delay for Auditorium audio systems.

4) Ceiling mounted speakers shall be provided in the back of house areas, including both dressing rooms and Back Stage. Ceiling speakers shall also be located in the Lobby. Local wall mounted volume controls shall provide level control in each space.

5) Ceiling speakers shall be located in the Control Booth for Auditorium audio playback. A local volume control shall be provided at an accessible location for level control.

6) Audio shall be streamed from the main Auditorium DSP to the Music Classroom DSP and be available as a source to allow Auditorium audio playback in each music classroom.

7) A digital mixing console and associated digital snakes shall be provided. Permanent rack-mounted snake heads as well as a portable 16-channel snake head shall be provided. The portable snake head shall be able to connect to the main stage input plates.

8) The digital console shall have a minimum of three admin level presets for console configuration. Presets may include “Theatrical”, “Music”, and other presets making use of various combinations of inputs, to be coordinated with Owner. All admin presets shall require the console admin password to overwrite but shall have all modification savable to other user presets on the user level password.

9) Audio inputs/outputs shall be distributed throughout the Auditorium stage and surrounding areas. The inputs and outputs shall be located on plates at stage right, stage left, and upstage center, as well as in stage-left and stage-right floor boxes. All stage inputs shall be routed to the dedicated rack-mounted digital snake head.

10) Dedicated inputs shall be provided for use in “Presentation Mode”. Inputs shall include the Stage Manager’s consumer inputs, Lectern input in the stage left floor box, video program audio, and the first two wireless microphones auxiliary outputs.

11) Three (3) hanging ceiling microphones and inputs shall be provided above the Stage.

12) Four (4) foldback monitors mixes shall be provided with monitor outputs distributed throughout the stage and in the floor boxes.

13) A CD and solid-state media player shall be provided in the main sound mixing position equipment rack.

14) Consumer inputs shall be provided in the Stage Manager’s rack and the main sound mixing desk.

15) A minimum of sixteen (16) wireless microphone receivers shall be provided. Two (2) shall be shared with all modes. Fourteen (14) shall be dedicated to the performance mode. Twelve (12) handheld transmitters with condenser microphone heads, sixteen (16) bodypack transmitters, sixteen (16) head worn microphones, and two (2) lavalier microphones shall be provided.

16) Portable wired microphones for voice and instruments, direct boxes, microphone cables, and microphone stands will be provided.

17) A solid-state recording device shall be provided at the main mix location.

18) A backstage audio monitoring/paging system shall be provided with a paging microphone and PTT button located in the Stage Manager's rack.

19) An ADA-compliant assistive listening system (ALS) shall be provided. The system shall consist of an RF transmitter with an antenna remotely located on a wall in the auditorium, body pack receivers, earphones, and telecoil neck loops (for use with hearing aids) quantity of all receivers and accessories shall be as required by current ADA requirements. Compliance signage shall be provided. AV Contractor shall coordinate mounting of compliance signage with GC and Architect.

d. Production Intercom:

1) A 2-channel wired production intercom system shall be provided to allow for communication between stage technicians.

2) Beltpack receptacles shall be provided throughout the Auditorium, including vestibules, Dimmer Room, Control Room, and 2nd floor Lobby.

3) Speaker stations shall be provided in back-of-house areas, including dressing rooms, Backstage, Dance and music classrooms.

4) Channel A shall feed the distributed Auditorium receptacles, Channel B shall feed the back of house spaces.

5) Dual and single beltpacks and headsets shall be provided.

e. Support Equipment:

1) A wall-mounted Stage Manager's equipment rack with locking front door shall be located downstage left and will house a Blu-ray player, touchscreen control panel, video transmission/distribution equipment, paging microphone, intercom base station, and the digital snake head.

2) A floor-standing equipment rack with shall be provided in the AV amplifier storage room to house all processing, amplification, and distribution equipment.

3) A countertop "upper" rack shall be provided at the control room mix position to house equipment requiring user adjustment.

4) An undercounter "lower" rack shall be provided at the control room mix position to house wireless microphone equipment.

5) Power sequencing/control shall be provided in each equipment rack.

f. Control System:

1) A control system with a hardware central controller shall be provided to integrate and simplify equipment controls and user functions. The central controller shall be in the Auditorium AV Amplifier rack.

2) Touchscreen controllers shall be provided at the Stage Manager's rack and at the main audio mix position. Video preview equipment shall be provided to view distributed video content on touchscreens, such as PTZ camera feed.

3) The control system shall monitor all equipment that provides bidirectional feedback and report any failures or errors to an Owner designated representative. Coordinate communication method (e-mail, etc.) with Owner.

4) Provide control app mirroring touchscreen for Owner-provided portable devices if any are provided. Coordinate use of Owner wireless network and access permissions with Owner IT if portable devices are provided and control is desired by Owner.

5) The control system shall accept a contact closure signal from the fire alarm system (provided by others) to mute the audio system. A contact closure signal from the Emergency Paging System (provided by others) shall be connected to the central controller and shall mute audio when the paging system is used for emergency pages.

6) The control system shall allow a user to select between two control modes: "Presentation Mode", and "Performance Mode."

7) Presentation Mode shall allow everyday users with little training to operate the system during simple events using the stage. This mode shall be controlled by a touchscreen and not require an operator. This system shall be adequate for lectures, assemblies, movies, community meetings, and simple events where a no more than three microphones will be used for speech or announcements.

8) Performance Mode shall allow an advanced user the ability to provide sound reinforcement for events with multiple microphones, such as amplified performances. This mode will use a mixing console to control audio sources.

9) In Presentation Mode, the touchscreen control shall include, but not be limited to the following:

a) Fully developed touchscreen options and layouts through the process described herein.

b) General:

i) Power the system on/off (note: provide shutdown confirmation).

ii) PIN or password lock, if requested by Owner.

iii) Change modes (note: provide mode change confirmation).

c) Video Page:

i) Video source select.

ii) Video source device remote control.

iii) Power the video projector on/off (Note: automatically turn on display when a video source is selected. Turn off display and cool down projector if required when the system is turned off. Provide separate display on/off control).

iv) Raise and lower the projector lift between storage and operating presets.

v) Deploy screen when projector is powered on. Raise screen when the system is turned off. Provide a separate control to raise/lower/stop screen manually.

vi) Video mute. Provide a splash screen displaying the school logo when video is muted, if desired by Owner.

vii) Power status and source select for stage confidence monitors and BOH monitors.

d) Audio Page:

i) Lectern microphone level control and mute.

ii) Wireless microphone 1 & 2 level and mute.

iii) Stage Manager consumer input level and mute.

iv) Video-related audio level and mute.

v) Audio mix options for both the main speakers as well as monitor channel 1 shall be provided.

e) Service Page (PIN lock service page):

i) Indicate projector lamp hours.

ii) Provide service contact information.

iii) Display monitored devices errors.

iv) Monitor UPS battery replacement schedule.

10) In Performance Mode, available touchscreen control options shall include, but not be limited to the following:

a) Fully developed touchscreen options and layouts through the process described herein.

b) General:

i) Power the system on/off (note: provide shutdown confirmation).

ii) PIN or password lock, if requested by Owner.

iii) Change modes (note: provide mode change confirmation).

c) Video Page:

i) Video source select.

ii) Video source device remote control.

iii) Power the video projector on/off (Note: automatically turn on display when a video source is selected. Turn off display and cool down projector if required when the system is turned off. Provide separate display on/off control).

iv) Raise and lower the projector lift between storage and operating presets.

v) Deploy screen when projector is powered on. Raise screen when the system is turned off. Provide a separate control to raise/lower/stop screen manually.

vi) Video mute. Provide a splash screen displaying the school logo when video is muted, if desired by Owner.

vii) Power status and source select for stage confidence monitors and BOH monitors.

d) Audio Page:

i) Route all audio sources to mixing console in Performance Mode. Provide screen with text note directing users that the mixing console is in control of audio system.

ii) Mute all simple system audio inputs.

iii) Provide audio level meters of DSP inputs from the mixing console with loudspeaker destination labels.

e) Service Page (PIN lock service page):

i) Indicate projector lamp hours.

ii) Provide service contact information.

iii) Display monitored devices errors.

iv) Monitor UPS battery replacement schedule.

v) Control projector lift to service position.

E. Library/Media Room

1. The Media Room shall have a wall-mounted video display.

2. Display control shall be handled via the manufacturer-provided remote controller.

3. Input connectors shall be located on the wall plate below the video display for user-provided video sources such as laptops.

1.8 AV CONTRACTOR'S QUALIFICATIONS:

A. The work of this section will be contracted to a single firm, referred to as the AV Contractor, for undivided responsibility.

B. The AV Contractor shall be experienced in the installation of professional AV systems and have completed within the past five years at least three AV system projects of a size and scope comparable to the project described herein.

C. The AV Contractor shall have factory-certified programmers for the programming of any processing and control equipment used in this project. The AV Contractor shall have a manufacturer certified programmer on staff for Q-SYS, AMX, and any specialized equipment requiring programming for the duration of this project.

D. The AV Contractor shall have capabilities and in-house facilities for installation, shop fabrication and repair service of professional AV systems.

E. The AV Contractor shall have on their full-time payroll at least one staff engineer having a minimum five years of experience as a professional AV designer. In place of a qualified staff engineer, the AV Contractor may retain a consulting engineer to direct the project. Prior to bid acceptance, the qualifications of the consulting engineer shall be submitted for the approval of the Owner. Said staff or consulting engineer shall:

1. Represent the AV Contractor at meetings and conferences and be present at the job site for all inspections.

2. Be responsible for supervision of all technical and engineering work required executing the contract, approving, and signing the shop drawings.

F. All Contractors desiring to submit bids for the installation of the audio-video systems specified herein must attend a pre-bid walkthrough with the Architect.

G. Bids submitted by Contractors who are not qualified will not be accepted.

H. Contractors desiring to bid on this installation shall submit written verification of the required qualifications described above.

I. Minimum Performance Requirements: To meet the minimum performance requirements, the AV Contractor shall be responsible for:

1. Each component's conformance with the manufacturer's published specifications and other requirements as stated herein.

2. Detailed checking of each item of equipment provided each portion of the installation, and of the complete installation to find and remedy any defects therein.

3. Setting the system gain structure, including initial adjustment of digital signal processing, and amplifier gain controls and making the final adjustment of these items.

4. Alignment and focus of video displays adjusting for optimized settings and making the final adjustment of these items.

5. Adjusting/applying EDID management strategy and adjusting color space for all displays in order to display the most optimal image possible for each video source.

J. Applicable Standards and Codes: In addition to all applicable local and state codes, the work shall be in accordance with the latest revisions of all applicable standards and specifications of the following:

1. NAB - National Association of Broadcasters

2. UL - Underwriters Laboratories

3. EIA - Electrical Industries Association

4. NEC - National Electrical Code

K. Final Acceptance: Final acceptance shall be contingent upon issuance by the Owner/Architect of a letter of acceptance stating that the work has been completed and is in accordance with the contract documents.

L. Manufacturers' Qualifications:

1. All electronic products shall be designed and marketed by the manufacturer for application in professional video projection, sound amplifying, reproduction and recording systems.

2. All products proposed by the AV Contractor for use in the systems described herein are subject to approval by the Owner.

1.9 SUBMITTALS

A. Prior to bidding, submit the following:

1. AV Contractor Qualification Statement: Non-pre-qualified AV Contractors shall submit electronic media in PDF format containing a statement of the AV Contractor's qualifications for approval.

2. As a minimum, this submittal shall include the following:

a. A list of AV systems of comparable size and scope to that described herein, completed by the AV Contractor in the last five (5) years. Show project name and address, year of completion and the name, telephone number, and e-mail address of a person to contact who is a representative of the Owner or User.

b. A personal resume of formal education and experience of the qualified staff engineer who would direct the work.

c. A personal resume of the staff member(s) with the required manufacturer certification and control system programming qualifications.

d. A description of the AV Contractor's capabilities and facilities for rack assembly, shop fabrication, software programming, repair and servicing of AV systems.

e. A letter from the processor and control system manufacturer(s) certifying that the AV Contractor’s software programmers have been factory trained and are qualified to provide the proposed installation.

B. During installation but before system testing, submit the following:

1. Control System Submittal

a. Prior to beginning any programming coordinate with the Owner/Architect and User on general expectations.

b. Conduct a programming discovery meeting with the Owner/Architect and User to review the following:

1) General overall layout

2) Expected control functions

3) Organization of basic and advanced functions

4) Detailed expectations for advanced control of individual components or subsystems

5) Expectations for automated or grouped control functions

6) Any other control related functionality as required by the Owner, Architect, and User

C. After installation is complete, submit the following:

1. Testing Report. Provide a report documenting the results of system tests described in this specification. The Owner/Architect will not schedule the initial post-construction site visit until this report has been delivered.

D. After the initial post-construction Owner/Architect site visit, submit the following:

1. A signed copy of the initial post-construction Owner/Architect site visit punch list with each completed item initialed. The Owner/Architect will not schedule the final post-construction or visit until this document has been delivered.

E. After the final Owner/Architect site visit and final punch list has been completed, submit the following:

1. Operation Manual: Provide the following in a neatly bound binder with tabbed dividers between sections. Also, provide a digital copy in PDF format on a CD-ROM or USB solid state memory drive.

    a. Title Page

    b. Table of Contents

    c. Description of each system including key features and operational concepts

    d. Setup diagrams and instructions to use in typical situations as directed by the Owner

    e. Single-line block diagrams showing all major system components`

    f. Manufacturer's operation manuals and information sheets for equipment intended for operation by system users

    g. A sheet of web links to relevant industry resources such as:

        1) The Shure publication Microphone Techniques for Live Sound Reinforcement

        2) The Soundcraft Guide to Mixing

        3) The Electro-Voice PA Bible including Introduction, PA Bible, and Additions two, three, four, five, seven, eight, nine, fourteen, and twenty

    h. Key schedule cross-referencing all keys to their respective functions and extra copies of all keys required to open or operate equipment specified in this section.

2. Maintenance Manual: Provide the following in a neatly bound binder with tabbed dividers between sections. Also, provide a digital copy in PDF format on a CD-ROM or USB solid state memory drive.

    a. Title Sheet

    b. Table of Contents

    c. Company name, address, telephone number, e-mail address, website, and contact name for system service or maintenance

    d. Listing of all equipment and materials with names of manufacturers and model numbers or part numbers

    e. Product manufacturer's warranties and a typed one-year system warranty explicitly covering all materials and labor

f. Manufacturer's service manuals for all major equipment items

g. A recommended preventative maintenance schedule with reference to the applicable pages in the manufacturer's maintenance manuals. Where the manufacturer provides inadequate information, provide the information necessary for proper maintenance.

h. Provide a working copy of the latest version of all software required to operate or configure the systems specified herein.

i. All software shall be fully documented, and that documentation included.

j. Software shall be furnished on a CD-ROM or USB solid state memory drive attached to the binder.

k. All user definable software configurations and/or programming shall become the sole property of the Owner. This includes all source code, source code copyrights, and related documentation.

3. Training Materials as described herein.

4. As-Built Drawings: Maintain a full set of shop drawings at the project site marked up to indicate actual locations of equipment, boxes, and other items called for in this section. After the final Owner/Architect site visit, compile the mark-ups into a set of as-built drawings and provide to the General Contractor, Architect, and Owner.

1.10 WARRANTY

A. Provide a written one (1) year warranty, signed by the Contractor, due on the date of the final acceptance.

B. Include the following provisions:

1. Warranty all equipment and the installation to be free of faulty workmanship.

2. Warranty all components and materials to be free of defects for a period of one (1) year from the date of final acceptance.

3. Paint and exterior finishes, fuses and lamps are excluded from above warranty, except when damage or failure results from defective materials or workmanship covered by the warranty.

C. SERVICE WARRANTY

1. Replace defective materials and repair faulty workmanship within forty-eight (48) hours of discovery at no cost to the Owner during the period of the warranty.

2. The Contractor shall be available on call and on eight (8) hour notice during the first month following acceptance of the system, to assist the Owner's representatives in any problems which may arise during the initial period of operation.

3. At no additional charge, provide maintenance service for a period of one (1) year after final acceptance of installation. This service shall consist of at least one visit six months and one visit eleven months after final acceptance for checking the equipment and making any necessary adjustments.

4. If, during the warranty period, any component is out of service for more than seven (7) days due to unavailability of parts or service, supply and install an identical new component. If an identical component is not available, substitute equivalent equipment, but only with the approval of the Owner.

PART 2 PRODUCTS

2.1 MATERIALS

A. All materials, equipment and apparatus shall be new and of the latest design or model offered for sale by the manufacturer.

B. Principal items of equipment and apparatus are identified herein by part number and manufacturer. Alternate part numbers and manufacturers are identified in instances in which equivalence has been determined.

C. For all items which are identified by part number and manufacturer, performance specifications which are published in the most recent manufacturer's data sheets available at the time of bidding this contract shall be applicable to the present work as though fully written out herein.

D. For those items which are not identified by part number and manufacturer, the AV Contractor may select items which conform to the functional and/or technical specifications. For all such items, the AV Contractor shall submit exact make and model for approval including all technical data which is available from the supplier or manufacturer.

2.2 EQUIVALENT EQUIPMENT

A. All equipment listed by make/model below represents a minimum standard of performance based on specifications supplied by the manufacturer. All equipment substitutions shall be submitted to the Owner/Architect for review and approval prior to bid. It is the responsibility of the AV Contractor to prove that requested substitutions are equivalent to the specified product and compatible with the overall system design, intent, and electrical infrastructure.

2.3 EQUIPMENT

A. Base Bid: Audio-Video System

DESCRIPTION	MANUFACTURER	MODEL NUMBER	QTY
ROOM: Dance and Music Classrooms

2.4 EQUIPMENT PERFORMANCE SPECIFICATIONS

A. The performance specifications for all components shall be as published in the most recent manufacturer's data sheets available at the time of bidding this contract and shall be applicable to the present work as though fully given herein.

2.5 WIRING AND CONDUCTORS

A. Installed microphone and line level cable:

1. Cable shall be 22 AWG stranded tinned copper, UL Listed, NEC Type CM CMR or CMP, PVC jacketed, twisted pair, with 100% coverage overall foil shield. Where required by code installed microphone and line level cables shall be plenum rated.

2. Approved non-plenum cables:

a. Belden 8451, 9451

b. West Penn 77291

c. Liberty 22-1P-EX

d. Clark SPA22GS

e. Submit proposed alternative for approval

3. Approved plenum cables:

a. Belden 9451P

b. West Penn D25291

c. Liberty 22-1P-CMP-EZ

d. Clark SPA22GSP

e. Submit proposed alternative for approval

B. Portable microphone, line level, and single channel analog party line intercom cable:

1. Cable shall be 20 AWG stranded tinned copper, EPDM Jacket, with minimum 85% coverage tinned copper braid shield.

2. Approved portable microphone cable:

a. Belden 8412

b. Clark FF220

c. Submit proposed alternative for approval

C. Loudspeaker cable for low impedance systems, runs less than 150', except 4-ohm dedicated low frequency loudspeakers (subwoofers):

1. Cable shall be copper 12 AWG, UL Listed, NEC Type CL3, PVC jacketed, stranded conductor.

2. Approved non-plenum cables:

a. Belden 8477, 5000UE

b. West Penn 227

c. Liberty 12-2C

d. Clark CW1202

e. Submit proposed alternative for approval

3. Approved plenum cables:

a. Belden 6000UE

b. West Penn 25227B

c. Liberty 12-2C-P

d. Clark CW1202P

e. Submit proposed alternative for approval

D. Loudspeaker cable for low impedance systems, runs greater than 150', and for all 4-ohm dedicated low frequency loudspeakers (subwoofers):

1. Cable shall be copper 10 AWG, UL Listed, NEC Type CL2, PVC jacketed, stranded conductor. Where required by code, loudspeaker cables shall be plenum rated.

2. Approved non-plenum loudspeaker cables:

a. Belden 5T00UP

b. West Penn HA210

c. Clark CW1002

d. Submit proposed alternative for approval

3. Approved plenum loudspeaker cables:

a. Belden 6T00UP

b. West Penn 25210

c. Clark CW1002P

d. Submit proposed alternative for approval

2.6 CONNECTORS

A. 3-pin XLR cable connectors shall be 3-pole XLR type connectors, with solder cups, with black metal housing, and with gold contacts.

1. Approved 3-Pin XLR cable connectors

a. Neutrik NC3FXX-B, NC3MXX-B

b. Submit Proposed Alternative for Approval

2. Approved 3-Pin XLR chassis connectors

a. Neutrik NC3FD-L-B-1, NC3MD-L-B-1

b. Submit proposed alternative for approval

PART 3 EXECUTION

3.1 COORDINATION

A. The AV Contractor shall coordinate this work with the other electrical work and the work of other trades.

B. Locations shown on AV Drawings are approximate. Refer to Architectural drawings for dimensions.

3.2 FABRICATION

A. Design/Engraving:

1. All equipment controls, receptacles and all indicators shall have, unless otherwise noted, lamacoid, permanently engraved, or silk-screened fully descriptive identification labels. The resolution of silk-screened labels shall not be less than 90,000 dots/sq. in.

2. The word "engraved" shall mean that the identification shall be engraved into the indicated panel, plate, or control surface.

3. All engraving shall be with 5/32" high characters, unless otherwise noted, and shall be filled with engraver's enamel of a contrasting color.

B. Custom Plates:

1. Receptacles shall be screwed, bolted or flush-riveted to the plate.

2. Plates shall be marked to indicate function and circuit of the receptacle, for example: MICROPHONE.

C. Terminals and Terminations:

1. Microphone cables shall not be spliced or otherwise interrupted from termination to termination. All cables shall have visible adhesive identifying markers on each end.

2. Wiring in terminal cabinets shall be tied and clamped neatly to backboards or cableforms.

3. Terminals shall, unless otherwise specified, be one of the following types:

4. Wire-wrap type terminal block.

5. Barrier strips with screw terminals.

6. Each terminal strip shall have a legibly marked identification strip.

D. Structural Assemblies:

1. Provide holes required for securing other components or assemblies to structural steel framing and for passage of other components through steel framing members as shown on final shop drawings. Cut, drill or punch holes perpendicular to metal surfaces. Do not flame cut holes or enlarge holes by burning.

2. In fabricating mounting brackets and other steel components requiring bends, the radii of the bends shall not be less than three times the thickness of the steel being bent.

3. All bolts and nuts used in the fabrication of mounting hardware shall be Grade 5 or better.

3.3 INSTALLATION

A. General:

1. Keep the job adequately staffed at all times. Designate a field supervisor to be present on the job site and in responsible charge during all phases of installation and check out. Maintain same supervisor throughout the execution of the work unless circumstances beyond the control of the AV Contractor intervene.

2. Install the system in cooperation with other trades in order to achieve coordinated progress and satisfactory final results. Watch for conflicts with work of other trades on the job.

3. Execute without claim for extra payment, moderate moves or changes as are necessary to accommodate other equipment or preserve symmetry and pleasing appearance.

4. The AV Contractor shall do all cutting and patching necessary for proper installation of the system and shall repair any damage done by himself or his workmen. Any required penetration of slabs or CMU walls shall be made by a cutting method rather than by a concussive method.

5. On completion, remove all rubbish and unused materials from the premises and clean the premises and all equipment where dirtied by removing all dirt, dust, stains and fingerprints.

B. Equipment Rack:

1. Install rack mounted equipment with black 10-32 star post drive security screws head screws with nylon washers, Middle Atlantic HTX or equivalent.

2. Wiring internal to equipment racks shall be installed neatly and bundled according to function. Separate power cables as far as possible from microphone level and line level signal cables. Provide lacer bars, horizontal cable managers, and vertical cable managers where required. Attach cable bundles every 6” to cable management.

3. Provide security covers for non-user-operated equipment having front panel controls. Where required by equipment manufacturer security covers shall be vented. Install covers at the conclusion of system test, tuning, and equalization.

4. All blank rack panels and connector panels shall be flanged to increase stiffness. Flat panels will not be accepted.

5. All equipment not available with an integral rack mounting kit shall be provided with a rack shelf including custom faceplate that fully covers any open space around the device. Fasten equipment to rack shelf where appropriate.

6. Provide rack slides for all equipment requiring access to side or top panels for routine adjustment or cleaning.

7. All open areas on front faces shall be covered with blank panels. Where obstructions prevent the installation of full rack space blanks, install ½ or 1/3 space blanks.

8. Heavy equipment, such as power amplifiers, shall be supported from rear rack rails in addition to front attachments. All equipment in portable equipment racks shall be supported from rear rails in addition to front attachments.

9. Locate all rack mounted equipment requiring adjustments, cleaning or similar attention so that it will be accessible. Ensure that equipment with sliding shelves, portable device docks, or user interaction functions operate smoothly without obstruction.

C. Equipment, Boxes, Plates:

1. Secure all equipment, except equipment designed to be portable, firmly in place, including loudspeakers, racks, amplifiers, cables, and displays.

2. Install work neatly, with boxes, equipment, etc. plumb and square.

3. Locate all apparatus requiring adjustments, cleaning or similar attention so that it will be accessible.

4. All supporting structures and enclosures supplied by the AV Contractor, not having a standard factory paint finish, shall be painted. Paint specifications and color shall be supplied by the Architect.

5. Color and finish of blank panels and custom assembly panels shall match adjacent equipment panels to the extent possible. Paint all conduit and boxes to match adjacent surfaces. The finish of wall mounted receptacle panels shall be coordinated with the Architect.

6. The equipment specified herein must be capable of operation in environments of normal humidity, dust and temperature. AV Contractor should avoid installing equipment where extreme environmental conditions can occur and shall be responsible for protection of equipment and related wiring from such conditions.

7. The AV Contractor shall take precautions to prevent electromagnetic and electrostatic hum.

8. Install the equipment to provide safe operation. Provide ventilation as required to maintain equipment within the manufacturers specified temperature limits.

9. Any obstructions or conflicts in the rated coverage pattern of loudspeakers not shown on design drawings shall be reported to the Owner. If unreported obstructions are found during testing, the Contractor shall move loudspeakers without claim for extra payment.

D. Installed Cabling & Conduit:

1. Provide all cables necessary for interconnection of permanently mounted equipment. Use terminations required to achieve full function of equipment as specified herein.

2. All cables shall be continuous and only spliced where approved on shop drawings.

3. Exercise care in wiring to avoid damage to the cables and to the equipment. Make all joints and connections with rosin-core solder or with mechanical connectors approved for Class I wiring.

4. Run lines in separate metallic conduits for microphone level circuits (up to -20 MBm), line level circuits (up to +30 dBm), loudspeaker circuits (above +30 dBm) and power circuits. Non-metallic or PVC conduits for AV system wiring are not acceptable unless otherwise noted. Use only cables which are insulated from the conduit and from each other for the entire conduit length.

5. Ground audio cable shields at both ends. Provide green heat shrink tubing for all exposed cable shields or shield drain conductors at termination points.

6. Provide the separation shown in the following chart between conduits carrying the following signal types. Where conduits must cross and separation cannot be maintained, cross at a 90 degree angle.

E. Wire Terminations:

1. Make connections using rosin-core solder or approved mechanical connectors.

2. Terminate three pin XLR connectors according to AES12-1992 (r2004) standard: Pin 1 = Shield, Pin 2 = Audio High (+), Pin 3 = Audio Low (-). Do not connect shields to connector shells.

3. Field terminated Speakon connectors shall be terminated with screw terminals. Do not tin wires or solder connectors. Strip 20mm from cable jacket and 8 mm from conductor insulators as directed by manufacturer. Use only an appropriate Pozidriv bit when tightening screw terminals.

4. Speakon chassis connectors shall be terminated with 4.8mm x 0.5mm Faston crimp connectors.

5. Provide only factory terminated HDMI, DVI, and DisplayPort digital video cables. Field terminated cables shall not be acceptable.

F. Portable Cabling: Provide portable cabling required to connect all portable equipment specified by this section.

G. Labeling:

1. Clearly, logically and permanently mark switches, connectors, jacks, relays, receptacles, cables and cable terminations.

2. Etch, engrave, silk screen or apply in a similar permanent manner all legends and markings on all custom panels and receptacle plates. Embossed tape, press type, etc., are not acceptable.

3.4 TESTING

A. Instrumentation: The AV Contractor shall provide the following test equipment for use during initial tests and adjustments and during acceptance testing and final adjustment of the system:

1. Sound Level Meter: Shall meet ANSI S1.4 specifications for Type I sound level meters. SMAART with a Type I microphone and calibrator is acceptable.

2. Sine Wave Generator: Continuously variable from 20 Hz to 20,000 Hz within +1 dB with less than 0.5% THD.

3. Pink Noise Generator: Generator shall produce at least 1 volt RMS of pink noise.

4. AC Voltmeter: With frequency response of +1 dB from 20 to 20,000 Hz, 0.0001 volts to minimum input impedance of 0.1 megohm.

5. Data Communications Cable Verifier: Fluke MicroScanner2 or equivalent.

6. Polarity checker: Studio Six Digital AudioTools speaker polarity module or equivalent.

7. All other equipment required to conduct tests, equipment setup and checkouts outlined in this specification.

B. System compliance testing and documentation. The Contractor shall perform the following tests and provide a compliance document confirming the results of all tests prior to the final Owner/Architect site visit.

1. Audio System Tests:

a. Emergency Systems Muting: Coordinate with others to test emergency system mute. Document verification of system mute.

b. Cabling:

1) Check each microphone and line level cable for continuity of all conductors. Verify connectors are terminated in accordance with AES12-1992 (r2004). Document compliance on each line.

2) Check each loudspeaker line for continuity. Positive polarity shall be marked with red or white. Negative polarity shall be marked with black.

3) Data communications cabling shall be tested with a cable verifier. Document compliance.

c. Loudspeaker Physical Alignment: Verify the height, vertical angle, and horizontal angle of all loudspeakers with a laser inclinometer. Document the measured aiming angles.

d. Loudspeaker Line Impedance: Measure and document the impedance of each loudspeaker and associated loudspeaker line. Using an audio impedance meter (not DC resistance). Measure full range loudspeaker impedance at 200 Hz and 2000 Hz. Measure subwoofer impedance at 50 Hz and 100 Hz. Measure high frequency driver impedance at 4000 Hz and 8000 Hz. A full range impedance sweep using a software impedance meter is also acceptable.

e. Loudspeaker Polarity: Perform polarity checks on all independent loudspeakers. Loudspeakers utilizing active crossovers shall have polarity checked on all individually amplified components. Results from all polarity checks shall be included in compliance documentation.

f. Freedom from Buzzes, Rattles and Objectionable Distortion:

1) Apply a slow continuous sine wave sweep at a level 3 dB below rated power amplifier output voltage. Listen carefully for buzzes, rattles, and objectionable distortion. Correct any causes of these defects, unless the cause is clearly outside the sound amplification system equipment and installation, in which case, the cause shall be brought to the attention of the Owner/Architect.

2) Listen for audible buzzes or noise in the audio system. Coordinate the operation of other building equipment, including but not limited to dimmers, motors, stage lifts, and HVAC equipment to ensure that normal operation of such devices does not cause audible noise in the sound system.

g. Assistive Listening Systems: Verify that the system is operational.

h. Gain Control Settings: Establish tentative normal settings for all gain controls. All gain controls on rack-mounted equipment shall be adjusted for optimum signal-to-noise ratio and signal balance. After final gain and attenuator settings have been established, mark all control settings with an adhesive indicator dot or arrow.

i. Freedom from Switching Transient Noise: Operate all control switches and relays, while listening for clicks and pops in the system outputs. Eliminate any found.

j. Listening Test: Listen to normal program material to be sure that there are no remaining defects.

k. Reporting: Upon completion of above tests and any necessary adjustments, submit a written report presenting test results for review by the Owner/Architect prior to acceptance testing, final tuning, and demonstration. With this report, submit written certification that the installation conforms to the requirements stated herein, is complete in all respects.

3.5 DOCUMENTATION

A. Project Record:

1. The AV Contractor shall supply clean As-Built prints of the system drawings which show all changes which were made during fabrication and installation.

2. The AV Contractor shall print a full-sized copy of the system one-line diagram on rigid foam core board and post it in a convenient location near the equipment rack.

B. Maintenance Manual:

1. The AV Contractor shall provide technical information for all electronic apparatus, including but not limited to schematic diagrams and parts lists, manufacturer's installation instructions, operating instructions, and technical specifications.

2. The AV Contractor submittal shall include all shop drawings prepared and used by the AV Contractor, as well as those which were not required to be submitted for approval. This shall include, but not be limited to, wiring diagrams, schedules for identification of building wiring and installation details useful to a maintenance technician.

C. Instruction Manuals:

1. Provide two (2) copies of an Instruction Manual to the Owner containing the following:

2. Title Page

3. Table of Contents

4. Description of each system including key features and operational concepts

5. Setup diagrams and instructions to use in typical situations as directed by the Owner

6. Single-line block diagrams showing all major system components

7. Manufacturer’s operation manuals and information sheets for equipment intended for operation by system users

8. Key schedule cross-referencing all keys to their respective functions and extra copies of all keys required to open or operate equipment specified in this section.

3.6 TRAINING AND INSTRUCTION

A. The following training periods shall be provided by the AV Contractor to Owner-designated representatives for all installed systems at a time mutually agreed upon between Owner and AV Contractor. The total training time may require that the training be broken into multiple sessions.

1. Minimum of thirty two (32) hours of training.

B. All training shall be recorded by the AV Contractor. AV Contractor shall provide two (2) copies of the training video on a format suitable to the Owner. AV Contractor will supply the equipment necessary to record the training sessions.

C. During the training, the participants shall be given opportunities for "hands-on" experience with operating the controls. There shall be visual and audible demonstrations using the systems themselves as aids. Personnel for instruction and training for the AV systems shall be designated by the Owner.

END OF SECTION

SECTION 12305

SCIENCE CASEWORK AND LABORATORY EQUIPMENT

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Wood-faced casework and trim.

2. Plastic laminate faced casework and shelving.

3. Plastic laminate countertops.

4. Solid polymer fabrication.

5. Wood shelving.

6. Preparation for installation, and connection of utilities.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other documents.

C. Related Sections:

1. Section 06100 - Rough Carpentry: Blocking and backing plates for anchorage.

2. Section 06200 - Finish Carpentry: Adjustable shelving.

3. Section 06400 - Architectural Woodwork: Finish cabinetry.

4. Section 06640 - Solid Polymer Fabrications: Countertops.

5. Section 07900 - Joint Sealers: Sealants for closing perimeter joints between casework and adjacent walls and flooring.

6. Section 09110 - Non-Load Bearing Steel Framing: Blocking and backing plates.

7. Section 09900 - Painting: Woodwork finishes.

8. DIVISIONS 15 and 16: Service fittings and connections.

1.2 DESCRIPTION OF WORK

A. The extent of the work of this Section is indicated on the Drawings and as specified herein, and includes providing and installing factory-fabricated science and laboratory casework and preparation for installation of mechanical and electrical services by other trades.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only. Comply with the applicable standards of the following, as referenced herein.

B. American Hardboard Association (AHA).

C. American National Standards Institute (ANSI):

1. ANSI A135.4 - Basic Hardboard.

2. ANSI A208.1 - Mat Formed Wood Particleboard.

D. Americans with Disabilities Act Accessibility Guidelines (ADAAG):

1. Accessibility Guidelines for Buildings and Facilities.

E. Architectural Woodwork Institute (AWI):

1. AWI AWQS - Architectural Woodwork Quality Standards, 6th Edition, Version 1.0, Premium Grade, except as otherwise indicated.

F. Hardwood Plywood & Veneer Association (HPVA).

G. National Electric Manufacturer's Association (NEMA):

1. NEMA LD3 - High Pressure Decorative Laminates.

H. Scientific Equipment and Furniture Association (SEFA).

I. United States Department of Commerce Product Standard (PS):

1. PS 1 - Construction and Industrial Plywood.

2. PS 20 - American Softwood Lumber Standard.

3. Products Standards of the National Institute of Standards and Technology (NIST).

1.4 DEFINITIONS

A. Exposed Surfaces: The exposed portions of casework, including surfaces visible when doors and drawers are closed. Bottoms of casework more than 4'-0" above the floor shall be considered as exposed. Visible members in open cases or behind glass doors also shall be considered as exposed. The front and both sides of all storage cabinets shall be considered as exposed, even when one or both side panels are against a wall or an adjacent cabinet.

B. Semi-exposed Surfaces: Semi-exposed portions of casework includes members behind opaque doors, such as shelves, dividers, interior face of ends, case back, drawer sides, backs and bottoms, and the inside face of doors. Tops of casework 6'-6" or more above the floor shall be considered as semi-exposed.

C. Unexposed Surfaces: Unexposed portions of casework includes sleepers, web frames, dust panels and other surfaces not usually visible after installation.

1.5 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer=s specifications and installation instructions for each item of factory-fabricated woodwork, wood veneer, finish hardware and finish coating products.

   a. Wood veneers and finishes.

   b. Data for hardware and accessories indicating the material, type, function, attachment and finish.

2. Shop Drawings: Show the location of each item on dimensioned plans, sections, elevations, and large scale details. Indicate materials used, wood species, component profiles, assembly methods, thickness of parts, joint details, fastening methods, accessory listings, hardware locations, location and type of cut-outs for related work, service fixtures, fittings and accessories and schedule of finishes. Submit for the following:

   a. Cabinet work, base and overhead.

   b. Counter work, base and overhead.

   c. Shelving units.

   d. With submit of manufacturers product information, include Shop Drawings for manufacturer=s standard units.

3. Samples: For each species and cut or pattern of architectural woodwork:

   a. General:

      1). Two (2) 12" x 12" solid wood and plywood or particle board samples with factory-applied transparent or opaque finish for each finish system and color required.

      2). Two (2) samples of each countertop material.

      3). One (1) unit of each type and finish of cabinet hardware.

   b. Initial Samples: Unless specific products are scheduled, submit 2" x 2", minimum, size samples of the complete range of colors, patterns, and finishes available for initial selection.

   c. Final Samples:

      1). Color, Pattern and Finish Samples: Submit 6" x 6" final samples matching those initially selected.

      2). Fused Joint Sample: On project products that would least likely obscure joints, submit 6" x 10" samples showing fused joint work.

   d. Laboratory Countertops: Unless specific products are scheduled, submit 2" x 2" size samples of the complete range of colors, patterns, and finishes available for each type of laboratory counter top material proposed for use.

4. Assurance / Control Submittals:

a. Manufacturer=s certificate that the products meet or exceed the specified requirements.

b. Documentation of experience indicating compliance with the specified qualifications requirements.

5. Certification: Submit manufacturer=s certification that the products furnished are lead free. All faucets and other components in direct contact with potable water shall be constructed entirely of lead-free materials including, but not limited to, pipes, tubing and solders.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Warranty: Provide a written standard Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.6 COORDINATION

A. Pre-Installation Meeting: Convene a Pre-Installation Meeting at the Project Site prior to the delivery of casework to the Site.

1. Require attendance of the Contractor, Architect, Owner=s representative, and representatives of the installer of finish carpentry, other finishes, painting and related mechanical and electrical work.

2. Review coordination and environmental controls required for proper installation, and ambient conditions in areas to receive the work.

3. Review preparation and installation procedures, and the coordination and scheduling required with related work.
