B. Support Work:

1. For support work not indicated in the Contact Documents, coordinate the requirements with other installers, in a timely manner.

2. Provide work as necessary to ensure that all work has proper framing, backing and reinforcing supports to ensure secure and solid installations.

1.7 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minium of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

B. Quality Standards:

1. Casework shall comply with the requirements of AWI ÄArchitectural Woodwork Quality Standards Illustrated@, Eight Edition, 200, except where more stringent requirements are specified herein. Provide custom quality.

2. Comply with SEFA standards as follows for the design, fabrication and installation of casework and laboratory equipment:

   a. SEFA 8-1999, ÄLaboratory Furniture, Casework, Shelving and Tables Recommended Practices.@

   b. SEFA 7-1996, ÄLaboratory and Hospital Fixtures Recommended Practices.@

   c. SEFA 2.3-1997, ÄInstallation of Scientific Laboratory Furniture and Equipment Recommended Practices.@

C. All wood casework and laboratory equipment shall be the product of a single manufacturer.

1.8 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Package casework in water-tight containers for transport to the Project Site to prevent damage, water damage, soiling and deterioration and for storage in a location other than inside the building, if necessary.

C. If casework must be stored in other than the installation areas, store only in areas meeting the requirements specified for the installation areas.

D. Do not deliver casework until wet work, grinding, painting and similar operations which could damage, soil or deteriorate the casework has been completed in the installation areas, and humidity has been stabilized.

E. Deliver products to the Project Site in the manufacturer=s original, new, unopened packaging, crates or containers.

1.9 JOB CONDITIONS

A. The fabricator of the casework shall determine the optimum moisture content and required temperature and humidity conditions.

B. The Installer shall advise the Contractor of the temperature and humidity requirements for the casework installation areas. Do not install casework until the required temperature and relative humidity has been stabilized and will be maintained in the installation areas.

C. Stabilize temperature and humidity in the installation areas, as necessary, to maintain the moisture content of the installed casework within a 1.0% tolerance of optimum, from the start of installation throughout the remainder of the construction period.

D. Unless instructed otherwise by the Installer, maintain the spaces to receive casework between 65E and 80E F, with a relative humidity of 60% or less for 72 hours prior to, during and after installation until the date of Substantial Completion.

1.10 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Manufacturer=s Warranty: Provide fabricator=s standard Warranty against defects in product materials and workmanship.

PART 2PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Collegedale Casework, LLC.

2. Kewaunee Scientific Corporation

3. Sheldon Laboratory Systems

4. Fisher Scientific / Hamilton Medical Products.

5. Leonard Peterson & Co., Inc.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 BASIS OF DESIGN

A. Product numbers scheduled on the Drawings are those of Collegedale, Collegiate unless specifically noted otherwise.

1. Products of similar design and construction by other acceptable manufacturers may be submitted to the Architect for review and approval. Acceptance is subject to compliance with the specified requirements as evidenced by submittal of the specified product data and Shop Drawings.

2. The product specified, as the basis of design, shall serve as the standard of quality in determining comparable construction of casework by other specified manufacturers. The Owner=s representative and the Architect shall be the sole judge in determining the comparable quality of casework products submitted by other manufacturers.

3. AWI Custom grade with factory-applied clear finish.

2.3 LUMBER

A. For Exposed Applications: Custom grade, plain cut natural birch. Lumber shall be clear, kiln dried, grade FAS or better and of similar grain and color for the entire installation.

B. For Semi-Exposed Applications: Hardwood, of the manufacturer=s selection. Lumber shall be kiln dried, without surface defects where exposed.

C. For Unexposed Applications: Manufacturer=s option.

2.4 SHEET MATERIALS

A. Plywood:

1. Exposed Applications: Minimum seven-ply softwood or hardwood core construction hardwood plywood meeting ANSI / HPVA HP-1-2004. Face veneers shall be AA, Custom grade, plain cut natural birch with the same, color and graining as the exposed lumber; book match veneers.

2. Semi-Exposed Applications: Minimum five-ply softwood or hardwood core construction hardwood plywood meeting ANSI / HPMA HP-1983, hardwood face veneers of the same species, color and graining to match exposed members.

3. Unexposed Applications: Minimum five-ply softwood or hardwood plywood.

B. Particleboard for Unexposed Applications: Mat formed, manufactured with long fibered cuttings, bonded with water-resistant adhesive; weighing a minimum of 42.5 lbs. / cu. ft.; complying with ANSI A208.1-1999, Grade M-2, exterior glue.

C. Hardboard: 1/4" thickness, tempered; meeting AHA 135.4-2004.

D. Plastic Laminates:

1. Type: Manufacturer=s standard plastic laminate conforming to NEMA Standard LD 3-2005, as follows:

a. Horizontal Applications: Grade HGS (0.048" nominal thickness).

b. Vertical Application: Grade VGS (0.028" nominal thickness).

c. Backing Sheets: Grade BKL (0.020" nominal thickness).

d. Cabinet Liner: Grade CLS (0.020" nominal thickness).

2. Color and Patterns: As selected by the Architect from the manufacturer=s standard colors, unless indicated otherwise in the Finish Schedule.

E. Glass: Clear, double-strength, AA@ grade, safety glass.

F. Stainless Steel: Type 302 / 304 alloy; #3 or #4 satin finish.

2.5 COUNTER TOPS

A. Casework Countertops: Manufacturer=s standard plastic laminate over particleboard core with backing sheet and matching plastic laminate edgebanding; laminate to the core with water-resistant adhesive.

B. Laboratory Tops: Manufacturer=s standard chemical-resistant, solid, 1" thick material of monolithic molded modified epoxy resins with a surface coating; black color.

2.6 HARDWARE

A. Hinges: Fabricate of, minimum, 0.093" thickness stainless steel, five knuckle, satin finish. Provide one pair of hinges for doors 4'-0" high or less; 1-1/2 pairs of hinges for doors over 4'-0" high.

B. Pulls for Drawers and Swinging Doors: Solid die-cast metal, manufacturer=s standard design, satin chrome finish. Provide two pulls for drawers over 2'-0" wide.

C. Pulls for Sliding Doors: Recessed finger pull type, minimum 2" diameter, satin chrome finish.

D. Catches: Nylon roller or friction type.

E. Shelf Standards and Supports: Manufacturer=s standard adjustable type, wrought steel, mortise mounted in cabinet end panels. Provide supports for each shelf at each standard. All surfaces shall be nickel plated.

F. Drawer Stops: Designed to permit easy drawer removal but not inadvertent drawer removal. Furnish stops for all drawers.

G. Sliding Door Assemblies: Double, overhead metal track with adjustable, nylon roller hangers and bottom guide; of size recommended by the manufacturer for the door size.

H. Locks: Half mortise design with only round cylinder exposed, five pin tumbler cylinder; satin chrome finish. All base and wall cabinet doors and drawers are to receive locks. Key all locks within a room alike. All casework locks shall be under one master key for the entire Project.

I. Label Holders: Size to receive 1" x 2" cards; satin chrome finish. Furnish one label holder per drawer.

J. Resilient Base: Extruded rubber or vinyl, black color, 4" high with pre-molded internal and external corners, coved type.

K. Leg Shoes: Extruded rubber or vinyl, black color, complete with hold down clips.

L. Drawer Glides: Heavy-duty, side mounted type, 75 lbs. capacity, zinc-plated steel; equip with heavy-duty ball bearing nylon wheels. Glides shall have automatic positive stops.

M. Toe Space Ventilator and Door Louvers: Manufacturer=s standard.

N. Rod Sockets: Die cast aluminum, surface-mounted insert with tapered rod hole to receive support rods; anodized finish.

O. Support Rods: Aluminum alloy, 3/4" diameter x 3'-0" length, rounded at top and tapered at the bottom to fit rod sockets; anodized finish.

P. Tote Tray: Vacuum formed polystyrene in the manufacturer=s standard color.

2.7 MECHANICAL SERVICE FIXTURES

A. Fixtures for water, gas, steam and other services shall be heavy-duty construction, especially fabricated for laboratory use. All fixtures shall be triple chrome-plated brass.

1. Water Faucets: Hot and cold water fixtures shall be case red brass, compression type with removable and replaceable seats. All fixtures shall have color coded

indexes and shall be equipped with serrated hose and a vacuum breaker nozzle, unless otherwise specified.

2. Gas, Air and Vacuum: Ground key cocks for gas, air, and vacuum shall be high grade brass forgings. Handles shall be one-piece construction. Core shall be spring-loaded for constant pressure and automatic take-up, and shall open full at one quarter turn. Cocks shall have integral, tenserration, non-slip hose ends and color coded indexes. Provide ground key cocks for low pressure service. Provide needle point valves for high pressures and oxygen service.

3. Electrical Fixtures: Flush-mounted electrical boxes shall be cadmium-plated steel. Pedestal type boxes shall be polished, cast aluminum with nipple and lock nuts. All boxes shall be equipped with stainless steel cover plates. Receptacles shall be 3-wire grounded type, 15A, 125V.

4. Other Mechanical Fixtures: Other fixtures shall be laboratory grade as approved by the laboratory casework manufacturer, designed for laboratory use and meeting all Codes.

5. Plastic Traps and Fittings: Plastic traps and fittings shall be made from chemical-resistant, flame-retardant, polypropylene material with schedule 40 wall thickness. Connections shall be made mechanical type. Traps shall be 1-1/2" size.

6. Sinks: Manufacturer=s standard types as follows:

   a. One-piece modified epoxy resin specially compounded and cured for optimum physical and chemical resistant properties. Provide with 1-1/2" diameter tailpiece and acid-resistant lined solids interceptor. Tailpiece shall be for connecting by mechanical joint to a trap or pipe only.

   b. Modified epoxy resin type sinks, approximate size: 24" long x 16" wide x 8" deep.

7. Sink Accessories: Stops, strainers, supports, straps and accessories for a complete installation.

2.8 FABRICATION

A. Field measure spaces where each casework item is to be placed, prior to the preparation of Shop Drawings and fabrication to insure proper fit of the work.

B. Factory fabricate casework components in accordance with the product data and approved Shop Drawings. Fabricate units to the sizes and configurations indicated.

C. Construct units square with plumb vertical lines. Fabricate with mortise and tenon joints, all joints glued, and screwed together.

D. Edgeband all edges of exposed plywood components and exposed edges of semi-exposed plywood components with hardwood edge strips and matching faces in species, color and graining.

E. No exposed edge grain will be allowable in the finished work.

F. Construct swinging pairs of doors with doors hinged to end panels; mount catches on the meeting rail.

G. Construct drawers with dovetail joints at drawer fronts and sides.

H. Doors shall be lipped type, overlapping the face frame at all edges.

I. Provide filler panels in the same material and finish as the casework.

J. Provide 1" high ledges (seismic lips) on all sides of all shelving consisting of a 2" high x 1/8" thick PVC band applied to the outside shelf face with hot melt glue. Contact cement is not acceptable.

2.9 FINISHES

A. Completely factory-finish casework components in accordance with the manufacturer=s standard procedures. Sand exposed and semi-exposed components to remove machine marks, surface blemishes and stains prior to finishing.

B. Exposed surfaces: Apply the following, in sequence; sand between each coat:

1. Sanding sealer.

2. Stain, matching the color selected.

3. Wood filler.

4. Finish, minimum two (2) coats of chemical-resistant, satin finish varnish, heat dried.

C. Semi-Exposed Surfaces: Apply the following, in sequence; sand between each coat:

1. Sanding sealer.

2. Stain, matching the casework exterior.

3. Finish, minimum of one (1) coat of chemical-resistant, satin finish varnish, heat dried.

D. Unexposed Surfaces: One (1) coat of sealer.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates, and conditions are as required, and ready to receive the work.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Condition casework to the average prevailing humidity conditions in the installation areas before installing.

B. Install concrete inserts and similar anchoring devices to be built into substrates well in advance of the time the substrates are to be installed.

C. Prior to installation of the casework, examine the shop-fabricated units for completion as required, including back priming.

3.3 INSTALLATION

A. Uncrate and set casework items in place at the locations shown on the Drawings. Secure as indicated on the approved Shop Drawings. Units shall be plumb and level within 1/8" in 20'-0". Provide concealed shims as indicated on the approved Shop Drawings.

B. Install casework, fixtures and equipment in compliance with the manufacturer=s instructions and SEFA 2.3 standard.

C. Where casework abuts other finished work, scribe and cut for accurate fit. Provide matching fillers where required.

D. Trim: Install in single unjointed lengths for openings and runs less than 10'-0" in length. For longer runs, use only one piece shorter than 10'-0" in straight runs.

E. Coordinate the installation of casework with related work for the proper placement of anchors, mechanical, plumbing and electrical items, and accessories.

F. Install laboratory equipment in accordance with the manufacturer=s product data and the approved Shop Drawings.

G. Adjust operating hardware for proper operation. Repair damaged items to their original condition. Replace damaged items which cannot be repaired to the satisfaction of the Owner=s representative.

H. Ensure that doors and drawers operate smoothly and easily without sticking or binding.

I. Touch-up damages to factory-finished casework, as required. Replace items if the touch-up work is not satisfactory to the Owner=s representative.

3.4 CONSTRUCTION

A. Interface with Other Work:

1. Coordinate the installation sequence of fixtures with the trades providing utilities to the fixtures.

B. Tolerances:

1. Fabrication: Variation of Components Size: + 1/8". Location of Openings + 1/8" from the required location.

2. Installation: 1/8" in 8'-0" for plumb and level, including countertops and with 1/64" maximum offset in flush adjoining surfaces; 1/32" maximum offsets in revealed adjoining surfaces.

C. Finishing:

1. Repair damaged and defective casework wherever possible to eliminate defects functionally and visually. Where not possible to repair to the satisfaction of the Owner=s representative, replace the casework.

2. Adjust joiner for a uniform appearance.

3. Touch-up shop-applied finishes to restore damaged and soiled areas.

4. Complete the finishing work specified as work of this Section, to whatever extent not completed in the shop or prior to installation of the casework.

3.5 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting the installed work.

B. Lubricate and make final adjustment of moving and operating parts for smooth and correct operation.

C. Installer shall return to the Project prior to Substantial Completion, repair any damage to the work and readjust the hardware.

3.6 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect installations for flush, plumb, level, alignment and secure attachment to substrates.

3.7 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Clean all exposed and semi-exposed surfaces of the casework, counters, shelves, hardware, fittings, and fixtures.

3.8 PROTECTION

A. The Installer shall advise the Contractor of the procedures required to protect the casework and equipment during the remainder of the construction to ensure that the work will be without damage and deterioration at the time of final acceptance.

B. Protect the installed casework from soiling, damage and excessive relative humidity until Substantial Completion. Cover with polyethylene or other approved protective material.

END OF SECTION

SECTION 12484

FLOOR MATS AND FRAMES

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Reversable floor mats.

2. Recessed mat frames.

3. Accessories.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the Work of this Section. Additional requirements and information necessary to complete the Work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03302 - Cast-in-Place Concrete: Floor substitute.

2. Section 08400 - Entrances, Storefronts and Windows: Entrance doors.

3. Section 09300 - Tile: Floor finish.

4. Section 09650 - Resilient Flooring: Floor finish.

1.2 DESCRIPTION OF WORK

A. The extent of the floor mats and frames work is as indicated on the Drawings and specified herein, and includes providing and installing reversable mats, recessed stainless steel frames and accessories necessary for proper installation.

B. Mat and frame installations shall comply with the Building Code and ADAAG.

1.3 REFERENCES

A. The publications listed below form a part of this Specification to the extent referenced. Publications are referred to in the text by basic designation only.

B. American Society for Testing and Materials (ASTM):

1. ASTM B 117 - Practice for Operating Salt Spray (Fog) Apparatus.

2. ASTM D 2047 - Test Method for Static Coefficient of Friction of Polish - Coated Flooring Surfaces as Measured by the James Machine.

3. ASTM E 648 - Test Method for Critical Radiant Flux of Floor-Covering Systems Using a Radiant Heat Energy Source.

C. Americans with Disabilities Act Accessibility Guidelines (ADAAG):

1. Accessibility Guidelines for Buildings and Schools.

1.4 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Manufacturer=s published descriptive literature, complete specifications, installation instructions, method of installation, and substrate preparation.

2. Shop Drawings: Show layout, profiles and product components, include details, direction of traffic, spline locations, anchorage, accessories, finish colors, patterns and textures.

3. Samples: For each type and color of exposed mat, frame and accessory required, two (2) - 12" x 12" samples of the mat material and frame.

4. Assurance / Control Submittals:

a. Certified test reports showing compliance with the specified performance characteristics and physical properties.

b. Documentation of experience indicating compliance with the specified qualifications requirements.

5. Maintenance Data: Manufacturer=s printed instructions for cleaning and maintaining the mats.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Special Warranty: Submit a written special Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.5 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing Products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

B. Flammability: Minimum 0.45 watts / sq. m. in accordance with ASTM E 648, Class 1.

C. Slip Resistance: Minimum 0.60 for assembled routes in accordance with ASTM D 2047.

D. Single Source Responsibility: Obtain all floor grids and frames from a single manufacturer.

1.6 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle store and protect Products.

B. Protect metal framing from corrosion, deformation and other damage during delivery,

storage and handling.

C. Deliver materials to the Job Site ready for use and fabricated in sections and assemblies as large as practical.

D. Protect finished aluminum surfaces with strippable coating. Do not use adhesive paper or sprayed coating which bond when exposed to sunlight or weather.

E. Deliver materials to the Project Site in the manufacturer=s original, unopened packages, containers or bundles bearing the brand name and identification of manufacturer.

F. Storage and protection: Store mats and metal frames under weatherproof covering, in a dry and protected location until ready for installation; ventilate to avoid condensation.

1.7 COORDINATION

A. Coordinate the frame installation with the concrete construction to ensure that the recess and frame anchorage are accurately located, and the base is level and flat. Defer frame installation until the building enclosure is complete and interior finish work is in progress.

1.8 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Special Warranty:

1. Provide a written Warranty that the products are free of defective materials and workmanship, and will repair or replace any defective component or the system, in whole or part, as necessary to restore the product to its original intended state and integrity.

2. Warranty Period: Five (5) years from the date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. MATS, Inc.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS

A. MATS, Inc. component designations are used within this Section to identify mat and frame types.

1. Recessed Foot Grid: Nuway Tuftguard by Mats, Inc.

2. Frame: Aluminum, ADeep Frame@, 1-1/4" mat and frame depth.

3. Mats: Alternating aluminum and unbuffed rubber strips with PVC spacers to allow for the passage of water and debris; reversible.

B. Fabrication:

1. Fabricate mats to the greatest extent possible, in single units for each installation, but do not exceed the manufacturer=s maximum size recommendation for units to be removed for cleaning and reversal. Where joints in mats are necessary, space symmetrically and away from normal traffic lanes. Size as shown on Drawings.

2. Provide frames in single lengths. When frame dimensions exceed the maximum lengths available, use the least number of pieces possible, with hairline joints equally spaced, and spliced with straight connection pins.

3. Miter corners and join with corner gusset and plates for hairline joints.

4. Coat the surfaces of frames to be installed in contact with cementitious material, with a zinc chromate primer.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates, and conditions are as required, and ready to receive the work.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Manufacturer shall provide assistance and guidance, and provide a template for irregular shaped grid assemblies to ensure proper installation.

3.3 INSTALLATION

A. Strictly comply with the manufacturer=s installation instructions and recommendations.

B. Set the mat height as recommended by the manufacturer for the most effective cleaning action.

C. Coordinate the top of mat surfaces with the bottom of doors that swing across to provide ample clearance between the door bottom and top of the mat.

D. Coordinate the installation with adjacent work to avoid a tripping hazard.

1. The installation shall comply with ADAAG.

3.4 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field inspection.

B. Inspect the installation and relationship to adjacent floor finishes to ensure avoidance of trip hazards.

3.5 CLEANING

A. Section 01700 - Execution Requirements: Cleaning the installed work.

B. Refer to the Manufacturer=s Cleaning and Maintenance Instructions.

3.6 PROTECTION

A. After completing the frame installation and concrete work, provide a temporary filler of plywood or fiberboard in the recess, and cover the frames with plywood protective flooring. Install mats for Substantial Completion of the Project.

B. Maintain the temporary protection until construction traffic has ended and the Project is near Substantial Completion.

END OF SECTION

SECTION 12492

BLINDS

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Horizontal metal slat louver blinds.

2. Mounting system.

3. Operating hardware.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-In-Place Concrete: Substrate for attachment.

2. Section 04230 - Reinforced Unit Masonry: Substrate for attachment.

3. Section 09110 - Non-Load Bearing Steel Framing: Structure for attachment.

4. Section 09250 - Gypsum Board: Adjacent wall finish.

1.2 DESCRIPTION OF WORK

A. The extent of the horizontal metal blinds work is indicated on the Drawings and as specified herein, and includes providing and installing slat louver blinds, mounting systems and operating hardware and devices.

1.3 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Data indicating the physical and dimensional characteristics and operating features.

2. Shop Drawings: Indicate opening sizes, quantities of each size, location of each size, tolerances required, method of attachment, clearances and operation.

3. Samples: Two each, 12" long illustrating slat material, finish and color.

4. Assurance / Control Submittals:

a. Manufacturer's certificate that products meet or exceed the specified requirements.

b. Documentation of experience indicating compliance with the specified

qualifications requirements.

c. Manufacturer's Installation Instructions: Indicate special procedures and any perimeter conditions requiring special attention.

B. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Operation and Maintenance Data: Manufacturer's recommendations for maintenance and cleaning.

2. Warranty: Submit a manufacturer=s special Warranty with forms completed in the name of the Owner and registered with the manufacturer.

1.4 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Installer: Company experienced in performing the work of this Section with a minimum of five (5) years documented experience.

1.5 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products.

B. Deliver products to the Project Site in the manufacturer's original, unopened protective packaging.

C. Store blinds to prevent damage to the materials, finishes and operating mechanisms.

D. Handle to prevent damage to the slats and operating mechanisms.

1.6 JOB CONDITIONS

A. Existing Conditions: Take field measurements of the openings to determine the exact size required for each opening.

1.7 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Special Warranty:

1. Provide a written Warranty, signed by the blinds manufacturer agreeing to repair or replace blinds that do not meet the requirement, or that fail in materials or workmanship.

2. Warranty Period: Lifetime.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the Project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Springs Window Fashions (Bali).

2. Hunter Douglas Contract.

3. Levolor.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.2 MATERIALS

A. Model / Color:

1. Springs Window Fashions: The Bali Classics Mini Blinds, 1", AMatte White@ color or as approved.

2. Hunter Douglas: 1" Mini Aluminum Blinds, Model CD80, ALinen Flirt@ color or as approved.

3. Levelor: Mark I DustGuard, 1" Blind, Model MARK 1, "Dover" color or as approved.

B. Blinds: Horizontal slat louvers, hung from a full-width headrail with full-width bottom rail; manual control for raising and lowering by a cord with full-range locking; open and closed point locking; blade angle adjustable by a control wand.

C. Metal Slats: Spring-tempered, pre-finished aluminum, radiused slat corners with manufacturing burrs removed.

1. Width: 1".

2. Thickness: 0.008", minimum.

D. Slat Support: Braded polyester yarn, ladder configuration.

E. Headrail: Pre-finished, formed steel box with end caps; internally fitted with hardware, pulleys and bearings for operation; same depth as the width of the slats.

1. Color: Same as the slats.

F. Bottom Rail: Pre-finished, formed steel with top side shaped to match the slat curvature; end caps.

1. Color: Same as the slats.

G. Lift Cord: Braided polyester, continuous loop.

1. Free end looped through a wall-mounted, spring tensioned pulley.

2. Color: White.

H. Control Wand: Extruded solid transparent plastic, ribbed or hexagonal shape.

1. Non-removable type.

2. Length of window opening height less 3".

3. Color: Clear.

I. Headrail Attachment: Wall brackets.

J. Accessory Hardware: Type recommended by the blind manufacturer.

2.3 FABRICATION

A. Fabricate blinds to cover the window frames completely.

B. At openings requiring multiple blind units, provide separate blind assemblies with a 1" space between assemblies; located at window mullion centers.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

1. Verify that structural blocking and supports, if required, are in place and correctly located.

C. Report, in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install blinds in accordance with the manufacturer's published instructions, at each window and where shown on the Drawings.

B. Secure in place with concealed fasteners.

3.3 CONSTRUCTION

A. Interface with other Work: Coordinate the work of this Section with the window installation and placement of concealed blocking to support the blinds.

B. Site Tolerances:

1. Maximum Variation of Gap at Window Opening Perimeter: 1/4".

2. Maximum Offset From Level: 1/8".

3.4 ADJUSTING

A. Section 01700 - Execution Requirements: Adjusting the installed work.

B. Adjusting blinds to hang level and plumb.

C. Adjust operating hardware for smooth operation.

3.5 FIELD QUALITY CONTROL

A. Section 01450 - Quality Control: Field testing and inspection.

B. Inspect the installation, attachment and operation of the blinds.

3.6 CLEANING

A. Section 01700 - Execution Requirements: Requirements for adjusting and cleaning.

B. Clean blinds surfaces prior to the Final Acceptance inspection.

END OF SECTION

SECTION 14240

ELEVATOR, HYDRAULIC

PART 1 GENERAL

1.1 SUMMARY

A. Section Includes:

1. Hydraulic elevator system.

2. Elevator cab.

3. Elevator equipment.

4. All related work and materials.

B. Related Documents: The Contract Documents, as defined in Section 01010 - Summary of Work, apply to the work of this Section. Additional requirements and information necessary to complete the work of this Section may be found in other Documents.

C. Related Sections:

1. Section 03300 - Cast-in-Place Concrete: Hoistway structure.

2. Section 05500 - Metal Fabrications: Sills.

3. Section 07900 - Joint Sealers: Sealant around door frames.

1.2 DESCRIPTION OF WORK

A. The extent of elevator work is indicated on the Drawings and as specified herein, and includes providing and installing elevator plant(s), complete, in a first-class workmanlike manner and all related work and materials. All work and material shall conform to the requirements of American National Standards Institute (ANSI), Safety Code for Elevators and Escalators, latest edition, the National Electric Code, and local codes which govern the installation for elevators.

B. In all cases where a device or part of equipment is herein referred to in the singular number, it is intended that such references shall apply to as many such devices as are required.

1.3 RELATED WORK

A. Refer to other Sections of these Specifications for related work that is required but is not the work of this Section, including electrical service with fused disconnect switches for the elevator system, hoistway, pit, and Machine Room; access lighting, air conditioning and services.

B. Preparatory work required in conjunction with the elevator installation shall consist of the following:

1. A legal hoistway, properly framed and enclosed, which shall withstand the forces

and loads resulting from use of the elevator; a pit of proper depth with pit ladder, pit screens, lighting, drains, waterproofing and sump pump, as required.

2. A clear and plumb hoistway. Bevel cants (15 degrees from vertical) over any rear or side wall ledges and beams that project 2" or more into the hoistway.

3. A Machine Room, properly lighted, isolated from outside atmosphere, fire-resistant, including concrete floors and foundations with adequate ladders and guards, self closing and locking access door; cooled to maintain a maximum temperature of
85E F; fire extinguisher, lighting and communications.

C. Furnish in place, as shown on the Drawings and as required, all supports for guide rail brackets. The Elevator Contractor shall provide inserts to the General Contractor for setting as required. Guard and protect the hoistway while equipment is being installed. Do all cutting and patching of beams, walls and masonry work required, including repairs to plaster.

D. Provide all chases and openings as required by the Elevator Contractor and as shown on the Elevator Drawings.

E. Provide proper electrical conductors to the elevator control panel terminals; include necessary mainline switches, circuit breakers or fuses. Provide all necessary outlets in the Machine Room for the elevator signal equipment and in the pit for a pit light; power of the necessary characteristics during installation to provide illumination, operation of the required tools and hoist and power for starting, testing and adjusting the elevator.

F. Provide divider beams between adjacent elevators at each floor, pit and overhead. Provide car intermediate rail supports where floor heights exceed 14' - 0".

G. Install guide rail bracket supports set in concrete, as required.

H. Provide wall blockouts for pushbutton stations, hall lanterns, position indicators and other signal fixtures.

I. Provide three-phase, mainline electrical power feeders to terminals of the elevator controller unit in the Machine Room. Include protected, lockable "off" disconnect switch. Provide single-phase power feeders to the elevator controller for lighting and exhaust blower. Provide temporary power and illumination needed to install, test and adjust the elevator equipment.

J. Provide venting means to prevent the accumulation of smoke and gasses in the hoistway; minimum 3'-0" sq. ft. per hoistway or 3.5% of the total hoistway area, whichever is greater.

K. Provide a 3'-0" square hole in the pit floor to install a protective casing. Fill the hole with concrete after jack installation. Provide pit support framing for jack cylinder and buffer loads. Provide opening in the hoistway wall for the passage of hydraulic piping.

L. Furnish and install sill support angles; material to run the full-width of the hoistway.

M. Furnish Lobby finishes after installing the elevator entrance.

N. Furnish and install emergency power through the same conductors used for normal power and through the elevator company’s controller terminals switch.

O. Install: Wiring for the communications (intercom) system.

P. Maintain elevator vertical alignment within a tolerance of +/- 1" throughout.

Q. Furnish elevator cab finishes as designated.

1.5 SUBMITTALS

A. Section 01330 - Submittal Procedures: Procedures for submittals.

1. Product Data: Indicate required performances, controls, capacities, features and finishes for the elevator.

2. Shop Drawings: Submit for approval. Include enough detailed information to determine that the equipment conforms to the requirements of this Specification but not less than the following:

a. Location of machinery and controls in the Machine Room.

b. Shop Drawings and catalog cuts for all Contractor-furnished materials and equipment, including a complete layout of the hoistway in plan and elevation and all other layout information and clearance dimensions.

c. Complete information on the motors, pumps, gauges, tanks, piping, valves, control system and buffers.

d. Seismic Zone No. 3 and 4: Include details of rail brackets, method of fastening brackets to the structure and the details of earthquake protection.

3. Operation and Maintenance Instructions: Three (3) sets of neatly bound operating and maintenance instructions shall be furnished, specific to the installation. The operation portion shall be bound separately from the maintenance portion. Operating instructions shall include detailed information relative to the type, method, and sequence of operation. Maintenance instructions shall include the complete system, repairing, and ordering of all replacement parts, and shall be fully illustrated for clarity. Any components or methods peculiar to the particular system shall be included in detail.

4. Wiring Diagrams: Complete wiring and single line diagrams showing the electrical connections, functions, and sequence of operation of all apparatus associated with the elevator, both in the Machine Room and in the hoistway, shall be furnished in duplicate. One set shall be plastic or glass covered, framed and mounted in the Machine Room. The other set shall be given to the Owner's representative.

5. Lubrication Chart: One plastic or glass covered and framed lubrication chart shall be furnished and mounted, as directed, in the Machine Room. The chart shall identify lubricants as well as lubrication points and the required frequency of lubrication.

6. Certificates and Permits: Provide a copy of all inspection / acceptance certificates and operating permits required by the governing authorities having jurisdiction to allow normal, unrestricted use of the elevator.

a. The Elevator Contractor shall obtain and pay for all necessary inspections and permits and make tests as called for by regulations of the governing authorities.

7. Service Contract: Provide a 1 year Continuing Maintenance Service Contract for service after the date of final acceptance, at no additional cost to the owner.

B. Elevator Schedules indicate the required performances, controls, capacities, features and finishes for each elevator, or group of elevators, and are to be submitted on the forms provided as attachments A - D.

C. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

1. Warranty: Provide a written Warranty with forms completed in the name of the Owner and registered with the manufacturer.

2. Service Contract: Provide owner with a signed copy.

1.6 QUALITY ASSURANCE

A. Qualifications:

1. Manufacturer: Company specializing in manufacturing the products specified with a minimum of five (5) years documented experience.

2. Installer: Either the elevator manufacturer, or a licensee of the manufacturer, who has not less than five (5) years of successful experience installing similar type elevators.

B. Regulatory Requirements:

1. Elevator Code: Except for more stringent requirements as indicated or imposed by required governing regulations, comply with the applicable requirements of ANSI / ASME A17.1, Safety Code for Elevators and Escalators, except indirect hydraulic elevators, which is based on ANSI and J.I.S. Code (hereinafter referred to as the "Code").

2. Fire Resistance of Entrances: Comply with NFPA No. 80 and provide units bearing UL labels with thirty minutes temperature rise on the labels, or comply with ANSI A17.1.

3. NEII, Standards for the Handicapped: Except as otherwise indicated, comply with NEII "Suggested Minimum Passenger Elevator Requirements For The Handicapped", including clearances, handrails, locations for signal equipment and similar provisions.

4. Conform to Americans with Disabilities Act Accessibility Guidelines (ADAAG).

5. Document Verification: In order to discover and resolve any conflicts or lack of definition which might create construction problems, the elevator supplier shall review the documents for compatibility with their respective products. Review and verification shall include, but not be limited to, architectural, structural, mechanical, and electrical Drawings, and the Specifications.

1.7 DELIVERY, STORAGE AND HANDLING

A. Section 01600 - Product Requirements: Transport, handle, store and protect the products

B. Protect the products from water, dust and humidity damage during delivery, handling, storage and installation.

C. Deliver products to the Project Site in the manufacturer’s original, unopened packaging, dry and undamaged with seals and labels intact.

D. Store under cover in dry, weathertight conditions. Place units on 4" high wood sills or store otherwise in a manner to prevent rust and damage.

E. Store products in a location protected from the weather and construction operations.

F. Inspect the products for damage. Minor damages may be repaired provided the finish items are equal, in all respects, to new work, and acceptable to the Owner’s representative; otherwise remove and replace the damaged items.

G. Protect adjacent work and materials from damage during installation of the bleachers.

Damaged work shall be repaired or replaced, as determined by the Owner's representative.

1.8 WARRANTY

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Special Warranty:

1. Submit a written Warranty jointly signed by the Contractor, Installer and manufacturer, certifying that the products and installation is free of defective materials and workmanship, and agreeing to repair, replace, and / or restore defective materials and workmanship during the warranty period. "Defective" is hereby defined to include operation or control systems performance below the required minimums, excessive wear, unusual deterioration or aging of materials and finishes, unsafe conditions, need for excessive maintenance, abnormal noise or vibration, and similar unusual, unexpected and unsatisfactory conditions.

2. The elevator manufacturer has no responsibility for work done by others, or defects brought about by abuse, misuse, neglect or cause beyond the manufacturer's control.

3. Warranty Period: One (1) year from the date of final acceptance.

1.9 MAINTENANCE

A. Section 01780 - Closeout Submittals: Procedures for closeout submittals.

B. Regular Maintenance Service: Regular maintenance on the elevator shall be provided and paid for by the Contractor for a period of twelve (12) months after the date of final acceptance. The maintenance service shall include regular examinations of the installation by competent and trained personnel and shall include all necessary adjustments, greasing, oiling, equipment cleaning, and supplies and parts to keep the equipment in good operating condition.

PART 2 PRODUCTS

2.1 GENERAL REQUIREMENTS

A. The completed elevator installation shall conform to ANSI A17.1 and A17.2, the handicap requirements of ANSI A 117.1, and ADAAG. The installation, including equipment, materials, workmanship, design, and tests shall be in accordance with the standards, rules and specifications referenced.

B. All material and equipment shall be new.

C. The equipment shall be the product of a company regularly engaged in the manufacture of this type of equipment.

D. Working parts shall be accessible for inspection, servicing, and repair. Adequate means shall be provided for servicing all wearing parts that require lubrication.

E. Electrical materials shall meet, and bear evidence of meeting the requirements of Underwriter's Laboratories or Factory Mutual Systems.

2.2 MANUFACTURERS

A. Subject to compliance with project requirements, manufacturers offering products which may be incorporated into the work include the following:

1. Otis Elevator Company (United Technologies).

2. Montgomery Elevator Co.

3. Dover Elevator Co.

4. Shindler Elevator Corp.

5. Fujitec.

B. Section 01600 - Product Requirements: Product Options: Substitutions permitted.

2.3 ELEVATOR DESCRIPTION

A. Otis Elevator Co. components are referenced within this Section to establish quality and to identify components. Other manufacturer's acceptable system shall be equivalent.

B. General: Twin direct-acting hydraulic cylinder, holeless, Otis Model # LVM 2000L.

Type of Machine	Hydraulic with valves in tank, submerged pump and motor
Load (Capacity)	[2000 pounds]
Car Speed	[125] feet per minute
Operation	Simplex Collective
Control	Microprocessor
Rise	[12' - 0"]
Number of Stops & Openings	[Two (2) at front of hoistway]
Maintenance Period	12 months
Power Supply	[208] volts, 3 phase, 60 hertz
Lighting Supply	120 volts, 1 phase, 15 amp, 60 hertz
Inside Clear Car Dimension	[5' - 8" wide x 4' - 3" deep]
Inside Cab Height	[8']
Height Under Suspended Ceiling	[8' - 11-1/2"]
Type of Doors for Car and Hoistway Entrances	[Side Opening]
Hoistway Entrance and Car Opening Size	3' - 0" Wide x 7' - 0" High
Car Operating Panel	[One (1) at front]
Finishes	See 2.10, 2.11 and 2.12

C. Performance:

1. Speed: Full-load "UP" shall be not less than 90% of the rated speed. Full-load "DOWN" shall be not more than 125% of the rated speed. No-load "UP" or "DOWN" shall be within 5% of the rated speed.

2. Capacity: Safely lower, stop and hold 125% of the rated load.

3. Doors shall start to open while the elevator is leveling and shall be 75% open when the car is level with the landing. Leveling accuracy shall be 1/4" plus or minus under all load conditions and regardless of the direction of travel. There shall be no appreciable time lag between starting of the pump and upward movement of the elevator.

D. Welding: All welding shall conform with AWS D1.1.

E. Painting: Field painting shall conform to the requirements of Division 9 of these Specifications. Shop painting shall include one coat of primer applied by the manufacturer at the factory.

2.4 CAR OPERATION AND CONTROL

A. Emergency Stop Switch and Alarm Button: Provide an emergency stop switch and alarm button in the car operating panel. Operation of the stop switch shall interrupt the power supply and stop the elevator travel independently of the regular operating device. The emergency stop switch and emergency alarm button shall be connected to one alarm bell to serve as emergency signal. The alarm bell, including conduit and wiring, shall be located in the hoistway.

1. The alarm button shall be a double contact type. One contact shall operate an AC bell from the normal AC power supply. The other contact shall operate a different bell powered from the car emergency lighting power supply. Both bells shall be 6" in size. Bells and their locations shall conform to ANSI A117.1.

B. Top of Car Operating Device: Provide an operating device, mounted on or from the car crosshead, which will permit slow speed car operation for purposes of adjustment, maintenance and repair. The control shall consist of five buttons listed "UP", "DOWN", "SAFETY", "EMERGENCY STOP SWITCH" (red in color), and "INSPECTION SWITCH". The transfer switch shall be provided in the top-of-car operating device fixture which will disconnect the hoistway access switch or switches and render the top-of-car operating device operative. The device shall include an emergency stop switch but will not require additional means for operation of the power door operators or automatic car leveling devices. A safety shall be provided so that operation of "UP" and "DOWN" buttons will only occur when the safety button is held in. The device shall be mounted in a metal box and shall be rigidly secured in a position readily accessible to workmen on top of the car. Operating buttons and control handles shall be shrouded or otherwise protected in an approved manner to preclude movement.

C. Hoistway Access: Provide key-operated hoistway access switches which shall permit limited movement of the car at terminal floors, car door opening and car positioning. The switches shall be operative only when the inspection switch in the car operating panel is in the "INSPECTION" position. Automatic operation of the elevator, and car hoistway doors shall be inoperative when the hoistway access switch is in use. The switch shall be a cylinder type having at least five pins or discs and shall spring return to the "OFF" position. The key shall be different from all other building keys except the elevator inspection switch key.

D. Selective Collective Automatic Operation: Provision shall be made for operation "Without Attendant". Operation of the elevator shall be from push buttons at the landing and in the car. An “UP” and a “DOWN” button shall be provided at each intermediate landing and a single button at the terminal landings. Pressure on a car button or a landing button shall dispatch or call the car to the desired landing, provided the interlock circuits have been established.

1. If, while the car is making an upward trip, a lower landing button is pressed, it shall not interrupt completion of the upward trip. After the interlock circuits have been re-established, the car shall automatically reverse and respond to the lower landing call.

2. The elevator shall operate similarly for the downward direction of travel. A time limit shall be provided, arranged to hold the car at the landing where it has stopped for a predetermined period. After all car and landing calls have been answered, the car shall automatically park at the ground level landing until another call is made.

3. The landing button pressed at the same floor where the car is parked shall open the car and hoistway doors.

4. Operation of the "EMERGENCY STOP" switch shall not cancel the registered calls, and after the switch is again released, the car shall resume answering registered calls.

5. Door safety edge and safety light ray devices shall operate for any door opened.

2.5 ELEVATOR MACHINE

A. General: The elevator machine shall be an electric motor-driven hydraulic pump, with direct plunger. The elevator machine shall have a maximum acoustic output of 60 dbA within a range of 20 Hz to 20 KHz measured within the Machine Room. The tank and all machinery shall be properly balanced to eliminate vibration and shall be provided with restraining devices to prevent movement due to earthquakes. Machines and controller frames in the Machine Room shall be finished in accordance with the manufacturer's standard practice. All iron work, metal fittings, and other un-coated ferrous surfaces exposed in the hoistway, Machine Room and areas adjacent thereto shall be cleaned and painted with one coat of approved rust-inhibitive paint and one coat of black paint conforming to the requirements of Division 9 of these Specifications.

B. Power Unit: The power unit (oil pumping and control mechanism) shall include an oil-hydraulic pump, an electric motor, a drive assembly, an oil strainer in the suction line, a structural steel outer base with tank supports, an oil-tight drip pan, an inner base for mounting a motor pump assembly, all combined in a compact and neatly designed self-contained unit. The power unit shall be quiet in operation. Maximum acoustical output level shall not exceed 86 decibels within a frequency range of 20 to 10,000 Hertz, measured within the Machine Room.

The elevator power unit and piping shall be installed with vibration absorption mountings and connections to prevent the transfer of machine noise to the building structure.

1. Pump: Shall be specially designed and manufactured for oil-hydraulic elevator service. It shall be of the positive displacement screw type, inherently designed for smooth operation and steady discharge with minimum pulsations. Pump speed shall not exceed 3500 revolutions per minute. A screened inlet shall be provided at the suction end.

2. Motor: Shall be manufacturer’s standard alternating current, polyphase squirrel cage induction type, designed for oil-hydraulic elevator service. It shall have a duty rating to comply with the speed and load herein specified. The drive shall be multiple V-belts with sheaves. Drive belts shall be provided as a factory balanced set and shall be installed strictly in accordance with the manufacturer’s instructions. Provide guards for the belt drive.

3. Storage Tank: Shall be constructed of steel and shall be provided with a removable oil dip stick. The pump and submergible motor shall be mounted on a special reinforced isolation mount in the bottom of the tank. The control valve shall be mounted in the discharge line above the oil level and easily accessible

from the top of the tank.

4. An initial supply of oil sufficient for proper operation shall be provided.

C. Oil Control: Unit shall consist of an integrated unit valve, including an “up” valve, a “down” valve, “up and down” leveling valves, a check valve, a high pressure relief valve, a tank shut-off valve and a manually-operated lowering valve. Operation of the manual lowering valve shall not require removal of any covers or shrouds.

1. All adjustments shall be readily accessible and shall be made without removing the assembly from the oil line.

2. The oil reservoir shall be a reinforced tank with tank cover. A strainer that can be readily cleaned shall be provided to prevent foreign materials from the fill reservoir from entering the pump and control systems. The tank shall provide capacity for full plunger displacement plus 25%.

3. A blowout-proof muffler shall be provided in the oil line to damp pulsations from the pump.

4. Provide Schedule 80, minimum, grooved end piping conforming to ASTM A 53, and fittings conforming to MIL-P-10388, rated for use with the maximum fluid pressure proposed for the specific elevator design. Gasket materials shall be suitable for use in the fluids provided. Provide a dielectric union at each end of a pipe run: one in the Machine Room and one in the pit. Provide seismic supports for all piping.

5. Provide Schedule 80 piping from the hoistway to the most remote location of the pumping plant. Piping shall be exposed and installed with hangers and supports. Tap both ends of the run for pressure gauges and supply plugs.

6. No hoses or screwed or flanged fittings will be permitted. Tap pipe for pressure gauges near the pump and cylinder and provide plugs.

7. A low oil condition shall automatically cause the car to descend to the lowest landing, open the car door, and shut down the elevator operation except for door control circuits. An indicator on the Machine Room control panel shall indicate the cause of the shutdown. Service shall be restored by replenishing the oil and pushing a manual reset or by recycling the main disconnect switch.

8. Provide devices to maintain the oil temperature between 45E and 95E F, regardless of the ambient temperature.

D. Cylinder-Plunger Unit: The cylinder-plunger unit shall be designed and constructed in accordance with ANSI A117.1. It shall be of sufficient size to lift the gross load the height specified, at the rated speed specified, and shall be factory tested to insure adequate strength and freedom from leakage. The plunger finish shall be 16 micro inches or finer. Packing shall inhibit oil leakage. Provide a scavenger pump to return leakage oil in the system to the tank with copper tubing.

1. Plunger couplings, if used, shall be internal type, shop assembled. The diameter of the plunger shall not vary more than .01" throughout its length, including the coupling area. Protect the plunger during shipment and handling. If gouged or scored to the extent of damaging the packing, it shall be replaced.

2. Provide a drip ring on the cylinder to capture excess oil. Provide packing which

inhibits oil leakage.

3. The cylinder shall be seamless steel pipe or tubing of thickness to withstand the maximum pressure and shall be at least 1-1/2" (nominally) greater in diameter than the plunger to permit future sleeving if necessary. The bottom shall be dished and provided with a baffle. Wire brush or sandblast the inside. Provide packing gland, packing and drip ring.

E. Cylinder Protection: The cylinder shall be protected by first sandblasting the exterior in accordance with SSPC-SP5, removing all rust and foreign substances and then immediately applying a coating system consisting of three coats of epoxy polyamide conforming to MIL-P-244441. Each coat to provide a dry film thickness of 3 mils. The first coat shall conform to MIL-P-244441/1, formula 150, the second coat to MIL-P-244441/2, formula 151 and the third coat to MIL-P-244441/3, formula 156 to provide a total dry film thickness of 9 mils. Apply one wrapping of self-adhesive 20 mil thickness tape applied 1/3 lap to provide a total tape thickness of 60 mils. Apply a complete covering of 75 lb. Kraft paper overall.

F. Motors: Electric motors shall be continuous rated 208 volts, 3 phase, 60 hertz, with speed no greater than 1800 rpm, having 50 degree C rise; class "A" insulation.

2.6 CONTROL EQUIPMENT

A. Self-Leveling Feature: Provide each elevator with a two-way, self-leveling feature that will automatically bring the car floor to within 1/4" of level with the floor landing regardless of load, or direction of travel. The car shall level into the floor at all times, not overrun and level back. This self-leveling shall, within its zone, be entirely automatic and independent of the operating service, and shall be designed to prevent or correct overtravel as well as undertravel of the car with respect to the landing sill level and shall re-level the car in case the elevator leaves the floor due to defective hydraulic operation.

B. Hydraulic Control System: The hydraulic control system shall be compact design suitable for operation under the required pressure and shall be mounted in the storage tank. The control valve shall be a manifold type with up, down and check valve sections. A control section including solenoid valves will direct the main valve and control up and down starting, transition from full speed to leveling speed, up and down stops, pressure relief and manual lowering. Down speed and up and down leveling shall be controlled at the main valve sections. All of these functions shall be fully adjustable for maximum smoothness and to meet contract conditions.

1. The manual lowering feature shall permit lowering the elevator at a slow speed in the event of a power failure or for adjusting purposes.

C. Controller: The elevator motor controller shall be magnetic reduced voltage resistance start with overload relays for each phase, and reverse phase relay driving a pump supplying oil to the piston for the "UP" direction only. The controller shall provide the required electrical operation of the elevator control system. A panel integral with the pumping unit is preferred.

1. The controller shall be designed to control the sequential starting, stopping, and speed of the elevator, and to provide the operation specified herein.

2. A microprocessor-based controller shall be provided including the necessary starting switches, all relays, switches, solid state components and hardware required for operation, including the door operation described herein. A three phase overload device shall be provided to protect the motor against

overloading.

3. The controller shall contain electromagnetic contactors mounted on a panel designed for mounting on a substantial steel frame. The bottom edge of the controller panel shall clear the floor by at least 6".

4. All control equipment shall be enclosed in sheet metal cabinets with removable or hinged door(s) provided with ventilation louvers. The doors and covers shall not ploy open during an earthquake.

D. Stopping shall be accomplished by sequentially throttling and stopping the oil flow. Leveling shall be accomplished by restricting the oil flow, bypassing a measured quantity of oil. “DOWN” operation shall be accomplished by opening a “DOWN” valve and allowing oil to return to the storage tank.

E. Switch and Relay Contacts: Provide switch and relay contacts designed to prevent sticking due to fusing. Design the controller circuit to minimize arcing across contacts. Mount wiring on the rear of the panel, neatly formed, either vertical or horizontally, and cleated. Wiring in the panel shall have flame-resistant insulation. Field connections shall be made at clearly designated junction blocks or studs. (Printed circuit boards in lieu of relays are permitted.)

F. All control systems shall be pre-adjusted at the factory.

2.7 OPERATING PANELS AND SIGNAL FIXTURES

A. Panels: The face plates of all car operating panels and landing push buttons stations shall be designed for flush mounting, shall be of stainless steel, round edge design, and not less than 1/8" thick. The car operating panels and landing push buttons stations shall be installed at approved locations. Attach faceplates with spanner type security screws. Indicator lamps shall be rated for 5000 hours of operation. Digital indications are permitted.

B. Push Buttons: Push buttons in the car operating panels and push buttons stations shall have contacts and wearing parts of material sized to meet the requirements of elevator service. The buttons shall be so designed that a spring will take up the initial pressure from which contact is made and further pressing shall sear the button on or in the faceplate. Landing call buttons and designed car buttons shall also serve as registered call signal indicators, and shall have their function indelibly and legibly identified by legend or arrow. When a landing call button is pushed, the button shall illuminate to indicate that the call has been registered. The illumination shall be extinguished when the car has served the registered call. Car and hall buttons shall be tamperproof type.

1. A key lockout switch shall disable activating car floor buttons and hall buttons.

2. Key operated hoistway access switches shall be incorporated into the hall button faceplates at terminal floors.

C. Car Operating Panel: The car shall be equipped with one car operating panel containing all controls for the type of operation specified in the paragraph "Car Operation and Control". The panel shall meet the handicap requirements of ANSI A117.1 and ADAAG. The faceplate shall be one piece, containing, in addition to all necessary operating buttons, a locked service cabinet and a telephone cabinet. The top operating buttons, shall be not more than 48" inches above the finished floor, and the bottom button shall not be less than 35" above the car floor. All designations shall be engraved and backfilled. No attached signs may be used. The car panel shall contain the following

devices:

1. In the exposed section:

   a. Illuminated operating buttons identified to correspond to the landings served by the elevator car.

   b. Emergency STOP button; red with engraved legend.

   c. Door OPEN and CLOSE buttons.

   d. Door HOLD button.

   e. Engraved designations in letters 1/4" high:
   Car Number _____
   Capacity _____
   Number of Passengers _____
   "NO SMOKING" in 1" letters.

2. In the service cabinet:

   a. Key operated inspection switch which will transfer car control to the top-of-car inspection operating controls and prevent operation of the car from the in-car control panel.

   b. Key operated Independent Service switch, with "UP" and DOWN" operating buttons and jewels.

   c. Car light switches for light in the car.

   d. Fan switch; three speed.

   e. Light ray cutout switch.

   f. Buzzer.

D. Switches and Devices: Provide the elevator manufacturer's standard grade of switches and devices on the car operating panel. Each device and its operating positions shall be legibly and indelibly identified.

E. Car Position Indicator: A horizontal electrical position indicator shall be provided over the entrance inside the car. The faceplate shall be flush mounted and the indicator shall be arranged to show the floor position of the car in the hoistway and its direction of travel. As the car travels through the hoistway, its position shall be indicated by illumination of the numeral corresponding to the landing at which the car is stopped or is passing. Change of illumination shall be instantaneous and shall be accomplished approximately midway between floors.

   1. The indicator shall consist of a finished faceplate with plastic numerals and arrows not less than 1" in height, broached thru the plate. Behind each designation shall be a small shielded light bulb of sufficient intensity to permit easy reading of the indicator. The light for each indication shall be enclosed in a light-tight compartment and arranged to illuminate only one indicator.

F. Landing Position Indicator: A horizontal electric position and direction of travel indicator, similar to the car position indicator, shall be provided in the wall above the frame of the

elevator hoistway door on the hall side at all landings. (Digital indicators are permitted.)

G. Car Direction Indicator: Provide, in the car entrance column, a direction indicator consisting of 2" to 2-1/2", minimum, equilateral triangle arrows; white for up and red for down. (Digital indicators are permitted.) Include a single stroke gong. The appropriate arrow shall illuminate when the car stops at a landing and shall indicate the direction in which the car will travel next. The gong shall sound once if the car is to go up and twice if it is to go down next.

2.8 HOISTWAY AND CAR EQUIPMENT

A. Guide Rails and Fastenings: Guide rails for cars shall be accurately machined, standard "T" sections with tongue and groove joints. The rails shall be installed plumb within 1/8" of true vertical and fastened to brackets having a maximum spacing of 14 feet. All shimming required shall be done with metal, securely held in place. Splice plates shall be located so as not to interfere with supporting clamps and brackets. Each splice plate bolt shall be fitted with a split spring steel lock washer.

1. Brackets and other supports shall be fastened to the hoistway walls by bolting or welding. Guide rail supports shall be provided as required to prevent guide rail deflection and stresses exceeding the limits prescribed by ANSI A17.1. Fastenings shall be made to suit cast-in-place inserts or by means of anchor bolts of an approved type and size. The inserts and all information relative to their location and placement shall be furnished. Anchor bolts, when used in lieu of inserts, shall be of the self-drilling tubular, externally split steel expansion shell with single cone expander.

2. The anchor shall develop the strength of the bolt after installation. Anchors shall
. be flush-mounted. Guide rails shall be firmly bottomed in the pit floor. When the building is complete, the guide rails shall be checked for alignment and shall be clean, free of rust and any signs of abrasion prior to acceptance.

B. Buffers: Spring buffers shall be provided as required by ANSI A17.1. Permanently fasten a plate giving the stroke and load rating to each buffer. Buffer anchorage shall not puncture the pit waterproofing.

C. Pit Equipment: Provide a pit switch accessible from the bottom terminal opening or from the pit access opening, in the pit, arranged to interrupt the power supply to the elevator motor and stop the elevator, independently of the regular operating device, to permit safe access to the pit. The location of the pit switch and pit light switch shall be in the shaft near the pit access door. The light shall be located 6 feet above the pit floor and shall provide at least 5 foot-candles of light at the pit floor.

D. Ladders: Ladders shall be steel, fixed-rail type. Ladders and accessories shall be hot-dip galvanized after fabrication. Rungs shall be solid-section rods, fitted into punched holes in the rails, welded, and ground smooth. Splices and connections shall have a smooth transition with the original members without sharp projections or more extensive than required for joint strength. Rails shall be fitted with brackets at the spacing indicated for anchorage.

E. Automatic Terminal Stops: Upper and lower normal terminal stopping devices shall be provided in the hoistway, and shall be arranged to automatically stop the car from any speed attained in normal operation within the top and bottom overtravels, independently of the operating device. Final terminal stopping devices shall be provided for the elevator and shall be arranged to automatically stop the car within the top clearance

independently of the operation of the normal terminal stopping devices. The final terminal stopping device, when operated, shall prevent further normal operation.

F. Wiring: Provide wiring in the hoistway and Machine Room adequate for proper operation of the equipment. Wires for light, and signal circuits in the Machine Room and hoistway shall conform to the elevator traveling cable specified in the National Electric Code for the particular type of location.

1. Wires shall be copper. The minimum size of wires, exclusive of those which form an integral part of control devices, shall be No. 14 for lighting circuits and No. 18 for operating, control and signal circuits, except that for lighting wires in traveling cable, No. 18 wires may be used in parallel to provide a current capacity equivalent to not less than No. 14 size. In no case shall the maximum current carried exceed that specified by the National Electric Code for the wire size used. All wiring between the various items of elevator equipment and external wiring, and wiring methods shall conform to the National Electric Code.

2. Wiring shall be run in zinc-coated rigid steel conduit, intermediate electrical conduit, electrical metallic tubing, raceway, and fittings, except for traveling cables. Flexible conduit may be used for short connections not subject to moisture, oil or embedment in concrete, but such runs shall contain a green equipment grounding conductor. Connections to the controller shall be made in a manner to minimize transmission of vibration and noise to the building. Hoistway raceway may be in rigid steel wiring duct. Threadless fittings shall not be used with rigid galvanized steel conduit.

3. Electrical connections to machinery shall allow for one foot of lateral motion.

G. Provide a working light circuit and switch for lampholder outlets, including porcelain medium base lamp holders fitted with wire lamp guards on the car crosshead and under the car platform. In addition, a duplex receptacle shall be provided on top of the car. A separate car light switch in the car panel shall control the lamps and plug receptacle on the exterior of the car.

H. Traveling cables shall be designed for elevators in service in accordance with the National Electric Code, shall be sufficiently flexible to readily adapt to all changes in the position of the elevator car and hang straight without twist. The cables shall be capable of bending 360 degrees with an inside radius of one foot without any permanent set and without cracking of the outer covering. The open loop shall show no tendency to twist upon itself. Traveling cables shall have non-metallic fillers and shall be suspended by looping the cable around supports. Terminal boxes shall have approved connection strips for connecting conductors, devices for connecting conductors, approved strain devices for connecting supporting strands and relieving the conductors of the traveling cables shall not be less than two feet long, unless otherwise approved. The traveling cables and the corresponding groups of conductors connecting these cables to the control, signal and car conductors shall have not less than 2 spare conductors of the same size and type. Each traveling cable conductor shall have a distinctive color coded outer covering for identification. Terminal blocks shall have indelible identification numbers for each terminal connection. Provide shielded wires for telephone and intercom.

2.9 CAR AND HOISTWAY DOOR ACCESSORIES

A. Power Operators for Passenger Elevators: Horizontal sliding door operators shall be moderate speed electric operators designed to operate the car and hoistway doors simultaneously. The doors shall operate smoothly without vibration, slam or shock. The electrical operator shall open the car and the hoistway doors at the landing where the car

has stopped or is in the leveling zone and shall close the doors before the car can leave the landing as specified under, "Car Operation and Control". The door operator shall permit the doors to be opened readily by hand from within the car when the electric power fails or is interrupted. An automatic torsion spring closer shall be provided for each hoistway door. The door mechanism shall not create hoistway interference.

B. Hoistway Door Interlocks and Car Door Contact: Each hoistway entrance shall be equipped with an approved type interlock. An electrical interlocking device separate from the mechanical interlock will not be approved. The interlock shall prevent operation of the car until the hoistway doors are locked in the closed position and shall prevent opening the doors at any landing from the landing side except by special key, unless the car is at rest at that landing, or is in the leveling zone and stopping at the landing. Accidental ground in the electric interlocks shall be so located as to have a ready, unobstructed access for periodic maintenance inspection and repairs. The car doors shall be equipped with a contact which will prevent operation of the car unless the doors are closed.

1. Contacts shall not be accessible from the landing side when the doors are closed.

C. Safety Light Ray Devices: A solid state light ray device shall be provided projecting at least two rays at approved heights across the car entrance in the space between the car and the horizontal sliding hoistway doors. The interruption of either ray by a person or object shall prevent the doors from closing, and if the doors are in the process of closing, shall cause the doors to reopen. The doors shall close a short time after the light rays are re-established. The design of the device shall include means that will make it inoperative after a prolonged interruption of either ray beyond a predetermined interval, or the duration of operation of the device itself may be limited to that interval. In either case, at the end of the predetermined interval, the doors shall begin to close in the normal manner.

D. Safety Edge: The car door shall be provided with a protective device extending the full height of the door and projecting beyond the front edge of the door. The protective device shall retract to a position flush with the front edge of the door when the door is fully open. The device shall be so arranged that should it touch a person or obstruction in its path while the door is closing, it shall automatically cause the car and hoistway doors to return to the open position. The door shall remain open until the expiration of the time interval and then close automatically.

2.10 PASSENGER CAR FRAME, PLATFORM AND ENCLOSURE

A. Car Frame: Provide a car frame made of steel channels and angles securely riveted, welded, or bolted, and substantially reinforced and braced. The car frame shall be effectively sound isolated from the plunger.

B. Guide Shoes: Guide shoes shall be provided in adjustable mountings on each side of the car. They shall be rigidly secured in accurate alignment at the top and bottom of the car frame. Roller guide shoes shall run on dry un-lubricated guide rails.

1. Shoes shall be roller type with at least three 1/2” rollers, spring or rubber backed, with auxiliary restraints spanning the full rail tongue under the top shoe mounting to protect against dislocation by earthquakes.

2. Flexible type sliding guide shoes shall consist of a swivel type shoe assembled on a metal base in such a manner as to permit self-alignment. Each shoe shall be provided with approved renewable bibs, 6" minimum length. The car guide

shoes shall be provided with spring takeup for side play between guide rails. Renewable wearing gibs shall be fabricated from an approved durable plastic compound material having a low coefficient of friction and long wearing qualities. The gibs shall be the type requiring minimum rail lubrication. Before the shoes are set, the car shall be balanced and the shoes must be doweled immediately after setting.

C. Platform: Provide a platform consisting of rigid structural steel members reinforced with intermediate steel stringers and designed for concentrated and eccentric type loading. The floor shall be double thick 3/4" exterior grade plywood. The under side of the platform shall be covered with sheet steel not less than 0.0179“ thick with exposed edges and joints folded. The platform shall be equipped with a fluted metal threshold plate of approved finish with grooves for door guides for sliding doors. The platform on the car shall be provided on the entrance side with a metal fascia of not less than 10 gauge steel extending beyond the underside of the platform to act as a toe guard for a vertical distance equal to, at least, the length of the leveling zone plus 3", with the lower portion bent back at least 60 degrees but not more than 75 degrees.

D. Cars: The entrance columns, shall be of stainless steel, Type 302 or 304, annealed, ground and number 4 polish finish, containing a maximum of 0.15 percent carbon and shall be not less than 0.0747" in thickness. Adjoining members of the soffit, grille, and canopy shall be welded together to form one-piece construction. The ceiling shall be reinforced to withstand the weight of 300 pounds on any square area 2 feet on a side.

1. Wainscoting shall be welded securely so as to form one panel from the top of the base to the underside of the soffit. Adequate reinforcement, secured by welding, shall be provided at all cutouts. The base shall be 5" high stainless steel with concealed vents. Vertical corners and the base shall be coved to not less than 1/2” radius. A solid, single bar type handrail of approved design shall be provided around the closed sides of the car about 32" above the floor. Interior surfaces shall be given a rust inhibitive paint adhering shop treatment prior to application of the finish. The interiors, except corrosion resisting steel, bronze, or aluminum, shall be finished in plastic laminate having a rated flame spread not exceeding 25 when tested in accordance with ASTM E 84.

2. Doors shall be provided for entrance to the car. The width and height of the opening shall be not less than that provided by the hoistway doors. The car door shall be the same type as the hoistway door and shall be equipped with a safety edge on each single slide, car side supported at the top with heavy-duty hangers, with not less than two 2" ball bearing sheaves for each hanger. Hangers shall be designed for as near noiseless operation as possible. The bottom of the door shall be guided by two (2) non-metallic gibs on each door panel. Gibs shall be replaceable without removing the door from the hanger rail.

3. Passenger car lighting shall be fluorescent type having bare F40T8 lamp fixtures with electronic ballasts, fitted with safety lamp guard clamps mounted above a suspended ceiling of lay-in translucent acrylic panels. Fixture placement shall provide a uniform illumination of at least 10 foot candles at the car floor.

4. A certificate frame shall be provided and mounted in the car in an approved location.

E. Passenger Car Emergency Lighting: Passenger car emergency lighting shall be provided by a power package containing a rechargeable battery and a battery charger. In the event of a power failure, power shall be immediately supplied to enough fixtures provided

with power packages to provide 0.2 foot-candles of illumination at the car floor for 4 hours. Provide each fixture, so equipped, with an un-switched 120 volt AC circuit. In addition, the power unit shall have the capacity to operate an alarm bell for 1 hour.

F. Provide a motor-driven ventilation fan located on the top of the cab, above a neat appearing grille and inlet vent slots in the wainscot more than 12" above the base. The fan shall have a capacity of not less than 400 cubic feet per minute. A switch shall be provided on the air panel to control the fan.

G. Pads and Hooks: Stainless steel pad hooks shall be provided in the car and shall be placed above the suspended ceiling line. Provide one complete set of protective pads.

H. Emergency Exit: Provide an emergency exit in the top of each car. The exit shall be hinged, unobstructed when open, shall have a mechanical stop rather than chain stop, and shall be arranged to open only from outside of the car without the use of tools. The exit shall be equipped with a non-self-resetting contact which shall prevent operation of the car unless the exit panel is fully closed.

I. Telephone: Provide a telephone recess with a hinged door in the car panel at an approved location suitable for use by the handicapped. The recess shall be equipped with an outlet box assembly, approved by the local telephone authorities for installation in elevators. The telephone recess door shall be equipped with an approved type latch and concealed hinges, and shall be designed to swing open not less than 90 degrees. A clear cast or etched inscription reading "Telephone" shall be provided on the frame or door of the telephone recess. Coordinate the telephone equipment with the telephone company. Install only at the time of acceptance.

2.11 PASSENGER CAR HOISTWAY DOORS AND ENTRANCES

A. General: Provide door and entrance assembly for horizontal sliding doors at each hoistway entrance.

1. Hoistway doors shall meet the requirements of ASTM E 176 for a 1-1/2 hour rating. All work shall be set from the center line of the aligned car guide rails and shall be in perfect alignment with the elevator car opening and car platform. Before the parts are assembled all steel surfaces shall be thoroughly cleaned of all rust, oil, grease, and dirt by benzine wash or otherwise, and shall then immediately be given a coat of approved rust-inhibitive paint. Surfaces which will be concealed shall be cleaned and coated prior to assembly or installation.

B. Assemblies for Horizontally Sliding Doors: Horizontal doors shall be power-operated and shall be single speed. Hoistway entrance door assemblies shall be complete including frames, doors, sills, fascia plates, hardware, struts, and accessories necessary for proper operation. Door casings shall have the floor number embossed in Braille symbols and raised Arabic numerals on each side of the doorway at a height of 42" above the finished floor.

1. Entrance frames shall be fabricated of corrosion-resisting sheet steel of not less than 0.747" nominal thickness. The component members constituting the unit frame shall include header, struts and frame of the door opening. The frame hoistway side shall be carried far enough back to present a neat appearance and shall be secured to the sill and header. Provide three suitable anchors on each side of the frame. Paint the inside of frames with 3/16" thick sound isolating material. Reinforce frames more than 8" wide. Grout frames after installation.

2. Both the car and hoistway doors shall open automatically while the car is in the

leveling zone and shall be 75% open when the car has completed the leveling operation. The doors shall close after a predetermined time unless a "DOOR CLOSE" button is pressed to immediately close the doors. Pressure on a landing button at the floor at which a car is standing with closed doors shall open the doors. The doors may be re-opened from the car by pressing the "DOOR OPEN" button.

3. Sills shall be narrow, one-piece extruded aluminum extending from strut to strut and securely fastened to the floor or sill supports. Include all necessary supports and brackets. Fastening screws shall not be visible. Grooves for door guides shall be not less than 1/2" wide. Grout sills solidly their full length after installation.

4. The hoistway entrance shall be of hollow metal, non-vision construction with flush surfaces on the car and landing sides. Doors shall be 0.598" nominal thickness sheet steel reinforced by formed vertical steel sections running the full height of the door and spaced not over 9" apart, designed to paste front and rear plates together securely. Each door panel shall be reinforced for the mounting of interlock and door operator accessories. The bottom of doors shall be guided by non-metallic gibs sliding in a machine grooves in the sill, with at least two gibs for each door panel. Hoistway doors shall be constructed in accordance with ANSI A17.1 and Underwriter's Laboratories requirements for 1-1/2 hour fire-rating and carry a U.L. label so indicating. Door panels shall be faced with 16 gauge stainless steel.

5. Hoistway doors shall be supported at the top with heavy-duty hangers equipped with 2-1/2", minimum, resilient tired ball bearing sheaves. Hangers shall operate quietly on the tracks. Each hanger shall be designed for an upward thrust against the underside of the track by a ball bearing roller on an adjustable eccentric stud. The tracks and track supports shall be fastened to the header plate. Provide a method for lubrication. Provide torsion spring type mechanical closing devices for hoistway doors.

2.12 INTERIOR CAB FINISHES

A. Provide the following finishes:

1. Floor Finish: The platform floor shall be finished with [1/8" thick vinyl tile securely adhered to the subfloor.] [1/4" thick quarry tile laid on 1/16" thick asphalt felt securely cemented to the subfloor.] [carpet glued down to the subfloor.] Tile shall match the Lobby floor.

2. Base: From manufacturer's standard options.

3. Wainscoat: From manufacturer's standard options.

4. Walls: From manufacturer's standard options.

5. Ceiling: From manufacturer's standard options.

6. Doors: From manufacturer's standard options.

7. Railing: From manufacturer's standard options.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01700 - Execution Requirements: Verification of existing conditions before starting the work.

B. Verification of Conditions: Verify that field measurements, surfaces, substrates and conditions are as required, and ready to receive the work.

1. Verify that the hoistway inside clear dimensions are within allowable tolerances, walls are plumb, clean and structurally adequate for proper anchoring of guiderails.

2. Verify that the pit depth and other dimensions are within allowable tolerances.

2. Verify that openings dimensions are within allowable tolerances, plumb, level, clean and provide for proper anchoring of door frames.

C. Report in writing, prevailing conditions that will adversely affect satisfactory execution of the work of this Section. Do not proceed with the work until the unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with the manufacturer's instructions and recommendations for the work required.

B. Welded Construction: Provide welded connections for the installation of elevator work where bolted connections are not required for subsequent removal or for normal operation, adjustment, inspection, maintenance and replacement of worn parts. Welding work shall be done by welders whom the Owner’s representative considers capable of and qualified to do such welding.

C. Coordination: Coordinate elevator work with the work of other trades for proper time and sequence to avoid construction delays. Use benchmarks, lines and levels designated by the Contractor to ensure dimensional coordination of the work.

D. Sound Isolation: Mount rotating and vibrating equipment and components on vibration-absorption mounts designed to effectively prevent transmission of vibrations to the structure and eliminate a source of structure-borne noise from the elevator system.

1. Install piping without routing underground where possible; where not possible cover underground piping with permanent protective wrapping before backfilling.

2. Lubricate operating parts of systems, including ropes if any, as recommended by the manufacturer.

E. Alignment: Coordinate the installation of hoistway entrances with installation of the elevator guide rails for accurate alignment of the entrance with the car. Where possible, delay final adjustment of sills and doors until the car is operable. Reduce clearances to a minimum, safe, workable dimension at each landing.

F. Leveling Tolerance: +1/4"(6 mm) for the elevator, regardless of load and direction of travel.

G. Grout sills with non-staining, non-shrink grout. Set units accurately aligned with and slightly above the finished floor at landings. Grouting shall be by the General Contractor.

3.3 FIELD TESTING AND INSPECTION

A. General: When the elevator work included in the Contract Specifications is fully complete, the Contractor shall notify the Owner's representative that the elevator is ready for final inspection and acceptance tests. The Contractor shall coordinate the final inspection and testing with the local government elevator inspector. The Contractor shall perform all tests and demonstrate the proper operation of all parts and provisions of the equipment and shall prove, to the satisfaction of the government inspector, that the elevator, as installed, complies with the requirements of this Contract and all applicable requirements of ANSI A17.1 and ADAAG. The inspection procedure and practice outlined in ANSI A17.2 shall form a part of the inspection.

B. Test Instruments: The Contractor shall furnish all test instruments, test weights, thermometers, gauges, and materials required for the final inspection to determine compliance of the work with the Contract requirements.

C. Final Inspection: The following tests shall be made at the time of final inspection:

1. The elevator shall be subject to test for a period of one hour continuous run, with the full specified rated load in the car. During the test run, the car shall be stopped at all floors in both directions of travel for a standing period of 10 seconds per floor.

2. The actual measured speed of the elevator car shall be determined in both directions of travel with both full-rated load in the car and with no-load in the car. The speed of the car in the "UP" direction with full-rated load shall be not less than 90% of the rated speed. The speed of the car in the "DOWN" direction with full- rated load shall not exceed 125% of the rated speed. Speed tests shall be made before the full-load run test.

3. Elevator car leveling devices shall be tested for the accuracy of landing at all floors with no-load in the car, and with full-load in the car, in both directions of travel. Accuracy of the floor landing shall be determined both before and after the full-load run test.

4. The complete wiring system of the elevator shall be free from short circuits and grounds; the insulation resistance of conductors shall be determined by the use of a "Megger". Conductors shall have an insulation resistance of not less than one megohm between each conductor and ground and between each conductor and all other conductors.

5. Operating pressure shall be checked at the pump and at the cylinder head for no-load and full-load. Check the pressure at which the relief valve operates.

6. Remote piping exceeding 15 feet in length shall be tested prior to final connection as follows:

a. Plug both ends and fill with fluid.

b. Install a pressure gauge at one end and apply a pressure of 400 psi at the other.

c. Allow to stand under pressure for 12 hours.

d. There shall be no loss of pressure.

D. Re-Inspection: If any equipment is found to be damaged, defective or if the performance does not conform to the requirements of these Specifications or the Safety Code, no certificate of approval shall be issued until the defects have been corrected. When the repairs or adjustments have been completed, the Owner's representative shall be notified and the elevator re-inspected. Any tests with unsatisfactory results shall be repeated, and no final approval will be issued until satisfactory compliance is assured. A rejected elevator may not be used prior to re-inspection and approval.

3.4 PROTECTION

A. At the time of Substantial Completion of the elevator work, or portion thereof, provide suitable protective coverings, barriers, devices, signs or such other methods or procedures to protect the work from damage and deterioration. Maintain the protective measures throughout the remainder of the construction period.

B. Provide similar protective measures for elevator units which will be placed into temporary service, including inspection and maintenance service during the period of temporary service.

3.5 INSTRUCTION AND MAINTENANCE

A. Instruct the Owner's personnel in the proper use, operation and daily maintenance of the elevators. Review emergency provisions, including emergency access and procedures to be followed at the time of failure in the operation and other building emergencies. Train the Owner's personnel in the normal procedures to follow in checking for causes of operational failures and malfunctions. Confer with the Owner on requirements for a complete elevator maintenance program.

1. Make a final check of each elevator operation with the Owner's personnel present, and just prior to the date of Substantial Completion. Determine that the control systems and operating devices are functioning properly.

B. Continuing Maintenance: The Installer shall provide, and the Contractor shall pay for, continuing maintenance for a period of one year, starting on the date of final acceptance by the Owner. The maintenance service shall include regular examinations of the installation by competent and trained personnel, and shall include all necessary adjustments, greasing, oiling, equipment cleaning and supplies and parts to keep the equipment in good operating condition.

SECTION 15050

BASIC MECHANICAL MATERIALS AND METHODS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following basic mechanical materials and methods to complement other Division 15 Sections.

1. Piping materials and installation instructions common to most piping systems.
2. Concrete base construction requirements.
3. Escutcheons.
4. Dielectric fittings.
5. Flexible connectors.
6. Mechanical sleeve seals.
7. Equipment nameplate data requirements.
8. Labeling and identifying mechanical systems and equipment is specified in Division 15 Section "Mechanical Identification."
9. Non-shrink grout for equipment installations.
10. Field-fabricated metal and wood equipment supports.
11. Installation requirements common to equipment specification sections.
12. Mechanical demolition.
13. Cutting and patching.
14. Touchup painting and finishing.

B. Pipe and pipe fitting materials are specified in Division 15 piping system Sections.

1.3 DEFINITIONS

A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe and duct shafts, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawl spaces, and tunnels.

B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.

C. Exposed, Exterior Installations: Exposed to view outdoors, or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.

D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in duct shafts.

E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants, but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

F. The following are industry abbreviations for plastic materials:

1. ABS: Acrylonitrile-butadiene-styrene plastic.

2. CPVC: Chlorinated polyvinyl chloride plastic.

3. NP: Nylon plastic.

4. PE: Polyethylene plastic.

5. PVC: Polyvinyl chloride plastic.

G. The following are industry abbreviations for rubber materials:

1. CR: Chlorosulfonated polyethylene synthetic rubber.

2. EPDM: Ethylene propylene diene terpolymer rubber.

1.4 SUBMITTALS

A. Product Data: For dielectric fittings, flexible connectors, mechanical sleeve seals, and identification materials and devices.

B. Shop Drawings: Detail fabrication and installation for metal and wood supports and anchorage for mechanical materials and equipment.

C. Coordination Drawings: For access panel and door locations.

D. Coordination Drawings: Detail major elements, components, and systems of mechanical equipment and materials in relationship with other systems, installations, and building components. Show space requirements for installation and access. Indicate if sequence and coordination of installations are important to efficient flow of the Work. Include the following:

1. Planned piping layout, including valve and specialty locations and valve-stem movement.

2. Clearances for installing and maintaining insulation.

3. Clearances for servicing and maintaining equipment, accessories, and specialties, including space for disassembly required for periodic maintenance.

4. Equipment and accessory service connections and support details.

5. Exterior wall and foundation penetrations.

6. Fire-rated wall and floor penetrations.

7. Sizes and location of required concrete pads and bases.

8. Scheduling, sequencing, movement, and positioning of large equipment into building during construction.

9. Floor plans, elevations, and details to indicate penetrations in floors, walls, and ceilings and their relationship to other penetrations and installations.

10. Reflected ceiling plans to coordinate and integrate installation of air outlets and inlets, light fixtures, communication system components, sprinklers, and other ceiling-mounted items.

E. Samples: Of color, lettering style, and other graphic representation required for each identification material and device.

1.5 QUALITY ASSURANCE

A. Comply with ASME A13.1 for lettering size, length of color field, colors, and viewing angles of identification devices.

B. Equipment Selection: Equipment of higher electrical characteristics, physical dimensions, capacities, and ratings may be furnished provided such proposed equipment is approved in writing and connecting mechanical and electrical services, circuit breakers, conduit, motors, bases, and equipment spaces are increased. Additional costs shall be approved in advance by appropriate Contract Modification for these increases. If minimum energy ratings or efficiencies of equipment are specified, equipment must meet design and commissioning requirements.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver pipes and tubes with factory-applied end caps. Maintain end caps through shipping, storage, and handling to prevent pipe end damage and prevent entrance of dirt, debris, and moisture.

B. Protect stored pipes and tubes from moisture and dirt. Elevate above grade. Do not exceed structural capacity of floor, if stored inside.

C. Protect flanges, fittings, and piping specialties from moisture and dirt.

D. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.7 SEQUENCING AND SCHEDULING

A. Coordinate mechanical equipment installation with other building components.

B. Arrange for pipe spaces, chases, slots, and openings in building structure during progress of construction to allow for mechanical installations.

C. Coordinate installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components, as they are constructed.

D. Sequence, coordinate, and integrate installations of mechanical materials and equipment for efficient flow of the Work. Coordinate installation of large equipment requiring positioning be-fore closing in building.

E. Coordinate connection of mechanical systems with exterior underground and overhead utilities and services. Comply with requirements of governing regulations, franchised service companies, and controlling agencies.

F. Coordinate requirements for access panels and doors if mechanical items requiring access are concealed behind finished surfaces. Access panels and doors are specified in Division 8 Section "Access Doors."

G. Coordinate installation of identifying devices after completing covering and painting, if devices are applied to surfaces. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 PRODUCTS

2.1 PIPE AND PIPE FITTINGS

A. Refer to individual Division 15 piping Sections for pipe and fitting materials and joining methods.

B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.2 JOINING MATERIALS

A. Refer to individual Division 15 piping Sections for special joining materials not listed below.

B. Pipe-Flange Gasket Materials: Suitable for chemical and thermal conditions of piping system contents.

1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch (3.2-mm) maximum thickness, unless thickness or specific material is indicated.

    a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.

    b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.

2. AWWA C110, rubber, flat face, 1/8 inch (3.2 mm) thick, unless otherwise indicated; and full-face or ring type, unless otherwise indicated.

C. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.

D. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.

E. Solder Filler Metals: ASTM B 32.

1. Alloy Sn95 or Alloy Sn94: Approximately 95 percent tin and 5 percent silver, with 0.10 percent lead content.

2. Alloy E: Approximately 95 percent tin and 5 percent copper, with 0.10 percent maximum lead content.

3. Alloy HA: Tin-antimony-silver-copper zinc, with 0.10 percent maximum lead content.

4. Alloy HB: Tin-antimony-silver-copper nickel, with 0.10 percent maximum lead content.

5. Alloy Sb5: 95 percent tin and 5 percent antimony, with 0.20 percent maximum lead content.

F. Brazing Filler Metals: AWS A5.8.

1. BCuP Series: Copper-phosphorus alloys.

2. BAg1: Silver alloy.

G. Welding Filler Metals: Comply with AWS D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

H. Solvent Cements: Manufacturer's standard solvent cements for the following:

1. ABS Piping: ASTM D 2235.

2. CPVC Piping: ASTM F 493.

3. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.

4. PVC to ABS Piping Transition: ASTM D 3138.

I. Plastic Pipe Seals: ASTM F 477, elastomeric gasket.

J. Flanged, Ductile-Iron Pipe Gasket, Bolts, and Nuts: AWWA C110, rubber gasket, carbon-steel bolts and nuts.

K. Couplings: Iron-body sleeve assembly, fabricated to match OD of plain-end, pressure pipes.

1. Sleeve: ASTM A 126, Class B, gray iron.

2. Followers: ASTM A 47 (ASTM A 47M) malleable iron or ASTM A 536 ductile iron.

3. Gaskets: Rubber.

4. Bolts and Nuts: AWWA C111.

5. Finish: Enamel paint.

2.3 DIELECTRIC FITTINGS

A. General: Assembly or fitting with insulating material isolating joined dissimilar metals, to pre-vent galvanic action and stop corrosion.

B. Description: Combination of copper alloy and ferrous; threaded, solder, plain, and weld-neck end types and matching piping system materials.

C. Insulating Material: Suitable for system fluid, pressure, and temperature.

D. Dielectric Unions: Factory-fabricated, union assembly, for 250-psig minimum working pressure at 180 deg. F (82 deg. C).

E. Dielectric Flanges: Factory-fabricated, companion-flange assembly, for 150- or 300-psig minimum working pressure as required to suit system pressures.

F. Dielectric-Flange Insulation Kits: Field-assembled, companion-flange assembly, full-face or ring type. Components include neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.

1. Provide separate companion flanges and steel bolts and nuts for 150- or 300-psig minimum working pressure as required to suit system pressures.

G. Dielectric Couplings: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining; threaded ends; and 300-psig minimum working pressure at 225 deg. F (107 deg. C).

H. Dielectric Nipples: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig minimum working pressure at 225 deg. F (107 deg. C).

2.4 FLEXIBLE CONNECTORS

A. General: Fabricated from materials suitable for system fluid and that will provide flexible pipe connections. Include 125-psig minimum working-pressure rating, unless higher working pressure is indicated, and ends according to the following:

1. 2-Inch NPS (DN50) and Smaller: Threaded.

2. 2-1/2-Inch NPS (DN65) and Larger: Flanged.

3. Option for 2-1/2-Inch NPS (DN65) and Larger: Grooved for use with keyed couplings.

B. Bronze-Hose, Flexible Connectors: Corrugated, bronze, inner tubing covered with bronze wire braid. Include copper-tube ends or bronze flanged ends, braze welded to hose.

C. Stainless-Steel-Hose/Steel Pipe, Flexible Connectors: Corrugated, stainless-steel, inner tubing covered with stainless-steel wire braid. Include steel nipples or flanges, welded to hose.

D. Stainless-Steel-Hose/Stainless-Steel Pipe, Flexible Connectors: Corrugated, stainless-steel, inner tubing covered with stainless-steel wire braid. Include stainless-steel nipples or flanges, welded to hose.

E. Rubber, Flexible Connectors: CR or EPDM elastomer rubber construction, with multiple plies of NP fabric, molded and cured in hydraulic presses. Include 125-psig minimum working-pressure rating at 220 deg. F (104 deg. C). Units may be straight or elbow type, unless otherwise indicated.

2.5 MECHANICAL SLEEVE SEALS

A. Description: Modular design, with interlocking rubber links shaped to continuously fill annular space between pipe and sleeve. Include connecting bolts and pressure plates.

2.6 PIPING SPECIALTIES

A. Sleeves: The following materials are for wall, floor, slab, and roof penetrations:

1. Steel Sheet Metal: 0.0239-inch (0.6-mm) minimum thickness, galvanized, round tube closed with welded longitudinal joint.

2. Steel Pipe: ASTM A 53, Type E, Grade A, Schedule 40, galvanized, plain ends.

3. Cast Iron: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral water-stop, unless otherwise indicated.

4. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.

   a. Underdeck Clamp: Clamping ring with set screws.

5. PVC: Manufactured, permanent, with nailing flange for attaching to wooden forms.

6. PVC Pipe: ASTM D 1785, Schedule 40.

7. PE: Manufactured, reusable, tapered, cup shaped, smooth outer surface, with nailing flange for attaching to wooden forms.

B. Escutcheons: Manufactured wall, ceiling, and floor plates; deep-pattern type if required to conceal protruding fittings and sleeves.

1. ID: Closely fit around pipe, tube, and insulation of insulated piping.

2. OD: Completely cover opening.

3. Cast Brass: One piece, with set screw.

   a. Finish: Rough brass.

   b. Finish: Polished chrome-plate.

4. Cast Brass: Split casting, with concealed hinge and set screw.

   a. Finish: Rough brass.

   b. Finish: Polished chrome-plate.

5. Stamped Steel: One piece, with set screw and chrome-plated finish.

6. Stamped Steel: One piece, with spring clips and chrome-plated finish.

7. Stamped Steel: Split plate, with concealed hinge, set screw, and chrome-plated finish.

8. Stamped Steel: Split plate, with concealed hinge, spring clips, and chrome-plated finish.

9. Stamped Steel: Split plate, with exposed-rivet hinge, set screw, and chrome-plated finish.

10. Stamped Steel: Split plate, with exposed-rivet hinge, spring clips, and chrome-plated finish.

11. Cast-Iron Floor Plate: One-piece casting.

2.7 IDENTIFYING DEVICES AND LABELS

A. General: Manufacturer's standard products of categories and types required for each application as referenced in other Division 15 Sections. If more than one type is specified for application, selection is Installer's option, but provide one selection for each product category.

B. Equipment Nameplates: Metal nameplate with operational data engraved or stamped; permanently fastened to equipment.

1. Data: Manufacturer, product name, model number, serial number, capacity, operating and power characteristics, labels of tested compliances, and similar essential data.

2. Location: Accessible and visible location.

C. Stencils: Standard stencils, prepared for required applications with letter sizes complying with recommendations of ASME A13.1 for piping and similar applications, but not less than 1-1/4-inch- (30-mm-) high letters for ductwork and not less than 3/4-inch- (19-mm-) high letters for access door signs and similar operational instructions.

1. Material: Fiberboard.

2. Material: Brass.

3. Stencil Paint: Standard exterior-type stenciling enamel; black, unless otherwise indicated; either brushing grade or pressurized spray-can form and grade.

4. Identification Paint: Standard identification enamel of colors indicated or, if not otherwise indicated for piping systems, comply with ASME A13.1 for colors.

D. Snap-on Plastic Pipe Markers: Manufacturer's standard preprinted, semi-rigid, snap on, color-coded, complying with ASME A13.1.

E. Pressure-Sensitive Pipe Markers: Manufacturer's standard preprinted, permanent adhesive, color-coded, pressure-sensitive vinyl, complying with ASME A13.1.

F. Plastic Duct Markers: Manufacturer's standard color-coded, laminated plastic. Comply with the following color code:

1. Green: Cold air.

2. Yellow: Hot air.

3. Yellow/Green or Green: Supply air.

4. Blue: Exhaust, outside, return, and mixed air.

5. For hazardous exhausts, use colors and designs recommended by ASME A13.1.

6. Nomenclature: Include the following:

   a. Direction of airflow.

   b. Duct service.

   c. Duct origin.

   d. Duct destination.

   e. Design cubic feet per meter (liters per second).

G. Engraved Plastic-Laminate Signs: ASTM D 709, Type I, cellulose, paper-base, phenolic-resin-laminate engraving stock; Grade ES-2, black surface, black phenolic core, with white melamine sub-core, unless otherwise indicated.

1. Fabricate in sizes required for message.

2. Engraved with engraver's standard letter style, of sizes and with wording to match equipment identification.

3. Punch for mechanical fastening.

4. Thickness: 1/16 inch (1.6 mm), unless otherwise indicated.

5. Thickness: 1/8 inch (3.2 mm), unless otherwise indicated.

6. Thickness: 1/16 inch (1.6 mm), for units up to 20 sq. in. (130 sq. cm) or 8 inches (200 mm) long; 1/8 inch (3.2 mm) for larger units.

7. Fasteners: Self-tapping stainless-steel screws or contact-type permanent adhesive.

H. Plastic Equipment Markers: Color-coded, laminated plastic. Comply with the following color code:

1. Green: Cooling equipment and components.

2. Yellow: Heating equipment and components.

3. Yellow/Green: Combination cooling and heating equipment and components.

4. Brown: Energy reclamation equipment and components.

5. Blue: Equipment and components that do not meet any criteria above.

6. For hazardous equipment, use colors and designs recommended by ASME A13.1.

7. Nomenclature: Include the following, matching terminology on schedules as closely as possible:

   a. Name and plan number.

   b. Equipment service.

   c. Design capacity.

d. Other design parameters such as pressure drop, entering and leaving conditions, and rpm.

8. Size: Approximate 2-1/2 by 4 inches (65 by 100 mm) for control devices, dampers, and valves; and 4-1/2 by 6 inches (115 by 150 mm) for equipment.

I. Lettering and Graphics: Coordinate names, abbreviations, and other designations used in mechanical identification, with corresponding designations indicated. Use numbers, lettering, and wording indicated for proper identification and operation/maintenance of mechanical systems and equipment.

1. Multiple Systems: If multiple systems of same generic name are indicated, provide identification that indicates individual system number and service such as "Boiler No. 3," "Air Supply No. 1H," or "Standpipe F12."

2.8 GROUT

A. Non-shrink, Nonmetallic Grout: ASTM C 1107, Grade B.

1. Characteristics: Post-hardening, volume-adjusting, dry, hydraulic-cement grout, non-staining, noncorrosive, nongaseous, and recommended for interior and exterior applications.

2. Design Mix: 5000-psig (34.5-MPa), 28-day compressive strength.

3. Packaging: Premixed and factory packaged.

PART 3 EXECUTION

3.1 PIPING SYSTEMS - COMMON REQUIREMENTS

A. General: Install piping as described below, unless piping Sections specify otherwise. Individual Division 15 piping Sections specify unique piping installation requirements.

B. General Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

C. Install piping at indicated slope.

D. Install components with pressure rating equal to or greater than system operating pressure.

E. Install piping in concealed interior and exterior locations, except in equipment rooms and service areas.

F. Install piping free of sags and bends.

G. Install exposed interior and exterior piping at right angles or parallel to building walls. Diagonal runs are prohibited, unless otherwise indicated.

H. Install piping tight to slabs, beams, joists, columns, walls, and other building elements. Allow sufficient space above removable ceiling panels to allow for ceiling panel removal.

I. Install piping to allow application of insulation plus 1-inch (25-mm) clearance around insulation.

J. Locate groups of pipes parallel to each other, spaced to permit valve servicing.

K. Install fittings for changes in direction and branch connections.

L. Install couplings according to manufacturer's written instructions.

M. Install pipe escutcheons for pipe penetrations of concrete and masonry walls, wall board partitions, and suspended ceilings according to the following:

1. Chrome-Plated Piping: Cast brass, one piece, with set screw, and polished chrome-plated finish. Use split-casting escutcheons if required, for existing piping.

2. Uninsulated Piping Wall Escutcheons: Cast brass or stamped steel, with set screw.

3. Uninsulated Piping Floor Plates in Utility Areas: Cast-iron floor plates.

4. Insulated Piping: Cast brass or stamped steel; with concealed hinge, spring clips, and chrome-plated finish.

5. Piping in Utility Areas: Cast brass or stamped steel, with set screw or spring clips.

N. Sleeves are not required for core drilled holes.

O. Permanent sleeves are not required for holes formed by PE removable sleeves.

P. Install sleeves for pipes passing through concrete and masonry walls, and concrete floor and roof slabs.

Q. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, and concrete floor and roof slabs.

1. Cut sleeves to length for mounting flush with both surfaces.

a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches (50 mm) above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.

2. Build sleeves into new walls and slabs as work progresses.

3. Install sleeves large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:

a. PVC Pipe Sleeves: For pipes smaller than 6-inch NPS (DN150).

b. Steel Pipe Sleeves: For pipes smaller than 6-inch NPS (DN150).

c. Steel, Sheet-Metal Sleeves: For pipes 6-inch NPS (DN150) and larger, penetrating gypsum-board partitions.

d. Stack Sleeve Fittings: For pipes penetrating floors with membrane waterproofing. Secure flashing between clamping flanges. Install section

of cast-iron soil pipe to extend sleeve to 2 inches (50 mm) above finished floor level. Refer to Division 7 Section "Sheet Metal Flashing and Trim" for flashing.

1) Seal space outside of sleeve fittings with non-shrink, nonmetallic grout.

4. Except for underground wall penetrations, seal annular space between sleeve and pipe or pipe insulation, using elastomeric joint sealants. Refer to Division 7 Section "Joint Sealants" for materials.

5. Use Type S, Grade NS, Class 25, Use O, neutral-curing silicone sealant, unless otherwise indicated.

R. Aboveground, Exterior-Wall, Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Size sleeve for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.

1. Install steel pipe for sleeves smaller than 6 inches (150 mm) in diameter.

2. Install cast-iron "wall pipes" for sleeves 6 inches (150 mm) in diameter and larger.

3. Assemble and install mechanical sleeve seals according to manufacturer's written instructions. Tighten bolts that cause rubber sealing elements to expand and make water-tight seal.

S. Underground, Exterior-Wall, Pipe Penetrations: Install cast-iron "wall pipes" for sleeves. Seal pipe penetrations using mechanical sleeve seals. Size sleeve for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.

1. Assemble and install mechanical sleeve seals according to manufacturer's written instructions. Tighten bolts that cause rubber sealing elements to expand and make water-tight seal.

T. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with fire-stopping materials. Refer to Division 7 Section "Fire-stopping" for materials.

U. Verify final equipment locations for roughing-in.

V. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.

W. Piping Joint Construction: Join pipe and fittings as follows and as specifically required in individual piping specification Sections:

1. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

2. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.

3. Soldered Joints: Construct joints according to AWS's "Soldering Manual," Chapter "The Soldering of Pipe and Tube"; or CDA's "Copper Tube Handbook."

4. Soldered Joints: Construct joints according to AWS's "Soldering Manual," Chapter "The Soldering of Pipe and Tube."

5. Soldered Joints: Construct joints according to CDA's "Copper Tube Handbook."

6. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," Chapter "Pipe and Tube."

7. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

    a. Note internal length of threads in fittings or valve ends, and proximity of internal seat or wall, to determine how far pipe should be threaded into joint.

    b. Apply appropriate tape or thread compound to external pipe threads, unless dry seal threading is specified.

    c. Align threads at point of assembly.

    d. Tighten joint with wrench. Apply wrench to valve end into which pipe is being threaded.

    e. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

8. Welded Joints: Construct joints according to AWS D10.12, "Recommended Practices and Procedures for Welding Low Carbon Steel Pipe," using qualified processes and welding operators according to "Quality Assurance" Article.

9. Flanged Joints: Align flange surfaces parallel. Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Assemble joints by sequencing bolt tightening to make initial contact of flanges and gaskets as flat and parallel as possible. Use suitable lubricants on bolt threads. Tighten bolts gradually and uniformly using torque wrench.

10. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces by wiping with clean cloth or paper towels. Join pipe and fittings according to the following:

    a. Comply with ASTM F 402 for safe-handling practice of cleaners, primers, and sol-vent cements.

    b. ABS Piping: ASTM D 2235 and ASTM D 2661.

    c. CPVC Piping: ASTM D 2846 and ASTM F 493.

    d. PVC Pressure Piping: ASTM D 2672.

    e. PVC Non-pressure Piping: ASTM D 2855.

    f. PVC to ABS Non-pressure Transition Fittings: Procedure and solvent cement according to ASTM D 3138.

X. Piping Connections: Make connections according to the following, unless otherwise indicated:

1. Install unions, in piping 2-inch NPS (DN50) and smaller, adjacent to each valve and at final connection to each piece of equipment with 2-inch NPS (DN50) or smaller threaded pipe connection.

2. Install flanges, in piping 2-1/2-inch NPS (DN65) and larger, adjacent to flanged valves and at final connection to each piece of equipment with flanged pipe connection.

3. Dry Piping Systems: Install dielectric unions and flanges to connect piping materials of dissimilar metals.

4. Wet Piping Systems: Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

3.2 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

A. Install equipment to provide maximum possible headroom, if mounting heights are not indicated.

B. Install equipment according to approved submittal data. Portions of the Work are shown only in diagrammatic form. Refer conflicts to Architect.

C. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.

D. Install mechanical equipment to facilitate service, maintenance, and repair or replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.

E. Install equipment giving right of way to piping installed at required slope.

F. Install flexible connectors on equipment side of shutoff valves, horizontally and parallel to equipment shafts if possible.

3.3 LABELING AND IDENTIFYING

A. Piping Systems: Install pipe markers on each system. Include arrows showing normal direction of flow.

1. Stenciled Markers: According to ASME A13.1.

2. Plastic markers, with application systems. Install on insulation segment if required for hot, uninsulated piping.

3. Locate pipe markers as follows if piping is exposed in finished spaces, machine rooms, and accessible maintenance spaces, such as shafts, tunnels, plenums, and exterior non-concealed locations:

a. Near each valve and control device.

b. Near each branch, excluding short takeoffs for fixtures and terminal units. Mark each pipe at branch, if flow pattern is not obvious.

c. Near locations if pipes pass through walls, floors, ceilings, or enter non-accessible enclosures.

d. At access doors, manholes, and similar access points that permit view of concealed piping.

e. Near major equipment items and other points of origination and termination.

f. Spaced at maximum of 50-foot (15-m) intervals along each run. Reduce intervals to 25 feet (7.5 m) in congested areas of piping and equipment.

g. On piping above removable acoustical ceilings, except omit intermediately spaced markers.

B. Equipment: Install engraved plastic-laminate sign or equipment marker on or near each major item of mechanical equipment.

1. Lettering Size: Minimum 1/4-inch- (6.4-mm-) high lettering for name of unit if viewing distance is less than 24 inches (610 mm), 1/2-inch- (12.7-mm-) high lettering for distances up to 72 inches (1800 mm), and proportionately larger lettering for greater distances. Pro-vide secondary lettering two-thirds to three-fourths of size of principal lettering.

2. Text of Signs: Provide name of identified unit. Include text to distinguish between multiple units, inform user of operational requirements, indicate safety and emergency pre-cautions, and warn of hazards and improper operations.

C. Duct Systems: Identify air supply, return, exhaust, intake, and relief ducts with duct markers; or provide stenciled signs and arrows, showing duct system service and direction of flow.

1. Location: In each space, if ducts are exposed or concealed by removable ceiling system, locate signs near points where ducts enter into space and at maximum intervals of 50 feet (15 m).

D. Adjusting: Relocate identifying devices as necessary for unobstructed view in finished construction.

3.4 PAINTING AND FINISHING

A. Refer to Division 9 Section "Painting" for paint materials, surface preparation, and application of paint.

B. Apply paint to exposed piping according to the following, unless otherwise indicated:

1. Interior, Ferrous Piping: Use semi-gloss, acrylic-enamel finish. Include finish coat over enamel undercoat and primer.

2. Interior, Galvanized-Steel Piping: Use semi-gloss, acrylic-enamel finish. Include two finish coats over galvanized metal primer.

3. Interior, Ferrous Supports: Use semi-gloss, acrylic-enamel finish. Include finish coat over enamel undercoat and primer.

4. Exterior, Ferrous Piping: Use semi-gloss, acrylic-enamel finish. Include two finish coats over rust-inhibitive metal primer.

5. Exterior, Galvanized-Steel Piping: Use semi-gloss, acrylic-enamel finish. Include two finish coats over galvanized metal primer.

6. Exterior, Ferrous Supports: Use semi-gloss, acrylic-enamel finish. Include two finish coats over rust-inhibitive metal primer.

C. Do not paint piping specialties with factory-applied finish.

D. Damage and Touchup: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

3.5 CONCRETE BASES

A. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit. Follow supported equipment manufacturer's setting templates for anchor bolt and tie locations. Use 3000-psig (20.7-MPa), 28-day compressive-strength concrete and reinforcement as specified in Division 3 Section "Cast-in-Place Concrete."

3.6 ERECTION OF METAL SUPPORTS AND ANCHORAGE

A. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor mechanical materials and equipment.

B. Field Welding: Comply with AWS D1.1, "Structural Welding Code--Steel."

3.7 ERECTION OF WOOD SUPPORTS AND ANCHORAGE

A. Cut, fit, and place wood grounds, nailers, blocking, and anchorage to support and anchor mechanical materials and equipment.

B. Select fastener sizes that will not penetrate members if opposite side will be exposed to view or will receive finish materials. Tighten connections between members. Install fasteners with-out splitting wood members.

C. Attach to substrates as required to support applied loads.

3.8 CUTTING AND PATCHING

A. Cut, channel, chase, and drill floors, walls, partitions, ceilings, and other surfaces necessary for mechanical installations. Perform cutting by skilled mechanics of trades involved.

B. Repair cut surfaces to match adjacent surfaces.

3.9 GROUTING

A. Install nonmetallic, non-shrink, grout for mechanical equipment base bearing surfaces, pump and other equipment base plates, and anchors. Mix grout according to manufacturer's written instructions.

B. Clean surfaces that will come into contact with grout.

C. Provide forms as required for placement of grout.

D. Avoid air entrapment during placing of grout.

E. Place grout, completely filling equipment bases.

F. Place grout on concrete bases to provide smooth bearing surface for equipment.

G. Place grout around anchors.

H. Cure placed grout according to manufacturer's written instructions.

END OF SECTION

SECTION 15060

HANGERS AND SUPPORTS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes hangers and supports for mechanical system piping and equipment.

B. Related Sections include the following:

1. Division 5 Section "Metal Fabrications" for materials for attaching hangers and supports to building structure.

2. Division 15 Section "Mechanical Vibration Controls and Seismic Restraints" for vibration isolation and seismic restraint devices.

1.3 DEFINITIONS

A. MSS: Manufacturers Standardization Society for the Valve and Fittings Industry.

B. Terminology: As defined in MSS SP-90, "Guidelines on Terminology for Pipe Hangers and Supports."

1.4 PERFORMANCE REQUIREMENTS

A. Design channel support systems for piping to support multiple pipes capable of supporting combined weight of supported systems, system contents, and test water.

B. Design heavy-duty steel trapezes for piping to support multiple pipes capable of supporting combined weight of supported systems, system contents, and test water.

C. Design seismic restraint hangers and supports for piping and equipment.

D. Design and obtain approval from authorities having jurisdiction for seismic restraint hangers and sup-ports for piping and equipment.

1.5 SUBMITTALS

A. Product Data: For each type of pipe hanger, channel support system component, and thermal-hanger shield insert indicated.

PART 2 PRODUCTS

2.1 MANUFACTURED UNITS

A. Pipe Hangers, Supports, and Components: MSS SP-58, factory-fabricated components. Refer to "Hanger and Support Applications" Article in Part 3 for where to use specific hanger and support types.

1. Galvanized, Metallic Coatings: For piping and equipment that will not have field-applied finish.

2. Nonmetallic Coatings: On attachments for electrolytic protection where attachments are in direct contact with copper tubing.

B. Channel Support Systems: MFMA-2, factory-fabricated components for field assembly.

1. Coatings: Manufacturer's standard finish, unless bare metal surfaces are indicated.

2. Nonmetallic Coatings: On attachments for electrolytic protection where attachments are in direct contact with copper tubing.

C. Thermal-Hanger Shield Inserts: 100-psi (690-kPa) minimum compressive-strength insulation, encased in sheet metal shield.

1. Material for Cold Piping: ASTM C 552, Type I cellular glass or water-repellent-treated, ASTM C 533, Type I calcium silicate with vapor barrier.

2. Material for Cold Piping: ASTM C 552, Type I cellular glass with vapor barrier.

3. Material for Cold Piping: Water-repellent-treated, ASTM C 533, Type I calcium silicate with vapor barrier.

4. Material for Hot Piping: ASTM C 552, Type I cellular glass or water-repellent-treated, ASTM C 533, Type I calcium silicate.

5. Material for Hot Piping: ASTM C 552, Type I cellular glass.

6. Material for Hot Piping: Water-repellent-treated, ASTM C 533, Type I calcium silicate.

7. For Trapeze or Clamped System: Insert and shield cover entire circumference of pipe.

8. For Clevis or Band Hanger: Insert and shield cover lower 180 degrees of pipe.

9. Insert Length: Extend 2 inches (50 mm) beyond sheet metal shield for piping operating below ambient air temperature.

2.2 MISCELLANEOUS MATERIALS

A. Powder-Actuated Drive-Pin Fasteners: Powder-actuated-type, drive-pin attachments with pull-out and shear capacities appropriate for supported loads and building materials where used.

B. Mechanical-Anchor Fasteners: Insert-type attachments with pull-out and shear capacities appropriate for supported loads and building materials where used.

C. Structural Steel: ASTM A 36/A 36M, steel plates, shapes, and bars, black and galvanized.

D. Grout: ASTM C 1107, Grade B, factory-mixed and -packaged, non-shrink and nonmetallic, dry, hydraulic-cement grout.

1. Characteristics: Post hardening and volume adjusting; recommended for both interior and exterior applications.

2. Properties: Non-staining, noncorrosive, and nongaseous.

3. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.

PART 3 EXECUTION

3.1 HANGER AND SUPPORT APPLICATIONS

A. Specific hanger requirements are specified in Sections specifying equipment and systems.

B. Comply with MSS SP-69 for pipe hanger selections and applications that are not specified in piping system Specification Sections.

C. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Specification Sections, install the following types:

1. Adjustable Steel Clevis Hangers (MSS Type 1): For suspension of non-insulated or insulated stationary pipes, NPS 1/2 to NPS 30 (DN15 to DN750).

2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of 120 to 450 deg. F (49 to 232 deg. C) pipes, NPS 4 to NPS 16 (DN100 to DN400), requiring up to 4 inches (100 mm) of insulation.

3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes, NPS 3/4 to NPS 24 (DN20 to DN600), requiring clamp flexibility and up to 4 inches (100 mm) of insulation.

4. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes, NPS 1/2 to NPS 24 (DN15 to DN600), if little or no insulation is required.

5. Pipe Hangers (MSS Type 5): For suspension of pipes, NPS 1/2 to NPS 4 (DN15 to DN100), to al-low off-center closure for hanger installation before pipe erection.

6. Adjustable Swivel Split- or Solid-Ring Hangers (MSS Type 6): For suspension of non-insulated stationary pipes, NPS 3/4 to NPS 8 (DN20 to DN200).

7. Adjustable Steel Band Hangers (MSS Type 7): For suspension of non-insulated stationary pipes, NPS 1/2 to NPS 8 (DN15 to DN200).

8. Adjustable Band Hangers (MSS Type 9): For suspension of non-insulated stationary pipes, NPS 1/2 to NPS 8 (DN15 to DN200).

9. Adjustable Swivel-Ring Band Hangers (MSS Type 10): For suspension of non-insulated stationary pipes, NPS 1/2 to NPS 2 (DN15 to DN50).

10. Split Pipe-Ring with or without Turnbuckle-Adjustment Hangers (MSS Type 11): For suspension of non-insulated stationary pipes, NPS 3/8 to NPS 8 (DN10 to DN200).

11. Extension Hinged or Two-Bolt Split Pipe Clamps (MSS Type 12): For suspension of non-insulated stationary pipes, NPS 3/8 to NPS 3 (DN10 to DN80).

12. U-Bolts (MSS Type 24): For support of heavy pipe, NPS 1/2 to NPS 30 (DN15 to DN750).

13. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.

14. Pipe Saddle Supports (MSS Type 36): For support of pipes, NPS 4 to NPS 36 (DN100 to DN900), with steel pipe base stanchion support and cast-iron floor flange.

15. Pipe Stanchion Saddles (MSS Type 37): For support of pipes, NPS 4 to NPS 36 (DN100 to DN900), with steel pipe base stanchion support and cast-iron floor flange and with U-bolt to retain pipe.

16. Adjustable Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes, NPS 2-1/2 to NPS 36 (DN65 to DN900), if vertical adjustment is required, with steel pipe base stanchion sup-port and cast-iron floor flange.

D. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Specification Sections, install the following types:

1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers, NPS 3/4 to NPS 20 (DN20 to DN500).

2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers, NPS 3/4 to NPS 20 (DN20 to DN500), if longer ends are required for riser clamps.

E. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Specification Sections, install the following types:

1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches (150 mm) for heavy loads.

2. Steel Clevises (MSS Type 14): For 120 to 450 deg. F (49 to 232 deg. C) piping installations.

3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.

4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.

5. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg. F (49 to 232 deg. C) piping installations.

F. Building Attachments: Unless otherwise indicated and except as specified in piping system Specification Sections, install the following types:

1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.

G. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Specification Sections, install the following types:

1. Steel Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.

2. Protection Shields (MSS Type 40): Of length recommended by manufacturer to prevent crushing insulation.

3. Thermal-Hanger Shield Inserts: For supporting insulated pipe, 360-degree insert of high-density, 100-psi (690-kPa) minimum compressive-strength, water-repellent-treated calcium silicate or cellular-glass pipe insulation, same thickness

as adjoining insulation with vapor barrier and encased in 360-degree sheet metal shield.

H. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system Specification Sections, install the following types:

1. Restraint-Control Devices (MSS Type 47): Where indicated to control piping movement.

2. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches (32 mm).

3. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41 roll hanger with springs.

4. Spring Sway Braces (MSS Type 50): To retard sway, shock, vibration, or thermal expansion in piping systems.

5. Variable-Spring Hangers (MSS Type 51): Preset to indicated load and limit variability factor to 25 percent to absorb expansion and contraction of piping system from hanger.

6. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to absorb expansion and contraction of piping system from base support.

7. Variable-Spring Trapeze Hangers (MSS Type 53): Preset to indicated load and limit variability factor to 25 percent to absorb expansion and contraction of piping system from trapeze support.

8. Constant Supports: For critical piping stress and if necessary to avoid transfer of stress from one support to another support, critical terminal, or connected equipment. Include auxiliary stops for erection, hydrostatic test, and load-adjustment capability. These supports include the following types:

a. Horizontal (MSS Type 54): Mounted horizontally.

b. Vertical (MSS Type 55): Mounted vertically.

c. Trapeze (MSS Type 56): Two vertical-type supports and one trapeze member.

3.2 HANGER AND SUPPORT INSTALLATION

A. Pipe Hanger and Support Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, sup-ports, clamps, and attachments as required to properly support piping from building structure.

B. Channel Support System Installation: Arrange for grouping of parallel runs of piping and support together on field-assembled channel systems.

1. Field assemble and install according to manufacturer's written instructions.

C. Heavy-Duty Steel Trapeze Installation: Arrange for grouping of parallel runs of horizontal piping and support together on field-fabricated, heavy-duty trapezes.

1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install inter-mediate supports for smaller diameter pipes as specified above for individual pipe hangers.

2. Field fabricate from ASTM A 36/A 36M, steel shapes selected for loads being supported. Weld steel according to AWS D-1.1.

D. Install building attachments within concrete slabs or attach to structural steel. Space attachments within maximum piping span length indicated in MSS SP-69. Install additional attachments at concentrated loads, including valves, flanges, guides, strainers, and expansion joints, and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.

E. Install powder-actuated drive-pin fasteners in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.

F. Install mechanical-anchor fasteners in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.

G. Install hangers and supports complete with necessary inserts, bolts, rods, nuts, washers, and other accessories.

H. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.

I. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.

J. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and so maximum pipe deflections allowed by ASME B31.9, "Building Services Piping," is not exceeded.

K. Insulated Piping: Comply with the following:

1. Attach clamps and spacers to piping.

   a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.

   b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.

   c. Do not exceed pipe stress limits according to ASME B31.9.

2. Install MSS SP-58, Type 39 protection saddles, if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.

   a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 (DN100) and larger if pipe is installed on rollers.

3. Install MSS SP-58, Type 40 protective shields on cold piping with vapor barrier. Shields shall span arc of 180 degrees.

a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 (DN100) and larger if pipe is installed on rollers.

4. Shield Dimensions for Pipe: Not less than the following:

a. NPS 1/4 to NPS 3-1/2 (DN8 to DN90): 12 inches (305 mm) long and 0.048 inch (1.22 mm) thick.

b. NPS 4 (DN100): 12 inches (305 mm) long and 0.06 inch (1.52 mm) thick.

c. NPS 5 and NPS 6 (DN125 and DN150): 18 inches (457 mm) long and 0.06 inch (1.52 mm) thick.

d. NPS 8 to NPS 14 (DN200 to DN350): 24 inches (610 mm) long and 0.075 inch (1.91 mm) thick.

5. Pipes NPS 8 (DN200) and Larger: Include wood inserts.

6. Insert Material: Length at least as long as protective shield.

7. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

3.3 EQUIPMENT SUPPORTS

A. Fabricate structural-steel stands to suspend equipment from structure above or to support equipment above floor.

B. Grouting: Place grout under supports for equipment and make smooth bearing surface.

3.4 METAL FABRICATION

A. Cut, drill, and fit miscellaneous metal fabrications for heavy-duty steel trapezes and equipment supports.

B. Fit exposed connections together to form hairline joints. Field-weld connections that cannot be shop-welded because of shipping size limitations.

C. Field Welding: Comply with AWS D1.1 procedures for shielded metal arc welding, appearance and quality of welds, and methods used in correcting welding work, and with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.

2. Obtain fusion without undercut or overlap.

3. Remove welding flux immediately.

4. Finish welds at exposed connections so no roughness shows after finishing and contours of welded surfaces match adjacent contours.

3.5 ADJUSTING

A. Hanger Adjustment: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.

3.6 PAINTING

A. Touching Up: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.

1. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils (0.05 mm).

B. Touching Up: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in Division 9 Section "Painting."

C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

END OF SECTION

SECTION 15081

DUCT INSULATION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes semi-rigid and flexible duct, and plenum insulation; insulating cements; field-applied jackets; accessories and attachments; and sealing compounds.

B. Related Sections include the following:

1. Division 7 Section "Fire-stopping" for fire-stopping materials and requirements for penetrations through fire and smoke barriers.

2. Division 15 Section "Pipe Insulation" for insulation for piping systems.

1.3 SUBMITTALS

A. Product Data: Identify thermal conductivity, thickness, and jackets (both factory and field applied, if any), for each type of product indicated.

B. Shop Drawings: Show fabrication and installation details for the following:

1. Removable insulation sections at access panels.

2. Application of field-applied jackets.

3. Applications at linkages for control devices.

1.4 QUALITY ASSURANCE

A. Fire-Test-Response Characteristics: As determined by testing materials identical to those specified in this Section according to ASTM E 84, by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and sealer and cement material containers with appropriate markings of applicable testing and inspecting agency.

1. Insulation Installed Indoors: Flame-spread rating of 25 or less, and smoke-developed rating of 50 or less.

2. Insulation Installed Outdoors: Flame-spread rating of 75 or less, and smoke-developed rating of 150 or less.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Packaging: Ship insulation materials in containers marked by manufacturer with appropriate ASTM specification designation, type and grade, and maximum use temperature.

1.6 COORDINATION

A. Coordinate clearance requirements with duct Installer for insulation application.

PART 2 PRODUCTS

2.1 INSULATION MATERIALS

A. Mineral-Fiber Blanket Thermal Insulation: Glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II, without facing and with all-service jacket manufactured from kraft paper, reinforcing scrim, aluminum foil, and vinyl film.

B. Mineral-Fiber Board Thermal Insulation: Glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IB, without facing and with all-service jacket manufactured from kraft paper, rein-forcing scrim, aluminum foil, and vinyl film.

C. Calcium Silicate Insulation: Flat-, curved-, and grooved-block sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C 533, Type I.

2.2 FIELD-APPLIED JACKETS

A. General: ASTM C 921, Type 1, unless otherwise indicated.

B. Foil and Paper Jacket: Laminated, glass-fiber-reinforced, flame-retardant kraft paper and aluminum foil.

C. Stainless-Steel Jacket: Deep corrugated sheets of stainless steel complying with ASTM A 666, Type 304 or 316; 0.10 inch (2.5 mm) thick; and roll stock ready for shop or field cutting and forming to indicated sizes.

1. Moisture Barrier: 1 mil (0.025 mm) thick, heat-bonded polyethylene and kraft paper.

2. Jacket Bands: Stainless steel, Type 304, 3/4 inch (19 mm) wide.

2.3 ACCESSORIES AND ATTACHMENTS

A. Bands: 3/4 inch (19 mm) wide, in one of the following materials compatible with jacket:

1. Stainless Steel: ASTM A 666, Type 304; 0.020 inch (0.5 mm) thick.

B. Wire: 0.080 inch (2.0 mm), nickel-copper alloy; 0.062 inch (1.6 mm), soft-annealed, stainless steel; or 0.062 inch (1.6 mm), soft-annealed, galvanized steel.

C. Weld-Attached Anchor Pins and Washers: Copper-coated steel pin for capacitor-discharge welding and galvanized speed washer. Pin length sufficient for insulation thickness indicated.

1. Welded Pin Holding Capacity: 100 lb. (45 kg) for direct pull perpendicular to the attached surface.

D. Adhesive-Attached Anchor Pins and Speed Washers: Galvanized steel plate, pin, and washer manufactured for attachment to duct and plenum with adhesive. Pin length sufficient for insulation thickness indicated.

1. Adhesive: Recommended by the anchor pin manufacturer as appropriate for surface temperatures of ducts, plenums, and breechings; and to achieve a holding capacity of 100 lb. (45 kg) for direct pull perpendicular to the adhered surface.

E. Self-Adhesive Anchor Pins and Speed Washers: Galvanized steel plate, pin, and washer manufactured for attachment to duct and plenum with adhesive. Pin length sufficient for insulation thickness indicated.

F. Glass Cloth and Tape: Comply with MIL-C-20079H, Type I for cloth and Type II for tape. Woven glass-fiber fabrics, plain weave, pre-sized a minimum of 8 oz./sq. yd. (270 g/sq. m).

1. Tape Width: 4 inches (100 mm).

2.4 VAPOR RETARDERS

A. Mastics: Materials recommended by insulation material manufacturer that are compatible with insulation materials, jackets, and substrates.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions for compliance with requirements for installation and other conditions affecting performance of insulation application.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

3.3 GENERAL APPLICATION REQUIREMENTS

A. Apply insulation materials, accessories, and finishes according to the manufacturer's written instructions; with smooth, straight, and even surfaces; and free of voids throughout the length of ducts and fittings.

B. Refer to schedules at the end of this Section for materials, forms, jackets, and thicknesses required for each duct system.

C. Use accessories compatible with insulation materials and suitable for the service. Use accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Apply multiple layers of insulation with longitudinal and end seams staggered.

E. Seal joints and seams with vapor-retarder mastic on insulation indicated to receive a vapor retarder.

F. Keep insulation materials dry during application and finishing.

G. Apply insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by the insulation material manufacturer.

H. Apply insulation with the least number of joints practical.

I. Apply insulation over fittings and specialties, with continuous thermal and vapor-retarder integrity, unless otherwise indicated.

J. Hangers and Anchors: Where vapor retarder is indicated, seal penetrations in insulation at hangers, supports, anchors, and other projections with vapor-retarder mastic. Apply insulation continuously through hangers and around anchor attachments.

K. Insulation Terminations: For insulation application where vapor retarders are indicated, seal ends with a compound recommended by the insulation material manufacturer to maintain vapor retarder.

L. Apply insulation with integral jackets as follows:

1. Pull jacket tight and smooth.

2. Joints and Seams: Cover with tape and vapor retarder as recommended by insulation material manufacturer to maintain vapor seal.

3. Vapor-Retarder Mastics: Where vapor retarders are indicated, apply mastic on seams and joints and at ends adjacent to duct flanges and fittings.

M. Cut insulation according to manufacturer's written instructions to prevent compressing insulation to less than 75 percent of its nominal thickness.

N. Install vapor-retarder mastic on ducts and plenums scheduled to receive vapor retarders.

1. Ducts with Vapor Retarders: Overlap insulation facing at seams and seal with vapor-retarder mastic and pressure-sensitive tape having same facing as insulation. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-retarder seal.

2. Ducts without Vapor Retarders: Overlap insulation facing at seams and secure with outward clinching staples and pressure-sensitive tape having same facing as insulation.

O. Roof Penetrations: Apply insulation for interior applications to a point even with top of roof flashing.

1. Seal penetrations with vapor-retarder mastic.

2. Apply insulation for exterior applications tightly joined to interior insulation ends.

3. Seal insulation to roof flashing with vapor-retarder mastic.

P. Interior Wall and Partition Penetrations: Apply insulation continuously through walls and partitions, except fire-rated walls and partitions.

Q. Fire-Rated Wall and Partition Penetrations: Terminate insulation at fire/smoke damper sleeves for fire-rated wall and partition penetrations.

R. Floor Penetrations: Terminate insulation at underside of floor assembly and at floor support at top of floor.

1. For insulation indicated to have vapor retarders, taper termination and seal insulation ends with vapor-retarder mastic.

3.4 MINERAL-FIBER INSULATION APPLICATION

A. Blanket Applications for Ducts and Plenums: Secure blanket insulation with adhesive and anchor pins and speed washers.

1. Apply adhesives according to manufacturer's recommended coverage rates per square foot, for 100 percent coverage of duct and plenum surfaces.

2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.

3. Install anchor pins and speed washers on sides and bottom of horizontal ducts and sides of vertical ducts as follows:

   a. On duct sides with dimensions 18 inches (450 mm) and smaller, along longitudinal center-line of duct. Space 3 inches (75 mm) maximum from insulation end joints, and 16 inches (400 mm) o.c.

   b. On duct sides with dimensions larger than 18 inches (450 mm). Space 16 inches (400 mm) o.c. each way, and 3 inches (75 mm) maximum from insulation joints. Apply additional pins and clips to hold insulation tightly against surface at cross bracing.

   c. Anchor pins may be omitted from top surface of horizontal, rectangular ducts and plenums.

   d. Do not over-compress insulation during installation.

4. Impale insulation over anchors and attach speed washers.

5. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.

6. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches (50 mm) from one edge and one end of insulation segment. Secure laps to adjacent insulation segment with 1/2-inch (13 mm) staples, 1 inch (25 mm) o.c. and cover with pressure-sensitive tape having same facing as insulation.

7. Overlap un-faced blankets a minimum of 2 inches (50 mm) on longitudinal seams and end joints. Secure with steel band at end joints and spaced a maximum of 18 inches (450 mm) o.c.

8. Apply insulation on rectangular duct elbows and transitions with a full insulation segment for each surface. Apply insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.

9. Insulate duct stiffeners, hangers, and flanges that protrude beyond the insulation surface with 6 inch (150 mm) wide strips of the same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with anchor pins spaced 6 inches (150 mm) o.c.

10. Apply vapor-retarder mastic to open joints, breaks, and punctures for insulation indicated to receive vapor retarder.

B. Board Applications for Ducts and Plenums: Secure board insulation with adhesive and anchor pins and speed washers.

1. Apply adhesives according to manufacturer's recommended coverage rates per square foot, for 100 percent coverage of duct and plenum surfaces.

2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.

3. Space anchor pins as follows:

   a. On duct sides with dimensions 18 inches (450 mm) and smaller, along longitudinal centerline of duct. Space 3 inches (75 mm) maximum from insulation end joints, and 16 inches (400 mm) o.c.

   b. On duct sides with dimensions larger than 18 inches (450 mm). Space 16 inches (400 mm) o.c. each way, and 3 inches (75 mm) maximum from insulation joints. Apply additional pins and clips to hold insulation tightly against surface at cross bracing.

   c. Anchor pins may be omitted from top surface of horizontal, rectangular ducts and plenums.

   d. Do not over compress insulation during installation.

4. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation sur-face. Cover exposed pins and washers with tape matching insulation facing.

5. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches (50 mm) from one edge and one end of insulation segment. Secure laps to adjacent insulation segment with 1/2-inch (13-mm) staples, 1 inch (25 mm) o.c., and cover with pressure-sensitive tape having same facing as insulation.

6. Apply insulation on rectangular duct elbows and transitions with a full insulation segment for each surface. Groove and score insulation to fit as closely as possible to outside and inside radi-us of elbows. Apply insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.

7. Insulate duct stiffeners, hangers, and flanges that protrude beyond the insulation surface with 6-inch- (150-mm-) wide strips of the same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with anchor pins spaced 6 inches (150 mm) o.c.

8. Apply vapor-retarder mastic to open joints, breaks, and punctures for insulation indicated to re-ceive vapor retarder.

3.5 CALCIUM SILICATE INSULATION APPLICATION

A. Apply insulation according to the manufacturer's written instructions and as follows:

1. Secure single layer of insulation to duct with stainless-steel bands. Tighten bands without de-forming the insulation material.

2. Apply two-layer insulation with joints tightly butted and staggered at least 3 inches (75 mm). Secure inner layer with 0.062 inch (1.6 mm), soft-annealed, stainless-steel wire. Secure outer layer with stainless-steel bands.

3. On exposed applications, without metal jacket, finish insulation with a skim coat of mineral-fiber, hydraulic-setting cement to surface of installed insulation. When dry,

apply flood coat of lagging adhesive and press on one layer of glass cloth or tape. Overlap edges at least 1 inch (25 mm). Apply finish coat of lagging adhesive over glass cloth or tape. Thin the finish coat to achieve smooth finish.

3.6 FIELD-APPLIED JACKET APPLICATION

A. Apply glass-cloth jacket, where indicated, directly over bare insulation or insulation with factory-applied jackets.

1. Apply jacket smooth and tight to surface with 2 inch (50 mm) overlap at seams and joints.

2. Embed glass cloth between two 0.062 inch (1.6 mm) thick coats of jacket manufacturer's recommended adhesive.

3. Completely encapsulate insulation with jacket, leaving no exposed raw insulation.

3.7 DUCT SYSTEM APPLICATIONS

A. Insulation materials and thicknesses are specified in schedules at the end of this Section.

B. Materials and thicknesses for systems listed below are specified in schedules at the end of this Section.

C. Insulate the following plenums and duct systems:

1. Indoor concealed supply-, return-, and outside-air ductwork.

2. Indoor exposed supply-, return-, and outside-air ductwork.

3. Outdoor exposed supply and return ductwork.

D. Items Not Insulated: Unless otherwise indicated, do not apply insulation to the following systems, materials, and equipment:

1. Fibrous-glass ducts.

2. Metal ducts with duct liner.

3. Factory-insulated flexible ducts.

4. Factory-insulated plenums, casings, terminal boxes, and filter boxes and sections.

5. Flexible connectors.

6. Vibration-control devices.

7. Testing agency labels and stamps.

8. Nameplates and data plates.

9. Access panels and doors in air-distribution systems.

3.8 INDOOR DUCT AND PLENUM APPLICATION SCHEDULE

A. Service: Round, supply-air ducts.

1. Material: Mineral-fiber blanket.

2. Thickness: 2 inches (50 mm).

3. Number of Layers: One.

4. Field-Applied Jacket: Foil and paper.

5. Vapor Retarder Required: Yes.

B. Service: Round, return-air ducts.

1. Material: Mineral-fiber blanket.

2. Thickness: 2 inches (50 mm).

3. Number of Layers: One.

4. Field-Applied Jacket: Foil and paper.

5. Vapor Retarder Required: Yes.

C. Service: Round, outside-air ducts.

1. Material: Mineral-fiber blanket.

2. Thickness: 2 inches (50 mm).

3. Number of Layers: One.

4. Field-Applied Jacket: Foil and paper.

5. Vapor Retarder Required: Yes.

D. Service: Rectangular, supply-air ducts.

1. Material: Mineral-fiber blanket.

2. Thickness: 2 inches (50 mm).

3. Number of Layers: One.

4. Field-Applied Jacket: Foil and paper.

5. Vapor Retarder Required: Yes.

E. Service: Rectangular, return-air ducts.

1. Material: Mineral-fiber blanket.

2. Thickness: 2 inches (50 mm).

3. Number of Layers: One.

4. Field-Applied Jacket: Foil and paper.

5. Vapor Retarder Required: Yes.

F. Service: Rectangular, outside-air ducts.

1. Material: Mineral-fiber blanket.
2. Thickness: 2 inches (50 mm).
3. Number of Layers: One.
4. Field-Applied Jacket: Foil and paper.
5. Vapor Retarder Required: Yes.

3.9 OUTDOOR DUCT AND PLENUM APPLICATION SCHEDULE

A. Service: Rectangular, supply-air ducts.

1. Material: Mineral-fiber board.
2. Thickness: 2 inches (50 mm).
3. Number of Layers: One.
4. Field-Applied Jacket: Stainless steel.
5. Vapor Retarder Required: Yes.

D. Service: Rectangular, return-air ducts.

1. Material: Mineral-fiber board.
2. Thickness: 2 inches (50 mm).
3. Number of Layers: One.
4. Field-Applied Jacket: Stainless steel.
9. Vapor Retarder Required: Yes.

3.10 GENERATOR EXHAUST PIPE & MUFFLER APPLICATION SCHEDULE

A. Service: Round, exposed.

1. Material: Calcium silicate.
2. Thickness: 4 inches (100 mm).
3. Number of Layers: One.
4. Field-Applied Jacket: Stainless steel.
   a. Corrugation Dimension: 1-1/4 by 1/4 inch (32 by 6 mm).
5. Vapor Retarder Required: No.

END OF SECTION

SECTION 15083

PIPE INSULATION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes preformed, rigid and flexible pipe insulation; insulating cements; field-applied jackets; accessories and attachments; and sealing compounds.

B. Related Sections include the following:

1. Division 7 Section "Fire-stopping" for fire-stopping materials and requirements for penetrations through fire and smoke barriers.

2. Division 15 Section "Duct Insulation" for insulation for ducts and plenums.

3. Division 15 Section "Hangers and Supports" for pipe insulation shields and protection saddles.

1.3 SUBMITTALS

A. Product Data: Identify thermal conductivity, thickness, and jackets (both factory and field applied, if any), for each type of product indicated.

1.4 QUALITY ASSURANCE

A. Fire-Test-Response Characteristics: As determined by testing materials identical to those specified in this Section according to ASTM E 84, by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and sealer and cement material containers with appropriate markings of applicable testing and inspecting agency.

1. Insulation Installed Indoors: Flame-spread rating of 25 or less, and smoke-developed rating of 50 or less.

2. Insulation Installed Outdoors: Flame-spread rating of 75 or less, and smoke-developed rating of 150 or less.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Packaging: Ship insulation materials in containers marked by manufacturer with appropriate ASTM specification designation, type and grade, and maximum use temperature.

1.6 COORDINATION

A. Coordinate size and location of supports, hangers, and insulation shields specified in Division 15 Section "Hangers and Supports."

B. Coordinate clearance requirements with piping Installer for insulation application.

1.7 SCHEDULING

A. Schedule insulation application after testing piping systems and, where required, after installing and testing heat-trace tape. Insulation application may begin on segments of piping that have satisfactory test results.

PART 2 PRODUCTS

2.1 INSULATION MATERIALS

A. Mineral-Fiber Insulation: Glass fibers bonded with a thermosetting resin complying with the following:

1. Preformed Pipe Insulation: Comply with ASTM C 547, Type 1, with factory-applied, all-purpose, vapor-retarder jacket.

2. Blanket Insulation: Comply with ASTM C 553, Type II, without facing.

3. Fire-Resistant Adhesive: Comply with MIL A-3316C in the following classes and grades:

a. Class 1, Grade A for bonding glass cloth and tape to un-faced glass-fiber insulation, for sealing edges of glass-fiber insulation, and for bonding lagging cloth to un-faced glass-fiber insulation.

b. Class 2, Grade A for bonding glass-fiber insulation to metal surfaces.

4. Vapor-Retarder Mastics: Fire- and water-resistant, vapor-retarder mastic for indoor applications. Comply with MIL-C-19565C, Type II.

5. Mineral-Fiber Insulating Cements: Comply with ASTM C 195.

6. Expanded or Exfoliated Vermiculite Insulating Cements: Comply with ASTM C 196.

7. Mineral-Fiber, Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C 449/C 449M.

B. Flexible Elastomeric Thermal Insulation: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials.

1. Adhesive: As recommended by insulation material manufacturer.

2. Ultraviolet-Protective Coating: As recommended by insulation manufacturer.

C. Calcium Silicate Insulation: Preformed pipe sections of noncombustible, inorganic, hydrous calcium silicate with a non-asbestos fibrous reinforcement. Comply with ASTM C 533, Type I.

D. Prefabricated Thermal Insulating Fitting Covers: Comply with ASTM C 450 for dimensions used in pre-forming insulation to cover valves, elbows, tees, and flanges.

2.2 FIELD-APPLIED JACKETS

A. General: ASTM C 921, Type 1, unless otherwise indicated.

B. Foil and Paper Jacket: Laminated, glass-fiber-reinforced, flame-retardant kraft paper and aluminum foil.

C. Stainless-Steel Jacket: ASTM A 666, Type 304 or 316; 0.10 inch (2.5 mm) thick; and factory cut and rolled to indicated sizes.

D. Stainless-Steel Jacket: ASTM A 666, Type 304 or 316; 0.10 inch (2.5 mm) thick; and roll stock ready for shop or field cutting and forming to indicated sizes.

1. Moisture Barrier: 1- mil - (0.025 -mm-) thick, heat-bonded polyethylene and kraft paper.

2. Moisture Barrier: 3- mil- (0.075 -mm-) thick, heat-bonded polyethylene and kraft paper.

3. Elbows: Gore type, for 45- and 90-degree elbows in same material, finish, and thickness as jack-et.

4. Jacket Bands: Stainless steel, Type 304, 3/4 inch (19 mm) wide.

2.3 ACCESSORIES AND ATTACHMENTS

A. Glass Cloth and Tape: Comply with MIL-C-20079H, Type I for cloth and Type II for tape. Woven glass-fiber fabrics, plain weave, pre-sized a minimum of 8 oz./sq. yd. (270 g/sq. m).

1. Tape Width: 4 inches (100 mm).

B. Bands: 3/4 inch (19 mm) wide, in one of the following materials compatible with jacket:

1. Stainless Steel: ASTM A 666, Type 304; 0.020 inch (0.5 mm) thick.

2. Galvanized Steel: 0.005 inch (0.13 mm) thick.

3. Aluminum: 0.007 inch (0.18 mm) thick.

4. Brass: 0.010 inch (0.25 mm) thick.

5. Nickel-Copper Alloy: 0.005 inch (0.13 mm) thick.

C. Wire: 0.080 -inch (2.0 -mm), nickel-copper alloy; 0.062 -inch (1.6 -mm), soft-annealed, stainless steel; or 0.062- inch (1.6 -mm), soft-annealed, galvanized steel.

2.4 VAPOR RETARDERS

A. Mastics: Materials recommended by insulation material manufacturer that are compatible with insulation materials, jackets, and substrates.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions for compliance with requirements for installation and other conditions affecting performance of insulation application.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Preparation: Clean and dry pipe and fitting surfaces. Remove materials that will adversely affect insulation application.

3.3 GENERAL APPLICATION REQUIREMENTS

A. Apply insulation materials, accessories, and finishes according to the manufacturer's written instructions; with smooth, straight, and even surfaces; free of voids throughout the length of piping, including fittings, valves, and specialties.

B. Refer to schedules at the end of this Section for materials, forms, jackets, and thicknesses required for each piping system.

C. Use accessories compatible with insulation materials and suitable for the service. Use accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Apply insulation with longitudinal seams at top and bottom of horizontal pipe runs.

E. Apply multiple layers of insulation with longitudinal and end seams staggered.

F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.

G. Seal joints and seams with vapor-retarder mastic on insulation indicated to receive a vapor retarder.

H. Keep insulation materials dry during application and finishing.

I. Apply insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by the insulation material manufacturer.

J. Apply insulation with the least number of joints practical.

K. Apply insulation over fittings, valves, and specialties, with continuous thermal and vapor-retarder integrity, unless otherwise indicated. Refer to special instructions for applying insulation over fittings, valves, and specialties.

L. Hangers and Anchors: Where vapor retarder is indicated, seal penetrations in insulation at hangers, supports, anchors, and other projections with vapor-retarder mastic.

1. Apply insulation continuously through hangers and around anchor attachments.

2. For insulation application where vapor retarders are indicated, extend insulation on anchor legs at least 12 inches (300 mm) from point of attachment to pipe and taper insulation ends. Seal tapered ends with a compound recommended by the insulation material manufacturer to maintain vapor retarder.

3. Install insert materials and apply insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by the insulation material manufacturer.

4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect the jacket from tear or puncture by the hanger, support, and shield.

M. Insulation Terminations: For insulation application where vapor retarders are indicated, taper insulation ends. Seal tapered ends with a compound recommended by the insulation material manufacturer to maintain vapor retarder.

N. Apply adhesives and mastics at the manufacturer's recommended coverage rate.

O. Apply insulation with integral jackets as follows:

1. Pull jacket tight and smooth.

2. Circumferential Joints: Cover with 3 -inch- (75 -mm-) wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip and spaced 4 inches (100 mm) o.c.

3. Longitudinal Seams: Overlap jacket seams at least 1-1/2 inches (40 mm). Apply insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 4 inches (100 mm) o.c.

a. Exception: Do not staple longitudinal laps on insulation having a vapor retarder.

4. Vapor-Retarder Mastics: Where vapor retarders are indicated, apply mastic on seams and joints and at ends adjacent to flanges, unions, valves, and fittings.

5. At penetrations in jackets for thermometers and pressure gages, fill and seal voids with vapor-retarder mastic.

P. Roof Penetrations: Apply insulation for interior applications to a point even with top of roof flashing.

1. Seal penetrations with vapor-retarder mastic.

2. Apply insulation for exterior applications tightly joined to interior insulation ends.

3. Extend metal jacket of exterior insulation outside roof flashing at least 2 inches (50 mm) below top of roof flashing.

4. Seal metal jacket to roof flashing with vapor-retarder mastic.

Q. Exterior Wall Penetrations: For penetrations of below-grade exterior walls, terminate insulation flush with mechanical sleeve seal. Seal terminations with vapor-retarder mastic.

R. Interior Wall and Partition Penetrations: Apply insulation continuously through walls and floors.

S. Fire-Rated Wall and Partition Penetrations: Apply insulation continuously through penetrations of fire-rated walls and partitions.

1. Fire-stopping and fire-resistive joint sealers are specified in Division 7 Section "Fire-stopping."

T. Floor Penetrations: Apply insulation continuously through floor assembly.

1. For insulation with vapor retarders, seal insulation with vapor-retarder mastic where floor supports penetrate vapor retarder.

3.4 MINERAL-FIBER INSULATION APPLICATION

A. Apply insulation to straight pipes and tubes as follows:

1. Secure each layer of preformed pipe insulation to pipe with wire, tape, or bands without deforming insulation materials.

2. Where vapor retarders are indicated, seal longitudinal seams and end joints with vapor-retarder mastic. Apply vapor retarder to ends of insulation at intervals of 15 to 20 feet (4.5 to 6 m) to form a vapor retarder between pipe insulation segments.

3. For insulation with factory-applied jackets, secure laps with outward clinched staples at 6 inches (150 mm) o.c.

4. For insulation with factory-applied jackets with vapor retarders, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by the insulation material manufacturer and seal with vapor-retarder mastic.

B. Apply insulation to fittings and elbows as follows:

1. Apply pre-molded insulation sections of the same material as straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.

2. When pre-molded insulation elbows and fittings are not available, apply mitered sections of pipe insulation, or glass-fiber blanket insulation, to a thickness equal to adjoining pipe insulation. Se-cure insulation materials with wire, tape, or bands.

3. Cover fittings with standard PVC fitting covers.

4. Cover fittings with heavy PVC fitting covers. Overlap PVC covers on pipe insulation jackets at least 1 inch (25 mm) at each end. Secure fitting covers with manufacturer's attachments and accessories. Seal seams with tape and vapor-retarder mastic.

C. Apply insulation to valves and specialties as follows:

1. Apply pre-molded insulation sections of the same material as straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.

2. When pre-molded insulation sections are not available, apply glass-fiber blanket insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation. For check valves, arrange insulation for access to strainer basket without disturbing insulation.

3. Apply insulation to flanges as specified for flange insulation application.

4. Use preformed standard PVC fitting covers for valve sizes where available. Secure fitting covers with manufacturer's attachments and accessories. Seal seams with tape and vapor-retarder mas-tic.

5. Use preformed heavy PVC fitting covers for valve sizes where available. Secure fitting covers with manufacturer's attachments and accessories. Seal seams with tape and vapor-retarder mas-tic.

6. For larger sizes where PVC fitting covers are not available, seal insulation with canvas jacket and sealing compound recommended by the insulation material manufacturer.

3.5 FLEXIBLE ELASTOMERIC THERMAL INSULATION APPLICATION

A. Apply insulation to straight pipes and tubes as follows:

1. Follow manufacturer's written instructions for applying insulation.

2. Seal longitudinal seams and end joints with manufacturer's recommended adhesive. Cement to avoid openings in insulation that will allow passage of air to the pipe surface.

B. Apply insulation to flanges as follows:

1. Apply pipe insulation to outer diameter of pipe flange.

2. Make width of insulation segment the same as overall width of the flange and bolts, plus twice the thickness of the pipe insulation.

3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of the same thickness as pipe insulation.

4. Secure insulation to flanges and seal seams with manufacturer's recommended adhesive. Cement to avoid openings in insulation that will allow passage of air to the pipe surface.

C. Apply insulation to fittings and elbows as follows:

1. Apply mitered sections of pipe insulation.

2. Secure insulation materials and seal seams with manufacturer's recommended adhesive. Cement to avoid openings in insulation that will allow passage of air to the pipe surface.

D. Apply insulation to valves and specialties as follows:

1. Apply preformed valve covers manufactured of the same material as pipe insulation and attached according to the manufacturer's written instructions.

2. Apply cut segments of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation. For check valves, fabricate removable sections of insulation arranged to allow access to strainer basket.

3. Apply insulation to flanges as specified for flange insulation application.

4. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive. Cement to avoid openings in insulation that will allow passage of air to the pipe surface.

3.6 CALCIUM SILICATE INSULATION APPLICATION

A. Apply insulation to straight pipes and tubes as follows:

1. Secure each layer of insulation to pipe with stainless-steel bands at 12-inch (300 - mm) intervals and tighten without deforming insulation materials.

2. Apply two-layer insulation with joints tightly butted and staggered at least 3 inches (75 mm). Secure inner layer with 0.062-inch (1.6-mm), soft-annealed, stainless-steel wire spaced at 12-inch (300-mm) intervals. Secure outer layer with stainless-steel bands at 12 -inch (300-mm) intervals.

3. Apply a skim coat of mineral-fiber, hydraulic-setting cement to surface of installed insulation. When dry, apply flood coat of lagging adhesive and press on one layer of glass cloth or tape. Overlap edges at least 1 inch (25 mm). Apply finish coat of lagging adhesive over glass cloth or tape. Thin the finish coat to achieve smooth finish.

B. Apply insulation to flanges as follows:

1. Apply preformed pipe insulation to outer diameter of pipe flange.

2. Make width of insulation segment the same as overall width of the flange and bolts, plus twice the thickness of the pipe insulation.

3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of block insulation of the same material and thickness as pipe insulation.

4. Finish flange insulation the same as pipe insulation.

C. Apply insulation to fittings and elbows as follows:

1. Apply pre-molded insulation sections of the same material as straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.

2. When pre-molded sections of insulation are not available, apply mitered sections of calcium silicate insulation. Secure insulation materials with stainless-steel wire.

3. Finish insulation of fittings the same as pipe insulation.

D. Apply insulation to valves and specialties as follows:

1. Apply mitered segments of calcium silicate insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation. For check valves, arrange insulation for access to strainer basket without disturbing insulation.

2. Apply insulation to flanges as specified for flange insulation application.

3. Finish valve and specialty insulation the same as pipe insulation.

3.7 FIELD-APPLIED JACKET APPLICATION

A. Apply glass-cloth jacket, where indicated, directly over bare insulation or insulation with factory-applied jackets.

1. Apply jacket smooth and tight to surface with 2 -inch (50 -mm) overlap at seams and joints.

2. Embed glass cloth between two 0.062 -inch- (1.6-mm-) thick coats of jacket manufacturer's recommended adhesive.

3. Completely encapsulate insulation with jacket, leaving no exposed raw insulation.

B. Foil and Paper Jackets: Apply foil and paper jackets where indicated.

1. Draw jacket material smooth and tight.

2. Apply lap or joint strips with the same material as jacket.

3. Secure jacket to insulation with manufacturer's recommended adhesive.

4. Apply jackets with 1-1/2-inch (40-mm) laps at longitudinal seams and 3-inch- (75-mm-) wide joint strips at end joints.

5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-retarder mastic.

C. Apply PVC jacket where indicated, with 1-inch (25-mm) overlap at longitudinal seams and end joints. Seal with manufacturer's recommended adhesive.

D. Apply metal jacket where indicated, with 2-inch (50-mm) overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches (300 mm) o.c. and at end joints.

3.8 FINISHES

A. Glass-Cloth Jacketed Insulation: Paint insulation finished with glass-cloth jacket as specified in Division 9 Section "Painting."

B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of the insulation manufacturer's recommended protective coating.

C. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.

3.9 PIPING SYSTEM APPLICATIONS

A. Insulation materials and thicknesses are specified in schedules at the end of this Section.

B. Items Not Insulated: Unless otherwise indicated, do not apply insulation to the following systems, materials, and equipment:

1. Flexible connectors.

2. Vibration-control devices.

3. Fire-suppression piping.

4. Drainage piping located in crawl spaces, unless otherwise indicated.

5. Below-grade piping, unless otherwise indicated.

6. Chrome-plated pipes and fittings, unless potential for personnel injury.

7. Air chambers, unions, strainers, check valves, plug valves, and flow regulators.

3.10 FIELD QUALITY CONTROL

A. Inspection: Owner will engage a qualified inspection agency to perform the following field quality-control inspections, after installing insulation materials, jackets, and finishes, to determine compliance with requirements:

B. Inspection: Engage a qualified inspection agency to perform the following field quality-control inspections, after installing insulation materials, jackets, and finishes, to determine compliance with requirements:

C. Inspection: Perform the following field quality-control inspections, after installing insulation materials, jackets, and finishes, to determine compliance with requirements:

1. Inspect fittings and valves randomly selected by Architect.

2. Remove fitting covers from 20 elbows or 1 percent of elbows, whichever is less, for various pipe sizes.

3. Remove fitting covers from 20 valves or 1 percent of valves, whichever is less, for various pipe sizes.

D. Insulation applications will be considered defective if sample inspection reveals noncompliance with requirements. Remove defective Work and replace with new materials according to these Specifications.

E. Reinstall insulation and covers on fittings and valves uncovered for inspection according to these Specifications.

3.11 INSULATION APPLICATION SCHEDULE, GENERAL

A. Refer to insulation application schedules for required insulation materials, vapor retarders, and field-applied jackets.

B. Application schedules identify piping system and indicate pipe size ranges and material, thickness, and jacket requirements.

3.12 INTERIOR INSULATION APPLICATION SCHEDULE

A. Service: Domestic hot and recirculated hot water.

1. Operating Temperature: 60 to 140 deg. F (15 to 60 deg. C).

2. Insulation Material: Mineral fiber.

3. Insulation Thickness: Apply the following insulation thicknesses:

a. Copper Pipe, <1 inch:1 inch

b. Copper Pipe, 1-<1.5 inches: 1 inch

c. Copper Pipe, 15-<4 inches: 1 inch

4. Field-Applied Jacket: Foil and paper.

5. Vapor Retarder Required: Yes.

6. Finish: None.

B. Service: Condensate drain piping.

1. Operating Temperature: 35 to 75 deg. F (2 to 24 deg. C).

2. Insulation Material: Flexible elastomeric.

3. Insulation Thickness: 1 inch

4. Field-Applied Jacket: None.

5. Vapor Retarder Required: Yes.

6. Finish: None.

C. Service: Exposed sanitary drains and domestic water supplies and stops for fixtures for the disabled.

1. Operating Temperature: 35 to 120 deg. F (2 to 49 deg. C).

2. Insulation Material: Flexible elastomeric.

3. Insulation Thickness: 1 inch

4. Field-Applied Jacket: PVC P-trap and supply covers.

5. Vapor Retarder Required: No.

6. Finish: Painted.

D. Service: Refrigerant suction and hot-gas piping.

1. Operating Temperature: 35 to 50 deg. F (2 to 10 deg. C).

2. Insulation Material: Flexible elastomeric.

3. Insulation Thickness: Apply the following insulation thicknesses:

a. Copper Pipe, <1 inch:1 inch

b. Copper Pipe, 1-<1.5 inches: 1 inch

c. Copper Pipe, 15-<4 inches:1 inch

4. Field-Applied Jacket: Stainless steel.

5. Vapor Retarder Required: Yes.

6. Finish: None.

E. Service: Diesel-engine exhaust.

1. Operating Temperature: 850 deg. F (454 deg. C) and lower.

2. Insulation Material: Calcium silicate.

3. Insulation Thickness: Apply the following insulation thicknesses:

a. Steel Pipe, 0.25-1.25 inches:3 inches

b. Steel Pipe, 1.5-3 inches: 3.5 inches

c. Steel Pipe, 3.5-5 inches:4 inches

d. Steel Pipe, 6-10 inches: 4 inches

4. Field-Applied Jacket: Stainless steel.

5. Vapor Retarder Required: No.

6. Finish: None.

3.13 EXTERIOR INSULATION APPLICATION SCHEDULE

A. This application schedule is for aboveground insulation outside the building. Loose-fill insulation, for belowground piping, is specified in Division 2 piping distribution Sections.

B. Service: Refrigerant suction.

1. Operating Temperature: 35 to 50 deg. F (2 to 10 deg. C).

2. Insulation Material: Flexible elastomeric.

3. Insulation Thickness: Apply the following insulation thicknesses:

a. Copper Pipe, <1 inch:1 inch

b. Copper Pipe, 1-<1.5 inches:1 inch

c. Copper Pipe, 15-<4 inches:1 inch

4. Field-Applied Jacket: Stainless steel.

5. Vapor Retarder Required: Yes.

6. Finish: None.

END OF SECTION

SECTION 15100

VALVES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes general duty valves common to several mechanical piping systems.

B. Related Sections: The following Sections contain requirements that relate to this Section:

1. Special purpose valves are specified in Division 15 piping system Sections.

2. Valve tags and charts are specified in Division 15 Section "Mechanical Identification."

1.3 SUBMITTALS

A. General: Submit each item in this Article according to the Conditions of the Contract and Division 1 Specification Sections.

B. Product Data for each valve type. Include body material, valve design, pressure and temperature classification, end connection details, seating materials, trim material and arrangement, dimensions and required clearances, and installation instructions. Include list indicating valve and its application.

C. Maintenance data for valves to include in the operation and maintenance manual specified in Division 1. Include detailed manufacturer's instructions on adjusting, servicing, disassembling, and repairing.

1.4 QUALITY ASSURANCE

A. Single-Source Responsibility: Comply with the requirements specified in Division 1 Section "Materials and Equipment," under "Source Limitations" Paragraph.

B. ASME Compliance: Comply with ASME B31.9 for building services piping and ASME B31.1 for power piping.

C. MSS Compliance: Comply with the various MSS Standard Practice documents referenced.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Prepare valves for shipping as follows:

1. Protect internal parts against rust and corrosion.

2. Protect threads, flange faces, grooves, and weld ends.

3. Set globe and gate valves closed to prevent rattling.

4. Set ball and plug valves open to minimize exposure of functional surfaces.

5. Set butterfly valves closed or slightly open.

6. Block check valves in either closed or open position.

B. Use the following precautions during storage:

1. Maintain valve end protection.

2. Store indoors and maintain valve temperature higher than ambient dew-point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.

C. Use a sling to handle large valves. Rig to avoid damage to exposed parts. Do not use handwheels and stems as lifting or rigging points.

PART 2 PRODUCTS

2.1 BASIC, COMMON FEATURES

A. Design: Rising stem or rising outside screw and yoke stems, except as specified below.

1. Non-rising stem valves may be used only where headroom prevents full extension of rising stems.

B. Pressure and Temperature Ratings: As indicated in the "Application Schedule" of Part 3 of this Section and as required to suit system pressures and temperatures.

C. Sizes: Same size as upstream pipe, unless otherwise indicated.

D. Operators: Use specified operators and handwheels, except provide the following special operator features:

1. Handwheels: For valves other than quarter turn.

2. Lever Handles: For quarter-turn valves 6 inches (DN150) and smaller, except for plug valves, which shall have square heads. Furnish Owner with 1 wrench for every 10 plug valves.

3. Chain-Wheel Operators: For valves 4 inches (DN100) and larger, installed 96 inches (2400 mm) or higher above finished floor elevation.

4. Gear-Drive Operators: For quarter-turn valves 8 inches (DN200) and larger.

E. Extended Stems: Where insulation is indicated or specified, provide extended stems arranged to receive insulation.

F. Bypass and Drain Connections: Comply with MSS SP-45 bypass and drain connections.

G. Threads: ASME B1.20.1.

H. Flanges: ASME B16.1 for cast iron, ASME B16.5 for steel, and ASME B16.24 for bronze valves.

I. Solder Joint: ASME B16.18.

1. Caution: Where soldered end connections are used, use solder having a melting point below 840 deg. F (450 deg. C) for gate, globe, and check valves; below 421 deg. F (216 deg. C) for ball valves.

2.2 GATE VALVES

A. Gate Valves, 2-1/2 Inches (DN65) and Smaller: MSS SP-80; Class 125, 200-psi (1380-kPa) cold working pressure (CWP), or Class 150, 300-psi (2070-kPa) CWP; ASTM B 62 cast-bronze body and bonnet, solid-bronze wedge, copper-silicon alloy rising stem, teflon-impregnated packing with bronze packing nut, threaded or soldered end connections; and with aluminum or malleable-iron handwheel.

B. Gate Valves, 3 Inches (DN80) and Larger: MSS SP-70, Class 125, 200-psi (1380-kPa) CWP, ASTM A 126 cast-iron body and bonnet, solid cast-iron wedge, brass-alloy stem, outside screw and yoke, teflon-impregnated packing with 2-piece packing gland assembly, flanged end connections; and with cast-iron handwheel.

2.3 BALL VALVES

A. Ball Valves, 4 Inches (DN100) and Smaller: MSS SP-110, Class 150, 600-psi (4140-kPa) CWP, ASTM B 584 bronze body and bonnet, 2-piece construction; chrome-plated brass ball, standard port for 1/2-inch (DN15) valves and smaller and conventional port for 3/4-inch (DN20) valves and larger; blowout proof; bronze or brass stem; teflon seats and seals; threaded or soldered end connections:

1. Operator: Vinyl-covered steel lever handle.

2. Specify stem extension for valves installed in insulated piping systems.

3. Stem Extension: For valves installed in insulated piping.

4. Memory Stop: For operator handles.

2.4 PLUG VALVES

A. Plug Valves: MSS SP-78, 175-psi (1200-kPa) CWP, ASTM A 126 cast-iron body and bonnet, cast-iron plug, Buna N, Viton, or teflon packing, flanged or grooved end connections:

1. Operator: Lever.

2. Operator: Worm and gear with handwheel, sizes 6 inches (DN150) and larger.

3. Operator: Worm and gear with chain wheel, sizes 6 inches (DN150) and larger, 96 inches (2400 mm) or higher above floor.

2.5 GLOBE VALVES

A. Globe Valves, 2-1/2 Inches (DN65) and Smaller: MSS SP-80; Class 125, 200-psi (1380-kPa) CWP, or Class 150, 300-psi (2070-kPa) CWP; ASTM B 62 cast-bronze body and screwed bonnet, rubber, bronze, or teflon disc, silicon bronze-alloy stem, teflon-impregnated packing with bronze nut, threaded or soldered end connections; and with aluminum or malleable-iron handwheel.

B. Globe Valves, 3 Inches (DN80) and Larger: MSS SP-85, Class 125, 200-psi (1380-kPa) CWP, ASTM A 126 cast-iron body and bolted bonnet with bronze fittings, renewable bronze seat and disc, brass-alloy stem, outside screw and yoke, teflon-impregnated packing with cast-iron follower, flanged end connections; and with cast-iron handwheel.

2.6 BUTTERFLY VALVES

A. Butterfly Valves: MSS SP-67, 200-psi (1380-kPa) CWP, 150-psi (1035- kPa) maximum pressure differential, ASTM A 126 cast-iron body and bonnet, extended neck, stainless-steel stem, field-replaceable EPDM or Buna N sleeve and stem seals, wafer, lug, or grooved style:

1. Disc Type: Nickel-plated ductile iron.

2. Operator for Sizes 2 Inches (DN50) to 6 Inches (DN150): Standard lever handle with memory stop.

3. Operator for Sizes 8 Inches (DN200) to 24 Inches (DN600): Gear operator with position indicator.

4. Operator for Sizes 8 Inches (DN200) and Larger, 96 Inches (2400 mm) or Higher above Floor: Chain-wheel operator.

2.7 CHECK VALVES

A. Swing Check Valves, 2-1/2 Inches (DN65) and Smaller: MSS SP-80; Class 125, 200-psi (1380-kPa) CWP, or Class 150, 300-psi (2070-kPa) CWP; horizontal swing, Y-pattern, ASTM B 62 cast-bronze body and cap, rotating bronze disc with rubber seat or composition seat, threaded or soldered end connections:

B. Swing Check Valves, 3 Inches (DN80) and Larger: MSS SP-71, Class 125, 200-psi (1380-kPa) CWP, ASTM A 126 cast-iron body and bolted cap, horizontal-swing bronze disc, flanged or grooved end connections.

C. Wafer Check Valves: Class 125, 200-psi (1380-kPa) CWP, ASTM A 126 cast-iron body, bronze disc/plates, stainless-steel pins and springs, Buna N seals, installed between flanges.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine piping system for compliance with requirements for installation tolerances and other conditions affecting performance of valves. Do not proceed with installation until unsatisfactory conditions have been corrected.

B. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.

C. Operate valves from fully open to fully closed positions. Examine guides and seats made accessible by such operation.

D. Examine threads on valve and mating pipe for form and cleanliness.

E. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Check gasket material for proper size, material composition suitable for service, and freedom from defects and damage.

F. Do not attempt to repair defective valves; replace with new valves.

3.2 INSTALLATION

A. Install valves as indicated, according to manufacturer's written instructions.

B. Piping installation requirements are specified in other Division 15 Sections. Drawings indicate the general arrangement of piping, fittings, and specialties.

C. Install valves with unions or flanges at each piece of equipment arranged to allow servicing, maintenance, and equipment removal without system shutdown.

D. Locate valves for easy access and provide separate support where necessary.

E. Install valves in horizontal piping with stem at or above the center of the pipe.

F. Install valves in a position to allow full stem movement.

G. For chain-wheel operators, extend chains to 60 inches (1500 mm) above finished floor elevation.

H. Installation of Check Valves: Install for proper direction of flow as follows:

1. Swing Check Valves: Horizontal position with hinge pin level.

2. Wafer Check Valves: Horizontal or vertical position, between flanges.

3.3 SOLDERED CONNECTIONS

A. Cut tube square and to exact lengths.

B. Clean end of tube to depth of valve socket with steel wool, sand cloth, or a steel wire brush to a bright finish. Clean valve socket.

C. Apply proper soldering flux in an even coat to inside of valve socket and outside of tube.

D. Open gate and globe valves to fully open position.

E. Remove the cap and disc holder of swing check valves having composition discs.

F. Insert tube into valve socket, making sure the end rests against the shoulder inside valve. Rotate tube or valve slightly to ensure even distribution of the flux.

G. Apply heat evenly to outside of valve around joint until solder melts on contact. Feed solder until it completely fills the joint around tube. Avoid hot spots or overheating valve. Once the solder starts cooling, remove excess amounts around the joint with a cloth or brush.

3.4 THREADED CONNECTIONS

A. Note the internal length of threads in valve ends and proximity of valve internal seat or wall to determine how far pipe should be threaded into valve.

B. Align threads at point of assembly.

C. Apply appropriate tape or thread compound to the external pipe threads, except where dry seal threading is specified.

D. Assemble joint, wrench tight. Wrench on valve shall be on the valve end into which the pipe is being threaded.

3.5 FLANGED CONNECTIONS

A. Align flange surfaces parallel.

B. Assemble joints by sequencing bolt tightening to make initial contact of flanges and gaskets as flat and parallel as possible. Use suitable lubricants on bolt threads. Tighten bolts gradually and uniformly with a torque wrench.

C. For dead-end service, butterfly valves require flanges both upstream and downstream for proper shutoff and retention.

3.6 VALVE END SELECTION

A. Select valves with the following ends or types of pipe/tube connections:

1. Copper Tube Size, 2-1/2 Inches (DN65) and Smaller: Solder ends, except provide threaded ends for heating hot water and low-pressure steam service.

2. Steel Pipe Sizes, 2-1/2 Inches (DN65) and Smaller: Threaded or grooved end.

3. Steel Pipe Sizes, 3 Inches (DN80) and Larger: Grooved end or flanged.

3.7 APPLICATION SCHEDULE

A. General Application: Use gate, ball, and butterfly valves for shutoff duty; globe, ball, and butterfly for throttling duty. Refer to piping system Specification Sections for specific valve applications and arrangements.

B. Domestic Water Systems: Use the following valve types:

1. Gate Valves: Class 125, bronze or cast-iron body to suit piping system.

2. Ball Valves: Class 150, 600-psi (4140-kPa) CWP, with stem extension.

3.8 ADJUSTING

A. Adjust or replace packing after piping systems have been tested and put into service, but before final adjusting and balancing. Replace valves if leak persists.

END OF SECTION

SECTION 15241

MECHANICAL VIBRATION CONTROLS AND SEISMIC RESTRAINTS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes vibration isolators, vibration isolation bases, vibration isolation roof curbs, and seismic restraints and snubbers.

B. Related Sections include the following:

1. Division 15 Section "Hangers and Supports" for pipe hanger restraints.

2. Division 15 Section "Metal Ductwork" for flexible duct connectors.

3. Division 15 piping Sections for flexible pipe connectors.

1.3 SUBMITTALS

A. Product Data: Indicate types, styles, materials, and finishes for each type of isolator specified. Include load deflection curves.

B. Shop Drawings: Show designs and calculations, certified by a professional engineer, for the following:

1. Design Calculations: Calculations for selection of vibration isolators, design of vibration isolation bases, and selection of seismic restraints.

2. Vibration Isolation Base Details: Detail fabrication, including anchorages and attachments to the structure and to the supported equipment. Include auxiliary motor slides and rails, and base weights.

3. Seismic Restraint Details: Detail fabrication and attachment of restraints and snubbers.

1.4 QUALITY ASSURANCE

A. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in Guam and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of vibration isolation bases and seismic restraints that are similar to those indicated for this Project in material, design, and extent.

1.5 PROJECT CONDITIONS

A. See IBC seismic requirements, latest edition.

1.6 COORDINATION

A. Coordinate layout and installation of vibration isolation and seismic-restraint devices with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression-system components, and partition assemblies.

B. Coordinate size and location of concrete housekeeping and vibration isolation bases. Cast anchor-bolt inserts into base. Concrete, reinforcement, and formwork requirements are specified in Division 3 Sections.

C. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Division 7 Sections.

PART 2 PRODUCTS

2.1 VIBRATION ISOLATORS

A. Isolator Pads: Oil and water resistant and factory cut to sizes that match requirements of the equipment supported.

1. Rubber Isolator Pads: Elastomer (neoprene or silicone) arranged in single or multiple layers and molded with a nonslip pattern and steel baseplates of sufficient stiffness to provide uniform loading over the pad area.

2. Fiberglass or Cork Isolator Pads: Molded cork or glass fiber not less than 1 inch (25 mm) thick and pre-compressed through 10 compression cycles at 3 times the rated load.

3. Load Range: From 10 to 50 psig (69 to 345 kPa) and a deflection not less than 0.08 inch per 1 inch (2 mm per 25 mm) of thickness. Do not exceed a loading of 50 psig (345 kPa).

B. Rubber Isolator Mounts: Double-deflection type, with molded, oil-resistant rubber or neoprene isolator elements, with encapsulated top and baseplates. Factory-drilled and tapped top plate for bolted equipment mounting. Factory-drilled baseplate for bolted connection to structure. Color-code to indicate capacity range.

C. Spring Isolators: Freestanding, laterally stable, open-spring-type isolators.

1. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.

2. Minimum Additional Travel: 50 percent of the required deflection at rated load.

3. Lateral Stiffness: More than 1.2 times the rated vertical stiffness.

4. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

5. Baseplates: Factory drilled for bolting to structure and bonded to a 1/4-inch- (6-mm-) thick, rubber isolator pad attached to the baseplate underside. Size baseplates to limit floor loading to 100 psig (690 kPa).

6. Top Plates: Provide threaded studs for fastening and leveling equipment.

7. Finishes: Manufacturer's standard corrosive-resistant finish.

D. Restrained Spring Isolators: Vertically restrained, freestanding, laterally stable, steel

open-spring-type isolators.

1. Housing: Welded steel with resilient vertical limit stops to prevent spring extension due to wind loads or when weight is removed. Factory-drilled baseplate for bolting to structure and bonded to a 1/4-inch- (6-mm-) thick, rubber isolator pad attached to the baseplate underside. Provide adjustable equipment mounting and leveling bolt.

2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.

3. Minimum Additional Travel: 50 percent of the required deflection at rated load.

4. Lateral Stiffness: More than 0.8 times the rated vertical stiffness.

5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

6. Finishes: Baked enamel for metal components on isolators for interior use. Hot-dip galvanized for metal components on isolators for exterior use.

E. Rubber Hangers: Double-deflection type, with molded, oil-resistant rubber or neoprene isolator elements bonded to formed-steel housings with threaded connections for hanger rods. Color-code to indicate capacity range.

F. Spring Hangers: Combination spring and elastomeric hanger with coil spring and elastomeric insert in compression.

1. Frame: Formed steel, fabricated for connection to threaded rods and to allow for 30 degrees of angular hanger rod misalignment without binding or reducing isolation efficiency.

2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.

3. Minimum Additional Travel: 50 percent of the required deflection at rated load.

4. Elastomeric Element: Molded, oil-resistant rubber or neoprene.

5. Finishes: Baked enamel for metal components. Color-code to indicate capacity range.

2.2 SEISMIC CONTROLS

A. Thrust Restraints: Combination spring and elastomeric restraints with coil spring and elastomeric insert in compression. Factory set for thrust.

1. Frame: Formed steel, fabricated for connection to threaded rods and to allow for 30 degrees of angular hanger rod misalignment without binding or reducing isolation efficiency.

2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.

3. Minimum Additional Travel: 50 percent of the required deflection at rated load.

4. Elastomeric Element: Molded, oil-resistant rubber or neoprene.

5. Finishes: Baked enamel for metal components. Color-code to indicate capacity range.

B. Manufactured Seismic Snubbers: All-directional, double-acting snubbers.

1. Construction: Interlocking steel members restrained by a 3/4-inch- (19-mm-) thick, replaceable, shock-absorbing neoprene insert. Maintain 1/8-inch (3-mm) clearance in all directions between rigid and resilient surfaces.

C. Fabricated Seismic Snubbers: Welded structural-steel shapes designed and fabricated to restrain equipment or vibration isolation bases from excessive movement during a seismic event. Design to resist gravity forces identified by authorities having jurisdiction.

1. Construction: Welded steel shapes conforming to ASTM A 36 (ASTM A 36M).

2. Resilient Components: 3/4-inch- (19-mm-) thick, replaceable, shock-absorbing neoprene insert.

2.3 VIBRATION ISOLATION BASES

A. Fabricated Steel Bases: Structural-steel bases and rails designed and fabricated by the isolation equipment manufacturer. Include equipment static loadings, power transmission, component misalignment, and cantilever loadings.

1. Fabricate bases to shapes required, with welded structural-steel shapes, plates, and bars conforming to ASTM A 36 (ASTM A 36M). Include support brackets to anchor base to isolation units. Include pre-located equipment anchor bolts and auxiliary motor slide bases or rails.

2. Design and fabricate bases to result in the lowest possible mounting height with not less than 1-inch (25-mm) clearance above the floor.

3. Weld steel angles on frame for outrigger isolation mountings, and provide for anchor bolts and equipment support.

4. Pump Bases: Size to support pump and piping elbows.

5. Factory Finish: Manufacturer's standard corrosive-resistant finish.

2.4 VIBRATION ISOLATION ROOF CURBS

A. Description: Factory-assembled, fully enclosed, insulated, air- and watertight curb designed to resiliently support roof-mounted equipment and to withstand 175-mph (78-m/s) wind impinging laterally against the side of the equipment. Design restraints to meet seismic requirements of authorities having jurisdiction.

B. Components: Upper support frame; lower support assembly; freestanding, unhoused, laterally stable steel springs; vertical and horizontal restraints.

1. Lower Support Assembly: Provide a means of attachment to the building structure and include a wood nailer strip for attachment of roof material and 2 inches (50 mm) of rigid insulation on the inside of the assembly.

2. Spring Isolators: As indicated or scheduled. Include adjustment bolt to permit leveling of equipment after installation. Attach to lower assembly with a rubber

isolation pad. Locate spring isolators so they are accessible for adjustment at any time during the life of the installation without interfering with the integrity of the roof.

3. Water Seal: Elastomeric seal conforming to UL Class A roofing materials, attached to the upper support frame, extending down past the wood nailer of the lower support assembly, and counter-flashed over the roof materials.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install and anchor vibration-, sound, and seismic-control products according to manufacturer's written instructions and authorities having jurisdiction.

B. Anchor interior mounts, isolators, hangers, and snubbers to vibration isolation bases. Bolt isolator baseplates to structural floors as required by authorities having jurisdiction.

C. Anchor exterior mounts, isolators, hangers, and snubbers to vibration isolation bases. Bolt isolator baseplates to structural supports as required by authorities having jurisdiction.

D. Install pipe connectors at connections for equipment supported on vibration isolators.

3.2 SEISMIC CONTROL

A. Vibration Isolation Bases: Mount equipment on structural-steel bases or concrete inertia bases.

B. Snubbers: Install the required number of seismic snubbers on each spring-mounted piece of equipment. Locate snubbers as close as possible to the vibration isolators and bolt to supporting structure.

3.3 ADJUSTING AND CLEANING

A. Adjust limit stops on restrained spring isolators to mount equipment at normal operating height. After equipment installation is complete, adjust limit stops so they are out of contact during normal operations.

B. Adjust thrust restraints for a maximum of 1/4 inch (6 mm) of movement at start and stop.

1.4 SUBMITTALS FOR REVIEW

A. Product Data: Provide manufacturers catalogue information. Indicate valve data and ratings.

B. Shop Drawings: Indicate pipe materials used, jointing methods, supports, floor and wall penetration seals. Indicate installation, layout, weights, mounting and support details, and piping connections as required by NFPA 13.

1.5 SUBMITTALS AT PROJECT CLOSEOUT

A. Project Record Documents: Record actual locations of components and tag numbering.

B. Operation and Maintenance Data: Include installation instructions and spare parts lists.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum three years documented experience.

B. Installer Qualifications: Company specializing in performing the work of this section with minimum three years documented experience.

C. Design fire sprinkler system under direct supervision of a Professional Fire Protection Engineer experienced in design of this Work and licensed in the U.S. Territory of Guam.

1.7 REGULATORY REQUIREMENTS

A. Conform to UL and/or FM.

B. Sprinkler Systems: Conform work to NFPA 13.

C. Welding Materials and Procedures: Conform to ASME Code.

D. Valves: Bear UL and/or FM label or marking. Provide manufacturer's name and pressure rating marked on valve body.

E. Products Requiring Electrical Connection: Listed and classified as suitable for the purpose specified and indicated.

1.8 DELIVERY, STORAGE, AND PROTECTION

A. Deliver and store valves in shipping containers, with labelling in place.

B. Provide temporary protective coating on cast iron and steel valves.

C. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.

PART 2 PRODUCTS

2.1 BURIED PIPING

A. Steel Pipe: ASTM A53, Schedule 40 black, with ASME C105 polyethylene jacket, or double layer, half lapped 10 mil (0.25 mm) polyethylene tape.

1. Steel Fittings: ASME B16.9, wrought steel, buttwelded; ASME B16.25, buttweld ends; ASTM A234, wrought carbon steel and alloy steel; ASME B16.11, forged steel socket welded and threaded; with double layer, half lapped 10 mil (0.25 mm) polyethylene tape.

2. Joints: AWS D1.1, welded.

2.2 ABOVE GROUND PIPING

A. Steel Pipe: ASTM A53; Schedule 40 black.

1. Steel Fittings: ASME B16.9, wrought steel, buttwelded; ASME B16.25, buttweld ends; ASTM A234, wrought carbon steel and alloy steel; ASME B16.5, steel flanges and fittings; ASME B16.11, forged steel socket welded and threaded.

2. Cast Iron Fittings: ASME B16.1, flanges and flanged fittings; ASME B16.4, threaded fittings.

3. Malleable Iron Fittings: ASME B16.3, threaded fittings ASTM A47.

4. Mechanical Grooved Couplings: Malleable iron housing clamps to engage and lock, "C" shaped elastomeric sealing gasket, steel bolts, nuts, and washers; galvanized for galvanized pipe.

5. Mechanical Formed Fittings: Carbon steel housing with integral pipe stop and O-ring pocked and O-ring, uniformly compressed into permanent mechanical engagement onto pipe.

2.3 PIPE HANGERS AND SUPPORTS

A. Conform to NFPA 13.

B. Hangers for Pipe Sizes 1/2 to 1 1/2 Inch (15 to 40 mm): Malleable iron, adjustable swivel, split ring.

C. Hangers for Pipe Sizes 2 Inches (50 mm) and Over: Carbon steel, adjustable, clevis.

D. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.

E. Wall Support for Pipe Sizes to 3 Inches (80 mm): Cast iron hook.

F. Wall Support for Pipe Sizes 4 Inches (100 mm) and Over: Welded steel bracket and wrought steel clamp.

G Vertical Support: Steel riser clamp.

H. Floor Support: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.

I. Copper Pipe Support: Carbon steel ring, adjustable, copper plated.

2.4 GATE VALVES

A. Up to and including 2 Inches (50 mm):

1. Bronze body, bronze trim, rising stem, hand wheel, solid wedge or disc, threaded ends.

B. Over 2 Inches (50 mm):

1. Iron body, bronze trim, rising stem pre-grooved for mounting tamper switch, hand wheel, OS&Y, solid rubber covered bronze or cast iron wedge, grooved ends.

C. Over 4 Inches (100 mm):

1. Iron body, bronze trim, non-rising stem with bolted bonnet, solid bronze wedge, flanged ends, iron body indicator post assembly.

2.5 GLOBE VALVES

A. Up to and including 2 Inches (50 mm):

1. Bronze body, bronze trim, rising stem and hand wheel, inside screw, renewable rubber disc, threaded ends, with back-seating capacity.

B. Over 2 Inches (50 mm):

1. Iron body, bronze trim, rising stem, hand wheel, OS&Y, plug type disc, flanged ends, renewable seat and disc.

2.6 BALL VALVES

A. Up to and including 2 Inches (50 mm):

1. Bronze two-piece body, brass, chrome plated bronze, or stainless steel ball, teflon seats and stuffing box ring, lever handle and balancing stops, threaded ends.

B. Over 2 Inches (50 mm):

1. Cast steel body, chrome plated steel ball, teflon seat and stuffing box seals, lever handle or gear drive hand wheel for sizes 10 inches (250 mm) and over, flanged.

2.7 BUTTERFLY VALVES

A. Bronze Body:

1. Stainless steel disc, resilient replaceable seat, threaded or grooved ends, extended neck, hand wheel and gear drive and integral indicating device.

B. Cast or Ductile Iron Body

1. Cast or ductile iron, chrome or nickel plated ductile iron or aluminum bronze disc, resilient replaceable EPDM seat, wafer, lug, or grooved ends, extended neck, hand wheel and gear drive and integral indicating device.

2.8 CHECK VALVES

A. Up to and including 2 Inches (50 mm):

1. Bronze body and swing disc, rubber seat, threaded ends.

B. Over 2 Inches (50 mm):

1. Iron body, bronze trim, swing check with rubber disc, renewable disc and seat, flanged ends with automatic ball check.

C. 4 Inches (100 mm) and Over:

1. Iron body, bronze disc, stainless steel spring, resilient seal, threaded, wafer, or flanged ends.

2.9 DRAIN VALVES

A. Compression Stop:

1. Bronze with hose thread nipple and cap.

B. Ball Valve:

1. Brass with cap and chain, 3/4-inch (20 mm) hose thread.

PART 3 EXECUTION

3.1 PREPARATION

A. Ream pipe and tube ends. Remove burrs. Bevel plain end ferrous pipe.

B. Remove scale and foreign material, from inside and outside, before assembly.

C. Prepare piping connections to equipment with flanges or unions.

3.2 INSTALLATION

A. Install piping in accordance with NFPA 13 for sprinkler systems and NFPA 24 for service mains.

B. Route piping in orderly manner, plumb and parallel to building structure. Maintain gradient.

C. Install piping to conserve building space, to not interfere with use of space and other work.

D. Group piping whenever practical at common elevations.

E. Sleeve pipes passing through partitions, walls, and floors.

F. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.

G. Inserts:

1. Provide inserts for placement in concrete formwork.

2. Provide inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.

3. Provide hooked rod to concrete reinforcement section for inserts carrying pipe over 4 inches (100 mm).

4. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.

5. Where inserts are omitted, drill through concrete slab from below and provide through bolt with recessed square steel plate and nut above slab.

H. Pipe Hangers and Supports:

1. Install in accordance with NFPA 13 and NFPA 14.

2. Install hangers to provide minimum 1/2-inch (15 mm) space between finished covering and adjacent work.

3. Place hangers within 12 inches (300 mm) of each horizontal elbow.

4. Use hangers with 1 1/2 inch (40 mm) minimum vertical adjustment. Design hangers for pipe movement without disengagement of supported pipe.

5. Support vertical piping at every floor. Support riser piping independently of connected horizontal piping.

6. Where several pipes can be installed in parallel and at same elevation, provide multiple or trapeze hangers.

7. Prime coat exposed steel hangers and supports. Hangers and supports located in crawl spaces, pipe shafts, and suspended ceiling spaces are not considered exposed.

I. Slope piping and arrange systems to drain at low points. Use eccentric reducers to maintain top of pipe level.

J. Prepare pipe, fittings, supports, and accessories for finish painting. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welding. Refer to Section 09900.

K. Do not penetrate building structural members unless indicated.

L. Provide sleeves when penetrating floors and walls. Seal pipe and sleeve penetrations to achieve fire resistance equivalent to fire separation required.

M. When installing more than one piping system material, ensure system components are compatible and joined to ensure the integrity of the system. Provide necessary joining fittings. Ensure flanges, union, and couplings for servicing are consistently provided.

N. Die cut threaded joints with full cut standard taper pipe threads with red lead and linseed oil or other nontoxic joint compound applied to male threads only.

O. Install valves with stems upright or horizontal, not inverted. Remove protective coatings prior to installation.

P. Provide gate or butterfly valves for shut off or isolating service.

Q. Provide drain valves at main shut off valves, low points of piping and apparatus.

SECTION 15320

FIRE PUMPS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Fire pump package.

B. Fire pump motor.

C. Electric jockey pump.

D. Controllers.

1.2 RELATED SECTIONS

A. Section 15170 - Motors.

B. Section 15245 - Vibration Isolation.

C. Section 15260 - Piping Insulation.

D. Section 15280 - Equipment Insulation.

E. Section 15310 - Fire Protection Piping.

F. Section 15410 - Plumbing Piping.

G. Section 16180 - Equipment Wiring Systems: Electrical characteristics and wiring connections.

1.3 REFERENCES

A. FM - Factory Mutual System - Approval Guide.

B. NEMA MG-1 - Motors and Generators.

C. NEMA 250 - Enclosures for Electrical Equipment (1000 Volt

D. NFPA 13 - Installation of Sprinkler Systems.

D. NFPA 20 - Installation of Centrifugal Fire Pumps.

E. NFPA 24 - Private Fire Service Mains and their Appurtenances.

F. NFPA 37 - Installation and Use of Stationary Combustion Engines and Gas Turbines.

G. NFPA 70 - National Electrical Code.

H. UL - Fire Protection Equipment Directory.

I. UL 448 - Pumps for Fire Protection Service.

J. UL 778 - Motor Operated Water Pumps.

K. UL 1478 - Fire Pump Relief Valves.

1.4 DESIGN REQUIREMENTS

A. Conform to NFPA 20.

1.5 PERFORMANCE REQUIREMENTS

A. Conform to greater of NFPA 20 or NFPA 13.

1.6 SUBMITTALS FOR REVIEW

A. Section 01300 - Submittals: Procedures for submittals.

B. Product Data: Provide manufacturers literature including general assembly, pump curves showing performance characteristics with pump and system, operating point indicated, NPSH curve, controls, wiring diagrams, and service connections.

C. Shop Drawings: Indicate layout, general assembly, components, dimensions, weights, clearances, and methods of assembly.

1.7 SUBMITTALS FOR INFORMATION

A. Section 01300 - Submittals: Procedures for submittals.

B. Test Reports: Indicate results of hydrostatic test and field acceptance tests performed in accordance with NFPA 20.

C. Manufacturer's Instructions: Indicate support details, connection requirements, for fire pump system.

1.8 SUBMITTALS AT PROJECT CLOSEOUT

A. Section 01700 - Contract Closeout:01730 - Operation and Maintenance Data: 01740 - Warranties and Bonds: Procedures for submittals.

B. Project Record Documents: Record actual locations of components and accessories.

C. Certificates: Certify that fire pumps meet or exceed specified requirements at specified operating conditions and that the installation complies with regulatory requirements. Submit summary and results of shop tests performed in accordance with NFPA 20.

D. Operation Data: Include manufacturer’s instructions, start-up data, trouble-shooting check lists, for pumps, drivers, and controllers.

E. Maintenance Data: Include manufacturers literature, cleaning procedures, replacement parts lists, and repair data for pumps, drivers and controllers.

1.9 QUALITY ASSURANCE

A. Perform Work in accordance with NFPA 20 . Maintain one copy on site.

B. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum 3 years experience.

C. Installer Qualifications: Company specializing in performing the work of this section [with minimum 3 years experience.

D. Design fire pump system under direct supervision of a Professional Engineer experienced in design of this Work and licensed at the place where the Project is located.

1.10 REGULATORY REQUIREMENTS

A. Conform to UL or FM.

B. Perform work in accordance with NFPA 20.

C. Conform to NFPA 20 for installation and testing of fire pumps, drivers, and controllers.

D. Provide certificate of compliance from authority have jurisdiction indicating approval of field acceptance tests.

E. Equipment and Components: Bear UL or FM label or marking.

F. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc., as suitable for the purpose specified and indicated.

1.11 PRE-INSTALLATION MEETING

A. Section 01039 - Coordination and Meetings: Pre-installation meeting.

B. Convene one week before starting work of this section.

1.12 DELIVERY, STORAGE, AND PROTECTION

A. Section 01600 - Material and Equipment: Transport, handle, store, and protect products.

B. Accept fire pumps and components on site in factory packing. Inspect for damage. Comply with manufacturers rigging and installation instructions.

C. Protect fire pumps and components from physical damage including effects of weather, water, and construction debris.

D. Provide temporary inlet and outlet caps, and maintain in place until installation.

1.13 MAINTENANCE SERVICE

A. Section 01700 - Contract Closeout.

B. Provide service and maintenance of fire pump, driver, and controller foroneyear from date of Substantial Completion.

1.14 EXTRA MATERIALS

A. Section 01700 - Contract Closeout. 01730 - Operation and Maintenance Data.

B. Provide one set of gaskets seals for each pump type and model supplied.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. AC Fire Pump

B. Other Acceptable Manufacturers:

1. Aurora Pumps

2. Fairbanks

3. Pentair

C. Section 01600 - Material and Equipment: Product options and substitutions. Substitutions: Not permitted.

2.2 HORIZONTAL BASE MOUNTED PUMPS

A. Type: UL 448 and UL 778 , horizontal shaft, single stage, double suction, direct connected, horizontally split casing, for 250 psi (1 720 kPa) maximum working pressure.

B. Casing: Cast iron, with suction and discharge gage ports, renewable bronze casing wearing rings, seal flush connection, drain plug, flanged suction and discharge.

C. Impeller: Bronze double suction fully enclosed, balanced and keyed to shaft.

D. Bearings: Grease lubricated ball bearings, replaceable without opening casing.

E. Shaft: Alloy steel with replaceable bronze shaft sleeve.

F. Seal: Packing gland with minimum four rings graphite impregnated packing and bronze lantern rings, 230 degrees F (110 degrees C) maximum continuous operating temperature.

G. Drive: Flexible coupling with coupling guard.

H. Baseplate: Cast iron [or fabricated steel] with integral drain rim.

I. Performance:

1. Flow: gpm 500 at 208 feet head

2. Motor: 40 hp, 480 volt, three phase, 60 Hz

1. Flow: gpm 500 at 208 feet head

2. Motor: 40 hp, 480 volt, three phase, 60 Hz

2.3 FIRE PUMP ACCESSORIES

A. Eccentric suction reducer and OS&Y gate or butterfly valve on suction side of pump.

B. Concentric increaser and check valve in pump discharge and OS&Y gate or butterfly valve on system side of check valve.

C. Fire pump bypass fitted with OS&Y gate or butterfly valves and check valve.

D. Main relief valve, UL 1478, open type waste cone.

E. Suction pressure gage, 4 1/2 inch (110 mm) diameter dial with snubber, valve cock and lever handle.

F. Discharge pressure gage mounted on board attached to pump, with snubber, valve cock and l ever handle.

G. Casing 3/4 inch (20 mm) relief valve.

H. Float operated 3/4 inch automatic air release valve.

I. Hose valve manifold with 2 1/2 inch hose gate valves with caps and chains.

J. Flow metering system for closed loop testing.

2.4 ELECTRIC MOTOR DRIVE

A. Motor: Squirrel cage induction type; in open drip proof NEMA MG-1 enclosure, 3500rpm. Refer to Section 15170.

B. Controller: Limited service type with [auto-transformer] [primary resistor] [reduced voltage,] [part winding] [across-the-line] starter, in NEMA 250 enclosure, including the following:

3. Disconnect Switch: Externally operable, quick break type.

4. Circuit Breaker: Size to NFPA 20, minimum 65,000 amperes interrupting capacity.

5. Motor Starter: Energized automatically through pressure switch or manually by externally operable handle.

6. Pressure Switch: Set to cut in at churn pressure.

7. Running Period Timer: Keeps motor in operation when started automatically, for a minimum of seven minutes.

8. Pilot Lamp: Indicates circuit breaker closed and power available.

9. Test Accessories: Ammeter test link and voltmeter test studs.

10. Alarm Relay: Energizes alarm to indicate circuit breaker open or power failure.

11. Switch Relay: For remote start.

12. Manual Selector Station: On enclosure marked "Automatic" and "Non-Automatic."

C. Electrical Characteristics:

1. 40 hp.

2. 480 volts, three phase, 60 Hz.

2.5 PRESSURE BOOSTER (JOCKEY) PUMP

A. Manufacturer: Goulds SV

B. Other acceptable manufacturers offering equivalent products.

1. Pentair

2. Grundfos

3. Xylem

4. Section 01600 - Material and Equipment: Product options and substitutions. Substitutions: Permitted.

C. Electrically operated, turbine type with standard open drip-proof horizontal motor.

D. Control by automatic jockey pump controller with full voltage starter [and minimum run timer] to start pump on pressure drop in system [and stay in operation for minimum period of time]. Fire pump shall start automatically on further pressure drop or on jockey pump failure.

E. Electrical Characteristics:

1. 2 hp.

2. 480 volts, three phase, 60 Hz.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install in accordance with NFPA 20.

B. Install diesel engine drive in accordance with NFPA 37.

C. Provide access space around pumps for service; no less than minimum as recommended by manufacturer.

D. Install piping in accordance with Section 15310. Decrease from line size with long radius reducing elbows or reducers. Support piping adjacent to pump such that no weight is carried on pump casings. For base mounted pumps, provide supports under elbows on pump suction and discharge.

E. Provide drains for bases and seals, piped to and discharging into floor drains.

F. Mount unit on vibration isolators. Refer to Section 15245.

G. Provide piping for fuel supply and return connected to motor. Provide piping to and from exhaust silencer with thimble at wall or roof penetrations. Refer to Section 15410.

H. Insulate piping associated with pump, pump casing and exhaust silencer. Refer to Section 15260 and Section 15280.

I. Provide for connection to electrical service. Refer to Section 16180.

J. Lubricate pumps before start-up.

K. Check, align, and certify base mounted pumps by qualified millwright prior to start-up.

3.2 FIELD QUALITY CONTROL

A. Section 01400 - Quality Assurance and 01650 - Starting of Systems: Field testing.

B. Perform flow test on entire system in accordance with NFPA 20.

C. Require test to be witnessed by authority having jurisdiction and Architect/Engineer.

3.3 DEMONSTRATION AND INSTRUCTIONS

A. Section 01700 - Contract Closeout: Demonstrating installed work.

B. Demonstrate automatic operation of system including verification of pressure switch set points.

END OF SECTION

SECTION 15330

WET PIPE SPRINKLER SYSTEM

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

Section 15010 "Basic Mechanical Requirements," applies to this section, with the additions and modifications specified herein.

1.2 DESCRIPTION

A. The work includes designing and providing new automatic wet pipe fire extinguishing sprinkler system for uniform distribution of water by hydraulic design to afford complete fire protection coverage throughout the project. Sprinkler protection shall provide 100% coverage for the enclosed areas of the buildings in accordance with NFPA 13.

B. System shall be provided with earthquake protection. Design and install system to give full consideration to blind spaces, piping, electrical equipment, ductwork, and all other construction and equipment to afford complete coverage in accordance with detailed drawings to be submitted for approval. Devices and equipment for fire protection service shall be listed by the Underwriters' Laboratories, Inc. or approved by Factory Mutual System. In the NFPA publications referred to herein, the advisory provisions shall be considered to be mandatory, as though the word "shall" had been substituted for "should" wherever it appears; reference to the "authority having jurisdiction" shall be interpreted to mean the Government of Guam Fire Department and Department of Public Works. The work shall begin at the point indicated.

1.3 APPLICABLE PUBLICATIONS

The publications listed below form a part of this specification to the extent referenced. The publications are referred to in the text by the designation only.

A. ASTM A 53-83 - Pipe, Steel, Black and Hot-Dipped, Zinc-Coated Welded and Seamless

B. AWWA C 104-80 - Cement-Mortar Lining for Cast-Iron and Ductile-Iron Pipe and Fitting for Water

C. AWWA C 110-82 - Gray-Iron and Ductile-Iron Fittings, 3 in. Through 48 in. for Water and Other Liquids

D. AWWA C 151-81 - Ductile-Iron Pipe, Centrifugally Cast in Metal Molds or Sand-Lined Molds, for Water and Other Liquids

E. AWWA C 500-80 - Gate Valves, 3 Inch Through 48 Inch, for Water and Sewage Systems

F. AWWA C 601-81 - Disinfecting Water Mains

G. FM 1992 - Approval Guide

H. NFPA 10-90 - Portable Fire Extinguishers

I. NFPA 13-91 - Sprinkler Systems

J. NFPA 14-90 - Standpipe and Hose Systems

K. NFPA 24-90 - Outside Protection

L. NFPA 70-90 - National Electrical Code

M. UL 262-80 - Gate Valves for Fire Protection Service

N. UL 789-82 - Indicator Posts for Fire Protection Service

1.4 QUALIFICATIONS OF INSTALLER

Prior to installation, submit data for approval by the Engineer, showing that the Contractor has successfully installed automatic fire extinguishing sprinkler systems of the same type and design as specified herein, or that he has a firm contractual agreement with a subcontractor having such required experience. The data shall include the names and locations of at least two installations where the Contractor, or the subcontractor referred to above, has installed such systems. The Contractor shall indicate the type and design of each system and certify that each system has performed satisfactorily in the manner intended for a period of not less than two years.

1.5 SUBMITTALS

Partial submittals will not be acceptable. Annotate descriptive data to show the specific model, type, and size of each item the Contractor proposes to furnish. Prepare working drawings on sheets not smaller than 30 inches by 42 inches, in accordance with the requirements for "Working Drawings (Plans) as specified in NFPA 13 and NFPA 14, and include data essential to the proper installation of each system. Do not commence work until the design of each system and the various components have been approved. The Engineer, Guam Fire Department and Department of Public Works will review and approve all submittals. Before work is commenced, submit for approval complete sets of working drawings and calculations for each sprinkler system and working drawings for the standpipe. Working drawings and calculations must be stamped by a registered professional engineer.

A. Manufacturer's Data:

1. Pipe, fittings, and mechanical coupling

2. Valves including gate, check, relief and globe

3. Sprinkler heads

4. Pipe hangers, supports and earthquake sway bracing

5. Alarm pressure switches

6. Valve tamper switches and waterflow switches

7. Fire department connections

8. Fire Hose Cabinets

9. Sprinkler stoppers

B. Shop (Working) Drawings:

1. Sprinkler system layout

2. Hydraulic calculations

3. Standpipe system layout

C. Samples: One of each type of sprinkler head and escutcheon plates to be used.

D. Certificates of Compliance:

1. Contractor's material and test certificate

2. Pipe and fittings

E. Operation and Maintenance Manuals: For all sprinkler system components.

1.6 AS-BUILT (RECORD) WORKING DRAWINGS

After completion, but before final acceptance of the work, furnish a complete set of drawings of each sprinkler, fire pump and standpipe system for record purposes. The drawings shall be not smaller than 30 inches by 42 inches reproducible drawings on mylar film with title block (8 inches by 4 inches) similar to full size contract drawings. Furnish the as-built (record) working drawings in addition to the as-built contract drawings required by Division 1 Section, “Project Record Documents”.

1.7 ELECTRICAL WORK

Provide under this section as specified in Division 16 "Electrical".

PART 2 PRODUCTS

2.1 DESIGN OF SPRINKLER SYSTEMS

A. Design of wet pipe fire extinguishing sprinkler system shall be by hydraulic calculations for uniform distribution of water over the design area and shall conform to NFPA 13 and to the requirements as specified herein.

B. Distribution of Water: Distribution shall be essentially uniform throughout the area in which it is assumed the sprinkler heads will open. Variation in discharge from individual heads in the hydraulically most remote area shall be between 100 and 120 percent of the specified density.

C. Density of Application of Water: Size pipe to provide the specified density when the system is discharging the specified total maximum required flow. Application to horizontal surfaces below the sprinklers shall be as indicated.

D. Sprinkler Discharge Area: Shall be the hydraulically most remote 1,500 sf as defined by NFPA 13.

E. Outside Hose Allowances: Hydraulic calculations shall include allowances for outside hose.

F. Water Supply: Water supply information shall be as indicated on the drawing. Contractor shall perform flow test on water supply to ensure that there is available flow and pressure for each sprinkler system.

G. Friction Losses: Calculate losses in pipe in accordance with the Hazen-Williams formula with 'C' value of 120 for steel pipe and 140 for buried cement-lined ductile-iron pipe and asbestos cement pipe.

H. Velocity: Sprinkler system hydraulic design shall limit velocities of flow in pipes to a maximum of 20 feet per second.

I. Location of Sprinkler Heads: Heads in relation to the ceiling and walls and the spacing of sprinklers shall not exceed that permitted by NFPA 13.

2.2 EQUIPMENT

A. Sprinkler Heads: Release element of each head shall be of the ordinary temperature rating or higher as suitable for the individual location where it is installed. Provide recessed chromium-plated pendant sprinklers, and chromium-plated ceiling plates below suspended ceilings. Sidewall sprinklers shall be chromium plated. Sprinklers located in exposed areas shall be stainless steel or polyester coated.

B. Heads in isolation cells and other security areas shall be institutional type heads. Verify with the Architect those areas requiring institutional type heads.

C. Cabinet: Provide extra sprinkler heads and sprinkler head wrench and three of the proper types of sprinkler stoppers in a metal cabinet located as instructed. The number and types of extra sprinkler heads shall be as specified in NFPA 13.

D. Sprinkler Supervisory Devices: Provide as indicated. Connection of the sprinkler supervisory devices to the building fire alarm system shall be provided under Division 16, Electrical.

E. Alarm Pressure Switch: UL listed or FM approved.

F. Water Flow Switch: Provide listed or approved vane type water flow switches complete with an adjustable pneumatic retard with an adjustable range of 0 to approximately 60 seconds and two sets of Form C electrical contacts.

G. Valve Tamper Switch: Provide each control valve with a listed or approved tamper switch for the automatic transmittal of a trouble signal.

2.3 ABOVE GROUND PIPING SYSTEMS

A. Inspect, test and approve piping before covering, or concealing. Provide fittings for changes in direction of piping and for all connections. Make changes in piping sizes through reducing pipe fittings; the use of bushings will not be permitted. Welding shall be performed in the shop; field welding will not be permitted.

B. Pipe and Fittings: Provide in accordance with NFPA 13, except as modified hereinafter. All pipe shall be black steel, schedule 40. Plastic pipe and copper tubing shall not be permitted. Fittings into which sprinkler heads, sprinkler head riser nipples, or drop nipples are threaded shall be welded, threaded, or grooved-end type. Use of plain-end fittings with mechanical couplings (which utilize steel gripping devices to bite into pipe when pressure is applied) will not be permitted. Rubber gasketed grooved-end pipe and fittings with mechanical couplings shall be permitted in pipe sizes 1.25 inches and larger; fittings shall be UL listed or FM approved for use in sprinkler systems.

C. Provide earthquake sway brace within 24 inches of each flexible coupling which is installed in horizontal piping for purposes other than earthquake protection.

D. Pipe Hangers, Supports, and Earthquake Sway Bracing: Provide in accordance NFPA 13 and NFPA 14.

E. Valves: Provide valves as required by NFPA 13 and NFPA 14 and of types approved for fire service. Gate valves shall open by counter clockwise rotation. Check valves shall be flanged clear opening swing check type with flanged inspection and access cover plate for sizes 4

inches and larger. Provide OS&Y sectional valves as indicated. Where maximum pressures exceed 175 psi valves shall comply with paragraph 3-13.1.4 of NFPA 13.

F. Identification Signs: Attach proper lettered approved metal signs conforming to NFPA 13 to each valve and alarm device. Permanently affix hydraulic design data nameplates to the riser of each system.

G. Inspector's Test Connection: Provide test connections about 6 feet above the floor for each sprinkler system or portion of each sprinkler system equipped with an alarm device and locate at the hydraulically most part of each system.

H. Main and Auxiliary Drains: Provide drain piping to discharge at safe points outside each building or to sight cones attached to drains of adequate size to readily receive the full flow from each drain under maximum pressure. Provide auxiliary drains required by NFPA 13.

I. Pipe Sleeves: Provide where piping passes through walls, floors, roofs, and partitions. Secure sleeves in proper position and location. Provide sleeves of sufficient length to pass through entire thickness of walls, floors, roofs, and partitions. Provide not less than 0.25-inch space between exterior of piping or pipe insulation and interior of sleeve. Firmly pack space with insulation and caulk at both ends of the sleeve with plastic waterproof cement which will dry to a firm but pliable mass, or provide a segmented elastomeric seal.

J. Sleeves in Masonry and Concrete Walls and Floors: Provide ASTM A 53 or ASTM A 120, Schedule 40 or Standard Weight, zinc-coated steel pipe sleeves. Extend sleeves in floor slabs 3 inches above the finished floor.

K. Sleeves in Partitions and Other Than Masonry and Concrete Walls, Floors, and Roofs: Provide zinc-coated steel having weight of not less than 0.90 pounds per square foot.

L. Escutcheon Plates: Provide one piece or split hinge type metal plates for piping passing through floors, walls, and ceilings in exposed areas. Provide chromium-plated finish on plates; in finished areas.

M. Provide paint finish on plates in unfinished areas. Securely anchor plates in place with setscrews or other approved positive means.

N. Fire Department Connections: Provide connections approximately 3 feet above finish grade, of the approved two-way type with 2.5-inch National Standard female hose threads with plug and chain. The function of the connection shall be clearly indicated for the SPRINKLER SYSTEM by raised 1-inch letters cast on the cover plate or fitting. Fire department connections shall be located as indicated and approved by the Guam Fire Department.

2.4 BURIED WATER PIPING SYSTEMS:

Pipe and Fittings: Provide outside-coated, cement mortar lined, ductile-iron pipe and fittings conforming to NFPA 24 for piping under the building and less than 5 feet outside of the building walls. Anchor the joints in accordance with NFPA 24; provide concrete thrust block at the elbow where the pipe turns up toward the floor, and restrain the pipe riser with steel rods from the elbow to the flange above the floor. Minimum pipe size shall be 6 inches. Minimum depth of cover shall be 3 feet. Piping more than 5 feet outside of the building walls shall be provided under Division 2 "Site Work".

PART 3 EXECUTION

3.1 INSTALLATION

A. Equipment, material, installation, and workmanship shall be in accordance with NFPA 13 and NFPA 14, except as modified herein. Install piping straight and true to bear evenly on

hangers. Keep the interior and of new piping and existing piping affected by the Contractor's operations thoroughly cleaned of water and foreign matter. Keep piping systems clean during installation by means of plugs or other approved methods. When work is not in progress, securely close open ends of piping and fittings so that water and foreign matter will not enter the pipes or fittings. Inspect piping before placing into position. Inspect, test, and approve piping before burying, covering, or concealing. Provide fittings for changes in direction of piping and for all connections. Make changes in piping sizes through tapered reducing pipe fittings; do not use bushings.

B. Pipe Hangers (Supports): Provide additional hangers to support the concentrated loads in piping between hangers, such as for flanged valves.

3.2 DISINFECTION

Disinfect the new water piping and existing water piping affected by Contractor's operations in accordance with AWWA C601. Fill the piping systems with solution containing minimum of 50 parts per million of available chlorine and allow solution to stand for minimum of 24 hours. Flush the solution from the systems with clean water until maximum residual chlorine content is not greater than 0.2 parts per million.

3.3 FIELD PAINTING

A. Clean, pre-treat, prime, and paint new sprinkler systems including valves, piping, conduit, hangers, miscellaneous metalwork, and accessories. Apply coatings to clean dry surfaces using clean brushes. Clean the surfaces to remove dust, dirt, rust and loose mill scale. Immediately after cleaning, provide the metal surfaces with one coat of pretreatment primer applied to a minimum dry film thickness of 0.3 mil, and one coat of primer applied to a minimum dry film thickness of one mil. Exercise care to avoid painting of sprinkler heads or protective devices. Remove materials which are used to protect sprinkler heads, while painting is in process, upon the completion of painting. Remove sprinkler heads which are painted and provide new clean sprinkler heads of the proper type. Provide primed surfaces with the following:

B. Sprinkler Systems in Unfinished Areas: Unfinished areas are defined as attic spaces, spaces above suspended ceilings, crawl spaces, pipe chases, and spaces where walls or ceiling are not painted or not constructed of prefinished material. Provide primed surfaces with one coat of red enamel applied to a minimum dry film thickness of one mil.

C. Sprinkler Systems in All Other Areas: Provide primed surfaces with two coats of paint to match adjacent surfaces, except provide valves and operating accessories with one coat of red enamel or self adhering red plastic tape bands at maximum of 20-foot intervals throughout the piping systems, except in finished areas, such as offices, the red bands may be deleted.

3.4 FIELD TESTING AND FLUSHING:

A. Preliminary Tests: Hydrostatically test each system at 200 psig or at 50 psi in excess of maximum pressure when the maximum will be in excess of 150 psi, whichever is greater, for a period of two hours. Piping above suspended ceilings shall be tested, inspected and approved before installation of ceilings.

1. Flush sprinkler and standpipe piping in accordance with NFPA 13. Continue flushing operations until water is clear, but for not less than 10 minutes.
2. Test the alarms and other devices. Test the water flow alarms by flowing water through the inspector's test connection.
3. When tests have been made completed and corrections made, submit a signed and dated certificate, similar to that specified in NFPA 13, with a request for a formal

inspection and tests.

4. Formal Inspection and Tests: The Government of Guam Fire Department and Department of Public Works will witness formal tests and approve all systems before they are accepted. Submit the request for formal inspection at least 15 days prior to the date for formal inspection is to take place. An experienced technician regularly employed by the sprinkler installer shall be present during the inspection. At this inspection repeat any or all of the required tests as directed. Correct defects in the work provided by the Contractor, and make additional tests until it has been demonstrated that the system complies with all contract requirements. Furnish appliances, equipment, electrically, instruments, connecting devices, and personnel for the tests.

3.5 INSTRUCTING OPERATING PERSONNEL

Upon completion of the work and at a time designated by the Owner, provide for a period of not less than a 4-hour the services of experienced technicians regularly employed by the manufacturer of the sprinkler to instruct operating personnel in the proper operation and maintenance of the equipment.

END OF SECTION 15330

SECTION 15411

WATER DISTRIBUTION AND LPG PIPING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes water and fuel distribution piping from locations indicated to fixtures and equipment inside building.

B. Related Sections include the following:

1. Division 2 Section "Water Systems" for exterior water service piping.

2. Division 15 Section "Plumbing Specialties" for water distribution piping specialties.

1.3 DEFINITIONS

A. Water Service Piping: Water piping outside building that conveys water to building.

B. Service Entrance Piping: Water piping at entry into building between water service piping and water distribution piping.

C. Water Distribution Piping: Water piping inside building that conveys water to fixtures and equipment throughout the building.

1.4 SYSTEM PERFORMANCE REQUIREMENTS

A. Provide components and installation capable of producing piping systems with the following minimum working-pressure ratings, unless otherwise indicated:

1. Combined Fire-Protection and Domestic, Service Entrance Piping: 250 psig (1725 kPa).

2. Service Entrance Piping: 160 psig (1100 kPa).

3. Water Distribution Piping: 125 psig (860 kPa).

1.5 SUBMITTALS

A. Water Samples, Test Results, and Reports: Specified in "Field Quality Control" and "Cleaning" articles.

B. Product Data: Provide data on pipe materials, pipe fittings, valves, and accessories. Provide manufacturers catalog information. Indicate valve data and ratings.

C. Shop Drawings: Indicate pipe materials used, jointing methods, supports, floor and wall penetration seals. Indicate installation, layout, weights, mounting and support details, and piping connections.

1.6 QUALITY ASSURANCE

A. Provide listing/approval stamp, label, or other marking on piping made to specified standards.

B. Comply with ASME B31.9, "Building Services Piping," for materials, products, and installation.

C. Comply with NSF 14, "Plastics Piping Components and Related Materials," for plastic potable-water piping components. Include marking "NSF-pw" on plastic potable-water piping.

D. Comply with NSF 61, "Drinking Water System Components--Health Effects," Sections 1 through 9 for potable-water piping and components.

E. ANSI Standard: Comply with ANSI Z223.1, "National Fuel Gas Code."

F. FM Standard: Provide components listed in FM's "Fire Protection Approval Guide" if specified to be FM approved.

G. UL Standard: Provide components listed in UL's "Gas and Oil Equipment Directory" if specified to be UL listed.

PART 2 PRODUCTS

2.1 PIPES AND TUBES

A. General: Applications of the following pipe and tube materials are indicated in Part 3 "Piping Applications" Article.

B. Soft Copper Tube: ASTM B 88, Types K and L (ASTM B 88M, Types A and B), water tube, annealed temper.

C. Hard Copper Tube: ASTM B 88, Types L and M (ASTM B 88M, Types B and C), water tube, drawn temper.

2.2 PIPE AND TUBE FITTINGS

A. General: Applications of the following pipe and tube fitting materials are indicated in Part 3 "Piping Applications" Article.

B. Copper, Solder-Joint Pressure Fittings: ASME B16.18 cast-copper alloy or ASME B16.22 wrought copper.

C. Copper, Grooved-End Fittings: ASTM B 75 (ASTM B 75M) copper tube or ASTM B 584 bronze castings.

D. Bronze Flanges: ASME B16.24, Class 150, with solder-joint end. Furnish Class 300 flanges if required to match piping.

E. Copper Unions: ASME B16.18, cast-copper-alloy, hexagonal-stock body with ball-and-socket joint, metal-to-metal seating surfaces, and solder-joint, threaded, or solder-joint and threaded ends. Include threads conforming to ASME B1.20.1 on threaded ends.

2.3 JOINING MATERIALS

A. General: Applications of the following piping joining materials are indicated in Part 3 "Piping Applications" Article.

B. Refer to Division 15 Section "Basic Mechanical Materials and Methods" for commonly used joining materials.

C. Solder: ASTM B 32, Alloy Sn95, Sn94, or E; lead free.

D. Brazing Filler Metal: AWS A5.8, BCuP, copper phosphorus or BAg, silver classification.

E. Copper, Keyed Couplings: Copper-tube dimensions and design similar to AWWA C606. Include ferrous housing sections, gasket suitable for hot water, and bolts and nuts.

2.4 VALVES

A. Gate Valve

1. Up To and Including 2 Inches (50 mm):

a. MSS SP-80, Class 125, bronze body, bronze trim, rising stem, hand-wheel, inside screw, solid wedge disc, solder or threaded ends.

2. 2 Inches (50 mm) and Larger:

a. MSS SP-70, Class 125, iron body, bronze trim, outside screw and yoke, hand-wheel, solid wedge disc, flanged ends. Provide chain-wheel operators for valves 6 inches (150 mm) and larger mounted over 8 feet (2400 mm) above floor.

B. GLOBE VALVES

1. Up To and Including 2 Inches (50 mm):

a. MSS SP-80, Class 125, bronze body, bronze trim, hand-wheel, bronze disc, solder or threaded ends.

2. 2 Inches (50 mm) and Larger:

a. MSS SP-85, Class 125, iron body, bronze trim, hand-wheel, outside screw and yoke, renewable bronze plug-type disc, renewable seat, flanged ends. Provide chain-wheel operators for valves 6 inches (150 mm) and larger mounted over 8 feet (2400 mm) above floor.

C. BALL VALVES:

1. Construction, 4 Inches (100 mm) and Smaller: MSS SP-110, Class 150, 400 psi (2760 kPa) CWP, bronze, two-piece body, chrome plated brass ball, regular port, teflon seats and stuffing box ring, blow-out proof stem, lever handle with balancing stops, threaded ends with union.

D. BUTTERFLY VALVES.

1. Construction 1-1/2 Inches (40 mm) and Larger: MSS SP-67, 200 psi (1380 kPa) CWP, cast or ductile iron body, aluminum bronze disc, resilient replaceable Buna N seat, wafer, lug or grooved ends, extended neck, 10 position lever handle. Provide gear operators for valves 8 inches (150 mm) and larger, and chain-wheel operators for valves mounted over 8 feet (2400 mm) above floor.

E. SWING CHECK VALVES:

1. Up To and Including 2 Inches (50 mm):

   a. MSS SP-80, Class 125, bronze body and cap, bronze swing disc with rubber seat, solder or threaded ends.

   b. 2 Inches (50 mm) and Larger: MSS SP-71, Class 125, iron body, bronze swing disc, renewable disc seal and seat, flanged or grooved ends.

F. SPRING LOADED CHECK VALVES:

1. Class 125, iron body, bronze trim, stainless steel springs, bronze disc, Buna N seals, wafer style ends.

G. RELIEF VALVES

1. Pressure Relief: AGA Z21.22 certified, bronze body, teflon seat, steel stem and springs, automatic, direct pressure actuated.

2.5 LPG PIPING, ABOVE GRADE

A. Steel Pipe: ASTM A53 Schedule 40 black.

1. Fittings: ASME B16.3, malleable iron, or ASTM A234/A234M, forged steel welding type.

2. Joints: NFPA 58, threaded.

B. Copper Tubing: ASTM B88 (ASTM B88M), Type K annealed.

1. Fittings: ASME B16.26, cast bronze.

2. Joints: Flared.

C. Piping specialties:

1. Flexible Connectors: ANSI Z21.24, copper alloy.

2. Quick-Disconnect Devices: ANSI Z21.41, convenience outlets and matching plug connector.

D. Specialty valves:

1. Valves, NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1 for pipe threads.

2. Valves, NPS 2-1/2 (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.

3. Appliance Connector Valves: ANSI Z21.15 and IAS listed.

4. Gas Stops: Bronze body with AGA stamp, plug type with bronze plug and flat or square head, ball type with chrome-plated brass ball and lever handle, or butterfly valve with stainless-steel disc and fluoro-carbon elastomer seal and lever handle; 2-psig (13.8-kPa) minimum pressure rating.

5. Automatic Gas Valves: ANSI Z21.21, with mechanical operator for actuation by appliance automatic shutoff device.

6. Electrically Operated Gas Valves: UL 429, bronze, aluminum, or cast-iron body solenoid valve; 120-V ac, 60 Hz, Class B, continuous-duty molded coil. Include NEMA ISC 6, Type 4, coil enclosure and electrically opened and closed dual coils. Valve position shall normally be closed.

E. Pressure regulators:

1. Description: Single stage and suitable for fuel gas service. Include steel jacket and corrosion-resistant components, elevation compensator, and atmospheric vent.

a. NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1 for pipe threads.

b. NPS 2-1/2 (DN 65) and Larger: Flanged ends according to ASME B16.5 for steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.

c. Line Pressure Regulators: ANSI Z21.80 with **2-psig- (13.8-kPa-) minimum** inlet pressure rating.

PART 3 EXECUTION

3.1 EXCAVATION

A. Refer to Division 2 Section "Earthwork" for excavating, trenching, and backfilling.

3.2 PIPING APPLICATIONS

A. Transition and special fittings with pressure ratings at least equal to piping pressure rating may be used in applications below, unless otherwise indicated.

B. Flanges may be used on aboveground piping, unless otherwise indicated.

C. Fitting Option: Mechanically formed tee-branch outlets and brazed joints may be used on aboveground copper tubing.

D. Underground, Service Entrance Piping: Do not use flanges or valves underground. Use the following:

1. 2-Inch NPS (DN50) and Smaller: Soft copper tube, Type K (Type A); copper, solder-joint pressure fittings; and soldered joints.

2. 2-1/2- to 3-1/2-Inch NPS (DN65 to DN90): Soft copper tube, Type K (Type A); copper, solder-joint pressure fittings; and soldered joints.

E. Aboveground, Water Distribution Piping: Use the following:

1. 1-1/2-Inch NPS (DN40) and Smaller: Hard copper tube, Type L (Type B); copper, solder-joint fit-tings; and soldered joints.

2. 2-Inch NPS (DN50): Hard copper tube, Type L (Type B); copper, solder-joint fittings; and soldered joints.

3. 2-Inch NPS (DN50): Hard copper tube, Type L (Type B) with grooved ends; copper, grooved-end fittings; and copper, keyed couplings.

4. Hard copper tube, Type L (Type B); copper, solder-joint fittings; and soldered joints.

5. 2-1/2- and 3-Inch NPS (DN65 and DN80): Hard copper tube, Type L (Type B) with grooved ends; copper, grooved-end fittings; and copper, keyed couplings.

F. Underground, Water Distribution Piping: Do not use flanges or valves underground. Use the following:

1. 2-Inch NPS (DN50) and Smaller: Soft copper tube, Type L (Type B); wrought-copper, solder-joint pressure fittings; and soldered joints.

2. 2-1/2- to 4-Inch NPS (DN65 to DN100): Hard copper tube, Type L (Type B); wrought-copper, solder-joint pressure fittings; and soldered joints.

3.3 VALVE APPLICATIONS

A. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:

1. Shutoff Duty: Use gate, ball, or butterfly valves.

2. Throttling Duty: Use globe, ball, or butterfly valves.

3.4 PIPING INSTALLATION, GENERAL

A. Refer to Division 15 Section "Basic Mechanical Materials and Methods" for basic piping installation.

3.5 SERVICE ENTRANCE PIPING INSTALLATION

A. Extend service entrance piping to exterior water service piping in sizes and locations indicated for service entrances into building. Refer to Division 2 Section "Water Systems" for water service piping.

B. Install shutoff valve, hose-end drain valve, strainer, pressure gage, and test tee with valve, inside building at each service entrance pipe.

C. Install cast-iron sleeve with water stop and mechanical sleeve seal at each service entrance pipe penetration through foundation wall. Select number of interlocking rubber links required to make installation watertight. Refer to Division 15 Section "Basic Mechanical Materials and Methods" for sleeves and mechanical sleeve seals.

3.6 WATER DISTRIBUTION PIPING INSTALLATION

A. Install piping level without pitch.

3.7 JOINT CONSTRUCTION

A. Refer to Division 15 Section "Basic Mechanical Materials and Methods" for basic piping joint construction.

B. Mechanically Formed Outlets: Form tee in copper tube according to equipment manufacturer's written instructions. Use tool designed for copper tube, drill pilot hole, form collar for outlet, dimple tube forming seating stop, and braze branch tube into collar.

C. Grooved Joints: Assemble joints with coupling, gasket, lubricant, and bolts according to coupling and fit-ting manufacturer's written instructions.

3.8 VALVE INSTALLATION

A. Sectional Valves: Install sectional valves close to main on each branch and riser serving plumbing fixtures or equipment, and where indicated. Use gate or ball valves for piping 2-inch NPS (DN50) and smaller. Use gate or butterfly valves for piping 2-1/2-inch NPS (DN65) and larger.

B. Shutoff Valves: Install shutoff valve on each water supply to equipment, on each supply to plumbing fixtures without supply stops, and where indicated. Use gate or ball valves for piping 2-inch NPS (DN50) and smaller. Use gate or butterfly valves for piping 2-1/2-inch NPS (DN65) and larger.

C. Drain Valves: Install drain valves for equipment, at base of each water riser, at low points in horizontal piping, and where required to drain water piping.

1. Install hose-end drain valves at low points in water mains, risers, and branches.

2. Install stop-and-waste drain valves where indicated.

3.9 HANGER AND SUPPORT INSTALLATION

A. Refer to Division 15 Section "Hangers and Supports" for pipe hanger and support devices. Install the following:

1. Riser clamps, MSS Type 8 or Type 42, for vertical runs.

2. Adjustable steel clevis hangers, MSS Type 1, for individual, straight, horizontal runs 100 feet (30 m) and less.

3. Adjustable roller hangers, MSS Type 43, for individual, straight, horizontal runs longer than 100 feet (30 m).

4. Spring cushion rolls, MSS Type 49, if indicated, for individual, straight, horizontal runs longer than 100 feet (30 m).

5. Pipe rolls, MSS Type 44, for multiple, straight, horizontal runs 100 feet (30 m) or longer. Support pipe rolls on trapeze.

6. Spring hangers, MSS Type 52, for supporting base of vertical runs.

B. Install supports according to Division 15 Section "Hangers and Supports."

C. Support vertical piping and tubing at base and at each floor.

D. Rod diameter may be reduced one size for double-rod hangers, with 3/8-inch (10-mm) minimum rods.

E. Install hangers for copper tubing with the following maximum spacing and minimum rod diameters:

1. 3/4-Inch NPS (DN20) and Smaller: Maximum horizontal spacing, 60 inches (1500 mm) with 3/8-inch (10-mm) minimum rod diameter; maximum vertical spacing, 10 feet (3 m).

2. 1-Inch NPS (DN25): Maximum horizontal spacing, 72 inches (1800 mm) with 3/8-inch (10-mm) minimum rod diameter; maximum vertical spacing, 10 feet (3 m).

3. 1-1/4-Inch NPS (DN32): Maximum horizontal spacing, 72 inches (1800 mm) with 3/8-inch (10-mm) minimum rod diameter; maximum vertical spacing, 10 feet (3 m).

4. 1-1/2 and 2-Inch NPS (DN40 and DN50): Maximum horizontal spacing, 96 inches (2400 mm) with 3/8-inch (10-mm) minimum rod diameter; maximum vertical spacing, 10 feet (3 m).

5. 2-1/2-Inch NPS (DN65): Maximum horizontal spacing, 108 inches (2700 mm) with 1/2-inch (13-mm) minimum rod diameter; maximum vertical spacing, 10 feet (3 m).

6. 3-Inch NPS (DN80): Maximum horizontal spacing, 10 feet (3 m) with 1/2-inch (13-mm) mini-mum rod diameter; maximum vertical spacing, 10 feet (3 m).

F. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

3.10 CONNECTIONS

A. Connect service entrance piping to exterior water service piping. Use transition fitting to join dissimilar piping materials.

B. Connect water distribution piping to service entrance piping at shutoff valve, and extend to and connect to the following:

1. Booster Systems: Connect cold-water suction and discharge piping.

2. Water Heaters: Connect cold-water supply and hot-water outlet piping in sizes indicated, but not smaller than sizes of water heater connections.

3. Plumbing Fixtures: Connect hot- and cold-water supply piping in sizes indicated, but not smaller than required by plumbing code. Refer to Division 15 Section "Plumbing Fixtures."

4. Equipment: Connect hot- and cold-water supply piping as indicated. Provide shutoff valve and union for each connection. Use flanges instead of unions for connections 2-1/2-inch NPS (DN65) and larger.

3.11 FIELD QUALITY CONTROL

A. Inspect water distribution piping as follows:

B. Inspect service entrance piping and water distribution piping as follows:

1. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.

2. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.

a. Roughing-In Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.

b. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.

3. Re-inspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for re-inspection.

4. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

C. Test water distribution piping as follows:

D. Test service entrance piping and water distribution piping as follows:

1. Test for leaks and defects in new piping and parts of existing piping that have been altered, ex-tended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.

2. Leave uncovered and unconcealed new, altered, extended, or replaced water piping until it has been tested and approved. Expose work that has been covered or concealed before it has been tested and approved.

3. Cap and subject piping to static water pressure of 50 psig (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow to stand for 4 hours. Leaks and loss in test pressure constitute defects that must be repaired.

4. Repair leaks and defects with new materials and retest piping or portion thereof until satisfactory results are obtained.

5. Prepare reports for tests and required corrective action.

3.12 CLEANING

A. Clean and disinfect service entrance piping and water distribution piping as follows:

1. Purge new piping and parts of existing water piping that have been altered, extended, or repaired before using.

2. Use purging and disinfecting procedure prescribed by authorities having jurisdiction or, if method is not prescribed, procedure described in either AWWA C651 or AWWA C652 or as described be-low:

a. Flush piping system with clean, potable water until dirty water does not appear at outlets.

b. Fill and isolate system according to either of the following:

1) Fill system or part thereof with water/chlorine solution with at least 50 ppm (50 mg/L) of chlorine. Isolate with valves and allow to stand for 24 hours.

2) Fill system or part thereof with water/chlorine solution with at least 200 ppm (200 mg/L) of chlorine. Isolate and allow to stand for 3 hours.

c. Flush system with clean, potable water until chlorine is no longer in water coming from system after the standing time.

d. Submit water samples in sterile bottles to authorities having jurisdiction. Repeat procedure if biological examination shows contamination.

B. Prepare and submit reports for purging and disinfecting activities.

C. Clean interior of piping system. Remove dirt and debris as work progresses.

3.13 COMMISSIONING

A. Fill water piping. Check components to determine that they are not air bound and that piping is full of water.

B. Perform the following steps before putting into operation:

1. Close drain valves, hydrants, and hose bibbs.

2. Open shutoff valves to fully open position.

3. Open throttling valves to proper setting.

4. Remove plugs used during testing of piping and plugs used for temporary sealing of piping during installation.

5. Remove and clean strainer screens. Close drain valves and replace drain plugs.

6. Remove filter cartridges from housings and verify that cartridges are as specified for application where used and that cartridges are clean and ready for use.

C. Check plumbing equipment and verify proper settings, adjustments, and operation. Do not operate water heaters before filling with water.

D. Check plumbing specialties and verify proper settings, adjustments, and operation.

E. Energize pumps and verify proper operation.

END OF SECTION

SECTION 15420

DRAINAGE AND VENT PIPING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes sanitary drainage and vent piping, and storm drainage piping inside building and to locations indicated.

B. Related Sections include the following:

1. Division 2 Section "Sewerage and Drainage" for sanitary sewerage and storm drainage.

2. Division 2 Section "Foundation Drainage Systems" for foundation drains.

3. Division 15 Section "Plumbing Specialties" for drainage and vent piping system specialties.

1.3 DEFINITIONS

A. Sewerage Piping: Building sewer piping outside building that conveys sanitary sewage from building.

B. Drainage Piping: Building sewer piping outside building that conveys storm drainage from building.

C. Service Entrance Piping: Drainage piping at entry into building between outside building sewer piping and inside drainage piping.

D. Drainage and Vent Piping: Piping inside building that conveys waste water and vapors from fixtures and equipment throughout the building.

E. The following are industry abbreviations for plastic and other piping materials:

1. ABS: Acrylonitrile-butadiene-styrene.

2. EPDM: Ethylene-propylene-diene polymer, rubber.

3. NBR: Acrylonitrile-butadiene rubber.

4. PVC: Polyvinyl chloride.

1.4 SYSTEM PERFORMANCE REQUIREMENTS

A. Provide components and installation capable of producing piping systems with the following minimum working-pressure ratings, unless otherwise indicated:

1. Soil, Waste, and Vent Systems: 10-foot head of water (30 kPa).

2. Storm Drainage Systems: 10-foot head of water (30 kPa).

1.5 SUBMITTALS

A. Test Results and Reports: Specified in "Field Quality Control" Article.

1.6 QUALITY ASSURANCE

A. Provide listing/approval stamp, label, or other marking on piping made to specified standards.

B. Comply with ASME B31.9, "Building Services Piping," for materials, products, and installation.

C. Comply with NSF 14, "Plastics Piping Components and Related Materials," for plastic piping components. Include marking with "NSF-DWV" for plastic drain, waste, and vent piping; "NSF-drain" for plastic drain piping; "NSF-tubular" for plastic continuous waste piping; and "NSF-sewer" for plastic sewer piping.

1.7 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed, are packaged with protective covering for storage, and are identified with labels describing contents. Deliver materials to Owner.

1. Couplings for Hubless, Cast-Iron Soil Piping, 4-Inch NPS (DN100) and Smaller: 8 of each type and size installed.

2. Couplings for Hubless, Cast-Iron Soil Piping, 5-Inch NPS (DN125) and Larger: 6 of each type and size installed.

3. Keyed Couplings, 4-Inch NPS (DN100) and Smaller: 4 of each type and size installed. Include one extra gasket with each coupling.

4. Keyed Couplings, 5-Inch NPS (DN125) and Larger: 2 of each type and size installed. Include one extra gasket with each coupling.

PART 2 PRODUCTS

2.1 PIPES AND TUBES

A. General: Applications of the following pipe and tube materials are indicated in Part 3 "Piping Applications" Article.

B. Hubless, Cast-Iron Soil Pipe: ASTM A 888 or CISPI 301.

C. ABS Plastic Pipe: ASTM D 2661, Schedule 40.

D. PVC Plastic Pipe: ASTM D 2665, Schedule 40.

2.2 PIPE AND TUBE FITTINGS

A. General: Applications of the following pipe and tube fitting materials are indicated in Part 3 "Piping Applications" Article.

B. Threaded-Fitting, End Connections: ASME B1.20.1.

C. Hubless, Cast-Iron, Soil-Pipe Fittings: CISPI 301.

D. ABS Socket Fittings: ASTM D 2661, made to ASTM D 3311 drain, waste, and vent pipe patterns.

E. ABS Tubular Fittings: ASTM F 409 drainage pattern, with ends as required for application.

F. PVC Socket Fittings: ASTM D 2665, made to ASTM D 3311 drain, waste, and vent pipe patterns.

G. PVC Plastic, Tubular Fittings: ASTM F 409 drainage pattern, with ends as required for application.

2.3 JOINING MATERIALS

A. General: Applications of the following piping joining materials are indicated in Part 3 "Piping Applications" Article.

B. Refer to Division 15 Section "Basic Mechanical Materials and Methods" for commonly used joining materials.

C. Hubless, Cast-Iron, Soil-Piping Couplings: ASTM C 1277 assembly of metal housing, corrosion-resistant fasteners, and ASTM C 564 rubber sleeve or gasket with integral, center pipe stop. Include the following:

1. Heavy-Duty, FM-Approved, Stainless-Steel Couplings: ASTM A 666, Type 304, stainless-steel housing; and stainless-steel clamps. Include gasket or bushing.

a. Clamp Width: 3 inches (75 mm) wide with 2 clamps, for piping 1-1/2- to 4-inch NPS (DN40 to DN100).

b. Clamp Width: 4 inches (100 mm) wide with 2 clamps, for piping 5- to 10-inch NPS (DN125 to DN250).

2.4 VALVES

A. Refer to Division 15 Section "Valves" for general-duty valves. Use valves specified for "Domestic Water Systems" applications.

PART 3 EXECUTION

3.1 EXCAVATION

A. Refer to Division 2 Section "Earthwork" for excavating, trenching, and backfilling.

3.2 PIPING APPLICATIONS

A. Transition and special fittings with pressure ratings at least equal to piping pressure rating may be used in applications below, unless otherwise indicated.

B. Aboveground, Soil, Waste, and Vent Piping: Use the following:

1. 1-1/2-Inch NPS (DN40): Hubless, cast-iron soil pipe; hubless, cast-iron, soil-pipe fittings; and one of the following hubless, cast-iron, soil-piping couplings:

a. Couplings: Heavy-duty, FM-approved, Type 304, stainless steel.

2. 2- to 4-Inch NPS (DN50 to DN100): Hubless, cast-iron soil pipe; hubless, cast-iron, soil-pipe fit-tings; and one of the following hubless, cast-iron, soil-piping couplings:

   a. Couplings: Heavy-duty, FM-approved, Type 304, stainless steel.

3. 5- and 6-Inch NPS (DN125 and DN150): Hubless, cast-iron soil pipe; hubless, cast-iron, soil-pipe fittings; and one of the following hubless, cast-iron, soil-piping couplings:

   a. Couplings: Heavy-duty, FM-approved, Type 304, stainless steel.

4. 8-Inch NPS (DN200): Hubless, cast-iron soil pipe; hubless, cast-iron, soil-pipe fittings; and one of the following hubless, cast-iron, soil-piping couplings:

   a. Couplings: Heavy-duty, FM-approved, Type 304, stainless steel.

C. Underground, Soil, Waste, and Vent Piping: Use the following:

1. 1-1/2-Inch NPS (DN40): ABS plastic pipe, ABS socket fittings, and solvent-cemented joints.

2. 2- to 4-Inch NPS (DN50 to DN100): ABS plastic pipe, ABS socket fittings, and solvent-cemented joints.

3. 5- and 6-Inch NPS (DN125 and DN150): ABS plastic pipe, ABS socket fittings, and solvent-cemented joints.

4. 8-Inch NPS (DN200): PVC plastic pipe, PVC socket fittings, and solvent-cemented joints.

D. Aboveground, Storm Drainage Piping: Use the following:

1. 2- to 4-Inch NPS (DN50 to DN100): Hubless, cast-iron soil pipe; hubless, cast-iron, soil-pipe fit-tings; and one of the following hubless, cast-iron, soil-piping couplings:

   a. Couplings: Heavy-duty, FM-approved, Type 304, stainless steel.

2. 5- and 6-Inch NPS (DN125 and DN150): Hubless, cast-iron soil pipe; hubless, cast-iron, soil-pipe fittings; and one of the following hubless, cast-iron, soil-piping couplings:

   a. Couplings: Heavy-duty, FM-approved, Type 304, stainless steel.

3. 8-Inch NPS (DN200): Hubless, cast-iron soil pipe; hubless, cast-iron, soil-pipe fittings; and one of the following hubless, cast-iron, soil-piping couplings:

   a. Couplings: Heavy-duty, FM-approved, Type 304, stainless steel.

E. Underground, Storm Drainage Piping: Use the following:

1. 3- and 4-Inch NPS (DN80 and DN100): ABS plastic pipe, ABS socket fittings, and solvent-cemented joints.

2. 5- and 6-Inch NPS (DN125 and DN150): ABS plastic pipe, ABS socket fittings, and solvent-cemented joints.

3. 8-Inch NPS (DN200): PVC plastic pipe, PVC socket fittings, and solvent-cemented joints.

3.3 VALVE APPLICATIONS

A. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:

1. Shutoff Duty: Use gate, ball, or butterfly valves.

2. Throttling Duty: Use globe, ball, or butterfly valves.

3.4 PIPING INSTALLATION, GENERAL

A. Refer to Division 15 Section "Basic Mechanical Materials and Methods" for basic piping installation.

3.5 SERVICE ENTRANCE PIPING INSTALLATION

A. Refer to Division 2 Section "Sewerage and Drainage" for sanitary and storm sewer piping.

B. Extend building sanitary drain piping and connect to sanitary sewer piping in sizes and locations indicated for service entrances into building. Install cleanout and extension to grade at connections of building sanitary drains with building sanitary sewers.

C. Extend building storm drain piping and connect to storm sewer piping in sizes and locations indicated for service entrances into building. Install cleanout and extension to grade at connections of building storm drains and building storm sewers.

D. Install wall penetration system at each service entrance pipe penetration through foundation wall. Make installation watertight. Refer to Division 15 Section "Basic Mechanical Materials and Methods" for wall penetration systems.

3.6 DRAINAGE AND VENT PIPING INSTALLATION

A. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."

B. Make changes in direction for drainage and vent piping using appropriate branches, bends, and long-sweep bends. Sanitary tees and short-sweep 1/4 bends may be used on vertical stacks if change in direction of flow is from horizontal to vertical. Use long-turn, double Y-branch and 1/8-bend fittings if 2 fixtures are installed back to back or side by side with common drain pipe. Straight tees, elbows, and crosses may be used on vent lines. Do not make change in direction of flow greater than 90 degrees. Use proper size of standard increasers and reducers if different sizes of piping are connected. Reducing size of drainage piping in direction of flow is prohibited.

C. Lay buried building drain piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.

D. Install drainage and vent piping at the following minimum slopes, unless otherwise indicated:

1. Sanitary Building Drain: 2 percent downward in direction of flow for piping 3-inch NPS (DN80) and smaller; 2 percent downward in direction of flow for piping 4-inch NPS (DN100) and larger.

2. Horizontal, Sanitary Drainage Piping: 2 percent downward in direction of flow.

3. Storm Building Drain: 1 percent downward in direction of flow.

4. Horizontal, Storm Drainage Piping: 2 percent downward in direction of flow.

5. Vent Piping: 1 percent down toward vertical fixture vent or toward vent stack.

E. Sleeves are not required for cast-iron soil piping passing through concrete slab on grade if slab is without membrane waterproofing.

F. Install ABS plastic drainage piping according to ASTM D 2661.

G. Install PVC plastic drainage piping according to ASTM D 2665.

H. Install underground, ABS and PVC plastic drainage piping according to ASTM D 2321.

3.7 JOINT CONSTRUCTION

A. Refer to Division 15 Section "Basic Mechanical Materials and Methods" for basic piping joint construction.

B. Cast-Iron, Soil-Piping Joints: Make joints according to CISPI's "Cast Iron Soil Pipe and Fittings Hand-book," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."

1. Hubless Joints: Make with rubber gasket and sleeve or clamp.

C. ABS Piping Joints: Join drainage piping according to ASTM D 2661.

D. PVC Piping Joints: Join drainage piping according to ASTM D 2665.

E. ABS to PVC Piping Transition Joints: Make non-pressure transition joints between ABS and PVC drainage components, using fittings and procedure according to ASTM D 3138.

F. Handling of Solvent Cements, Primers, and Cleaners: Comply with procedures in ASTM F 402 for safe handling during joining of plastic pipe and fittings.

3.8 HANGER AND SUPPORT INSTALLATION

A. Refer to Division 15 Section "Hangers and Supports" for pipe hanger and support devices. Install the following:

1. Riser clamps, MSS Type 8 or Type 42, for vertical runs.

2. Adjustable steel clevis hangers, MSS Type 1, for individual, straight, horizontal runs 100 feet (30 m) and less.

3. Adjustable roller hangers, MSS Type 43, for individual, straight, horizontal runs longer than 100 feet (30 m).

4. Spring cushion rolls, MSS Type 49, if indicated, for individual, straight, horizontal runs longer than 100 feet (30 m).

5. Pipe rolls, MSS Type 44, for multiple, straight, horizontal runs 100 feet (30 m) or longer. Support pipe rolls on trapeze.

6. Spring hangers, MSS Type 52, for supporting base of vertical runs.

B. Install supports according to Division 15 Section "Hangers and Supports."

C. Support vertical piping and tubing at base and at each floor.

D. Rod diameter may be reduced one size for double-rod hangers, with 3/8-inch (10-mm) minimum rods.

E. Install hangers for cast-iron soil piping with the following maximum spacing and minimum rod diameters:

1. 1-1/2- and 2-Inch NPS (DN40 and DN50): Maximum horizontal spacing, 60 inches (1500 mm) with 3/8-inch (10-mm) minimum rod diameter; maximum vertical spacing, 15 feet (4.5 m).

2. 3-Inch NPS (DN80): Maximum horizontal spacing, 60 inches (1500 mm) with 1/2-inch (13-mm) minimum rod diameter; maximum vertical spacing, 15 feet (4.5 m).

3. 4- and 5-Inch NPS (DN100 and DN125): Maximum horizontal spacing, 60 inches (1500 mm) with 5/8-inch (16-mm) minimum rod diameter; maximum vertical spacing, 15 feet (4.5 m).

4. 6-Inch NPS (DN150): Maximum horizontal spacing, 60 inches (1500 mm) with 3/4-inch (19-mm) minimum rod diameter; maximum vertical spacing, 15 feet (4.5 m).

5. 8- through 12-Inch NPS (DN200 through DN300): Maximum horizontal spacing, 60 inches (1500 mm) with 7/8-inch (22-mm) minimum rod diameter; maximum vertical spacing, 15 feet (4.5 m).

F. Install hangers for ABS and PVC plastic piping with the following maximum spacing and minimum rod diameters:

1. 1-1/2- and 2-Inch NPS (DN40 and DN50): Maximum horizontal spacing, 48 inches (1200 mm) with 3/8-inch (10-mm) minimum rod diameter; maximum vertical spacing, 48 inches (1200 mm).

2. 4- and 5-Inch NPS (DN100 and DN125): Maximum horizontal spacing, 48 inches (1200 mm) with 5/8-inch (16-mm) minimum rod diameter; maximum vertical spacing, 48 inches (1200 mm).

3. 6-Inch NPS (DN150): Maximum horizontal spacing, 48 inches (1200 mm) with 3/4-inch (19-mm) minimum rod diameter; maximum vertical spacing, 48 inches (1200 mm).

4. 8- through 12-Inch NPS (DN200 through DN300): Maximum horizontal spacing, 48 inches (1200 mm) with 7/8-inch (22-mm) minimum rod diameter; maximum vertical spacing, 48 inches (1200 mm).

G. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

3.9 CONNECTIONS

A. Connect service entrance piping to exterior sewerage and drainage piping. Use transition fitting to join dissimilar piping materials.

B. Connect drainage piping to service entrance piping, and extend to and connect to the following:

1. Plumbing Fixtures: Connect drainage piping in sizes indicated, but not smaller than required by plumbing code. Refer to Division 15 Section "Plumbing Fixtures."

2. Plumbing Specialties: Connect drainage and vent piping in sizes indicated, but not smaller than required by plumbing code. Refer to Division 15 Section "Plumbing Specialties."

3. Equipment: Connect drainage piping as indicated. Provide shutoff valve, if indicated, and union for each connection. Use flanges instead of unions for connections 2-1/2-inch NPS (DN65) and larger.

3.10 FIELD QUALITY CONTROL

A. Inspect drainage and vent piping as follows:

1. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.

2. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.

a. Roughing-In Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.

b. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.

3. Re-inspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for re-inspection.

4. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

B. Test drainage and vent piping according to procedures of authorities having jurisdiction or, in absence of published procedure, as follows:

1. Test for leaks and defects in new piping and parts of existing piping that have been altered, ex-tended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.

2. Leave uncovered and unconcealed new, altered, extended, or replaced drainage and vent piping until it has been tested and approved. Expose work that has been covered or concealed before it has been tested and approved.

3. Roughing-In Plumbing Test Procedure: Test drainage and vent piping, except outside leaders, on completion of roughing-in. Close openings in piping system and fill with water to point of over-flow, but not less than 10 feet of head (30 kPa). Water level must not drop from 15 minutes before inspection starts through completion of inspection. Inspect joints for leaks.

4. Finished Plumbing Test Procedure: After plumbing fixtures have been set and traps filled with water, test connections and prove they are gastight and watertight. Plug vent-stack openings on roof and building drains where they leave building. Introduce air into piping system equal to pressure of 1-inch wg (250 Pa). Use U-tube or manometer inserted in trap of water closet to measure this pressure. Air

pressure must remain constant without introducing additional air throughout period of inspection. Inspect plumbing fixture connections for gas and water leaks.

5. Repair leaks and defects using new materials and retest piping or portion thereof until satisfactory results are obtained.

6. Prepare reports for tests and required corrective action.

3.11 CLEANING AND PROTECTING

A. Clean interior of piping system. Remove dirt and debris as work progresses.

B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.

C. Place plugs in ends of uncompleted piping at end of day and when work stops.

D. Exposed ABS and PVC Piping: Protect plumbing vents exposed to sunlight with 2 coats of water-based latex paint.

END OF SECTION

SECTION 15430

PLUMBING SPECIALTIES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes plumbing specialties for the following:

1. Water distribution systems.

2. Soil, waste, and vent systems.

3. Storm drainage systems.

4. Rainwater harvesting systems.

B. Related Sections include the following:

1. Division 15 Section "Basic Mechanical Materials and Methods" for piping joining materials, joint construction, basic installation requirements, and labeling and identifying requirements; and escutcheons, dielectric fittings, sleeves, and sleeve seals that are not in this Section.

2. Division 15 Section "Water Distribution Piping" for water-supply piping and connections.

3. Division 15 Section "Drainage and Vent Piping" for drainage and vent piping and connections.

1.3 SYSTEM PERFORMANCE REQUIREMENTS

A. Provide components and installation capable of producing piping systems with following minimum working-pressure ratings, unless otherwise indicated:

1. Water Distribution Piping: 125 psig (860 kPa).

2. Soil, Waste, and Vent Piping: 10-foot head of water (30 kPa).

3. Storm Drainage Piping: 10-foot head of water (30 kPa).

4. Rainwater Harvesting Piping: 10-foot head of water (30 kPa).

1.4 SUBMITTALS

A. Product Data: For each plumbing specialty indicated. Include rated capacities of selected equipment and shipping, installed, and operating weights. Indicate materials, finishes, dimensions, required clearances, and methods of assembly of components; and piping and wiring connections for the following plumbing specialty products:

1. Balancing valves.

2. Strainers.

3. Water hammer arresters.

4. Drain valves.

5. Hose bibbs.

6. Cleanouts.

7. Floor drains.

8. Vent caps, vent terminals, and roof flashing assemblies.

9. Roof drains.

10. Vortex Rainwater Fine Filter.

11. Rainwater harvesting smoothing inlet.

12. Sleeve penetration systems.

13. Solids interceptor.

14. Acid neutralizing tank.

B. Reports: Specified in "Field Quality Control" Article.

C. Closeout Submittals:

1. Operation and Maintenance Data:

a. Provide instructions on operation, calibration, troubleshooting, and servicing equipment.

b. Include layout drawings, parts lists, and component manufacturer’s product data.

1.5 QUALITY ASSURANCE

A. Product Options: Drawings indicate size, profiles, dimensional requirements, and characteristics of plumbing specialties and are based on the specific types and models indicated. Other manufacturers' products with equal performance characteristics may be considered. Refer to Division 1 Section "Substitutions."

B. Provide listing/approval stamp, label, or other marking on plumbing specialties made to specified standards.

C. Listing and Labeling: Provide electrically operated plumbing specialties specified in this Section that are listed and labeled.

1. Terms "Listed" and "Labeled": As defined in National Electrical Code, Article 100.

2. Listing and Labeling Agency Qualifications: "Nationally Recognized Testing Laboratory" as de-fined in OSHA Regulation 1910.7.

D. Comply with ASME B31.9, "Building Services Piping," for materials, products, and installation.

E. Comply with NFPA 70, "National Electrical Code," for electrical components.

F. Comply with NSF 14, "Plastics Piping Components and Related Materials," for plastic potable-water piping components. Include marking "NSF-pw" on plastic potable-water piping and "NSF-dwv" on plastic drain, waste, and vent piping.

G. Rainwater Harvesting System.

1. Manufacturer Qualifications:

a. Minimum 3 years' experience in work of this Section.

b. Successful completion of minimum of 5 previous projects of similar scope and complexity.

2. Installer Qualifications:

a. Minimum 2 years' experience in work of this Section.

b. Successful completion of minimum of 3 previous projects of similar scope and complexity.

c. Maintain factory trained technicians on staff to provide field service and warranty work.

1.6 DELIVERY, STORAGE AND HANDLING

A. Do not deliver system components until time needed for installation, and after proper protection can be provided.

B. Protect components from damage and corrosion.

C. Leave protective coverings in place until just prior to installation.

PART 2 PRODUCTS

2.1 DISHWASHER AIR-GAP FITTINGS

A. Description: ASSE 1021, fitting suitable for use with domestic dishwashers and for deck mounting; with plastic body, chrome-plated brass cover; and capacity of at least 5 gpm (0.32 L/s); and inlet pres-sure of at least 5 psig (35 kPa) at temperature of at least 140 deg F (60 deg C). Include 5/8-inch- (16-mm-) ID inlet and 7/8-inch- (22-mm-) ID outlet hose connections.

2.2 BACKFLOW PREVENTERS

A. General: ASSE standard, backflow preventers, of size indicated for maximum flow rate and maximum pressure loss indicated.

1. 2-Inch NPS (DN50) and Smaller: Bronze body with threaded ends.

2. 2-1/2-Inch NPS (DN65) and Larger: Bronze, cast-iron, steel, or stainless-steel body with flanged ends.

a. Interior Lining: AWWA C550 or FDA-approved, epoxy coating for backflow preventers having cast-iron or steel body.

3. Interior Components: Corrosion-resistant materials.

4. Exterior Finish: Polished chrome-plate if used in chrome-plated piping system.

5. Strainer on inlet, if indicated.

B. Hose-Connection Vacuum Breakers: ASSE 1011, nickel plated, with nonremovable and manual drain features, and ASME B1.20.7 garden-hose threads on outlet. Units attached to rough-bronze-finish hose connections may be rough bronze.

C. Reduced-Pressure-Principle Backflow Preventers: ASSE 1013, suitable for continuous pressure appli-cation. Include outside screw and yoke gate valves on inlet and outlet, and strainer on inlet; test cocks; and pressure-differential relief valve with ASME A112.1.2 air-gap fitting located between 2 positive-seating check valves.

1. Pressure Loss: 12 psig (83 kPa) maximum, through middle one-third of flow range.

D. Laboratory Faucet Vacuum Breakers: ASSE 1035, suitable for continuous pressure application and chrome plated; consisting of primary and secondary checks; intermediate vacuum breaker; and threaded ends, 1/4- or 3/8-inch NPS (DN8 or DN10) as required.

2.3 WATER FILTERS

A. General: Cartridge-type assemblies suitable for potable water of size and at flow rate and pressure loss indicated. Include housing, fittings, filter cartridges, and cartridge end caps.

B. Wall-Mounting Type: Housing head section with threaded inlet and outlet, mounting bracket, and re-movable lower section for 10-inch- (250-mm-) long filter cartridge.

1. Housing Material: Stainless steel, 150-psig (1035-kPa) minimum operating pressure.

2. Housing Material: Plastic, 125-psig (860-kPa) minimum operating pressure.

3. Cartridge: Activated-charcoal filter media, 10 inches (250 mm), 10-micron-particulate removable rating.

4. Cartridge: Wound- or molded-fiber filter media, 10 inches (250 mm), 10-micron-particulate removable rating.

5. Cartridge: Pleated-polypropylene filter media, 10 inches (250 mm), 10-micron-particulate re-movable rating.

C. Floor-Mounting Type: Stainless-steel housing rated at 150-psig (1035-kPa) minimum operating pressure.

1. Base Section: Floor-mounting section with inlet and outlet connections and removable top section for one or more 10-micron-particulate removable-rating cartridges.

2. Connections, 2-Inch NPS (DN50) and Smaller: Threaded.

3. Connections, 2-1/2-Inch NPS (DN65) and Larger: Flanged.

4. Cartridge: Activated-charcoal filter media.

5. Cartridge: Wound- or molded-fiber filter media.

6. Cartridge: Pleated-polypropylene filter media.

2.4 WATER TEMPERING VALVES

A. General: Manually adjustable, thermostatically controlled water tempering valve; bronze body; and ad-justable temperature setting.

B. System Water Tempering Valves: Piston or discs controlling both hot- and cold-water flow, capable of limited antiscald protection. Include threaded inlets and outlet, capacity at pressure loss, and tempera-ture range or setting as indicated.

1. Finish: Rough bronze unless chrome-plated finish is indicated.

C. Limited-Volume, Water Tempering Valves: Solder-joint inlets and 3/4-inch NPS (DN20) maximum outlet, with minimum capacity and maximum pressure loss as indicated.

2.5 BALANCING VALVES

A. Calibrated Balancing Valves: Adjustable, with 2 readout ports and memory setting indicator. Include manufacturer's standard hoses, fittings, valves, differential pressure meter, and carrying case.

1. 2-Inch NPS (DN50) and Smaller: Bronze body with brass ball, adjustment knob, calibrated nameplate, and threaded or solder-joint ends.

2. 2-Inch NPS (DN50) and Smaller: Bronze, Y-pattern body with adjustment knob and threaded ends.

3. 2-1/2-Inch NPS (DN65) and Larger: Cast-iron, Y-pattern body with bronze disc and flanged or grooved ends.

2.6 STRAINERS

A. Strainers: Y-pattern, unless otherwise indicated, and full size of connecting piping. Include ASTM A 666, Type 304, stainless-steel screens with 3/64-inch (1.2-mm) round perforations, unless otherwise indicated.

1. Pressure Rating: 125-psig (860-kPa) minimum steam working pressure, unless otherwise indicated.

2. 2-Inch NPS (DN50) and Smaller: Bronze body, with female threaded ends.

3. 2-1/2-Inch NPS (DN65) and Larger: Cast-iron body, with interior AWWA C550 or FDA-approved epoxy coating and flanged ends.

4. Y-Pattern Strainers: Screwed screen retainer with centered blowdown.

a. Drain: Pipe plug.

b. Drain: Factory- or field-installed, hose-end drain valve.

5. T-Pattern Strainers: Malleable-iron or ductile-iron body with grooved ends; access end cap with drain plug and access coupling with rubber gasket.

2.7 DRAIN VALVES

A. Hose-End Drain Valves: MSS SP-110, 3/4-inch NPS (DN20) ball valve, rated for 400-psig (2760-kPa) minimum CWP. Include 2-piece, ASTM B 62 bronze body with standard port, chrome-plated brass ball, replaceable seats and seals, blowout-proof stem, and vinyl-covered steel handle.

1. Inlet: Threaded or solder joint.

2. Outlet: Short-threaded nipple with ASME B1.20.7 garden-hose thread and cap.

3. Hose-End Drain Valve Option: MSS SP-80, gate valve, Class 125, ASTM B 62 body, with 3/4-inch NPS (DN20) threaded or solder-joint inlet and ASME B1.20.7 garden-hose threads on outlet and cap. Hose bibbs are prohibited for this application.

4. Fire-Hose-End Drain Valve Option: UL 668, 1-1/2-inch NPS (DN40), bronze body, 90-degree angle or straightway-pattern hose valve, rated for 175-psig (1200-kPa) minimum working pressure.

a. Male Outlet Threads: NFPA 1963 and local fire department standards. Include attached chain and cap.

1) Option: 2-1/2-inch NPS (DN65) valves with 2-1/2-by-1-1/2-inch NPS (DN65 by DN40) adapter and attached chain and cap may be provided instead of 1-1/2-inch NPS (DN40) valves.

B. Stop-and-Waste Drain Valves: MSS SP-110, ball valve, rated for 200-psig (1380-kPa) minimum CWP or MSS SP-80, Class 125, gate valve; ASTM B 62 bronze body, with 1/8-inch NPS (DN6) side drain outlet and cap.

2.8 OUTLET BOXES

A. General: Recessed-mounting outlet boxes with fittings complying with ASME A112.18.1M. Include box with faceplate, services indicated for equipment connections, and wood-blocking reinforcement.

B. Clothes Washer Outlet Boxes: With hose connections, drain, and the following:

1. Box and Faceplate: Plastic.

2. Shutoff Fittings: 2 hose bibbs.

3. Supply Fittings: Two 1/2-inch NPS (DN15) gate, globe, or ball valves and 1/2-inch NPS (DN15) copper, water tubing.

4. Drain Fitting: 2-inch NPS (DN50) drainage piping P-trap with 2-inch NPS (DN50) standpipe ex-tending from floor to outlet box and 2-inch NPS (DN50) waste.

5. Inlet Hoses: Two 60-inch- (1500-mm-) long, ASTM D 3571, clothes washer inlet hoses with fe-male hose-thread couplings.

6. Drain Hose: One 48-inch- (1200-mm-) long, ASTM D 3572, clothes washer drain hose with hooked end.

C. Ice Maker Outlet Boxes: With hose connection and the following:

1. Box and Faceplate: Plastic.

2. Shutoff Fitting: Hose bibb.

3. Supply Fitting: 1/2-inch NPS (DN15) gate, globe, or ball valve and 1/2-inch NPS (DN15) cop-per, water tubing.

D. Reinforcement: 2-by-4-inch- or 2-by-6-inch- (38-by-89-mm- or 38-by-140-mm-), fire-retardant-treated-wood blocking between studs.

2.9 TRAP SEAL PRIMER VALVES

A. Trap Seal Primer Valves: ASSE 1018, water-supply-fed type, with the following characteristics:

1. 125-psig (860-kPa) minimum working pressure.

2. Bronze body with atmospheric-vented drain chamber.

3. Inlet and Outlet Connections: 1/2-inch NPS (DN15) threaded, union, or solder joint.

4. Gravity Drain Outlet Connection: 1/2-inch NPS (DN15) threaded or solder joint.

5. Finish: Chrome plated, or rough bronze for units used with pipe or tube that is not chrome fin-ished.

B. Trap Seal Primer System: Factory-fabricated, automatic-operation assembly for wall mounting with the following:

1. Piping: 3/4-inch NPS, ASTM B 88, Type L (DN20, ASTM B 88M, Type B); copper, water tubing inlet and manifold with number of 1/2-inch NPS (DN15) outlets as indicated.

2. Cabinet: Steel box with stainless-steel cover.

3. Electric Controls: 24-hour timer, solenoid valve, and manual switch for 120-V, ac power.

4. Water Hammer Arrester: ASSE 1010.

5. Vacuum Breaker: ASSE 1001.

2.10 MISCELLANEOUS PIPING SPECIALTIES

A. Water Hammer Arresters: ASME A112.26.1M, ASSE 1010, or PDI-WH 201, bellows or piston type with pressurized cushioning chamber. Sizes are based on water-supply fixture units, ASME A112.26.1M sizes A through F and PDI-WH 201 sizes A through F.

B. Hose Bibbs: Bronze body, with renewable composition disc, 1/2- or 3/4-inch NPS (DN15 or DN20) threaded or solder-joint inlet. Provide ASME B1.20.7 garden-hose threads on outlet and integral or field-installed, non-removable, drainable, hose-connection vacuum breaker.

1. Finish: Chrome or nickel plated.

2. Operation: Wheel handle.

C. Roof Flashing Assemblies: Manufactured assembly made of 4-lb/sq. ft. (20-kg/sq. m), 0.0625-inch- (1.6-mm-) thick, lead flashing collar and skirt extending at least 8 inches (200 mm) from pipe with galvanized steel boot reinforcement, and counter-flashing fitting.

1. Vent Cap: Open top, without cap.

D. Floor-Drain Inlet Fittings: Cast iron, with threaded inlet and threaded or spigot outlet, and trap seal primer valve connection.

E. Air-Gap Fittings: ASME A112.1.2, cast iron or cast bronze, with fixed air gap, inlet for drain pipe or tube, and threaded or spigot outlet.

F. Stack Flashing Fittings: Counter-flashing-type, cast-iron fitting, with bottom recess for terminating roof membrane, and with threaded or hub top for extending vent pipe.

G. Vent Caps: Cast-iron body with threaded or hub inlet and vandal-proof design. Include vented hood and set-screws to secure to vent pipe.

H. Vent Terminals: Commercially manufactured, shop-fabricated or field-fabricated, frost-proof assembly constructed of galvanized steel, copper, or lead-coated copper. Size to provide 1-inch (25-mm) enclosed air space between outside of pipe and inside of flashing collar extension, with counter-flashing, as indicated.

I. Expansion Joints: ASME A112.21.2M, assembly with cast-iron body with bronze sleeve, packing gland, and packing, of size and end types corresponding to connected piping.

J. Downspout Boots: ASTM A 74, Service class, hub-and-spigot, cast-iron soil pipe.

2.11 SLEEVE PENETRATION SYSTEMS

A. Description: UL 1479, through-penetration fire-stop assembly consisting of sleeve and stack fitting with fire-stopping plug.

1. Sleeve: Molded PVC plastic, of length to match slab thickness and with integral nailing flange on one end for installation in cast-in-place concrete slabs.

2. Stack Fitting: ASTM A 48, cast-iron, hubless pattern, wye-branch stack fitting with neoprene O-ring at base and cast-iron plug in thermal-release harness in branch. Include PVC protective cap for plug.

a. Special Coating: Include corrosion-resistant interior coating on fittings for plastic chemical waste and vent stacks.

2.12 FLASHING MATERIALS

A. Copper Sheet: ASTM B 152 (ASTM B 152M), of the following minimum weights and thicknesses, unless otherwise indicated:

1. General Applications: 12 oz./sq. ft. (3.7 kg/sq. m or 0.41-mm thickness).

2. Vent Pipe Flashing: 8 oz./sq. ft. (2.5 kg/sq. m or 0.27-mm thickness).

B. Fasteners: Metal compatible with material and substrate being fastened.

C. Metal Accessories: Sheet metal strips, clamps, anchoring devices, and similar accessory units required for installation; matching or compatible with material being installed.

D. Solder: ASTM B 32, lead-free alloy.

E. Bituminous Coating: SSPC-Paint 12, solvent-type, bituminous mastic.

2.13 RAINWATER HARVESTING SPECIALTIES

A. Rainwater Filter, Vortex Type:

1. Jay R. Smith Mfg. Co. Model: No. RH9521-12 or approved equal.

2. Description: 20-inch stainless steel lift handle, removable stainless steel 380-micron fine mesh filter, steel housing lid and baseplate, and polypropylene filter housing with closing ring.

3. Ventilation: To suit project conditions.

B. Storage Tank Accessories:

1. Smoothing inlets:

a. Jay R. Smith Mfg. Co. Model: No. RH9530SI or approved equal.

b. Description: Stainless steel smoothing inlet for an 8-inch inlet pipe.

2. Level indicator:

a. Jay R. Smith Mfg. Co. Model: No. RH9530LI or approved equal.

b. Description: Wireless storage tank level sensor.

3. Float switch:

a. Jay R. Smith Mfg. Co. Model: No. RH9542FSO or approved equal.

b. Description: Polyethylene switch level and float housing with flexible cable; dry run protection, normally open.

4. Second source storage tank float switch:

a. Jay R. Smith Mfg. Co. Model: No. RH9542FSC or approved equal.

b. Description: Polyethylene switch level and float housing with flexible cable; control normally closed solenoid valve.

PART 3 EXECUTION

3.1 PLUMBING SPECIALTY INSTALLATION

A. General: Install plumbing specialty components, connections, and devices according to manufacturer's written instructions.

B. Install strainers on supply side of each control valve, pressure regulator, and solenoid valve, and where indicated.

C. Install hose bibbs with integral or field-installed vacuum breaker.

D. Install expansion joints on vertical risers, stacks, and conductors as indicated.

E. Install cleanouts in aboveground piping and building drain piping as indicated, and where not indicated, according to the following:

1. Size same as drainage piping up to 4-inch NPS (DN100). Use 4-inch NPS (DN100) for larger drainage piping unless larger cleanout is indicated.

2. Locate at each change in direction of piping greater than 45 degrees.

3. Locate at minimum intervals of 50 feet (15 m) for piping 4-inch NPS (DN100) and smaller and 100 feet (30 m) for larger piping.

4. Locate at base of each vertical soil and waste stack.

F. Install cleanout deck plates, of types indicated, with top flush with finished floor, for floor cleanouts for piping below floors.

G. Install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall, for cleanouts located in concealed piping.

H. Install flashing flange and clamping device with each stack and cleanout passing through floors with waterproof membrane.

I. Install vent flashing sleeves on stacks passing through roof. Secure over stack flashing according to manufacturer's written instructions.

J. Install floor drains at low points of surface areas to be drained. Set grates of drains flush with finished floor or as indicated. Size outlets as indicated.

K. Set floor drains below elevation of surrounding finished floor to allow floor drainage. Set with grates de-pressed according to the following drainage area radii:

1. Radius, 30 Inches (750 mm) or Less: Equivalent to 1 percent slope, but not less than 1/4-inch (6.35-mm) total depression.

2. Radius, 30 to 60 Inches (750 to 1500 mm): Equivalent to one percent slope.

3. Radius, 60 Inches (1500 mm) or Larger: Equivalent to 1 percent slope, but not greater than 1-inch (25-mm) total depression.

L. Install individual traps for floor drains connected to sanitary building drain, unless otherwise indicated.

M. Install floor-drain flashing collar or flange so no leakage occurs between drain and adjoining flooring. Maintain integrity of waterproof membranes where penetrated.

N. Position floor drains for easy access and maintenance.

O. Install roof drains at low points of roof areas according to roof membrane manufacturer's written installation instructions. Size outlets as indicated.

P. Install roof-drain flashing collar or flange so no leakage occurs between drain and adjoining roofing. Maintain integrity of waterproof membranes where penetrated.

Q. Position roof drains for easy access and maintenance.

R. Fasten wall-hanging plumbing specialties securely to supports attached to building substrate if supports are specified and to building wall construction if no support is indicated.

S. Fasten recessed, wall-mounting plumbing specialties to reinforcement built into walls.

T. Secure supplies to supports or substrate.

U. Install individual stop valve in each water supply to plumbing specialties. Use ball, gate, or globe valve if specific valve is not indicated.

V. Install water-supply stop valves in accessible locations.

W. Install traps on plumbing specialty drain outlets. Omit traps on indirect wastes unless trap is indicated.

X. Locate drainage piping as close as possible to bottom of floor slab supporting fixtures and drains.

Y. Install escutcheons at wall, floor, and ceiling penetrations in exposed finished locations and within cabinets and millwork. Use deep-pattern escutcheons if required to conceal protruding pipe fittings.

Z. Include wood-blocking reinforcement for recessed and wall-mounting plumbing specialties.

3.2 CONNECTIONS

A. Piping installation requirements are specified in other Division 15 Sections. Drawings indicate general arrangement of piping, fittings, and specialties. The following are specific connection requirements:

1. Install piping connections between plumbing specialties and piping specified in other Division 15 Sections.

2. Install piping connections indicated between appliances and equipment specified in other Sections; connect directly to plumbing piping systems.

3. Install piping connections indicated as indirect wastes from appliances and equipment specified in other Sections, to spill over receptors connected to plumbing piping systems.

B. Install hoses between plumbing specialties and appliances as required for connections.

C. Arrange for electric-power connections to plumbing specialties and devices that require power. Electric power is specified in Division 16 Sections.

D. Supply Run-outs to Plumbing Specialties: Install hot- and cold-water-supply piping of sizes indicated, but not smaller than required by authorities having jurisdiction.

E. Drainage Run-outs to Plumbing Specialties: Install drainage and vent piping, with approved trap, of sizes indicated, but not smaller than required by authorities having jurisdiction.

F. Ground electric-powered plumbing specialties.

1. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. Where manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

G. Arrange for electric-power connections to plumbing specialties and devices that require power. Electric power, wiring, and disconnect switches are specified in Division 16 Sections.

3.3 FLASHING INSTALLATION

A. Fabricate flashing manufactured from single piece unless large pans, sumps, or other drainage shapes are required.

B. Solder joints of copper sheets where required.

C. Install sheet flashing on pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane.

1. Pipe Flashing: Sleeve type, matching pipe size, with minimum length of 10 inches (2500 mm), and skirt or flange extending at least 8 inches (200 mm) around pipe.

2. Sleeve Flashing: Flat sheet, with skirt or flange extending at least 8 inches (200 mm) around sleeve.

3. Embedded Specialty Flashing: Flat sheet, with skirt or flange extending at least 8 inches (200 mm) around specialty.

D. Set flashing on floors and roofs in solid coating of bituminous cement.

E. Secure flashing into sleeve and specialty clamping ring or device.

F. Install flashing for piping passing through roofs with counter-flashing or commercially made flashing fit-tings, according to Division 7 Section "Sheet Metal Flashing and Trim."

G. Extend flashing up vent pipe passing through roofs and turn down into pipe, or secure flashing into cast-iron sleeve having calking recess.

H. Fabricate and install flashing and pans, sumps, and other drainage shapes as indicated. Install drain connection if indicated.

3.4 COMMISSIONING

A. Before startup, perform the following checks:

1. System tests are complete.

2. Damaged and defective specialties and accessories have been replaced or repaired.

3. Clear space is provided for servicing specialties.

B. Before operating systems, perform the following steps:

1. Close drain valves, hydrants, and hose bibbs.

2. Open general-duty valves to fully open position.

3. Remove and clean strainers.

4. Verify that drainage and vent piping are clear of obstructions. Flush with water until clear.

C. Startup Procedures: Follow manufacturer's written instructions. If no procedures are prescribed by manufacturer, proceed as follows:

1. Energize circuits for electrically operated units. Start and run units through complete sequence of operations.

D. Adjust operation and correct deficiencies discovered during commissioning.

3.5 PROTECTION

A. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to pre-vent damage from traffic and construction work.

B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

3.6 CLEANOUT SCHEDULE

A. Cleanout FCO: Where plumbing specialties of this designation are indicated, provide products complying with the following:

1. Applicable Standard: ASME A112.36.2M.

2. Application: Floor cleanout.

3. Body or Ferrule Material: Cast iron.

4. Outlet Connection: Spigot.

5. Adjustable Housing Material: Cast iron with threads.

6. Frame and Cover Material and Finish: Nickel-brass, copper alloy.

7. Frame and Cover Shape: Round.

3.7 FLOOR-DRAIN SCHEDULE

A. Floor Drain FD: Where plumbing specialties of this designation are indicated, provide products complying with the following:

1. Applicable Standard: ASME A112.21.1M.

2. Body Material: Cast iron.

3. Seepage Flange: Required.

4. Clamping Device: Required.

5. Outlet: Bottom.

6. Sediment Bucket: Not required.

7. Top or Strainer Material: Stainless steel.

8. Top of Body and Strainer Finish: Stainless steel.

9. Top Shape: Round.

10. Top Loading Classification: Medium Duty.

11. Trap Material: Cast iron.

12. Trap Pattern: Standard P-trap.

3.8 TRENCH-DRAIN SCHEDULE

A. Trench Drain: Where plumbing specialties of this designation are indicated, provide products complying with the following:

1. Applicable Standard: ASME A112.21.1M.

2. Body Material: Cast iron.

3. Outlet: Bottom or Side.

4. Grate Material: Stainless steel.

5. Top Loading Classification: Heavy Duty.

3.9 GREASE-INTERCEPTOR SCHEDULE

A. Grease Interceptor: Where plumbing specialties of this designation are indicated, provide prod-ucts complying with the following:

1. Applicable Standard: PDI-G101.

2. Body Material: Plastic.

3. Cleanout: Integral or field installed on outlet.

4. Mounting: See plumbing plans.

7. Flow-Control Fitting: Required.

3.10 OIL-INTERCEPTOR SCHEDULE

A. Oil Interceptor: Where plumbing specialties of this designation are indicated, provide products complying with the following:

1. Body Material: Cast iron or steel.

2. Interior Coating: Corrosion-resistant enamel.

3. Exterior Coating: Corrosion-resistant enamel.

4. Cleanout: Integral or field installed on outlet.

5. Mounting: See plumbing plans.

6. Flow-Control Fitting: Required.

3.11 SOLIDS-INTERCEPTOR SCHEDULE

A. Solids Interceptor SI-[#]: Where plumbing specialties of this designation are indicated, provide products complying with the following:

1. Body Material: Cast iron or steel.

2. Interior Separation Device: Baffles or Screens.

3. Interior Coating: Corrosion-resistant enamel.

4. Exterior Coating: Corrosion-resistant enamel.

5. Mounting: See plumbing plans.

3.12 ACID NEUTRALIZATION TANK

A. Compact, under sink mounted acid neutralization tank with 2-inch inlet, outlet and vent connections; with seamless construction manufactured from high-density polyethylene. The top shall be with gasketed, bolt-down cover.

B. Limestone chips used in conjunction with neutralization tanks must be in the one to three-inch (1"- 3") diameter size range and must contain a high calcium carbonate content in excess of 90%.

3.13 ROOF-DRAIN SCHEDULE

A. Roof Drain RD: Where plumbing specialties of this designation are indicated, provide products complying with the following:

1. Applicable Standard: ASME A112.21.2M.

2. Body Material: Cast iron.

3. Combination Flashing Ring and Gravel Stop: Required.

4. Outlet: Bottom.

5. Dome Material: Cast iron.

6. Extension Collars: Required.

7. Underdeck Clamp: Required.

8. Sump Receiver: Required.

END OF SECTION

SECTION 15440

PLUMBING FIXTURES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes plumbing fixtures and trim, faucets, other fittings, and related components.

B. Related Sections: The following Sections contain requirements that relate to this Section:

1. Division 7 Section "Joint Sealants" for sealing between fixtures and walls, floors, and counters.

2. Division 15 Section "Plumbing Specialties" for backflow preventers and other specialties not specified in this Section.

1.3 DEFINITIONS

A. Accessible: Plumbing fixture, building, facility, or portion thereof that can be approached, entered, and used by physically handicapped, disabled, and elderly people.

B. Fitting: Device that controls flow of water into or out of plumbing fixture. Fittings specified in this Section include supplies and stops, faucets and spouts, shower heads and tub spouts, drains and tailpieces, traps and waste pipes. Pipe fittings, tube fittings, and general-duty valves are included where indicated.

1.4 SUBMITTALS

A. General: Submit each item in this Article according to the Conditions of the Contract and Division 1 Specification Sections.

B. Product Data for each plumbing fixture category and type specified. Include selected fixture, trim, fit-tings, accessories, appliances, appurtenances, equipment, and supports. Indicate materials and finishes, dimensions, construction details, and flow-control rates.

C. Wiring diagrams from manufacturer for electrically operated units.

D. Maintenance data for plumbing fixtures and components to include in the operation and maintenance manuals specified in Division 1.

1.5 QUALITY ASSURANCE

A. Source Limitations: Obtain plumbing fixtures, faucets, and other components of each category from one source and by a single manufacturer.

1. Exception: Where fixtures, faucets, or other components are not available from a single manufacturer, obtain similar products from other manufacturers specified for this category.

B. Regulatory Requirements: Comply with requirements of CABO A117.1, "Accessible and Usable Buildings and Facilities"; Public Law 90-480, "Architectural Barriers Act"; and Public Law 101-336, "Americans with Disabilities Act"; regarding plumbing fixtures for physically handicapped people.

C. Regulatory Requirements: Comply with requirements of Architectural and Transportation Barriers Compliance Board's (ATBCB) "Uniform Federal Accessibility Standards (UFAS), 1985-494-187" regarding plumbing fixtures for physically handicapped people.

D. Energy Policy Act Requirements: Comply with requirements of Public Law 102-486, "Energy Policy Act," regarding water flow rate and water consumption of plumbing fixtures.

E. Listing and Labeling: Provide electrically operated fixtures and components specified in this Section that are listed and labeled.

1. The Terms "Listed" and "Labeled": As defined in the National Electrical Code, Article 100.

2. Listing and Labeling Agency Qualifications: A "Nationally Recognized Testing Laboratory" (NRTL) as defined in OSHA Regulation 1910.7.

F. Select combinations of fixtures and trim, faucets, fittings, and other components that are compatible.

G. Product Options: Drawings indicate size, profiles, dimensional requirements, and characteristics of plumbing fixtures and are based on specific types and models indicated. Other manufacturers' fixtures with equal performance characteristics may be considered. Refer to Division 1 Section "Substitutions."

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver plumbing fixtures in manufacturer's protective packing, crating, and covering.

B. Store plumbing fixtures on elevated platforms in dry location.

1.7 PROJECT CONDITIONS

A. Field Measurements: Coordinate roughing-in and final fixture locations and verify that plumbing fixtures can be installed to comply with original design and referenced standards.

PART 2 PRODUCTS

2.1 PLUMBING FIXTURE STANDARDS

A. Comply with applicable standards below and other requirements specified.

1. Emergency Equipment: ANSI Z358.1.

2. National Sanitation Foundation Construction: NSF 2.

3. Vitreous-China Fixtures: ASME A112.19.2M.

4. Water-Closet, Flush Valve: ASME A112.19.5.

5. Electric Water Coolers: ARI 1010 and UL 399.

6. Stainless-Steel Fixtures Other than Service Sinks: ASME A112.19.3M.

2.2 LAVATORY/SINK FAUCET STANDARDS

A. Comply with ASME A112.18.1M and other requirements specified for lavatory, sink, and similar-type-fixture faucet fittings. Include hot- and cold-water indicators; 0.5-gpm maximum flow rate; and polished, chrome-plated finish; except where otherwise indicated. Coordinate faucet inlets with supplies and fixture holes and outlet with spout and fixture receptor.

1. Pipe Threads: ASME B1.20.1.

2. Sensor-Actuated Faucets and Electrical Devices: UL 1951.

3. Sink Spray Hoses: ASTM D 3573.

2.3 SHOWER FAUCET STANDARDS

A. Comply with ASME A112.18.1M and other requirements specified for bathtub and shower faucet fittings. Include hot- and cold-water indicators; 2.5-gpm- (0.16-L/s-) maximum flow rate; and polished, chrome-plated finish; except where otherwise indicated. Coordinate faucet inlets with supplies and outlet with diverter valve; tub spout; and shower head, arm, and flange.

1. Combination, Pressure-Equalizing- and Thermostatic-Control, Antiscald Faucets: ASSE 1016.

2. Hand-Held Showers: ASSE 1014.

3. High-Temperature-Limit Controls for Thermal-Shock-Preventing Devices: ASTM F 445.

4. Hose-Coupling Threads: ASME B1.20.1 or ASME B1.20.7.

5. Manual-Control Antiscald Faucets: ASTM F 444.

6. Pipe Threads: ASME B1.20.1.

7. Pressure-Equalizing-Control Antiscald Faucets: ASTM F 444 and ASSE 1016.

8. Thermostatic-Control Antiscald Faucets: ASTM F 444 and ASSE 1016.

2.4 MISCELLANEOUS FITTING STANDARDS

A. Comply with ASME A112.18.1M and other requirements specified for fittings, other than faucets. Include polished, chrome-plated finish, except where otherwise indicated. Coordinate fittings with other components and connectors.

1. Atmospheric Vacuum Breakers: ASSE 1001.

2. Automatic Flow Restrictors: ASSE 1028.

3. Brass and Copper, Supplies and Tubular Brass: ASME A112.18.1M.

4. Fixed Flow Restrictors: ASSE 1034.

5. Plastic Tubular Fittings: ASTM F 409.

6. Sensor-Operation Flushometers: ASSE 1037 and UL 1951.

2.5 MISCELLANEOUS COMPONENT STANDARDS

A. Comply with applicable standards below and other requirements specified for components for plumbing fixtures, equipment, and appliances.

1. Disposers: ASSE 1008 and UL 430.

2. Floor Drains: ASME A112.21.1M.

3. Grab Bars: ASTM F 446.

4. Hose-Coupling Threads: ASME B1.20.7.

5. Pipe Threads: ASME B1.20.1.

6. Plastic Toilet Seats: ANSI Z124.5.

7. Supply and Drain Insulation Kits: CABO A117.1.

8. Supports: ASME A112.6.1M.

2.6 FITTINGS

A. Fittings for Plumbing Fixtures: Refer to plumbing fixture schedules at the end of this Section for materials for supplies, supply stops, supply risers, traps, and other fittings.

B. Fittings for Equipment Specified in Other Sections: Fittings include the following:

1. Supply Inlets: Brass pipe or copper tube, size required for final connection.

2. Supply Stops: Chrome-plated brass, angle or straight; compression, wheel-handle type; same size as supply inlet and with outlet matching supply riser.

3. Supply Risers: 3/8-inch NPS (DN10) flexible copper tube with knob end. Use chrome-plated tube for exposed applications.

4. Traps: Tubular brass with 0.045-inch (1.1 mm) wall thickness, slip-joint inlet, cleanout, wall flange, escutcheons, and size to match equipment. Use chrome-plated tube for exposed applications.

5. Continuous Waste: Tubular brass, 0.045-inch (1.1-mm) wall thickness, with slip-joint inlet, and size to match equipment.

6. Indirect Waste: Tubular brass, 0.045-inch (1.1-mm) wall thickness, and size to match equipment.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine roughing-in for potable, hot- and cold-water supply piping systems; soil, waste, and vent piping systems; and supports. Verify that locations and sizes of piping and

locations and types of supports match those indicated, before installing and connecting fixtures. Use manufacturer's roughing-in data when roughing-in data are not indicated.

B. Examine walls, floors, and cabinets for suitable conditions where fixtures are to be installed.

C. Do not proceed until unsatisfactory conditions have been corrected.

3.2 APPLICATIONS

A. Include supports for plumbing fixtures according to the following:

1. Carriers: For wall-hanging water closets and fixtures supported from wall construction.

2. Chair Carriers: For wall-hanging urinals, lavatories, sinks, drinking fountains, and electric water coolers.

3. Heavy-Duty Chair Carriers: For accessible urinals, lavatories, and other fixtures where indicated.

4. Reinforcement: For floor-mounted lavatories and sinks that require securing to wall and recessed, box-mounted, electric water coolers.

5. Fabricate reinforcement from 2-by-4-inch or 2-by-6-inch (38-by-89-mm or 38-by-140-mm) fire-retardant-treated-wood blocking between studs or 1/4-by-6-inch (6.35-by-152.4-mm) steel plates attached to studs, in wall construction, to secure fixtures to wall. Include length that will extend beyond ends of fixture mounting bracket and attach to at least 2 studs.

B. Include fitting insulation kits for accessible fixtures according to the following:

1. Lavatories: Cover hot- and cold-water supplies, stops and handles, drain, trap, and waste to wall.

2. Sinks: Cover hot- and cold-water supplies, stops and handles, drain, trap, and waste to wall.

3. Fixtures with Offset Drain: Cover hot- and cold-water supplies, offset drain, trap, and waste to wall.

4. Other Fixtures: Cover exposed fittings below fixture.

3.3 PLUMBING FIXTURE INSTALLATION

A. Assemble plumbing fixtures and trim, fittings, faucets, and other components according to manufacturers' written instructions.

B. Install fixtures level and plumb according to manufacturers' written instructions, roughing-in drawings, and referenced standards.

C. Install wall-hanging, back-outlet water closets with support manufacturer's tiling frame or setting gage.

D. Install toilet seats on water closets.

E. Install wall-hanging, back-outlet urinals with gasket seals.

F. Install flushometer valves for accessible water closets and urinals with handle mounted on wide side of compartment. Install other actuators in locations that are easy for handicapped people to reach.

G. Fasten wall-hanging plumbing fixtures securely to supports attached to building substrate when supports are specified, and to building wall construction where no support is indicated.

H. Fasten floor-mounted fixtures to substrate. Fasten fixtures having holes for securing fixture to wall construction, to reinforcement built into walls.

I. Fasten recessed, wall-mounted fittings to reinforcement built into walls.

J. Fasten wall-mounted fittings to reinforcement built into walls.

K. Fasten counter-mounting plumbing fixtures to casework.

L. Secure supplies to supports or substrate within pipe space behind fixture.

M. Install individual stop valve in each water supply to fixture. Use gate or globe valve where specific stop valve is not specified.

1. Exception: Omit stop valves on supplies to emergency equipment, except when permitted by authorities having jurisdiction. When permitted, install valve chained and locked in OPEN position.

N. Install water-supply stop valves in accessible locations.

O. Install faucet, laminar-flow fittings with specified flow rates and patterns in faucet spouts when faucets are not available with required rates and patterns. Include adapters when required.

P. Install supply, flow-control fittings with specified flow rates in fixture supplies at stop valves.

Q. Install faucet, flow-control fittings with specified flow rates and patterns in faucet spouts when faucets are not available with required rates and patterns. Include adapters when required.

R. Install traps on fixture outlets. Omit traps on fixtures having integral traps. Omit traps on indirect wastes, except where otherwise indicated.

S. Install escutcheons at wall, floor, and ceiling penetrations in exposed, finished locations and within cabinets and millwork. Use deep-pattern escutcheons where required to conceal protruding pipe fittings.

T. Seal joints between fixtures and walls, floors, and counters using sanitary-type, 1-part, mildew-resistant, silicone sealant according to sealing requirements specified in Division 7 Section "Joint Sealants." Match sealant color to fixture color.

3.4 CONNECTIONS

A. Piping installation requirements are specified in other Division 15 Sections. Drawings indicate general arrangement of piping, fittings, and specialties. The following are specific connection requirements:

1. Install piping connections between plumbing fixtures and piping systems and plumbing equipment specified in other Division 15 Sections.

B. Supply and Waste Connections to Plumbing Fixtures: Refer to plumbing fixture schedules at the end of this Section for fitting sizes and connection requirements for each plumbing fixture.

C. Supply and Waste Connections to Equipment Specified in Other Sections: Connect equipment with sup-ply inlets, supply stops, supply risers, and traps specified in this Section. Use fitting sizes required to match connected equipment. Connect fittings to plumbing piping.

D. Ground equipment.

1. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. Where manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

E. Arrange for electric-power connections to fixtures and devices that require power. Electric power is specified in Division 16 Sections.

3.5 FIELD QUALITY CONTROL

A. Verify that installed fixtures are categories and types specified for locations where installed.

B. Check that fixtures are complete with trim, faucets, fittings, and other specified components.

C. Inspect installed fixtures for damage. Replace damaged fixtures and components.

D. Test installed fixtures after water systems are pressurized and demonstrate proper operation. Replace malfunctioning fixtures and components, then retest. Repeat procedure until units operate properly.

3.6 ADJUSTING AND CLEANING

A. Operate and adjust faucets and controls. Replace damaged and malfunctioning fixtures, fittings, and controls.

B. Adjust water pressure at electric water coolers, faucets, and flushometer valves having controls, to pro-duce proper flow and stream.

C. Replace washers and seals of leaking and dripping faucets and stops.

D. Clean fixtures, faucets, and other fittings with manufacturers' recommended cleaning methods and materials. Include the following:

1. Remove faucet spouts and strainers, remove sediment and debris, and reinstall strainers and spouts.

2. Remove sediment and debris from drains.

3.7 PROTECTION

A. Provide protective covering for installed fixtures and fittings.

B. Do not allow use of fixtures for temporary facilities, except when approved in writing by Owner.

3.8 WATER CLOSET SCHEDULE

A. Water Closet WC & WC-1: Flushometer valve. Where plumbing fixtures of this designation are indicated, provide products complying with the following:

1. Fixture Color: To be selected by Architect.

2. Bowl Type and Operation: Elongated, siphon jet.

3. Mounting and Outlet: Floor Mounted.

4. Fixture Bolt Caps: Color matching bowl.

5. Rim Height: 14 to 15.5 inches (356 to 394 mm) for Standard height (WC); and 17.5 to 18 inches (445 to 457 mm) for Accessible (WC-1).

6. Design Water Consumption: 1.3 gal. per flushing cycle.

7. Flushometer Valve Construction: Cast-brass body, brass or copper pipe or tubing inlet with wall flange and tailpiece with spud, screwdriver check stop, and vacuum breaker.

8. Flushometer Valve Operation: Diaphragm.

9. Flushometer Valve Finish: Polished, chrome-plated, exposed metal parts.

10. Flushometer Valve, Water Consumption: Factory set or field adjusted, 1.3 gal. maximum per flushing cycle.

11. Flushometer valve components include the following:

a. Battery-powered, sensor-actuation, automatic flushing system.

12. Toilet Seat: Solid-plastic, water-closet seat with bumpers and hardware, compatible with water closet and as follows:

a. Color: To be selected by Architect.

b. Class: Commercial, Heavy Duty.

c. Size: Elongated.

d. Pattern: Open front without cover.

e. Hinge Type: Self-sustaining check (SC).

13. Fixture Support: Vertically adjustable, cast-iron, water-closet carrier with combination support and waste fitting assemblies and tiling frame or setting gage. Include additional faceplate and coupling for water closet at wide pipe space. Compact-type carrier for back-to-back water-closet installation is prohibited.

3.9 URINAL SCHEDULE

A. Urinal UR & UR-1: Where plumbing fixtures of this designation are indicated, provide products complying with the following:

1. Fixture Color: To be selected by Architect.

2. Type and Operation: Siphon jet.

3. Mounting and Outlet: Wall hanging, back outlet.

4. Fixture Bolt Caps: Color to match fixture.

5. Rim Height: 24 inches (610 mm) standard (UR); and 17 inches (432 mm) for Accessible (UR-1).

6. Design Water Consumption: 0.5 gal. per flushing cycle.

7. Flushometer Valve Construction: Cast-brass body, brass or copper pipe or tubing inlet with wall flange and tailpiece with spud, screwdriver check stop, and vacuum breaker.

8. Flushometer Valve Operation: Diaphragm.

9. Flushometer Valve Finish: Polished, chrome-plated, exposed metal parts.

10. Flushometer Valve, Water Consumption: Factory set or field adjusted 0.5 gal. maximum per flushing cycle.

11. Flushometer valve components include the following:

    a. Battery-powered, sensor-actuation, automatic flushing system.

12. Fixture Support: Type I, vertically adjustable, urinal, chair carrier with coupling; heavy-duty, rectangular-steel, upright members; bearing plate; and feet.

3.10 LAVATORY SCHEDULE

A. Lavatory LAV & LAV-1: Where plumbing fixtures of this designation are indicated, provide products complying with the following:

1. Fixture Color: To be selected by Architect.

2. Fixture Dimensions: See architectural plans.

3. Fixture Faucet-Hole Spacing: 3 holes, centered and 4 inches (102 mm) each side of center.

4. Mounting: See architectural plans.

5. Faucet Construction: Center set with inlets on 4-inch (102-mm) centers, and with pop-up waste.

6. Faucet Valve Operation: Manual, adjustable, self-closing, metering lavatory faucet

7. Faucet Mounting Position: Centered on fixture deck.

8. Faucet Components: Include the following:

a. Fixture Operation: Manual.

b. Standard Handle (LAV): Dual, metering, self-closing, pushbuttons.

c. Accessible Handle (LAV-1): Dual, 4-inch (102-mm) wrist blade.

d. Spout: Swing gooseneck.

e. Spout Outlet: 1/2-gpm (0.032-L/s) laminar flow.

9. Supply Inlets: 1/2-inch NPS (DN15), brass pipe or copper tubing.

10. Supply Stops: Manufacturer's standard brass, angle or straight, compression, wheel-handle type, same size as supply inlet and with outlet matching supply riser.

11. Supply Risers: 3/8-inch NPS (DN10) flexible with knob end.

12. Supply, Flow-Control Restrictors: 3/8-inch NPS (DN10), 1/2 gpm (0.032 L/s).

13. Drain: Pop-up with 1-1/4-inch NPS (DN32) tailpiece, included with faucet.

14. Tubular Trap: 1-1/4-inch NPS (DN32), with slip-joint inlet and wall flange.

15. Supply Insulation Kit: Molded, soft-plastic covering for supplies from wall to fixture with removable covering for stops and handles. Include manufacturer's standard fasteners, straps, and adhesives.

16. Drain Insulation Kit: Molded, soft-plastic covering for drain piping from fixture to wall. Include manufacturer's standard fasteners, straps, and adhesives.

3.11 SHOWER SCHEDULE

A. Shower SHO & SHO-1: Where plumbing fixtures of this designation are indicated, provide products complying with the following:

1. Faucet Construction: Cast-brass, thermostatic-control, with high-temperature-limit control, single-handle mixing valve with check stops, and escutcheon.

2. Faucet Components: Include the following:

a. Handle: Single-lever, chrome-plated brass.

b. Standard Shower Head, Arm, and Flange (SHO): Manufacturer's standard with manual flow control in head.

c. Shower Arm, Flow-Control Fitting: 1.5 gpm.

d. Accessible Hand Shower, Hose, and Brackets or Slide (SHO-1): Manufacturer's standard.

e. Hose-Supply, Flow-Control Fitting: 1.5 gpm (.

B. Supplies: Copper tubing with ball, gate, or globe valve if check stops not included with faucet.

3.12 SINK SCHEDULE

A. Kitchen Sink KS: Where plumbing fixtures of this designation are indicated, provide products complying with the following:

1. Fixture Dimensions: See architectural plans.

2. Fixture Stainless-Steel Thickness: 0.063 inch (1.6 mm).

3. Fixture Faucet-Hole Spacing: 3 holes, centered and 4 inches (102 mm) each side of center.

4. Fixture Mounting: Counter.

5. Faucet Construction: Center set with inlets on 4-inch (102-mm) centers, and cast-brass underbody and brass escutcheon.

6. Faucet Mounting: Centered on fixture deck.

7. Faucet Components: Include the following:

   a. Accessible-Fixture Operation: Manual.

   b. Handles: Dual, 4-inch (102-mm) wrist blades.

   c. Spout: Swing gooseneck.

   d. Spout-Outlet, Flow-Control Fitting: 1.5 gpm.

8. Supply Inlets: 1/2-inch NPS (DN15), brass pipe or copper tubing.

9. Supply Stops: Manufacturer's standard brass, angle or straight, compression, wheel-handle type, same size as supply inlet and with outlet matching supply riser.

10. Drain: 1-1/2-inch (38-mm) removable, stainless-steel strainer bucket with 3-1/2-inch (89-mm) removable, stainless-steel crumb cup with 1-1/2-inch NPS (DN40) tubular stainless-steel tailpiece.

B. 2-Compartment Sink: Where plumbing fixtures of this designation are indicated, provide products complying with the following:

1. Fixture: See architectural plans or FFE submittal.

2. Faucet: ASME A112.18.1; NSF 61 – Section 9; NSF 372 (Low Lead Content); 8” Wall mount mixing faucet, Quarter turn cartridges with spring checks, Lever handles, Add-on faucet, 12” Swing nozzle, 44” Flexible stainless-steel hose, 1.5 GPM Spray valve and ½” NPT Female inlets.

3. Accessories: Chrome plated 17 gage (1.3 mm) brass P-trap with clean-out plug and arm with escutcheon, wheel handle stop, flexible supplies.

C. 3-Compartment Sink: Where plumbing fixtures of this designation are indicated, provide products complying with the following:

1. Fixture: See architectural plans or FFE submittal.

2. Faucet: ASME A112.18.1; NSF 61 – Section 9; NSF 372 (Low Lead Content); 8” Wall mount mixing faucet, Quarter turn cartridges with spring checks,

Lever handles, Add-on faucet, 12” Swing nozzle, 44” Flexible stainless-steel hose, 1.5 GPM Spray valve and ½” NPT Female inlets.

3. Accessories: Chrome plated 17 gage (1.3 mm) brass P-trap with clean-out plug and arm with escutcheon, wheel handle stop, flexible supplies.

D. Multi station hand wash sink:

1. Fixture Dimensions: See architectural plans.

2. Fixture Stainless-Steel Thickness: 16-gauge type 304 stainless steel with 2" tubular stainless steel wall brackets. Prefab system with ADA accessibility provisions.

3. Fixture Faucet-Hole Spacing: 4" on center faucet holes are pre-drilled inthe hand sink's high backsplash.

4. Fixture Mounting: Pre-fabricated self standing with adjustable legs and clear space for ADA access.

5. Faucet Construction: Center set with inlets on 4-inch (102-mm) centers, and cast-brass underbody and brass escutcheon.

6. Faucet Mounting: match with number faucet holes.

7. Faucet Components: Include the following:

a. Accessible-Fixture Operation: Manual.

b. Handles: Dual, 4-inch (102-mm) wrist blades.

c. Spout: Swing gooseneck.

d. Spout-Outlet, Flow-Control Fitting: 1.5 gpm.

8. Supply Inlets: 1/2-inch NPS (DN15), brass pipe or copper tubing.

9. Supply Stops: Manufacturer's standard brass, angle or straight, compression, wheel-handle type, same size as supply inlet and with outlet matching supply riser.

10. Drain: 1-1/2-inch (38-mm) removable, stainless-steel strainer bucket with 3-1/2-inch (89-mm) removable, stainless-steel crumb cup with 1-1/2-inch NPS (DN40) tubular stainless-steel tailpiece.

3.13 MOP-SERVICE BASIN SCHEDULE

A. Mop-Service Basin MS: Where plumbing fixtures of this designation are indicated, provide products complying with the following:

1. Fixture Stainless-Steel Thickness: 0.078 inch (2.0 mm).

2. Fixture Dimensions: 24 by 36 inches (610 by 914 mm); 12 inches (305 mm).

3. Mounting: Floor.

4. Rim Guard: Chrome plated, brass.

5. Faucet: Widespread, cast brass with supplies on 8-inch (203-mm) centers.

6. Faucet Mounting: Wall, centered on fixture.

7. Faucet Components: Include the following:

   a. Finish: Polished chrome.

   b. Handles: Dual lever or 4 arm.

   c. Supply Stops: Integral, in shanks.

   d. Spout: With integral vacuum breaker, pail hook, and hose-thread outlet.

   e. Wall Brace: Assembly with wall bracket and support to faucet spout.

   f. Hose: 30-inch- (762-mm-) minimum, flexible hose with stainless-steel hose wall bracket.

8. Drain: 3-inch NPS (DN80) with grid strainer.

9. P-Trap: 3-inch NPS (DN80) drainage piping.

10. Mop Rack: Wall mounted.

11. Supplies: 1/2-inch NPS (DN15) copper tubing with ball, gate, or globe valve.

12. Reinforcement: Provide for wall-mounting faucet and wall brace.

3.14 ELECTRIC WATER COOLER SCHEDULE (DRINKING FOUNTAIN)

A. Dual Height Electric Water Cooler EWC: Where plumbing fixtures of this designation are indicated, pro-vide products complying with the following:

1. Fixture Type: Bi-level bubbler with water bottle filler and integral counter.

2. No. of Bubblers or Stations: 2.

3. Fixture Unit Capacity: 7.8 GPH of 50 degree-F drinking waters.

4. Fixture Cabinet Material: Stainless steel, vandal resistant.

5. Fixture Color or Finish: Stainless steel, vandal resistant.

6. Fixture Mounting: Recessed.

7. Wall Grille: Stainless steel, vandal resistant.

8. Supply: 3/8-inch NPS (DN10) copper tubing with gate, globe, or ball valve.

9. Water Filter: Manufacturer's standard.

10. Cast-Brass Trap{s}: 1-1/4-inch NPS (DN32), cast-brass trap, with slip-joint inlet, pipe nipple to wall, and wall flange.

11. Fixture Support: bilevel, vertically adjustable, hanger-plate, water-cooler, chair carrier with steel-pipe upright members, bearing plate{s}, and feet.

3.15 EMERGENCY EQUIPMENT SCHEDULE

A. Combination Emergency Shower & Eyewash: Where plumbing fixtures of this designation are indicated, provide products complying with the following:

1. Material: Galvanized steel with safety yellow coating.

2. Mounting: Floor, with wall brace.

3. Supply: 1-1/2-inch NPS (DN40) copper tubing.

4. Provide with water flow sensor with audible & visual alarm.

END OF SECTION

SECTION 15441

WATER DISTRIBUTION PUMPS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes pumps for the building potable-water systems.

B. Related Sections include the following:

1. Division 16 Sections for power-supply wiring, field-installed disconnects, electrical devices, and motor controllers.

1.3 SUBMITTALS

A. Product Data: Include certified performance curves and rated capacities of selected models; shipping, installed, and operating weights; furnished specialties; and accessories for each type and size of pump specified. Indicate pumps' operating point on curves.

B. Shop Drawings: Show layout and connections for pumps. Include setting drawings with templates, directions for installation of foundation and anchor bolts, and other anchorages.

1. Wiring Diagrams: Detail wiring for power, signal, and control systems and differentiate between manufacturer-installed and field-installed wiring.

C. Maintenance Data: For each pump specified to include in maintenance manuals specified in Division 1.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain same type of pumps through one source from a single manufacturer.

B. Product Options: Drawings indicate size, profiles, connections, and dimensional requirements of pumps and are based on specific manufacturer types and models indicated. Other manufacturers' pumps with equal performance characteristics may be considered. Refer to Division 1 Section "Substitutions."

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Retain shipping flange protective covers and protective coatings during storage.

B. Protect bearings and couplings against damage.

PART 2 PRODUCTS

2.1 PUMPS, GENERAL

A. Description: Factory-assembled and -tested, centrifugal pump units; complying with UL 778; suitable for potable-water service; with all-bronze or stainless-steel construction and components in contact with water made of corrosion-resistant materials.

B. Motors: Comply with requirements in Division 15 Section "Motors" with built-in thermal-overload protection appropriate for motor size and duty.

C. End Connections for NPS 2-1/2 (DN65) and Larger: Flanged.

D. Finish: Manufacturer's standard paint applied to factory-assembled and -tested units before shipping.

E. Manufacturer's Preparation for Shipping: Clean flanges and exposed machined metal surfaces and treat with anticorrosion compound after assembly and testing. Protect flanges, pipe openings, and nozzles.

2.2 COMPACT CIRCULATORS

A. Description: Horizontal, in-line, replaceable-cartridge-design circulator; rated for 125-psig (860-kPa) minimum working pressure and minimum continuous water temperature of 225 deg F (107 deg C).

1. Pump and Motor Assembly: On common shaft in hermetically sealed unit without stuffing box or mechanical seal, and with manufacturer's standard cooling and lubrication system.

2. Impeller: Corrosion-resistant material.

3. Motor: Single speed, unless otherwise indicated.

2.3 IN-LINE CIRCULATORS

A. Description: Horizontal in-line circulator, rated for 125-psig (860-kPa) minimum working pressure and minimum continuous water temperature of 225 deg F (107 deg C).

1. Construction: Radially split, all-bronze casing.

2. Impeller: ASTM B 36/B 36M, rolled brass; or ASTM B 584, cast bronze; overhung, single suction, and keyed to shaft.

3. Seal: Mechanical.

4. Shaft and Sleeve: Steel shaft, with oil-lubricated copper sleeve.

5. Pump Bearings: Oil-lubricated, bronze-journal or thrust type.

6. Shaft Coupling: Flexible, capable of absorbing torsional vibration and shaft misalignment.

7. Motor: Single speed, with oil-lubricated bearings, unless otherwise indicated; and resiliently mounted to pump casing.

a. Motor Size: For motors larger than 1/2 hp, select motor size that will not overload through full range of pump performance curve.

2.4 HORIZONTAL IN-LINE PUMPS

A. Description: Horizontal, in-line, separately coupled pump; rated for 175-psig (1200-kPa) minimum working pressure and minimum continuous water temperature of 225 deg F (107 deg C); and complying with HI 1.1-1.5 for in-line centrifugal pumps.

1. Construction: Radially split, all-bronze casing.

2. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, closed, overhung, single suction, and keyed to shaft.

3. Shaft and Sleeve: Stainless-steel shaft, with oil-lubricated copper sleeve.

4. Mechanical Seal: Carbon-steel rotating ring, stainless-steel spring, ceramic seat, and rubber bellows and gasket. Include water slinger on shaft between motor and seal.

5. Pump Bearings: Oil-lubricated, bronze-journal or ball type.

6. Shaft Coupling: Flexible, capable of absorbing torsional vibration and shaft misalignment.

7. Motor: Energy-efficient design; single speed, with built-in thermal-overload protection; grease-lubricated ball bearings; and resiliently mounted to pump casing.

a. Motor Size: For motors larger than 1/2 hp, select motor size that will not overload through full range of pump performance curve.

2.5 VERTICAL IN-LINE PUMPS

A. Description: Vertical, in-line, separately coupled pump; rated for 175-psig (1200-kPa) minimum working pressure and minimum continuous water temperature of 225 deg F (107 deg C); and complying with HI 1.1-1.5 for in-line centrifugal pumps.

1. Construction: Radially split, all-bronze casing.

2. Impeller: ASTM B 584, cast bronze; statically and dynamically balanced, closed, overhung, single suction, and keyed to shaft.

3. Shaft and Sleeve: Stainless-steel shaft, with oil-lubricated copper sleeve.

5. Mechanical Seal: Carbon-steel rotating ring, stainless-steel spring, ceramic seat, and rubber bellows and gasket. Include water slinger on shaft between motor and seal.

6. Pump Bearings: Oil-lubricated, bronze-journal or ball type.

7. Shaft Coupling: Flexible, capable of absorbing torsional vibration and shaft misalignment.

8. Motor: Energy-efficient design; single speed, with built-in thermal-overload protection; grease-lubricated ball bearings; and directly mounted to pump casing.

a. Motor Size: For motors larger than 1/2 hp, select motor size that will not overload through full range of pump performance curve.

b. Lifting and Supporting Lug: Directly mounted in top of motor enclosure.

2.6 MULTIPLEX, VARIABLE-SPEED BOOSTER PUMPS

A. Description: Factory-assembled and tested, fluid-handling system for domestic water, with pumps, piping, valves, integral bladder type expansion tank, specialties, and controls, and mounted on base.

B. Pumps:

1. Type: Vertical, multistage as defined in HI 1.1-1.2 and HI 1.3 for in-line, multistage, separately coupled, overhung-impeller, centrifugal pump.

2. Casing: Cast-iron or steel base and stainless-steel chamber.

3. Impeller: Closed, stainless steel; statically and dynamically balanced and keyed to shaft.

4. Shaft: Stainless steel.

5. Seal: Mechanical.

6. Bearing: Water-lubricated sleeve type.

C. Motors: Pre-greased, permanently shielded, ball-type bearings. Select motors that will not overload through full range of pump performance curve.

D. Piping: Stainless-steel pipe and fittings.

E. Valves:

1. Shutoff Valves NPS 2 (DN 50) and Smaller: Gate valve or two-piece, full-port ball valve, in each pump's suction and discharge piping.

2. Shutoff Valves NPS 2-1/2 (DN 65) and Larger: Gate valve or lug-type butterfly valve, in each pump's suction and discharge piping.

3. Check Valves NPS 2 (DN 50) and Smaller: Silent or swing type in each pump's discharge piping.

4. Check Valves NPS 2-1/2 (DN 65) and Larger: Silent type in each pump's discharge piping.

5. Thermal-Relief Valve: Temperature-and-pressure relief type in pump's discharge header piping.

F. Dielectric Fittings: With insulating material isolating joined dissimilar metals.

G. Control Panel: Factory installed and connected as an integral part of booster pump; automatic for multiple-pump, variable-speed operation, with load control and protection functions.

1. Control Logic: Solid-state system with transducers, programmable microprocessor, VFC, and other devices in controller. Install VFC for pump motors larger than 25 hp in separate panel; same type as motor control panel enclosure.

2. Motor Controller: NEMA ICS 2, variable-frequency, solid-state type.

    a. Control Voltage: 24-V ac, with integral control-power transformer.

3. Enclosure: NEMA 250, Type 3R.

4. Motor Overload Protection: Overload relay in each phase.

5. Starting Devices: Hand-off-automatic selector switch for each pump in cover of control panel, plus pilot device for automatic control.

    a. Triplex, Sequence (Lead-Lag-Lag) Starter: Switches lead pump to one lag main pump and to three-pump operation.

6. Pump Operation and Sequencing: Pressure-sensing method.

    a. Time Delay: Controls pump on-off operation; adjustable from 1 to 300 seconds.

7. VFC: Voltage-source, pulse-width, modulating-frequency converter for each pump.

8. Manual Bypass: Magnetic contactor arranged to transfer to constant-speed operation upon VFC failure.

9. Instrumentation: Suction and discharge pressure gages.

10. Lights: Running light for each pump.

11. Alarm Signal Device: Sounds alarm when backup pumps are operating.

    a. Time Delay: Controls alarm operation; adjustable from 1 to 300 seconds, with automatic reset.

12. Thermal-bleed cutoff.

13. Low-suction-pressure cutout.

14. High-suction-pressure cutout.

15. Low-discharge-pressure cutout.

16. High-discharge-pressure cutout.

H. Base: Structural steel.

2.7 MOTORS

A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors.

1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in NFPA 70.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine roughing-in for booster pumps to verify actual locations of piping connections before booster-pump installation.

3.2 INSTALLATION

A. Equipment Mounting:

1. Install booster pumps on cast-in-place concrete equipment base.

B. Support connected domestic-water piping so weight of piping is not supported by booster pumps.

C. Install pumps according to manufacturer's written instructions and with access for periodic maintenance, including removing motors, impellers, couplings, and accessories.

D. Support pumps and piping so weight of piping is not supported by pumps.

E. Suspend horizontal in-line pumps independent of piping. Use continuous-thread hanger rods and vibration isolation hangers of sufficient size to support pump weight. Fabricate brackets or supports as re-quired. Refer to Division 15 Section "Hangers and Supports" for materials.

F. Suspend vertical in-line pumps independent of piping. Use continuous-thread hanger rods and vibration isolation hangers of sufficient size to support pump weight. Refer to Division 15 Section "Hangers and Supports" for materials.

3.3 CONNECTIONS

A. Comply with requirements for piping specified in Section 15411 "Water Distribution Piping." Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect domestic-water piping to booster pumps. Install suction and discharge pipe equal to or greater than size of system suction and discharge headers.

1. Install flanged, or grooved-joint connections on suction and discharge headers at connection to domestic-water piping.

2. Install valved bypass, same size as and between piping, at connections to booster-pump suction and discharge headers.

3. Install flexible connectors, same size as piping, on piping connections to booster-pump suction and discharge headers.

4. Install piping adjacent to booster pumps to allow service and maintenance.

C. Electrical wiring and connections are specified in Division 16 Sections.

D. Ground equipment.

1. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.4 IDENTIFICATION

A. Identify system components. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

3.5 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.

B. Perform tests and inspections.

1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

C. Tests and Inspections:

1. Perform visual and mechanical inspection.

2. Leak Test: After installation, charge booster pump and test for leaks. Repair leaks and retest until no leaks exist.

3. Operational Test: After electrical circuitry has been energized, start booster pumps to confirm proper motor rotation and booster-pump operation.

4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. Pumps and controls will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

3.6 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.

3.7 ADJUSTING

A. Adjust booster pumps to function smoothly, and lubricate as recommended by manufacturer.

B. Adjust pressure set points.

C. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting booster pump to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.8 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain booster pumps.

END OF SECTION

SECTION 15446

ELEVATOR SUMP PUMPS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes sump pumps for the building storm drainage systems.

B. Related Sections include the following:

1. Division 15 Section "Motors" for sump pump motors.

1.3 SUBMITTALS

A. Product Data: Include performance curves, furnished specialties, and accessories for each type and size of pump indicated.

B. Shop Drawings: Show layout and connections for pumps. Include setting drawings with templates, directions for installing foundation and anchor bolts, and other anchorages.

1. Wiring Diagrams: Detail wiring for power, signal, and control systems and differentiate between manufacturer-installed and field-installed wiring.

C. Maintenance Data: For each type and size of pump specified to include in maintenance manuals specified in Division 1.

1.4 QUALITY ASSURANCE

A. Product Options: Drawings indicate size, profiles, connections, and dimensional requirements of pumps and are based on specific manufacturer types and models indicated. Other manufacturers' pumps with equal performance characteristics may be considered. Refer to Division 1 Section "Substitutions."

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Retain shipping flange protective covers and protective coatings during storage.

B. Protect bearings and couplings against damage.

C. Comply with pump manufacturer's rigging instructions for handling.

PART 2 PRODUCTS

2.1 SUMP PUMPS, GENERAL

A. Description: Factory-assembled and -tested, single-stage, centrifugal, end-suction sump pump units complying with UL 778. Include motor, operating controls, and construction for permanent installation.

B. Discharge Pipe End Connections NPS 2 (DN50) and Smaller: Threaded. Pumps available only with flanged-end discharge pipe may be furnished with threaded companion flanges.

C. Discharge Pipe End Connections NPS 2-1/2 (DN65) and Larger: Flanged.

D. Motors: Single speed, with grease-lubricated ball bearings, and non-overloading through full range of pump performance curves.

E. Finish: Manufacturer's standard paint applied to factory-assembled and -tested units before shipping.

F. Manufacturer's Preparation for Shipping: Clean flanges and exposed machined metal surfaces and treat with anticorrosion compound after assembling and testing. Protect flanges, pipe openings, and nozzles with wooden flange covers or with screwed-in plugs.

2.2 SUBMERSIBLE SUMP PUMPS

A. Description: Submersible, direct-connected sump pump complying with HI 1.1-1.5 for submersible sump pumps.

1. Pump Arrangement: Simplex.

2. Casing: Cast iron with cast-iron inlet strainer, legs that elevate pump to permit flow into impeller, and discharge companion flange suitable for plain-end pipe connection arranged for vertical dis-charge.

3. Impeller: ASTM A 48, Class No. 25 A or higher cast iron; statically and dynamically balanced, open or semi-open non-clog design, overhung, single suction, keyed to shaft, and secured by locking cap screw.

4. Construction: Stainless steel with stainless-steel or other corrosion-resistant impeller, stainless-steel inlet strainer, legs that elevate pump to permit flow into impeller, and discharge companion flange suitable for plain-end pipe connection arranged for vertical discharge.

5. Pump and Motor Shaft: Stainless steel, with factory-sealed, grease-lubricated ball bearings.

6. Seals: Double mechanical seals.

7. Motor: Hermetically sealed, capacitor-start type, with built-in overload protection; and three-conductor waterproof power cable of length required, with grounding plug and cable-sealing assembly for connection at pump.

8. Moisture-Sensing Probe: Internal moisture sensor, moisture alarm, and waterproof cable of length required, with cable-sealing assembly for connection at pump.

9. Pump Discharge Piping: Factory or field fabricated, ASTM A 53, Schedule 40, galvanized-steel pipe, bronze pipe, or copper tube.

10. Basin Cover: Cast iron or steel and suitable for supporting controls. Refer to "Sump Pump Ba-sins" Article for other requirements.

11. Controls: NEMA 250, Type 1 enclosure, pedestal mounted, unless wall mounting is indicated; with two mercury-float switches in NEMA 250, Type 6 enclosures; mounting rod; and electric cables; operating & alarm condition indicator lights and alarm horn. Provide oil sensor with indicating lights and alarm horn for elevator sump pit applications.

12. Float-Guide Pipe: Guide pipe or other restraint for floats and rods in basins of depth greater than 60 inches (1500 mm).

13. High-Water Alarm: Rod-mounted, NEMA 250, Type 6 enclosure with mercury-float-switch alarm matching control and electric bell; 120-V ac, with transformer and contacts for remote alarm bell, unless battery operation is indicated.

2.3 SUMP PUMP PITS

A. Description: Cast-in-place concrete with steel curb frames and covers. Refer to Division 3 Section "Cast-in Place Concrete."

B. Curb Frames: Galvanized steel or steel with bitumastic coating of dimension to fit cover.

1. Pattern: Angle-cross-section shape with flat top surface.

2. Pattern: Z-cross-section shape with raised outer rim of height matching cover for recessed mounting that will have installed cover flush with top of floor slab.

C. Pit Cover: Fabricate with openings with gaskets, seals, and bushings, for access, pumps, pump shafts, control rods, discharge piping, vent connections, and power cables.

1. Material: Steel, with drainage holes and bitumastic coating or cast iron, with drainage holes.

2. Reinforcement: Steel or cast-iron reinforcement capable of supporting foot-traffic areas.

2.4 GENERAL-DUTY VALVES

A. Refer to Division 15 Section "Valves" for general-duty gate, ball, butterfly, globe, and check valves. Use valves specified for domestic water, unless otherwise indicated. Include features and devices indicated.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine roughing-in of plumbing piping systems to verify actual locations of piping connections before pump installation.

3.2 EARTHWORK

A. Excavating, trenching, and backfilling are specified in Division 2 Section "Earthwork."

3.3 CONCRETE

A. Install concrete bases of dimensions indicated for sump pumps. Refer to Division 3 Section "Cast-in-Place Concrete" and Division 15 Section "Basic Mechanical Materials and Methods."

B. Concrete for pits and sumps is specified in Division 3 Section "Cast-in-Place Concrete."

3.4 INSTALLATION

A. Install pumps according to manufacturer's written instructions.

B. Install pumps and arrange to provide access for maintenance, including removal of motors, impellers, couplings, and accessories.

C. Support piping so weight of piping is not supported by pumps.

D. Submersible Sump Pumps: Set pumps on basin, pit, or sump floor. Make direct connections to storm drainage piping.

E. Sump Pump Pits: Construct concrete pits and connect to storm drainage piping. Refer to Division 3 Section "Cast-in-Place Concrete" for concrete work. Set basin cover and fasten to top edge of concrete pit. Install so top surface of cover is flush with finished floor.

3.5 CONNECTIONS

A. Storm drainage piping installation requirements are specified in Division 15 Section "Drainage and Vent Piping." Drawings indicate general arrangement of piping and specialties. The following are specific connection requirements:

1. Install discharge pipe sizes equal to or greater than diameter of pump nozzles, and connect to storm drainage piping.

2. Install swing check valve and gate or ball valve on each sump pump discharge. Include spring-loaded or weighted-lever check valves for piping NPS 2-1/2 (DN65) and larger.

3. Install swing check valve and gate or ball valve on each automatic, packaged pump discharge.

B. Install electrical connections for power, controls, and devices.

C. Electrical power and control components, wiring, and connections are specified in Division 16 Sections.

D. Ground equipment.

1. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.6 ADJUSTING

A. Pump Controls: Set pump controls for automatic start, stop, and alarm operation as required for system application.

3.7 COMMISSIONING

A. Final Checks before Starting: Perform the following preventive maintenance operations:

1. Lubricate bearings.

2. Disconnect couplings and check motors for proper direction of rotation.

3. Verify that each pump is free to rotate by hand. Do not operate pump if it is bound or drags, until cause of trouble is determined and corrected.

4. Verify that pump controls are correct for required application.

B. Starting procedure for pumps with shutoff power not exceeding safe motor power is as follows:

1. Start motors.

2. Open discharge valves slowly.

3. Check general mechanical operation of pumps and motors.

END OF SECTION

SECTION 15450

POTABLE WATER STORAGE TANKS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Panel Type Water Storage Tank

1.2 RELATED SECTIONS

A. Section 15140 - Supports and Anchors.

1.3 REFERENCES

A. ANSI/ASHRAE 90A - Energy Conservation in New Building Design.

B. ANSI/NFPA 70 - National Electrical Code.

1.4 DEFINITIONS

A. Reservoir: Flat-bottomed, surface water-storage tank.

B. FRP: Fiberglass Reinforced Plastic

C. GRP: Glass-fiber Reinforced Plastic

D. NR: Natural rubber.

E. PVC: Polyvinyl chloride plastic.

1.5 PERFORMANCE REQUIREMENTS

A. Structural Performance: Surface water-storage tank, including structural reinforcement, foundation & base supports, shall be capable of withstanding the effects of dead and live gravity loads and winds determined according to authorities having jurisdiction.

B. Seismic Performance: Surface water-storage tank, including structural reinforcement, foundation and base supports, shall be capable of withstanding the effects of earthquake motions determined according to authorities having jurisdiction.

C. Thermal Movements: Surface water-storage tank, including structural reinforcement, foundation and base supports, shall allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects. Base engineering calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg. F (67 deg. C), ambient; 180 deg. F (100 deg. C), material surfaces.

1.6 SUBMITTALS

A. Shop Drawings:

1. Include dimensions of tanks, tank lining methods, anchors, attachments, lifting points, tappings, and drains.

B. Product Data:

1. Include dimension drawings of water heaters indicating components and connections to other equipment and piping.

2. Provide electrical characteristics and connection requirements.

C. Manufacturer's Installation Instructions.

1.7 OPERATION AND MAINTENANCE DATA

A. Submit under provisions of Section 01700.

B. Include operation, maintenance, and inspection data.

1.8 QUALITY ASSURANCE

A. Perform Work in accordance with Uniform Plumbing Code and in accordance with authorities having jurisdiction.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, protect and handle products to site under provisions of Section 01600.

B. Provide temporary inlet and outlet caps. Maintain caps in place until installation.

1.10 WARRANTY

A. Provide one year warranty under provisions of Section 01700.

PART 2 PRODUCTS

2.1 PANEL-TYPE WATER STORAGE TANK

A. GRP Panel type water tank shall be in compliance with ANSI/NSF 61, Section 9. and shall be designed to have sufficient strength to withstand expected 0.3G minimum horizontal ground acceleration. Tanks shall be constructed in metric moduled panels in configurations of 2m x 1m / 1m x 1m/ 1.5m x 1m / 2m x 0.5m / 1.5m x 0.5m / 1m x 0.5m / 0.5m x 0.5m as per manufacturer recommendation.

B. Materials

1. Materials for the construction of the panels shall be Isophthalic unsaturated polyester resin, and the glassfibre used shall be non-alkali type.

2. Manufacturing process of panel shall be the Hot Press Moulding System at 150^{o}c temperature with Sheet Moulding Compound (S.M.C.).

3. The SMC forming panels shall be externally reinforced with a F/G roving mesh of density not less than 230 g/m2 before the hot pressing process.

4. Panels and covers shall be in Grey colour in accordance to Munsell's value N-7.0 to prevent light transmission so as to avoid algae growth in tank. (Value of light transmission shall not be exceeding 0.00%).

C. Dimensions

1. Tolerance of dimensions of each panel shall be within +/-0.03% of the nominal dimensions.

2. Tolerance with regard to panel and flange angle shall be within +/-0.30

D. Fabrication

1. G.R.P. Panels shall be externally flanged at 90º on four sides.

2. Thickness of flange for roof panels shall not be less than 6mm, other panels' flange shall not be less than 10mm and the landed width of all flanges shall not be less than 57mm.

3. Bottom panels shall be convex shape and drain panel shall be concave shape to allow complete drainage of water from the tank by gravity.

E. Bolts & Nuts

1. Bolts, nuts and washers for external fixing shall be of stainless steel grade A4-316.

2. Bolts, nuts and washers for internal fixing of roof panels and partition shall be of stainless steel grade A4-316.

3. Bolt sets for connecting the flanges of inlet, outlet, overflow and drainage to water tanks shall be food grade Rubber Capped.

4. Diameter of bolts shall be 12mm & at a rate of 8 bolt sets per linear meter.

F. Sealing Materials

1. Sealant materials used for joints shall be chemically stable, non-toxic, flexible, and resistant to ultraviolet rays and must be tested for non-toxicity in accordance to the SISR 245-1981

2. Material for the roof sealant shall be made of EPDM and the main solid sealant shall be made of S.E.B.S. (Stylene Ethylene Butyrene Styrene) i.e. Solid synthetic Rubber.

3. The main sealant shall be ribbed in not less than 4 locations. These ribs shall be continuous along the length of the sealant without any breaking. Such main sealant shall remain flexible and resistant to ultra-violet rays.

4. The main sealant shall be subject to testing in accordance to SS245 for the following :- Effect on taste, odor, color and turbidity - Toxic metals - Cytotoxicity - Microbiological growth Such tests shall be performed by a reputable laboratory.

G. Reinforcements and Supports of Water Tank

1. Water tanks shall be strengthened externally with the hot-dipped galvanized steel reinforcement.

2. Internal reinforcements for sectional tank, if required by manufacturer, shall be of Stainless Steel grade A4–316.

3. Support poles of ceiling panels shall be uPVC pipes properly secured.

4. Brackets securing the roof tank covers shall be out of food grade high density polyurethane material.

H. Roof Manhole Cover

1. The roof manhole panel shall have a 610mm diameter opening and access door fixed with Stainless Steel Hinges and lock device.

2. The access door shall be designed to be non-detachable and opened at 135º.

3. The access door shall be hermetically closed and light, dust and insect proof.

I. Air Vent

1. Air vents shall be made of uPVC 2” or 4” Dia with net of mesh No. 22 and shall be light, dust and insect proof.

J. Cat ladder

1. Tanks above 1.0 meter high shall have one external and one internal ladder fitted to every manhole access.

2. The external ladder shall be made of hot dipped galvanized steel conforming to J.I.S. G3101 SS400 and H8641.

3. The internal ladder shall be made of uPVC.

K. Steel Skid

1. Water tanks higher than 1 meter shall be mounted firmly onto a cross steel footing. For 1.5&2 m. high tanks primary beams shall be H Beam of size 100*100*8mm and for tanks higher than 2m. primary beams shall be I Beams of minimum size 200*100*7t*5mm.

2. Maximum deflection permissible shall not exceed 5mm. The Steel footing shall be painted with 2 coats of Red Oxide Primer.

L. Concrete pad and pedestal supports.

1. Provide concrete pad and pedestal supports, size and configuration per manufacturer's recommendations. Structural design shall be submitted for review and approval of Structural DOR.

PART 3 EXECUTION

3.1 PANEL-TYPE WATER TANK INSTALLATION

A. Install water tank in accordance with manufacturer's instructions. Installation shall be by trained manufacturers personnel.

B. Coordinate with plumbing piping and related electrical work to achieve operating system.

3.2 CONNECTIONS

A. Connect tanks to water-distribution and fire suppression piping.

B. Connect drains to storm-drainage piping.

3.3 WATER-STORAGE TANK APPURTENANCE INSTALLATION

A. Install and adjust water-level control valves, piping, and alarms.

B. Install obstruction lighting according to authorities having jurisdiction.

3.4 FIELD QUALITY CONTROL

A. Testing: Engage a qualified testing agency to perform the following field quality-control testing:

1. Leak Test: Comply with IPC. Fill tanks with potable water and test for leaks after installation. Repair leaks and retest until no leaks exist.

a. Water will be furnished by Owner.

2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Remove and replace malfunctioning units and retest as specified above.

3.5 CLEANING

A. Clean interior and exterior of surface water-storage tanks.

B. Disinfect surface water-storage tanks according to AWWA C652 or requirements of authorities having jurisdiction.

3.6 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain the following. Retain subparagraphs below to suit Project.

1. Obstruction lighting.

2. Water-level controls.

END OF SECTION 15450

SECTION 15484

FUEL OIL PIPING SYSTEM

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Pipe and pipe fittings.

B. Valves.

C. Fuel oil storage tanks.

D. Accessories.

1.2 RELATED SECTIONS

A. Section 09900 - Painting.

B. Section 10600 – Hangers and Supports.

C. Section 16180 - Equipment Wiring Systems: Electrical characteristics and wiring connections.

1.3 REFERENCES

A. ANSI B31.9 - Building Service Piping.

B. API 650 - Welded Steel Tanks for Oil Storage.

C. API 2000 - Venting Atmospheric and Low-Pressure Storage Tanks.

D. ASME - Boiler and Pressure Vessel Code.

E. ASME SEC IX - Welding and Brazing Qualifications.

F. ASME B16.3 - Malleable Iron Threaded Fittings.

G. ASME B36.10 - Welded and Seamless Wrought Steel Pipe.

H. ASTM A53 - Pipe, Steel, Black and Hot-Dipped Zinc Coated, Welded and Seamless.

I. ASTM A234/A234M - Pipe Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and Elevated Temperatures.

J. ASTM D2310 - Machine-Made Reinforced Thermosetting Resin Pipe.

K. ASTM D2996 - Filament-Wound Reinforced Thermosetting Resin Pipe.

L. NFPA 30 - Flammable and Combustible Liquids Code.

M. NFPA 31 - Installation of Oil Burning Equipment.

N. UL 142 - Steel Aboveground Tanks for Flammable and Combustible Liquids.

1.4 SUBMITTALS FOR REVIEW

A. Product Data: Provide data on pipe materials, pipe fittings, valves and accessories. Provide manufacturers catalog information. Indicate valve data and ratings.

B. Shop Drawings: Indicate tanks, system layout, pipe sizes, location, and elevations. For fuel oil tanks, indicate dimensions and accessories including manholes and hold down straps.

1.5 SUBMITTALS AT PROJECT CLOSEOUT

A. Project Record Documents: Record actual locations of piping system, storage tanks, and system components.

B. Maintenance Data: Include installation instructions, spare parts lists.

C. Warranty: Submit manufacturer warranty and ensure forms have been completed in Owner's name and registered with manufacturer.

1.6 QUALITY ASSURANCE

A. Welding Materials and Procedures: Conform to ASME Code.

B. Welders Certification: In accordance with ASME SEC IX.

C. Manufacturer Qualifications: Company specializing in manufacturing the Products specified in this section with minimum three years documented experience.

D. Installer Qualifications: Company specializing in performing the work of this section approved by manufacturer.

E. Valves: Manufacturer's name and pressure rating marked on valve body.

1.7 REGULATORY REQUIREMENTS

A. Conform to applicable EPA Regulations for installation of fuel oil system.

B. Conform to ANSI B31.1 for installation of fuel oil piping.

C. Products Requiring Electrical Connection: Listed and classified by Underwriters Laboratories Inc., as suitable for the purpose specified and indicated.

1.8 DELIVERY, STORAGE, AND PROTECTION

A. Protect piping and fittings from soil and debris with temporary end caps and closures. Maintain in place until installation.

1.9 WARRANTY

A. Provide five-year manufacturer warranty for fuel tanks.

1.10 EXTRA MATERIALS

A. Provide two repacking kits for each size valve.

PART 2 PRODUCTS

2.1 BURIED PIPING

A. Steel Pipe: ASTM A53, Schedule 40 black.

1. Fittings: ASTM A234/A234M, wrought carbon steel and alloy steel welding type.

2. Joints: ANSI B31.9 welded.

3. Jacket: AWWA C105 polyethylene or double layer, half-lapped 10 mil (0.25 mm) polyethylene tape.

2.2 ABOVE GROUND PIPING

A. Steel Pipe: ASTM A53 or ASME B36.10, Schedule 40 black.

1. Fittings: ASTM B16.3, malleable iron, or ASTM A234/A234M, wrought carbon steel and alloy steel welding type.

2. Joints: NFPA 30, threaded or welded to ANSI B31.9.

2.3 UNDERGROUND PIPING CONTAINMENT SYSTEM

A. FRP: ASTM D2310 and ASTM D2996, UL listed filament wound fiberglass reinforced epoxy pipe with integral epoxy liner and exterior coating.

1. Fittings: Two piece, compression molded, filament wound fiberglass reinforced epoxy, mechanically joined.

2.4 PIPE HANGERS AND SUPPORTS

A. Conform to ANSI B31.4.

B. Hangers for Pipe Sizes 1/2 to 1-1/2 Inch (15 to 40 mm): Carbon steel, adjustable swivel, split ring.

C. Hangers for Pipe Sizes 2 Inches (50 mm) and Over: Carbon steel, adjustable, clevis.

D. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.

E. Wall Support for Pipe Sizes to 3 Inches (80 mm): Cast iron hook.

F. Vertical Support: Steel riser clamp.

G. Floor Support: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.

2.5 FLANGES, UNIONS, AND COUPLINGS

A. Pipe Size 2 Inches (50 mm) and Under:

1. Ferrous pipe: 150 psi (1034 kPa) malleable iron threaded unions.

B. Pipe Size Over 2 Inches (50 mm):

1. Ferrous pipe: 150 psi (1034 kPa) forged steel slip-on flanges; 1/16 inch (1.6 mm) thick preformed neoprene gaskets.

2.6 GATE VALVES

A. MSS SP-80, Class 125, bronze body, bronze trim, rising stem, handwheel, inside screw, solid wedge disc, threaded ends.

2.7 GLOBE VALVES

A. MSS SP-80, Class 125, bronze body, bronze trim, handwheel, bronze disc, threaded ends.

2.8 BALL VALVES

A. MSS SP-110, Class 150, 400 psi (2760 kPa) CWP, bronze, two piece body, chrome plated brass ball, regular port, teflon seats and stuffing box ring, blow-out proof stem, lever handle with balancing stops, threaded ends with union.

2.9 SWING CHECK VALVES

A. MSS SP-80, Class 125, bronze body and cap, bronze swing disc, threaded ends.

2.10 RELIEF VALVES

A. Bronze body, teflon seat, steel stem and springs, automatic, direct pressure actuated at maximum 60 psi (400 kPa), UL listed for fuel oil, capacities ASME certified and labelled.

2.11 STRAINERS

A. Threaded brass body for 175 psi (1200 kPa) CWP, Y pattern with 1/32 inch (0.8 mm) stainless steel perforated screen.

2.12 FLEXIBLE CONNECTORS

A. Bronze inner hose and braided exterior sleeve, suitable for minimum 200 psi (1380 kPa) CWP and 250 degrees F (121 degrees C).

2.13 ABOVEGROUND FUEL STORAGE TANKS AND ACCESSORIES

A. Construct fuel oil tanks of steel to comply with NFPA 30, NFPA 31, and UL 2085. Provide openings for fill, vent, pump suction, oil return, and oil level gage. Size vent pipes according to NFPA 30, NFPA 31, and UL 2085 but not less than 1 ¼-inch nominal inside diameter. Vent pipe shall connect to tapping at high end of tank and shall not extend more than one inch into tank.

1. Description: UL 2085, double-wall, horizontal, steel tank; with primary and secondary containment walls and interstitial space.

2. Construction: Fabricated with welded, carbon steel; suitable for operation at atmospheric pressure and for storing fuel oil with specific gravity up to 1.1 and with maintained temperature up to 150 deg F.

3. Supports: Manufacturer's standard structural steel welded to tank.

C. Aboveground Fuel Storage/Daytank

1. Tank: UL 142, welded steel, oval with steel support saddles, tappings for accessories, threaded connections; integral secondary containment system.

2. Accessories: Tank fill, gage, vents (emergency & normal), and outlet connections.

3. Integral transfer pump control panel with automatic level controls, level gauge indicator, alarms, and safety devices.

D. Tank Protective Coatings

1. Interior surfaces: Coat 100 percent of metal tank's interior surfaces including all metal piping and metal appurtenances as specified in Section LOW VOC POLYSULFIDE INTERIOR COATING OF WELDED STEEL PETROLEUM FUEL TANKS.

2. Exterior Surfaces, Aboveground Tanks: Protect the exterior surfaces of each aboveground tank as specified in Section HIGH PERFORMANCE COATING FOR STEEL STRUCTURES.

3. All Contractors and Subcontractors that perform surface preparation or coating application must be certified to SSPC QP 3 and SSPC QS 1 prior to contract award and must remain certified while accomplishing any surface preparation or coating application. Painting contractors and painting subcontractors must remain so certified for the duration of the project. If a contractor or subcontractor certification expires, the firm is not allowed to perform any work until the certification is reissued. Requests for extension of time due to delay as a result of an inactive certification will not be considered and liquidated damages will apply.

E. Connections to Fuel Oil Tanks:

Provide the following connections

1. Goose-neck vent caps or caps conforming to MIL-C-19902.

2. Fill lines with removable single strainer; filler cap; spill containment box with lockable cover.

3. Gage: Remote reading, electronic, for two wire, 24 volt power, with wall mounted direct reading gage.

4. A sounding connection, to permit entry of the gaging rod, with a locking cap. Provide graduated gaging rod and calibration chart.

5. Pump suction lines with internal vertical pipes and foot valve extending to within 4 inches of tank bottom.

6. Fuel oil supply, return, fill and vent piping utilizing swing joint elbows to allow for

ample tank movement and pipe expansion. Drain piping into tank when pump is shut-off.

7. Flexible hose connections for vibration isolation of oil burning equipment.

8. On steel tanks weld a 12 by 12 by 1/4 inch steel striker plate under gage and fill lines.

9. Nylon dielectric bushings on pipe connections to steel tanks.

10. Ball float valves on vent lines to restrict flow into tank when the tank reaches 90 percent full.

11. Automatic high level alarm with setting of approximately 95 percent and 98 percent of tank capacity. Audible alarm shall sound locally at tank.

12. Gage Fittings.

13. Connections: UL 567, dielectric bushings.

14. Manway: 22 inch (550 mm) diameter, with cover and gasket, and extension sleeve; located at top of tank.

15. Leak Detector System.

16. Ladders: Carbon-steel ladder outside tank, anchored to top and side wall.

2.14 FUEL OIL STORAGE TANK PIPING SPECIALTIES

A. Fitting Materials: Cast iron, malleable iron, brass, or corrosion-resistant metal; suitable for fuel-oil service.

1. Surface, Flush-Mounted Fittings: Waterproof and suitable for truck traffic.

2. Aboveground-Mounted Fittings: Weatherproof.

B. Spill-Containment Fill Boxes: Flush mounting, with drainage feature to drain oil into tank, threaded fill-pipe connection, and wrench operation.

C. Fill Boxes: Flush mounting, with threaded fill-pipe connection and wrench operation.

D. Locking Fill Boxes: Flush mounting, with locking-type inner fill cap for standard padlock and threaded fill-pipe connection.

E. Supply and Sounding Drop Tubes: Fuel-oil supply piping or fitting, inside tank, terminating 6 inches (150 mm) above bottom of tank, and with end cut at a 45-degree angle (1:1 slope).

F. Pipe Adapters and Extensions: Compatible with piping and fittings.

G. Suction Strainers and Check Valves: Bronze or corrosion-resistant metal components.

H. Foot Valves and Antisiphon Valves: Poppet-type, bronze or corrosion-resistant metal components.

I. Weatherproof Vent Cap: Cast- or malleable-iron increaser fitting with corrosion-resistant

wire screen, with free area at least equal to cross-sectional area of connecting pipe and threaded-end connection.

J. Monitoring Well Caps: Locking pipe plug and manhole.

2.15 FUEL OIL TRANSFER PUMPS

A. Fuel Oil Transfer Pump Sets: Factory-fabricated and wired, packaged unit; for fuel oil service, listed and labeled by a nationally recognized testing laboratory acceptable to authorities having jurisdiction; with base, strainer, two fuel oil pumps, and controls.

1. Base: Steel with pumps, accessories, and controls factory mounted.

2. Pumps: Comply with HI 3.1-3.5, two-stage, internal-gear with crescent, positive-displacement, rotary type. Include foot-mounted, cast-iron housing; steel gears; bronze bearings; steel shaft; mechanical seals; and built-in pressure relief bypass.

3. Drives: V-belt with guard or direct close coupled.

4. Motors: Comply with Division 15 Section "Motors."

5. Piping: Steel with ferrous fittings and threaded or welded joints.

6. Strainer: Duplex, basket type with corrosion-resistant-metal-screen baskets.

7. Controls: Automatic operation with pump alternator and broken-line, oil shutoff feature. System: Float valves and relays to automatically energize transfer pumps to fill day tank from main storage tank.

a. Low level: Energize pumps when tank level drops below 50 percent of full volume.

b. Full level: De-energize pumps when full.

c. Alarm: Sound audible alarm when fuel overflows into return line.

PART 3 EXECUTION

3.1 EXAMINATION

A. Section 01039 - Coordination and Meetings: Verification of existing conditions before starting work.

3.2 PREPARATION

A. Ream pipe and tube ends. Remove burrs.

B. Remove scale and dirt, on inside and outside, before assembly.

C. Prepare piping connections to equipment with flanges or unions.

3.3 INSTALLATION

A. Install in accordance with manufacturer's instructions and AP1 1615.

B. Provide non-conducting dielectric connections wherever jointing dissimilar metals. Install to NACE RP-01-69.

C. Route piping in orderly manner and maintain gradient.

D. Install piping to conserve building space and not interfere with use of space.

E. Group piping whenever practical at common elevations.

F. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.

G. Provide clearance for installation of insulation and access to valves and fittings.

H. Provide access where valves and fittings are not exposed.

I. Establish elevations of buried piping outside the building to ensure not less than 2 ft of cover.

J. Where pipe support members are welded to structural building framing, scrape, brush clean, weld, and apply one coat of zinc rich primer.

K. Prepare pipe, fittings, supports, and accessories not prefinished, ready for finish painting. Refer to Section 09900.

L. Identify piping systems including underground piping. refer to Section 15190.

M. Install valves with stems upright or horizontal, not inverted.

N. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work, and isolating parts of completed system.

3.4 FUEL TANK INSTALLATION

A. Install tanks in accordance with manufacturer's instructions and API 1615.

B. Clean and flush aboveground tanks prior to delivery to site. Seal until pipe connections are made.

C. Provide piping connections to tanks with unions and swing joints. Provide venting to API 2000.

D. Mount aboveground tanks on steel support saddles and stands as indicated.

E. Clean and flush day tank prior to delivery to site. Seal until pipe connections are made.

F. Fill tanks at project turn-over with appropriate fuel.

END OF SECTION

SECTION 15485

ELECTRIC DOMESTIC WATER HEATERS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following for domestic water systems:

1. Tankless, electric water heaters.

2. Commercial, electric water heaters.

3. Compression tanks.

4. Accessories.

1.3 SUBMITTALS

A. Product Data: For each type and size of water heater. Include rated capacities; shipping, installed, and operating weights; furnished specialties; and accessories.

B. Shop Drawings: Detail water heater assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Wiring Diagrams: Power, signal, and control wiring. Differentiate between manufacturer-installed and field-installed wiring.

C. Product Certificates: Signed by manufacturers of water heaters certifying that products furnished com-ply with requirements.

D. Maintenance Data: For water heaters to include in maintenance manuals specified in Division 1.

E. Warranties: Special warranties specified in this Section.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain same type of water heaters through one source from a single manufacturer.

B. Product Options: Drawings indicate size, profiles, and dimensional requirements of water heaters and are based on specific units indicated. Other manufacturers' products complying with requirements may be considered. Refer to Division 1 Section "Substitutions."

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by testing agency acceptable to authorities having jurisdiction, and marked for intended use.

D. ASME Compliance: Fabricate and label water heater, hot-water storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," Division 1.

E. ASHRAE Standards: Comply with performance efficiencies prescribed for the following:

1. ASHRAE 90.2, "Energy Efficient Design of New Low-Rise Residential Buildings," for household water heaters.

1.5 WARRANTY

A. General Warranty: Special warranty specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run con-current with, other warranties made by Contractor under requirements of the Contract Documents.

PART 2 PRODUCTS

2.1 POINT-OF-USE, TANKLESS, ELECTRIC WATER HEATERS

A. Description: Comply with UL 499.

B. Construction: Without hot-water storage.

1. Working-Pressure Rating: 125 psig (860 kPa) minimum.

2. Tappings: ASME B1.20.1, pipe thread.

3. Interior Finish: Materials complying with NSF 61, barrier materials for potable-water tank linings.

4. Jacket: Aluminum or steel, with enameled finish, or plastic.

C. Heating System: Electric-resistance type.

1. Temperature Control: Adjustable thermostat.

2. Temperature Control: Adjustable, microprocessor temperature-control thermostat for remote, wall-mounting installation. Include control wiring.

3. Temperature Control: Factory-set, temperature-control thermostat for fixed, outlet-water temperature.

4. Temperature Control: Flow-control fitting in inlet piping.

5. Safety Control: Automatic, high-temperature-limit cutoff device or system.

D. Mounting: Bracket or device for wall mounting.

2.2 COMMERCIAL, STORAGE, ELECTRIC WATER HEATERS

A. Description: Comply with UL 1453.

B. Storage Tank Construction: ASME-code steel with 150-psig (1035-kPa) working-pressure rating.

1. Tappings: Factory fabricated of materials compatible with tank for piping connections, relief valve, pressure gage, thermometer, drain, anode rods, and controls as required. Attach tappings to tank shell before testing and labeling.

a. NPS 2 (DN50) and Smaller: Threaded ends according to ASME B1.20.1, pipe threads.

b. NPS 2-1/2 (DN65) and Larger: Flanged ends according to ASME B16.5 for steel and stainless-steel flanges and according to ASME B16.24 for copper and copper-alloy flanges.

2. Interior Finish: Materials and thicknesses complying with NSF 61, barrier materials for potable-water tank linings. Extend finish into and through tank fittings and outlets.

3. Insulation: Comply with ASHRAE 90.1. Surround entire storage tank except connections and controls.

4. Jacket: Steel, with enameled finish.

C. Heating Elements: Electric, screw-in or bolt-on, immersion type arranged in multiples of three.

1. Exception: Water heaters up to 9-kW input may have 2 or 3 elements.

2. Staging: Input not exceeding 18 kW per step.

3. Temperature Control: Adjustable, surface-mounted thermostat.

4. Safety Controls: Automatic, high-temperature-limit and low-water cutoff devices or systems.

D. Drain Valve: ASSE 1005, corrosion-resistant metal, factory installed.

E. Anode Rods: Factory installed, magnesium.

F. Dip Tube: Factory installed. Not required if cold-water inlet is near bottom of storage tank.

G. Special Requirement: NSF 5 construction.

2.3 COMPRESSION TANKS

A. Description: Steel, pressure-rated tank constructed with welded joints and factory-installed, butyl-rubber diaphragm. Include air precharge to minimum system-operating pressure at tank.

B. Construction: 150-psig (1035-kPa) working-pressure rating.

C. Tappings: Factory-fabricated steel, welded to tank before testing and labeling. Include ASME B1.20.1, pipe thread.

D. Tank Interior Finish: Materials and thicknesses complying with NSF 61, barrier materials for potable-water tank linings. Extend finish into and through tank fittings and outlets.

E. Tank Exterior Finish: Manufacturer's standard, unless finish is indicated.

F. Air-Charging Valve: Factory installed.

2.4 WATER HEATER ACCESSORIES

A. Combination Temperature and Pressure Relief Valves: ASME rated and stamped and complying with ASME PTC 25.3. Include relieving capacity at least as great as heat input and include pressure setting less than water heater working-pressure rating. Select relief valve with sensing element that extends into tank.

1. Option: Separate temperature and pressure relief valves are acceptable instead of combination relief valve.

2. Exception: Omit combination temperature and pressure relief valve for tankless water heater, and furnish pressure relief valve for installation in piping.

B. Pressure Relief Valves: ASME rated and stamped and complying with ASME PTC 25.3. Include pressure setting less than heat-exchanger working-pressure rating.

C. Water Heater Mounting Brackets: Water heater manufacturer's factory-fabricated, steel bracket for wall mounting and capable of supporting water heater and water.

D. Piping-Type Heat Traps: Field-fabricated piping arrangement according to ASHRAE 90.1 or ASHRAE 90.2.

PART 3 EXECUTION

3.1 WATER HEATER INSTALLATION

A. Install water heaters in accordance with manufacturer’s recommendations.

B. Anchor water heaters to substrate.

C. Install temperature and pressure relief valves in top portion of storage tanks. Use relief valves with sensing elements that extend into tanks. Extend relief valve outlet with water piping in continuous downward pitch and discharge onto closest floor drain.

D. Install pressure relief valves in water piping for water heaters without storage. Extend relief valve outlet with water piping in continuous downward pitch and discharge onto closest floor drain.

E. Install vacuum relief valves in cold-water-inlet piping.

F. Install water heater drain piping as indirect waste to spill into open drains or over floor drains. Install hose-end drain valves at low points in water piping for water heaters that do not have tank drains. Refer to Division 15 Section "Plumbing Specialties" for drain valves.

G. Install piping-type heat traps on inlet and outlet piping of water heater storage tanks without integral or fitting-type heat traps.

H. Fill water heaters with water.

3.2 CONNECTIONS

A. Piping installation requirements are specified in other Division 15 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to machine to allow service and maintenance.

C. Connect hot- and cold-water piping with shutoff valves and unions. Connect hot-water-circulating piping with shutoff valve, check valve, and union.

D. Make connections with dielectric fittings where piping is made of dissimilar metal.

E. Electrical Connections: Power wiring and disconnect switches are specified in Division 16 Sections. Arrange wiring to allow unit service.

F. Ground equipment.

1. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.3 FIELD QUALITY CONTROL

A. Engage a factory-authorized service representative to perform startup service.

B. In addition to manufacturer's written installation and startup checks, perform the following:

1. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

2. Verify that piping system tests are complete.

3. Check for piping connection leaks.

4. Check for clear relief valve inlets, outlets, and drain piping.

5. Check operation of circulators.

6. Test operation of safety controls, relief valves, and devices.

7. Energize electric circuits.

8. Adjust operating controls.

9. Adjust hot-water-outlet temperature settings. Do not set above 140 deg. F (60 deg. C) unless piping system application requires higher temperature.

3.4 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain water heaters.

1. Train Owner's maintenance personnel on procedures for starting and stopping, troubleshooting, servicing, and maintaining equipment.

2. Review data in maintenance manuals. Refer to Division 1 Section "Contract Closeout."

3. Review data in maintenance manuals. Refer to Division 1 Section "Operation and Maintenance Data."

4. Schedule training with Owner, through Architect, with at least seven days' advance notice.

END OF SECTION 15485

SECTION 15535

REFRIGERATION PIPING AND SPECIALTIES

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Piping.

B. Refrigerant.

C. Moisture and liquid indicators.

D. Filter-driers.

1.2 RELATED REQUIREMENTS

Section 15050, "Basic Mechanical Materials and Methods", applies to this section with the additions and modifications specified herein.

1.3 RELATED SECTIONS

A. Section 15260 - Piping Insulation.

1.4 REFERENCES

The publications listed below form a part of this specification to the extent referenced. The publications are referred to in the text by the basic designation only.

A. ANSI 15 - Safety Code for Mechanical Refrigeration (ANSI/ASHRAE 15).

B. ANSI 17 - Method of Testing for Capacity Rating of Thermostatic Refrigerant Expansion Valves (ANSI/ASHRAE 17).

C. ANSI/ARI 710 - Liquid-Line Driers.

D. ANSI/ASHRAE 34 - Number Designation of Refrigerants.

E. ANSI/ASME B16.22 - Wrought Copper and Copper Alloy Solder Joint Pressure Fittings.

F. ANSI/ASME B31.5 - Refrigeration Piping.

G. ANSI/ASME B31.9 - Building Services Piping.

H. ANSI/AWS A5.8 - Filler Metals for Brazing and Braze Welding.

I. ARI 750 - Thermostatic Refrigerant Expansion Valves.

J. ARI 760 - Solenoid Valves for Use with Volatile Refrigerants.

K. ASTM B 88 - Seamless Copper Water Tube.

L. ASTM B280 - Seamless Copper Tube for Air Conditioning and Refrigeration Field Service.

M. ASTM C 534 - Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form.

N. FS OO-A-373 - (Rev C; Int A^m 1) Air Conditioners, Single Package Type.

O. FS OO-A-374 - (Rev B) Air Conditioners, with Remote Condensing Units or Remote Air-Cooled, Condenser Units, Unitary.

P. MIL-H-22547 - (Rev C) Heat Pumps, Heating and Cooling (Unitary) (8,400 to 300,000 BTU).

Q. MSS SP-58 - Pipe Hangers and Supports - Materials, Design and Manufacture.

R. MSS SP-69 - Pipe Hangers and Supports - Selection and Application.

S. UL 109 - Tube Fittings for Flammable and Combustible Fluids, Refrigeration Service, and Marine Use.

1.5 SUBMITTALS

A. Manufacturers' Catalog Data: Submit product data under provisions of Section 01300.

1. Pipe, fittings and accessories.

2. Valves.

3. Gaskets.

4. Brazing materials

5. Hangers and supports

For valves, submit the valve manufacturer's published ratings and maximum operating pressure differential. For relief valves, also submit the manufacturers published discharge capacity ratings. For level control valves, also submit manufacturers published ratings based on factory test, for a particular refrigerant application.

B. Installation Drawings/Calculations: Field-assembled refrigerant piping including equipment connections, specific pipe routing, hangers and supports, critical dimensions, pipe sizes and refrigerant system controls. Provide refrigerant pipe sizing calculations based on actual locations and distances of the equipment and pipes. Verify with air conditioning equipment manufacturer that the refrigerant pipe sizes are within the operating limits of the air-conditioning equipment.

C. Welding Procedure: Before performing welding, the Contractor shall submit three copies of welding procedure specification for each metal included in the work, together with proof of qualifications in accordance with ASME B31.5.

D. Performance Qualification Record: Before performing welding, the Contractor shall submit three copies of the Welder's Performance Qualification Record in conformance with ASME B31.5 showing that the welder or operator was tested under the approved procedure specification submitted by the Contractor. Certification dates shall be less than one (1)

year old.

E. Submit test reports indicating results of leak test, vacuum and acid test.

F. Submit operation and maintenance data in accordance with Section, "Operation and Maintenance Data."

1.6 PROJECT RECORD DOCUMENTS

A. Accurately record exact locations of equipment and refrigeration accessories on record drawings.

1.7 REGULATORY REQUIREMENTS

A. Conform to ANSI/ASME B31.9.

B. Welding Materials and Procedures: Conform to ANSI/ASME SEC 9 and applicable Guam labor regulations.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to site in accordance with the applicable provisions of General Conditions and General Requirements.

B. Deliver and store piping and specialties in shipping containers with labeling in place.

C. Protect piping and specialties from entry of contaminating material by leaving end caps and plugs in place until installation.

PART 2 PRODUCTS

2.1 PIPING

A. Dimensions and material requirements for pipe, pipe fittings and components shall conform to ANSI 15 and ASME B31.5 and shall be compatible with fluids used and capable of withstanding the pressures and temperatures of the service. Pipe, tubing, and components used for refrigerant service shall be cleaned, sealed, capped, or plugged prior to shipment from the manufacturer's plant.

B. Provide accessories as specified in FS OO-A-374, MIL-H-22547 and this section. Provide suction line accumulators as recommended by equipment manufacturer's installation instructions. Provide a filter-drier in the liquid line.

C. Factory Charged Tubing: Provide extra soft, deoxidized, bright annealed copper tubing conforming to ASTM B 280, factory dehydrated and furnished with a balanced charge of refrigerant recommended by manufacturer of equipment being connected. Factory insulates suction line tubing with 1/2-inch minimum thickness of closed cell, foamed plastic conforming to ASTM C 534 with a permeance rating not to exceed 1.0. Provide quick-connectors with caps or plugs to protect couplings. Include couplings for suction and liquid line connections of the indoor and outdoor sections.

D. Field-Assembled Piping: Material and dimensional requirements for field-assembled refrigerant piping, valves, fittings, and accessories shall conform to ANSI 15 and ASME

B31.5, except as herein specified. Provide seamless copper tubing, hard drawn, Type K or L, conforming to ASTM B 88, except that tubing with outside diameters of 1/4 inch and 3/8 inch shall have nominal wall thickness of not less than 0.30 inch and 0.032-inch, respectively. Soft annealed copper tubing conforming to ASTM B 280 may be used where flare connections to equipment are required only in nominal sizes less than one inch outside diameter. Provide schedule 80 CPVC for drain lines.

E. Fittings for Field-Assembled Piping: Wrought copper, ANSI B16.22 for solder-joint fittings. UL 109 for flared tube fittings.

F. Brazing Filler Material: AWS A5.8 brazing filler metal type BAg-5 with AWS Type 3 flux, except type BCuP-5 or BCuP-6 may be used for brazing copper-to-copper joints.

G. Gaskets: ASTM D 2000, fluorinated elastomers compatible in form with grooves in the flange faces.

H. Pipe Hangers and Supports: Design and fabrication of pipe hangers, supports, and welding attachments shall conform to MSS SP-58. Hanger types and supports for bare and covered pipes shall conform to MSS SP-69 for the system temperature range. Unless otherwise indicated, horizontal and vertical piping attachments shall conform to MSS SP-58. Provide metal protection shields and inserts for insulated piping in accordance with Section 15260, Piping Insulation.

I. Pipe Sleeves: Provide sleeves where piping passes through walls, floors, roofs, and partitions. Secure sleeves in proper position and location during construction. Provide sleeves of sufficient length to pass through entire thickness of walls, floors, roofs, and partitions. Provide not less than 0.5-inch space between exterior of piping or pipe insulation and interior of sleeve. Firmly pack space with insulation and caulk at both ends of the sleeve with plastic waterproof cement, which will dry to a firm but pliable mass, or provide a segmented elastomeric seal.

1. Sleeves in Masonry and Concrete Walls, Floors, and Roofs: Provide Schedule 40 or Standard Weight zinc-coated steel pipe sleeves. Extend sleeves in floor slabs 3 inches above finished floor.

2. Sleeves in Partitions and Non-Masonry Structures: Provide zinc-coated steel sheet sleeves having a nominal weight of not less than 0.90 pound per square foot, in partitions and other than masonry and concrete walls, floors, and roofs.

2.2 VALVES

A. Provide valves designed, manufactured, and tested specifically for refrigerant service. Internal parts shall be removable for inspection or replacement without applying heat or breaking pipe connections. Valves shall open when turned counterclockwise. Threaded ends shall not be used, except as specified herein.

B. Globe and Angle Valves: Forged brass, bronze alloy, forged steel, steel alloy, or ductile iron body with packed stem and seal cap. Packless type with hand wheels and forged brass or bronze alloy bodies with brazing ends may be used in sizes up to and including 7/8-inch O.D. Valves 1 1/4 inches and larger shall be tongue-and-groove flanged and shall have bolted bonnets. Valves one-inch and smaller shall have brazed or soldered ends. Refrigerant valves shall be of the back seating type making it possible to repack the valves under pressure without removal from the line.

2.3 REFRIGERANT

ANSI/ASHRAE 34; R-410A

2.4 ACCESSORIES

A. Moisture and Liquid Indicators: Double port type, UL listed, with copper or brass body, flared or solder ends, sight glass, color coded paper moisture indicator with removable element cartridge and plastic cap; for maximum working pressure of 500 psi, and maximum temperature of 200 degrees F. Indicating material shall register moisture by varying degrees of color change, based on 100 degrees F and a moisture content in the range of 45 to 180 particles per million in R410a refrigerant.

B. Filter-Driers: Sealed cartridge type, ANSI/ARI 710, UL listed, steel shell, molded desiccant filter core; for maximum working pressure of 350 psi.

C. Liquid Line Driers: ARI 710. Driers 50 cubic inches and larger shall be the cartridge refillable type, provided with a valved bypass of the same size as the liquid line. Drier body shall be of brass or steel, provided with means for holding the desiccant securely in place and distributing the liquid refrigerant evenly throughout the desiccant. Driers shall be capable of withstanding a service pressure of 350 psig. Driers may be of the combination drier-indicator type.

PART 3 EXECUTION

3.1 PREPARATION

A. Ream pipe and tube ends. Remove burrs.

B. Maintain pipe seals until system is closed to prevent contamination by moisture and dirt.

C. Prepare piping connections to equipment with flanges or unions.

3.2 INSTALLATION

A. Install refrigeration specialties in accordance with manufacturer's instructions.

3.3 PIPING

A. Brazing, bending, forming and assembly of refrigerant piping shall conform to ASME B31.5.

B. Pipe Hangers and Supports: Design and fabrication of pipe hangers, supports, and welding attachments shall conform to MSS SP-58. Installation of hanger types and supports for are and covered pipes shall conform to MSS SP-69 for the system temperature range. Unless otherwise indicated, horizontal and vertical piping attachments shall conform to MSS SP-58.

C. Refrigerant Piping: Cut pipe to measurements established at the site and work into place without springing or forcing. Install piping with sufficient flexibility to provide for expansion and contraction due to temperature fluctuation. Where pipe passes through building structure pipe joints shall not be concealed, but shall be located where they may be readily inspected. Install piping to be insulated with sufficient clearance to permit application of insulation. Install piping as indicated and detailed, to avoid interference with other piping,

conduit, or equipment. Except where specifically indicated otherwise, run piping plumb and straight and parallel to walls and ceilings. Trapping of lines will not be permitted except where indicated. Provide sleeves of suitable size for lines passing through building structure. Braze refrigerant piping with silver solder complying with AWS A5.8. Inside of tubing and fittings shall be free of flux. Clean parts to be jointed with emery cloth and keep hot until solder has penetrated full depth of fitting and extra flux has been expelled. Cool joints in air and remove flame marks and traces of flux. During brazing operation, prevent oxide film from forming on inside of tubing by slowly flowing dry nitrogen through tubing to expel air. Make provisions to automatically return oil on halocarbon systems. Installation of piping shall comply with ASME B31.5.

D. Returning Oil from Refrigerant System: Install refrigerant lines so that gas velocity in the evaporator suction line is sufficient to move oil along with gas to the compressor. Where equipment location requires vertical risers, line shall be sized to maintain sufficient velocity to lift oil at minimum system loading and corresponding reduction of gas volume. Install a double riser when excess velocity and pressure drop would result from full system loading. Larger riser shall have a trap, of minimum volume, obtained by use of 90- and 45- degree ells. Arrange small riser with inlet close to bottom of horizontal line, and connect to top of upper horizontal line. Do not install valves in risers.

E. Refrigerant Driers, Sight Glass Indicators, and Strainers: Provide refrigerant driers, sight glass liquid indicators, and strainers in refrigerant piping in accordance with MIL-H-22547 when not furnished by the manufacturer as part of the equipment. Install driers in liquid line with service valves and valve bypass line the same size as liquid line in which dryer is installed. Size of driers shall be determined by piping and installation of the unit on location. Install dryers of 50 cubic inches and larger vertically with the cover for removing cartridge at the bottom. Install moisture indicators in the liquid line downstream of the drier. Indicator connections shall be the same size as the liquid line in which it is installed.

F. Route piping in orderly manner, with plumbing parallel to building structure, and maintain gradient.

G. Install piping to conserve building space and not interfere with use of space.

H. Group piping whenever practical at common elevations locations. Slope piping one percent in direction or oil return.

I. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.

J. Provide clearance for installation of insulation and access to valves and fittings.

K. Prepare pipe, fittings, supports, and accessories not prefinished, ready for finish painting.

L. Fully charge completed system with refrigerant after testing.

3.4 DRAIN CONNECTIONS AND DRAIN LINES

A. Provide separate drain lines for the unit drain. Traps and piping to drainage disposal points shall conform to International Plumbing Code.

3.5 ACCESS PANELS

A. Provide access panels for concealed valves, controls, dampers, and other fittings requiring inspection and maintenance.

3.6 APPLICATION

A. Provide line size liquid indicator in liquid line.

B. Provide line size filter-drier in liquid line.

3.7 FIELD QUALITY CONTROL

A. Test refrigeration system in accordance with ANSI/ASME B31.5.

B. Pressure test system with dry nitrogen to 200 psig. Perform final tests at 27 inches vacuum and 200 psig using halide torch or electronic leak detector. Test to no leakage.

3.8 QUALITY CONTROL

A. Prior to initial operation examine and inspect piping systems for conformance to plans and specifications and ASME B31.5. Equipment, material, or work rejected because of defects or nonconformance with plans, specifications, and ANSI Codes for pressure piping shall be corrected as directed by the Project Engineer.

3.9 FIELD-TESTS

After completion of piping installation and prior to initial operation, conduct tests on piping system. Furnish materials and equipment required for tests. Correct defects disclosed by the test. Perform test after installation and prior to acceptance in the presence of the Project Engineer and subject to his approval.

A. Refrigerant Piping System Test: Test system for tightness after installation and before insulation is applied. Temporarily remove controls and other apparatus that may be damaged by test pressure or make inoperative before tests are made and plug, or cap openings. Correct threaded, soldered, or brazed joints that leak by remaking joints. Repair welded joints that leak by cutting out faulty weld affected section and rewelding joint. Test charging, evacuation, and initial charging are not necessary for fully pre-charged refrigeration machinery. Provide leak testing of connections and add only enough additional refrigerant to obtain full charge.

B. Test Pressures: Refrigerant system test pressures for tightness shall not be less than test pressures specified in ANSI 15 or ASME B31.5.

C. Charging System for Test: Charge low and high pressure side of system with a dry, inert gas, such as nitrogen or anhydrous carbon dioxide using a small amount of refrigerant gas to act as a tracer. Use a pressure limiting or reducing valve with pressure gage on high pressure gas tank to limit the pressure in system to the specified test pressure for the respective refrigerant.

D. Leakage Test: With system charged to desired pressure, tightly shutoff gas supply and hold the system for 30 minutes, during which time there shall be no loss of pressure. If a pressure drop, not attributable to temperature changes, occurs during this period, check entire system with a halide torch or an electronic leak detector. When leaks are found, make repairs and provide another 30-minute period at test pressure. Testing and repair shall continue until there is no loss of pressure.

E. Evacuation: After completions of leak testing of refrigerant system, remove all air and moisture from system with a high vacuum pump. Pump shall be capable of reducing absolute pressure in system to a point where any water present in lines will vaporize at a temperature appreciably below ambient temperature and will be withdrawn from system. Before conducting evacuation test, inspect vacuum pump oil for purity and provide new oil charge if existing charge is contaminated. Evacuate system to a maximum absolute pressure of 0.020 inches of Mercury (500 microns) or lower. During evacuation, ambient temperature shall not drop below 35 degrees F. Use pressure gages for measurement of pressure. Upon achieving evacuation of system, valve off vacuum pump from system for a period of at least 12 hours. Consider system tight and dry and free of air, if absolute pressure has not increased by more than 0.002 inches of mercury (50 microns) at the expiration of this period. Repeat pressure test if pressure rise exceeds 0.02 inches of mercury, indicating a leak in system or presence of moisture. If no leaks are found, resume evacuation test and continue until dryness of system is achieved. When a satisfactory vacuum has been obtained, break vacuum by introducing vapor (no liquid) refrigerant and subsequently seal off system.

F. Charging: Provide initial charge of refrigerant. Charge by connecting drums of refrigerant to system charging connection, to feed liquid refrigerant into low side of system where it will be evaporated. Note gross and net weights of drum, and place drum on a scale to determine when empty. Loosely connect charging connection to system connection, so that initial flow of refrigerant will expel air from connection, and then tighten loose joint. When system vacuum has been broken by refrigerant, start and operate compressor while charging continues. Exercise the following procedures and precautions during charging operation:

1. Place refrigerant condensing system in operation.

2. Place fluid circulation system of water coolers or evaporator fans of a direct expansion system in operation.

3. Do not permit compressor discharge pressure from becoming excessive.

3.10 STARTUP AND OPERATIONAL TESTS

Start up and initially operate refrigeration system. During this time, periodically clean strainers until no further accumulation of foreign material occurs. Exercise care so that minimum loss of refrigerant occurs when strainers are cleaned. Adjust safety and automatic control instruments as necessary to place them in required operation and sequence.

END OF SECTION

SECTION 15630

SOLAR ENERGY DEVICES

PART 1 GENERAL

1.1 WORK INCLUDED

A. Solar Collectors.

B. Controls.

C. Pipe and pipe fittings.

D. Valves.

1.2 RELATED WORK

A. Section 15010 - Basic Mechanical Requirements.

B. Section 15260 - Piping Insulation.

1.3 REFERENCES

A. ANSI/ASME Sec 8D Boiler and Pressure Vessel Code.

B. ASHRAE 93 Methods of Testing to Determine the Thermal Performance of Solar Collectors.

C. ASHRAE 96 Methods of Testing to Determine the Thermal Performance of Unglazed Flat Plate Liquid Type Solar Collectors.

D. ASTM B88 Seamless Copper Water Tube.

1.4 REGULATORY REQUIREMENTS

A. Conform to ANSI/ASME B31.9.

1.5 QUALITY ASSURANCE

A. Valves: Manufacturer's name and pressure rating marked on valve body.

B. Manufacturer: For each product specified, provide components by same manufacturer throughout.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1.

C. ASME Compliance: Where ASME-code construction is indicated, fabricate and label commercial, domestic-water heater storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.

D. NSF Compliance: Fabricate and label equipment components that will be in contact with potable water to comply with NSF 61, "Drinking Water System Components - Health Effects."

1.6 SUBMITTALS

A. Shop Drawings: Provide for manufactured assemblies. Indicate system and controls schematics. Indicate solar collector installation, layout, weights, mounting and support details, and piping connections.

B. Product Data: Provide data on specialties, including manufacturers catalogue information. Submit performance ratings for solar collectors, rough in details, weights, support requirements, and piping connections.

C. Operation and Maintenance Instructions: Include installation instruction, spare parts lists, procedures, and treatment programs.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store solar collectors in shipping containers and maintain in place until installation. Provide caps on piping connections.

B. Deliver and store valves in shipping containers with labelling in place.

PART 2 PRODUCTS

2.1 HEAT PIPE SOLAR COLLECTORS

A. Construction: Unit consisting of manufacturers standard assembly of frame, manifold casing, header, cover, back cover with insulation, absorber solar tubes heat pipe assembly, and accessories.

B. Frame: Type 304 2B stainless steel frame assembly, with stainless steel screws and self-sealing neoprene washers.

C. Manifold casing: Type 304 2B stainless steel.

D. Header pipe:C12200 copper pipe.

E. Insulation: Rigid fiberglass insulation, 2 inch thick.

F. Rubber seals and rings: UV stabilized high temperature silicone rubber.

G. Testing pressure:130 psi.

H. Collector tube assembly: Copper heat pipe & heat transfer fins inside high efficiency solar glass vacuum tube. Minimum output: 525 kwh per square meter. Quantity of collector tubes shall be per manufacturers recommendations, submit shop drawings & calculations for review & approval by engineer.

2.2 DIFFERENTIAL CONTROLLERS

A. Description: Solid state differential temperature thermostat with two low resistance thermistors and SPDT relay contactor, and field adjustable differential.

B. Functions:

1. Standard: When collector outlet temperature exceeds storage temperature, close contacts.

2. Ambient Override: When collector temperature is less than 80 degrees F, open contacts.

3. High Limit Off: When storage temperature rises above 160 degrees F (71 degrees C), open contacts.

2.3 THERMOSTATS

A. Electric Thermostat: Low voltage type with setback/setup temperature control for heating only.

B. Line Voltage Thermostats: Integral manual On/Off/Auto selector switch, maximum dead band of 2 degrees F concealed temperature adjustment, and locking cover, rated for motor load, single or two pole as required.

2.4 PIPING

A. Copper Tubing: ASTM B88, Type L hard drawn.

1. Fittings: Cast brass or wrought copper.

2. Joints: Grade 95TA solder joints.

2.5 GATE VALVES

A. Up to 2 Inches: Bronze body, bronze trim, non-rising stem, handwheel, inside screw, single wedge or disc, [solder or] threaded ends.

2.6 GLOBE VALVES

A. Up to 2 Inches: Bronze body, bronze trim, rising stem and handwheel, inside screw, renewable composition disc, [solder or] screwed ends, with backseating capacity.

2.7 BALL VALVES

A. Up to 2 Inches: Bronze or stainless steel one piece body, stainless steel ball, teflon seats and stuffing box ring, lever handle, solder or threaded ends.

2.8 SWING CHECK VALVES

A. Up to 2 Inches: Bronze swing disc, solder or screwed ends.

2.9 RELIEF VALVES

A. Bronze body, teflon seat, stainless steel stem and springs, automatic, direct pressure actuated, capacities ASME certified and labelled.

2.10 DIAPHRAGM TYPE COMPRESSION TANKS

A. Construction: Welded steel, tested and stamped in accordance with Section 8D of ANSI/ASME Code; rated for working pressure of 125 psig, with flexible diaphragm sealed into tank, and steel legs or saddles.

B. Automatic Cold Water Fill Assembly: Pressure reducing valve, reduced pressure double check back flow preventer, test cocks, strainer, vacuum breaker, and valved by pass.

C. Pressure Relief Valve: 80 psi.

D. Accessories: Pressure gage and air charging fitting.

2.11 AIR VENTS

A. Manual Type: Short vertical sections of 2-inch (50 mm) diameter pipe to form air chamber, with 1/8 inch (3 mm) brass needle valve at top of chamber.

B. Float Type: Brass or semi steel body, copper float, stainless steel valve and valve seat; suitable for system operating temperature and pressure; with isolating valve.

2.12 STRAINERS

A. Size 2 inch and Under: Screwed brass or iron body for 175 psig working pressure, Y pattern with 1/32-inch stainless steel perforated screen.

2.13 CONTROL VALVES

A. Angle or straight pattern, rising stem, globe valve for 125 psig working pressure, with bronze body and integral union for screwed connections, renewable composition disc, general purpose solenoid enclosure with continuous duty coil.

2.14 TANKS

A. Tank: 0.188-inch-thick steel internally lined with epoxy lining 0.01-inch-thick, and painting on exterior with primer. Continuous weld and grind joints smooth. Brace externally around perimeter. Slope floor towards drain nozzle. Support floor with flat bars spaced as required. Flange external connections larger than 2 inches.

PART 3 EXECUTION

3.1 PREPARATION

A. Ream pipe and tube ends. Remove burrs.

B. Remove scale and dirt on inside and outside before assembly.

C. Prepare piping connections to equipment with flanges or unions.

D. After completion, fill, clean, and treat systems.

3.2 INSTALLATION

A. Install equipment in accordance with manufacturer’s instructions.

B. Route piping in orderly manner, plumb and parallel to building structure, and maintain gradient.

C. Install piping to conserve building space, and not interfere with use of space and other work. Group piping whenever practical at common elevations.

D. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment. Refer to Section 15121.

E. Provide clearance for installation of insulation, and access to valves and fittings.

F. Provide access where valves and fittings are not exposed.

G. Slope piping and arrange systems to drain at low points. Use eccentric reducers to maintain top of pipe level.

H. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welding.

I. Prepare pipe, fittings, supports, and accessories for finish painting.

J. Install valves with stems upright or horizontal.

K. Support tanks inside building from building structure.

L. Provide valved drain and hose connection on strainer blow down connection.

M. Select system relief valve capacity so that it is greater than make up pressure reducing valve capacity. Select equipment relief valve capacity to exceed rating of connected equipment. Pipe relief valve outlet to nearest floor drain.

N. Change line size with reducing fittings. Support piping adjacent to pump such that no weight is carried on pump casings.

O. Provide line sized shut off valve and strainer on pump suction, and line sized check valve and balancing valve on pump discharge. Provide air cock and drain connection on horizontal pump casings.

P. Install unions downstream of valves and at equipment or apparatus connections.

Q. Install thread brass male adapters each side of valves in copper piped system. Sweat solder adapters to pipe.

R. Install ball valves for shut off and to isolate equipment, part of systems, or vertical risers.

S. Install globe valves for throttling, bypass, or manual flow control services.

T. Provide 3/4-inch ball drain valves at main shut off valves, low points of piping, bases of vertical risers, and at equipment. Pipe to nearest drain.

U. Provide automatic air vents at system high points. Provide vent tubing to nearest drain.

V. Provide relief valves on system at expansion tanks.

3.3 CLEANING SEQUENCE

A. After completion, fill, start, and vent prior to cleaning. Use water meter to record capacity in each system. Place terminal control valves in open position during cleaning.

B. Circulate for 48 hours, then drain systems as quickly as possible. Refill with clean water, circulate for 24 hours, then drain. Refill with clean water and repeat until system cleaner is removed.

C. Use neutralizer agents on recommendation of system cleaner supplier and approval of Architect/Engineer.

D. Flush open systems with clean water for one hour minimum. Drain completely and refill.

E. Remove, clean, and replace strainer screens. Inspect, remove sludge, and flush low points with clean water after cleaning process is completed. Include disassembly of components as required.

END OF SECTION

SECTION 15738

SPLIT-SYSTEM AIR-CONDITIONING UNITS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes split-system air-conditioning units consisting of separate evaporator-fan and compressor-condenser components. Units are designed for exposed or concealed mounting, and may be connected to ducts.

B. Related Sections include the following:

1. Division 15 Section "Mechanical Vibration Isolation and Seismic Restraints" for isolation pads, spring isolators, and seismic restraints.

1.3 DEFINITIONS

A. Evaporator-Fan Unit: The part of the split-system air-conditioning unit that contains a coil for cooling (heat rejection for heating operation in heat pump units) and a fan to circulate air to conditioned space.

B. Compressor-Condenser Unit: The part of the split-system air-conditioning unit that contains a refrigerant compressor and a coil for condensing refrigerant (evaporator for heating operation in heat pump units).

1.4 SUBMITTALS

A. Product Data: Include rated capacities; shipping, installed, and operating weights; furnished specialties; and accessories for each type of product indicated. Include performance data in terms of capacities, outlet velocities, static pressures, sound power characteristics, motor requirements, and electrical characteristics.

B. Shop Drawings: Diagram power, signal, and control wiring and differentiate between manufacturer-installed and field-installed wiring.

C. Samples for Initial Selection: Manufacturer's color charts consisting of units of sections of units showing the full range of colors available for units with factory-applied color finishes.

D. Maintenance Data: For split-system air-conditioning units to include in maintenance manuals specified in Division 1.

E. Warranties: Special warranties specified in this Section.

1.5 QUALITY ASSURANCE

A. Product Options: Drawings indicate size, profiles, and dimensional requirements of split-system units and are based on the specific system indicated. Other manufacturers'

systems with equal performance characteristics may be considered. Refer to Division 1 Section "Substitutions."

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.6 COORDINATION

A. Coordinate size and location of concrete bases for units. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork are specified in Division 3 Section "Cast-in-Place Concrete."

B. Coordinate size, location, and connection details with roof curbs, equipment supports, and roof penetrations specified in Division 7 Section "Roof Accessories."

1.7 WARRANTY

A. General Warranty: Special warranty specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run con-current with, other warranties made by Contractor under requirements of the Contract Documents.

B. Special Warranty: Written warranty, executed by manufacturer agreeing to repair or replace components of split-system air-conditioning units that fail in materials or workmanship within specified warranty period.

C. Warranty Period: One year from date of substantial completion.

PART 2 PRODUCTS

2.1 VARIABLE REFRIGERANT VOLUME MULTI-SPLIT SYSTEM TYPE

A. The Variable Refrigerant Volume (VRV) & capacity, heat pump air conditioning system shall consist of multiple indoor ducted type fan coil units and one outdoor unit. The VRV system shall be direct expansion (DX), air-cooled heat pump air-conditioning system, variable speed driven compressor multi zone split system, using R410A refrigerant. All indoor units shall be capable of operating separately with individual temperature control. The indoor units shall be connected to the outdoor utilizing manufacturer's specified piping joints and headers.

B. Provide maintenance tools, software and converters to enable maintenance personnel to diagnose, operate, monitor, control and maintain the system.

C. The outdoor condensing unit shall be of galvanized steel casing with factory applied finish coating. Corrosion control coating for outdoor unit casing and condenser coils & fins shall pass salt-spray tests per ASTM B117 for duration of 10,000 hours.

2.2 SINGLE-SPLIT SYSTEM TYPE

A. The single-split air conditioning system shall consist of matched indoor ducted type air-handling unit and outdoor unit. The direct expansion (DX) air-conditioning system shall include multi-stage compressors using R410A refrigerant.

B. Provide maintenance tools, software and converters to enable maintenance personnel to diagnose, operate, monitor, control and maintain the system.

C. The outdoor condensing unit shall be of galvanized steel casing with factory applied finish coating. Corrosion control coating for outdoor unit casing and condenser coils & fins shall pass salt-spray tests per ASTM B117 for duration of 10,000 hours.

2.3 DEDICATED OUTSIDE AIR SUPPLY SPLIT-SYSTEM TYPE

A. Dedicated Outdoor Air Supply (DOAS) ducted DX-split system shall be designed for the treatment of outdoor air only. Unit shall pre-cool outdoor air and adjust the outdoor air temperature via fixed discharge temperature control using electric or hot gas reheat; temperature control set point shall be field adjustable.

B. Provide passive Wrap-around type Heat Pipe to enhance dehumidification capacity.

C. Provide maintenance tools, software and converters to enable maintenance personnel to diagnose, operate, monitor, control and maintain the system.

D. The outdoor condensing unit shall be of galvanized steel casing with factory applied finish coating. Corrosion control coating for outdoor unit casing, condenser coils & fins and indoor unit evaporator coils & fins shall pass salt-spray tests per ASTM B117 for duration of 10,000 hours.

2.4 DUCTED TYPE EVAPORATOR-FAN COMPONENTS

A. Cabinet: Enameled steel with flanged duct connections, removable panels for servicing, and insulation on back of panel.

1. Insulation: Faced, glass-fiber duct liner.

2. Drain Pans: Galvanized steel, with connection for drain; insulated.

B. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins, complying with ARI 210/240, and with thermal-expansion valve. For DOAS units, provide factory applied corrosion control coating.

C. Fan: Forward-curved, double-width wheel of galvanized steel; directly connected to motor.

D. Fan Motor: Multispeed, PSC type. Provide Variable Frequency Drive (VFD), where required. See mechanical equipment schedules.

E. Disposable Filters: MERV-14, extended surface mini-pleat filters in fiberboard frames.

F. Wiring Terminations: Connect motor to chassis wiring with plug connection.

G. Provide UVC Ultraviolet Germicidal Irradiation Lights for HVAC systems. The UVC system shall be ETL or UL 1598 Listed for luminaries and the lamps shall be rated for wet locations and air handling unit use. Provide mechanical interlock switches to access doors and panels to insure UVC system will be de-energized when access panels are opened. Provide UVC sight glass and 1-set of spare lamps for each AHU or FCU.

2.5 WALL- OR CEILING-MOUNTED, EVAPORATOR-FAN COMPONENTS

A. Cabinet: Enameled steel with removable panels on front and ends, and discharge drain pans with drain connection.

B. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins, complying with ARI 210/240, and with thermal-expansion valve.

C. Fan and Motor: Centrifugal fan, directly driven by multispeed, electric motor with integral overload protection; resiliently mounted.

D. Filters: Permanent, cleanable.

E. Provide ionization type disinfection device consisting of emitters, status LED light indicators, Building System Automation (BAS) alarm contacts and positive & negative ion output. Disinfection device shall be UL Listed and approved for use with ductless mini-split units.

2.6 AIR-COOLED, COMPRESSOR-CONDENSER COMPONENTS

A. Casing: Steel, finished with baked enamel, with removable panels for access to controls, weep holes for water drainage, and mounting holes in base. Provide brass service valves, fittings, and gage ports on exterior of casing. Provide factory or shop applied corrosion control coating.

B. Compressor: Hermetically sealed with crankcase heater and mounted on vibration isolation. Compressor motor shall have thermal and current-sensitive overload devices, start capacitor, relay, and contactor.

1. Compressor Type: Reciprocating.

2. Two-speed compressor motor with manual-reset high-pressure switch and automatic-reset low-pressure switch.

C. Refrigerant Coil: Copper tube, with mechanically bonded aluminum fins, complying with ARI 210/240, and with liquid sub-cooler. Provide factory applied corrosion control coating.

D. Fan: Aluminum-propeller type, directly connected to motor.

E. Motor: Permanently lubricated, with integral thermal-overload protection.

F. Mounting Base: Polyethylene.

2.7 ACCESSORIES

A. Thermostat: Wireless infrared functioning to remotely control compressor and evaporator fan, with the following features:

1. Compressor time delay.

2. 24-hour time control of system stop and start.

3. Liquid-crystal display indicating temperature, set-point temperature, time setting, operating mode, and fan speed.

4. Fan-speed selection, including auto setting.

B. Automatic-reset timer to prevent rapid cycling of compressor.

C. Refrigerant Line Kits: Soft-annealed copper suction and liquid lines factory cleaned, dried, pressurized, and sealed; factory-insulated suction line with flared fittings at both ends.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install units' level and plumb.

B. Install evaporator-fan components using manufacturer's standard mounting devices securely fastened to building structure.

C. Install ground-mounted, compressor-condenser components on 4-inch- (100-mm-) thick, reinforced concrete base; 4 inches (100 mm) larger on each side than unit. Concrete, reinforcement, and formwork are specified in Division 3, "Cast-in-Place Concrete." Coordinate anchor installation with concrete base.

D. Install roof-mounted compressor-condenser components on equipment supports specified in Division 7 Section "Roof Accessories." Anchor units to supports with removable, cadmium-plated fasteners.

E. Connect pre-charged refrigerant tubing to component's quick-connect fittings. Install tubing to allow access to unit.

3.2 CONNECTIONS

A. Piping installation requirements are specified in other Division 15 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to unit to allow service and maintenance.

C. Unless otherwise indicated, connect piping with unions and shutoff valves to allow units to be disconnected without draining piping. Refer to piping system Sections for specific valve and specialty arrangements.

D. Ground equipment.

1. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.3 FIELD QUALITY CONTROL

A. Installation Inspection: Engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including piping and electrical connections, and to prepare a written report of inspection.

B. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.

C. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation. Remove malfunctioning units, replace with new components, and retest.

D. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3.4 COMMISSIONING

A. Engage a factory-authorized service representative to perform startup service.

B. Verify that units are installed and connected according to the Contract Documents.

C. Lubricate bearings, adjust belt tension, and change filters.

D. Perform startup checks according to manufacturer's written instructions and do the following:

1. Fill out manufacturer's checklists.

2. Check for unobstructed airflow over coils.

3. Check operation of condenser capacity-control device.

4. Verify that vibration isolation devices and flexible connectors dampen vibration transmission to structure.

3.5 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain units.

1. Train Owner's maintenance personnel on procedures and schedules for starting and stopping, troubleshooting, servicing, and maintaining units.

2. Review data in maintenance manuals. Refer to Division 1 Section "Contract Closeout."

3. Review data in maintenance manuals. Refer to Division 1 Section "Operation and Maintenance Data."

4. Schedule training with Owner, through Architect, with at least seven days' advance notice.

END OF SECTION

SECTION 15781

PACKAGED AIR-CONDITIONING UNITS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Packaged roof top unit.

B. Unit controls.

C. Roof Curb

1.2 REFERENCES

A. ARI 210 - Unitary Air-Conditioning Equipment.

B. ARI 240 - Air Source Unitary Heat Pump Equipment.

C. ARI 270 - Sound Rating of Outdoor Unitary Equipment.

D. NFPA 70 - National Electrical Code.

E. NFPA 90A - Installation of Air Conditioning and Ventilation Systems.

1.3 SUBMITTALS FOR REVIEW

A. Shop Drawings: Indicate capacity and dimensions of manufactured products and assemblies required for this project. Indicate electrical service with electrical characteristics and connection requirements, and duct connections.

B. Product Data: Provide capacity and dimensions of manufactured products and assemblies required for this project. Indicate electrical service with electrical characteristics and connection requirements, and duct connections.

C. Submit manufacturer's installation instructions. Indicate assembly, support details, connection requirements, and include start-up instructions.

D. Operation and Maintenance Data: Include manufacturer's descriptive literature, operating instructions, installation instructions, maintenance and repair data, and parts listing.

1.4 QUALITY ASSURANCE

A. Manufacturer: Company specializing in manufacturing the Products specified in this section with minimum three years' experience.

1.5 REGULATORY REQUIREMENTS

A. Products Requiring Electrical Connection: Listed and classified by Underwriters' Laboratories, Inc., as suitable for the purpose specified and indicated.

1.6 DELIVERY, STORAGE, AND PROTECTION

A. Protect units from physical damage by storing off site until equipment curbs are in place, ready for immediate installation of units.

1.7 WARRANTY

A. Provide a one-year warranty to include coverage for refrigeration compressors.

1.8 MAINTENANCE SERVICE

A. Furnish service and maintenance of packaged units for one year from Date of Substantial Completion.

B. Provide maintenance service with a two-month interval as maximum time period between calls. Provide 24-hour emergency service on breakdowns and malfunctions.

C. Include maintenance items as outlined in manufacturer's operating and maintenance data, including minimum of six filter replacements, minimum of one fan belt replacement, and controls check-out, adjustments, and recalibration.

D. Submit copies of service calls work order or report, and includes description of work performed.

1.9 EXTRA MATERIALS

A. Provide one set of filters.

PART 2 PRODUCTS

2.1 AIR CONDITIONING UNITS

A. Description: Self-contained, packaged, factory assembled and prewired, consisting of cabinet and frame, supply fan, controls, air filters, refrigerant cooling coil and compressor, condenser coil and condenser fan.

B. Provide manufacturer’s standard hot gas reheat system for humidity control.

C. Disconnect Switch: Factory mount disconnects switch on equipment.

2.2 DEDICATED OUTSIDE AIR SUPPLY UNITS

A. Provide single packaged type Dedicated Outdoor Air Supply (DOAS) unit complete with reheat, outside air intake, ducted supply outlet, control dampers, humidity & temperature sensors & controllers, vibration isolators and appurtenances.

B. The unit’s evaporator and condenser coil assembly shall be treated with phenolic coating or other manufacturer’s protective coating to protect against sea spray and other corrosive elements. Coil coating shall meet 10,000-hours Salt Spray test rating per ASTM B117 Standard.

C. The unit's casing shall be provided with corrosion protection with finish coating that pass salt-spray tests per ASTM B117 for duration of 10,000 hours.

2.2 FABRICATION

A. Cabinet: Galvanized steel with baked enamel finishes, access doors or removable access panels with stainless-steel quick fasteners screwdriver operated flush cam type. Structural members shall be minimum 18 gage (1.20 mm), with access doors or removable panels of minimum 20 gage (0.90 mm). Provide phenolic or equivalent coating for the entire unit; coating shall meet 10,000-hours Salt Spray test rating per ASTM B117 Standard.

B. Insulation: 2-inch (50-mm) thick neoprene coated glass fiber with edges protected from erosion.

C. Supply Fan: Forward curved centrifugal type, resiliently mounted with V-belt drive, adjustable variable pitch motor pulley, and rubber isolated hinge mounted high efficiency motor. Isolate complete fan assembly.

D. Air Filters: MERV-14, One-inch (25-mm) thick glass fiber disposable media in metal frames.

2.3 EVAPORATOR COIL

A. Provide copper tube aluminum fin coil assembly with galvanized drain pan and connection.

B. Provide capillary tubes or thermostatic expansion valves for units of 6 tons (21 kW) capacity and less, and thermostatic expansion valves and alternate row circuiting for units 7.5 tons (26 kW) cooling capacity and larger.

2.4 COMPRESSOR

A. Provide hermetic or semi-hermetic compressors, 3600 rpm maximum, resiliently mounted with positive lubrication, crankcase heater, high- and low-pressure safety controls, motor overload protection, suction and discharge service valves and gage ports, and filter drier.

B. Five-minute timed off circuit to delay compressor start.

C. Provide step capacity control by cylinder unloading.

2.5 CONDENSER COIL

A. Provide copper tube aluminum fin coil assembly with subcooling rows and coil guard. Treat coil assembly with phenolic coating or other manufacturer’s protective coating to protect against sea spray and other corrosive elements. Coil coating shall meet 10,000-hours Salt Spray test rating per ASTM B117 Standard.

B. Provide direct drive propeller fans, resiliently mounted with fan guard, motor overload protection, wired to operate with compressor. Provide high efficiency fan motors.

2.6 MIXED AIR CASING

A. Dampers: Provide manual outside air dampers for fixed outside air quantity.

B. Gaskets: Provide tight fitting dampers with edge gaskets maximum leakage 5 percent at 2 inches (500 Pa) pressure differential.

2.7 UVC ULTRAVIOLET GERMICIDAL IRRADIATION LIGHTS

A. UVC system shall be ETL or UL 1598 Listed for luminaries and the lamps shall be rated for wet locations and air handling unit use. Provide mechanical interlock switches to access doors and panels to insure UVC system will be de-energized when access panels are opened. Provide UVC sight glass and 1-set of spare lamps for each PCU.

2.8 VARIABLE-AIR-VOLUME CONTROL (WHERE REQUIRED)

A. Electric discharge-air-temperature step controller; supply-air static-pressure controller with damper operator operating variable-inlet-fan vanes.

2.9 SMOKE DETECTORS

A. Photoelectric detector located in return-air plenum, to de-energize unit.

2.10 OPERATING CONTROLS

A. Provide low voltage, adjustable thermostat to control compressor and condenser fan and supply fan to maintain temperature setting.

1. Include system selector switch (off-auto-cool) and fan control switch (auto-on).

2. Provide single acting thermostat with minimum 3 stage cooling.

3. Locate thermostat in return air.

B. Provide voltage monitor protection.

C. Provide remote mounted fan control switch (on-auto).

D. Provide low limit thermostat in supply air to stop supply fan.

E. Provide night control energized by central time clock to maintain lower thermostat setting for night and unoccupied operation.

F. Provide remote readout panels containing signal lights indicating system status, cooling system failure; check switches proving signal light operations; system on-off switch and cooling system on-off switch.

G. Provide in panel a manual 12-hour timer to override night control, 7 day time clock for energizing night control, low limit manual reset, and remote thermostat temperature set point.

2.11 OPERATING CONTROLS - SINGLE ZONE UNITS

A. Electric solid-state microcomputer-based room thermostat located as indicated in service area with remote sensor located as indicated.

B. Room thermostat shall incorporate:

1. Preferential rate control to minimize overshoot and deviation from set point.
2. Set-up for four separate temperatures per day.

3. Instant override of set point for continuous or timed period from one hour to 31 days.

4. Short cycle protection.

5. Programming based on weekdays, Saturday and Sunday.

6. Switch selection features including imperial or metric display, 12 or 24-hour clock, keyboard disable, remote sensor, and fan on-auto.

C. Room thermostat display shall include:

1. Time of day.

2. Actual room temperature.

3. Programmed temperature.

4. Programmed time.

5. Duration of timed override.

6. Day of week.

7. System model indication: cooling, auto, off, fan auto, fan on.

8. Stage (cooling) operation.

2.12 Roof Mounting Curb: 24 inches (610 mm) high stainless-steel, channel frame with gaskets, nailer strips.

PART 3 EXECUTION

3.1 EXAMINATION

A. Coordination and Meetings: Verification of existing conditions prior to beginning work.

B. Verify that proper power supply is available.

3.2 INSTALLATION

A. Install in accordance with manufacturer's instructions.

B. Install in accordance with NFPA 90A.

3.3 MANUFACTURER'S FIELD SERVICES

A. Provide initial start-up and shut-down during first year of operation, including routine servicing and check-out.

END OF SECTION

SECTION 15815

DUCTWORK

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes rectangular, round, and flat-oval metal ducts and plenums for heating, ventilating, and air-conditioning systems in pressure classes from minus 2- to plus 10-inch w.g. (minus 500 to plus 2490 Pa).

B. Related Sections include the following:

1. Division 7 Section "Joint Sealants" for fire-resistant sealants for use around duct penetrations and fire-damper installations in fire-rated floors, partitions, and walls.

2. Division 10 Section "Louvers and Vents" for intake and relief louvers and vents connected to ducts and installed in exterior walls.

3. Division 15 Section "Mechanical Insulation" for duct insulation.

4. Division 15 Section "Duct Accessories" for dampers, sound-control devices, duct-mounted access doors and panels, turning vanes, and flexible ducts.

5. Division 15 Section "Diffusers, Registers, and Grilles."

6. Division 15 Section "Testing, Adjusting, and Balancing" for air balancing and final adjusting of manual-volume dampers.

1.3 DEFINITIONS

A. Thermal Conductivity and Apparent Thermal Conductivity (k-Value): As defined in ASTM C 168. In this Section, these values are the result of the formula Btu x in./h x sq. ft. x deg. F or W/m x K at the temperature differences specified. Values are expressed as Btu or W.

1. Example: Apparent Thermal Conductivity (k-Value): 0.26 or 0.037.

1.4 SYSTEM DESCRIPTION

A. Duct system design, as indicated, has been used to select and size air-moving and -distribution equipment and other components of air system. Changes to layout or configuration of duct system must be specifically approved in writing by Architect. Accompany requests for layout modifications with calculations showing that proposed layout will provide original design results without increasing system total pressure.

1.5 SUBMITTALS

A. Product Data: For sealing materials.

B. Shop Drawings: Show details of the following:

1. Fabrication, assembly, and installation, including plans, elevations, sections, components, and attachments to other work.

2. Duct layout indicating pressure classifications and sizes on plans.

3. Fittings.

4. Reinforcement and spacing.

5. Seam and joint construction.

6. Penetrations through fire-rated and other partitions.

7. Hangers and supports, including methods for building attachment, vibration isolation, seismic restraints, and duct attachment.

C. Coordination Drawings: Reflected ceiling plans drawn to scale and coordinating penetrations and ceiling-mounted items. Show the following:

1. Ceiling suspension assembly members.

2. Other systems installed in same space as ducts.

3. Ceiling- and wall-mounted access doors and panels required to provide access to dampers and other operating devices.

4. Coordination with ceiling-mounted items, including lighting fixtures, diffusers, grilles, speakers, sprinkler heads, access panels, and special moldings.

D. Field Test Reports: Indicate and interpret test results for compliance with performance requirements.

E. Record Drawings: Indicate actual routing, fitting details, reinforcement, support, and installed accessories and devices.

1.6 QUALITY ASSURANCE

A. Comply with NFPA 90A, "Installation of Air Conditioning and Ventilating Systems," unless otherwise indicated.

B. Comply with NFPA 96, "Ventilation Control and Fire Protection of Commercial Cooking Operations," Chapter 3, "Duct System," for range hood ducts, unless otherwise indicated.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver sealant and fire-stopping materials to site in original unopened containers or bundles with labels indicating manufacturer, product name and designation, color, expiration period for use, pot life, curing time, and mixing instructions for multicomponent materials.

B. Store and handle sealant and fire-stopping materials according to manufacturer's written recommendations.

C. Deliver and store stainless-steel sheets with mill-applied adhesive protective paper maintained through fabrication and installation.

PART 2 PRODUCTS

2.1 SHEET METAL MATERIALS

A. Galvanized, Sheet Steel: Lock-forming quality; ASTM A 653/A 653M, G90 (Z275) coating designation; mill-phosphatized finish for surfaces of ducts exposed to view.

B. Stainless Steel: ASTM A 480/A 480M, Type 316, sheet form with No. 4 finish for surfaces of ducts ex-posed to view; and Type 304, sheet form with No. 1 finish for concealed ducts.

C. Aluminum Sheets: ASTM B 209 (ASTM B 209M), Alloy 3003, Temper H14, sheet form with standard, one-side bright finish for ducts exposed to view and with mill finish for concealed ducts.

D. Reinforcement Shapes and Plates: Galvanized steel reinforcement where installed on galvanized, sheet metal ducts; compatible materials for aluminum and stainless-steel ducts.

E. Tie Rods: Galvanized steel, 1/4-inch (6-mm) minimum diameter for 36-inch (900-mm) length or less; 3/8-inch (10-mm) minimum diameter for lengths longer than 36 inches (900 mm).

2.2 SEALANT MATERIALS, METAL DUCTWORK

A. Joint and Seam Sealants, General: The term "sealant" is not limited to materials of adhesive or mastic nature but includes tapes and combinations of open-weave fabric strips and mastics.

1. Joint and Seam Tape: 2 inches (50 mm) wide; glass-fiber fabric reinforced.

2. Tape Sealing System: Woven-fiber tape impregnated with a gypsum mineral compound and a modified acrylic/silicone activator to react exothermically with tape to form a hard, durable, air-tight seal.

3. Joint and Seam Sealant: One-part, non-sag, solvent-release-curing, polymerized butyl sealant, formulated with a minimum of 75 percent solids.

4. Flanged Joint Mastics: One-part, acid-curing, silicone, elastomeric joint sealants, complying with ASTM C 920, Type S, Grade NS, Class 25, Use O.

2.3 THERMOPLASTIC DUCTWORK

A. Construct ductwork, fittings and accessories in accordance with SMACNA 1378 and NFPA 91. Fabricate supplementary steel in accordance with the AISC 360.

B. Provide duct system from a manufacturer recognized in the field of fabrication of PVC material. Fabricating personnel must be certified by the manufacturer as qualified to perform the work in accordance with the specified requirements.

C. Fabricate ducts, accessories and components in sheet form from materials conforming to ASTM D1927, Type I, Grade 2. Utilize extrusions of the same compounds as specified for duct. Solvent cement must conform to ASTM D2564. Construct metal components, when permitted to be located interior to the duct, of 316 or 316L corrosion resistant steel.

D. Where penetration of duct surfaces is approved or specified, provide Type 316 corrosion resistant steel fastener assemblies encapsulated with polyester on duct interior, unless total disassembly is intended. Provide flange fastener bolts and nuts of hex type only, cadmium plated, unless exposed to corrosive fumes; in which case provide Type 316 stainless steel. Equip bolted assemblies with two oversized washers, except where assembled with metallic reinforcement contact. Plastic bolting is prohibited.

E. Joint gaskets. Provide 1/8-inch-thick acid resistant chloroprene.

F. Fabrication: Construct water washable, watertight, self-draining, and airtight ductwork as specified or indicated. Provide required reinforcements, bracing, supports, framing, gasketing, sealing, resilient mounting, drainage provisions, and fastening to guarantee rigid construction and freedom from vibration, airflow induced motion and noise, and excessive deflection at specified maximum system pressure and velocity.

G. Flanges: Provide flanges at all branches on maximum 20 foot centers in ducting sized 16 inches and under, on maximum 8 foot centers in duct sized over 16 inches, where required for ease of access to equipment, at hoods, enclosure connections and where indicated. Furnish one piece, heat, adhesive, or solvent vulcanized or bonded full face gaskets at flange joints.

H. Access plates: Provide access plates upstream and downstream of equipment in ducts at locations to facilitate duct cleaning, and where indicated. Locate access openings a minimum of 2 inches above bottom of duct and externally frame with welded and ground miter joint steel which is isolated from duct interior. Construct access plate with PVC on interior side, backed with steel on exterior side. Provide stainless steel access plate fasteners. For ductwork cleaning access, provide 8 inch diameter gasketed access plates on maximum 10 foot on centers, except where access is available through an air terminal device or other required access.

2.4 HANGERS AND SUPPORTS

A. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for building materials.

1. Use powder-actuated concrete fasteners for standard-weight aggregate concretes or for slabs more than 4 inches (100 mm) thick.

2. Exception: Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes or for slabs less than 4 inches (100 mm) thick.

B. Hanger Materials: Galvanized, sheet steel or round, threaded steel rod.

1. Hangers Installed in Corrosive Atmospheres: Electrogalvanized, all-thread rod or galvanized rods with threads painted after installation.

2. Straps and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for sheet steel width and thickness and for steel rod diameters.

C. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.

D. Trapeze and Riser Supports: Steel shapes complying with ASTM A 36/A 36M.

1. Supports for Galvanized-Steel Ducts: Galvanized steel shapes and plates.

2. Supports for Stainless-Steel Ducts: Stainless-steel support materials.

3. Supports for Aluminum Ducts: Aluminum support materials, unless materials are electrolytically separated from ductwork.

2.5 RECTANGULAR DUCT FABRICATION

A. General: Fabricate ducts, elbows, transitions, offsets, branch connections, and other construction with galvanized, sheet steel, according to SMACNA's "HVAC Duct Construction Standards--Metal and Flexible." Comply with requirements for metal thickness, reinforcing types and intervals, tie-rod applications, and joint types and intervals.

1. Lengths: Fabricate rectangular ducts in lengths appropriate to reinforcement and rigidity class required for pressure classification.

2. Materials: Free from visual imperfections such as pitting, seam marks, roller marks, stains, and discolorations.

B. Static-Pressure Classifications: Unless otherwise indicated, construct ducts to the following:

1. Supply Ducts: 3-inch wg (750 Pa).

2. Return Ducts: 2-inch wg (500 Pa), negative pressure.

3. Exhaust Ducts: 2-inch wg (500 Pa), negative pressure.

C. Cross Breaking or Cross Beading: Cross break or cross bead duct sides 19 inches (480 mm) and larger and 0.0359 inch (0.9 mm) thick or less, with more than 10 sq. ft. (0.93 sq. m) of unbraced panel area, un-less ducts are lined.

2.6 ROUND AND FLAT-OVAL DUCT FABRICATION

A. General: Diameter as applied to flat-oval ducts in this Article is the diameter of the size of round duct that has a circumference equal to perimeter of a given size of flat-oval duct.

B. Round Ducts: Fabricate supply ducts of galvanized steel according to SMACNA's "HVAC Duct Construction Standards--Metal and Flexible."

C. Flat-Oval Ducts: Fabricate supply ducts with standard spiral lock seams or with butt-welded longitudinal seams according to SMACNA's "HVAC Duct Construction Standards--Metal and Flexible."

2.7 ROUND AND FLAT-OVAL SUPPLY AND EXHAUST FITTING FABRICATION

A. 90-Degree Tees and Laterals and Conical Tees: Fabricate to comply with SMACNA's "HVAC Duct Construction Standards--Metal and Flexible," with metal thicknesses specified for longitudinal seam straight duct.

B. Diverging-Flow Fittings: Fabricate with a reduced entrance to branch taps with no excess material projecting from body onto branch tap entrance.

C. Elbows: Fabricate in die-formed, gored, pleated, or mitered construction. Fabricate bend radius of die-formed, gored, and pleated elbows one and one-half times elbow diameter. Unless elbow construction type is indicated, fabricate elbows as follows:

1. Mitered-Elbow Radius and Number of Pieces: Welded construction complying with SMACNA's "HVAC Duct Construction Standards--Metal and Flexible," unless otherwise indicated.

2. Round Mitered Elbows: Welded construction with the following metal thickness for pressure classes from minus 2- to plus 2-inch wg (minus 500 to plus 500 Pa):

    a. Ducts 3 to 26 Inches (75 to 660 mm) in Diameter: 0.028 inch (0.7 mm).

    b. Ducts 27 to 36 Inches (685 to 915 mm) in Diameter: 0.034 inch (0.85 mm).

    c. Ducts 37 to 50 Inches (940 to 1270 mm) in Diameter: 0.040 inch (1.0 mm).

    d. Ducts 52 to 60 Inches (1320 to 1525 mm) in Diameter: 0.052 inch (1.3 mm).

    e. Ducts 62 to 84 Inches (1575 to 2130 mm) in Diameter: 0.064 inch (1.6 mm).

3. Round Mitered Elbows: Welded construction with the following metal thickness for pressure classes from 2- to 10-inch wg (500 to 2490 Pa):

    a. Ducts 3 to 14 Inches (75 to 355 mm) in Diameter: 0.028 inch (0.7 mm).

    b. Ducts 15 to 26 Inches (380 to 660 mm) in Diameter: 0.034 inch (0.85 mm).

    c. Ducts 27 to 50 Inches (685 to 1270 mm) in Diameter: 0.040 inch (1.0 mm).

    d. Ducts 52 to 60 Inches (1320 to 1525 mm) in Diameter: 0.052 inch (1.3 mm).

    e. Ducts 62 to 84 Inches (1575 to 2130 mm) in Diameter: 0.064 inch (1.6 mm).

4. Flat-Oval Mitered Elbows: Welded construction with same metal thickness as longitudinal seam flat-oval duct.

5. 90-Degree, Two-Piece, Mitered Elbows: Use only for supply systems, or exhaust systems for material-handling classes A and B; and only where space restrictions do not permit using 1.5 bend radius elbows. Fabricate with single-thickness turning vanes.

6. Round Elbows, 8 Inches (200 mm) and Smaller: Fabricate die-formed elbows for 45- and 90-degree elbows and pleated elbows for 30, 45, 60, and 90 degrees only. Fabricate nonstandard bend-angle configuration or nonstandard diameter elbows with gored construction.

7. Round Elbows, 9 through 14 Inches (225 through 355 mm): Fabricate gored or pleated elbows for 30, 45, 60, and 90 degrees, unless space restrictions require a mitered elbow. Fabricate non-standard bend-angle configuration or nonstandard diameter elbows with gored construction.

8. Round Elbows, Larger than 14 Inches (355 mm), and All Flat-Oval Elbows: Fabricate gored el-bows, unless space restrictions require a mitered elbow.

9. Die-Formed Elbows for Sizes through 8 Inches (200 mm) and All Pressures: 0.040 inch (1.0 mm) thick with two-piece welded construction.

10. Round Gored-Elbow Metal Thickness: Same as non-elbow fittings specified above.

11. Flat-Oval Elbow Metal Thickness: Same as longitudinal seam flat-oval duct specified above.

12. Pleated Elbows for Sizes through 14 Inches (355 mm) and Pressures through 10-inch wg (2490 Pa): 0.022 inch (0.55 mm).

PART 3 EXECUTION

3.1 DUCT INSTALLATION, GENERAL

A. Duct installation requirements are specified in other Division 15 Sections. Drawings indicate general arrangement of ducts, fittings, and accessories.

B. Construct and install each duct system for the specific duct pressure classification indicated.

C. Install round and flat-oval ducts in lengths not less than 12 feet (3.7 m), unless interrupted by fittings.

D. Install ducts with fewest possible joints.

E. Install fabricated fittings for changes in directions, changes in size and shape, and connections.

F. Install couplings tight to duct wall surface with a minimum of projections into duct.

G. Install ducts, unless otherwise indicated, vertically and horizontally, parallel and perpendicular to building lines; avoid diagonal runs.

H. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.

I. Install ducts with a clearance of 1 inch (25 mm), plus allowance for insulation thickness.

J. Conceal ducts from view in finished spaces. Do not encase horizontal runs in solid partitions, unless specifically indicated.

K. Coordinate layout with suspended ceiling, fire and smoke control dampers, lighting layouts, and similar finished work.

L. Electrical Equipment Spaces: Route ductwork to avoid passing through transformer vaults and electrical equipment spaces and enclosures.

M. Non-Fire-Rated Partition Penetrations: Where ducts pass through interior partitions and exterior walls, and are exposed to view, conceal space between construction opening and duct or duct insulation with sheet metal flanges of same metal thickness as duct. Overlap opening on four sides by at least 1-1/2 inches (38 mm).

N. Fire-Rated Partition Penetrations: Where ducts pass through interior partitions and exterior walls, install appropriately rated fire damper, sleeve, and fire-stopping sealant. Fire and smoke dampers are specified in Division 15 Section "Duct Accessories." Fire-stopping materials and installation methods are specified in Division 7 Section "Fire-stopping."

3.2 SEAM AND JOINT SEALING

A. General: Seal duct seams and joints according to the duct pressure class indicated and as described in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

B. Pressure Classification Less than 2-Inch wg (500 Pa): Transverse joints.

C. Seal externally insulated ducts before insulation installation.

3.3 HANGING AND SUPPORTING

A. Install rigid round, rectangular, and flat-oval metal duct with support systems indicated in SMACNA's "HVAC Duct Construction Standards--Metal and Flexible."

B. Support horizontal ducts within 24 inches (600 mm) of each elbow and within 48 inches (1200 mm) of each branch intersection.

C. Support vertical ducts at a maximum interval of 16 feet (5 m) and at each floor.

D. Install upper attachments to structures with an allowable load not exceeding one-fourth of failure (proof-test) load.

E. Install concrete inserts before placing concrete.

F. Install powder-actuated concrete fasteners after concrete is placed and completely cured.

3.4 CONNECTIONS

A. Connect equipment with flexible connectors according to Division 15 Section "Duct Accessories."

B. For branch, outlet and inlet, and terminal unit connections, comply with SMACNA's "HVAC Duct Construction Standards--Metal and Flexible."

3.5 ADJUSTING

A. Adjust volume-control dampers in ducts, outlets, and inlets to achieve design airflow.

B. Refer to Division 15 Section "Testing, Adjusting, and Balancing" for detailed procedures.

3.6 CLEANING

A. After completing system installation, including outlet fittings and devices, inspect the system. Vacuum ducts before final acceptance to remove dust and debris.

END OF SECTION

SECTION 15820

DUCT ACCESSORIES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Backdraft dampers.

2. Manual-volume dampers.

3. Fire and smoke dampers.

4. Turning vanes.

5. Duct-mounted access doors and panels.

6. Flexible ducts.

7. Flexible connectors.

8. Duct accessory hardware.

B. Related Sections include the following:

1. Division 8 Section "Access Doors" for wall- and ceiling-mounted access doors and panels.

2. Division 10 Section "Louvers and Vents" for intake and relief louvers and vents connected to ducts and installed in exterior walls.

3. Division 15 Section "Diffusers, Registers, and Grilles."

1.3 SUBMITTALS

A. Product data for the following:

1. Backdraft dampers.

2. Manual-volume dampers.

3. Fire and smoke dampers.

4. Duct-mounted access doors and panels.

5. Flexible ducts.

B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loadings, required clearances, method of field assembly, components, location, and size of each field connection. Detail the following:

1. Special fittings and manual- and automatic-volume-damper installations.

2. Fire and smoke-damper installations, including sleeves and duct-mounted access doors and panels.

C. Product Certificates: Submit certified test data on dynamic insertion loss; self-noise power levels; and airflow performance data, static-pressure loss, dimensions, and weights.

1.4 QUALITY ASSURANCE

A. NFPA Compliance: Comply with the following NFPA standards:

1. NFPA 90A, "Installation of Air Conditioning and Ventilating Systems."

1.5 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed, are packaged with protective covering for storage, and are identified with labels describing contents.

1. Fusible Links: Furnish quantity equal to 10 percent of amount installed.

PART 2 PRODUCTS

2.1 SHEET METAL MATERIALS

A. Galvanized, Sheet Steel: Lock-forming quality; ASTM A 653/A 653M, G90 (Z275) coating designation; mill-phosphatized finish for surfaces of ducts exposed to view.

B. Aluminum Sheets: ASTM B 209 (ASTM B 209M), Alloy 3003, Temper H14, sheet form; with standard, one-side bright finish for ducts exposed to view and mill finish for concealed ducts.

C. Extruded Aluminum: ASTM B 221 (ASTM B 221M), Alloy 6063, Temper T6.

D. Reinforcement Shapes and Plates: Galvanized steel reinforcement where installed on galvanized, sheet metal ducts; compatible materials for aluminum and stainless-steel ducts.

E. Tie Rods: Galvanized steel, 1/4-inch (6-mm) minimum diameter for 36-inch (900-mm) length or less; 3/8-inch (10-mm) minimum diameter for lengths longer than 36 inches (900 mm).

2.2 BACKDRAFT DAMPERS

A. Description: Suitable for horizontal or vertical installations.

B. Frame: 0.052-inch (1.3-mm) thick, galvanized, sheet steel, with welded corners and mounting flange.

C. Blades: 0.025-inch- (0.6-mm-) thick, roll-formed aluminum.

D. Blade Seals: Felt.

E. Blade Axles: Galvanized steel.

F. Tie Bars and Brackets: Galvanized steel.

G. Return Spring: Adjustable tension.

2.3 MANUAL-VOLUME DAMPERS

A. General: Factory fabricated with required hardware and accessories. Stiffen damper blades for stability. Include locking device to hold single-blade dampers in a fixed position without vibration. Close duct penetrations for damper components to seal duct consistent with pressure class.

1. Pressure Classifications of 3-Inch wg (750 Pa) or Higher: End bearings or other seals for ducts with axles full length of damper blades and bearings at both ends of operating shaft.

B. Standard Volume Dampers: Multiple- or single-blade, parallel- or opposed-blade design as indicated, standard leakage rating, and suitable for horizontal or vertical applications.

1. Steel Frames: Hat-shaped, galvanized, sheet steel channels, minimum of 0.064 inch (1.62 mm) thick, with mitered and welded corners; frames with flanges where indicated for attaching to walls; and flangeless frames where indicated for installing in ducts.

2. Roll-Formed Steel Blades: 0.064-inch (1.62-mm) thick, galvanized, sheet steel.

3. Roll-Formed Aluminum Blades: 0.10-inch (2.5-mm) thick aluminum sheet.

4. Extruded-Aluminum Blades: 0.050-inch (1.2-mm) thick extruded aluminum.

5. Blade Axles: Galvanized steel.

6. Tie Bars and Brackets: Galvanized steel.

C. Low-Leakage Volume Dampers: Multiple or single-blade, parallel or opposed-blade design as indicated, low-leakage rating, and suitable for horizontal or vertical applications.

1. Steel Frames: Hat-shaped, galvanized, sheet steel channels, minimum of 0.064 inch (1.62 mm) thick, with mitered and welded corners; frames with flanges where indicated for attaching to walls; and flangeless frames where indicated for installing in ducts.

2. Roll-Formed Steel Blades: 0.064-inch- (1.62-mm) thick, galvanized, sheet steel.

3. Blade Seals: Felt.

4. Blade Seals: Vinyl.

5. Blade Seals: Neoprene.

6. Blade Axles: Galvanized steel.

7. Tie Bars and Brackets: Galvanized steel.

D. Jackshaft: 1-inch- (25-mm) diameter, galvanized steel pipe rotating within a pipe-bearing assembly mounted on supports at each mullion and at each end of multiple-damper assemblies.

1. Length and Number of Mountings: Appropriate to connect linkage of each damper of a multiple-damper assembly.

E. Damper Hardware: Zinc-plated, die-cast core with dial and handle made of 3/32-inch- (2.4-mm) thick zinc-plated steel, and a 3/4-inch (19-mm) hexagon locking nut. Include center hole to suit damper operating-rod size. Include elevated platform for insulated duct mounting.

2.4 FIRE DAMPERS

A. General: Labeled to UL 555.

B. Fire Rating: One and one-half and three hours.

C. Frame: SMACNA Type B with blades out of airstream; fabricated with roll-formed, 0.034-inch- (0.85-mm) thick galvanized steel; with mitered and interlocking corners.

D. Mounting Sleeve: Factory- or field-installed galvanized, sheet steel.

1. Minimum Thickness: 0.052 inch (1.3 mm) or 0.138 inch (3.5 mm) thick as indicated, and length to suit application.

2. Exceptions: Omit sleeve where damper frame width permits direct attachment of perimeter mounting angles on each side of wall or floor, and thickness of damper frame complies with sleeve requirements.

E. Mounting Orientation: Vertical or horizontal as indicated.

F. Blades: Roll-formed, interlocking, 0.034-inch (0.85-mm) thick, galvanized, sheet steel. In place of interlocking blades, use full-length, 0.034-inch (0.85-mm) thick, galvanized steel blade connectors.

G. Horizontal Dampers: Include a blade lock and stainless-steel negator closure spring.

H. Fusible Link: Replaceable, 165 or 212 deg. F (74 or 100 deg. C) rated as indicated.

2.5 TURNING VANES

A. Fabricate to comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

B. Manufactured Turning Vanes: Fabricate of 1-1/2-inch- (38-mm-) wide, curved blades set 3/4 inch (19 mm) o.c.; support with bars perpendicular to blades set 2 inches (50 mm) o.c.; and set into side strips suitable for mounting in ducts.

C. Acoustic Turning Vanes: Fabricate of airfoil-shaped aluminum extrusions with perforated faces and fibrous-glass fill.

2.6 DUCT-MOUNTED ACCESS DOORS AND PANELS

A. General: Fabricate doors and panels airtight and suitable for duct pressure class.

B. Frame: Galvanized, sheet steel, with bend-over tabs and foam gaskets.

C. Door: Double-wall, galvanized, sheet metal construction with insulation fill and thickness, and number of hinges and locks as indicated for duct pressure class. Include vision panel where indicated. Include 1-by-1-inch (25-by-25-mm) butt or piano hinge and cam latches.

D. Seal around frame attachment to duct and door to frame with neoprene or foam rubber.

E. Insulation: 1-inch- (25-mm-) thick, fibrous-glass or polystyrene-foam board.

2.7 FLEXIBLE CONNECTORS

A. General: Flame-retarded or noncombustible fabrics, coatings, and adhesives complying with UL 181, Class 1.

B. Standard Metal-Edged Connectors: Factory fabricated with a strip of fabric 3-1/2 inches (89 mm) wide attached to two strips of 2-3/4-inch (70-mm) wide, 0.028-inch (0.7-mm) thick, galvanized, sheet steel or 0.032-inch (0.8-mm) aluminum sheets. Select metal compatible with connected ducts.

C. Conventional, Indoor System Flexible Connector Fabric: Glass fabric double coated with polychloroprene.

1. Minimum Weight: 26 oz./sq. yd. (880 g/sq. m).

2. Tensile Strength: 480 lbf/inch (84 N/mm) in the warp, and 360 lbf/inch (63 N/mm) in the filling.

D. Conventional, Outdoor System Flexible Connector Fabric: Glass fabric double coated with a synthetic-rubber, weatherproof coating resistant to the sun's ultraviolet rays and ozone environment.

1. Minimum Weight: 26 oz./sq. yd. (880 g/sq. m).

2. Tensile Strength: 530 lbf/inch (93 N/mm) in the warp, and 440 lbf/inch (77 N/mm) in the filling.

2.8 FLEXIBLE DUCTS

A. General: Comply with UL 181, Class 1.

B. Flexible Ducts, Insulated: Factory-fabricated, insulated, round duct, with an outer jacket enclosing 1-1/2-inch (38-mm) thick, glass-fiber insulation around a continuous inner liner.

1. Reinforcement: Steel-wire helix encapsulated in inner liner.

2. Outer Jacket: Glass-reinforced, silver Mylar with a continuous hanging tab, integral fibrous-glass tape, and nylon hanging cord.

3. Outer Jacket: Polyethylene film.

4. Inner Liner: Polyethylene film.

C. Pressure Rating: 6-inch wg (1500 Pa) positive, 1/2-inch wg (125 Pa) negative.

2.9 ACCESSORY HARDWARE

A. Instrument Test Holes: Cast iron or cast aluminum to suit duct material, including screw cap and gasket. Size to allow insertion of pitot tube and other testing instruments, and length to suit duct insulation thick-ness.

B. Splitter Damper Accessories: Zinc-plated damper blade bracket; 1/4-inch (6-mm), zinc-plated operating rod; and a duct-mounted, ball-joint bracket with flat rubber gasket and square-head set screw.

C. Flexible Duct Clamps: Stainless-steel band with cadmium-plated hex screw to tighten band with a worm-gear action, in sizes 3 to 18 inches (75 to 450 mm) to suit duct size.

D. Adhesives: High strength, quick setting, neoprene based, waterproof, and resistant to gasoline and grease.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install duct accessories according to applicable details shown in SMACNA's "HVAC Duct Construction Standards--Metal and Flexible" for metal ducts and NAIMA's "Fibrous Glass Duct Construction Standards" for fibrous-glass ducts.

B. Provide test holes at fan inlet and outlet and elsewhere as indicated.

C. Install fire and smoke dampers according to manufacturer's UL-approved written instructions.

1. Install fusible links in fire dampers.

D. Install duct access panels for access to both sides of duct coils. Install duct access panels downstream from volume dampers, fire dampers, turning vanes, and equipment.

1. Install duct access panels to allow access to interior of ducts for cleaning, inspecting, adjusting, and maintaining accessories and terminal units.

2. Install access panels on side of duct where adequate clearance is available.

E. Label access doors according to Division 15 Section "Mechanical Identification."

3.2 ADJUSTING

A. Adjust duct accessories for proper settings.

B. Adjust fire and smoke dampers for proper action.

C. Final positioning of manual-volume dampers is specified in Division 15 Section "Testing, Adjusting, and Balancing."

END OF SECTION

SECTION 15845

AIR TERMINALS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Single-duct air terminals.

B. Related Sections include the following:

1. Division 15 Section "Duct Insulation" for external insulation of air terminals.

2. Division 15 Section "Control Systems Equipment" for control devices installed on air terminals.

1.3 SUBMITTALS

A. Product Data: Include rated capacities; shipping, installed, and operating weights; furnished specialties; and accessories for each model indicated. Include a schedule showing drawing designation, room location, number furnished, model number, size, and accessories furnished.

B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loadings, required clearances, method of field assembly, components, and location and size of each field connection.

1. Wiring Diagrams: Detail wiring for power, signal, and control systems and differentiate between manufacturer-installed and field-installed wiring.

C. Coordination Drawings: Reflected ceiling plans drawn to scale and coordinating air outlets with other items installed in ceilings.

D. Maintenance Data: List of parts for each type of air terminal and troubleshooting maintenance guide to include in the maintenance manuals specified in Division 1.

1.4 QUALITY ASSURANCE

A. Product Options: Drawings and schedules indicate requirements of air terminals and are based on specific systems indicated. Other manufacturers' systems with equal performance characteristics may be considered. Refer to Division 1 Section "Substitutions."

B. Listing and Labeling: Provide electrically operated air terminals specified in this Section that are listed and labeled.

1. The Terms "Listed" and "Labeled": As defined in NFPA 70, Article 100.

2. Listing and Labeling Agency Qualifications: A "Nationally Recognized Testing Laboratory" as defined in OSHA Regulation 1910.7.

C. NFPA Compliance: Install air terminals according to NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems."

D. Comply with NFPA 70 for electrical components and installation.

PART 2 PRODUCTS

2.1 SINGLE-DUCT AIR TERMINALS

A. Configuration: Volume-damper assembly inside unit casing. Locate control components inside protective metal shroud.

B. Casings: Steel or aluminum sheet metal of the following minimum thicknesses:

1. Upstream Pressure Side: 0.032-inch (0.8-mm) aluminum.

2. Downstream Pressure Side: 0.025-inch (0.63-mm) aluminum.

C. Casing Lining: Minimum of 1/2-inch (13-mm) thick, neoprene- or vinyl-coated, fibrous-glass insulation; 1.5-lb/cu. ft. (24-kg/cu. m) density, complying with NFPA 90A requirements and UL 181 erosion requirements. Secure lining to prevent delamination, sagging, or settling.

1. Coat liner surfaces and edges with erosion-resistant coating or cover with perforated metal.

D. Plenum Air Inlets: Round stub connections or S-slip and drive connections for duct attachment.

E. Plenum Air Outlets: S-slip and drive connections.

F. Access: Removable panels to permit access to dampers and other parts requiring service, adjustment, or maintenance; with airtight gasket and quarter-turn latches.

G. Volume Damper: Construct of galvanized steel with peripheral gasket and self-lubricating bearings.

1. Maximum Damper Leakage: 2 percent of nominal airflow at 1-inch wg (250-Pa) inlet static pressure.

2. Maximum Damper Leakage: 2 percent of nominal airflow at 3-inch wg (750-Pa) inlet static pressure.

3. Damper Position: Normally open.

H. Round Outlet: Discharge collar matching inlet size.

I. Controls: Damper operator, thermostat, and other devices compatible with temperature controls specified in other Division 15 Sections.

J. Electric Controls: 24-V damper actuator with wall-mounted electric thermostat and appropriate mounting hardware.

K. Electronic Controls: Bidirectional damper operator and microprocessor-based controller with integral airflow transducer and room sensor provide control with the following features:

1. Proportional plus integral control of room temperature.

2. Occupied/unoccupied operating mode.

3. Remote reset of airflow or temperature set points.

4. Adjusting and monitoring with portable terminal.

5. Communication with temperature-control system specified in other Division 15 Sections.

2.2 SOURCE QUALITY CONTROL

A. Testing Requirements: Test and rate air terminals according to ARI 880, "Industry Standard for Air Terminals."

B. Identification: Label each air terminal with plan number, nominal airflow, maximum and minimum factory-set airflows, coil type, and ARI certification seal.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install air terminals level and plumb, according to manufacturer's written instructions, rough-in drawings, original design, and referenced standards; and maintain sufficient clearance for normal service and maintenance.

B. Connect ductwork to air terminals according to Division 15 ductwork Sections.

3.2 CONNECTIONS

A. Electrical: Comply with applicable requirements in Division 16 Sections.

B. Ground equipment.

1. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. Where manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.3 FIELD QUALITY CONTROL

A. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3.4 CLEANING

A. After completing system installation, including outlet fittings and devices, inspect exposed finish. Remove burrs, dirt, and construction debris, and repair damaged finishes.

3.5 COMMISSIONING

A. Verify that installation of each air terminal is according to the Contract Documents.

B. Check that inlet duct connections are as recommended by air terminal manufacturer to achieve proper performance.

C. Check that controls and control enclosure are accessible.

D. Verify that control connections are complete.

E. Check that nameplate and identification tag are visible.

F. Verify that controls respond to inputs as specified.

3.6 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel as specified below:

1. Train Owner's maintenance personnel on procedures and schedules related to startup and shutdown, troubleshooting, servicing, and preventive maintenance.

2. Review data in the maintenance manuals. Refer to Division 1 Section "Contract Closeout."

3. Review data in the maintenance manuals. Refer to Division 1 Section "Operation and Maintenance Data."

4. Schedule training with Owner, through Architect, with at least 7 days' advance notice.

END OF SECTION

SECTION 15853

POWER VENTILATORS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Propeller wall exhaust fans.

2. In-line centrifugal fans.

3. Centrifugal roof ventilators.

4. Make-up air supply fans.

5. Air curtain fans.

B. Related Sections: The following Sections contain requirements that relate to this Section:

1. Division 15 Section "Vibration Control" for vibration hangers and supports.

2. Division 15 Section "Control Systems Equipment" for control devices.

3. Division 16 Section "Disconnects and Circuit Breakers" for disconnect switches.

4. Division 16 Section "Motor Controllers" for motor starters.

C. Products furnished, but not installed, under this Section include roof curbs for roof-mounted exhaust fans.

1.3 PERFORMANCE REQUIREMENTS

A. Project Altitude: Base air ratings on sea-level conditions.

B. Operating Limits: Classify according to AMCA 99.

C. Fan Unit Schedule: The following information is described in an equipment schedule on the Drawings.

1. Fan performance data including capacities, outlet velocities, static pressures, sound power characteristics, motor requirements, and electrical characteristics.

2. Fan arrangement including wheel configuration, inlet and discharge configurations, and required accessories.

1.4 SUBMITTALS

A. General: Submit each item in this Article according to the Conditions of the Contract and Division 1 Specification Sections.

B. Product Data including rated capacities of each unit, weights (shipping, installed, and operating), furnished specialties, accessories, and the following:

1. Certified fan performance curves with system operating conditions indicated.

2. Certified fan sound power ratings.

3. Motor ratings and electrical characteristics plus motor and electrical accessories.

4. Material gages and finishes, including color charts.

5. Dampers, including housings, linkages, and operators.

C. Shop Drawings from manufacturer detailing equipment assemblies and indicating dimensions, weights, loadings, required clearances, method of field assembly, components, and location and size of each field connection.

D. Coordination Drawings, according to Division 15 Section "Basic Mechanical Requirements," for roof penetration requirements and for reflected ceiling plans drawn accurately to scale and coordinating penetrations and units mounted above ceiling. Show the following:

1. Ceiling suspension assembly members.

2. Size and location of initial access modules for acoustical tile.

3. Ceiling-mounted items including light fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.

E. Wiring diagrams detailing wiring for power and control systems and differentiating clearly between manufacturer-installed and field-installed wiring.

F. Maintenance data for power ventilators to include in the operation and maintenance manual specified in Division 1 and in Division 15 Section "Basic Mechanical Requirements."

1.5 QUALITY ASSURANCE

A. Electrical Component Standard: Provide components that comply with NFPA 70 and that are listed and labeled by UL where available.

B. Listing and Labeling: Provide electrically operated fixtures specified in this Section that are listed and labeled.

1. The Terms "Listed" and "Labeled": As defined in the National Electrical Code, Article 100.

2. Listing and Labeling Agency Qualifications: A "Nationally Recognized Testing Laboratory" (NRTL) as defined in OSHA Regulation 1910.7.

C. AMCA Compliance: Provide products that meet performance requirements and are licensed to use the AMCA Seal.

D. NEMA Compliance: Provide components required as part of fans that comply with applicable NEMA standards.

E. UL Standard: Provide power ventilators that comply with UL 705.

F. Kitchen Hood Roof Ventilators: Comply with requirements of NFPA 96 and UL 762.

G. Comply with AMCA 220, "Test Methods for Air Curtain Units," for airflow, outlet velocity, and power consumption.

H. Comply with NSF 37, "Air Curtains for Entranceways in Food and Food Service Establishments."

1.6 PROJECT CONDITIONS

A. Field Measurements: Verify dimensions by field measurements. Verify clearances.

B. Do not operate fans until ductwork is clean, filters are in place, bearings are lubricated, and fans have been commissioned.

1.7 COORDINATION AND SCHEDULING

A. Coordinate the size and location of structural steel support members.

B. Coordinate the installation of roof curbs, equipment supports, and roof penetrations. Roof specialties are specified in Division 7 Sections.

1.8 EXTRA MATERIALS

A. Furnish one set of belts for each belt-driven fan that match products installed, are packaged with protective covering for storage, and are identified with labels clearly describing contents.

PART 2 PRODUCTS

2.1 PROPELLER WALL EXHAUST FANS

A. Description: Belt-driven or direct-drive propeller fans, as indicated, consisting of housing, wheel, gravity-type discharge damper, fan shaft, bearings, motor and disconnect switch, drive assembly, wall housing, exhaust hood, and accessories.

B. Fan Housing: Reinforced and braced galvanized steel, containing galvanized steel gravity dampers and motor and drive assembly, and fan wheel.

C. Exhaust Hood: Stainless steel weather hood with stainless steel bird screen; 90-degree facing-down configuration.

D. Fan Wheel: Replaceable, cast-aluminum blades fastened to cast-aluminum hub; factory set pitch angle.

E. Belt-Driven Drive Assembly: Resiliently mounted to the housing; weatherproof housing of same material as fan housing with the following features:

1. Fan Shaft: Turned, ground, and polished steel drive shaft keyed to wheel hub.

2. Shaft Bearings: Pre-lubricated and sealed, self-aligning, pillow-block-type ball bearings.

3. Pulleys: Cast-iron, adjustable-pitch motor pulley.

4. Motor Mount: On outside of fan cabinet, adjustable base for belt tensioning.

2.2 IN-LINE CENTRIFUGAL FANS

A. Description: In-line, belt-driven centrifugal fans consisting of housing, wheel, outlet guide vanes, fan shaft, bearings, drive assembly, motor and disconnect switch, mounting brackets, and accessories.

B. Housing: Split, spun-aluminum housing, with aluminum straightening vanes; inlet and outlet flanges; and support bracket adaptable to floor, side wall, or ceiling mounting.

C. Direct-Drive Units: Motor encased in housing out of air stream, factory wired to disconnect located on outside of fan housing.

D. Belt-Driven Units: Motor mounted on adjustable base, with adjustable sheaves, enclosure around belts within fan housing, and lubricating tubes from fan bearings extended to outside of fan housing.

E. Fan Wheels: Aluminum, airfoil blades welded to aluminum hub.

F. Accessories: The following accessories are required as indicated:

1. Volume-Control Damper: Manually operated with quadrant lock, located in fan outlet.

2. Companion Flanges: For inlet and outlet duct connections.

3. Fan Guards: Expanded metal in removable frame. Provide belt guards for units not connected to ductwork.

2.3 CENTRIFUGAL ROOF VENTILATORS

A. Product Requirements:

1. Performance Ratings: Conform to AMCA 210 and bear the AMCA Certified Rating Seal.

2. Sound Ratings: AMCA 301, tested to AMCA 300 and bear AMCA Certified Sound Rating Seal.

3. Fabrication: Conform to AMCA 99.

4. UL Compliance: UL listed and labeled, designed, manufactured, and tested in accordance with UL 705; and UL 762 for ventilators handling grease laden vapors.

B. Description: Belt-driven or direct-drive centrifugal fans, as indicated, consisting of housing, wheel, fan shaft, bearings, motor and disconnect switch, drive assembly, curb base, and accessories.

C. Housing: Removable, spun-aluminum, dome top and outlet baffle; square, one-piece, aluminum base with venturi inlet cone.

1. Upblast Units: Provide spun-aluminum discharge baffle to direct discharge air upward, with rain drains.

D. Fan Wheels: Aluminum hub and wheel with backward-inclined blades.

E. Belt-Driven Drive Assembly: Resiliently mounted to the housing, with the following features:

1. Fan Shaft: Turned, ground, and polished steel drive shaft keyed to wheel hub.

2. Shaft Bearings: Permanently lubricated, permanently sealed, self-aligning ball bearings.

3. Pulleys: Cast-iron, adjustable-pitch motor pulley.

4. Fan and motor isolated from exhaust air stream.

F. Accessories: The following items are required as indicated:

1. Variable-Speed Controller: Solid-state control to reduce speed from 100 percent to less than 50 percent.

2. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted inside fan housing, factory wired through an internal aluminum conduit.

3. Bird Screens: Removable 1/2-inch (13-mm) mesh, aluminum or brass wire.

4. Dampers: Counterbalanced, parallel-blade, backdraft dampers mounted in curb base; factory set to close when fan stops.

5. Roof Curbs: Galvanized steel; mitered and welded corners; 2-inch- (50-mm-) thick, rigid, fiber-glass insulation adhered to inside walls; and 2-inch (50-mm) wood nailer. Size as required to suit roof opening and fan base.

a. Configuration: Self-flashing without a cant strip, with mounting flange.

b. Overall Height: 12 inches (300 mm).

G. Tie-Down Points: Four aluminum brackets which secures fan in heavy wind applications.

2.4 ROOF SUPPLY FANS

A. General Description: Base fan performance at standard conditions (density 0.075 Lb/ft3). Maximum continuous operating temperature is 130 Fahrenheit (54.4 Celsius). Each fan shall bear a permanently affixed manufacture's engraved metal nameplate containing the model number and individual serial number.

B. Wheel: Forward curved centrifugal wheel. Constructed of heavy gauge steel. Shall be a double width and double inlet scroll. Statically and dynamically balanced in accordance to AMCA Standard 204-05. The wheel cone and fan inlet will be matched and shall have precise running tolerances for maximum performance and operating efficiency.

C. Motor enclosures: Totally enclosed fan cooled. Motors are permanently lubricated, heavy duty ball bearing type to match with the fan load and pre-wired to the specific voltage and phase. Mounted on vibration isolators, out of the airstream.

D. Shafts and Bearings: Fan shaft shall be ground and polished solid steel with an anti-corrosive coating. Permanently sealed bearings. Bearing shall be selected for a minimum L50 life, in excess of 200,000 hours at maximum cataloged operating speed. Bearings are 100 percent factory tested. Fan Shaft first critical speed is at least 25 percent over maximum operating speed.

E. Hood: Constructed of heavy gauge steel. Removable hood cover. Leak resistant.

F. Housing Supports and Drive Frame: Drive frame assemblies shall be constructed of heavy gauge steel and mounted on vibration isolators. Lifting lugs shall be located on the drive frame to provide easy lifting.

G. Vibration Isolation: Double studded or pedestal mount true isolators. No metal to metal contact. Sized to match the weight of each fan.

H. Drive Assembly: Belts, pulleys, and keys oversized for a minimum of 150 percent of driven horsepower. Belts: Static free and oil resistant. Pulleys: Cast type, keyed, and securely attached to wheel and motor shafts. Motor pulleys are adjustable for final system balancing. Readily accessible for maintenance.

I. Filters: Washable aluminum one-inch filter factory standard, two inch also available.

J. Curb Caps: Includes prepunched mounting holes to ensure correct attachment to roof.

K. Tie-Down Points: Four aluminum brackets which secures fan in heavy wind applications.

2.5 AIR CURTAINS

A. Housing Materials: Heavy-gage, aluminum construction. Anodized Finish: Match finish and color of adjacent architectural metals. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Intake Louvers: Integral part of the housing, mechanically field adjustable and capable of reducing air-outlet velocity by 60 percent with louver in totally closed position.

C. Discharge Nozzle: Integral part of the housing, wedge shaped, containing adjustable air-directional vanes with 40-degree sweep front to back.

D. Fans: **Aluminum, Centrifugal, forward curved, double width, double inlet;** statically and dynamically balanced.

E. Fan Drives: **Direct**.

F. Motor Type: **Two speed**, resiliently mounted, continuous duty, **totally enclosed, fan cooled**, with integral thermal-overload protection.

G. Automatic Door Switch: Remotely installed in door area to activate air curtain when door opens and to deactivate air curtain when door closes.

H. Motor-Control Panel: Complete with motor starter, 115-V ac transformer with primary and secondary fuses, terminal strip, and NEMA 250, Type **1** enclosure.

2.6 MOTORS

A. Refer to Division 15 Section "Motors" for general requirements for factory-installed motors.

B. Motor Construction: NEMA MG 1, general purpose, continuous duty, Design B.

C. Enclosure Type: The following features are required as indicated:

1. Open drip-proof motors where satisfactorily housed or remotely located during operation.

2. Guarded drip-proof motors where exposed to contact by employees or building occupants.

2.7 FACTORY FINISHES

A. Sheet Metal Parts: Prime coat before final assembly.

B. Exterior Surfaces: Baked-enamel finish coat after assembly.

C. Aluminum Parts: No finish required.

2.8 SPECIAL CONSTRUCTION FOR HAZARDOUS AREAS

A. Spark resistant: Construct specified or indicated units in accordance with AMCA 99-0401; Type C. Provide Type B or Type C construction and electrical grounding of fan parts and grounding to building structure where fume or vapor handling systems conforming to NFPA 91 are specified. Do not place bearings in the air stream.

B. Explosion proof: Construct fans to AMCA 99-0401, Type C spark-resistant requirements where explosion-proof electrical components are specified or indicated to conform to NFPA 70 requirements.

C. Protective coating of fans: Prepare and coat fans as follows: Replace bolts required to provide access or adjustment and normally threaded into the coated surface with studs or bolts having heads continuously welded inside. Omit sharp edges, self-tapping screws, and permanent threads protruding into the coated surface. Eliminate hairline cracks and sharp inside corners by continuous welding, brazing, or filling with high melting point solder. Seal impeller hub to the shaft. Construct housing split to use external through bolts. Flange inlet and outlet and consider as fan interior. Peen or grind welds smooth, and grind outside corners to approximately 1/16-inch radius. Sandblast metal surfaces to white metal in accordance with SSPC SP 5/NACE No. 1. Coat interior surfaces of housing in contact with airstream, including inlet, impeller and shaft, flange faces, shaft seal, exterior surfaces of housing and bearing and motor pedestal. Do not coat bearings, coupling, motor, drive, or other auxiliaries. Finish fan in accordance with the manufacturer's standard practice. Statically and dynamically balance the fan in two planes after coating and finishing, and where material has been removed, refinish and rebalance the fan as specified herein.

D. PVC blowers: Housings shall be vacuum formed from unplasticized Type I polyvinyl chloride for complete corrosion protection. Impellers shall be made of injection molded PVDF to resist highly corrosive atmospheres. Dry powder epoxy-coated base and weather cover provide long life in extreme weather. Inlet and discharge diameters sized to receive rigid PVC ducting material directly for easy installation. Sheaves shall be adjustable to save energy and to allow for air volume adjustment. Self-adjusting gravity belt tightener ensures consistent performance because belt is held taut by weight of motor. Motor mount keeps the motor in place should the belt ever fail.

2.9 SOURCE QUALITY CONTROL

A. Testing Requirements: The following factory tests are required as indicated:

1. Sound Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Label fans with the AMCA Seal.

2. Fan Performance Ratings: Establish flow rate, pressure, power, air density, speed of rotation, and efficiency by factory tests and ratings according to AMCA 210, "Laboratory Methods of Testing Fans for Rating."

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions for compliance with requirements of installation tolerances and other conditions affecting performance of the power ventilators. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install power ventilators according to manufacturer's written instructions.

B. Support units using the vibration-control devices indicated. Vibration-control devices are specified in Division 15 Section "Vibration Control."

1. Suspend units from structural steel support frame using threaded steel rods and vibration isolation springs.

2. Ceiling Units: Suspend units from structure using steel wire or metal straps.

C. Install units with clearances for service and maintenance.

D. Label units according to requirements specified in Division 15 Section "Mechanical Identification."

3.3 CONNECTIONS

A. Duct installation and connection requirements are specified in other Division 15 Sections. Drawings indicate the general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors.

B. Electrical: Conform to applicable requirements in Division 16 Sections.

C. Grounding: Ground equipment. Tighten electrical connectors and terminals, including grounding connections, according to manufacturer's published torque-tightening values. Where manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.4 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Provide services of a factory-authorized service representative to supervise the field assembly of components and installation of fans, including duct and electrical connections, and to report results in writing.

3.5 ADJUSTING

A. Adjust damper linkages for proper damper operation.

B. Adjust belt tension.

C. Lubricate bearings.

3.6 CLEANING

A. After completing installation, inspect exposed finish. Remove burrs, dirt, and construction debris, and repair damaged finishes including chips, scratches, and abrasions.

B. Clean fan interiors to remove foreign material and construction debris. Vacuum clean fan wheel and cabinet.

3.7 COMMISSIONING

A. Final Checks before Startup: Perform the following operations and checks before startup:

1. Verify that shipping, blocking, and bracing are removed.

2. Verify that unit is secure on mountings and supporting devices and that connections for piping, ducts, and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnects.

3. Perform cleaning and adjusting specified in this Section.

4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.

5. Lubricate bearings, pulleys, belts, and other moving parts with factory-recommended lubricants.

6. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in the fully open position.

7. Disable automatic temperature-control operators.

B. Starting procedures for fans are as follows:

1. Energize motor; verify proper operation of motor, drive system, and fan wheel. Adjust fan to indicated RPM.

2. Measure and record motor voltage and amperage.

C. Shut unit down and reconnect automatic temperature-control operators.

D. Refer to Division 15 Section "Testing, Adjusting, and Balancing" for procedures for air-handling-system testing, adjusting, and balancing.

E. Replace fan and motor pulleys as required to achieve design conditions.

3.8 DEMONSTRATION

A. Train Owner's maintenance personnel on procedures and schedules related to startup and shutdown, troubleshooting, servicing, and preventive maintenance.

B. Review data in the operation and maintenance manuals. Refer to Division 1 Section "Contract Closeout."

C. Schedule training with Owner, through Architect, with at least 7 days' advance notice.

D. Demonstrate operation of power ventilators. Conduct walking tour of the Project. Briefly identify location and describe function, operation, and maintenance of each power ventilator.

END OF SECTION

SECTION 15855

DIFFUSERS, REGISTERS, AND GRILLES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes ceiling and wall-mounted diffusers, registers, and grilles.

B. Related Sections include the following:

1. Division 10 Section "Louvers and Vents" for fixed and adjustable louvers and wall vents, whether or not they are connected to ducts.

2. Division 15 Section "Duct Accessories" for fire and smoke dampers and volume-control dampers not integral to diffusers, registers, and grilles.

3. Division 15 Section "Testing, Adjusting, and Balancing" for balancing diffusers, registers, and grilles.

1.3 DEFINITIONS

A. Diffuser: Linear slot, circular, square, or rectangular air distribution outlet, generally located in the ceiling and comprised of deflecting members discharging supply air in various directions and planes and arranged to promote mixing of primary air with secondary room air.

B. Grille: A louvered or perforated covering for an opening in an air passage, which can be located in a sidewall, ceiling, or floor.

C. Register: A combination grille and damper assembly over an air opening.

1.4 SUBMITTALS

A. Product Data: For each model indicated, include the following:

1. Data Sheet: For each type of air outlet and inlet, and accessory furnished; indicate construction, finish, and mounting details.

2. Performance Data: Include throw and drop, static-pressure drop, and noise ratings for each type of air outlet and inlet.

B. Coordination Drawings: Reflected ceiling plans and wall elevations drawn to scale to show locations and coordination of diffusers, registers, and grilles with other items installed in ceilings and walls.

1.5 QUALITY ASSURANCE

A. Product Options: Drawings and schedules indicate specific requirements of diffusers, registers, and grilles and are based on the specific requirements of the systems indicated.

Other manufacturers' products with equal performance characteristics may be considered. Refer to Division 1 Section "Substitutions."

B. NFPA Compliance: Install diffusers, registers, and grilles according to NFPA 90A, "Standard for the Installation of Air-Conditioning and Ventilating Systems."

PART 2 PRODUCTS

2.1 MANUFACTURED UNITS

A. Diffusers, registers, and grilles are scheduled at the end of this Section.

B. Diffusers, registers, and grilles sizes are indicated on Drawings.

2.2 SOURCE QUALITY CONTROL

A. Testing: Test performance according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine areas where diffusers, registers, and grilles are to be installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install diffusers, registers, and grilles level and plumb, according to manufacturer's written instructions, Coordination Drawings, original design, and referenced standards.

B. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated, as much as practicable. For units installed in lay-in ceiling panels, locate units in the center of the panel. Where architectural features or other items conflict with installation, notify Architect for a determination of final location.

C. Install diffusers, registers, and grilles with airtight connection to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

3.3 ADJUSTING

A. After installation, adjust diffusers, registers, and grilles to air patterns indicated, or as directed, before starting air balancing.

3.4 CLEANING

A. After installation of diffusers, registers, and grilles, inspect exposed finish. Clean exposed surfaces to re-move burrs, dirt, and smudges. Replace diffusers, registers, and grilles that have damaged finishes.

3.5 DIFFUSER SCHEDULE

A. Ceiling Diffusers:

1. Material: Aluminum.

2. Finish: Baked enamel, color to be selected by Architect.

3. Duct Connection: Round.

4. Duct Connection Size: See mech. drawings.

5. Face Size: See mech. drawings.

6. Maximum Noise-Criterion Rating: ASHRAE Standard.

7. Face Style: Square.

8. Mounting: Flush.

9. Pattern: 4-way.

10. Dampers: Opposed blade.

11. Accessories: Include the following:

a. Equalizer deflectors.

b. Smudge ring.

c. Plaster ring.

d. Extractor.

e. Blank-off panel.

f. Operating keys.

3.6 CEILING SLOT DIFFUSERS

A. Type: Continuous one inch wide slot, one slot wide, with adjustable vanes for left, right, or vertical discharge; and volume control.

B. Fabrication: Aluminum extrusions with factory baked enamel finish, color to be selected by architect.

C. Frame: One inch margin with concealed mounting and gasket, end cap.

D. Plenum: Integral, galvanized steel, insulated.

3.7 REGISTER SCHEDULE

A. Supply Registers:

1. Material: Aluminum.

2. Finish: Baked enamel, color to be selected by Architect.

3. Face Blade Arrangement: Adjustable horizontal.

4. Rear Blade Arrangement: Adjustable vertical.

5. Frame: 1-1/4 inches (32 mm) wide.

6. Mounting: Concealed.

7. Damper Type: Adjustable opposed-blade assembly.

8. Accessories: Include plaster frame.

3.8 GRILLE SCHEDULE

A. Return and Exhaust Grilles:

1. Material: Aluminum.

2. Finish: Baked enamel, color to be selected by Architect.

3. Face Blade Arrangement: Fixed horizontal.

4. Rear Blade Arrangement: Fixed vertical.

5. Frame: 1-1/4 inches (32 mm) wide.

6. Mounting: Concealed.

7. Accessories: Include plaster frame.

END OF SECTION

SECTION 15900

HVAC INSTRUMENTATION AND CONTROLS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes control equipment for HVAC systems and components, including control components for terminal cooling units not supplied with factory-wired controls.

B. Related Sections include the following:

1. Division 13 Section "Fire Alarm" for fire and smoke detectors mounted in HVAC systems and equipment.

2. Division 13 Section "Lighting Controls" for building lighting control system.

3. Division 16 Section "Electrical Power Monitoring and Control."

1.3 DEFINITIONS

A. DDC: Direct-digital controls.

B. LAN: Local area network.

C. MS/TP: Master-slave/token-passing.

D. PICS: Protocol Implementation Conformance Statement.

1.4 SYSTEM DESCRIPTION

A. Control system consists of sensors, indicators, actuators, final control elements, interface equipment, other apparatus

B. Control system includes the following:

1. Fire alarm system specified in Division 13 Section "Fire Alarm."

2. Building lighting control system specified in Division 13 Section "Lighting Controls."

1.5 SUBMITTALS

A. Product Data: Include manufacturer's technical literature for each control device. Indicate dimensions, capacities, performance characteristics, electrical characteristics, finishes for materials, and installation and startup instructions for each type of product indicated.

1. Each control device labeled with setting or adjustable range of control.

B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Schematic flow diagrams showing fans, pumps, coils, dampers, valves, and control devices.

2. Wiring Diagrams: Power, signal, and control wiring. Differentiate between manufacturer-installed and field-installed wiring.

3. Details of control panel faces, including controls, instruments, and labeling.

4. Written description of sequence of operation.

5. Trunk cable schematic showing programmable control unit locations and trunk data conductors.

6. Listing of connected data points, including connected control unit and input device.

7. System graphics indicating monitored systems, data (connected and calculated) point addresses, and operator notations.

8. System configuration showing peripheral devices, batteries, power supplies, diagrams, modems, and interconnections.

C. ASHRAE BACnet Statement: PICS for each DDC system component (panel, zone controller, field devices, and operator workstation) proposed.

D. Samples: For each color required, of each type of thermostat cover.

E. Software and Firmware Operational Documentation: Include the following:

1. Software operating and upgrade manuals.

2. Program Software Backup: On a magnetic media or compact disc, complete with data files.

3. Device address list.

4. Printout of software application and graphic screens.

5. Software license required by and installed for DDC workstations and control systems.

F. Software Upgrade Kit: For Owner to use in modifying software to suit future power system revisions or monitoring and control revisions.

G. Field Test Reports: Indicate and interpret test results for compliance with performance requirements.

H. Maintenance Data: For systems to include in maintenance manuals specified in Division 1. Include the following:

1. Maintenance instructions and lists of spare parts for each type of control device and compressed-air station.

2. Interconnection wiring diagrams with identified and numbered system components and devices.

3. Keyboard illustrations and step-by-step procedures indexed for each operator function.

4. Inspection period, cleaning methods, cleaning materials recommended, and calibration tolerances.

5. Calibration records and list of set points.

I. Qualification Data: For firms and persons specified in "Quality Assurance" Article.

J. Project Record Documents: Record actual locations of control components, including control units, thermostats, and sensors. Revise Shop Drawings to reflect actual installation and operating sequences.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who is an authorized representative of the automatic control system manufacturer for both installation and maintenance of units required for this Project.

B. Manufacturer Qualifications: A firm experienced in manufacturing automatic temperature-control systems similar to those indicated for this Project and with a record of successful in service performance.

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

D. Comply with NFPA 90A, "Installation of Air Conditioning and Ventilation Systems."

E. Comply with ASHRAE 135 for DDC system control components.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Factory-Mounted Components: Where control devices specified in this Section are indicated to be factory mounted on equipment, arrange for shipping of control devices to unit manufacturer.

1.8 COORDINATION

A. Coordinate location of thermostats and other exposed control sensors with plans and room details before installation.

B. Coordinate equipment with Division 13 Section "Fire Alarm" to achieve compatibility with equipment that interfaces with that system.

C. Coordinate supply of conditioned electrical circuits for control units and operator workstation.

D. Coordinate equipment with Division 16 Section "Panel boards" to achieve compatibility with starter coils and annunciation devices.

E. Coordinate equipment with Division 16 Section "Motor-Control Centers" to achieve compatibility with motor starters and annunciation devices.

F. Coordinate equipment with Division 13 Section "Lighting Controls" to achieve compatibility with equipment that interfaces with that system.

G. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 3 Section "Cast-in-Place Concrete."

1.9 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

B. Replacement Materials: One replacement diaphragm or relay mechanism for each unique valve motor, controller, thermostat & positioning relay.

C. Maintenance Materials: One thermostat adjusting key.

PART 2 PRODUCTS

2.1 DDC EQUIPMENT

A. Operator Station: PC-based Microcomputer station with printer.

B. Workstation: IBM-compatible microcomputer with minimum configuration as follows:

1. Motherboard: With 8 integrated USB 2.0 ports, integrated Intel Pro 10/100 (Ethernet), integrated audio, bios, and hardware monitoring

2. Processor: Intel Pentium Dual Core, 3.2 GHz or higher.

3. Random-Access Memory: 512 MB or higher.

4. Graphics: Video adapter, minimum 1600 x 1200 pixels, 64-MB video memory, with TV out.

5. Monitor: 17 inches LCD flat panel color monitor, high resolution 1024 x 768 minimum.

6. Keyboard: QWERTY, 105 keys in ergonomic shape.

7. USB Ports.

8. Hard-Disk Drive: 80 GB minimum.

9. CD-RW Drive.

10. Mouse: Three button.

11. Modem: Autodial, internal, minimum 56 kBaud.

12. Tape Backup: Internal, 56 kBps or higher.

13. Operating System: Microsoft Windows 10 or later.

14. BACnet Conformance: Workstation shall support BACnet device and have minimum capabilities defined in PICS for the following areas:

    a. Network.

    b. Functional groups.

    c. Standard application services supported.

    d. Standard objects supported.

C. Printer: Color, ink-jet type as follows:

1. Print Head: 1440 x 1440 dpi photo quality color resolution.

2. Internal Memory Buffer: 32 kB.

3. Paper Handling: Minimum of 100 sheets.

4. Print Speed: Minimum of 8 ppm in black and 4 ppm in color.

D. Application Software: Include the following:

1. Input/output capability from operator station.

2. Operator system access levels via software password.

3. Database creation and support.

4. Dynamic color graphic displays.

5. Alarm processing.

6. Event processing.

7. Automatic restart of field equipment on restoration of power.

8. Data collection.

9. Graphic development on workstation.

10. Maintenance management.

E. Control Units: Modular, comprising processor board with programmable, nonvolatile, random-access memory; local operator access and display panel; integral interface equipment; and backup power source.

1. Units monitor or control each input/output point; process information; execute commands from other control units, devices, and operator stations; and download from or upload to operator station.

2. Stand-alone mode control functions operate regardless of network status. Functions include the following:

    a. Global communications.

    b. Discrete/digital, analog, and pulse input/output.

c. Monitoring, controlling, or addressing data points.

d. Testing and developing control algorithms without disrupting field hardware and controlled environment.

e. Local operator interface provides for download from or upload to mobile operator station.

f. BACnet Conformance: Reside on BACnet LAN in Ethernet IEEE 802.3, Class 3, minimum, with routers between LAN and other panels, with at least one communication port, and have minimum capabilities defined in PICS for the following areas:

1) Network.

2) Functional groups.

3) Standard application services supported.

4) Standard objects supported.

F. Local Control Units: Modular, comprising processor board with electronically programmable, nonvolatile, read-only memory; and backup power source.

1. Units monitor or control each input/output point; process information; and download from or upload to operator station.

2. Stand-alone mode control functions operate regardless of network status. Functions include the following:

a. Global communications.

b. Discrete/digital, analog, and pulse input/output.

c. Monitoring, controlling, or addressing data points.

d. Local operator interface provides for download from or upload to mobile operator station.

e. BACnet Conformance: Reside on BACnet LAN using MS/TP, Class 2, minimum, with at least one communication port, and have minimum capabilities defined in PICS for the following areas:

1) Network.

2) Functional groups.

3) Standard application services supported.

4) Standard objects supported.

G. LANs: Capacity for a minimum of 10 workstations connected to multiuser, multitasking environment with concurrent capability to access DDC network or control units.

1. Media: Ethernet, peer-to-peer CMA/CD, operating at 10 MBps.

2. Media: ARCNET (attached resources computer network), peer to peer, operating at 2.5 MBps.

3. Media: MS/TP, EIA 485, operating at 76.8 kBps.

H. Software: Update to latest version of software at Project completion. Include and implement the following capabilities from the control units:

1. Units of Measure: Inch-pound and SI (metric).

2. Load Control Programs: Demand limiting, duty cycling, automatic time scheduling, start/stop time optimization, night setback/setup, DDC with fine tuning, and trend logging.

3. HVAC Control Programs: Optimal run time, supply-air reset, and enthalpy switchover.

4. Programming Application Features: Include trend point, alarm messages, weekly scheduling, and interlocking.

2.2 CONTROL PANELS

A. Central (Master) Control Panels: Fully enclosed, steel-rack-type cabinet with locking doors or locking removable backs. Match finish of panels and provide multicolor graphic displays, schematically showing system being controlled.

B. Local Control Panels: Unitized cabinet with suitable brackets for wall or floor mounting, located adjacent to each system under automatic control. Provide common keying for all panels.

1. Fabricate panels of 0.06-inch- (1.5-mm-) thick, furniture-quality steel, or extruded-aluminum alloy, totally enclosed, with hinged doors and keyed lock and with manufacturer's standard shop-painted finish.

2. Panel-Mounted Equipment: Temperature and humidity controllers, relays, and automatic switches; except safety devices. Mount devices with adjustments accessible through front of panel.

3. Door-Mounted Equipment: Flush-mount (on hinged door) manual switches, including damper-positioning switches, changeover switches, thermometers, and gages.

4. Graphics: Color-coded graphic, laminated-plastic displays on doors, schematically showing system being controlled, with protective, clear plastic sheet bonded to entire door.

C. Alarm Panels: Indicating light for each alarm point, single horn, acknowledge switch, and test switch, mounted in hinged-cover enclosure.

1. Alarm Condition: Indicating light flashes and horn sounds.

2. Acknowledge Switch: Horn is silent and indicating light is steady.

3. Second Alarm: Horn sounds and indicating light is steady.

4. Alarm Condition Cleared: System is reset and indicating light is extinguished.

5. Contacts in alarm panel allow remote monitoring by independent alarm company.

2.3 ANALOG CONTROLLERS

A. Step Controllers: Six- or 10-stage type, with heavy-duty switching rated to handle loads and operated by electric motor.

B. Electric, Outdoor-Reset Controllers: Remote-bulb or bimetal rod-and-tube type, proportioning action with adjustable throttling range, adjustable set point, scale range minus 10 to plus 70 deg. F (minus 23 to plus 21 deg. C), and single- or double-pole contacts.

C. Electronic Controllers: Wheatstone-bridge-amplifier type, in steel enclosure with provision for remote-resistance readjustment. Identify adjustments on controllers, including proportional band and authority.

1. Single controllers can be integral with control motor if provided with accessible control readjustment potentiometer.

D. Fan-Speed Controllers: Solid-state model providing field-adjustable proportional control of motor speed from maximum to minimum of 55 percent and on-off action below minimum fan speed. Controller shall briefly apply full voltage, when motor is started, to rapidly bring motor up to minimum speed. Equip with filtered circuit to eliminate radio interference.

E. Receiver Controllers: Single or multiple-input models with control-point adjustment, direct or reverse acting with mechanical set-point adjustment with locking device, proportional band adjustment, authority adjustment, and proportional control mode.

1. Remote-control-point adjustment shall be plus or minus 20 percent of sensor span, input signal of 3 to 13 psig (21 to 90 kPa).

2. Proportional band shall extend from 2 to 20 percent for 5 psig (34 kPa).

3. Authority shall be 20 to 200 percent.

4. Air-supply pressure of 18 psig (124 kPa), input signal of 3 to 15 psig (21 to 103 kPa), and output signal 0 to supply pressure.

5. Gages: 3-1/2 inches (89 mm) in diameter, 2.5 percent wide-scale accuracy, and range to match transmitter input or output pressure.

2.4 TIME CLOCKS

A. Solid-state, programmable time control with 4 separate programs; 24-hour battery carryover; individual on-off-auto switches for each program; 365-day calendar with 20 programmable holidays; choice of fail-safe operation for each program; and system fault alarm.

2.5 SENSORS

A. Electronic Sensors: Vibration and corrosion resistant; for wall, immersion, or duct mounting as required.

1. Thermistor temperature sensors as follows:

a. Accuracy: Plus, or minus 0.5 deg. F (0.3 deg. C) at calibration point.

b. Wire: Twisted, shielded-pair cable.

c. Insertion Elements in Ducts: Single point, 8 inches (20 cm) long; use where not affected by temperature stratification or where ducts are smaller than 9 sq. ft. (1 sq. m).

d. Averaging Elements in Ducts: 36 inches (91 cm) long, flexible; use where prone to temperature stratification or where ducts are larger than 9 sq. ft. (1 sq. m); length as required.

e. Insertion Elements for Liquids: Brass socket with minimum insertion length of 2-1/2 inches (64 mm).

f. Room Sensors: Match room thermostats, locking cover.

g. Outside-Air Sensors: Watertight inlet fitting, shielded from direct sunlight.

h. Room Security Sensors: Stainless-steel cover plate with insulated back and security screws.

2. Resistance Temperature Detectors: Platinum.

a. Accuracy: Plus, or minus 0.2 percent at calibration point.

b. Wire: Twisted, shielded-pair cable.

c. Insertion Elements in Ducts: Single point, 8 inches (20 cm) long; use where not affected by temperature stratification or where ducts are smaller than 9 sq. ft. (1 sq. m).

d. Averaging Elements in Ducts: 36 inches (91 cm) long, flexible; use where prone to temperature stratification or where ducts are larger than 9 sq. ft. (1 sq. m); length as required.

e. Insertion Elements for Liquids: Brass socket with minimum insertion length of 2-1/2 inches (64 mm).

f. Room Sensors: Match room thermostats, locking cover.

g. Outside-Air Sensors: Watertight inlet fitting, shielded from direct sunlight.

h. Room Security Sensors: Stainless-steel cover plate with insulated back and security screws.

3. Humidity Sensors: Bulk polymer sensor element.

a. Accuracy: 5 percent full range with linear output.

b. Room Sensors: With locking cover matching room thermostats, span of 25 to 90 percent relative humidity.

c. Duct and Outside-Air Sensors: With element guard and mounting plate, range of 0 to 100 percent relative humidity.

4. Static-Pressure Transmitter: Nondirectional sensor with suitable range for expected input, and temperature compensated.

a. Accuracy: 2 percent of full scale with repeatability of 0.5 percent.

b. Output: 4 to 20 mA.

c. Building Static-Pressure Range: 0 to 0.25 inch wg (0 to 62 Pa).

d. Duct Static-Pressure Range: 0 to 5 inches wg (0 to 1243 Pa).

5. Pressure Transmitters: Direct acting for gas or liquid service; range suitable for system; proportional output 4 to 20 mA.

B. Equipment operation sensors as follows:

1. Status Inputs for Fans: Differential-pressure switch with adjustable range of 0 to 5 inches wg (0 to 1243 Pa).

2. Status Inputs for Pumps: Differential-pressure switch piped across pump with adjustable pressure-differential range of 8 to 60 psig (55 to 414 kPa).

3. Status Inputs for Electric Motors: Current-sensing relay with current transformers, adjustable and set to 175 percent of rated motor current.

C. Electronic Valve/Damper Position Indication: Visual scale indicating percent of travel and 2- to 10-V dc, feedback signal.

D. Carbon-Monoxide Detectors: Single or multichannel, dual-level detectors, using solid-state sensors with 3-year minimum life, maximum 15-minute sensor replacement, suitable over a temperature range of 23 to 130 deg F (minus 5 to plus 55 deg C), calibrated for 50 and 100 ppm, with maximum 120-second response time to 100-ppm carbon monoxide.

E. Carbon-Dioxide Sensor and Transmitter: Single detectors, using solid-state infrared sensors, suitable over a temperature range of 23 to 130 deg F (minus 5 to plus 55 deg C), calibrated for 0 to 2 percent, with continuous or averaged reading, 4 to 20 mA output, and wall mounted.

F. Occupancy Sensor: Passive infrared, with time delay, daylight sensor lockout, sensitivity control, and 180-degree field of view with vertical sensing adjustment, for flush mounting.

2.6 THERMOSTATS

A. Combination Thermostat and Fan Switches: Line-voltage thermostat with two-, three-, or four-position, push-button or lever-operated fan switch.

1. Label switches "FAN ON-OFF," "FAN HIGH-LOW-OFF," "FAN HIGH-MED-LOW-OFF." Provide unit for mounting on two-gang switch box.

B. Electric solid-state, microcomputer-based room thermostat with remote sensor.

1. Preferential rate control to minimize overshoot and deviation from set point.

2. Set up for four separate temperatures per day.

3. Instant override of set point for continuous or timed period from 1 hour to 31 days.

4. Short-cycle protection.

5. Programming based on weekdays, Saturdays and Sundays.

6. Selection features include deg. F or deg. C display, 12- or 24-hour clock, keyboard disable, remote sensor, fan on-auto.

7. Battery replacement without program loss.

8. Thermostat display features include the following:

    a. Time of day.

    b. Actual room temperature.

    c. Programmed temperature.

    d. Programmed time.

    e. Duration of timed override.

    f. Day of week.

    g. System mode indications include "heating," "off," "fan auto," and "fan on."

C. Low-Voltage, On-Off Thermostats: NEMA DC 3, 24-V, bimetal-operated, mercury-switch type, with adjustable or fixed anticipation heater.

D. Line-Voltage, On-Off Thermostats: Bimetal-actuated, open contact or bellows-actuated, enclosed, snap-switch type, or equivalent solid-state type, with heat anticipator, integral manual on-off-auto selector switch.

1. Equip thermostats, which control electric heating loads directly, with off position on dial wired to break ungrounded conductors.

2. Dead Band: Maximum 2 deg. F (1 deg. C).

E. Remote-Bulb Thermostats: On-off or modulating type, liquid filled to compensate for changes in ambient temperature, with copper capillary and bulb, unless otherwise indicated.

1. Bulbs in water lines with separate wells of same material as bulb.

2. Bulbs in air ducts with flanges and shields.

3. Averaging Elements: Copper tubing with either single- or multiple-unit elements, extended to cover full width of duct or unit, adequately supported.

4. Scale settings and differential settings are clearly visible and adjustable from front of instrument.

5. On-Off Thermostat: With precision snap switches, with electrical ratings required by application.

6. Modulating Thermostats: Construct so complete potentiometer coil and wiper assembly is removable for inspection or replacement without disturbing calibration of instrument.

F. Room Thermostat Cover Construction: Manufacturer's standard locking covers.

1. Set-Point Adjustment: Concealed.

2. Set-Point Indication: Exposed.

3. Thermometer: Concealed.

4. Color: Manufacturer's standard.

5. Orientation: Horizontal.

G. Room thermostat accessories include the following:

1. Insulating Bases: For thermostats located on exterior walls.

2. Thermostat Guards: Locking; heavy-duty, transparent plastic; mounted on separate base.

3. Adjusting Key: As required for calibration and cover screws.

4. Aspirating Boxes: For flush-mounted aspirating thermostats.

5. Set-Point Adjustment: 1/2-inch- (13-mm-) diameter, adjustment knob.

H. Immersion Thermostat: Remote-bulb or bimetal rod-and-tube type, proportioning action with adjustable throttling range and adjustable set point.

1. Airstream Thermostats: Two-pipe, fully proportional, single-temperature type, with adjustable set point in middle of range and adjustable throttling range, plug-in test fitting or permanent pressure gage, remote bulb, bimetal rod and tube, or averaging element.

I. Electric Low-Limit Duct Thermostat: Snap-acting, single-pole, single-throw, manual- or automatic-reset switch that trips if temperature sensed across any 12 inches (300 mm) of bulb length is equal to or below set point.

1. Bulb Length: Minimum 20 feet (6 m).

2. Quantity: One thermostat for every 20-sq. ft. (2 sq. m) of coil surface.

J. Electric High-Limit Duct Thermostat: Snap-acting, single-pole, single-throw, manual- or automatic-reset switch that trips if temperature sensed across any 12 inches (300 mm) of bulb length is equal to or above set point.

1. Bulb Length: Minimum 20 feet (6 m).

2. Quantity: One thermostat for every 20-sq. ft. (2 sq. m) of coil surface.

2.7 HUMIDISTATS

A. Room Humidistats: Wall-mounted, proportioning type with adjustable throttling range, 55 to 95 percent operating range, cover matching room thermostat cover.

B. Duct-Mounted Humidistats: Electric insertion, 2-position type with adjustable 2 percent throttling range, 20 to 80 percent operating range, single- or double-pole contacts.

2.8 ACTUATORS

A. Electric Motors: Size to operate with sufficient reserve power to provide smooth modulating action or two-position action.

1. Permanent Split-Capacitor or Shaded-Pole Type: Gear trains completely oil immersed and sealed. Equip spring-return motors with integral spiral-spring mechanism in housings designed for easy removal for service or adjustment of limit switches, auxiliary switches, or feedback potentiometer.

2. Non-Spring-Return Motors for Valves Larger Than NPS 2-1/2 (DN 65): Size for running torque of 150 in. x lbf (16.9 N x m) and breakaway torque of 300 in. x lbf (33.9 N x m).

3. Spring-Return Motors for Valves Larger Than NPS 2-1/2 (DN 65): Size for running and breakaway torque of 150 in. x lbf (16.9 N x m).

4. Non-Spring-Return Motors for Dampers Larger Than 25 Sq. Ft. (2.3 sq. m): Size for running torque of 150 in. x lbf (16.9 N x m) and breakaway torque of 300 in. x lbf (33.9 N x m).

5. Spring-Return Motors for Dampers Larger Than 25 Sq. Ft. (2.3 sq. m): Size for running and breakaway torque of 150 in. x lbf (16.9 N x m).

2.9 CONTROL VALVES

A. Control Valves: Factory fabricated, of type, body material, and pressure class based on maximum pressure and temperature rating of piping system, unless otherwise indicated.

B. Globe Valves NPS 2 (DN 50) and Smaller: Bronze body, bronze trim, rising stem, renewable composition disc, and screwed ends with back seating capacity re-packable under pressure.

C. Globe Valves NPS 2-1/2 (DN 65) and Larger: Iron body, bronze trim, rising stem, plug-type disc, flanged ends, and renewable seat and disc.

D. Butterfly valves below can also be rated up to 250 deg. F (121 deg. C).

E. Butterfly Valves: 200-psig (1380-kPa), 150-psig (1035-kPa) maximum pressure differential, ASTM A 126 cast-iron or ASTM A 536 ductile-iron body and bonnet, extended neck, stainless-steel stem, field-replaceable EPDM or Buna N sleeve and stem seals.

1. Body Style: Lug or Grooved.

2. Disc Type: Nickel-plated ductile iron.

3. Sizing: 1-psig (7-kPa) maximum pressure drop at design flow rate.

2.10 DAMPERS

A. Dampers: AMCA-rated, opposed-blade design; 0.1084-inch (2.8-mm) minimum, galvanized-steel frames with holes for duct mounting; damper blades shall not be less than 0.0635-inch (1.6-mm) galvanized steel with maximum blade width of 8 inches (203 mm).

1. Blades shall be secured to 1/2-inch- (13-mm-) diameter, zinc-plated axles using zinc-plated hardware, with nylon blade bearings, blade-linkage hardware of zinc-plated steel and brass, ends sealed against spring-stainless-steel blade bearings, and thrust bearings at each end of every blade.

2. Operating Temperature Range: From minus 40 to plus 200 deg F (minus 40 to plus 93 deg C).

3. For standard applications, include optional closed-cell neoprene edging.

4. For low-leakage applications, use opposed-blade design with inflatable seal blade edging, or replaceable rubber seals, rated for leakage at less than 10 cfm per sq. ft. (51 L/s per sq. m) of damper area, at differential pressure of 4 inches wg (995 Pa) when damper is being held by torque of 50 in. x lbf (5.6 N x m); when tested according to AMCA 500D.

2.11 CONTROL CABLE

A. Electronic and Fiber-Optic Cable for Control Wiring: As specified in Division 16 Section "Control/Signal Transmission Media."

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify that conditioned power supply is available to control units and operator workstation.

B. Verify that duct, pipe, and equipment-mounted devices and wiring are installed before proceeding with installation.

3.2 INSTALLATION

A. Install equipment level and plumb.

B. Install software in control units and operator workstation. Implement all features of programs to specified requirements and as appropriate to sequence of operation.

C. Connect and configure equipment and software to achieve sequence of operation specified.

D. Verify location of thermostats, humidistats, and other exposed control sensors with plans and room details before installation. Locate all 60 inches (1524 mm) above the floor.

1. Install averaging elements in ducts and plenums in crossing or zigzag pattern.

E. Install guards on thermostats in the following locations:

1. Entrances.
2. Public areas.
3. Where indicated.

F. Install labels and nameplates to identify control components according to Division 15 Section "Basic Mechanical Materials and Methods."

G. Install electronic and fiber-optic cables according to Division 16 Section "Control/Signal Transmission Media."

3.3 ELECTRICAL WIRING AND CONNECTION INSTALLATION

A. Install raceways, boxes, and cabinets according to Division 16 Section "Raceways and Boxes."

B. Install building wire and cable according to Division 16 Section "Conductors and Cables."

C. Install signal and communication cable according to Division 16 Section "Control/Signal Transmission Media."

1. Conceal cable, except in mechanical rooms and areas where other conduit and piping are exposed.

2. Install exposed cable in raceway.

3. Install concealed cable in raceway.

4. Bundle and harness multi-conductor instrument cable in place of single cables where several cables follow a common path.

5. Fasten flexible conductors, bridging cabinets and doors, along hinge side; protect against abrasion. Tie and support conductors.

6. Number-code or color-code conductors for future identification and service of control system, except local individual room control cables.

D. Connect manual-reset limit controls independent of manual-control switch positions. Automatic duct heater resets may be connected in interlock circuit of power controllers.

E. Connect hand-off-auto selector switches to override automatic interlock controls when switch is in hand position.

3.4 CONNECTIONS

A. Piping installation requirements are specified in other Division 15 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

1. Install piping adjacent to machine to allow service and maintenance.

B. Ground equipment.

1. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.5 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including piping and electrical connections. Report results in writing.

1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.

2. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation. Remove malfunctioning units, replace with new units, and retest.

3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment, and retest.

4. Calibration test electronic controllers by disconnecting input sensors and stimulating operation with compatible signal generator.

B. Engage a factory-authorized service representative to perform startup service.

C. Replace damaged or malfunctioning controls and equipment.

1. Start, test, and adjust control systems.

2. Demonstrate compliance with requirements, including calibration and testing, and control sequences.

3. Adjust, calibrate, and fine tune circuits and equipment to achieve sequence of operation specified.

D. Verify DDC as follows:

1. Verify software including automatic restart, control sequences, scheduling, reset controls, and occupied/unoccupied cycles.

2. Verify operation of operator workstation.

3. Verify local control units including self-diagnostics.

3.6 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain control systems and components.

1. Train Owner's maintenance personnel on procedures and schedules for starting and stopping, troubleshooting, servicing, and maintaining equipment and schedules.

2. Provide operator training on data display, alarm and status descriptors, requesting data, executing commands, calibrating and adjusting devices, resetting default values, and requesting logs. Include a minimum of 40 hours' dedicated instructor time on-site.

3. Review data in maintenance manuals. Refer to Division 1 Section "Contract Closeout."

4. Review data in maintenance manuals. Refer to Division 1 Section "Operation and Maintenance Data."

5. Schedule training with Owner, through Architect, with at least seven days' advance notice.

3.7 ON-SITE ASSISTANCE

A. Occupancy Adjustments: Within one year of date of Substantial Completion, provide up to three Project site visits, when requested by Owner, to adjust and calibrate components and to assist Owner's personnel in making program changes and in adjusting sensors and controls to suit actual conditions.

END OF SECTION

SECTION 15990

TESTING, ADJUSTING, AND BALANCING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes testing, adjusting, and balancing HVAC systems to produce design objectives, including the following:

1. Balancing airflow within distribution systems, including submains, branches, and terminals, to indicated quantities according to specified tolerances.

2. Adjusting total HVAC systems to provide indicated quantities.

3. Measuring electrical performance of HVAC equipment.

4. Setting quantitative performance of HVAC equipment.

5. Verifying that automatic control devices are functioning properly.

6. Measuring sound and vibration.

7. Reporting results of the activities and procedures specified in this Section.

B. Related Sections include the following:

1. Testing and adjusting requirements unique to particular systems and equipment are included in the Sections that specify those systems and equipment.

2. Field quality-control testing to verify that workmanship quality for system and equipment installation is specified in system and equipment Sections.

1.3 DEFINITIONS

A. Adjust: To regulate flow rate and air patterns at the terminal equipment, such as to reduce fan speed or adjust a damper.

B. Balance: To proportion flows within the distribution system, including sub mains, branches, and terminals, according to design quantities.

C. Draft: A current of air, when referring to localized effect caused by one or more factors of high air velocity, low ambient temperature, or direction of airflow, whereby more heat is withdrawn from a person's skin than is normally dissipated.

D. Procedure: An approach to and execution of a sequence of work operations to yield repeatable results.

E. Report Forms: Test data sheets for recording test data in logical order.

F. System Effect: A phenomenon that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.

G. System Effect Factors: Allowances used to calculate a reduction of the performance ratings of a fan when installed under conditions different from those presented when the fan was performance tested.

H. Terminal: A point where the controlled medium, such as fluid or energy, enters or leaves the distribution system.

I. Test: A procedure to determine quantitative performance of a system or equipment.

J. Testing, Adjusting, and Balancing Agent: The entity responsible for performing and reporting the testing, adjusting, and balancing procedures.

K. AABC: Associated Air Balance Council.

L. AMCA: Air Movement and Control Association.

M. NEBB: National Environmental Balancing Bureau.

N. SMACNA: Sheet Metal and Air Conditioning Contractors' National Association.

1.4 SUBMITTALS

A. Quality Assurance Submittals: Within 30 days from the Contractor's Notice to Proceed, submit 2 copies of evidence that the testing, adjusting, and balancing Agent and this Project's testing, adjusting, and balancing team members meet the qualifications specified in the "Quality Assurance" Article below.

B. Contract Documents Examination Report: Within 45 days from the Contractor's Notice to Proceed, submit 2 copies of the Contract Documents review report as specified in Part 3 of this Section.

C. Strategies and Procedures Plan: Within 60 days from the Contractor's Notice to Proceed, submit 2 copies of the testing, adjusting, and balancing strategies and step-by-step procedures as specified in Part 3 "Preparation" Article below. Include a complete set of report forms intended for use on this Project.

D. Certified Testing, Adjusting, and Balancing Reports: Submit 2 copies of reports prepared, as specified in this Section, on approved forms certified by the testing, adjusting, and balancing Agent.

E. Sample Report Forms: Submit 2 sets of sample testing, adjusting, and balancing report forms.

F. Warranty: Submit 2 copies of special warranty specified in the "Warranty" Article below.

1.5 QUALITY ASSURANCE

A. Agent Qualifications: Engage a testing, adjusting, and balancing agent certified by either AABC or NEBB.

B. Testing, Adjusting, and Balancing Conference: Meet with the Owner's and the Architect's representatives on approval of the testing, adjusting, and balancing strategies and procedures plan to develop a mutual understanding of the details. Ensure the participation of testing, adjusting, and balancing team members, equipment manufacturers' authorized

service representatives, HVAC controls Installer, and other support personnel. Provide 7 days' advance notice of scheduled meeting time and location.

1. Agenda Items: Include at least the following:

    a. Submittal distribution requirements.

    b. Contract Documents examination report.

    c. Testing, adjusting, and balancing plan.

    d. Work schedule and Project site access requirements.

    e. Coordination and cooperation of trades and subcontractors.

    f. Coordination of documentation and communication flow.

C. Certification of Testing, Adjusting, and Balancing Reports: Certify the testing, adjusting, and balancing field data reports. This certification includes the following:

1. Review field data reports to validate accuracy of data and to prepare certified testing, adjusting, and balancing reports.

2. Certify that the testing, adjusting, and balancing team complied with the approved testing, adjusting, and balancing plan and the procedures specified and referenced in this Specification.

D. Testing, Adjusting, and Balancing Reports: Use standard forms either from AABC's "National Standards for Testing, Adjusting, and Balancing" or NEBB's "Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems."

E. Instrumentation Type, Quantity, and Accuracy: As described either in NEBB's "Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems," Section II, "Required Instrumentation for NEBB Certification" or AABC national standards.

F. Instrumentation Calibration: Calibrate instruments at least every 6 months or more frequently if required by the instrument manufacturer.

1.6 PROJECT CONDITIONS

A. Partial Owner Occupancy: The Owner may occupy completed areas of the building before Substantial Completion. Cooperate with the Owner during testing, adjusting, and balancing operations to minimize conflicts with the Owner's operations.

1.7 COORDINATION

A. Coordinate the efforts of factory-authorized service representatives for systems and equipment, HVAC controls installers, and other mechanics to operate HVAC systems and equipment to support and assist testing, adjusting, and balancing activities.

B. Notice: Provide 7 days' advance notice for each test. Include scheduled test dates and times.

C. Perform testing, adjusting, and balancing after leakage and pressure tests on air and water distribution systems have been satisfactorily completed.

1.8 WARRANTY

A. General Warranty: The national project performance guarantee specified in this Article shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by the Contractor under requirements of the Contract Documents.

B. National Project Performance Guarantee: Provide a guarantee on AABC'S "National Standards" forms stating that AABC will assist in completing the requirements of the Contract Documents if the testing, adjusting, and balancing Agent fails to comply with the Contract Documents. Guarantee includes the following provisions:

C. Special Guarantee: Provide a guarantee on NEBB forms stating that NEBB will assist in completing the requirements of the Contract Documents if the testing, adjusting, and balancing Agent fails to comply with the Contract Documents. Guarantee includes the following provisions:

1. The certified Agent has tested and balanced systems according to the Contract Documents.

2. Systems are balanced to optimum performance capabilities within design and installation limits.

PART 2 PRODUCTS (Not Applicable)

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine Contract Documents to become familiar with project requirements and to discover conditions in systems' designs that may preclude proper testing, adjusting, and balancing of systems and equipment.

1. Contract Documents are defined in the General and Supplementary Conditions of the Contract.

2. Verify that balancing devices, such as test ports, gage cocks and manual volume dampers, are required by the Contract Documents. Verify that quantities and locations of these balancing devices are accessible and appropriate for effective balancing and for efficient system and equipment operation.

B. Examine approved submittal data of HVAC systems and equipment.

C. Examine project record documents described in Division 1 Section "Project Record Documents."

D. Examine Architect's and Engineer's design data, including HVAC system descriptions, statements of design assumptions for environmental conditions and systems' output, and statements of philosophies and assumptions about HVAC system and equipment controls.

E. Examine equipment performance data, including fan curves. Relate performance data to project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system. Calculate system effect factors to reduce the performance ratings of HVAC equipment when installed under conditions different from those presented when the equipment was performance tested at the factory. To calculate system effects for air systems, use tables and charts

found in AMCA 201, "Fans and Systems," Sections 7 through 10; or in SMACNA's "HVAC Systems--Duct Design," Sections 5 and 6. Compare this data with the design data and installed conditions.

F. Examine system and equipment installations to verify that they are complete and that testing, cleaning, adjusting, and commissioning specified in individual Specification Sections have been performed.

G. Examine system and equipment test reports.

H. Examine HVAC system and equipment installations to verify that indicated balancing devices, such as test ports, gage cocks and manual volume dampers, are properly installed, and their locations are accessible and appropriate for effective balancing and for efficient system and equipment operation.

I. Examine systems for functional deficiencies that cannot be corrected by adjusting and balancing.

J. Examine air-handling equipment to ensure clean filters have been installed, bearings are greased, belts are aligned and tight, and equipment with functioning controls is ready for operation.

K. Examine terminal units, such as variable-air-volume boxes and mixing boxes, to verify that they are accessible and their controls are connected and functioning.

L. Examine plenum ceilings, utilized for supply air, to verify that they are airtight. Verify that pipe penetrations and other holes are sealed.

M. Examine equipment for installation and for properly operating safety interlocks and controls.

N. Examine automatic temperature system components to verify the following:

1. Dampers, valves, and other controlled devices operate by the intended controller.

2. Dampers and valves are in the position indicated by the controller.

3. Integrity of valves and dampers for free and full operation and for tightness of fully closed and fully open positions. This includes dampers in multi-zone units, mixing boxes, and variable-air-volume terminals.

4. Automatic modulating and shutoff valves, including 2-way valves and 3-way mixing and diverting valves, are properly connected.

5. Thermostats and humidistats are located to avoid adverse effects of sunlight, drafts, and cold walls.

6. Sensors are located to sense only the intended conditions.

7. Sequence of operation for control modes is according to the Contract Documents.

8. Controller set points are set at design values. Observe and record system reactions to changes in conditions. Record default set points if different from design values.

9. Interlocked systems are operating.

O. Report deficiencies discovered before and during performance of testing, adjusting, and balancing procedures.

3.2 PREPARATION

A. Prepare a testing, adjusting, and balancing plan that includes strategies and step-by-step procedures.

B. Complete system readiness checks and prepare system readiness reports. Verify the following:

1. Permanent electrical power wiring is complete.

2. Automatic temperature-control systems are operational.

3. Equipment and duct access doors are securely closed.

4. Balance, smoke, and fire dampers are open.

5. Ceilings are installed in critical areas where air-pattern adjustments are required and access to balancing devices is provided.

6. Windows and doors can be closed so design conditions for system operations can be met.

3.3 GENERAL TESTING AND BALANCING PROCEDURES

A. Perform testing and balancing procedures on each system according to the procedures contained either in AABC national standards, or NEBB's "Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems" and this Section.

B. Cut insulation, ducts, pipes, and equipment cabinets for installation of test probes to the minimum extent necessary to allow adequate performance of procedures. After testing and balancing, close probe holes and patch insulation with new materials identical to those removed. Restore vapor barrier and finish according to the insulation Specifications for this Project.

C. Mark equipment settings with paint or other suitable, permanent identification material, including damper-control positions, valve indicators, fan-speed-control levers, and similar controls and devices, to show final settings.

3.4 FUNDAMENTAL AIR SYSTEMS' BALANCING PROCEDURES

A. Prepare test reports for both fans and outlets. Obtain manufacturer's outlet factors and recommended testing procedures. Crosscheck the summation of required outlet volumes with required fan volumes.

B. Prepare schematic diagrams of systems' "as-built" duct layouts.

C. For variable-air-volume systems, develop a plan to simulate diversity.

D. Determine the best locations in main and branch ducts for accurate duct airflow measurements.

E. Check the airflow patterns from the outside-air louvers and dampers and the return and exhaust-air dampers, through the supply-fan discharge and mixing dampers.

F. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.

G. Verify that motor starters are equipped with properly sized thermal protection.

H. Check dampers for proper position to achieve desired airflow path.

I. Check for airflow blockages.

J. Check condensate drains for proper connections and functioning.

K. Check for proper sealing of air-handling unit components.

3.5 CONSTANT-VOLUME AIR SYSTEMS' BALANCING PROCEDURES

A. The procedures in this Article apply to constant-volume supply, return, and exhaust air systems. Additional procedures are required for variable-air-volume supply-air systems and process exhaust-air systems. These additional procedures are specified in other articles in this Section.

B. Adjust fans to deliver total design airflows within the maximum allowable rpm listed by the fan manufacturer.

1. Measure fan static pressures to determine actual static pressure as follows:

a. Measure outlet static pressure as far downstream from the fan as practicable and up-stream from restrictions in ducts such as elbows and transitions.
b. Measure static pressure directly at the fan outlet or through the flexible connection.
c. Measure inlet static pressure of single-inlet fans in the inlet duct as near the fan as possible, upstream from flexible connection and downstream from duct restrictions.
d. Measure inlet static pressure of double-inlet fans through the wall of the plenum that houses the fan.

2. Measure static pressure across each air-handling unit component.

a. Simulate dirty filter operation and record the point at which maintenance personnel must change filters.

3. Measure static pressures entering and leaving other devices such as sound traps, heat recovery equipment, and air washers under final balanced conditions.

4. Compare design data with installed conditions to determine variations in design static pressures versus actual static pressures. Compare actual system effect factors with calculated system effect factors to identify where variations occur. Recommend corrective action to align design and actual conditions.

5. Adjust fan speed higher or lower than design with the approval of the Architect. Make required adjustments to pulley sizes, motor sizes, and electrical connections to accommodate fan-speed changes.

6. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure no overload will occur. Measure amperage in full cooling, full heating, and economizer modes to determine the maximum required brake horsepower.

C. Adjust volume dampers for main duct, submain ducts, and major branch ducts to design airflows within specified tolerances.

1. Measure static pressure at a point downstream from the balancing damper and adjust volume dampers until the proper static pressure is achieved.

a. Where sufficient space in submains and branch ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow for that zone.

2. Remeasure each submain and branch duct after all have been adjusted. Continue to adjust sub-mains and branch ducts to design airflows within specified tolerances.

D. Measure terminal outlets and inlets without making adjustments.

1. Measure terminal outlets using a direct-reading hood or the outlet manufacturer's written instructions and calculating factors.

E. Adjust terminal outlets and inlets for each space to design airflows within specified tolerances of design values. Make adjustments using volume dampers rather than extractors and the dampers at the air terminals.

1. Adjust each outlet in the same room or space to within specified tolerances of design quantities without generating noise levels above the limitations prescribed by the Contract Documents.

2. Adjust patterns of adjustable outlets for proper distribution without drafts.

3.6 VARIABLE-AIR-VOLUME SYSTEMS' ADDITIONAL PROCEDURES

A. Compensating for Diversity: When the total airflow of all terminal units is more than the fan design airflow volume, place a selected number of terminal units at a maximum set-point airflow condition until the total airflow of the terminal units equals the design airflow of the fan. Select the reduced airflow terminal units so they are distributed evenly among the branch ducts.

B. Pressure-Independent, Variable-Air-Volume Systems: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:

1. Set outside-air dampers at minimum, and return and exhaust-air dampers at a position that simulates full-cooling load.

2. Select the terminal unit that is most critical to the supply-fan airflow and static pressure. Measure static pressure. Adjust system static pressure so the entering static pressure for the critical terminal unit is not less than the sum of the terminal unit manufacturer's recommended minimum inlet static pressure plus the static pressure needed to overcome terminal-unit discharge duct losses.

3. Measure total system airflow. Adjust to within 10 percent of design airflow.

4. Set terminal units at maximum airflow and adjust controller or regulator to deliver the designed maximum airflow. Use the terminal unit manufacturer's written instructions to make this adjustment. When total airflow is correct, balance the air outlets downstream from terminal units as described for constant-volume air systems.

5. Set terminal units at minimum airflow and adjust controller or regulator to deliver the designed minimum airflow. Check air outlets for a proportional reduction in airflow as described for constant-volume air systems.

    a. If air outlets are out of balance at minimum airflow, report the condition but leave the outlets balanced for maximum airflow.

6. Re-measure the return airflow to the fan while operating at maximum return airflow and minimum outside airflow. Adjust the fan and balance the return-air ducts and inlets as described for constant-volume air systems.

7. Measure static pressure at the most critical terminal unit and adjust the static-pressure controller at the main supply-air sensing station to ensure adequate static pressure is maintained at the most critical unit.

8. Record the final fan performance data.

3.7 MOTORS

A. Motors, 1/2 HP and Larger: Test at final balanced conditions and record the following data:

1. Manufacturer, model, and serial numbers.

2. Motor horsepower rating.

3. Motor rpm.

4. Efficiency rating if high-efficiency motor.

5. Nameplate and measured voltage, each phase.

6. Nameplate and measured amperage, each phase.

7. Starter thermal-protection-element rating.

B. Motors Driven by Variable-Frequency Controllers: Test for proper operation at speeds varying from minimum to maximum. Test the manual bypass for the controller to prove proper operation. Record observations, including controller manufacturer, model and serial numbers, and nameplate data.

3.8 TEMPERATURE TESTING

A. During testing, adjusting, and balancing, report need for adjustment in temperature regulation within the automatic temperature-control system.

B. Measure indoor wet and dry-bulb temperatures every other hour for a period of 2 successive 8-hour days, in each separately controlled zone, to prove correctness of final temperature settings. Measure when the building or zone is occupied.

C. Measure outside-air, wet and dry-bulb temperatures.

3.9 CONDENSING UNITS

A. Verify proper rotation of fans and measure entering- and leaving-air temperatures. Record compressor data.

3.10 TEMPERATURE TESTING

A. During testing, adjusting, and balancing, report need for adjustment in temperature regulation within the automatic temperature-control system.

B. Measure indoor wet- and dry-bulb temperatures every other hour for a period of 2 successive 8-hour days, in each separately controlled zone, to prove correctness of final temperature settings. Measure when the building or zone is occupied.

C. Measure outside-air, wet- and dry-bulb temperatures.

3.11 FUME HOODS

A. Determine total airflow into the room where the fume hood is located and balance systems to ensure ad-equate air supply to all hoods.

1. Set fume-hood door opening at position of normal use.

2. Energize the exhaust fan and adjust airflow to provide the indicated average fume-hood face velocity at hood opening.

3. Measure exhaust airflow volume by measuring airflow by Pitot-tube duct traverse.

4. Measure air velocity using Pitot-tube traverse method.

5. Record each face velocity measurement taken at 4- to 6-inch (100- to 150-mm) increments over the entire hood door opening.

6. Calculate the average face velocity by averaging all velocity measurements.

7. Calculate the airflow volume of exhaust-hood face velocity by multiplying the calculated aver-age face velocity by the opening area. Compare this quantity with exhaust volume at exhaust fan and report duct leakage.

8. Measure airflow volume supplied by makeup fan. Verify that the makeup system supplies the proper amount of air to keep the space at the indicated pressure with the exhaust systems in all operating conditions.

9. Retest for average face velocity. Adjust hood baffles, fan drives, and other parts of the system to provide the indicated average face velocity and the indicated auxiliary air-supply percentages.

10. Retest and adjust the systems until fume-hood performance complies with Contract Documents.

3.12 TEMPERATURE-CONTROL VERIFICATION

A. Verify that controllers are calibrated and commissioned.

B. Check transmitter and controller locations and note conditions that would adversely affect control functions.

C. Record controller settings and note variances between set points and actual measurements.

D. Verify operation of limiting controllers (i.e., high- and low-temperature controllers).

E. Verify free travel and proper operation of control devices such as damper and valve operators.

F. Verify sequence of operation of control devices. Note air pressures and device positions and correlate with airflow and water-flow measurements. Note the speed of response to input changes.

G. Confirm interaction of electrically operated switch transducers.

H. Confirm interaction of interlock and lockout systems.

I. Verify main control supply-air pressure and observe compressor and dryer operations.

J. Record voltages of power supply and controller output. Determine if the system operates on a grounded or non-grounded power supply.

K. Note operation of electric actuators using spring return for proper fail-safe operations.

3.13 TOLERANCES

A. Set HVAC system airflow and water flow rates within the following tolerances:

1. Supply, Return, and Exhaust Fans: Plus 5 to plus 10 percent.

2. Air Outlets and Inlets: 0 to minus 10 percent.

3.14 REPORTING

A. Initial Construction-Phase Report: Based on examination of the Contract Documents as specified in "Examination" Article above, prepare a report on the adequacy of design for systems' balancing devices. Recommend changes and additions to systems' balancing devices to facilitate proper performance measuring and balancing. Recommend changes and additions to HVAC systems and general construction to allow access for performance measuring and balancing devices.

B. Status Reports: As Work progresses, prepare reports to describe completed procedures, procedures in progress, and scheduled procedures. Include a list of deficiencies and problems found in systems being tested and balanced. Prepare a separate report for each system and each building floor for systems serving multiple floors.

3.15 FINAL REPORT

A. General: Typewritten, or computer printout in letter-quality font, on standard bond paper, in 3-ring binder, tabulated and divided into sections by tested and balanced systems.

B. Include a certification sheet in front of binder signed and sealed by the certified testing and balancing engineer.

1. Include a list of the instruments used for procedures, along with proof of calibration.

C. Final Report Contents: In addition to the certified field report data, include the following:

1. Fan curves.

2. Manufacturers' test data.

3. Field test reports prepared by system and equipment installers.

4. Other information relative to equipment performance, but do not include approved Shop Drawings and Product Data.

D. General Report Data: In addition to the form titles and entries, include the following data in the final report, as applicable:

1. Title page.

2. Name and address of testing, adjusting, and balancing Agent.

3. Project name.

4. Project location.

5. Architect's name and address.

6. Engineer's name and address.

7. Contractor's name and address.

8. Report date.

9. Signature of testing, adjusting, and balancing Agent who certifies the report.

10. Summary of contents, including the following:

    a. Design versus final performance.

    b. Notable characteristics of systems.

    c. Description of system operation sequence if it varies from the Contract Documents.

11. Nomenclature sheets for each item of equipment.

12. Data for terminal units, including manufacturer, type size, and fittings.

13. Notes to explain why certain final data in the body of reports vary from design values.

14. Test conditions for fans and pump performance forms, including the following:

    a. Settings for outside, return, and exhaust-air dampers.

    b. Conditions of filters.

    c. Cooling coil, wet and dry-bulb conditions.

    d. Face and bypass damper settings at coils.

    e. Fan drive settings, including settings and percentage of maximum pitch diameter.

    f. Inlet vane settings for variable-air-volume systems.

    g. Settings for supply-air, static-pressure controller.

h. Other system operating conditions that affect performance.

E. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present with single-line diagrams and include the following:

1. Quantities of outside, supply, return, and exhaust airflows.

2. Duct, outlet, and inlet sizes.

3. Terminal units.

4. Balancing stations.

F. Air-Handling Unit Test Reports: For air-handling units with coils, include the following:

1. Unit Data: Include the following:

a. Unit identification.

b. Location.

c. Make and type.

d. Model number and unit size.

e. Manufacturer's serial number.

f. Unit arrangement and class.

g. Discharge arrangement.

h. Sheave make, size in inches (mm), and bore.

i. Sheave dimensions, center-to-center and amount of adjustments in inches (mm).

j. Number of belts, make, and size.

k. Number of filters, type, and size.

2. Motor Data: Include the following:

a. Make and frame type and size.

b. Horsepower and rpm.

c. Volts, phase, and hertz.

d. Full-load amperage and service factor.

e. Sheave make, size in inches (mm), and bore.

f. Sheave dimensions, center-to-center and amount of adjustments in inches (mm).

3. Test Data: Include design and actual values for the following:

a. Total airflow rate in cfm (L/s).

b. Total system static pressure in inches wg (Pa).

c. Fan rpm.

d. Discharge static pressure in inches wg (Pa).

e. Filter static-pressure differential in inches wg (Pa).

f. Cooling coil static-pressure differential in inches wg (Pa).

g. Outside airflow in cfm (L/s).

h. Return airflow in cfm (L/s).

i. Outside-air damper position.

j. Return-air damper position.

G. Apparatus-Coil Test Reports: For apparatus coils, include the following:

1. Coil Data: Include the following:

a. System identification.

b. Location.

c. Coil type.

d. Number of rows.

e. Fin spacing in fins per inch (mm o.c.).

f. Make and model number.

g. Face area in sq. ft. (sq. m).

h. Tube size in NPS (DN).

i. Tube and fin materials.

j. Circuiting arrangement.

2. Test Data: Include design and actual values for the following:

a. Airflow rate in cfm (L/s).

b. Average face velocity in fpm (m/s).

c. Air pressure drop in inches wg (Pa).

d. Outside-air, wet- and dry-bulb temperatures in deg. F (deg. C).

e. Return-air, wet- and dry-bulb temperatures in deg. F (deg. C).

f. Entering-air, wet- and dry-bulb temperatures in deg. F (deg. C).

g. Leaving-air, wet- and dry-bulb temperatures in deg. F (deg. C).

h. Refrigerant expansion valve and refrigerant types.

i. Refrigerant suction pressure in psig (kPa).

j. Refrigerant suction temperature in deg. F (deg. C).

H. Fan Test Reports: For supply, return, and exhaust fans, include the following:

1. Fan Data: Include the following:

a. System identification.

b. Location.

c. Make and type.

d. Model number and size.

e. Manufacturer's serial number.

f. Arrangement and class.

g. Sheave make, size in inches (mm), and bore.

h. Sheave dimensions, center-to-center and amount of adjustments in inches (mm).

2. Motor Data: Include the following:

a. Make and frame type and size.

b. Horsepower and rpm.

c. Volts, phase, and hertz.

d. Full-load amperage and service factor.

e. Sheave make, size in inches (mm), and bore.

f. Sheave dimensions, center-to-center and amount of adjustments in inches (mm).

g. Number of belts, make, and size.

3. Test Data: Include design and actual values for the following:

a. Total airflow rate in cfm (L/s).

b. Total system static pressure in inches wg (Pa).

c. Fan rpm.

d. Discharge static pressure in inches wg (Pa).

e. Suction static pressure in inches wg (Pa).

I. Round, Flat-Oval, and Rectangular Duct Traverse Reports: Include a diagram with a grid representing the duct cross-section and record the following:

1. Report Data: Include the following:

a. System and air-handling unit number.

b. Location and zone.

c. Traverse air temperature in deg. F (deg. C).

d. Duct static pressure in inches wg (Pa).

e. Duct size in inches (mm).

f. Duct area in sq. ft. (sq. m).

g. Design airflow rate in cfm (L/s).

h. Design velocity in fpm (m/s).

i. Actual airflow rate in cfm (L/s).

j. Actual average velocity in fpm (m/s).

k. Barometric pressure in psig (Pa).

J. Air-Terminal-Device Reports: For terminal units, include the following:

1. Unit Data: Include the following:

a. System and air-handling unit identification.

b. Location and zone.

c. Test apparatus used.

d. Area served.

e. Air-terminal-device make.

f. Air-terminal-device number from system diagram.

g. Air-terminal-device type and model number.

h. Air-terminal-device size.

i. Air-terminal-device effective area in sq. ft. (sq. m).

2. Test Data: Include design and actual values for the following:

a. Airflow rate in cfm (L/s).

b. Air velocity in fpm (m/s).

c. Preliminary airflow rate as needed in cfm (L/s).

d. Preliminary velocity as needed in fpm (m/s).

e. Final airflow rate in cfm (L/s).

f. Final velocity in fpm (m/s).

g. Space temperature in deg. F (deg. C).

K. Compressor and Condenser Reports: For refrigerant side of unitary systems, stand-alone refrigerant compressors or air-cooled condensing units include the following:

1. Unit Data: Include the following:

a. Unit identification.

b. Location.

c. Unit make and model number.

d. Manufacturer's compressor serial numbers.

e. Compressor make.

f. Compressor model and serial numbers.

g. Refrigerant weight in lb (kg).

h. Low ambient temperature cutoff in deg F (deg C).

2. Test Data: Include design and actual values for the following:

a. Inlet-duct static pressure in inches wg (Pa).

b. Outlet-duct static pressure in inches wg (Pa).

c. Entering-air, dry-bulb temperature in deg F (deg C).

d. Leaving-air, dry-bulb temperature in deg F (deg C).

e. Control settings.

f. Unloader set points.

g. Low-pressure-cutout set point in psig (kPa).

h. High-pressure-cutout set point in psig (kPa).

i. Suction pressure in psig (kPa).

j. Suction temperature in deg F (deg C).

k. Condenser refrigerant pressure in psig (kPa).

l. Condenser refrigerant temperature in deg F (deg C).

m. Oil pressure in psig (kPa).

n. Oil temperature in deg F (deg C).

o. Voltage at each connection.

p. Amperage for each phase.

q. The kW input.

r. Crankcase heater kW.

s. Number of fans.

t. Condenser fan rpm.

u. Condenser fan airflow rate in cfm (L/s).

v. Condenser fan motor make, frame size, rpm, and horsepower.

w. Condenser fan motor voltage at each connection.

x. Condenser fan motor amperage for each phase.

L. Instrument Calibration Reports: For instrument calibration, include the following:

1. Report Data: Include the following:

a. Instrument type and make.

b. Serial number.

c. Application.

d. Dates of use.

e. Dates of calibration.

3.16 ADDITIONAL TESTS

A. Within 90 days of completing testing, adjusting, and balancing, perform additional testing and balancing to verify that balanced conditions are being maintained throughout and to correct unusual conditions.

END OF SECTION

SECTION 16050

BASIC ELECTRICAL MATERIALS AND METHODS

PART 1 GENERAL

1.1 RELATED DOCUMENTS: This Section supplements all sections of Division 16, and shall apply to all phases of work specified, shown on the drawings, and required to provide all electrical systems complete and operable for the project. The work required under the Division is not limited to the work shown on the electrical drawings. Refer to site, architectural, structural and mechanical drawings, coordinate all such work to attain fully operational systems throughout the project. The intent of this specification is to provide a complete and operating electrical system in accordance with all Contract Documents.

1.2 WORK INCLUDED: Provide all labor, materials, services and skilled supervision necessary for the construction, erection, installation, connection, testing, and adjustment of all circuits and electrical equipment required by the Contract Documents, complete in all respects and ready for use.

1.3 SUPERVISION OF WORK

A. Electrical work shall be under the full supervision of a professional electrical engineer or a master electrician registered to practice in the Territory of Guam. Within 30 calendar days after the Contractor has received the Owner's Notice to Proceed, submit a certification from the Professional Engineer or master electrician stating that the work will be done under his full supervision. At the conclusion of the work, prior to final inspection, submit certification that the work was done in accordance with electrical construction documents and the installation complies with the latest edition of the National Electrical Code.

B. Installation of Diesel Generating Unit shall be under the direct supervision of Generator Manufacturer’s Representative.

1.4 COORDINATION OF WORK

A. Plan all work so that it proceeds with a minimum of interference with other trades. Coordinate all openings required for equipment and conduit required for work of other trades. Provide all special frames, sleeves and anchor bolts as required. Coordinate electrical work with the mechanical installation.

B. Work lines and established heights shall be in accordance with architectural drawings. Verify all dimensions shown and establish all elevations and detailed dimensions not shown.

C. Lay out and coordinate all work well in advance to avoid conflicts or interference with other work in progress so that in the event of interference, the electrical layout may be altered to suit the conditions, prior to the installation of any work, and without additional cost to the Owner. Conflicts arising from lack of coordination shall be the contractor's responsibility.

D. Maintain all code required clearance around electrical equipment. Unless specifically noted otherwise, establish the exact location of electrical equipment based on the actual dimensions of equipment furnished.

1.5 COOPERATION WITH OTHER TRADES

A. Cooperate and coordinate all work of Division 16 with that of other trades; afford reasonable opportunity for the execution of their work. Properly connect and coordinate

this work with the work of other trades at such time and in such a manner as not to delay or interfere with their work.

B. Examine the drawings and specifications for the general and mechanical work and the work of other trades. Coordinate this work accordingly.

C. Promptly report to the Contracting Officer any delay or difficulties encountered in the installation of this work which might prevent prompt and proper installation or make it unsuitable to connect with or receive the work of others. Failure to report shall constitute an acceptance of the work of other trades as being fit and proper for the execution of this work.

1.6 CODES, PERMITS AND FEES

A. Perform work in accordance with the National Electrical Code, applicable building ordinances, and other applicable codes, hereinafter referred to as the "Code". Where the Contract Documents exceed minimum requirements, the most stringent shall apply unless variance is approved.

B. Comply with all requirements for permits, licenses, fees, and codes. Obtain all required permits, licenses, inspections, and pay all fees required to perform the work described in the Contract Documents.

C. Comply with all requirements of the applicable utility authorities serving the project. Make all arrangements with the utility authorities for proper coordination of the work.

1.7 MATERIALS AND EQUIPMENT FURNISHED BY OTHERS: The electrical work includes the installation or connection of certain materials and equipment furnished by others. Verify installation details. Foundations for apparatus and equipment will be furnished by others unless otherwise noted or detailed.

1.8 CONTRACT DRAWINGS: The Contract Drawings are shown in part diagrammatic, and intend to convey the scope of work, indicating the intended general arrangement of equipment, conduit and outlets. Follow the drawings in laying out the work and verify spaces for the installation of materials and equipment based on actual dimensions of equipment furnished. Wherever a question exists regarding the intended location of outlets or equipment, circuiting, etc., obtain instructions from the Contracting Officer before proceeding with the work.

1.9 EQUIPMENT OR FIXTURES: Equipment or fixtures shall be connected to provide circuit continuity in accordance with applicable codes whether or not each piece of conductor, conduit, or protective device is shown between such items of equipment or fixtures, and the point of circuit origin.

1.10 NEW EQUIPMENT AND MATERIAL:

A. Unless otherwise specified, equipment and materials of the same type of classification, and used for the same purpose shall be products of the same manufacturer. Use only new and unweathered material.

B. Furnish products listed and classified by Underwriter's Laboratories, Inc.

1.11 APPLICABLE DOCUMENTS: Design, manufacture, testing and method of installation of all apparatus and materials furnished under Division 16 of the specifications shall conform to the latest publications or standard rules of the following:

Institute of Electrical and Electronic Engineers
(Formerly American Institute of Electrical Engineers) – IEEE

National Electrical Manufacturers' Association - NEMA
Underwriters' Laboratories, Inc. - UL
National Fire Protection Association - NFPA
American Society for Testing and Materials - ASTM
American National Standards Institute – ANSI
National Electrical Code - NEC
National Electrical Safety Code - NESC
Uniform Fire Code – UFC
International Building Code - IBC
Insulated Power Cable Engineers Association – IPCEA
Americans with Disabilities Act Guidelines - ADAG
American Institute of Steel Construction - AISC
Department of Public Works Standards, Government of Guam - DPW
Guam Fire Department Standards, Government of Guam - GFD
Guam Power Authority Standards, Government of Guam - GPA
GTA Standards – GTA
Guam Environmental Protection Agency - GEPA

1.12 EXECUTION OF THE WORK

A. Install equipment and materials in neat and workmanlike manner and align, level and adjust for proper operation. Install equipment so that all parts are easily accessible for inspection, operation, maintenance, and repair.

B. Where damage, marring or disfigurement has occurred, replace or refinish the damaged surfaces as directed, and to the satisfaction of the Contracting Officer.

C. Provide the design, fabrication, and erection of all supplementary structural framing required for attachment of hangers or other devices supporting electrical equipment. Submit design/shop drawing to the Contracting Officer for approval.

D. Outlet Location:

1. Position of outlets: Center all outlets with regard to panelling, furring and trim. Symmetrically arrange outlets in the room. Satisfactorily correct outlets improperly located or installed. Repair or replace damaged finishes. Set outlets plumb and extend to the finished surface of the wall, ceiling or floor without projecting beyond same.

2. Install all receptacles, switches, and outlets shown on the wood trim, cases or symmetrically, and where necessary, set the long dimension of the plate horizontal, or ganged in tandem.

1.13 SPECIAL CONSIDERATION

A. Cutting, Patching and Piercing: Obtain written permission from the Contracting Officer before cutting or piercing structural members.

1. Use craftsmen skilled in their respective trades for cutting, fitting, repairing, patching of plaster and finishing of materials including carpentry work, metal work or concrete work required for by Division 16. Do not weaken walls, partitions or floor by cutting. Holes required to be cut in floors must be drilled or cored without breaking or spalling around the holes. Do all necessary patching and/or refinishing as instructed by the Contracting Officer.

2. Sleeves through floors and walls to be galvanized rigid steel flush with walls, ceiling or finished floors; size to accommodate the raceway.

3. Use care in piercing waterproofing. After the part piercing waterproofing has been set in place, seal opening and make absolutely watertight.

4. Provide baked white enamel painted spring-clipped escutcheon plates where exposed pipe passes through walls, floors, or ceilings. Cover sleeves and entire opening made for the pipe with escutcheon plates. Field applied paint finish shall match color of surrounding finish. Seal all conduit openings through floor slabs, masonry walls, and continuous partitions to make air and watertight. Tightly caulk space between conduit and abutting materials with fiberglass insulation and nonflammable sealant.

B. Seal equipment or components exposed to the weather and make watertight and insect-proof. Protect equipment outlets and conduit openings with temporary plugs or caps at all times that work is not in progress.

C. Equipment Access: Locate starters, switches, receptacles, and pull boxes to allow easy Equipment Identification: Identify each piece of equipment including disconnect switches and motor starters, with plastic laminate nameplates, black face with white core letters, having proper and complete identification. Clearly identify on the equipment served, and spell out the full name of the equipment, such as "Air Handling Unit AHU-1" and "Hot Water Cir. Pump P-1". Do not use abbreviated plan references such as "AHU-1" or "P-1".

D. Equipment Access: Locate starters, switches, receptacles, and pull boxes to allow easy access for operation, repair and maintenance, and if concealed, provide access doors.

E. Equipment Bases: Provide equipment bases on all floor-mounted equipment furnished under this Contract.

F. Protection of apparatus, materials and equipment: Take all necessary precautions to properly protect all apparatus, fixtures, appliances, material, equipment and installations from damage of any kind. The Contracting Officer may reject any particular piece or pieces of material, apparatus, or equipment which has scratches, dents or otherwise damaged.

G. Operation and Maintenance Manuals: During the time of the Contract and before final acceptance of the electrical installation, submit to the Contracting Officer three copies of all descriptive literature, maintenance recommendations from the equipment manufacturer, data of initial operation, wiring diagrams and parts list of each item of electrical equipment installed under the Contract; submit all manufacturer's guarantees and warranties. Submittal shall include: switchboards, motor control centers, generators, and fire alarm system.

1. Refer to Division 1 for additional requirements.

H. Painting Preparation: Prepare all exposed fittings, boxes, supports and panelboards for painting; remove traces of oil, grease and dirt. Employ all necessary precautionary methods to prevent scratching or defacing of all electrical apparatus and devices.

I. Painting: Exposed conduit, boxes installed after room has been painted, shall be painted to match room finish by this contractor.

1. Corrosion Control: All corrosive metal surfaces, conduits/fittings, pipelines and structures shall be provided with corrosion inhibiting primer before installation. Appropriate surface preparation shall be made before application of primer.

J. Rust Prevention: Provide hot dip galvanized finish for all ferrous materials. In addition, outdoor installations shall be field painted with two coats of enamel paint.

K. Tests: Provide all tests as outlined hereinafter, and other tests necessary to establish the adequacy, quality, safety, completed status, and suitable operation of each system. Tests shall be conducted in the presence of the Contracting Officer.

1. Ground Rod Test: Immediately after installation, test driven grounds with direct-reading single-test megger, utilizing the AC fall-of-potential method and two reference electrodes. Orient the ground to be tested and two reference electrodes in a straight line spaced 50 feet apart. Drive the reference electrodes 5 feet deep. Disconnect the ground rod to be tested from other ground system at the time of testing. Ground resistance for the electrical service shall be 25 ohms or less. Ground resistance for communication system shall meet manufacturer's minimum requirements. Submit the results, date of test, and soil conditions, to the Contracting Officer in writing, immediately after testing.

2. System voltage at each panelboard measure voltage between phases; phase to neutral; phase to ground; and neutral to ground. Measurements shall be conducted during unloaded condition and repeated during loaded condition. Adjust system value to within ±3% of nominal voltage.

3. Insulation resistance of conductors.

L. Seismic Consideration: Installation shall meet Seismic Zone 4 requirements.

M. Windload Consideration: Installation exposed to outdoors shall be designed to withstand 170 MPH wind speed IBC 2009 Exposure C and ASCE7-05.

1.14 QUALITY ASSURANCE

A. Use adequate numbers of skilled workmen who are thoroughly trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and the methods needed for proper performance of the work of this Division.

B. Without additional cost to the Owner, provide such other labor and materials as are required to complete the work of this Division in accordance with the requirements of governmental agencies having jurisdiction, regardless of whether such materials and associated labor are called for elsewhere in these Contract Documents.

1.15 ELECTRICAL SERVICE

A. Electrical service to the building is as indicated on the drawings.

B. Make all necessary arrangements with the serving utilities, and pay all costs and fees, assessed to the project by the serving utilities. All work shall be in accordance with serving utilities standards and subject to their approval. Coordinate the installation of service entrance equipment with GPA prior to start of construction.

C. Application for power service must be submitted to GPA eight months before service connection to allow for timely delivery of transformers.

1.16 PRODUCT HANDLING: Comply with pertinent provisions of Division 1.

1.17 WARRANTY: Provide one year warranty on all labor and materials.

1.18 AS-BUILT DRAWINGS

A. The Contractor shall maintain at the site one copy of all Drawings, Specifications, Addenda, approved Shop Drawings, Change Orders, and other modifications, in good order and marked to record all changes made during construction. These shall be made available to the Contracting Officer.

B. At the conclusion of the work, the Contractor will be furnished by the Contracting Officer, at the Contractor's expense, a set of reproducibles made from original contract plans. The Contractor shall then incorporate all changes made, as recorded, into the set of reproducibles in a clear, legible and reproducible manner. All feeders, main alarm and communication lines, service entrance, and stub-outs shall be dimensionally located within the building structure. As a condition for acceptance of work, "as-built" reproducibles shall be signed by Contractor attesting that all changes have been incorporated, dated and delivered to the Contracting Officer.

1.19 SPARE PARTS AND MAINTENANCE PRODUCTS

A. Provide spare parts, maintenance, and extra Products in quantities specified in individual specification sections.

B. Deliver to Project site and place in location as directed; obtain receipt prior to final payment.

END OF SECTION

SECTION 16208

DIESEL ENGINE-GENERATOR SET

PART 1 GENERAL

1.1 RELATED WORK SPECIFIED IN OTHER SECTIONS: Section 16050 "Basic Electrical Materials and Methods," applies to this section except as specified otherwise.

1.2 DESCRIPTION: Provide diesel electric generating unit with accessories, auxiliary equipment, and associated work as specified.

1.3 QUALITY ASSURANCE: Provisions of Division 1 apply.

A. Operating Experience Requirements: Engines installed shall meet all of the operating experience requirements listed below:

1. Only electric generation service is considered as equivalent experience. Engines driving pumps or compressors, or those in marine propulsion or railroad service, are not acceptable.

2. Only experience on the same engine model is acceptable. Engine model is considered to be a given series or class of identical bore and stroke and of the same type of engine, such as in-line or Vee. In-line and Vee engines with identical bore and stroke are considered as two separate models of engines.

3. Only experience at the identical rotative speed as that which is offered is acceptable.

4. Only experience at the identical or higher brake mean effective pressure as that which is offered is acceptable.

5. Only experience with fuel oil is acceptable.

1.4 SUBMITTALS

A. Furnish certificate(s) within 30 days after award certifying that not less than two engines of identical number of cylinders and cylinder size, identical rotative speed, and identical or higher BMEP, and of the same basic configuration (in-line or Vee) as the engine to be furnished, shall have driven generators which have satisfactory operated not less than 3-years. Certificate(s) shall include:

1. A list of at least two engine installations meeting the experience requirements set forth in paragraph entitled "Operating Experience Requirements".

2. Owner and location of each such installation.

3. Date of initial operation of each such installation.

4. Number of KW hours produced at each installation.

5. Horsepower rating, KW rating, and rotative speed of each unit.

6. Design characteristics of each unit, such as bore and stroke, number of cylinders, and configuration (in-line or Vee).

B. Manufacturer's Data:

1. Diesel engine driven electric generator set.

2. Valves.

3. Fuel oil day tank (specified under Division 15).

4. Fuel line strainers.

5. Engine muffler.

C. Shop Drawings and Calculations: Submit for diesel generating unit and auxiliary equipment, including the following:

1. Certified outline, general arrangement (setting plan), and anchor bolt details. Drawings shall show the total weight and center of gravity of the assembled equipment on the mounting skid.

2. General arrangement drawings showing location of all auxiliary equipment in relation to the diesel generating unit.

3. Piping schematics for fuel oil, lubricating oil, jacket water, and cooling water integral with diesel engine.

4. Battery sizes and cranking time calculations.

5. Critical speed calculations.

6. Drawings for the transfer switch, including certified outline, electrical ratings, general arrangement, and detail drawings.

7. Electrical elements, schematics and wiring diagrams, including details of the safety shutdown systems and main generator circuit breaker trip system.

D. Certified Test Reports:

1. Diesel engine shop tests.

2. Generator shop test.

3. Diesel engine driven electric generator set shop tests.

4. Automatic transfer switch.

5. Radio-interference suppression.

E. Manuals: Provide two sets of operation and maintenance manuals for equipment. Identification symbols for all replaceable parts and assemblies shall be included. Information in manuals shall be comprehensive and specific.

F. Safety Requirements: Comply with ANSI B15.1.

G. Approved Manufacturers: Manufacturer shall have local on-island distributor with spare parts and repair services available.

1. Generator Set:

a. Caterpillar
b. Onan
c. Kohler

2. Automatic Transfer Switch:

a. ASCO
b. Russelectric
c. Zenith

PART 2 PRODUCTS

2.1 MATERIALS

A. Standard Commercial Product: Generator set shall, as a minimum, be in accordance with the requirements of this specification and shall be the manufacturer's standard commercial product with any added features needed to comply with the requirements. Additional or better features which are not specifically prohibited by this specification, but which are a part of the manufacturer's standard commercial product shall be included in the generator set being furnished. Standard commercial product is a product which has been or will be sold on the commercial market through advertisements or manufacturer's catalogs, or brochures, and represents the latest production model(s).

B. Materials and Equipments: Furnish new materials of high quality which will give long life and reliable operation. Equipment shall not have been in prior service except as required by factory test. Workmanship shall be of highest quality in every detail.

2.2 DIESEL-ELECTRIC GENERATOR SET AND AUXILIARY EQUIPMENT: Each generator set shall consist of a diesel engine connected to an alternating current generator with brushless excitation system mounted on a steel subbase and provided with all necessary accessories, auxiliaries, and control equipment resulting in a complete self-contained unit capable of operation. Set shall be arranged for automatic unattended starting. Generator set must be capable of providing full rated power within 10 seconds after failure of normal power. Generator set shall be "tropicallized".

A. Equipment Rating and Capability: Diesel-electric generating set shall have a standby rating indicated at 0.8 power factor. Gross KW rating of each diesel generating set shall be not more than the figure obtained by multiplying the delivered shaft horsepower rating of the engine by 0.746 and by the overall efficiency of the generator at the corresponding load. Overall efficiency of the generator shall allow for power required to operate the exciter. Rated net capacity of each generating set is defined as gross electrical power output of generator minus total electrical power requirements of electric motor driven engine accessories normally constituting part of "engine assembly," as defined in DEMA publication "Standard Practices for Stationary Diesel and Gas Engines." All auxiliary equipment furnished shall be designed for continuous duty at 110 percent of rated net capacity of generating set.

B. Critical Speeds: Each complete diesel-electric generating set shall be free of critical speeds of either a major or minor order that will endanger satisfactory operation of the set.

Satisfactory operation will be considered endangered if torsional vibration stresses exceed 5,000 psi within 10 percent above or below rated engine speed.

2.3 DESIGN AND CONSTRUCTION: Rotating or reciprocating parts, or other parts that may present a hazard to operating personnel shall be isolated or shielded to minimize danger. Design characteristics shall limit operating temperatures at critical points of maximum wear at full-load operating conditions.

2.4 DIESEL ENGINE AND ACCESSORIES

A. Engine shall be 4-cycle, naturally aspirated, turbocharged, turbocharged-intercooled, vertical in-line or vertical "V" type. Design and construct engine so as to eliminate undue heating, vibration, and wear. Engine shall be capable of burning diesel fuel oil conforming to Fed. Spec. W-F-800 (Grade DF-2). Limiting characteristics of engine shall be as follows:

1. Maximum engine speed, 1,800 rpm:

2. Maximum piston speed, 1,950 fpm:

B. Base rating of each engine on plant site elevation of 1,000 feet above mean sea level and an atmospheric temperature of 104 degrees F. Offer engine only at speeds and ratings not higher than those for which they have been designed, which fulfill requirements specified in paragraph entitled "Operating Experience Requirements."

C. General Construction: Engine shall be constructed adequately to withstand sudden changes from no load to rated load, and to preserve alignment of integral components under all conditions of operation. Engine shall be neat in appearance and shall permit easy access to various parts for maintenance purposes. The crankshaft shall incorporate drilled passages for pressure lubrication of bearings, and the journals shall be hardened, or chromium plated to provide a hard shock-resistant surface with ductile core. Crankshaft and connecting rod bearings shall be the replaceable precision sleeve type. Cylinders shall be provided with replaceable liners. The piston rings shall be constructed of a heat-resisting alloy steel or chromium plated cast iron. Camshafts shall be gear or chain driven and shall have higher wear resistance at cams and journals. Timing marks shall be clearly indicated on the crankshaft and gears. Valves shall operate in removable stem guides and seat inserts. The fly-wheel shall be balanced and shall be capable of being rotated 50 percent above the maximum rated engine rotative speed without danger of breaking or exploding. Flywheel housings shall be provided with a drain hole at the lowest point. Means for turning the crankshaft manually shall be provided.

D. Assembly: Completely factory assembles each engine. Mount turbocharger, intercooler if provided and all piping integral with the engine on the engine.

E. Engine Speed Governing System: Governing system shall be electronic type suitable for controlling the speed of the generator set within the requirements specified herein without intermediate adjustment and shall maintain the specified stability without hunting or cycling.

1. Speed (Frequency) Governing System: Set shall have an engine speed (frequency) governing system conforming to IEEE 126, Section II. Engine speed governing system shall be adjusted to meet the performance requirements of IEEE 126, Section II, when tested in accordance with ASME PTC26.

F. Overspeed Shutdown Device: The overspeed shutdown device shall be entirely independent of the engine speed governing system and shall consist of solid-state

overspeed device positive engaged so that engine speed shall not exceed 110 percent of synchronous speed and shall react to shut-off the engine's air or fuel supply and trip the set output circuit breaker. The overspeed device shall require manual resetting after emergency tripping.

G. Engine Fuel System: The engine shall be provided with all necessary equipment, including piping, fittings, valves, fuel coolers, filters, strainers, day tank, and appurtenances. A mechanical fuel injection system shall be employed. Injection pump shall be driven in a positive manner from cam or drive shaft. Injection pump and injection valves shall be of type not requiring adjustment in service and shall be capable of quick replacement in a few minutes by ordinary mechanics without special diesel experience. Internal parts forming the high-pressure portion of the fuel system shall have wear-resistant surfaces where relative movement between surfaces exists. The fuel system shall include the following fuel related equipment supplied and factory installed by the engine-generator set manufacturer. A sub-base fuel storage tank with capacity of minimum 24 hours continuous operation at 80% capacity. It shall have the structural integrity to support the engine generator set along with the associated vibrations and shall be designed to meet Seismic Zone 4 requirements. Minimum features shall include double walled all welded construction, fuel gauge, low fuel alarm, line check valve, fuel leak indicator and fittings for fuel supply fill and vent.

H. Engine Lubricating Oil System: Provide with a full pressure lubricating system arranged to distribute oil to all moving parts of the engine and to cool the pistons. System shall include an engine-driven positive displacement pump, pressure regulating valves, oil filter, oil pressure indicator, crankcase ventilator for four-cycle engines, and the necessary piping and fittings. The pump shall have ample capacity to circulate the lubricating oil required for engine lubrication, and to cool the pistons. All necessary stop, check, pressure relief, and pressure control valves shall be provided.

1. Lubricating Oil Filters: Shall be the full-flow type (throw-away-type) and shall be capable of filtering the full rate of oil flow of the oil pump at maximum engine speed. Means shall be provided to insure delivery of lubricating oil to vital wearing surfaces regardless of the condition of the filter. Additionally, the filter must provide a means of automatically bypassing filter if it should become flow-restricting.

2. Lubricating Oil Coolers: Provide to maintain the lubricating oil within the temperature limits recommended by the manufacturer. Oil cooler shall utilize the engine jacket cooling water from the radiator as the cooling medium. Temperature rise of the jacket water across the lubricating oil cooler shall be limited so that the temperature of the water leaving the lubricating oil cooler will be not higher than the optimum temperature as recommended by the engine manufacturer for jacket water to the engine. Cooler shall be either the shell and tube single or multipass design or shall be built in as an integral part of the engine cooling radiator. The core shall be constructed of copper base alloys. The cooler shall be designed for jacket water to pass through the tubes. The temperature of the oil to the engine shall be maintained at a reasonably constant value. Thermostats used in the oil cooler shall be of the nonadjustable type and factory set at the temperature as recommended by the manufacturer. Where temperature of the oil in the cooler is regulated by controlling the jacket water temperature, the system design shall assure proper oil temperature under operating conditions.

I. Engine Cooling System: The radiator fan shall direct the air flow from the engine outward through the radiator, with horizontal air discharge. The fan shall be driven directly from the engine crankshaft or through V-belt drive. The radiator shall have sufficient capacity to dissipate not less than the total British Thermal Units per hour rejected by the engine to the cooling system at 110 percent rated load in 104 degrees F ambient, and against a static

restriction of 0.5 inches of water as may be imposed by louvers, ductwork, etc. Cooling section shall have a tube and fin type core which shall consist of copper or copper base alloy tubes with nonferrous fins. The radiator shall be protected by a strong grille or metal bar guard on the exterior, and the fan shielded with a metal canopy. Filler caps shall be designed for pressure relief prior to removal. A thermostatic control valve shall be installed in the jacket water system of the engine to maintain the water system temperature of the engine. The thermostatic valve shall be the standard modulating type utilizing self-contained thermostats. The valve shall be capable of passing the water flow as determined by the manufacturer without excessive pressure drop across the valve. The valve shall be provided with one or more interchangeable thermostatic elements. The elements shall be nonadjustable type and the operating temperature shall be set at the temperature recommended by the engine manufacturer. The valve shall be designed so that in event of the thermostatic element failure, water will be able to flow through the engine. Radiator core shall be treated with anti corrosion coating.

J. Engine Exhaust System: Provide a complete exhaust system, including exhaust flexible connection and residential type silencer.

K. Engine Air Induction System: The air induction system shall be equipped with heavy-duty dry type air cleaners of adequate capacity to effectively remove the dirt and abrasives from the combustion air to the engine. When the engine air intake noise level is above the audible mechanical noise level of the engine, a combination filter-silencer or a separate silencer shall be provided. For two-stroke engines, an air intake shutoff shall be provided which shall be operated by the engine overspeed shutdown device.

1. Scavenging air blowers for two-stroke cycle engines shall be built integrally with and driven directly from the engine.

2. Turbocharger shall be a combination centrifugal blower driven by an exhaust gas turbine, with the air blower directly connected to the intake air manifold. Systems that require cooling of the intake air below ambient air temperature ahead of the turbocharger or scavenger air blower will not be acceptable. They may be lubricated from the engine pressure lubrication system or as recommended by the manufacturer. All necessary supports and connections shall be provided.

3. Intercooler: Tubular heat exchangers will be accepted only if available jacket water can be used as the cooling medium. Supplementary water cooling equipment is not acceptable. When intercooling is included, provide and install on the engine all necessary intercooling equipment, including valves, controls, and integral piping.

L. Cranking System: NEMA ICS 1 and NEMA ICS 2. An electric cranking system shall be furnished, capable of rotating the engine at a speed sufficient for rapid starting in an ambient temperature of 60 degrees F. The system shall be arranged to permit starting of the engine automatically upon signal from the automatic transfer switch.

1. Cranking: The electric cranking system shall utilize direct current (DC) electrical circuit, with the negative polarity grounded, energized by storage batteries. The cranking motor shall be of the heavy-duty type with adequate capacity to crank the engine continuously to start the engine in an ambient temperature of 60 degrees F. The drive mechanism for engaging the starting motor with the engine flywheel shall be designed to inherently engage and release without binding. When the engine starts, a "stop cranking" switch, which is engine speed actuated, shall cause disengagement of the starting gearing and the shutdown of the starting motor. Starting shall be automatic. Automatic cranking panel shall crank the engine for 15 seconds cranking and 15 seconds off for three consecutive cycle before locking out

the starting circuitry, sounding an alarm and illuminating an "overcrank" indicating light which shall remain lighted until it is manually reset.

2. Storage Battery: The engine cranking battery shall be S.A.E. Type "D", diesel engine starting type and of sufficient size and capacity in a fully charged condition to start the engine-generator six consecutive times. Batteries shall comply with Fed. Spec. W-B-133.

3. Battery Charger: The battery charger shall be enclosed, wall-mounted, automatic, dual rate, solid-state, constant voltage type having AC voltage compensation, DC voltage regulation, and current limiting. The charger shall employ transistor-controlled magnetic amplifier circuits to provide continuous taper charging. Charger shall have two ranges, float and equalize, with 0-24 hour equalizer time, DC cranking relay, silicon diode full-wave rectifiers, automatic surge suppressors, DC ammeter, DC voltmeter, and fused inputs and outputs. Charger shall have a continuous rated output of not less than 10 amps. Battery charger shall conform to UL 1236.

M. Safety Shutdown Controls and Alarms: Control shall be provided that will function to immediately shut off delivery of fuel to the engine cylinders, when actuated by a condition of low lubricating oil pressure, high water temperature, overspeed, or low water level. The values at which the controls for low lubricating oil pressure and high water temperature are actuated shall be as recommended by the manufacturer, and the overspeed governor shall be set to actuate at the value specified herein. The low lubricating oil pressure shutdown control shall be provided with a means to make it inoperative during the period of low oil pressure when the engine is started. Each shutdown shall initiate its individual light and sound an alarm within the cranking panel and shall require manual reset to release each indicating light. Normal startup and shutdown shall not actuate the manual reset indicator system.

2.5 GENERATORS AND EXCITATION SYSTEMS

A. Generators: The generators for each unit shall be rated as indicated, 60 Hz, 0.80 power factor alternating-current type with revolving field. The speed of the generator shall be that of the engine. The generator shall be capable of carrying continuously an 0.80 power factor load equal to the gross kilowatt rating of the diesel generating unit at normal voltage and with a temperature rise of not more than 130 degrees C as measured by resistance based on 40 degrees C ambient temperature. Enclosures shall be the general-purpose open type with ventilating openings covered with removable screens having a mesh not larger than 1/2 inch. The generator shall conform to ANSI C50.10, and to NEMA MG-1. The generator shall have Class H insulation. The stator winding shall be arranged for "wye" connection with both line and neutral leads of each of the three-phase windings brought out of the bottom of the generator frame, and the neutral grounded. The generator and flywheel shall have sufficient flywheel effect to meet the requirements of regulation and operation as specified. The rotor shall have continuous or interconnected amortisseur windings. The generator rotor shall be mounted on an extended shaft which shall be coupled rigidly to the engine crankshaft. Impellers shall be mounted on the rotor for cooling the generator. The rotor shall be capable of safe operation at a speed 25 percent in excess of its rated synchronous speed. The generator armature, field, and ground leads shall have clamp-or crimp-type lugs or connectors for electrical connections. Terminal markings shall conform to NEMA MG-1.

1. Generator Space Heater: Provide 120 ac volt heaters. Heater capacity shall be as recommended by the generator manufacturer to aid in keeping the generator insulation dry.

B. Excitation and Voltage Regulation System: The excitation system shall be the integral brushless-type consisting of a rotating AC exciter and rectifier diode assembly together with a static-type voltage regulating system and including surge protection and the required accessories. The system shall serve as an individual excitation and regulation system for the generator specified herein, and there is no requirement for parallel operation with other exciters. The excitation system shall have a continuous current rating of not less than the generator excitation current required when the generator operates at 105 percent rated voltage under the condition of continuous rating requiring maximum field current. The voltage rating of the system shall be as required to match the generator field requirements. The excitation system response ratio shall be not less than 0.5 and the ceiling voltage shall be not less than 120 percent of rated voltage.

1. Exciter: The exciter shall be a rotating AC generator having a rotating armature on the rotor spider and a stationary field on the stator frame. The exciter insulation shall be Class B and the temperature rise shall not exceed 70 degrees C when measured by resistance based on a 40 degree C ambient temperature.

2. Rectifiers: Shall be full-wave silicon diode type, with each diode protected by individual fuses. The rectifiers shall be mounted on the rotating part of the exciter to convert AC exciter output to DC for the main generator excitation. Connections shall be provided between the exciter, rectifiers, and generator field without use of brushes or slip rings.

3. Voltage Regulator: The voltage regulator shall be completely solid-state type for control of generator voltage by control of the exciter field. The regulator shall be suitable for mounting in the generator switchgear. The regulator shall control the generator exciter field as required to maintain a constant and stable generator output voltage within plus or minus 1/4 of one percent of nominal for all steady-state loads from no load to full load, including a 5 percent variation in frequency and the effects of field heating. The regulator shall be designed for single-phase voltage sensing. Electromagnetic interference suppression shall be an integral part of the regulator. Thermal protection for power semiconductors, inherent overvoltage protection, and fuse protection shall be provided internally in the regulator. No electrolytic capacitors, vacuum tubes, or electromechanical relays shall be used in the voltage regulator. The regulator shall have provisions for switching to manual control to allow the generator voltage to be controlled either manually or automatically. The following regulator components shall be mounted on the front of the generator switchgear:

   a. Voltage adjusting rheostat.

   b. Manual voltage control with adjusting rheostat and manual automatic-off transfer switch.

4. Engine-Generator Instruments and Controls: NEMA ICS 1, 2, 3, 4, and 6.

5. Engine Instruments: Include the following as minimum components:

   a. Lubricating Oil Pressure Gauge: Shall be electronic, utilizing a Bourdon tube for confining the pressure medium. The Bourdon tube shall be seamless and made of phosphor bronze. Gauge shall be accurate to within 2 percent of full scale reading. Gauge subject to rapid pressure surges shall be properly suppressed.

b. Coolant Temperature Indicators: Shall be analog or electronic. Capillary tubing shall be covered with a protective casing throughout its entire length and reinforced with an additional casing at the connection to the bulb or socket. The temperature indicator shall be accurate to within 2 percent of full scale reading.

c. Running Time Meter: Totalize engine running time to 9999.9 hours total.

d. Oil Temperature Gauge: Shall be indicating dial type. Indicator shall be accurate to within 2% of full scale reading.

e. Fuel Pressure Gauge: Shall be indicating dial type, utilizing a Bourdon tube. Gauge shall be accurate to within 2% of full scale reading.

6. Generator Controls and Instruments: NEMA ICS 1, 2, 3, and 4 and shall include the components listed below: Instruments shall comply with ANSI C39.1.

a. Voltmeter and Ammeter: Semiflush mounted electronic type.

b. Frequency Meter: Electronic type.

c. Control Switches: Voltage and ampere ratings suitable for the intended use. Contacts shall be rated in accordance with NEMA Standards ICS 2-125.

d. Generator Output Circuit Breaker: Shall comply with Fed. Spec. W-C-375. Molded case type, trip-free, and shall be mounted to allow operation from outside the control panel. Frame size shall be adequate for generator amperage when operating at standby rating, and an adjustable trip shall be provided. Lugs shall be provided for electrical connections.

e. Voltage adjustment rheostat.

f. Panel lights and control switch.

g. Alarm indicating panel.

h. Remote Annunciator Panels: ANSI/NFPA 99; include engine run and low fuel indicator lights, failure alarm, normal and emergency power status lights, automatic transfer switch position status lights, and remote start/stop switch; surface mounted panel with brushed stainless steel finish.

2.6 GENERATOR CIRCUIT BREAKER: UL 489, molded case, adjustable thermal magnetic trip type circuit breaker. The circuit breaker continuous current rating shall be adequate for the power rating of the engine-generator set and the circuit breaker shall be rated to withstand the short circuit current provided by the generator set. Provide circuit breaker in a NEMA ICS 6, Type 1 enclosure mounted on the engine-generator set.

2.7 BASE ASSEMBLY AND ENCLOSURE: NEMA ICS 6.

A. Engine-Generator: Shall be mounted on a fabricated steel skid base suitable for supporting, transporting, and skidding engine and generator without damage to equipment or alignment.

B. Vibration Isolators: Shall be provided to isolate the engine-generator set from the building floor. At least four isolators, as recommended by the isolator manufacturer, are required.

The isolators shall be manufactured by a firm specializing in this product, and the unit shall be specifically listed for this application and have a maximum deflection of one inch.

2.8 TREATMENT AND PAINTING: All parts, including engine subject to high temperature, shall be treated and painted in accordance with manufacturer's standards. The generator and all associated electrical equipment shall be thoroughly cleaned and treated prior to painting. Color shall be manufacturer's standard.

2.9 AUTOMATIC TRANSFER SWITCH: UL 1008.

A. Automatic Transfer Switch: Provide automatic transfer switch with the number of poles, amperage voltage, and withstand ratings as shown. Transfer switch shall be listed per UL 1008 as a recognized component for emergency systems and rated for all classes of loads when installed in an unventilated enclosure. Electrical operation shall be accomplished by a nonfused momentarily energized solenoid direct operating mechanism or stored energy operator. Mechanical locking in each direction shall be provided. Operation shall be inherently double throw where normal and emergency contacts operate with no intentional delay in mid position. Main pole structures shall be designed so that fault currents result in increased main contact pressure. An overload or short circuit shall not cause the switch to go to a neutral position. Main contacts shall be designed for automatic transfer switch service. Inspection and replacement of all main and separate arcing contacts, moving and stationary, shall be possible from the front of the switch without any disassembly of operating linkages or power conductors. Two circuit breaker system is not acceptable.

B. Accessories: A separately mounted unitized control module shall include:

1. Nonadjustable (one-second, nominal) time delay to override momentary dips in normal power source.

2. Phase voltage relay supervision of three phases of the normal source 65 to 70 percent dropout (D.O.) and 92 to 95 percent pickup (P.U.) to detect "brown-out" conditions.

3. Voltage/frequency lockout relay (90 percent P.U., nominal) to prevent premature transfer.

4. System test switch (momentary type).

5. Engine starting control contacts (one-N.C. and one-N.O.).

6. Auxiliary pilot contacts rated 10 amperes at 480 Vac (one closed on "N" (normal) and one closed on "E" (emergency)).

7. Adjustable 2-25 minutes time delay on retransfer to normal power source.

8. The switch shall have full-rated neutral transfer contacts driven by the main contact shaft.

9. Provide adjustable time delay, 5 to 15 minutes, on shutdown of engine-generator after retransfer of the load to "normal".

10. Pilot lights to indicate source to which the load is connected.

11. Automatic Exerciser - Provide exerciser to function equivalent to a test switch to automatically start and run generator for 15 minutes every 168 hours. Provide selector switch to choose between test with load and test without load conditions.

12. Provide inphase monitor controls for transfer and retransfer of load.

PART 3 EXECUTION

3.1 INSTALLATION: Installation shall conform to the requirements of NFPA 70. Muffler and fuel connections shall be made under the Mechanical sections of this contract.

3.2 DIESEL ENGINE-GENERATOR: Install diesel generating unit as indicated. Provide vibration isolators to isolate vibrations from the diesel generating unit to the foundation.

3.3 TESTING: Perform the following tests on the generator set system provided. The Contracting Officer shall be given 5 working days notice prior to each test. The Contractor shall provide all test equipment, load bank, fuel, lubricants, and personnel and submit written copies of all test results.

A. Factory Tests: The engine-generator shall be subject to the manufacturer's standard run-in and conditioning tests. Following the run-in tests, test the engine-generator set at rated speed and voltage for 4 hours of continuous operation with 2 hours each at 50 and 100 percent of rated load, consecutively, 0.8 power factor. Determine generator frequency, phase current, and voltage and record at 15-minute intervals. Run tests on the voltage regulator to determine the variation in terminal voltage under conditions of constant load, and under conditions of abrupt load changes to determine the maximum voltage change during the surging period and the time required as specified in paragraph entitled "Voltage Regulator".

1. Speed Governing Test: Engine speed governing system shall be tested in accordance with ASME PTC26.

B. Field Tests and Inspections: The Contractor shall perform all field tests and trial operations and conduct all field inspections (except final field inspection). The Contractor shall provide all labor, equipment, load bank, and incidentals required for the tests. The Government Representative(s) will witness all field tests and trial operations and conduct final field inspections. The Contractor shall give the Contracting Officer ample notice of the dates and times scheduled for tests, trial operations, and inspections which require the presence of the Owner Representative. All deficiencies found shall be rectified and work affected by such deficiencies shall be completely retested at the Contractor's expense. A qualified factory representative shall assist the Contractor with the field checkout, startup, and test. Field tests shall include the following:

1. Demonstrate proper operation of all systems.

2. Simulate power failure and demonstrate complete automatic start, load, unload, by-pass, and stop sequence.

3. Conduct 6-hour load run utilizing Contractor-furnished portable load banks as follows:

a. 1/2 load--2 hours

b. Full load--4 hours

C. Failure to Meet Requirements: In the event any of the equipment fails to meet specified performance or fails to operate satisfactorily, the Owner shall have the right to operate the equipment until the defects have been corrected. Any equipment proved to be faulty or inadequate for the service specified will be rejected, but the Owner shall have the right to operate the rejected equipment until such time as new equipment is provided by the Contractor to replace the equipment rejected.

D. Instruction of Operators: After equipment is ready to be placed in service, the Contractor shall provide the services of the manufacturer's technical representative to fully instruct the Owner's designated plant operators in operation and maintenance of the equipment.

E. Cleaning: Clean work under provisions of Division 1. Clean engine and generator surfaces. Replace oil and fuel filters.

F. Operating Permit: Obtain EPA operating permit.

END OF SECTION

SECTION 16301

EXTERIOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.1. RELATED DOCUMENTS

A. General conditions and special provisions preceding these specifications shall govern this section.

B. Specifications and drawings complement each other and what is specified, scheduled or mentioned by one shall be binding as if called for by both. Specifications and drawings are intended to specify nature, quantity, and quality of work. Report any error, conflicts, or omissions to the Owner's Representative (hereafter referred to as Contracting Officer) at least one week before submission of bids for interpretation or clarification. If errors or omissions are not reported, provide necessary work at no costs to Owner to complete intent of specifications and drawings.

1.2. SCOPE OF WORK

A. In general, provide complete conduit riser and underground raceways for electric.

B. Provide all material, labor, tools, and equipment to construct all items as indicated on the drawings and as specified herein; including but not limited to the following:

1. Complete underground raceway system including conduits, service risers, handholes and concrete pads that will be used by the Guam Power Authority, (hereafter referred to as GPA).

2. Coordinate work and arrange for periodic and specified inspections of work by GPA, and Contracting Officer. Request for inspection shall be submitted 2 days in advance.

3. Pass test mandrel through all ducts and conduits and make corrections as directed by inspectors or Contracting Officer.

4. Provide 70 lb. test nylon pull cord in all ducts and conduits, except provide 200 pound test line in all 4" ducts.

5. Immediately report and pay for damages to existing equipment.

C. Obtain and pay for electrical permits, arrange for periodic inspection by local authorities and deliver certificate of final inspection to Contracting Officer.

1.3. SPECIAL CONDITIONS

A. Contractor shall make detailed arrangements for work by utility agencies pertaining to this Contract. Payment to utility agencies for their work shall be by the Contractor. Request shall be submitted at least 7 days in advance for proper coordination.

B. Riser conduit work on utility pole shall be in accordance with utility agency standards.

C. Application for power service must be submitted eight months before service connection to allow for delivery of transformers.

1.4. WORK BY OTHERS

A. Electric utility and equipment by respective utility agencies.

B. Contractor shall schedule their work to allow the utility agencies sufficient time to complete their respective utility work within the time frame allowed under this contract.

1.5. WORKMANSHIP AND REGULATIONS

A. Work shall comply with ordinances of the Government of Guam, Department of Public Works, National Electrical Code, National Electrical Safety Code and applicable specifications and requirements of GPA.

B. Inspection, skill, and competency of workmanship shall be subject to the approval of the inspectors of GPA, and Contracting Officer. All concrete pouring, handhole fabrications, riser conduit erection, and duct laying shall be performed in the presence of the respective utility agencies and company's inspector. Notification shall be given 72 hours in advance.

1.6. DRAWINGS

A. Before installing, verify all dimensions, conditions, and sizes of equipment at job site.

B. During bidding and construction, Contractor shall coordinate his work with utilities and other trades to avoid omissions and overlapping responsibilities.

PART 2 PRODUCTS

2.1. GENERAL: Materials shall be new and those items listed by the Underwriters' Laboratories shall bear "UL" labels of approval.

2.2. CONDUIT

A. Underground conduits shall be PVC, Schedule 40.

B. Rigid Metal Conduits: Rigid aluminum, round bore electrical conduits, and used with threaded fitting. Manufacture and install in accordance with NEC Article 346. Use only where exposed.

C. Conduit and Duct Accessories: Couplings, spacers, plugs and accessories shall be as recommended by the manufacturer of conduits and ducts.

End Bells: End bells matching conduit or duct shall be provided at each entry into handhole or transformer.

2.3. GROUND RODS: Ground rods shall be 3/4" x 10' copperweld.

2.4. HARDWARE: Steel hardware for handholes shall be hot-dipped galvanized after fabrication.

2.5. STRUCTURAL REINFORCING BARS: Intermediate grade steel, deformed, and meeting ASTM Specifications A-15.

2.6. WIRE MESH: Welded steel wire fabric for reinforcing concrete, galvanized conforming to ASTM Specification A-185.

2.7. CONCRETE: Ready mixed type with compressive strengths as shown on drawing. Concrete material and aggregates shall be No. 3 fine.

2.8. BACKFILL MATERIAL

A. Selected Backfill: Sand, earth or earth and gravel mixture. If earth and gravel mixture, rock size shall be 1-inch or smaller and shall not contain more than 50% rock particles by volume. This fill shall be used over concrete encased ducts and over buried ducts after sand cushion has been placed, in accordance with drawings.

B. Sand Cushion: Manufactured sand or beach sand. This fill shall be used all around direct buried conduits as shown on the drawings.

2.9. WIRES AND CABLES

A. Ground Wire: as indicated.

B. Wires: 600 volts, No. 12 AWG minimum, copper conductor. Size No. 12 to 10 solid; No. 8 and larger stranded. National Electrical Code insulation: THW, RHW, THWN. Manufacture and install according to NEC Articles 300 and 310.

PART 3 PART 3 EXECUTION

3.1. TRENCH EXCAVATIONS

A. Dimensions and locations of trenches for handholes, pads, conduits and ductlines shall be as shown on the drawings. Trench width and depth shall be sufficient to accommodate proper installation of conduit banks.

B. Where a trench is excavated on slope, sides are to be vertical, and depth measured at lowest side. All measurements are to be based on final grade.

C. All trench bottoms are to be flat and smooth.

D. Trenches shall be widened at concrete transformer pad sites to permit proper entry of conduits.

E. Trenches shall be approved by utility inspector before any ducts are placed.

F. All excavations for handholes and pullboxes in excess of the depths required shall be filled with concrete or crushed rock.

G. Sheathing and bracing as required shall be provided to support sides of excavations from cave-ins.

H. Provide drainage and pumps to keep trenches dry.

I. Saw cut all edges of existing sidewalks and pavement before trenching.

3.2. BACKFILL

A. Concrete encasement or sand cushion backfilling shall be done after duct, pullbox and conduit installations have been approved by GPA and the Contracting Officer.

B. Sand cushion around direct buried conduit shall be 4" thick.

C. Selected backfill shall be used over concrete encased ducts only and sand cushioned ducts.

D. Backfilling shall be to finished grades shown on accompanying drawings and matching existing conditions.

E. Backfill material shall be completely free of wood or other debris.

F. Sand cushion around conduits shall be installed under supervision of utility agencies' inspectors.

G. Backfill material shall be placed in maximum of 12" layers in loose thickness before compacting. Backfill shall be thoroughly compacted with hand or mechanical tampers, and in no case, tamping shall be accomplished by using the wheels or tracts of a vehicle.

3.3. GPA TRANSFORMER PAD AND LOT

A. Slope of lots for concrete pads shall not exceed one-inch rise in one foot run.

B. Grade sufficiently around lots to prevent future filling of lots.

C. Concrete pad shall be level. The pad elevation shall be 2" above the highest sidewalk grade.

3.4. INSTALLATION OF CONDUIT AND DUCT BANKS

A. Trench bottom shall be clean, smooth, well graded and approved by utility agency inspectors.

B. Saw, cut, ream and taper ducts and conduits with manufacturer approved tool.

C. Coupling shall be tight to prevent entry of dirt or concrete into ducts and conduits.

D. Provide plastic spacers to maintain proper separation between ducts.

E. Conduits and duct run change of direction shall not exceed 4 degrees per length of conduit or duct. Radii and turns shall be made with appropriate duct short lengths.

F. Ducts shall be clean and free from debris and rubbish.

G. Concrete encasement shall be 3" all around duct bank.

H. When pouring concrete prevent heavy masses of concrete from falling directly on ducts. If unavoidable, protect ducts with plank.

I. Direct flow of concrete down sides of duct bank to bottom, to center, and then to rise up in middle thus filling all open spaces uniformly.

J. To insure against voids, work a long, flat splicing bar or spatula liberally and carefully up and down the vertical rows of ducts.

K. Cure for a minimum 72 hours before permitting traffic and backfilling.

L. During construction provide temporary conduit plugs at the end of conduit banks to prevent entry of dirt, rubbish, debris or concrete at end of each day's work.

M. Pass smooth bullet-shaped wooden test mandrel through the entire length of each duct or conduit to test for freedom of burrs and obstructions.

N. Install 70 lbs. nylon pull cord in each conduit after testing, except install 200 pound line in 4" ducts.

O. Apply thin coat of sealing compound on ducts and conduits at couplings and bells.

P. Couplings and bells shall be tight to prevent entry of dirt or concrete into ducts and conduits.

3.5. CONCRETE WORK

A. Concrete, ready mixed according to ASTM C-94-47.

B. Convey concrete from mixer to forms rapidly to prevent segregation. Free drop shall be limited to 5', unless authorized by inspector.

C. Placing:

1. Clean and remove all debris from inside forms and trenches before placing concrete.

2. Place concrete only on clean damp surfaces, but free from water.

3. Place concrete in forms in horizontal layers not exceeding 18" thickness.

4. Place concrete to avoid segregation of materials and displacement of ducts, inserts and reinforcing.

D. Forming:

1. Forms shall be of good sound lumber with sufficient strength and conforming to shapes and dimensions indicated on drawings.

2. Forms shall be treated with non-staining form oil immediately before each use.

E. Patching: Patch all voids, pour joints and holes before concrete is thoroughly dry. Use mortar of same proportions as original concrete.

F. Curing: Curing of concrete shall be accomplished by impervious membrane method with liquid membrane compound. Apply two or more coats of total one (1) gallon for one hundred and fifty (150) square feet of concrete surface.

G. Reinforcing Steel:

1. Clean reinforcing of mill or rust scale and form to dimensions indicated.

2. Install reinforcing in proper locations and secure in place to prevent movement during concrete placing or vibrating.

H. Hollow Concrete Block Work:

1. Hollow block shall be laid in full bed of mortar both horizontally and vertically and joints shall be tooled.

2. Mortar shall be one (1) part cement and three (3) parts sand thoroughly mixed and used when fresh. Retamping will not be allowed.

3. Setting bed shall be of depth required to bring top of blocks flush with finish line.

I. Finishing:

1. Handhole floors shall have integral cement topping with smooth metal trowelled finish.

2. Removable concrete covers for handholes shall be finished to match the adjacent sidewalk.

3.6. STRUCTURAL STEEL AND MISCELLANEOUS METAL WORK: Structural steel work including bolts, nuts, anchors, pulling-in irons, etc. shall be galvanized by hot-dipped process after fabrication into largest practical sections.

3.7. UNDERGROUND UTILITIES: Underground utilities indicated on plans, are approximate in location. It is not the intention of plans to imply that all existing utilities are drawn and located. It shall be the responsibility of Contractor to coordinate locations of existing utilities prior to doing any excavation work.

3.8. CLEANING AND REPAIRING

A. During the progress of work, all rubbish, waste, lumber, displaced materials, etc. shall be removed as soon as possible and upon completion of the work, Contractor shall remove from Owner's property and from all public and private property, at his own expense, all temporary structures, rubbish and waste material resulting from his operations.

B. The Contractor shall restore all removed or damaged pavement, gutters, curbs, sidewalks, sign posts, trees and landscape to as near their original conditions or better.

3.9. SOIL TREATMENT

A. All electrical backfill shall be treated with toxicant. Toxicant shall be registered with the Environmental Protection Agency (EPA) for use as specified herein. The toxicant shall be chlorpyrifos phosphorothiate, 1.0% concentration by weight. Diluent shall not include other pesticide residues or rinsates.

B. Application:

1. Licenses and Certification Requirements: The Contractor shall be licensed by the applicable agency responsible for enforcing the Federal Insecticide, Fungicide, and Rodenticide Act as amended (FIFRA), in the category required for performance of this contract. Pesticide applications shall be made by a certified applicator.

2. Application: Toxicant shall be applied by spraying after conduits have been covered by one foot of soil but prior to compaction. Application shall be at rate of 1.5 gallons per 10 square feet.

END OF SECTION

SECTION 16402

INTERIOR WIRING SYSTEMS

PART 1 GENERAL

1.1 RELATED REQUIREMENTS: Section 16050, "Basic Electrical Materials and Methods," applies to this section with additions and modifications specified herein.

1.2 SUBMITTALS

A. Shop Drawings - Submit for the following:

Panelboards
Transformers

B. Manufacturer's Data:

Receptacles
Circuit breakers
Switches
Conduit and fittings (each type)
Ground rods
Device plates
Insulated conductors
Outlet and junction boxes
Transformers

C. Test Reports: Submit test results for approval in report form.

1. Transformer tests: Submittal shall include routine NEMA ST20 transformer test results on each transformer and also contain the results of NEMA "design" and "prototype" tests that were made on transformers electrically and mechanically equal to those specified.

2. 600-volt wiring test.

3. Grounding system test.

1.3 QUALITY ASSURANCE: In each standard referred to herein, consider the advisory provisions to be mandatory, as though the word "shall" has been substituted for "should" wherever it appears. Interpret references in these standards to "authority having jurisdiction.

A. SD-01, DATA

1. Short-Circuit and Protective Devices Coordination Studies: Studies which demonstrate that the equipment selected, and system constructed meet the contract requirements for equipment ratings and coordination and protection. The studies shall include a complete single-line diagram of the power system covered by this specification; a short circuit study including the maximum and minimum values of short circuit currents at major buses extended down to system buses where currents are equal to 10,000 amperes symmetrical; utility company data including system voltage, transformer ratios, and relay device numbers and settings; and existing

power system data including time-current characteristic curves including recommended ratings and settings of all protective devices in tabulated form; and associated calculations to demonstrate that the power system or equipment submitted. Situations where system coordination is not achievable due to device limitations along with inadequate interrupting ratings shall be noted. These studies shall be performed by the registered Professional Engineer.

2. Equipment Performance: Data consisting of manufacturer's time-current characteristic curves for individual protective devices, recommended settings of adjustable protective devices, and recommended ratings of non-adjustable protective devices.

3. Qualifications: Verification of experience and license number of a registered Professional Engineer with at least four years of current experience in the design or coordinated power system protection. Experience data shall include at least five references for work of magnitude comparable to this contract, including points of contact, addresses and telephone numbers. This engineer must perform items required by this section to be performed by a registered Professional Engineer.

PART 2 PRODUCTS

2.1 MATERIALS AND EQUIPMENT: Materials, equipment and devices shall, as a minimum, meet the requirements of UL, where UL standards are established for those items, and the requirements of NFPA 70.

2.2 CONDUIT AND FITTINGS

A. Rigid Steel Conduit (Zinc-Coated): ANSI C80.1, UL 6.

B. Rigid Aluminum Conduit: ANSI C80.5, UL 6.

C. Rigid Nonmetallic Conduit: PVC Type EPC-40, in accordance with NEMA TC2.

D. Electrical Metallic Tubing (EMT): UL 797, ANSI C80.3.

E. Flexible Metal Conduit: UL 1.

1. Liquid-Tight Flexible Metal Conduit (Steel): UL 360.

F. Fittings for Metal Conduit, EMT and Flexible Metal Conduit: UL 514B. Ferrous fittings shall be cadmium- or zinc-coated in accordance with UL 514B.

1. Fittings for Rigid Metal Conduit and IMC: Threaded type. Split couplings unacceptable.

2. Fittings for EMT: Compression-type.

3. Fittings for use in Hazardous Locations: UL 886.

G. Fittings for Rigid Nonmetallic Conduit: NEMA TC3.

2.3 OUTLET BOXES AND COVERS: UL 514A, cadmium- or zinc-coated, if of ferrous metal. UL 514C, if nonmetallic.

A. Outlet Boxes in Hazardous Locations: UL 886.

B. Floor Outlet Boxes: Boxes shall be adjustable and concrete-tight. Each outlet shall consist of a nonmetallic or cast-metal body with threaded openings or sheet-steel body with knockouts for conduits, adjustable ring, brass flange ring, and cover plate with 3/4-inch 1-inch or threaded plug. Receptacle outlets shall consist of flush brass housing with a duplex-type receptacle, as specified herein. Gaskets shall be used where necessary to ensure watertight installation.

2.4 CABINETS, JUNCTION BOXES AND PULL BOXES (WITH VOLUME GREATER THAN 100 CUBIC INCHES): UL 50, hot-dip zinc-coated, if of sheet steel.

2.5 WIRES AND CABLES: Wires and cables shall meet the applicable requirements of NFPA 70 and UL for the type of insulation, jacket, and conductor specified or indicated. Wires and cables manufactured more than 12 months prior to date of delivery to the site shall not be used.

A. Conductors: No. 10 AWG and smaller shall be solid; No. 8 AWG and larger shall be stranded. Conductors shall be copper, unless indicated otherwise.

1. Minimum Conductor Sizes: Minimum size for branch circuits shall be No. 12 AWG; for Class 1 remote-control and signal circuits, No. 14 AWG; and for Class 2 Low-energy, remote-control and signal circuits, No. 16 AWG.

B. Color Coding: Provide for all service, feeder, branch, control, and signaling circuit conductors. Color shall be green for grounding conductors, and white for neutrals, except where neutrals of more than one system are installed in same raceway or box, the other neutral shall be white with a colored (not green) stripe. The color of the ungrounded conductors in different voltage systems shall be as follows:

1.	120/208 volt, 3-phase:	Phase A - black Phase B - red Phase C - blue
2.	277/480 volt, 3-phase:	Phase A - brown Phase B -orange Phase C -yellow
3.	120/240 volt, single phase:	red and black.

C. Insulation: Unless specified or indicated otherwise or required by NFPA 70, all power and lighting wires shall be 600-volt, Type THW, THWN, XHHW, or RHW, except that grounding wire may be Type TW; remote-control and signal circuits shall be Type TW, THW or TF. Conductors shall conform to UL 83. Where lighting fixtures require 90 degree C conductors, provide only conductors with 90 degree C insulation or better.

D. Bonding Conductors: ASTM B 1, solid bare copper wire for sizes No. 8 AWG and smaller diameter; ASTM B 8, Class B, stranded bare copper wire for sizes No. 6 AWG and larger diameter.

E. Service-Entrance (SE) and Underground Service-Entrance (USE) Cables: UL 854.

2.6 SPLICES AND TERMINATION COMPONENTS: UL 486A for wire connectors, and UL 510 for insulating tapes. Connectors for wires No. 10 AWG and smaller diameter wires shall be insulated,

pressure-type in accordance with UL 486A or UL 486C (twist-on splicing connector). Provide solderless terminal lugs on stranded conductors.

2.7 DEVICE PLATES: Provide UL listed, one-piece device plates for outlets and fittings to suit the devices installed. Plates on finished walls shall be urea or phenolic, minimum 0.10-inch wall thickness. Plates shall be the same color as the receptacle or toggle switch with which they are mounted. Screws shall be machine type with countersunk heads in a color to match the finish of the plate. The use of sectional type device plates will not be permitted. Plates installed in wet locations shall be gasketed and UL listed for "wet locations".

2.8 SWITCHES

A. Toggle Switches: Fed. Spec. W-S-896, totally enclosed with bodies of thermosetting plastic and a mounting strap. Handles shall be ivory. Wiring terminals shall be of the screw type, side wired. Switches shall be rated quiet-type AC only, 120/277 volts, with the current rating and number of poles indicated.

B. Disconnect Switches: NEMA KS1. Switches serving as motor-disconnect means shall be horsepower rated. Provide heavy duty type switches where indicated, where switches are rated higher than 240 volts, and for double throw switches. Fused switches shall utilize Class R fuseholders and fuses, unless indicated otherwise. Provide switches in NEMA enclosure as indicated, per NEMA ICS 6.

C. Breakers Used as Switches: For 120-Volt LED, mark breakers "SWD" in accordance with UL 489.

2.9 RECEPTACLES: UL 498 and NEMA WDI, heavy-duty, specification grade grounding type. Ratings and configurations shall be as indicated. Wiring terminals shall be of the screw type, side wired. Connect grounding pole to the mounting strap. Bodies shall be ivory thermosetting plastic supported on a metal mounting strap.

A. Weatherproof Receptacles: Provide in a cast metal box with a gasketed, weatherproof, cast-metal cover plate and a gasketed cap over each receptacle opening. Receptacle shall be UL approved for use in "wet locations". All outdoor-location receptacles shall be GFCI and weather-resistant rated. Device cover shall be weatherproof rated, “in-use” type.

B. Ground Fault Circuit Interrupter (GFCI) Receptacles: UL 943, duplex type for mounting in a standard outlet box. The device shall be capable of detecting a current leak of 6 milliamperes or greater and tripping per requirements of UL 943 for Class A GFCI devices.

2.10 PANELBOARDS: UL 67 and UL 50. Panelboards for use as service disconnecting means shall additionally conform to UL 869. Panelboards shall be circuit breaker equipped bolt on type. Design shall be such that any individual breakers can be removed without disturbing adjacent units or without loosening or removing supplemental insulation supplied as a means of obtaining clearances as required by UL. Where "space only" (PFB) is indicated, make provisions for the future installation of a breaker sized as indicated. All panelboard locks shall be keyed same. Directories shall be typed to indicate load served by each circuit and mounted in a holder behind transparent protective covering.

A. Panelboard Buses: Provide panelboard with copper bus. Support bus bars on bases independent of the circuit breakers. Main buses and back pans shall be designed so that breakers may be changed without machining, drilling, or tapping. Provide an isolated neutral bus in each panel for connection of circuit neutral conductors. Provide a separate ground bus identified as equipment grounding bus per UL 67 for connecting grounding connectors; bond to steel cabinet.

B. Circuit Breakers: Fed. Spec. W-C-375 thermal magnetic type with interrupting capacity as indicated. Series rated circuit breakers are unacceptable. Breaker terminals shall be UL listed as suitable for the type of conductor provided. Plug-in circuit breakers unacceptable.

1. Multipole Breakers: Provide common-trip type with a single operating handle. Breaker design shall be such that an overload in one pole automatically causes all poles to open. Maintain phase sequence throughout each panel so that any three adjacent breaker poles are connected to Phases A, B and C, respectively.

2. Circuit Breaker with GFCI: UL 943 and NFPA 70. Provide with "push-to-test" button, visible indication of tripped condition, and ability to detect and trip on current imbalance of 6 milliamperes or greater per requirements of UL 943 for Class A GFCI devices.

2.11 ENCLOSED CIRCUIT BREAKERS: UL 489. Individual molded case circuit breakers with voltage and continuous current ratings, number of poles, overload trip setting, and short circuit interrupting rating as indicated. Enclosure type as indicated. Provide solid neutral.

2.12 TRANSFORMERS: NEMA ST20, general-purpose, dry-type, self-cooled, sealed. Provide transformers in a NEMA 1 enclosure. Transformer shall have 220 degrees C insulation system for transformer 15kVA and greater and shall have 180 degrees C insulation for transformers rated 10kVA and less, with temperature rise not exceeding 80 degrees C under full-rated load in maximum ambient of 40 degrees C. Transformer of 80 degrees C temperature rise shall be capable of carrying continuously 130 percent of nameplate kVA without exceeding insulation rating. Transformers shall be quiet type with maximum sound level of minimum 3 decibels less than NEMA standard level for transformer ratings indicated.

2.13 GROUNDING AND BONDING EQUIPMENT: UL 467. Ground rods shall be copper-encased steel, with minimum diameter of 3/4 inch and minimum length of 10 feet.

2.14 HAZARDOUS LOCATIONS: Electrical materials, equipment and devices for installation in hazardous locations, as defined by NFPA 70, shall be specifically approved by Underwriters' Laboratories, Inc., or Factory Mutual for the particular "Class", "Division", and "Group" of hazardous locations involved. The boundaries and classifications of hazardous locations shall be as indicated.

2.15 CONTACTOR: NEMA ICS 2, electrically operated, mechanically held contactor rated as indicated. Provide in NEMA 1 enclosure conforming to NEMA ICS 6. Contactor shall have silver alloy double-break contacts and coil clearing contactor with hand-off automatic selector switch.

2.16 NAMEPLATES: Fed. Spec. L-P-387. Provide as specified in Section 16050, "Basic Electrical Materials and Methods."

2.17 SOURCE QUALITY CONTROL: Test opening around electrical penetrations through fire resistive-rated walls, partitions, floor or ceiling for fire resistive integrity in accordance with ASTM E 814.

PART 3 EXECUTION

3.1 INSTALLATION: Electrical installations shall conform to requirements of NFPA 70 and to requirements specified herein.

A. Underground Service: Underground service conductors and associated conduit shall be continuous from service entrance equipment to outdoor power system connection.

B. Hazardous Locations: Work in hazardous locations, as defined by NFPA 70, shall be performed in strict accordance with NFPA 70 for the particular "Class", "Division", and "Group" of hazardous locations involved. Provide conduit and cable seals where required by NFPA 70. All conduit shall have tapered threads.

C. Service Entrance Identification: Service entrance disconnect devices, switches, or enclosures shall be labeled or identified as such.

1. Labels: Wherever work results in service entrance disconnect devices in more than one enclosure, as permitted by NFPA 70, each enclosure, new and existing, shall be labeled as one of several enclosures containing service entrance disconnect devices. Label, at minimum, shall indicated number of service disconnect devices housed by enclosure and shall indicate total number of enclosures that contain service disconnect devices. Provide laminated plastic labels. Use lettering of at least 0.25 inch in height and engrave on black-on-white matte finish. Service entrance disconnect devices in more than one enclosure shall be provided only as permitted by NFPA 70.

D. Wiring Methods: Provide insulated conductors installed in conduit, except where specifically indicated or specified otherwise, or required by NFPA 70 to be installed otherwise. Provide insulated, green equipment grounding conductor in all feeder and branch circuits, including lighting circuits. Grounding conductor shall be separate from electrical system neutral conductor. Provide insulated, green conductor for grounding conductors installed in conduit or raceways. Minimum conduit size shall be 3 /4 inch in diameter for low voltage lighting and power circuits. Vertical distribution in multiple story buildings shall be made with metal conduit in fire-rated shafts. Metal conduit shall extend through shafts for minimum distance of 6 inches. Conduit which penetrates fire walls, fire partitions, or floors shall be metallic on both sides of fire walls, fire partitions, or floors for minimum distance of 6 inches.

1. Aluminum Conduit: Use in exposed installation and in unairconditioned spaces.

a. Do not install underground or encase in concrete.

b. Do not use brass or bronze fittings.

2. Electrical Metallic Tubing: Use in dry partitions and above drop ceiling.

a. Do not use in feeder circuits.

b. Do not install underground.

c. Do not encase in concrete.

d. Do not use in areas where subject to severe physical damage (including, but not limited to, mechanical equipment rooms and electrical equipment rooms).

e. Do not use in hazardous areas.

f. Do not use in outdoor work.

3. Nonmetallic Conduit:

a. Underground Conduit: PVC, Type EPC-40; or fiberglass.

b. Conduit Embedded in Concrete: PVC, Type EPC-40.

c. Restrictions applicable to PVC Schedule 40 and PVC Schedule 80:

(1) Do not use in areas subject to severe physical damage (including, but not limited to, mechanical equipment rooms, electrical equipment rooms, etc.).

(2) Do not use in hazardous areas.

(3) Do not use in penetrating fire-rated walls or partitions, fire rated floors, etc.

E. Conduit Installation: Unless indicated otherwise, conceal conduit within finished walls, ceilings, and floors. Keep conduit minimum 6 inches away from parallel runs of flues and steam or hot-water pipes. Install conduit parallel with or at right angles to ceilings, walls, and structural members were located above accessible ceilings and where conduit will be visible after completion of project.

1. Where conduits rise through floor slabs, the curved portion of bends shall not be visible above the finish slab.

2. Conduit Support: Support conduit by pipe straps, wall brackets, hangers, or ceiling trapeze. Fasten by wood screws to wood; by toggle bolts on hollow masonry units; by concrete inserts or expansion bolts on concrete or brick; by machine screws, welded threaded studs, or spring-tension clamps on steel work. Threaded C-clamps may be used on rigid steel conduit only. Do not weld conduits or pipe straps to steel structures. The load applied to fasteners shall not exceed one-fourth of the proof test load. Fasteners attached to concrete ceiling shall be vibration resistant and shock resistant. Holes cut to a depth of more than 1-1/2 inches in reinforced concrete beams or to a depth of more than 3/4-inch in concrete joints shall not cut the main reinforcing bars. Fill unused holes. In partitions of light steel construction, use sheet-metal screws. In suspended-ceiling construction, run conduit above the ceiling. Spring steel fasteners may be used for lighting branch circuit conduit supports in suspended ceiling in dry locations. Support exposed risers in wire shafts of multi-story buildings by U-clamp hangers at each floor level and at 10 feet maximum intervals. Where conduit crosses building expansion joints provide a suitable watertight expansion/deflection fitting that maintains the conduit electrical continuity by bonding jumpers or other means.

3. Make changes in direction of runs with symmetrical bends or cast-metal fittings. Make field-made bends and offsets with a hickey or conduit-bending machine. Do not install crushed or deformed conduits. Avoid trapped conduits. Prevent plaster, dirt, or trash from lodging in conduits, boxes, fittings, and equipment during construction. Free clogged conduits of all obstructions.

4. Install pull wires in empty conduit in which wire is to be installed by others. The pull wire shall be plastic having minimum 200-pound tensile strength. Leave a minimum 12 inches of slack at each end of the pull wire.

5. Conduit Installed in Concrete Floor Slabs: Locate so as not to adversely affect the structural strength of the slabs. Install conduit within the middle one-third of the

concrete slab. Do not stack conduits. Space conduit horizontally minimum three diameters except at cabinet locations. Curved portions of bends shall not be visible above the finish slab. Increase slab thickness as necessary to provide a minimum one-inch cover over conduit. Where embedded conduits cross expansion joints, provide suitable watertight expansion/deflection fittings and bonding jumpers. Conduit larger than one-inch trade size shall be parallel with or at right angles to the main reinforcement; when at right angles to the reinforcement, the conduit shall be close to one of the supports of the slab. Where nonmetallic conduit is used, raceway must be converted to plastic coated rigid steel before rising above floor, unless specifically indicated otherwise.

6. Fasten conduits to sheet metal boxes and cabinets with two locknuts where required by NFPA 70, where insulated bushings are used, and where bushings cannot be brought into firm contact with the box; otherwise, use minimum single locknut and bushing. Locknuts shall have sharp edges for digging into the wall of metal enclosures. Install bushings on the ends of conduits and provide insulating type where required by NFPA 70.

7. Stub-Ups: Provide conduits stubbed up through concrete floor for connection to free-standing equipment with an adjustable top or coupling threaded inside for plugs, set flush with the finished floor. Extend conductors to equipment in rigid steel conduit, except that flexible metal conduit may be used 6 inches above the floor. Where no equipment connections are made, install screwdriver-operated threaded flush plugs in conduit end.

8. Flexible Connections: Provide flexible connections of short length, 6 feet maximum, for recessed and semi-recessed lighting fixtures; for equipment subject to vibration, noise transmission, or movement; and for all motors. Provide liquid-tight flexible conduit in wet locations. Provide separate ground conductor across flexible connections.

F. Boxes, Outlets and Supports: Provide boxes in the wiring or raceway systems wherever required for pulling of wires, making connections, and mounting of devices or fixtures. Boxes for metallic raceways shall be of the cast-metal hub type when located in wet locations, when surface mounted on outside of exterior surfaces, when installed exposed up to 7 feet above interior floors and walkways, or when installed in hazardous areas. Boxes in other locations shall be sheet steel, except that aluminum boxes may be used with aluminum conduit; nonmetallic boxes may be used with nonmetallic conduit system. Each box shall have the volume required by NFPA 70 for the number of conductors enclosed in the box. Boxes for mounting lighting fixtures shall be minimum 4 inches square or octagonal, except that smaller boxes may be installed as required by fixture configurations, as approved. Boxes for use in masonry-block or tile walls shall be square-cornered tile-type, or standard boxes having square-cornered tile-type covers. Provide gaskets for cast-metal boxes installed in wet locations and boxes installed flush with the outside of exterior surfaces. Provide separate boxes for flush or recessed fixtures when required by the fixture terminal operating temperature; fixtures shall be readily removable for access to the boxes unless ceiling access panels are provided. Support boxes and pendants for surface-mounted fixtures on suspended ceilings independently of the ceiling supports or make adequate provisions for distributing the load over the ceiling support members. Fasten boxes and supports with wood screws on wood, with bolts and expansion shields on concrete or brick, with toggle bolts on hollow masonry units and with machine screws or welded studs on steel. In open overhead spaces, cast boxes threaded to raceways need not be separately supported except where used for fixture support; support sheet metal boxes directly from the building structure or by bar hangers. Where bar hangers are used, attach the bar to raceways on

opposite sides of the box and support the raceway with an approved type fastener maximum 24 inches from the box. When penetrating reinforced-concrete members, avoid cutting any reinforcing steel.

1. Boxes for use with raceway systems shall be minimum 1-1/2 inches deep, except where shallower boxes required by structural conditions are approved. Boxes for other than lighting-fixture outlets shall be minimum 4 inches square, except that 4 inch by 2 inch boxes may be used where only one raceway enters the outlet.

2. Pull Boxes: Construct of at least the minimum size required by NFPA 70 of code-gage aluminum or galvanized sheet steel, except where cast-metal boxes are required in locations specified herein. Furnish boxes with screw-fastened covers. Where several feeders pass through a common pull box, tag the feeders to indicate clearly the electrical characteristics, circuit number, and panel designation.

G. Mounting Heights: Mount panelboards, circuit breakers, and disconnecting switches so the height of the operating handle at its highest position maximum 72 inches above the floor. Mount lighting switches receptacles and other devices as indicated. Measure mounting heights of wiring devices and outlets to the center of device or outlet.

H. Conductor Identification: Provide conductor identification within each enclosure where a tap, splice, or termination is made. For conductors No. 6 AWG and smaller diameter, color coding shall be by factory-applied color-impregnated insulation. For conductors No. 4 AWG and larger diameter, color coding shall be by plastic-coated self-sticking markers, colored nylon cable ties and plates, or heat-shrink type sleeves. Identify control circuit terminations.

I. Splices: Make splices in accessible locations. Make splices in conductors No. 10 AWG and smaller diameter with an insulated pressure type connector. Make splices in conductors No. 8 AWG and larger diameter with a solderless connector and cover with an insulation material equivalent to the conductor insulation.

J. Covers and Device Plates: Install with edges in continuous contact with finished wall surfaces without the use of mats or similar devices. Plaster fillings are not permitted. Plates shall be installed with an alignment tolerance of 1/16 inch. The use of sectional type device plates are not permitted. Plates installed in wet locations shall be gasketed.

K. Electrical Penetrations: Openings around electrical penetrations through fire resistance rated walls, partitions, floors, or ceilings shall be sealed to maintain fire resistive integrity as tested per ASTM E 814.

L. Grounding and Bonding: In accordance with NFPA 70. Ground all exposed non-current-carrying metallic parts of electrical equipment, metallic raceway systems, grounding conductor in metallic and nonmetallic raceways, and neutral conductor of wiring systems. Make ground connection to driven ground rods on the exterior of the building. Where ground fault protection is employed, ensure that the connection of ground and neutral does not interfere with the correct operation of the fault protection. Bond building foundation rebars to ground.

1. Grounding Conductor: Provide an insulated, green equipment grounding conductor in all feeder and branch circuits including lighting circuits. Grounding conductor shall be separated from the electrical system neutral conductor. Provide insulated, green conductor for grounding conductors installed in conduit or raceways.

2. Resistance: The maximum resistance to ground of the grounding system shall not exceed 25 ohms under normally dry conditions. Where the resistance obtained exceed 25 ohms provide additional ground rods to achieve the resistance level. Spacing of ground rods shall not exceed 10 feet apart.

M. Elevator: Provide circuit to line terminals of elevator controller, and disconnect switch on line side of controller, outlet for control power, outlet receptacle and work light at midheight of elevator shaft, and work light and outlet receptacle in elevator pit.

N. Owner-Furnished Equipment: The Contractor shall make connections to Owner-furnished equipment to make equipment operate as intended, including providing miscellaneous items such as plugs, receptacles, wire, cable, conduit, flexible conduit, and outlet boxes or fittings.

O. Motor Load: When motor size provided differs from the size indicated or specified, make adjustments to the wiring, disconnect devices, and branch circuit protection to accommodate the equipment actually provided.

3.2 FIELD QUALITY CONTROL: Furnish test equipment and personnel and submit written copies of test results to the Contracting Officer. Give five working days notice prior to each test.

A. Devices Subject to Manual Operation: Each device subject to manual operation shall be operated at least five times, demonstrating satisfactory operation each time.

B. Transformer Tests: Perform tests classified as routine in accordance with NEMA ST 20 on each transformer.

C. Test on 600-Volt Wiring: Test all 600-volt wiring to verify that no short circuits or accidental grounds exist. Perform insulation resistance tests on all wiring No. 6 AWG and larger diameter using an instrument which applies a voltage of approximately 500 volts to provide a direct reading of resistance; minimum resistance shall be 250,000 ohms.

D. Grounding System Test: Test the grounding system to ensure continuity and resistance to ground is not excessive. Test each ground rod for resistance to ground before making any connections to the rod; tie grounding system together and test for resistance to ground. Make resistance measurements in dry weather, not earlier than 48 hours after rainfall. Submit written results of each test to the Contracting Officer and indicate the location of the rods as well as the resistance and soil conditions at the time the measurements were made.

END OF SECTION

SECTION 16475

INTERIOR SWITCHGEAR AND SWITCHBOARDS, LOW-VOLTAGE

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS: Section 16050, "Basic Electrical Materials and Methods," applies to this section, with the additions and modifications specified herein. Equipment, materials, installation, and workmanship shall be in accordance with the required and advisory provisions of NFPA 70. Materials not normally furnished by the manufacturer of the equipment shall be provided in Section 16301, "Underground Electrical Work" and Section 16402, "Interior Wiring Systems".

1.2 SUBMITTALS

A. Manufacturer's Data

1. Switchboards;
2. Meters;
3. Relays; and
4. Circuit Breakers.

B. Shop Drawings: Furnish drawings for switchboards including, but not limited to, the following:

1. Overall dimensions and front view;
2. Ampere ratings of bus bars;
3. Maximum short circuit bracing;
4. Circuit breaker type, interrupting rating, trip setting;
5. Provision for future extension;
6. Elementary diagrams and wiring diagrams with terminals identified, and indicating prewired interconnections between items of equipment and the interconnection between the items; and
7. One-line diagrams.

C. Certified Laboratory Test Reports:

1. Switchgear Production Tests: Furnish reports which include results of production tests performed according to ANSI C37.20.

2. Switchgear Paint Qualification Test: Furnish reports showing that the paint qualification test of UL 1558 has been performed to ensure the adequacy of finishes to inhibit the buildup of rust on ferrous metal materials used for enclosures.

3. Switchboard Production Tests: Furnish reports which include results of production tests performed according to NEMA PB 2.

D. Operation and Maintenance Manuals:

1. Switchboards

E. Field Tests Reports: Certified copies of dielectric tests reports.

F. Ground Resistance Tests Reports: Upon completion and before final acceptance of the work, submit the measured ground resistance of each ground rod and grounding system, indicating the location of the rod and grounding system and soil condition at the time the measurements were taken.

PART 2 PRODUCTS

2.1 SWITCHBOARDS: NEMA PB 2, deadfront, metal-enclosed, self-supported type. Main bus shall be rated as indicated. Switchboard shall be UL listed as service entrance equipment. Devices shall be front accessible and shall be completely isolated between sections by vertical steel barriers. Provide switchboard in NEMA ICS 6 Type 1 enclosure. Switchboard shall be factory engineered and assembled, including protective devices and equipment indicated with necessary interconnections, instrumentations, and control wiring. Switchboard shall consist of main, auxiliary and distribution sections.

A. Bus Bars: Copper with silver-plated contact surfaces. Plating shall be a minimum of 0.0002 inches thick. Make bus connections and joints with hardened steel bolts. A full-capacity bus shall connect sections together, with provisions for future expansion. Buses shall be insulated from the devices so that the only exposed energized parts will be at the point of connection to devices. Locate each bus horizontally in the rear of each section behind the components and vertically centered. Support and brace the buses for the short circuit current specified. Provide and secure ground bus to each vertical switchboard section and extend ground bus to the entire length of the structure. Size neutral bus 100 percent of full load amperes.

B. Main Protective Device: Individually mounted molded-case circuit breaker removable from the front of the switchboard.

1. Molded Case Circuit Breaker: UL 489. Manually operated, rated as indicated, equipped with solid-state trips, with current sensors and solid-state logic circuits integral to the circuit breaker frame. The solid-state current control shall provide adjustable ampere setting, adjustable long-time delay, short-time delay, and adjustable instantaneous trip. Settings shall be located behind cover to deter tampering. Provide ground fault protection having solid-state circuitry as an integral part of the circuit breaker frame.

C. Auxiliary Section: Provide a watthour meter with 15 - minute maximum demand register, ammeter with integral peak current demand indicator, voltmeter, selector switches, potential transformers, current transformers in each phase, and related control wiring, fuses, and accessories.

1. Watthour Meter: ANSI C12.10 with 3-wire, single pole double throw, quick-make, quick-break pulse initiator. Coordinate pulse output ratio with main circuit breaker rating.

2. Mechanical Demand Register: ANSI C12.4.

3. Voltmeter and Ammeter: ANSI C39.1.

4. Potential and Current Transformers: ANSI C57.13.

5. Instrument Control Switches: Provide rotary cam operated type with positive means of indicating contact positions. Switches shall have silver-to-silver contacts enclosed in a protective cover which can be removed to inspect the contacts.

D. Distribution Section: Provide group mounted devices arranged to allow removal and interchanging from the front of the switchboard without disturbing adjacent devices. Where indicated, "space for future" or "space" shall mean to include bus, device supports, and connections. Group mounted devices shall be mounted in a panelboard arrangement.

1. Feeder Breakers: Molded-case current-limiting type unless indicated otherwise, of sizes and capacity indicated.

E. Finish: ANSI Z55.1, ANSI 61 or ANSI 49 light gray, for exterior surfaces of switchboard assembly.

2.2 CORROSION PROTECTION: Bases, frames, and channels of switchgear and switchboards which come in contact with concrete shall be corrosion resistant and shall be fabricated of hot-dip galvanized steel.

A. Galvanized Steel: ASTM A123, ASTM A525 G90 coating, and ASTM A153, as applicable. Galvanize after fabrication where practicable. Galvanizing repair paint shall conform to Mil. Spec. DOD-P-21035.

2.3 WIRE MARKING: Mark control and metering conductors at each end. Provide factory-installed white plastic tubing heat stamped with black block type letters on factory-installed wiring. On field-installed wiring, provide white preprinted polyvinyl chloride (PVC) sleeves, heat stamped with black block type letters. Each sleeve shall contain a single letter or number, shall be elliptically shaped to securely grip the wire, and shall be keyed in such a manner to ensure alignment with adjacent sleeves. Provide specific wire markings using the appropriate combination of individual sleeves. Each wire marker shall indicate the device or equipment, including specific terminal number to which the remote end of the wire is attached.

PART 3 EXECUTION

3.1 INSTALLATION: Electrical installations shall conform to ANSI C2, NFPA 70, and to the requirements specified herein. Provide new equipment and materials, unless indicated or specified otherwise.

3.2 GROUNDING: NFPA 70 and ANSI C2, except that grounds and grounding systems shall have a resistance to solid earth ground not exceeding 25 ohms.

A. Grounding Electrodes: Where practicable, use electrically continuous metallic buried water piping for grounding electrodes, supplemented by driven ground rods and building foundation rebar as specified in Section 16402, "Interior Wiring Systems". Provide bolted (clamped) connection at equipment end of ground conductors.

B. Switchboard Grounding: Provide bare copper cable not smaller than No. 4/0 AWG not less than 24 inches below grade connecting to the indicated ground rods.

C. Connections: Weld joints in grounding conductors and mats. The welding process shall not cause joined parts to be damaged or weakened and shall join strands. The welding process shall be an exothermic type, and the completed connection or joint shall be equal or larger in size than the conductors joined.

D. Ground Cable Crossing Expansion Joints in Structures and Pavements: Protect from damage by means of approved devices or methods of installation to allow the necessary slack in the cable across the joint to permit movement. Use stranded or other approved flexible copper cable run or jumper across such separations.

E. Grounding and Bonding Equipment: UL 467, except as indicated or specified otherwise.

3.3 INSTALLATION OF EQUIPMENT AND ASSEMBLIES: Install and connect switchboards as indicated on project drawings, the approved shop drawings, and as specified herein.

A. Switchboard: NEMA PB 2.1.

B. Meters and Instrument Transformers: ANSI C12.1.

C. Galvanizing Repair: ASTM A780, using galvanizing repair paint for galvanizing damaged by handling, transporting, cutting, welding, or bolting. Do not heat surfaces that repair paint has been applied to.

3.4 FOUNDATION FOR EQUIPMENT AND ASSEMBLIES: Mount switchboard on concrete slab. The top of the concrete slab shall be approximately 4 inches above the finished floor. Edges above floor shall have 1/2-inch chamfer. The slab shall be of adequate size to project at least 8 inches beyond the equipment. Provide concrete work under Section 03300 or 03302, "Cast-in Place Concrete."

3.5 FIELD TESTS AND INSPECTIONS

A. Performance of Acceptance Checks, Settings, and Tests: Perform in accordance with the manufacturer's recommendations, NFPA 70B, and referenced ANSI standards. Perform tests to obtain information about the performance of the breakers, meters, wiring, and instrument transformers together as a unit, as well as separately. Tests shall include but not be limited to the following:

1. Compare actual connections with wiring diagrams. If differences are found, determine if error is in diagram or in actual wiring; correct as necessary.

2. Inspect devices and equipment for damage or maladjustment caused by shipment or installation.

3. Use calibrated torque wrench to assure that tightness of bolted bus joints are in accordance with manufacturer's recommendations.

4. Perform mechanical operator and contact alignment tests on breakers and operating mechanisms in accordance with manufacturer's recommendations. Adjust as necessary.

5. Measure breaker contact resistance and perform minimum pickup voltage tests on trip and closing coils. Adjust as necessary to stay within manufacturer's acceptable range.

6. Check electrical continuity of current, potential, and control circuits in accordance with wiring diagrams.

7. Perform insulation resistance test at 500 volts dc on field-installed control wiring. Disconnect field-installed control wiring from equipment and from factory-installed wiring before testing. Minimum insulation resistance shall be 1,000,000 ohms.

8. Verify type, range, and connections of instrument transformers. Confirm correct polarity of current transformers electrically.

9. Remove short-circuiting links from current transformers after checking that secondary circuits are complete.

10. Verify meter connections and ensure calibration.

11. Remove wedges, ties, and blocks installed by the manufacturer to prevent damage during shipment.

12. Check low-voltage circuit breakers in accordance with manufacturer's instructions. Check time-current characteristics with a test kit approved by the breaker manufacturer.

13. Perform testing and calibration of power relays by a certified relay technician.

14. Verify maximum resistance to ground of grounding systems.

CAUTION: Changes of connection, insertion, and removal of instruments and meters must be performed in such a manner that the secondary circuits of energized current transformers are not opened, even momentarily.

B. Field Dielectric Tests: Perform on low-voltage switchgear according to ANSI C37.20.

C. Follow-up Verification: Upon completion of acceptance checks, settings, and tests, the Contractor shall show by demonstration in service that circuits and devices are in good operating condition and performing the intended function. Circuit breakers shall be tripped by operation of each protective device. Test shall require each item to perform its function not less than three times. As an exception to requirements stated elsewhere in the contract, the Contracting Officer shall be given 5 working days advance notice of the dates and times for checks, settings, and tests.

END OF SECTION

SECTION 16501

COORDINATED POWER SYSTEM PROTECTION

PART 1 GENERAL

1.1 SYSTEM DESCRIPTION

The power system covered by this specification consists of 3-phase, ungrounded 13.8 kV system supplying 480/277 V loads and 480-208/120 V loads.

1.2 SUBMITTALS

Approval is required for submittals indicated. Submit the following in accordance with the SUBMITTAL PROCEDURES:

A. Product Data

Fault Current Analysis

Protective Device Coordination Study

System Coordinator

1.3 QUALITY ASSURANCE

A. System Coordinator

System coordination recommended ratings and settings of protective devices, and design analysis must be accomplished by a registered professional electrical power engineer with a minimum of 3 years of current experience in the coordination of electrical power systems. Submit verification of experience and license number, of a registered Professional Engineer as specified above. Provide experience data consisting of at least five references for work of a magnitude comparable to this contract, including points of contact, addresses and telephone numbers.

PART 2 PRODUCTS

2.1 COORDINATED POWER SYSTEM PROTECTION

Contractor to prepare analyses to demonstrate that the equipment selected, and system constructed meet the contract requirements for ratings, coordination, and protection. Include a load flow analysis, a fault current analysis, and a protective device coordination study. Submit the study along with protective device equipment submittals. No time extensions or similar contact modifications will be granted for work arising out of the requirements for this study. Approval of protective devices proposed will be based on recommendations of this study. The Government is not responsible for any changes to equipment, device ratings, settings, or additional labor for installation of equipment or devices ordered and/or procured prior to approval of the study. The studies must be performed by a registered professional engineer with demonstrated experience in power system coordination in the last 3 years. Provide a list of references complete with points of contact, addresses and telephone numbers. The selection of the engineer is subject to the approval of the Contracting Officer.

A. Scope of Analyses

The fault current analysis and protective device coordination study must begin at the source bus of medium voltage primary transformer and extend down to system buses where fault availability is 10,000 amperes (symmetrical) for building/facility 600 volt level distribution buses.

B. Determination of Facts

Determine and document the time-current characteristics, features, and nameplate data for each existing protective device. Coordinate with the commercial power company for fault current availability at the site.

C. Single Line Diagram

Prepare a single line diagram to show the electrical system buses, devices, transformation points, and all sources of fault current (including generator and motor contributions). A fault-impedance diagram or a computer analysis diagram may be provided. Each bus, device or transformation point must have a unique identifier. If a fault-impedance diagram is provided, show impedance data. Show location of switches, breakers, and circuit interrupting devices on the diagram together with available fault data, and the device interrupting rating.

D. Fault Current Analysis

1. Method

Perform the fault current analysis in accordance with methods described in IEEE 242, and IEEE 399.

2. Data

Utilize actual data in fault calculations. Bus characteristics and transformer impedance must be those proposed. Document data in the report.

3. Fault Current Availability

Provide balanced three-phase fault, bolted line-to-line fault, and line-to-ground fault current values at each voltage transformation point and at each power distribution bus. Show the maximum and minimum values of fault available at each location in tabular form on the diagram or in the report.

E. Coordination Study

Demonstrate that the maximum possible degree of selectivity has been obtained between devices specified, consistent with protection of equipment and conductors from damage from overloads and fault conditions. Include a description of the coordination of the protective devices in this project. Provide a written narrative describing which devices may operate in the event of a fault at each bus; the logic used to arrive at device ratings and settings; situations where system coordination is not achievable due to device limitations (an analysis of any device curves which overlap); coordination between upstream and downstream devices; and relay settings. Provide recommendations to improve or enhance system reliability, and detail where such changes would involve additions or modifications to the contract and cost damages (addition or reduction). Provide composite coordination plots on log-log graph paper.

F. Study report

1. Include a narrative describing: the analyses performed; the bases and methods used; and the desired method of coordinated protection of the power system.

2. Include descriptive and technical data for existing devices and new protective devices proposed. Include manufacturers published data, nameplate data, and definition of the fixed or adjustable features of the existing or new protective devices.

3. Document utility company data including system voltages, fault MVA, system X/R ratio, time-current characteristic curves, current transformer ratios, and relay device numbers and settings; and existing power system data including time-current characteristic curves and protective device ratings and settings.

4. The report must contain fully coordinated composite time-current characteristics curves for each bus in the system, as required to ensure coordinated power system protection between protective devices or equipment. Include recommended ratings and settings of all protective devices in tabulated form.

5. Provide the calculation performed for the analyses, including computer analysis programs utilized. Provide the name of the software package, developer, and version number.

PART 3 EXECUTION

Not Used

END OF SECTION

SECTION 16510

INTERIOR LIGHTING

PART 1 GENERAL

1.1 RELATED REQUIREMENTS

Materials not considered to be luminaires, luminaire accessories, or lighting equipment are specified in Section 16402 INTERIOR WIRING SYSTEM. Luminaires and accessories that are mounted in exterior environments and not attached to the exterior of the building are specified in Section 16520 EXTERIOR LIGHTING.

1.2 DEFINITIONS

A. Unless otherwise specified or indicated, electrical and electronics terms used in these specifications and on the drawings, must be as defined in IEEE 100 and ANSI/IES LS-1.

B. For LED luminaire light sources, "Useful Life" is the operating hours before reaching 70 percent of the initial rated lumen output (L70) with no catastrophic failures under normal operating conditions. This is also known as 70 percent "Rated Lumen Maintenance Life" as defined in ANSI/IES LM-80.

C. For LED luminaires, "Luminaire Efficacy" (LE) is the appropriate measure of energy efficiency, measured in lumens/watt. This is gathered from LM-79 data for the luminaire, in which absolute photometry is used to measure the lumen output of the luminaire as one entity, not the source separately and then the source and housing together.

D. Total harmonic distortion (THD) is the root mean square (RMS) of all the harmonic components divided by the total fundamental current.

1.3 SUBMITTALS

A. Shop Drawings

Luminaire Drawings
Occupancy/Vacancy Sensor Coverage Layout
Lighting Control System One-Line Diagram
Sequence of Operation for Lighting Control System

B. Product Data

Luminaires
Light Sources
LED Drivers
Luminaire Warranty

Photosensor Verification Test

E. Certificates

LED Driver and Dimming Switch Compatibility Certificate

F. Operation and Maintenance Data

Lighting System
Lighting Control System
Maintenance Staff Training Plan
End-User Training Plan

1.4 QUALITY ASSURANCE

Data, drawings, and reports must employ the terminology, classifications and methods prescribed by the IES Lighting Library as applicable, for the lighting system specified.

A. Luminaire Drawings

Include dimensions, accessories installation details, and construction details. Photometric data, including CRI, CCT, LED driver type, zonal lumen data, and candlepower distribution data must accompany shop drawings.

B. Luminaire Design Data

1. Provide safety certification and file number for the luminaire family that must be listed, labeled, or identified in accordance with the NFPA 70. Applicable testing bodies are determined by the US Occupational Safety Health Administration (OSHA) as Nationally Recognized Testing Laboratories (NRTL) and include: CSA (Canadian Standards Association), ETL (Edison Testing Laboratory), and UL (Underwriters Laboratories).

2. Provide long term lumen maintenance projections for each LED luminaire in accordance with ANSI/IES TM-21. Data used for projections must be obtained from testing in accordance with ANSI/IES LM-80.

C. ANSI/IES LM-79 Test Report

Submit test report on manufacturer's standard production model of specified luminaire. Testing must be performed at the same operating drive current as specified luminaire. Include all applicable and required data in IES format as outlined under "14.0 Test Report" in ANSI/IES LM-79.

D. ANSI/IES LM-80 Test Report

Submit report on manufacturer's standard production LED light source (package, array, or module) of specified luminaire. Testing must be performed at the same operating drive current as specified luminaire. Include all applicable and required data as outlined under "8.0 Test Report" in ANSI/IES LM-80.

E. ANSI/IES TM-21 Test Report

Submit test report on manufacturer's standard production LED light source (package, array, or module) of specified luminaire. Testing must be performed at the same operating drive current as specified luminaire. Include all applicable and required data, as well as required interpolation information as outlined under "7.0 Report" in ANSI/IES TM-21.

F. ANSI/IES TM-30 Test Report

Submit color vector graphic in accordance with ANSI/IES TM-30 on manufacturer's standard production LED light source (package, array, or module) of specified luminaire. Include spectral distribution of test LED light source.

G. LED Driver and Dimming Switch Compatibility Certificate

Submit certification from the luminaire, driver, or dimmer switch manufacturer that ensures compatibility and operability between devices without flickering and to specified dimming levels.

H. Occupancy/Vacancy Sensor Coverage Layout

Provide floor plans showing coverage layouts of all devices using manufacturer's product information.

I. Test Laboratories

Test laboratories for the ANSI/IES LM-79 and ANSI/IES LM-80 test reports must be one of the following:

1. National Voluntary Laboratory Accreditation Program (NVLAP) accredited for solid-state lighting testing as part of the Energy-Efficient Lighting Products laboratory accreditation program for both LM-79 and LM-80 testing.

2. One of the qualified labs listed on the Department of Energy - LED Lighting Facts Approved Testing Laboratories List for LM-79 testing.

3. One of the EPA-Recognized Laboratories listed for LM-80 testing.

J. Regulatory Requirements

Equipment, materials, installation, and workmanship must be in accordance with the mandatory and advisory provisions of NFPA 70, unless more stringent requirements are specified or indicated. Provide luminaires and assembled components that are approved by and bear the label of UL for the applicable location and conditions unless otherwise specified.

K. Standard Products

Provide materials and equipment that are products of manufacturers regularly engaged in the production of such products which are of equal material, design, and workmanship. Products must have been in satisfactory commercial or industrial use for six months prior to bid opening. The six-month period must include applications of equipment and materials under similar circumstances and of similar size. The product must have been on sale on the commercial market through advertisements, manufacturers' catalogs, or brochures during the six-month period. Where two or more items of the same class of equipment are required, these items must be products of a single manufacturer; however, the component parts of the item need not be the products of the same manufacturer unless stated in this section.

1. Alternative Qualifications

Products having less than a six-month field service record will be acceptable if a certified record of satisfactory field operation for not less than 6000 hours, exclusive of the manufacturers' factory or laboratory tests, is furnished.

2. Material and Equipment Manufacturing Date

Do not use products manufactured more than six months prior to date of delivery to site, unless specified otherwise.

1.5 WARRANTY

Support all equipment items by service organizations which are reasonably convenient to the equipment installation in order to render satisfactory service to the equipment on a regular and emergency basis during the warranty period of the contract.

A. Luminaire Warranty

Provide and transfer to the owner the original LED luminaire manufacturers standard commercial warranty for each different luminaire manufacturer used in the project.

1. Provide a written five year minimum replacement warranty for material, luminaire finish, and workmanship. Provide written warranty document that contains all warranty processing information needed, including customer service point of contact, whether or not a return authorization number is required, return shipping information, and closest return location to the luminaire location.

(a) Finish warranty must include failure and substantial deterioration such as blistering, cracking, peeling, chalking, or fading.

(b) Material warranty must include:

(1) All LED drivers and integral control equipment.

(2) Replacement when more than 10 percent of LED sources in any lightbar or subassembly(s) are defective, non-starting, or operating below 70 percent of specified lumen output.

2. Warranty period must begin in accordance with the manufacturer's standard warranty starting date.

3. Provide replacements that are promptly shipped, without charge, to the using Government facility point of contact and that are identical to or an improvement upon the original equipment. All replacements must include testing of new components and assembly.

B. Lighting Controls Warranty

Provide and transfer to the owner the original lighting controls manufacturers standard commercial warranty for each different lighting controls manufacturer used in the project. Warranty coverage must begin from date of final system commissioning or three months from date of delivery, whichever is the earliest. Warranty service must be performed by a factory-trained engineer or technician.

1. Unless otherwise noted, provide a written five year minimum warranty on the complete system for all systems with factory commissioning. Provide warranty that covers 100 percent of the cost of any replacement parts and services required over the five years which are directly attributable to the product failure. Failures include, but are not limited to, the following:

(a) Software: Failure of input/output to execute switching or dimming commands.

(b) Damage of electronic components due to transient voltage surges.

(c) Failure of control devices, including but not limited to occupancy sensors, photosensors, and manual wall station control devices.

2. Provide a written five year minimum warranty on all input devices against defect in workmanship or materials provided by device manufacturer.

3. Provide a written five year minimum warranty on all control components attached to luminaires against defect in workmanship or materials.

1.6 OPERATION AND MAINTENANCE MANUALS

A. Lighting System

Provide operation and maintenance manuals for the lighting system that provide basic data relating to the design, operation, and maintenance of the lighting system for the building. Include the following:

1. Manufacturers' operating and maintenance manuals.

2. Luminaire shop drawings for modified and custom luminaires.

3. Luminaire Manufacturers' standard commercial warranty information as specified in paragraph LUMINAIRE WARRANTY.

B. Lighting Control System

Provide operation and maintenance manuals for the lighting control system that provide basic data relating to the design, operation, and maintenance of the lighting control system for the building. Include the following:

1. Lighting control system layout and wiring plan.

2. Lighting control system one-line diagram.

3. Product data for all devices, including installation and programming instructions.

4. Occupancy/vacancy sensor coverage layout.

5. Training materials, such as videos or in-depth manuals, that cover basic operation of the lighting control system and instructions on modifying the lighting control system. Training materials must include calibration, adjustment, troubleshooting, maintenance, repair, and replacement.

6. Sequence of operation descriptions for each typical room type, including final programming, schedules, and calibration settings.

PART 2 PRODUCTS

2.1 PRODUCT COORDINATION

2.2 LUMINAIRES

UL 1598, NEMA C82.77-10. Provide luminaires as indicated in the luminaire schedule and NL plates or details on project plans, complete with light source, wattage, and lumen output indicated. All luminaires of the same type must be provided by the same manufacturer. Luminaires must be specifically designed for use with the driver and light source provided.

A. Luminaires

UL 8750, ANSI/IES LM-79, ANSI/IES LM-80. For all luminaires, provide:

1. Complete system with LED drivers and light sources.

2. Housings constructed of non-corrosive materials. All new aluminum housings must be anodized or powder-coated. All new steel housings must be treated to be corrosion resistant.

3. ANSI/IES TM-21, ANSI/IES LM-80. Minimum L70 lumen maintenance value of 50,000 hours unless otherwise indicated in the luminaire schedule. Luminaire drive current value must be identical to that provided by test data for luminaire in question.

4. Minimum efficacy as specified in the luminaire schedule. Theoretical models of initial lamp lumens per watt are not acceptable. If efficacy values are not listed in the luminaire schedule, provide luminaires that meet the following minimum values:

Luminaire Style	Minimum Luminaire Efficacy
Recessed 1 by 4, 2 by 4, and 2 by 2	100 LPW
Recessed Downlight (fixed, adjustable, wallwash)	80 LPW
Linear, Accent (undercabinet, cove)	45 LPW
Linear, Ambient (indirect wall mount, linear pendent)	100 LPW
High Bay, Low Bay, and Industrial Locations	100 LPW
Food Service and Hazardous Locations	60 LPW
Other (track, residential diffusers)	50 LPW
Exterior Wall Sconce	50 LPW

5. UL listed for dry or damp location typical of interior installations. Any luminaire mounted on the exterior of the building must be UL listed for wet location typical of exterior installations.

6. LED driver and light source package, array, or module are accessible for service or replacement without removal or destruction of luminaire.

7. Lenses constructed of heat tempered borosilicate glass, UV-resistant acrylic, or silicone. Sandblasting, etching and polishing must be performed as indicated in the luminaire description.

B. Luminaires for Hazardous Locations

In addition to requirements stated herein, provide LED luminaires for hazardous locations which conform to UL 844 or which have Factory Mutual certification for the class and division indicated.

2.3 LIGHT SOURCES

NEMA ANSLG C78.377, NEMA SSL 3. Provide type, delivered lumen output, and wattage as indicated in the luminaire schedule on project plans.

A. LED Light Sources

Provide LED light sources that meet the following requirements:

1. NEMA ANSLG C78.377. Emit white light and have a nominal CCT of 3500 Kelvin.

2. Minimum Color Rendering Index (CRI) of 80 with an R9 value of 95.

3. Directive 2011/65/EU. Restriction of Hazardous Substances (RoHS) compliant.

4. Light source color consistency by utilizing a binning tolerance within a 3-step McAdam ellipse.

a) Linear LED Lamps

Provide linear LED Lamps and meet the following additional requirements:

1) UL 1993 UL Type A linear LED lamp.

2) Power Factor greater than or equal to 0.90 at full input power and across specified dimming range.

3) Maximum Total Harmonic Distortion (THD) less than or equal to 20 percent at full input power and across specified dimming range.

4) Lumen per watt efficacy no less than 120.

5) Minimum beam angle of 180 degrees.

6) Lamp datasheet complies with ANSI C78.54. Manufacturer must provide list of all ballasts that are compatible for use with lamp.

2.4 LED DRIVERS

NEMA SSL 1, UL 8750. Provide LED drivers that are electronic, UL Class 1 or Class 2, constant-current type and that comply with the following requirements:

A. The combined driver and LED light source system does not exceed the minimum luminaire efficacy values as listed in the luminaire schedule provided.

B. Operates at a voltage of 120-277 volts at 50/60 hertz, with input voltage fluctuations of plus/minus 10 percent.

C. Power Factor (PF) greater than or equal to 0.90 at full input power and across specified dimming range.

D. Maximum Total Harmonic Distortion (THD) less than 20 percent at full input power and across specified dimming range.

E. Operates for at least 50,000 hours at maximum case temperature and 90 percent non-condensing relative humidity.

F. Withstands Category A surges of 4 kV without impairment of performance. Provide surge protection that is integral to the driver.

G. Integral thermal protection that reduces the output power to protect the driver and light source from damage if the case temperature approaches or exceeds the driver's maximum operating temperature.

H. 47 CFR 15. Complies with the requirements of the Federal Communications Commission (FCC) rules and regulations, Non-Consumer (Class A) for EMI/RFI (conducted and radiated).

I. Class A sound rating.

J. Directive 2011/65/EU. Restriction of Hazardous Substances (RoHS) compliant.

K. Provide dimming capability as indicated in the luminaire schedule on project plans. Dimmable drivers must dim down to 10 percent. Dimmable drivers must be controlled by

a Class 2 low voltage 0-10VDC controller dimming signal protocol unless otherwise specified. LED drivers of the same family/series must track evenly across multiple luminaires at all light levels.

2.5 LIGHTING CONTROLS

A. Devices

1. Switches

Provide line-voltage toggle switches as specified in Section 16402 INTERIOR WIRING SYSTEM. When used for non-digital loads, devices must be rated at 20 Amps inductive load, and be compatible with the lighting control systems.

2. Wall Box Dimmers

UL 1472, UL 20, IEEE C62.41, NEMA 77, NEMA SSL 7A. Dimmers must provide flicker-free, continuously variable light output throughout the dimming range of 10 percent to 100 percent. Devices must be capable of operating at their full rated capacity regardless of being single or ganged-mounted, and be compatible with three-way and four-way switching scenarios.

Provide wall-box dimmers that meet the following requirements:

a. Device operates as an independent control device.

b. Device operates with the use of a vertical slider, paddle, rotary, button, or toggle with adjacent vertical slider.

c. Finish of device matches switches and outlets in the same area.

d. Back box in wall has sufficient depth to accommodate body of switch and wiring.

e. Dimmer is capable of controlling 0-10 volt LED drivers. Dimmers and the drivers they control must be provided from the same manufacturer or tested and certified as compatible for use together.

f. Radio frequency interference suppression is integral to device.

3. Scene Wallstations

Provide scene wallstations that are compatible with the other components of the lighting control system and capable of Class 1 or 2 wiring methods in accordance with the NEC and local codes. Provide devices that contain on/off group, preset scene functions, or dim up/dim down interface through front panel. Programming of new scenes or zone assignments must be accomplished by authorized personnel from the space being controlled. Provide labeling for each button, including laminated sheet with scene descriptions to be posted near each scene controller.

4. Occupancy/Vacancy Sensors

IEEE C62.41, NEMA WD 1, UL 94, UL 916, UL 508, ASTM D4674 REV A, NEMA WD 7. Provide occupancy/vacancy sensors with coverage patterns as indicated on manufacturer shop drawings. Provide no less quantity of sensors as shown on plans, but add additional sensors when required to fulfill coverage requirement for the specific model of sensor

provided. Provide sensor types as described in the sequence of operations. Sensor locations and quantities are shown in shop drawings provided by the lighting control system manufacturer. Provide occupancy sensor operation that requires movement to activate luminaires controlled and turns luminaires off after a set time of inactivity. Provide vacancy sensor operation that requires manual control to activate luminaires and turns luminaires off after a set time of inactivity. Provide ceiling or wall-mounted occupancy/vacancy sensors that meet the following requirements:

a. Operating voltage of 120-277 volts.

b. Time delay of 30 seconds to 30 minutes with at least four intermediate time delay settings.

c. Sensors are ceiling mounted wall-box mounted wall mounted.

d. No minimum load requirement and be capable of switching from zero to 800 W at 120 VAC, 50/60 Hz and from zero to 1200 W at 277 VAC, 50/60 Hz.

e. Shielded or controlled by internal logic to adjust sensitivity to avoid false triggering due to ambient temperature, air temperature variations or HVAC air movement.

f. Sensor is equipped to automatically energize the connected load upon loss of normal power when located in a means of egress.

g. Occupancy and vacancy operation is field-adjustable and programmable with push-button or dip switch on the sensor device.

h. No leakage current to load when in the off mode.

i. Utilize zero-crossing circuitry to prevent damage from high inrush current and to promote long life operation.

j. Allow the adding or deleting of specific luminaires or zones to the assigned sensor without the use of ladders.

1) Passive Infrared Sensors

Provide Passive Infrared Sensors (PIR) sensors that detect occupancy by sensing heat and movement in the area of coverage. Provide sensors are constructed of a housing of high-impact, injection-molded thermoplastic. Provide PIR sensors that are temperature compensated, with a dual element sensor and a multi-element fresnel lens of POLY IR4 material.

2) Ultrasonic Sensors

Provide ultrasonic sensors that detect occupancy by sensing a change in pattern of reflected ultrasonic waves in the area of coverage. Provide sensors that are constructed of a housing of high-impact, injection-molded thermoplastic. Provide ultrasonic sensors that operate at 40 kHz.

3) Dual Technology Sensors

Provide dual technology sensors that meet the requirements for PIR sensors and ultrasonic sensors indicated above. If either the PIR or ultrasonic sensing registers occupancy, the luminaires must remain on.

4) High Bay Sensors

Provide occupancy/vacancy sensors specifically designed for high-bay mounting applications for all ceiling-mounted sensors mounted above 35 feet using PIR technology. Provide high-bay sensors with interchangeable lenses for 360 degree open area coverage or narrow rectangular warehouse aisle coverage.

5) Power Packs

UL 2043. Provide power packs to provide power to lighting control sensors as required in accordance with the manufacturer's specifications. Provide power packs that meet the following requirements:

a) Operate at an input voltage of 120-277 VAC, with an output voltage 12-24 VDC at 225 mA.

b) Constructed of plenum-rated, high-impact thermoplastic enclosure.

c) Utilizes zero-crossing circuitry to prevent damage from inrush current.

d) Directive 2011/65/EU. Restriction of Hazardous Substances (RoHS) compliant.

6. Photosensors

Provide photosensors that meet the following requirements:

a. Detect changes in ambient lighting level and enable dimming as required.

b. Contain a detection cone, where the base of the cone may be circular or an elongated shape, and where the smallest angle between the edge and the axis of the cone is between 20 and 50 degrees. The cone axis may be tilted to the vertical when installed to give the sensor preferred directionality.

c. Sensors are ceiling-mounted wall-box-mounted wall-mounted with sensitivity, filtering, range and viewing angle to meet requirements of sequence of operation, scope of work and construction documents.

d. Time delay that is adjustable from 1 to 30 seconds ON delay, and 1 to 30 minutes OFF delay to prevent cycling, with deadband adjustment of 25 percent to 100 percent above lower setpoint.

e. Output dimming signal is linear to light level with less than 1 percent variation. Cadmium sulfide photo-resistors are not acceptable.

f. Sensor is not combined in the same housing or location with occupancy or vacancy sensors if the proper location for one function compromises

the successful operation of the other function, or in any way reduces the system's ability to meet the design intent.

7. Time Clocks

UL 917, NEMA ICS 6. House time clock in a surface-mounted, lockable, NEMA 1 or 4 as required enclosure constructed of painted steel or plastic polymer. Provide electronic type time clock that meets the following criteria:

a. Astronomic programming function.

b. 12 hour AM/PM type digital clock display format.

c. Power outage back-up for time clock utilizing lithium battery which provides coverage for a minimum of seven days.

d. Contacts are rated for 30 amps at 120-277 VAC resistive load in a normally open (NO) normally closed (NC) configuration.

e. Contains function that allows automatic control to be skipped on certain selected days of the week manual bypass or remote override control.

2.6 EXIT AND EMERGENCY LIGHTING EQUIPMENT

A. Exit Signs

UL 924, NFPA 101. Provide wattage as indicated in the luminaire schedule on project plans. Provide LED Exit Signs that meet the following criteria:

a. Housing constructed of Edge-lit type with clear acrylic, edge-lit face and aluminum trim having clear aluminum finish.

b. UL listed for damp location.

c. Configured for universal mounting.

d. 6 inch high, 3/4 inch stroke red lettering on face of sign with chevrons on either side of lettering to indicate direction.

e. Single or double face as indicated in project plans and luminaire schedule.

1) Exit Signs with Battery Backup

Equip with automatic power failure device, test switch, and pilot light, and fully automatic high/low trickle charger in a self-contained power pack. Battery must be sealed, maintenance free nickel-cadmium type, and must operate unattended for a period of not less than five years. Emergency run time must be a minimum of 1-1/2 hours. LEDs must have a minimum rated life of 10 years. Provide self-diagnostic circuitry integral to emergency LED driver.

B. Emergency Lighting Unit (ELU)

UL 924, NFPA 101. Provide emergency lighting units (ELUs) completely assembled with wiring and mounting devices, ready for installation at the locations indicated. Provide in UV-stable, thermo-plastic housing with UL damp label as indicated. Emergency lighting units must be rated for 12 volts, except units having no remote-mounted light sources and

having no more than two unit-mounted light sources may be rated six volts. Equip units with brown-out sensitive circuit to activate battery when input voltage falls to 75 percent of normal. Equip with two LED light sources, automatic power failure device, test switch, and pilot light, and fully automatic high/low trickle charger in a self-contained power pack. Battery must be sealed, maintenance free nickel-cadmium type, and must operate unattended for a period of not less than five years. Emergency run time must be a minimum of 90 minutes. LEDs must have a minimum rated life of 10 years. Provide self-diagnostic circuitry integral to emergency LED driver.

C. LED Emergency Drivers

UL 924, NFPA 101. Provide LED emergency driver with automatic power failure detection, test switch and LED indicator (or combination switch/indicator) located on luminaire exterior, and fully-automatic solid-state charger, battery and inverter integral to a self-contained housing. Provide self-diagnostic function integral to emergency driver. Integral nickel-cadmium battery is required to supply a minimum of 90 minutes of emergency power at 10 watts, 10-50 VDC, constant output. Driver must be RoHS compliant, rated for installation in plenum-rated spaces and damp locations, and be warranted for a minimum of five years.

D. Self-Diagnostic Circuitry for LED Drivers

UL 924, NFPA 101. Provide emergency lighting unit with fully-automatic, integral self-testing/diagnostic electronic circuitry. Circuitry must provide for a one minute diagnostic test every 28 days, and a 30 minute diagnostic test every six months, minimum. Any malfunction of the unit must be indicated by LED(s) visible from the exterior of the luminaire. A manual test switch must also be provided to perform a diagnostic test at any given time.

2.7 LUMINAIRE MOUNTING ACCESSORIES

A. Suspended Luminaires

1. Provide hangers capable of supporting twice the combined weight of luminaires supported by hangers.

2. Hangers must allow luminaires to swing within an angle of 45 degrees. Brace pendents 4 feet or longer to limit swinging. Provide with swivel hangers to ensure a plumb installation for rigid stem pendents. Provide cadmium-plated steel with a swivel-ball tapped for the conduit size indicated.

3. Single-unit suspended luminaires must have twin-stem hangers. Multiple-unit or continuous row luminaires with a separate power supply cord must have a tubing or stem for wiring at one point and a tubing or rod suspension provided for each unit length of chassis, including one at each end.

4. Provide all linear pendent and surface mounted luminaires with two supports per four-foot section or three per eight-foot section unless otherwise recommended by manufacturer.

5. Provide rods in minimum 0.18 inch diameter.

B. Recess and Surface Mounted Luminaires

Provide access to light source and LED driver from bottom of luminaire. Provide trim and lenses for the exposed surface of flush-mounted luminaires as indicated on project drawings and specifications. Luminaires recessed in ceilings which have a fire resistive

rating of one hour or more must be enclosed in a box which has a fire resistive rating equal to that of the ceiling. For surface mounted luminaires with brackets, provide flanged metal stem attached to outlet box, with threaded end suitable for supporting the luminaire rigidly in design position. Flanged part of luminaire stud must be of broad base type, secured to outlet box at not fewer than three points.

C. Luminaire Support Hardware

1. Wire

ASTM A641/A641M. Galvanized, soft tempered steel, minimum 0.11 inches in diameter, or galvanized, braided steel, minimum 0.08 inches in diameter.

2. Wire for Humid Spaces

ASTM A580/A580M. Composition 302 or 304, annealed stainless steel, minimum 0.11 inches in diameter.

ASTM B164. UNS NO4400, annealed nickel-copper alloy, minimum 0.11 inches in diameter.

3. Threaded Rods

Threaded steel rods, 3/16 inch diameter, zinc or cadmium coated.

4. Straps

Galvanized steel, one by 3/16 inch, conforming to ASTM A653/A653M, with a light commercial zinc coating or ASTM A1008/A1008M with an electrodeposited zinc coating conforming to ASTM B633, Type RS.

2.8 EQUIPMENT IDENTIFICATION

A. Manufacturer's Nameplate

Each item of equipment must have a nameplate bearing the manufacturer's name, address, model number, and serial number securely affixed in a conspicuous place; the nameplate of the distributing agent will not be acceptable.

B. Labels

UL 1598. All luminaires must be clearly marked for operation of specific light sources and LED drivers. The labels must be easy to read when standing next to the equipment, and durable to match the life of the equipment to which they are attached. Note the following light source characteristics in the format "Use Only _____":

1. Correlated Color Temperature (CCT) and Color Rendering Index (CRI) for all luminaires.

2. Driver and dimming protocol.

All markings related to light source type must be clear and located to be readily visible to service personnel, but unseen from normal viewing angles when light sources are in place. LED drivers must have clear markings indicating dimming type and indicate proper terminals for the various outputs.

2.9 FACTORY APPLIED FINISH

NEMA 250. Provide all luminaires and lighting equipment with factory-applied painting system that as a minimum, meets requirements of corrosion-resistance testing.

PART 3 EXECUTION

3.1 INSTALLATION

IEEE C2, NFPA 70.

A. Light Sources

When light sources are not provided as an integral part of the luminaire, deliver light sources of the type, wattage, lumen output, color temperature (CCT), color rendering index (CRI), and voltage rating indicated to the project site and install just prior to project completion, if not already installed in the luminaires from the factory.

B. Luminaires

Set luminaires plumb, square, and level with ceiling and walls, in alignment with adjacent luminaires and secure in accordance with manufacturers' directions and approved drawings. Provide accessories as required for ceiling construction type indicated on Finish Schedule. Luminaire catalog numbers do not necessarily denote specific mounting accessories for type of ceiling in which a luminaire may be installed. Provide wires, straps, or rods for luminaire support in this section. Install luminaires with vent holes free of air blocking obstacles.

1. Suspended Luminaires

Measure mounting heights from the bottom of the luminaire for ceiling-mounted luminaires and to center of luminaire for wall-mounted luminaires. Obtain architect approval of the exact mounting height on the job before commencing installation and, where applicable, after coordinating with the type, style, and pattern of the ceiling being installed. Support suspended luminaires from structural framework of ceiling or from inserts cast into slab.

a. Provide suspended luminaires with 45 degree swivel hangers so that they hang plumb and level.

b. Locate so that there are no obstructions within the 45 degree range in all directions.

c. The stem, canopy and luminaire must be capable of 45 degree swing.

d. Rigid pendent stem, aircraft cable, rods, or chains 4 feet or longer excluding luminaire must be braced to prevent swaying using three cables at 120 degree separation.

e. Suspended luminaires in continuous rows must have internal wireway systems for end to end wiring and must be properly aligned to provide a straight and continuous row without bends, gaps, light leaks or filler pieces.

f. Utilize aligning splines on extruded aluminum luminaires to assure minimal hairline joints.

g. Support steel luminaires to prevent "oil-canning" effects.

h. Match supporting pendents with supported luminaire. Aircraft cable must be stainless steel.

i. Match finish of canopies to match the ceiling and provide low profile canopies unless otherwise shown.

j. Maximum distance between suspension points must be 10 feet or as recommended by the manufacturer, whichever is less.

2. Recessed and Semi-Recessed Luminaires

a. Support recessed and semi-recessed luminaires independently from the building structure by a minimum of two wires, straps or rods per luminaire and located near opposite corners of the luminaire. Secure horizontal movement with clips provided by manufacturer. Ceiling grid clips are not allowed as an alternative to independently supported luminaires.

b. Support round luminaires or luminaires smaller in size than the ceiling grid independently from the building structure by a minimum of four wires, straps or rods per luminaire, spaced approximately equidistant around.

c. Do not support luminaires by acoustical tile ceiling panels.

d. Where luminaires of sizes less than the ceiling grid are indicated to be centered in the acoustical panel, support each independently and provide at least two 3/4 inch metal channels spanning, and secured to, the ceiling tees for centering and aligning the luminaire.

e. Luminaires installed in suspended ceilings must also comply with the requirements of Section 09 51 00 ACOUSTICAL CEILINGS.

f. Adjust aperture rings on all applicable ceiling recessed luminaires to accommodate various ceiling material thickness. Coordinate cut-out size in ceiling to ensure aperture covers cut-out entirely. Install aperture rings such that the bottom of the ring is flush with finished ceiling or not more than 1/16 inch above. Do not install luminaires such that the aperture ring extends below the finished ceiling surface.

3. Field Applied Painting

Paint lighting equipment as required to match finish of adjacent surfaces or to meet the indicated or specified safety criteria. Provide painting as specified in Section 09 90 00 PAINTS AND COATINGS.

C. LED Drivers

Provide LED drivers integral to luminaire as constructed by the manufacturer.

D. Exit Signs

NFPA 101. Wire exit signs and emergency lighting units ahead of the local switch, to the normal lighting circuit located in the same room or area.

Connect exit signs on separate circuits and serve from an emergency panel. Provide only one source of control, which would be the circuit breaker in the emergency panel. Paint source of control red and provide lockout capability.

E. Lighting Controls

1. Occupancy/Vacancy Sensors

a. Provide quantity of sensor units indicated as a minimum. Provide additional units to give full coverage over controlled area. Full coverage must provide hand and arm motion detection for office and administration type areas and walking motion for industrial areas, warehouses, storage rooms and hallways.

b. Locate ceiling-mounted sensors no closer than 6 feet from the nearest HVAC supply or return diffuser.

c. Locate the sensor(s) as indicated and in accordance with the manufacturer's recommendations.

2. Photosensors

Locate and aim sensor as indicated and in accordance with the manufacturer's recommendations. Adjust sensor set-point in accordance with the manufacturer's recommendations and for the indicated light level of the area of coverage, measured at the work plane.

3.2 FIELD QUALITY CONTROL

A. Tests

1. Lighting Control Verification Tests

Verify lighting control system and devices operate according to approved sequence of operations. Verification tests are to be completed after commissioning.

a. Verify occupancy/vacancy sensors operate as described in sequence of operations. Provide testing of sensor coverage, sensitivity, and time-out settings in all spaces where sensors are placed. This is to be completed only after all furnishings have been installed. Submit occupancy/vacancy sensor verification test.

b. Verify photosensors operate as described in sequence of operations. Provide testing of sensor coverage, aiming, and calibration in all spaces where sensors are placed. This is to be completed only after all furnishings have been installed. Submit photosensor verification test.

c. Verify wall box dimmers and scene wallstations operate as described in sequence of operations.

2. Emergency Lighting Test

Interrupt power supply to demonstrate proper operation of emergency lighting. If adjustments are made to the lighting system, re-test system to show compliance with standards.

3.3 CLOSEOUT ACTIVITIES

A. Commissioning

NFPA 101. Commission all components of the lighting system and lighting control system. Factory Trained Field Service Technician is responsible for calibration and programming sequences for input devices and systems in accordance with the requirements described in the sequence of operation.

B. Training

1. Maintenance Staff Training

Submit a Maintenance Staff Training Plan at least 30 calendar days prior to training session that describes training procedures for Owner's personnel in the operation and maintenance of lighting and lighting control system. Provide on-site training which demonstrates full system functionality, assigning schedules, calibration adjustments for light levels and sensor sensitivity, integration procedures for connecting to third-party devices, and manual override including information on appropriate use. Provide protocols for troubleshooting, maintenance, repair, and replacement, and literature on available system updates and process for implementing updates.

2. End-User Training

Submit an End-User Training Plan at least 30 calendar days prior to training session that describes training procedures for end-users on the lighting control system. Provide users with a list of control devices located within user-occupied spaces, such as photosensors and occupancy and vacancy sensors, including information on the proper operation and schedule for each device. Provide demonstration for each type of interface. Provide users with the building schedule as currently commissioned, including conditional programming based on astronomic time clock functionality. Provide users with the correct contact information for maintenance personnel who will be available to address any lighting control issues.

Provide laminated instructions to the user at each scene wallstation. Provide only instructions relevant to the functionality of the specific scene wallstation. Provide a description of each labeled scene control button. If the room utilizes occupancy/vacancy sensors or photosensors, include a description of this functionality on the instruction sheet.

END OF SECTION

SECTION 16520

EXTERIOR LIGHTING

PART 1 GENERAL

1.1 RELATED REQUIREMENTS

A. Materials not considered to be luminaires, luminaire accessories, or lighting equipment are specified in Section(s)16301 Exterior Electrical System. Luminaires and accessories installed in interior of buildings or attached to the exterior of a building are specified in Section 16402 Interior Wiring System.

1.2 DEFINITIONS

A. Unless otherwise specified or indicated, electrical and electronics terms used in these specifications and on the drawings must be as defined in IEEE 100 and ANSI/IES LS-1.

B. For LED luminaire light sources, "Useful Life" is the operating hours before reaching 70 percent of the initial rated lumen output (L70) with no catastrophic failures under normal operating conditions. This is also known as 70 percent "Rated Lumen Maintenance Life" as defined in ANSI/IES LM-80.

C. For LED luminaires, "Luminaire Efficacy" (LE) is the appropriate measure of energy efficiency, measured in lumens/watt. This is gathered from LM-79 data for the luminaire, in which absolute photometry is used to measure the lumen output of the luminaire as one entity, not the source separately and then the source and housing together.

D. Total Harmonic Distortion (THD) is the Root Mean Square (RMS) of all the harmonic components divided by the total fundamental current.

1.3 SUBMITTALS

A. Shop Drawings

Luminaire Drawings
Pole Drawings
Control System One-Line Diagram
Sequence of Operation for Exterior Lighting Control System

B. Product Data

Luminaires
Light Sources
LED Drivers
Luminaire Warranty
Lighting Controls Warranty

C. Pole Warranty

Photosensors
Time Clock

Lighting Contactor

Poles
Brackets

D. Design Data

Luminaire Design Data
Photometric Plan

E. Test Reports

ANSI/IES LM-79 Test Report
ANSI/IES LM-80 Test Report
ANSI/IES TM-21 Test Report

F. Manufacturer's Instructions

Poles

G. Operation and Maintenance Data

Lighting System
Exterior Lighting Control System
Maintenance Staff Training Plan
End-User Training Plan

1.4 QUALITY ASSURANCE: Data, drawings, and reports must employ the terminology, classifications and methods prescribed by the IES Lighting Library as applicable, for the lighting system specified.

A. Drawing Requirements

1. Luminaire Drawings

Include dimensions, effective projected area (EPA), weight, accessories, and installation and construction details. Photometric data, including CRI, CCT, TM-15-11 BUG rating, LED driver type, aiming diagram, zonal lumen data, and candlepower distribution data per LM-79 must accompany shop drawings.

2. Pole Drawings

Include dimensions, wind load determined in accordance with ASCE 7-16, pole deflection, pole class, and other applicable information. For concrete poles, include: section and details to indicate quantities and position of prestressing steel, spiral steel, inserts, and through holes; initial prestressing steel tension; and concrete strengths at release and at 28 days.

B. Luminaire Design Data

1. Provide distribution data according to IES classification type as defined in IES Lighting Library and ANSI/IES RP-8.

2. B.U.G. rating for the installed position as defined by ANSI/IES TM-15 and shielding as defined by ANSI/IES RP-8.

3. Provide safety certification and file number for the luminaire family. Include listing, labeling and identification in accordance with NFPA 70 (NEC). Applicable testing bodies are determined by the US Occupational Safety Health Administration

(OSHA) as Nationally Recognized Testing Laboratories (NRTL) and include: CSA (Canadian Standards Association), ETL (Edison Testing Laboratory), and UL (Underwriters Laboratories).

4. Provide long term lumen maintenance projections for each LED luminaire in accordance with ANSI/IES TM-21. Data used for projections must be obtained from testing in accordance with ANSI/IES LM-80.

5. Provide wind loading calculations for luminaires mounted on poles. Weight and effective projected area (EPA) of luminaires and mounting brackets must not exceed maximum rating of pole as installed in particular wind zone area.

C. ANSI/IES LM-79 Test Report

Submit test report on manufacturer's standard production model of specified luminaire. Testing must be performed at the same operating drive current as specified luminaire. Include all applicable and required data as outlined under "14.0 Test Report" in ANSI/IES LM-79.

D. ANSI/IES LM-80 Test Report

Submit report on manufacturer's standard production LED light source (package, array, or module) of specified luminaire. Testing must be performed at the same operating drive current as specified luminaire. Include all applicable and required data as outlined under "8.0 Test Report" in ANSI/IES LM-80.

E. ANSI/IES TM-21 Test Report

Submit test report on manufacturer's standard production LED light source (package, array or module) of specified luminaire. Testing must be performed at the same operating drive current as specified luminaire. Include all applicable and required data, as well as required interpolation information as outlined under "7.0 Report" in ANSI/IES TM-21.

F. Photometric Plan

For parking lots and sport fields includes computer-generated photometric analysis of the "designed to" values in accordance with ANSI/IES LP-11 for the "end of useful life" of the luminaire installation using a light loss factor of 0.81. Provide photometric plans that meet criteria in the Basis of Design in the project plans. Include the following in the submittal:

1. Horizontal illuminance measurements at finished grade, taken at a maximum grid size of 10 feet by 10 feet.

2. Vertical illuminance measurements at 5 feet above finished grade at all sidewalks and crosswalks, taken at a maximum of 10 feet.

3. Minimum and maximum footcandle levels.

4. Average maintained footcandle level.

5. Maximum to minimum ratio for horizontal illuminance only.

G. Test Laboratories

Test laboratories for the ANSI/IES LM-79 and ANSI/IES LM-80 test reports must be one of the following:

1. National Voluntary Laboratory Accreditation Program (NVLAP) accredited for solid-state lighting testing as part of the Energy-Efficient Lighting Products laboratory accreditation program.

2. One of the qualified labs listed on the Department of Energy - Energy Efficiency & Renewable Energy, Solid-State Lighting web site.

3. One of the EPA-Recognized Laboratories listed at for LM-80 testing.

H. Regulatory Requirements

Equipment, materials, installation, and workmanship must be in accordance with the mandatory and advisory provisions of NFPA 70 unless more stringent requirements are specified or indicated. Provide luminaires and assembled components that are approved by and bear the label of UL for the applicable location and conditions unless otherwise specified.

I. Standard Products

Provide materials and equipment that are products of manufacturers regularly engaged in the production of such products which are of equal material, design and workmanship. Products must have been in satisfactory commercial or industrial use for six months prior to bid opening. The six-month period must include applications of equipment and materials under similar circumstances and of similar size. The product must have been on sale on the commercial market through advertisements, manufacturers' catalogs, or brochures during the six-month period. Where two or more items of the same class of equipment are required, these items must be products of a single manufacturer; however, the component parts of the item need not be the products of the same manufacturer unless stated in this section.

1. Alternative Qualifications

Products having less than a six-month field service record will be acceptable if a certified record of satisfactory field operation for not less than 6000 hours, exclusive of the manufacturers' factory or laboratory tests, is furnished.

2. Material and Equipment Manufacturing Date

Do not use products manufactured more than six months prior to date of delivery to site, unless specified otherwise.

1.5 DELIVERY, STORAGE, AND HANDLING OF POLES

A. Aluminum Poles

Do not store poles on ground. Support poles so they are at least one foot above ground level and growing vegetation. Do not remove factory-applied pole wrappings until just before installing pole.

B. Steel Poles

Do not store poles on ground. Support poles so they are at least one foot above ground level and growing vegetation. Do not remove factory-applied pole wrappings until just before installing pole.

C. Concrete Poles

Do not store poles on ground. Support poles so they are at least one foot above ground level and growing vegetation.

1.6 WARRANTY

Support all equipment items by service organizations which are reasonably convenient to the equipment installation in order to render satisfactory service to the equipment on a regular and emergency basis during the warranty period of the contract.

A. Luminaire Warranty

Provide and transfer to the government the original LED luminaire manufacturers standard commercial warranty for each different luminaire manufacturer used in the project.

1. Provide a written five year minimum replacement warranty for material, luminaire finish, and workmanship. Provide written warranty document that contains all warranty processing information needed, including customer service point of contact, whether or not a return authorization number is required, return shipping information, and closest return location to the luminaire location.

a) Finish warranty must include failure and substantial deterioration such as blistering, cracking, peeling, chalking, or fading.

b) Material warranty must include:

(1) All LED drivers and integral control equipment.

(2) Replacement when more than 10 percent of LED sources in any lightbar or subassembly(s) are defective, non-starting, or operating below 70 percent of specified lumen output.

2. Warranty period must begin in accordance with the manufacturer's standard warranty starting date.

3. Provide replacements that are promptly shipped, without charge, to the using Government facility point of contact and that are identical to or an improvement upon the original equipment. All replacements must include testing of new components and installation.

B. Lighting Controls Warranty

Provide and transfer to the government the original lighting controls manufacturers standard commercial warranty for each different lighting controls manufacturer used in the project. Warranty coverage must begin from date of final system commissioning or three months from date of delivery, whichever is the earliest. Warranty service must be performed by a factory-trained engineer or technician.

1. Unless otherwise noted, provide a written five year minimum warranty on the complete system for all systems with factory commissioning. Provide warranty that covers 100 percent of the cost of any replacement parts and services required over the five years which are directly attributable to the product failure. Failures include, but are not limited to, the following:

a) Software: Failure of input/output to execute switching or dimming commands.

b) Damage of electronic components due to transient voltage surges.

c) Failure of control devices, including but not limited to photosensors and motion sensors.

2. Provide a written five-year minimum warranty on all input devices against defect in workmanship or materials provided by device manufacturer.

3. Provide a written five-year minimum warranty on all control components attached to luminaires against defect in workmanship or materials.

C. Pole Warranty

Provide and transfer to the owner the original pole manufacturers standard commercial warranty for each different pole manufacturer used in the project. Warranty coverage must begin from date of final system commissioning or three months from date of delivery, whichever is the earliest. Provide a written three year minimum replacement warranty for material, luminaire finish, and workmanship. Warranty service must be performed by a factory-trained engineer or technician.

1.7 OPERATION AND MAINTENANCE MANUALS

A. Lighting System

Provide operation and maintenance manuals for the lighting system that provide basic data relating to the design, operation, and maintenance of the lighting system. Include the following:

1. Manufacturers' operating and maintenance manuals.

2. Luminaire shop drawings for modified and custom luminaires.

3. Luminaire Manufacturers' standard commercial warranty information as specified in paragraph LUMINAIRE WARRANTY.

B. Exterior Lighting Control System

Provide operation and maintenance manuals for the exterior lighting control system that provide basic data relating to the design, operation, and maintenance of the exterior lighting control system. Include the following:

1. Control System One-Line Diagram

2. Product data for all devices, including installation and programming instructions.

3. Training materials, such as videos or in-depth manuals, that cover basic operation of the lighting control system and instructions on modifying the control system. Training materials must include calibration, adjustment, troubleshooting, maintenance, repair, and replacement.

PART 2 PRODUCTS

2.1 PRODUCT COORDINATION

2.2 LUMINAIRES

UL 1598, NEMA C82.77-10. Provide luminaires as indicated in the luminaire schedule and XL plates or details on project plans, complete with light source, wattage, and lumen output indicated. All luminaires of the same type must be provided by the same manufacturer. Luminaires must be specifically designed for use with the LED driver and light source provided.

A. Luminaires

UL 8750, ANSI/IES LM-79, ANSI/IES LM-80. For all luminaires, provide:

1. Complete system with LED drivers and light sources.

2. Housing constructed of non-corrosive materials. All new aluminum housings must be anodized or powder-coated. All new steel housings must be treated to be corrosion resistant.

3. ANSI/IES TM-21, ANSI/IES LM-80. Minimum L70 lumen maintenance value of 50,000hours unless otherwise indicated in the luminaire schedule. Luminaire drive current value must be identical to that provided by test data for luminaire in question.

4. Minimum efficacy as specified in the luminaire schedule. Theoretical models of initial lamp lumens per watt are not acceptable. If efficacy values are not listed in the luminaire schedule, provide luminaires that meet the following minimum values:

Luminaire Style	Minimum Luminaire Efficacy
Area and Roadway (pole mounted, arm mounted)	95 LPW
Pedestrian Post-Top (pole mounted, arm mounted)	90 LPW
Bollard	35 LPW
Accent (adjustable landscape, sign lighting)	35 LPW
Linear Accent (facade, wallwash)	80 LPW
Exterior Wall Sconce	50 LPW

5. Product rated for operation within an ambient temperature range of minus 22 degrees F to 122 degrees F.

6. UL listed for wet locations.

7. IES Lighting Library. Light distribution and NEMA field angle classifications as indicated in luminaire schedule on project plans.

8. Housing finish that is baked-on enamel, anodized, or baked-on powder coat paint. Finish must be capable of surviving ASTM B117 salt fog environment testing for 2500 hours minimum without blistering or peeling.

9. LED driver and light source package, array, or module are accessible for service or replacement without removal or destruction of luminaire.

10. ANSI/IES TM-15. Does not exceed the BUG ratings as listed in the luminaire schedule. If BUG ratings are not listed in the luminaire schedule, provide luminaires that meet the following minimum values for each application and mounting conditions:

Lighting Application	Mounting Conditions	BUG Rating
Area and Roadway	All	B3-U0-G3
Pedestrian Post-Top	All	B2-U1-G1
Exterior Wall Sconce	Above 4 feet AFF	B1-U0-G2
Exterior Wall Sconce	Below or at 4 feet AFF	B4-U0-G4

11. Fully assembled and electrically tested prior to shipment from factory.

12. Finish color is as indicated in the luminaire schedule or detail on the project plans.

13. Lenses constructed of frosted tempered glass or UV-resistant acrylic. Provide polycarbonate vandal-resistant lenses.

14. All factory electrical connections are made using crimp, locking, or latching style connectors. Twist-style wire nuts are not acceptable.

15. NEMA C136.31. Comply with 3G vibration testing.

16. Luminaire arm bolts constructed from 304 stainless steel or zinc-plated steel.

17. Wiring compartment on pole-mounted, street and area luminaires is accessible without the use of hand tools to manipulate small screws, bolts, or hardware.

18. Incorporate modular electrical connections, and construct luminaires to allow replacement of all or any part of the optics, heat sinks, LED drivers, surge suppressors and other electrical components using only a simple tool, such as a manual or cordless electric screwdriver.

19. ANSI C136.3. For all roadway and area luminaires, provide products with an integral tilt adjustment of plus or minus 5 degrees to allow the unit to be leveled.

2.3 LIGHT SOURCES

NEMA ANSLG C78.377, NEMA SSL 3. Provide type, lumen rating, and wattage as indicated in luminaire schedule on project plans.

A. LED Light Sources

Provide LED light sources that meet the following requirements:

1. NEMA ANSLG C78.377. Emit white light and have a nominal Correlated Color Temperature (CCT) of 3500 Kelvin.

2. Minimum Color Rendering Index (CRI) of 80.

3. Directive 2011/65/EU. Restriction of Hazardous Substances (RoHS) compliant.

4. Light source color consistency by utilizing a binning tolerance within a 4-step McAdam ellipse.

2.4 LED DRIVERS

NEMA SSL 1, UL 1310. Provide LED Drivers that are electronic, UL Class 1 or Class 2, constant-current type and meet the following requirements:

1. The combined LED driver and LED light source system is greater than or equal to the minimum luminaire efficacy values as listed in the luminaire schedule provided.

2. Operate at a voltage of 120-277 volts at 50/60 hertz, with input voltage fluctuations of plus or minus 10 percent.

3. Power Factor (PF) greater than or equal to 0.90 at full input power and across specified dimming range.

4. Maximum Total Harmonic Distortion (THD) less than or equal to 20 percent at full input power and across specified dimming range.

5. Operates for at least 50,000 hours at maximum case temperature and 90 percent non-condensing relative humidity.

6. Meets the "Elevated" (10kV/10kA) requirements per IEEE C62.41.2 -2002. Manufacturer must indicate whether failure of the electrical immunity system can possibly result in disconnect of power to luminaire. Provide surge protection that is integral to the LED driver.

7. Contains integral thermal protection that reduces the output power to protect the driver and light source from damage if the case temperature approaches or exceeds the driver's maximum operating temperature.

8. Complies with the requirements of the Federal Communications Commission (FCC) rules and regulations, Title 47 CFR part 15, Non-Consumer (Class A) for EMI/RFI (conducted and radiated).

9. Class A sound rating for all drivers mounted under a covered structure, such as a canopy, or where otherwise appropriate.

10. Directive 2011/65/EU. Restriction of Hazardous Substances (RoHS) compliant.

11. UL listed for wet locations typical of exterior installations.

12. Rated to operate between ambient temperatures of minus 22 degrees F and 122 degrees F.

2.5 LIGHTING CONTROLS

A. System

Provide exterior lighting control system that operates the exterior lighting system as described in the exterior lighting control strategies in the project plans. Submit Sequence of Operation for Exterior Lighting Control System describing the operation of the proposed exterior lighting control system and devices. Sequence of Operation must provide the strategies identified in the exterior lighting control strategies.

1. Relay Panel

Enclose panel hardware in a surface-mounted, NEMA 1 or 4 as required, painted, steel enclosure with lockable access door and ventilation openings. Internal low-voltage compartment must be separated from line-voltage compartment of enclosure with only low-voltage compartment accessible upon opening of door. Provide additional remote cabinets that communicate back to main control panel as required. Provide relay panel that meets the following criteria:

a) Input voltage of 120-277 at 50/60 Hz, with internal low voltage power supply as required.

b) UL 924. Quantity as required single-pole latching relays rated at 30 amps, 120-277 volts. Provide provision for relays to close upon power failure. Provide relays designed for 10 years of use at full rated load.

B. Devices

1. Time Clock

NEMA ICS 6. House time clock in a surface-mounted, lockable NEMA 1 enclosure constructed of painted steel or plastic polymer. Provide electronic type time clock that meets the following criteria:

a) 24-hour 7-day astronomic programming function, providing a total of 56 on/off set points.

b) 12-hour AM/PM type digital clock display format.

c) Power outage back-up for switch utilizing lithium battery which provides coverage for a minimum of seven days.

d) Capable of controlling a minimum of 4 channels or loads.

e) Contacts are rated for 30 amps at 120-277 VAC resistive load in a SPST normally open (NO) normally closed (NC) configuration.

f) Contains function that allows automatic control to be skipped on certain selected days of the week manual bypass or remote override control ability for photosensor input.

2. Photosensors

UL 773, UL 773A. Provide Photosensors that meet the following requirements:

a) Hermetically sealed, cadmium sulfide light sensor type, rated as indicated on plan, 50/60 Hz with single-pole, single-throw contacts.

b) Turns ON at 1 to 3 footcandles and turns OFF at 3 to 15 footcandles.

c) Designed to fail to the ON position.

d) Housing is constructed of die cast aluminum UV stabilized polypropylene, rated to operate within a temperature range of minus 40 to 158 degrees F.

e) Time delay that prevents accidental switching from transient light sources.

f) Directional lens in front of the cell to prevent fixed light sources from creating a turnoff condition.

g) Designed for 20-year service to match life expectancy of long-life LED fixtures and exceed 15,000 operations at full load. Provide photosensors with zero-cross technology to withstand severe in-rush current and extend relay life.

h) Swivel base type housing with 1/2 in threaded base for mounting to a junction box or conduit.

i) NEMA C136.10. Twist-lock receptacle type. Provide with solid brass prongs and voltage markings and color coding on exterior of housing.

j) Provide photosensors with metal oxide varistor (MOV) type surge protection.

3. Lighting Contactor

NEMA ICS 2. Provide a mechanically -held lighting contactor. Contactor must have poles as indicated on plan, configured as normally open (NO) normally closed (NC). Contacts must be rated 600 volts, 30 amperes for a resistive load. Coil operating voltage must be volts as indicated on plan. Contactor must have silver cadmium oxide double-break contacts and coil clearing contacts for mechanically held contactors and must require no arcing contacts. Provide contactor with hand-off-automatic selector switch.

2.6 POLES

LTS ASCE 7-16. Provide round straight poles designed for wind loading of 170 miles per hour while supporting luminaires and all other appurtenances indicated. The effective projected areas (EPA) of luminaires and appurtenances used in calculations must be specific for the actual products provided on each pole. Provide poles that are embedded anchor-base type designed for use with underground. Poles must have oval-shaped hand hole having a minimum clear opening of 3 by 5 inches. Secure hand hole covers by stainless steel captive screws. Provide metal poles with an internal grounding connection accessible from the hand hole near the bottom of each pole. Install a means of wire disconnection accessible from the hand hole. Do not install square poles. Provide poles from a Manufacturer with a standard provision for protecting the finish during shipment and installation. Do not install scratched, stained, chipped, or dented poles.

A. Steel Poles

Provide steel poles with hot-dipped galvanized in accordance with ASTM A123/A123M factory finish. Provide poles that meet the following requirements:

1. Minimum 11-gage steel with minimum yield/strength of 48,000 psi

2. Pole is mounted by anchor bolts.

3. Consists of tapered tubular members, either round in cross section or polygonal.

4. Pole shaft is one piece and is of welded construction with no bolts, rivets, or other means of fastening except as specifically approved.

5. Base covers are of structural quality hot-rolled carbon steel plate, with a minimum yield of 36,000 psi.

6. Markings are approximately 3 to 4 feet above grade and includes manufacturer, year of manufacture, top and bottom diameters, and length.

7. Grounding connection is designed to prevent electrolysis when used with copper ground wire.

B. Concrete Poles

ASTM C1089. Cross-sectional shape must be round.

1. Steel Reinforcing

Provide prestressed concrete pole shafts that are reinforced with steel prestressing members. Provide internal longitudinal loading by either pre-tensioning or post-tensioning longitudinal reinforcing members.

2. Tensioned Reinforcing

Primary reinforcement steel used for a prestressed concrete pole shaft must be tensioned between 60 to 70 percent of its ultimate strength. The amount of reinforcement must be such that when reinforcement is tensioned to 70 percent of its ultimate strength, the total resultant tensile force does not exceed the minimum section compressive strength of the concrete.

3. Coating and Sleeves for Reinforcing Members

Where minimum internal coverage cannot be maintained next to required core opening, such as hand holes and wiring inlet, protect reinforcing with a vapor proof noncorrosive sleeve over the length without the 1/2 inch concrete coverage. Apply a nonmigrating slipper coating to each steel reinforcing member which is to be post-tensioned prior to the application of concrete to ensure uniformity of stress throughout the length of each member.

4. Strength Requirement

As an exception to the requirements of ASTM C1089, provide poles that are naturally cured to achieve a 28-day compressive strength of 7000 psi. Poles must not be subjected to severe temperature changes during the curing period.

5. Shaft Preparation

Provide completed prestressed concrete pole shaft with a hard, smooth, nonporous surface that is resistant to soil acids, road salts, and attacks of water and frost, and must be clean, smooth, and free of surface voids and internal honeycombing. Do not install poles within 15 days of manufacture.

C. Brackets and Supports

ANSI C136.3, ANSI C136.13, and ANSI C136.21. Provide pole brackets that are not less than 1 1/4 inch galvanized steel pipe secured to pole. Slip-fitter or pipe-threaded brackets may be used, but brackets must be coordinated to luminaires provided, and brackets for use with one type of luminaire must be identical. Brackets for pole-mounted street lights must correctly position luminaire no lower than mounting height indicated. Mount brackets not less than 24 feet above street. Provide special mountings or brackets as indicated and of metal which will not promote galvanic reaction with luminaire head.

D. Pole Foundations

Provide anchor bolts consisting of a steel rod with a minimum yield strength of 50,000 psi; the top 12 inches of the rod must be galvanized in accordance with ASTM A153/A153M. Concrete must be as specified in Section 03 30 00 CAST-IN-PLACE CONCRETE.

2.7 EQUIPMENT IDENTIFICATION

A. Manufacturer's Nameplate

Each item of equipment must have a nameplate bearing the manufacturer's name, address, model number, and serial number securely affixed in a conspicuous place; the nameplate of the distributing agent will not be acceptable.

B. Labels

UL 1598. Luminaires must be clearly marked for operation of specific light sources and drivers according to proper light source type. Note the following luminaire characteristics in the format "Use Only _____":

1. Correlated color temperature (CCT) and color rendering index (CRI) for all luminaires.

2. Driver and dimming protocol.

Markings related to light source type must be clear and located to be readily visible to service personnel, but unseen from normal viewing angles when light sources are in place. LED drivers must have clear markings indicating dimming type and indicate proper terminals for the various outputs.

2.8 FACTORY APPLIED FINISH

NEMA 250. Provide all luminaires and lighting equipment with factory-applied painting system that as a minimum meets requirement of corrosion-resistance testing.

PART 3 EXECUTION

3.1 INSTALLATION

IEEE C2, NFPA 70.

A. Luminaires

Install all luminaires in accordance with the luminaire manufacturer's written instructions. Install all luminaires at locations and heights as indicated on the project plans. Level all luminaires in accordance to manufacturer's written instructions.

B. LED Drivers

Provide LED drivers integral to luminaire as constructed by the manufacturer.

C. Concrete Poles

Install according to pole manufacturer's instructions.

D. Aluminum and Steel Poles

Provide pole foundations with galvanized steel anchor bolts, threaded at the top end and bent 90 degrees at the bottom end. Provide ornamental covers to match pole and galvanized nuts and washers for anchor bolts. Concrete for anchor bases, polyvinyl chloride (PVC) conduit bells, and ground rods must be as specified in Section 16301 Exterior Electrical System. Thoroughly compact backfill with compacting arranged to prevent pressure between conductor, jacket, or sheath and the end of conduit ell. Adjust poles as necessary to provide a permanent vertical position with the bracket arm in proper position for luminaire location. Install according to pole manufacturer's instructions. Alterations to poles after fabrication will void manufacturer's warranty and is not allowed.

E. Pole Setting

Set pole to depth as indicated. Poles in straight runs must be in a straight line. Dig holes large enough to permit the proper use of tampers to the full depth of the hole. Place backfill in the hole in 6 inch maximum layers and thoroughly tamp. Place surplus earth around the pole in a conical shape and pack tightly to drain water away.

F. Lighting Controls

1. Photosensors

Aim photosensor according to manufacturer's recommendations.

G. Grounding

Ground noncurrent-carrying parts of equipment including metal poles, luminaires, mounting arms, brackets, and metallic enclosures as specified in Section 16301 Exterior Electrical System. Where copper grounding conductor is connected to a metal other than copper, provide specially treated or lined connectors suitable for this purpose.

3.2 FIELD QUALITY CONTROL

A. Tests

Upon completion of installation, verify that equipment is properly installed, connected, and adjusted. Perform initial operational test, consisting of the entire system energized for 72 consecutive hours without any failures of any kind occurring in the system. All circuits must test clear of faults, grounds, and open circuits.

1. Lighting Control Verification Test

Verify lighting control system and devices operate according to approved sequence of operations. Verification tests are to be completed after commissioning.

3.3 CLOSEOUT ACTIVITIES

A. Training

Provide on-site training to the Owner's personnel in the operation and maintenance of lighting and lighting control system. Provide training that includes calibration, adjustment, troubleshooting, maintenance, repair, and replacement.

1. Maintenance Staff Training

Submit a Maintenance Staff Training Plan at least 30 calendar days prior to training session that describes training procedures for Owner's personnel in the operation and maintenance of lighting and lighting control system. Provide on-site training which demonstrate full system functionality, assigning schedules, calibration adjustments for light levels and sensor sensitivity, integration procedures for connecting to third-party devices, and manual override including information on appropriate use. Provide protocols for troubleshooting, maintenance, repair, and replacement, and literature on available system updates and process for implementing updates.

2. End-User Training

Submit a End-User Training Plan at least 30 calendar days prior to training session that describes training procedures for end-users on the lighting control system. Provide demonstration for each type of user interface. Provide users with the curfew schedule as currently commissioned, including conditional programming based on astronomic time clock functionality. Provide users with the correct contact information for maintenance personnel who will be available to address any lighting control issues.

END OF SECTION

SECTION 16721

DIGITAL, ADDRESSABLE FIRE-ALARM SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Electrical Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Fire-alarm control unit.

2. Manual fire-alarm boxes.

3. System smoke detectors.

4. Heat detectors.

5. Flame detectors

6. Notification appliances.

7. Device guards.

8. Magnetic door holders.

9. Remote annunciator.

10. Addressable interface device.

11. Network communications.

1.3 DEFINITIONS

A. EMT: Electrical Metallic Tubing.

B. FACP: Fire Alarm Control Panel.

C. HLI: High Level Interface.

D. NICET: National Institute for Certification in Engineering Technologies.

E. PC: Personal computer.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product, including furnished options and accessories.

1. Include construction details, material descriptions, dimensions, profiles, and finishes.

2. Include rated capacities, operating characteristics, and electrical characteristics.

B. Shop Drawings: For fire-alarm system.

1. Comply with recommendations and requirements in the "Documentation" section of the "Fundamentals" chapter in NFPA 72.

2. Include plans, elevations, sections, details, and attachments to other work.

3. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and locations. Indicate conductor sizes, indicate termination locations and requirements, and distinguish between factory and field wiring.

4. Detail assembly and support requirements.

5. Include voltage drop calculations for notification-appliance circuits.

6. Include battery-size calculations.

7. Include input/output matrix.

8. Include statement from manufacturer that all equipment and components have been tested as a system and meet all requirements in this Specification and in NFPA 72.

9. Include performance parameters and installation details for each detector.

10. Verify that each duct detector is listed for complete range of air velocity, temperature, and humidity possible when air-handling system is operating.

11. Provide program report showing that air-sampling detector pipe layout balances pneumatically within the airflow range of the air-sampling detector.

12. Include plans, sections, and elevations of heating, ventilating, and air-conditioning ducts, drawn to scale; coordinate location of duct smoke detectors and access to them.

    a. Show critical dimensions that relate to placement and support of sampling tubes, detector housing, and remote status and alarm indicators.

    b. Show field wiring required for HVAC unit shutdown on alarm.

    c. Show field wiring and equipment required for HVAC unit shutdown on alarm.

    d. Show field wiring and equipment required for HVAC unit shutdown on alarm and override by firefighters' smoke-evacuation system.

    e. Locate detectors according to manufacturer's written recommendations.

13. Include floor plans to indicate final outlet locations showing address of each addressable device. Show size and route of cable and conduits and point-to-point wiring diagrams.

C. General Submittal Requirements:

1. Submittals shall be approved by authorities having jurisdiction prior to submitting them to Architect.

2. Shop Drawings shall be prepared by persons with the following qualifications:

   a. Trained and certified by manufacturer in fire-alarm system design.

   b. NICET-certified, fire-alarm technician; **Level III** minimum.

   c. Licensed or certified by authorities having jurisdiction.

D. Delegated-Design Submittal: For notification appliances and smoke and heat detectors, in addition to submittals listed above, indicate compliance with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Drawings showing the location of each notification appliance and smoke and heat detector, ratings of each, and installation details as needed to comply with listing conditions of the device.

2. Design Calculations: Calculate requirements for selecting the spacing and sensitivity of detection, complying with NFPA 72. Calculate spacing and intensities for strobe signals and sound-pressure levels for audible appliances.

3. Indicate audible appliances required to produce square wave signal per NFPA 72.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Seismic Qualification Certificates: For fire-alarm control unit, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.

2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.

3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

C. Field quality-control reports.

1.6 Sample Warranty: For special warranty.

1.7 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fire-alarm systems and components to include in emergency, operation, and maintenance manuals.

1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following:

   a. Comply with the "Records" section of the "Inspection, Testing and Maintenance" chapter in NFPA 72.

b. Provide "Fire Alarm and Emergency Communications System Record of Completion Documents" according to the "Completion Documents" Article in the "Documentation" section of the "Fundamentals" chapter in NFPA 72.

c. Complete wiring diagrams showing connections between all devices and equipment. Each conductor shall be numbered at every junction point with indication of origination and termination points.

d. Riser diagram.

e. Device addresses.

f. Record copy of site-specific software.

g. Provide "Inspection and Testing Form" according to the "Inspection, Testing and Maintenance" chapter in NFPA 72, and include the following:

1) Equipment tested.

2) Frequency of testing of installed components.

3) Frequency of inspection of installed components.

4) Requirements and recommendations related to results of maintenance.

5) Manufacturer's user training manuals.

h. Manufacturer's required maintenance related to system warranty requirements.

i. Abbreviated operating instructions for mounting at fire-alarm control unit and each annunciator unit.

B. Software and Firmware Operational Documentation:

1. Software operating and upgrade manuals.

2. Program Software Backup: On magnetic media or compact disk, complete with data files.

3. Device address list.

4. Printout of software application and graphic screens.

1.8 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Lamps for Remote Indicating Lamp Units: Quantity equal to **10** percent of amount installed, but no fewer than one unit.

2. Lamps for Strobe Units: Quantity equal to **10** percent of amount installed, but no fewer than one unit.

3. Smoke Detectors, Flame Detectors and Heat Detector: Quantity equal to **10**<> percent of amount of each type installed, but no fewer than one unit of each type.

4. Detector Bases: Quantity equal to **two** percent of amount of each type installed, but no fewer than one unit of each type.

5. Keys and Tools: One extra set for access to locked or tamper proofed components.

6. Audible and Visual Notification Appliances: **One** of each type installed.

7. Fuses: **Two** of each type installed in the system. Provide in a box or cabinet with compartments marked with fuse types and sizes.

1.9 QUALITY ASSURANCE

A. Installer Qualifications: Personnel shall be trained and certified by manufacturer for installation of units required for this Project.

B. Installer Qualifications: Installation shall be by personnel certified by NICET as fire-alarm **Level III** technician.

C. NFPA Certification: Obtain certification according to NFPA 72 by an NRTL (nationally recognized testing laboratory).

D. NFPA Certification: Obtain certification according to NFPA 72 by a UL-listed alarm company.

E. NFPA Certification: Obtain certification according to NFPA 72 in the form of a placard by an FM Global-approved alarm company.

1.10 PROJECT CONDITIONS

A. Perform a full test of the existing system prior to starting work. Document any equipment or components not functioning as designed.

B. Interruption of Existing Fire-Alarm Service: Do not interrupt fire-alarm service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary guard service according to requirements indicated:

1. Notify **Owner** no fewer than **seven** days in advance of proposed interruption of fire-alarm service.

2. Do not proceed with interruption of fire-alarm service without **Owner's** written permission.

C. Use of Devices during Construction: Protect devices during construction unless devices are placed in service to protect the facility during construction.

1.11 SEQUENCING AND SCHEDULING

A. Existing Fire-Alarm Equipment: Maintain existing equipment fully operational until new equipment has been tested and accepted. As new equipment is installed, label it "NOT IN SERVICE" until it is accepted. Remove labels from new equipment when put into service, and label existing fire-alarm equipment "NOT IN SERVICE" until removed from the building.

B. Equipment Removal: After acceptance of new fire-alarm system, remove existing disconnected fire-alarm equipment and wiring.

1.12 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace fire-alarm system equipment and components that fail in materials or workmanship within specified warranty period.

1. Warranty Extent: All equipment and components not covered in the Maintenance Service Agreement.
2. Warranty Period: **2**years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

A. Source Limitations for Fire-Alarm System and Components: Components shall be compatible with, and operate as an extension of, existing system. Provide system manufacturer's certification that all components provided have been tested as, and will operate as, a system.

B. Non-coded, **UL-certified** or **FM Global-placarded** addressable system, with multiplexed signal transmission and **speaker**/strobe evacuation.

C. Automatic sensitivity control of certain smoke detectors.

D. All components provided shall be listed for use with the selected system.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 SYSTEMS OPERATIONAL DESCRIPTION

A. Fire-alarm signal initiation shall be by one or more of the following devices **and systems**:

1. Manual stations.

2. Heat detectors..

3. Smoke detectors.

4. Duct smoke detectors.

5. Automatic sprinkler system water flow.

B. Fire-alarm signal shall initiate the following actions:

1. Continuously operate alarm notification appliances.

2. Identify alarm and specific initiating device at fire-alarm control unit**, connected network control panels, and remote annunciators**.

3. Release fire and smoke doors held open by magnetic door holders.

4. Switch heating, ventilating, and air-conditioning equipment controls to fire-alarm mode.

5. Activate smoke-control system (smoke management). Close smoke dampers in air ducts of designated air-conditioning duct systems. Coordinate first subparagraph below with "Elevator Recall" Paragraph in "Fire-Alarm Control Unit" Article.

6. Recall elevators to primary or alternate recall floors.

7. Activate elevator power shunt trip.

8. Record events in the system memory.

9. Indicate device in alarm on the graphic annunciator.

C. Supervisory signal initiation shall be by one or more of the following devices and actions:

1. Valve supervisory switch.

2. Alert and Action signals of air-sampling detector system.

3. Elevator shunt-trip supervision.

4. Independent fire-detection and -suppression systems.

5. User disabling of zones or individual devices.

6. Loss of communication with any panel on the network.

D. System trouble signal initiation shall be by one or more of the following devices and actions:

1. Open circuits, shorts, and grounds in designated circuits.

2. Opening, tampering with, or removing alarm-initiating and supervisory signal-initiating devices.

3. Loss of communication with any addressable sensor, input module, relay, control module, remote annunciator, or Ethernet module.

4. Loss of primary power at fire-alarm control unit.

5. Ground or a single break in internal circuits of fire-alarm control unit.

6. Abnormal ac voltage at fire-alarm control unit.

7. Break in standby battery circuitry.

8. Failure of battery charging.

9. Abnormal position of any switch at fire-alarm control unit or annunciator.
10. Hose cabinet door open.

E. System Supervisory Signal Actions:

1. Initiate notification appliances.

2. Identify specific device initiating the event at fire-alarm control unit**, connected network control panels, and remote annunciators**.

3. After a time delay of **200 seconds** transmit a trouble or supervisory signal to the remote alarm receiving station.

4. Transmit system status to building management system.

5. Display system status on graphic annunciator.

2.3 PERFORMANCE REQUIREMENTS

A. Seismic Performance: Fire-alarm control unit and raceways shall withstand the effects of earthquake motions determined according to **ASCE/SEI 7**

1. The term "withstand" means "the unit will remain in place without separation of any parts from the device when subjected to the seismic forces specified **and the unit will be fully operational after the seismic event**."

2.4 FIRE-ALARM CONTROL UNIT

A. Fire Alarm Control unit: EST3 Base Platform or approved equivalent.

B. General Requirements for Fire-Alarm Control Unit:

1. Field-programmable, microprocessor-based, modular, power-limited design with electronic modules, complying with UL 864.

a. System software and programs shall be held in nonvolatile flash, electrically erasable, programmable, read-only memory, retaining the information through failure of primary and secondary power supplies.

b. Include a real-time clock for time annotation of events on the event recorder.

c. Provide communication between the FACP and remote circuit interface panels, annunciators, and displays.

d. The FACP shall be listed for connection to a central-station signaling system service.

e. Provide nonvolatile memory for system database, logic, and operating system and event history. The system shall require no manual input to initialize in the event of a complete power down condition. The FACP shall provide a minimum 1740 -event history log.

2. Addressable Initiation Device Circuits: The FACP shall indicate which communication zones have been silenced and shall provide selective silencing of alarm notification appliance by building communication zone.

3. Addressable Control Circuits for Operation of Notification Appliances and Mechanical Equipment: The FACP shall be listed for releasing service.

C. Alphanumeric Display and System Controls: Arranged for interface between human operator at fire-alarm control unit and addressable system components including annunciation and supervision. Display alarm, supervisory, and component status messages and the programming and control menu.

1. Annunciator and Display: Liquid-crystal type, **168** characters, minimum.

2. Keypad: Arranged to permit entry and execution of programming, display, and control commands.

D. Alphanumeric Display and System Controls: Arranged for interface between human operator at fire-alarm control unit and addressable system components including annunciation and supervision. Display alarm, supervisory, and component status messages and the programming and control menu.

1. Annunciator and Display: Liquid-crystal type, **three** line(s) of **80** characters, minimum.

2. Keypad: Arranged to permit entry and execution of programming, display, and control commands **and to indicate control commands to be entered into the system for control of smoke-detector sensitivity and other parameters**

E. Initiating-Device, Notification-Appliance, and Signaling-Line Circuits:

1. Pathway Class Designations: NFPA 72, **Class A Class B**.

2. Pathway Survivability: **Level 1**.

3. Install no more than **256**addressable devices on each signaling-line circuit.

4. Serial Interfaces:

a. One dedicated RS 485 port for **central-station** operation using point ID DACT.

b. One RS 485 port for remote annunciators, Ethernet module, or multi-interface module.

c. One **USB** port for PC configuration.

d. One RS 232 port for voice evacuation interface.

F. Smoke-Alarm Verification:

1. Initiate audible and visible indication of an "alarm-verification" signal at fire-alarm control unit.

2. Activate an approved "alarm-verification" sequence at fire-alarm control unit and detector.

3. Sound general alarm if the alarm is verified.

4. Cancel fire-alarm control unit indication and system reset if the alarm is not verified.

G. Notification-Appliance Circuit:

1. Audible appliances shall sound in a three-pulse temporal pattern, as defined in NFPA 72.

2. Where notification appliances provide signals to sleeping areas, the alarm signal shall be a 520-Hz square wave with an intensity 15 dB above the average ambient sound level or 5 dB above the maximum sound level, or at least 75 dBA, whichever is greater, measured at the pillow.

3. Visual alarm appliances shall flash in synchronization where multiple appliances are in the same field of view, as defined in NFPA 72.

H. Elevator Recall:

1. Elevator recall shall be initiated only by one of the following alarm-initiating devices:

   a. Elevator lobby detectors except the lobby detector on the designated floor.

   b. Smoke detector in elevator machine room.

   c. Smoke detectors in elevator hoist way.

2. Elevator controller shall be programmed to move the cars to the alternate recall floor if lobby detectors located on the designated recall floors are activated.
3. Water-flow alarm connected to sprinkler in an elevator shaft and elevator machine room shall shut down elevators associated with the location without time delay.

   a. Water-flow switch associated with the sprinkler in the elevator pit may have a delay to allow elevators to move to the designated floor.

I. Door Controls: Door hold-open devices that are controlled by smoke detectors at doors in smoke-barrier walls shall **be** connected to fire-alarm system.

J. Remote Smoke-Detector Sensitivity Adjustment: Controls shall select specific addressable smoke detectors for adjustment, display their current status and sensitivity settings, and change those settings. Allow controls to be used to program repetitive, time-scheduled, and automated changes in sensitivity of specific detector groups. Record sensitivity adjustments and sensitivity-adjustment schedule changes in system memory.

K. Primary Power: 24-V dc obtained from 120-V ac service and a power-supply module. Initiating devices, notification appliances, signaling lines, trouble signals, shall be powered by 24-V dc source.

1. Alarm current draw of entire fire-alarm system shall not exceed 80 percent of the power-supply module rating.

L. Secondary Power: 24-V dc supply system with batteries, automatic battery charger, and automatic transfer switch.

1. Batteries: **Sealed lead calcium**

M. Instructions: Computer printout or typewritten instruction card mounted behind a plastic or glass cover in a stainless-steel or aluminum frame. Include interpretation and describe appropriate response for displays and signals. Briefly describe the functional operation of the system under normal, alarm, and trouble conditions.

2.5 MANUAL FIRE-ALARM BOXES

A. General Requirements for Manual Fire-Alarm Boxes: Comply with UL 38. Boxes shall be finished in red with molded, raised-letter operating instructions in contrasting color; shall show visible indication of operation; and shall be mounted on recessed outlet box. If indicated as surface mounted, provide manufacturer's surface back box.

1. Double-action mechanism requiring two actions to initiate an alarm **pull-lever** type; with addressable module arranged to communicate manual-station status (normal, alarm, or trouble) to fire-alarm control unit.

2. Station Reset: Key- or wrench-operated switch.

3. Indoor Protective Shield: Factory-fabricated, clear plastic enclosure hinged at the top to permit lifting for access to initiate an alarm. Lifting the cover actuates an integral battery-powered audible horn intended to discourage false-alarm operation.

4. Weatherproof Protective Shield: Factory-fabricated, clear plastic enclosure hinged at the top to permit lifting for access to initiate an alarm.

2.6 SYSTEM SMOKE DETECTORS

A. General Requirements for System Smoke Detectors:

1. Comply with UL 268; operating at 24-V dc, nominal.

2. Detectors shall be **two**-wire type.

3. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.

4. Base Mounting: Detector and associated electronic components shall be mounted in a twist-lock module that connects to a fixed base. Provide terminals in the fixed base for connection to building wiring.

5. Self-Restoring: Detectors do not require resetting or readjustment after actuation to restore them to normal operation.

6. Integral Visual-Indicating Light: LED type, indicating detector has operated **and power on status**.

7. Remote Control: Unless otherwise indicated, detectors shall be digital-addressable type, individually monitored at fire-alarm control unit for calibration, sensitivity, and alarm condition **and individually adjustable for sensitivity by fire-alarm control unit**.

   a. Rate-of-rise temperature characteristic of combination smoke- and heat-detection units shall be selectable at fire-alarm control unit for 15 or 20 deg. F (8 or 11 deg. C) per minute.

   b. Fixed-temperature sensing characteristic of combination smoke- and heat-detection units shall be independent of rate-of-rise sensing and shall be settable at fire-alarm control unit to operate at 135 or 155 deg. F (57 or 68 deg. C).

   c. Multiple levels of detection sensitivity for each sensor.

   d. Sensitivity levels based on time of day.

B. Photoelectric Smoke Detectors:

1. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.

2. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:

    a. Primary status.

    b. Device type.

    c. Present average value.

    d. Present sensitivity selected.

    e. Sensor range (normal, dirty, etc.).

C. Ionization Smoke Detector:

1. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.

2. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:

    a. Primary status.

    b. Device type.

    c. Present average value.

    d. Present sensitivity selected.

    e. Sensor range (normal, dirty, etc.).

D. Duct Smoke Detectors: Photoelectric type complying with UL 268A.

1. Detector address shall be accessible from fire-alarm control unit and shall be able to identify the detector's location within the system and its sensitivity setting.

2. An operator at fire-alarm control unit, having the designated access level, shall be able to manually access the following for each detector:

    a. Primary status.

    b. Device type.

    c. Present average value.

    d. Present sensitivity selected.

    e. Sensor range (normal, dirty, etc.).

3. Weatherproof Duct Housing Enclosure: NEMA 250, Type 4X; NRTL listed for use with the supplied detector for smoke detection in HVAC system ducts.

4. Each sensor shall have multiple levels of detection sensitivity.

5. Sampling Tubes: Design and dimensions as recommended by manufacturer for specific duct size, air velocity, and installation conditions where applied.

6. Relay Fan Shutdown: Fully programmable relay rated to interrupt fan motor-control circuit.

2.7 HEAT DETECTORS

A. General Requirements for Heat Detectors: Comply with UL 521.

1. Temperature sensors shall test for and communicate the sensitivity range of the device.

B. Heat Detector, Combination Type: Actuated by either a fixed temperature of **135 deg. F (57 deg. C)** or a rate of rise that exceeds **15 deg. F (8 deg. C)** per minute unless otherwise indicated.

1. Mounting: **Adapter plate for outlet box mounting**.

2. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.

C. Heat Detector, Fixed-Temperature Type: Actuated by temperature that exceeds a fixed temperature of **190 deg. F (88 deg. C)**.

1. Mounting: **Adapter plate for outlet box mounting**

2. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to fire-alarm control unit.

2.8 NOTIFICATION APPLIANCES

A. General Requirements for Notification Appliances: Individually addressed, connected to a signaling-line circuit, equipped for mounting as indicated, and with screw terminals for system connections.

B. General Requirements for Notification Appliances: Connected to notification-appliance signal circuits, zoned as indicated, equipped for mounting as indicated, and with screw terminals for system connections.

1. Combination Devices: Factory-integrated audible and visible devices in a single-mounting assembly, equipped for mounting as indicated, and with screw terminals for system connections.

C. Chimes, Low-Level Output: Vibrating type, 75-dBA minimum rated output.

D. Chimes, High-Level Output: Vibrating type, 81-dBA minimum rated output.

E. Visible Notification Appliances: Xenon strobe lights complying with UL 1971, with clear or nominal white polycarbonate lens mounted on an aluminum faceplate. The word "FIRE" is engraved in minimum 1-inch- (25-mm-) high letters on the lens.

1. Rated Light Output:

a. 15/30/75/110 cd, selectable in the field.

2. Mounting: Wall mounted unless otherwise indicated.

3. For units with guards to prevent physical damage, light output ratings shall be determined with guards in place.

4. Flashing shall be in a temporal pattern, synchronized with other units.

5. Strobe Leads: Factory connected to screw terminals.

6. Mounting Faceplate: Factory finished, **white**.

F. Voice/Tone Notification Appliances:

1. Comply with UL 1480.

2. Speakers for Voice Notification: Locate speakers for voice notification to provide the intelligibility requirements of the "Notification Appliances" and "Emergency Communications Systems" chapters in NFPA 72.

3. High-Range Units: Rated 2 to 15 W.

4. Low-Range Units: Rated 1 to 2 W.

5. Mounting: **surface mounted and bidirectional**.

6. Matching Transformers: Tap range matched to acoustical environment of speaker location.

G. Exit Marking Audible Notification Appliance:

1. Exit marking audible notification appliances shall meet the audibility requirements in NFPA 72.

2. Provide exit marking audible notification appliances at the entrance to all building exits.

3. Provide exit marking audible notification appliances at the entrance to areas of refuge with audible signals distinct from those used for building exit marking.

2.9 MAGNETIC DOOR HOLDERS

A. Description: Units are equipped for wall or floor mounting as indicated and are complete with matching doorplate.

1. Electromagnets: Require no more than 3 W to develop 25-lbf (111-N) holding force.

2. Wall-Mounted Units: Flush mounted unless otherwise indicated.

3. Rating: 24-V ac or dc.

4. Rating: 120-V ac.

B. Material and Finish: Match door hardware.

2.10 ADDRESSABLE INTERFACE DEVICE

A. General:

1. Include address-setting means on the module.

2. Store an internal identifying code for control panel use to identify the module type.

3. Listed for controlling HVAC fan motor controllers.

B. Monitor Module: Microelectronic module providing a system address for alarm-initiating devices for wired applications with normally open contacts.

C. Integral Relay: Capable of providing a direct signal **to elevator controller to initiate elevator recall**.

1. Allow the control panel to switch the relay contacts on command.

2. Have a minimum of two normally open and two normally closed contacts available for field wiring.

D. Control Module:

1. Operate notification devices.

2. Operate solenoids for use in sprinkler service.

2.11 DEVICE GUARDS

A. Description: Welded wire mesh of size and shape for the manual station, smoke detector, gong, or other device requiring protection.

1. Factory fabricated and furnished by device manufacturer.

2. Finish: Paint of color to match the protected device.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions for compliance with requirements for ventilation, temperature, humidity, and other conditions affecting performance of the Work.

1. Verify that manufacturer's written instructions for environmental conditions have been permanently established in spaces where equipment and wiring are installed, before installation begins.

B. Examine roughing-in for electrical connections to verify actual locations of connections before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 EQUIPMENT INSTALLATION

A. Comply with NFPA 72, NFPA 101, and requirements of authorities having jurisdiction for installation and testing of fire-alarm equipment. Install all electrical wiring to comply with requirements in NFPA 70 including, but not limited to, Article 760, "Fire Alarm Systems."

1. Devices placed in service before all other trades have completed cleanup shall be replaced.

2. Devices installed but not yet placed in service shall be protected from construction dust, debris, dirt, moisture, and damage according to manufacturer's written storage instructions.

B. Connecting to Existing Equipment: Verify that existing fire-alarm system is operational before making changes or connections.

C. Equipment Mounting: Install fire-alarm control unit on concrete base. Comply with requirements for concrete base specified in **Section 033000 "Cast-in-Place Concrete."**

1. Install seismic bracing.

2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (460-mm) centers around the full perimeter of concrete base.

3. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.

4. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

5. Install anchor bolts to elevations required for proper attachment to supported equipment.

D. Equipment Mounting: Install fire-alarm control unit on finished floor.

E. Install wall-mounted equipment, with tops of cabinets not more than 78 inches (1980 mm) above the finished floor.

F. Manual Fire-Alarm Boxes:

1. Install manual fire-alarm box in the normal path of egress within 60 inches (1520 mm) of the exit doorway.

2. Mount manual fire-alarm box on a background of a contrasting color.

3. The operable part of manual fire-alarm box shall be between 42 inches (1060 mm) and 48 inches (1220 mm) above floor level. All devices shall be mounted at the same height unless otherwise indicated.

G. Smoke- or Heat-Detector Spacing:

1. Comply with the "Smoke-Sensing Fire Detectors" section in the "Initiating Devices" chapter in NFPA 72, for smoke-detector spacing.

2. Comply with the "Heat-Sensing Fire Detectors" section in the "Initiating Devices" chapter in NFPA 72, for heat-detector spacing.

3. Smooth ceiling spacing shall not exceed **30 feet (9 m)**

4. Spacing of detectors for irregular areas, for irregular ceiling construction, and for high ceiling areas shall be determined according to Annex A in NFPA 72.

5. HVAC: Locate detectors not closer than **36 inches (910 mm)** from air-supply diffuser or return-air opening.

6. Lighting Fixtures: Locate detectors not closer than 12 inches (300 mm) from any part of a lighting fixture and not directly above pendant mounted or indirect lighting.

H. Install a cover on each smoke detector that is not placed in service during construction. Cover shall remain in place except during system testing. Remove cover prior to system turnover.

I. Duct Smoke Detectors: Comply with NFPA 72 and NFPA 90A. Install sampling tubes so they extend the full width of duct. Tubes more than 36 inches (9100 mm) long shall be supported at both ends.

1. Do not install smoke detector in duct smoke-detector housing during construction. Install detector only during system testing and prior to system turnover.

J. Elevator Shafts: Coordinate temperature rating and location with sprinkler rating and location. Do not install smoke detectors in sprinklered elevator shafts.

K. Remote Status and Alarm Indicators: Install in a visible location near each smoke detector, sprinkler water-flow switch, and valve-tamper switch that is not readily visible from normal viewing position.

L. Audible Alarm-Indicating Devices: Install not less than 6 inches (150 mm) below the ceiling. Install bells and horns on flush-mounted back boxes with the device-operating mechanism concealed behind a grille. Install all devices at the same height unless otherwise indicated.

M. Visible Alarm-Indicating Devices: Install adjacent to each alarm bell or alarm horn and at least 6 inches (150 mm) below the ceiling. Install all devices at the same height unless otherwise indicated.

N. Device Location-Indicating Lights: Locate in public space near the device they monitor.

3.3 PATHWAYS

A. Pathways above recessed ceilings and in non-accessible locations may be routed exposed.

1. Exposed pathways located less than 96 inches (2440 mm) above the floor shall be installed in EMT.

B. Pathways shall be installed in EMT.

C. Exposed EMT shall be painted red enamel.

3.4 CONNECTIONS

A. For fire-protection systems related to doors in fire-rated walls and partitions and to doors in smoke partitions, comply with requirements in Section 087100 "Door Hardware." Connect hardware and devices to fire-alarm system.

1. Verify that hardware and devices are listed for use with installed fire-alarm system before making connections.

B. Make addressable connections with a supervised interface device to the following devices and systems. Install the interface device less than 36 inches (910 mm) from the device controlled. Make an addressable confirmation connection when such feedback is available at the device or system being controlled.

1. Alarm-initiating connection to smoke-control system (smoke management) at firefighters' smoke-control system panel.

2. Alarm-initiating connection to stairwell and elevator-shaft pressurization systems.

3. Smoke dampers in air ducts of designated HVAC duct systems.

4. Magnetically held-open doors.

5. Alarm-initiating connection to elevator recall system and components.

6. Supervisory connections at valve supervisory switches.

7. Supervisory connections at elevator shunt-trip breaker.

3.5 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

B. Install framed instructions in a location visible from fire-alarm control unit.

3.6 GROUNDING

A. Ground fire-alarm control unit and associated circuits; comply with IEEE 1100. Install a ground wire from main service ground to fire-alarm control unit.

B. Ground shielded cables at the control panel location only. Insulate shield at device location.

3.7 FIELD QUALITY CONTROL

A. Field tests shall be witnessed Owner’s engineer.

B. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.

C. Perform tests and inspections.

D. Perform the following tests and inspections **with the assistance of a factory-authorized service representative**:

1. Visual Inspection: Conduct visual inspection prior to testing.

    a. Inspection shall be based on completed record Drawings and system documentation that is required by the "Completion Documents, Preparation" table in the "Documentation" section of the "Fundamentals" chapter in NFPA 72.

    b. Comply with the "Visual Inspection Frequencies" table in the "Inspection" section of the "Inspection, Testing and Maintenance" chapter in NFPA 72; retain the "Initial/Reacceptance" column and list only the installed components.

2. System Testing: Comply with the "Test Methods" table in the "Testing" section of the "Inspection, Testing and Maintenance" chapter in NFPA 72.

3. Test audible appliances for the public operating mode according to manufacturer's written instructions. Perform the test using a portable sound-level meter complying with Type 2 requirements in ANSI S1.4.

4. Test audible appliances for the private operating mode according to manufacturer's written instructions.

5. Test visible appliances for the public operating mode according to manufacturer's written instructions.

6. Factory-authorized service representative shall prepare the "Fire Alarm System Record of Completion" in the "Documentation" section of the "Fundamentals" chapter in NFPA 72 and the "Inspection and Testing Form" in the "Records" section of the "Inspection, Testing and Maintenance" chapter in NFPA 72.

E. Reacceptance Testing: Perform reacceptance testing to verify the proper operation of added or replaced devices and appliances.

F. Fire-alarm system will be considered defective if it does not pass tests and inspections.

G. Prepare test and inspection reports.

H. Maintenance Test and Inspection: Perform tests and inspections listed for weekly, monthly, quarterly, and semiannual periods. Use forms developed for initial tests and inspections.

I. Annual Test and Inspection: One year after date of Substantial Completion, test fire-alarm system complying with visual and testing inspection requirements in NFPA 72. Use forms developed for initial tests and inspections.

3.8 MAINTENANCE SERVICE

A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service shall include **12**months' full maintenance by skilled employees of manufacturer's designated service organization. Include preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

1. Include visual inspections according to the "Visual Inspection Frequencies" table in the "Testing" paragraph of the "Inspection, Testing and Maintenance" chapter in NFPA 72.

2. Perform tests in the "Test Methods" table in the "Testing" paragraph of the "Inspection, Testing and Maintenance" chapter in NFPA 72.

3. Perform tests per the "Testing Frequencies" table in the "Testing" paragraph of the "Inspection, Testing and Maintenance" chapter in NFPA 72.

3.9 SOFTWARE SERVICE AGREEMENT

A. Comply with UL 864.

B. Technical Support: Beginning at Substantial Completion, service agreement shall include software support for **two** years.

C. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within **two** years from date of Substantial Completion. Upgrading software shall include operating system and new or revised licenses for using software.

1. Upgrade Notice: At least **30**days to allow Owner to schedule access to system and to upgrade computer equipment if necessary.

3.10 DEMONSTRATION

A. **Engage a factory-authorized service representative to train** Owner's maintenance personnel to adjust, operate, and maintain fire-alarm system.

END OF SECTION

SECTION 16800

PHOTOVOLTAIC SYSTEM

PART 1 GENERAL

1.1 SUMMARY

A. This Section includes the following: Photovoltaic collectors, mounting hardware, inverters, and grid tie equipment. The Photovoltaic system shall provide of power with a grid tie connection to the electrical power system. The PV system shall be designed by the Contractor to provide a complete and functioning system.

1.2 DEFINITION

A. PV: Photovoltaic.

1.3 SUBMITTALS

Approval is required for submittals indicated. The following shall be submitted in accordance with SUBMITTAL PROCEDURES

A. Shop Drawings

PV Modules

Include photovoltaic collector interconnection method and photovoltaic collector mounting details.

B. Product Data

Photovoltaic Collectors
Inverters
Mounting Hardware
Grid Tie Equipment

C. Certificates

PV System

Submit certification of compliance with NFPA 70 (NEC 690) and UL listing.

1.4 QUALITY ASSURANCE

A. NFPA 70 - National Electrical Code (NEC)

B. Occupational Safety and Health Administration (OSHA) Directives

C. IEEE 519 Guide for Harmonic Control and Reactive Compensation of Static Power Controllers

D. IEEE 1262, Recommend Criteria for Qualifications of Photovoltaic Modules

E. IEEE 928, Recommend Criteria for Terrestrial Photovoltaic Power Systems (PV system performance criteria)

F. IEEE 929, Recommend Practice for Utility Interface of Photovoltaic (PV) Systems

G. Comply with IEEE C2

H. UL 1741 (UL Standard for Inverters and Charge Controllers)

I. UL 1703 (UL Standard for Listing Photovoltaic Modules

J. Certification of PV Equipment: All PV modules, inverters and electrical components shall be required to be listed or recognized by an appropriate and recognized United States Safety Laboratory (for example: UL, ETL, etc.)

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver ducts to Project site sealed and protected from weather. Store with supports to prevent bending, warping, and deforming.

1.6 PROJECT CONDITIONS

A. Interruption of Existing Electrical Service: Do not interrupt electrical service to facilities unless permitted under the following conditions and then only after arranging to provide temporary electrical service according to requirements indicated: Notify those affected and the Owner no fewer than two days in advance of proposed interruption of electrical service.

1.7 COORDINATION

A. Coordinate layout and installation with surface features as determined in the field.

1.8 EQUIPMENT WARRANTIES

A. The solar modules shall have a one-year manufacturer's warranty.

B. The inverter shall have a one -year manufacturer's warranty.

C. The entire system shall have a one-year warranty from the installing subcontractor including parts and labor. The Contractor shall be responsible to correct any deficiencies in the system if it fails to meet the performance criteria during commissioning.

PART 2 PRODUCTS

2.1 PV SYSTEM

A. The PV components and the system shall be designed to safely operate at continuous output, under a wide range of temperature and irradiance conditions characteristic of the specific site. Readily available solar panels of the latest technologies are to be considered for this project.

B. The power converter/inverter shall be multi-mode and shall convert DC power generated by PV solar arrays into utility grade AC power. Equipment shall be mounted in a

rainproof NEMA 4X stainless enclosure. The converter shall be listed by UL 1741 or CEC. The inverter output must be connected to the building's AC electrical distribution system in a manner that does not create parallel grounding paths (parallel current paths are created with neutral currents flowing in the equipment grounding conductors). A 3-phase 480/277 V Isolation Transformer shall be an integral unit of the inverter. The Inverter shall automatically disconnect from the grid if no incoming power is detected.

C. Performance Requirements:

(1) Nominal AC Voltage: 480/277 VAC Three-phase, +10/-12 percent

(2) Nominal AV Frequency: 60 Hz +0.5 Hz / -0.7 Hz

(3) AC Current Distortion: <5 percent THD at rated power

(4) Max. Open Circuit Voltage: 600 VDC

(5) Max. Ripple Current: <5 percent of rated current

(6) Peak Inverter Efficiency: >95 percent

(7) Standby Tare Losses: <100 watts

(8) Protective Circuits: AC over/under voltage, AC over/under frequency, ground overcurrent, over temperature, AC and DC over current, DC over voltage.

(9) Meters: LCD display of following parameters:
AC Output: Voltage, kW
DC Input: Voltage, current, kW
Operating state of the inverter Faults

(10) Ambient Temp Range: Operating: 20 degrees C to 50 degrees C. Non-Operating: -40 degrees C to 50 degrees C.

(11) Ambient Humidity +/-95 percent to 25 degrees C.

(12) Enclosure Environmental Rating: NEMA 4X stainless steel.

2.2 PV MODULES

A. UL Class "C" fire rated solar modules are permitted providing that PV crystal panels are mounted above the roof surface allowing for a minimum of a 50 mm air gap, otherwise, UL Class "B" or better fire rated PV panels are required. UL fire classification of all PV panels shall be tested by UL 790. Strain relief shall be provided for connecting wires. If the module has a closed weatherproof junction box, strain relief and moisture-tight clamps shall be used in any knockouts provided for field wiring.

B. Provide structure support system that will withstand 170 mph typhoon winds and shall be seismically designed for zone 4 locations.

C. Modules shall be marked with the following information that must appear on each module's factory-installed label.

(a) Polarity of output terminals or leads

(b) Maximum over-current device rating for module protection
(c) Rated open-circuit voltage
(d) Rated operating voltage
(e) Rated short-circuit current
(f) Rated operating current
(g) Rated maximum power

D. Only Copper conductors shall be used for all PV system wiring (NEC 110-5). All wire sizes must refer to copper conductors. Conductor insulation must have a wet-rated 90 degrees C and be sunlight resistant. Single-conductor, Type UF (Underground Feeder - Identified (marked) as Sunlight Resistant), Type SE (Service Entrance), or Type USE (Underground Service Entrance) cables are permitted for module inter-connect wiring (NEC 690-31 (B)). Stranded wire is suggested to ease servicing of the modules after installation and for durability (NEC 690-34). The temperature de-rated ampacity of conductors, at any point, must be at least 156 percent of the module, or array of parallel modules, rated short-circuit (Isc) at that point (NEC 690-8(A), (B)). If flexible, two conductor cable is needed, electrical tray cable (Type TC) is available but must be supported in a specific manner as outlines in the (NEC 318 and NEC 340).

E. The instructions furnished with each module will state the acceptable size and type of wires for use with the terminals. Some modules may require the use of crimp-on terminals when stranded conductors are used. In general, un-insulated terminals are preferred (with insulation applied later if required), but care must be exercised to obtain the heavier, more reliable UL-Listed terminals and not unlisted electronic or automotive grades, use only UL-Listed terminals. If the junction box provides box-style pressure terminals, it is not necessary to use crimped terminals.

PART 3 EXECUTION

3.1 TRANSITION WIRING

A. The PV system w i ring must be made using one of the methods included in the (NEC 690-31, Chapter 3). single-conductor, exposed wiring is not permitted except for module wiring or with special permission (Chapter 3). The most common methods used for PV systems are individual conductors in electrical [conduit][metallic tubing (EMT), nonmetallic conduit, or non-metallic sheathed cable]. Where individual conductors are used in conduit, they should be conductors with at least 90 degrees C insulation such as RHW-2, THW-2, THWN-2 or XHHW-2. Conduits installed exposed or outdoors, are considered as installed in "wet locations". [The conduit can be thick-wall rigid galvanized-steel (RGS), intermediate metal conduit (IMC) or thin-wall electrical metallic tubing (EMT), and if rigid non-metallic conduit is used, electrical (gray) PVC (Schedule 40 or Schedule 80) must be used.] Splices from the conductors, from the modules to this wire, when located outside, must be protected in rainproof junction boxes such as NEMA type 3R. Cable clamps must also be used. Cable clamps used with this box must be listed for outdoor use.

3.2 MODULE CONNECTORS

A. Module connectors that are concealed at the time of installation must be able to resist the environment, be polarized. and be able to handle the short circuit current. They shall also be part of a latching design with the terminals guarded. The equipment grounding member, if used, shall make first and break last (NEC 690-32, 33). The UL standard also

requires that the connectors for positive and negative conductors should not be interchangeable.

B. Module Connection Access: All junction boxes and other locations where modules and stranded wiring may allow accessibility (NEC 690-34). The modules should not be permanently fixed (welded) to mounting frames, and solid wire that could break when modules are moved to service the junction boxes should not be used. Open spaces behind the modules would allow access to the junction boxes.

3.3 FUSING

A. Fuses shall be DC rated, listed, and able to handle the short circuit currents they may be subjected to. The use of AC-only rated supplementary fuses is not acceptable for the DC circuits of PV systems.

3.4 DISCONNECTING MEANS

The disconnect system must provide safe, reliable, and understandable operation.

A. Photovoltaic Array Disconnects: All current-carrying conductors from the PV power source must have disconnect provisions. This includes the ground conductor, if any. Ground conductors which normally remain connected at all times may have a bolted disconnect (terminal or lug) that can be used for service operations and for meeting the NEC requirements. Ungrounded conductors must have a switch or circuit breaker disconnect. In ungrounded 24-volt PV system, both positive and negative conductors must be switched.

B. Equipment Disconnects: Each piece of equipment in the PV system shall have disconnects switches as means of disconnecting the PV system from all sources of power. Disconnects shall be circuit breakers or switches and shall comply with all of the provisions of NEC 690-17. When properly located and used within their approved ratings, circuit breakers can serve as both disconnect and over current device. Disconnect switches must be rated to carry this load and have appropriate interrupt rating.

ATTACHMENT B-9

PERFORMANCE AUDIO-VIDEO LEGEND

WALL MOUNTED

AL — ASSISTED LISTENING ANTENNA BOX. 2-GANG LARGE CAPACITY, EXTRA DEEP JUNCTION BOX. FLUSH MOUNT IN WALL 6" BELOW FINISHED CEILING UNLESS OTHERWISE NOTED. AV CONTRACTOR SHALL PROVIDE ANTENNA AND MOUNT TO BOX WITH MANUFACTURER'S BRACKET.

AP — PRACTICE/ENSEMBLE/MUSIC OFFICE BOX. 2-GANG LARGE CAPACITY, EXTRA DEEP JUNCTION BOX. FLUSH MOUNT IN-WALL AT STANDARD OUTLET HEIGHT. ELECTRICAL CONTRACTOR SHALL PROVIDE ONE (1) 20A 120V DEDICATED TECHNICAL POWER CIRCUIT WITH ISOLATED GROUND TO DUPLEX NEMA 5-20R RECEPTACLE ADJACENT TO BOX. TELECOM CONTRACTOR SHALL PROVIDE ONE (1) BUILDING DATA RECEPTACLE ADJACENT TO BOX. AV CONTRACTOR SHALL PROVIDE CUSTOM PLATE.

BI — BLEACHER INTERFACE BOX. 3-GANG LARGE CAPACITY, EXTRA DEEP JUNCTION BOX, FLUSH MOUNT IN FACE OF BLEACHER. AV CONTRACTOR SHALL COORDINATE WITH BLEACHER PROVIDER. ELECTRICAL CONTRACTOR SHALL PROVIDE ONE (1) 20A 120V DEDICATED TECHNICAL POWER CIRCUIT WITH ISOLATED GROUND TO DUPLEX NEMA 5-20R RECEPTACLE ADJACENT TO PLATE. TELECOM CONTRACTOR SHALL PROVIDE TWO (2) BUILDING DATA OUTLETS ADJACENT TO PLATE. AV CONTRACTOR SHALL PROVIDE CUSTOM PLATE.

CI — CLASSROOM INPUT. 4-GANG EXTRA DEEP, LARGE CAPACITY JUNCTION BOX, FLUSH MOUNT IN-WALL AT STANDARD OUTLET HEIGHT. ELECTRICAL CONTRACTOR SHALL PROVIDE ONE (1) 20A 120V DEDICATED TECHNICAL POWER CIRCUIT WITH ISOLATED GROUND TERMINATED TO DUPLEX NEMA 5-20R RECEPTACLE ADJACENT TO BOX. TELECOM CONTRACTOR SHALL PROVIDE ONE (1) BUILDING DATA OUTLET ADJACENT TO BOX.

FP — FLAT PANEL DISPLAY BOX. CHIEF PACS26 OR EQUAL. FLUSH MOUNT IN WALL AT HEIGHT SHOWN ON DRAWINGS. ELECTRICAL CONTRACTOR SHALL PROVIDE (1) 20A 120V DEDICATED TECHNICAL POWER CIRCUIT TERMINATED TO DUPLEX NEMA 5-20R RECEPTACLE IN BOX. TELECOM CONTRACTOR SHALL PROVIDE ONE (1) BUILDING DATA RECEPTACLE IN BOX.

G — GYMNASIUM INPUT BOX. 3-GANG LARGE CAPACITY, EXTRA DEEP JUNCTION BOX. FLUSH MOUNT IN WALL AT STANDARD OUTLET HEIGHT. ELECTRICAL CONTRACTOR SHALL PROVIDE ONE (1) 20A 120V DEDICATED TECHNICAL POWER CIRCUIT WITH ISOLATED GROUND TO DUPLEX NEMA 5-20R RECEPTACLE ADJACENT TO BOX. TELECOM CONTRACTOR SHALL PROVIDE ONE (1) BUILDING DATA RECEPTACLE ADJACENT TO BOX. AV CONTRACTOR SHALL PROVIDE CUSTOM PLATE.

IC$_X$ — INTERCOM BOX. 1-GANG LARGE CAPACITY JUNCTION BOX, FLUSH MOUNT IN-WALL AT STANDARD OUTLET HEIGHT UNLESS OTHERWISE NOTED. AV CONTRACTOR SHALL PROVIDE CUSTOM PLATE. "X" DENOTES PLATE TYPE.

IS — INTERCOM SPEAKER STATION, 4-GANG EXTRA DEEP, LARGE CAPACITY JUNCTION BOX MOUNTED AT STANDARD SWITCH HEIGHT UNLESS OTHERWISE NOTED. AV CONTRACTOR SHALL MOUNT INTERCOM DEVICE IN BOX.

JB — BLEACHER JUNCTION BOX. 2-GANG EXTRA DEEP, LARGE CAPACITY JUNCTION BOX, FLUSH MOUNT IN-WALL AT STANDARD OUTLET HEIGHT. ELECTRICAL CONTRACTOR SHALL PROVIDE ONE (1) 20A 120V DEDICATED TECHNICAL POWER CIRCUIT WITH ISOLATED GROUND TERMINATED TO DUPLEX NEMA 5-20R RECEPTACLE ADJACENT TO BOX. TELECOM CONTRACTOR SHALL PROVIDE ONE (1) BUILDING DATA OUTLET ADJACENT TO BOX.

MX — MIX POSITION BOX. 6"x6"x4" JUNCTION BOX. FLUSH MOUNT IN-WALL AT STANDARD OUTLET HEIGHT UNDER MIX POSITION COUNTER. ELECTRICAL CONTRACTOR SHALL PROVIDE ONE (1) 20A 120V TECHNICAL POWER CIRCUIT WITH ISOLATED GROUND TERMINATED TO PLUGMOLD STRIP ABOVE COUNTER. PROVIDE A MINIMUM OF ONE (1) OUTLET EVERY 18". GC TO PROVIDE FOUR (4) 2" GROMMET HOLES SPACED ACROSS THE BACK OF THE COUNTERTOP TO ACCESS CABLE TRAY. AV CONTRACTOR TO PROVIDE CUSTOM PLATE.

PS — PROJECTION SCREEN. ELECTRICAL CONTRACTOR SHALL TERMINATE LOW VOLTAGE CONDUIT INTO PROJECTION SCREEN CASE PER MANUFACTURER'S INSTRUCTIONS. ELECTRICAL CONTRACTOR SHALL PROVIDE AND TERMINATE 120VAC POWER TO PROJECTION SCREEN PER MANUFACTURER'S INSTRUCTIONS. AV CONTRACTOR SHALL PROVIDE AND INSTALL PROJECTION SCREEN AND COORDINATE POWER AND LOW VOLTAGE CONDUIT REQUIREMENTS WITH ELECTRICAL CONTRACTOR.

RI$_X$ — RECORDING INTERFACE BOX. 8"x8"x4" JUNCTION BOX, FLUSH MOUNTED IN-WALL AT STANDARD OUTLET HEIGHT. ELECTRICAL CONTRACTOR SHALL PROVIDE ONE (1) 20A 120V DEDICATED TECHNICAL POWER CIRCUIT WITH ISOLATED GROUND TERMINATED TO QUAD NEMA 5-20R RECEPTACLE ADJACENT TO BOX. AV CONTRACTOR SHALL PROVIDE CUSTOM PLATE. SUBSCRIPT DENOTES PLATE LOCATION AND TYPE.

S — LOUDSPEAKER BOX. 2-GANG LARGE CAPACITY JUNCTION BOX FLUSH MOUNT IN-WALL AT HEIGHT INDICATED ON DRAWING.

SA — STAGE I/O BOX. 8"x8"x4" JUNCTION BOX FLUSH MOUNT IN-WALL AT STANDARD OUTLET HEIGHT. ELECTRICAL CONTRACTOR SHALL PROVIDE ONE (1) 20A 120V TECHNICAL POWER CIRCUIT WITH ISOLATED GROUND TERMINATED TO QUAD NEMA 5-20R RECEPTACLE ADJACENT TO BOX. TELECOM CONTRACTOR SHALL PROVIDE CUSTOM PLATE.

SC — PROJECTION SCREEN LOW VOLTAGE CONTROL CONNECTION BOX. 1-GANG LARGE CAPACITY JUNCTION BOX. FLUSH MOUNT IN WALL AT STANDARD SWITCH HEIGHT.

TS — TOUCH SCREEN. CUSTOM BACK BOX PROVIDED BY AV CONTRACTOR TO BE INSTALLED BY ELECTRICAL CONTRACTOR AT STANDARD SWITCH HEIGHT.

VC — VOLUME CONTROL. 1-GANG LARGE CAPACITY JUNCTION BOX. MOUNT FLUSH IN WALL AT STANDARD SWITCH HEIGHT

VI — VIDEO INPUT. 1-GANG LARGE CAPACITY JUNCTION BOX, FLUSH MOUNT IN-WALL AT STANDARD OUTLET HEIGHT. ELECTRICAL CONTRACTOR SHALL PROVIDE ONE (1) 20A 120V DEDICATED TECHNICAL POWER CIRCUIT WITH ISOLATED GROUND TERMINATED TO DUPLEX NEMA 5-20R RECEPTACLE ADJACENT TO BOX. TELECOM CONTRACTOR SHALL PROVIDE ONE (1) BUILDING DATA OUTLET ADJACENT TO BOX. AV CONTRACTOR TO PROVIDE CUSTOM PLATE.

WM — WIRELESS MICROPHONE ANTENNA BOX. 2-GANG LARGE CAPACITY, EXTRA DEEP JUNCTION BOX FLUSH MOUNT IN-WALL AT 20' AFF, UNLESS OTHERWISE NOTED. AV CONTRACTOR SHALL PROVIDE PLATE WITH 1" GROMMET. AV CONTRACTOR SHALL PROVIDE AND MOUNT ANTENNA.

CEILING MOUNTED

AL — ASSISTED LISTENING ANTENNA BOX. 2-GANG LARGE CAPACITY, EXTRA DEEP JUNCTION BOX. FLUSH MOUNT IN FINISHED CEILING OPENING DOWNWARD. AV CONTRACTOR SHALL PROVIDE ANTENNA AND MOUNT TO BOX WITH MANUFACTURER'S BRACKET.

BT — BLUETOOTH RECEIVER BOX. 8"x8"x4" JUNCTION BOX SURFACE MOUNT TO CEILING STRUCTURE. ELECTRICAL CONTRACTOR SHALL PROVIDE ONE (1) 20A 120V DEDICATED TECHNICAL POWER CIRCUIT WITH ISOLATED GROUND TERMINATED TO DUPLEX NEMA 5-20R RECEPTACLE ADJACENT TO BOX. AV CONTRACTOR TO INSTALL ANTENNA TO EXTERIOR OF BOX.

CA — CEILING CAMERA. 3-GANG LARGE CAPACITY, EXTRA DEEP JUNCTION BOX. FLUSH MOUNT IN FINISHED CEILING OPENING DOWNWARD ADJACENT TO CAMERA MOUNTING LOCATION. ELECTRICAL CONTRACTOR SHALL PROVIDE ONE (1) 20A 120V DEDICATED TECHNICAL POWER CIRCUIT TERMINATED TO DUPLEX NEMA 5-20R RECEPTACLE ADJACENT TO BOX. TELECOM CONTRACTOR SHALL PROVIDE ONE (1) BUILDING DATA RECEPTACLE ADJACENT TO BOX. AV CONTRACTOR SHALL PROVIDE CUSTOM PLATE.

CM — CEILING MICROPHONE BOX. 2-GANG LARGE CAPACITY, EXTRA DEEP JUNCTION BOX FLUSH MOUNT IN CEILING OPENING DOWNWARD. AV CONTRACTOR TO PROVIDE CUSTOM PLATE.

CEILING MOUNTED (CONT.)

CS — CEILING LOUDSPEAKER. FLUSH MOUNT IN CEILING. IN ROOMS WITH ACCESSIBLE CEILINGS, PROVIDE PLENUM CABLE TO LOUDSPEAKER WITH J-HOOKS. IN ROOMS WITH NO CEILINGS, PROVIDE PENDANT LOUDSPEAKERS. ELECTRICAL CONTRACTOR SHALL PROVIDE 1-GANG JUNCTION BOX ATTACHED TO STRUCTURE ABOVE LOUDSPEAKER LOCATION OPENING DOWNWARD. ELECTRICAL CONTRACTOR SHALL PROVIDE FLEXIBLE CONDUIT FROM JUNCTION BOX TO LOUDSPEAKER BACKCAN.

PJ — PROJECTOR BOX. CHIF CMS492C, OR EQUAL, FLUSH MOUNT IN ACT CEILING. ELECTRICAL CONTRACTOR SHALL PROVIDE ONE (1) 20A 120V DEDICATED TECHNICAL POWER CIRCUIT WITH ISOLATED GROUND TERMINATED TO DUPLEX NEMA 5-20R RECEPTACLE IN BOX. TELECOM CONTRACTOR SHALL PROVIDE ONE (1) BUILDING DATA RECEPTACLE IN BOX.

PS — PROJECTION SCREEN. ELECTRICAL CONTRACTOR SHALL TERMINATE LOW VOLTAGE CONDUIT INTO PROJECTION SCREEN CASE PER MANUFACTURER'S INSTRUCTIONS. ELECTRICAL CONTRACTOR SHALL PROVIDE AND TERMINATE 120VAC POWER TO PROJECTION SCREEN PER MANUFACTURER'S INSTRUCTIONS. AV CONTRACTOR SHALL PROVIDE AND INSTALL PROJECTION SCREEN AND COORDINATE POWER AND LOW VOLTAGE CONDUIT REQUIREMENTS WITH ELECTRICAL CONTRACTOR.

SP — SCENIC PROJECTION BOX. 2-GANG LARGE CAPACITY, EXTRA DEEP JUNCTION BOX. MOUNT TO UNDERSIDE OF CEILING STRUCTURE. ELECTRICAL CONTRACTOR SHALL PROVIDE ONE (1) 20 120V POWER CIRCUIT TERMINATED TO DUPLEX NEMA 5-20R RECEPTACLE ADJACENT TO BOX. TELECOM CONTRACTOR SHALL PROVIDE ONE (1) BUILDING DATA OUTLETS ADJACENT TO BOX. AV CONTRACTOR SHALL PROVIDE BLANK COVER PLATE.

TP — THEATRE VIDEO PROJECTOR BOX. 2-GANG EXTRA-DEEP, LARGE CAPACITY JUNCTION BOX. SURFACE MOUNT IN PROJECTOR LIFT. ELECTRICAL CONTRACTOR SHALL PROVIDE ONE (1) 20A 120V DEDICATED TECHNICAL POWER CIRCUIT TERMINATED TO DUPLEX NEMA 5-20R RECEPTACLE AND ONE (1) 20A 208V DEDICATED TECHNICAL POWER CIRCUIT ADJACENT TO PROJECTOR MOUNTING POINT. TELECOM CONTRACTOR SHALL PROVIDE ONE (1) BUILDING DATA RECEPTACLE ADJACENT IN PROJECTOR LIFT. AV CONTRACTOR SHALL PROVIDE CUSOM PLATE.

S — LOUDSPEAKER BOX, CEILING MOUNTED. 4" X 4" X 4" JUNCTION BOX SURFACE MOUNT TO CEILING STRUCTURE ADJACENT TO LOUDSPEAKER RIGGING POINT OPENING DOWNWARD. AV CONTRACTOR TO PROVIDE CUSTOM PLATE WITH GROMMET.

WM — WIRELESS MICROPHONE ANTENNA BOX. 2-GANG LARGE CAPACITY, EXTRA DEEP JUNCTION BOX FLUSH MOUNT IN-WALL AT 20' AFF. UNLESS OTHERWISE NOTED. AV CONTRACTOR SHALL PROVIDE PLATE WITH 1" GROMMET. AV CONTRACTOR SHALL PROVIDE AND MOUNT ANTENNA.

FLOOR MOUNTED

FB$_X$ — FLOOR BOX, FSR FL-600P-6" OR EQUAL. RECESS BOX TO ALLOW COVER TO BE FLUSH WITH FINISHED FLOOR. SUBMIT COVER TO ARCHITECT FOR REVIEW. AV CONTRACTOR SHALL PROVIDE BOX TO ELECTRICAL CONTRACTOR FOR INSTALLATION. ELECTRICAL CONTRACTOR SHALL PROVIDE ONE (1) 20A 120V TECHNICAL POWER CIRCUIT WITH ISOLATED GROUND TERMINATED TO DUPLEX NEMA 5-20R RECEPTACLE IN FLOOR BOX. TELECOM CONTRACTOR SHALL PROVIDE ONE (1) BUILDING DATA RECEPTACLE IN FLOOR BOX. AV CONTRACTOR SHALL PROVIDE CUSTOM PLATE. SUBSCRIPT DENOTES PLATE NUMBER.

EQUIPMENT RACKS

AV RK-1 — AV STAGE MANAGER'S RACK. ELECTRICAL CONTRACTOR SHALL PROVIDE TWO (2) 20A 120V TECHNICAL POWER CIRCUITS WITH ISOLATED GROUND TERMINATED TO QUAD NEMA 5-20R RECEPTACLES BEHIND RACK. TELECOM CONTRACTOR SHALL PROVIDE TWO (2) BUILDING DATA RECEPTACLES BEHIND RACK. AV CONTRACTOR SHALL COORDINATE OUTLET LOCATION SO THAT RACK SITS FLUSH WITH WALL.

AV RK-2 — AV AMPLIFIER RACK. ELECTRICAL CONTRACTOR SHALL PROVIDE FIVE (5) 20A 120V TECHNICAL POWER CIRCUITS WITH ISOLATED GROUND TERMINATED TO QUAD NEMA 5-20R RECEPTACLES BEHIND RACK. TELECOM CONTRACTOR SHALL PROVIDE TWO (2) BUILDING DATA RECEPTACLES BEHIND RACK. AV CONTRACTOR SHALL COORDINATE OUTLET LOCATION SO THAT RACK SITS FLUSH WITH WALL.

AV RK-3 — AV MIX POSITION UPPER RACK.

AV RK-4 — AV MIX POSITION LOWER RACK. ELECTRICAL CONTRACTOR SHALL PROVIDE THREE (3) 20A 120V TECHNICAL POWER CIRCUITS WITH ISOLATED GROUND TERMINATED TO QUAD NEMA 5-20R RECEPTACLES BEHIND RACK. TELECOM CONTRACTOR SHALL PROVIDE TWO (2) BUILDING DATA RECEPTACLES BEHIND RACK. AV CONTRACTOR SHALL COORDINATE OUTLET LOCATION SO THAT RACK SITS FLUSH WITH WALL.

AV RK-5 — AV CLASSROOM EQUIPMENT RACK. ELECTRICAL CONTRACTOR SHALL PROVIDE TWO (2) 20A 120V TECHNICAL POWER CIRCUITS WITH ISOLATED GROUND TERMINATED TO DUPLEX NEMA 5-20R RECEPTACLES BEHIND RACK. TELECOM CONTRACTOR SHALL PROVIDE TWO (2) BUILDING DATA RECEPTACLES BEHIND RACK. AV CONTRACTOR SHALL COORDINATE OUTLET LOCATION SO THAT RACK SITS FLUSH WITH WALL. MOUNT ON WALL WITH 46" CLEARANCE UNDER RACK.

AV RK-6 — AV PORTABLE RECORDING RACK. PARTIAL-HEIGHT, PORTABLE RACK. MOUNT MIXER ON TOP OF RACK. PROVIDE CABLE MANAGEMENT AS NEEDED.

AV RK-7 — AV GYMNASIUM EQUIPMENT RACK. ELECTRICAL CONTRACTOR SHALL PROVIDE TWO (2) 20A 120V TECHNICAL POWER CIRCUITS WITH ISOLATED GROUND TERMINATED TO DUPLEX NEMA 5-20R RECEPTACLES BEHIND RACK. TELECOM CONTRACTOR SHALL PROVIDE TWO (2) BUILDING DATA RECEPTACLES BEHIND RACK. AV CONTRACTOR SHALL COORDINATE OUTLET LOCATION SO THAT RACK SITS FLUSH WITH WALL.

WIREWAY. ELECTRICAL CONTRACTOR TO PROVIDE WIREWAY CENTERED 18" ABOVE RACK. SIZE WIREWAY AS NEEDED TO ACCOMMODATE NUMBER AND SIZE OF CONDUITS SHOWN ON DRAWING.

FLAGS

1 — ROUTE TO WIREWAY ABOVE STAGE MANAGER'S RACK (AV RK-1)

2 — ROUTE TO WIREWAY ABOVE AMPLIFIER RACK (AV RK-2)

3 — NOT USED

4 — NOT USED

5 — ROUTE TO WIREWAY ABOVE CLASSROOM RACK (AV RK-5)

6 — ROUTE TO ASSOCIATED RECORDING INTERFACE BOX IN ROOM

7 — ROUTE TO WIREWAY ABOVE AV GYMNASIUM EQUIPMENT RACK (AV RK-7)

8 — ROUTE TO LOCAL VOLUME CONTROL (VC) IN ROOM

PERFORMANCE AUDIO-VIDEO GENERAL NOTES

1. THE INFRASTRUCTURE DRAWINGS ARE INTENDED AS DESIGN INPUT TO THE ARCHITECT AND ELECTRICAL THE INFRASTRUCTURE DRAWINGS ARE INTENDED AS DESIGN INPUT TO THE ARCHITECT AND ELECTRICAL CONTRACTOR.
2. ALL ELECTRICAL CONDUITS, BOXES AND WIRE WAYS DEFINED IN THE AV SERIES DRAWINGS SHALL BE PROVIDED AND INSTALLED BY THE ELECTRICAL CONTRACTOR UNLESS OTHERWISE NOTED.
3. WHERE EXACT DIMENSIONS ARE NOT CALLED FOR, THE SCALE OF THESE DRAWING IS SUFFICIENTLY ACCURATE FOR DETERMINING LOCATION OF EQUIPMENT, JUNCTION BOXES, OUTLET BOX WIRE WAYS, PANELS, ETC. WHERE EXACT DIMENSIONS ARE CALLED FOR, THE REFERENCE SURFACE SHALL BE THE FINAL FINISHED SURFACE INCLUDING ANY ACOUSTICAL TREATMENT. DIMENSIONS REFER TO THE CENTER OF THE DEVICE UNLESS OTHERWISE ROOM DIMENSIONS ON THESE DRAWINGS HAVE BEEN TAKEN FROM PRELIMINARY ARCHITECTURAL DRAWINGS. ALL DIMENSIONS MUST BE VERIFIED AND ANY DEVIATIONS CAUSING CHANGES EXCEEDING 3.00 INCHES IN THE LOCATION OF EQUIPMENT MUST BE COORDINATED WITH THE ARCHITECT AND CONSULTANT.
4. CONDUIT RUNS ON THIS DRAWING SHOW ONLY INTERCONNECTION BETWEEN THE TERMINATION POINTS. THE EXACT PATH OF CONDUIT IS TO BE DETERMINED BY THE ELECTRICAL CONTRACTOR AND FIELD CONDITIONS.
5. ALL EMPTY CONDUIT SHALL BE DEBURRED, CLEANED, CAPPED, TAGGED AND FURNISHED WITH PULL STRINGS.
6. ELECTRICAL CONTRACTOR TO COORDINATE ALL CONDUIT RUNS WITH AV CONTRACTOR SUCH THAT CONDUIT IS THE MOST DIRECT AS POSSIBLE AND NO SIGNAL PATH IS BEYOND THE OPERATING LIMITS FOR ANY SIGNAL TYPE. ALL COORDINATION TO BE DOCUMENTED, DATED, AND SIGNED OFF BY BOTH AV AND ELECTRICAL CONTRACTORS.
7. THERE SHALL BE A MINIMUM OF ONE PULL BOX FOR EVERY 100 FEET OF CONDUIT. THERE SHALL NOT BE MORE THAN THE EQUIVALENT OF TWO QUARTER BENDS (180 DEGREES TOTAL) BETWEEN PULL POINTS.
8. POWER AND DATA RECEPTACLES CALLED FOR ON AV DRAWINGS ARE TO BE DEDICATED TO SPECIFIC AV EQUIPMENT.
9. OVERCURRENT PROTECTION DEVICES SHALL BE SIZED AND SPECIFIED BY THE ELECTRICAL ENGINEER. REFER TO ELECTRICAL DRAWINGS. ALL DEDICATED AV CIRCUITS SHALL BE PROTECTED BY 120 VAC, 20.0 A CIRCUIT BREAKERS UNLESS OTHERWISE NOTED.
10. ELECTRICAL FEEDS SHALL NOT BE RUN PARALLEL WITH VIDEO AND/ OR AUDIO LINES OR RACEWAYS. IF ELECTRICAL FEEDS MUST RUN PARALLEL TO AUDIO/VIDEO LINES, A MINIMUM OF 4 FEET OF SEPARATION MUST BE MAINTAINED.
11. STRUCTURAL BACKING FOR MOUNTING AV EQUIPMENT, INCLUDING DISPLAYS AND CAMERAS, SHALL BE COORDINATED BY AV CONTRACTOR AND PROVIDED BY GENERAL CONTRACTOR.
12. THE METHOD OF INSTALLATION OF BOXES IN WALLS AND THE METHOD OF PASSAGE OF CONDUITS AND WIRE WAYS THROUGH ACOUSTICALLY SENSITIVE WALLS SHALL BE COORDINATED WITH THE ACOUSTICAL CONSULTANT.
13. AV CONDUIT ABOVE ACCESSIBLE CEILING MAY BE INTERRUPTED ALLOWING AV CABLING TO BE RUN IN LADDER RACKS OR CEILING HOOKS. WHERE CONDUIT IS INTERRUPTED, PLENUM CABLE SHALL BE USED FOR THE ENTIRE RUN.

SCOPE OF WORK BETWEEN TRADES

GENERAL CONTRACTOR

1. FURNISH AND INSTALL ALL IN WALL AND IN CEILING BLOCKING SUPPORT FOR AV MOUNTS
2. PROVIDE WALL AND CEILING SPEAKER CUTOUTS
3. PROVIDE TABLE CUTOUTS FOR AV EQUIPMENT (UNLESS PROVIDED BY TABLE PROVIDER)

ELECTRICAL CONTRACTOR

1. FURNISH AND INSTALL ALL POWER OUTLETS AND JUNCTION BOXES
2. FURNISH AND INSTALL ALL CONDUIT
3. FURNISH AND INSTALL ALL PULL STRINGS IN CONDUIT
4. FURNISH AND INSTALL ALL CABLE TRAY AND LADDER RACKS
5. FURNISH AND INSTALL ALL ELECTRICAL BOXES
6. FURNISH AND INSTALL ALL AV BACK BOXES UNLESS OTHERWISE NOTED
7. FURNISH AND INSTALL ALL FLOOR BOXES UNLESS OTHERWISE NOTED

AUDIO VISUAL CONTRACTOR

1. FURNISH AND INSTALL ALL AV CABLING
2. FURNISH AND INSTALL ALL AV CONNECTORS
3. FURNISH AND INSTALL AV PLATES AND INTERFACES
4. FURNISH AND INSTALL CEILING AV MOUNTS
5. FURNISH AND INSTALL WALL MOUNTS
6. FURNISH AND INSTALL ALL AV DEVICES AND EQUIPMENT
7. FURNISH AND INSTALL ALL DEDICATED AV NETWORK EQUIPMENT AND CABLING
8. PROVIDE ALL AV SYSTEM PROGRAMMING REQUIRED TO PROVIDE DESCRIBED FUNCTIONALITY

DATA CONTRACTOR

1. FURNISH AND INSTALL ALL NETWORK CABLING, FIBER AND TWISTED PAIR, EXCLUDING DEDICATED AV NETWORK CABLING
2. FURNISH AND INSTALL ALL NETWORK CONNECTORS AND PLATES, EXCLUDING NETWORK CONNECTORS AND PLATES DEDICATED TO AV EQUIPMENT

THEATRE SYSTEMS LEGEND

WALL MOUNTED

- (C2)X — LIGHTING CONTROL RECEPTACLE STATION. 4-GANG J-BOX RACO #695 OR EQUAL. SURFACE MOUNT 18" AFF, BENEATH COUNTER. (NETx2/DMX1IN/DMX2IN) ELECTRICAL TO PROVIDE 15A, 120VAC POWER, TERMINATED IN DUPLEX OUTLET, ADJACENT TO RECEPTACLE STATION. SUBSCRIPT DENOTES LOCATION.
- (E2)X — 2-BUTTON LIGHTING PRESET STATION. 1-GANG J-BOX RACO #692 OR EQUAL. FLUSH MOUNT AT SWITCH HEIGHT NEAR DOOR. SUBSCRIPT DENOTES CONTROL.
- (E4)X — 4-BUTTON LIGHTING PRESET STATION. 1-GANG J-BOX FSR #SMWB-1G OR EQUAL. FLUSH MOUNT AT SWITCH HEIGHT NEAR DOOR. SUBSCRIPT DENOTES CONTROL.
- (ES) — MOTORIZED HOIST CONTROL EMERGENCY STOP BUTTON. 2-GANG J-BOX, RACO #696 OR EQUAL. FLUSH MOUNT AT SWITCH HEIGHT.
- (HC)1 — MOTORIZED HOIST CONTROL AND INTERFACE BOX, THEATRE CONTRACTOR TO PROVIDE INTERFACE BOX. ELECTRICAL CONTRACTOR TO PROVIDE ONE (1) 20A, 480VAC, 3 PHASE CIRCUIT. COORDINATE EXACT LOCATION AND FEED WITH THEATRE SYSTEMS CONTRACTOR.
- (HC)2 — MOTORIZED HOIST CONTROL AND INTERFACE BOX, THEATRE CONTRACTOR TO PROVIDE INTERFACE BOX. ELECTRICAL CONTRACTOR TO PROVIDE ONE (1) 20A, 480VAC, 3 PHASE CIRCUIT. COORDINATE EXACT LOCATION AND FEED WITH THEATRE SYSTEMS CONTRACTOR.
- (HC)3 — MOTORIZED HOIST CONTROL AND INTERFACE RACEWAY, THEATRE CONTRACTOR TO PROVIDE INTERFACE BOX. ELECTRICAL CONTRACTOR TO PROVIDE (3) 20A, 480VAC, 3 PHASE CIRCUITS TO RACEWAY. NO MORE THAN (3) MOTORS WILL BE ALLOWED TO OPERATE SIMULTANEOUSLY. COORDINATE EXACT LOCATION AND FEED WITH THEATRE SYSTEMS CONTRACTOR.
- (MC) — MOTORIZED HOIST CONTROL STATION WITH LOCKABLE COVER. FLUSH WALL MOUNT +48" A.F.F.
- (T)X — PERFORMANCE LIGHTING TORM DISTRIBUTION OUTLET BOX. 4-GANG J-BOX RACO #695 OR EQUAL. SUBSCRIPT DENOTES LOCATION.
- (TS) — LIGHTING TOUCHSCREEN CONTROL STATION. CUSTOM BACKBOX PROVIDED BY THEATRE CONTRACTOR. FLUSH MOUNT AT STANDARD SWITCH HEIGHT. COORDINATE EXACT LOCATION WITH AV CONTRACTOR FOR STAGE MANAGER EQUIPMENT LOCATION.

CEILING MOUNTED

- (FH)X — PERFORMANCE LIGHTING DISTRIBUTION STRIP, PIPE MOUNTED ON BATTEN. THEATRE CONTRACTOR SHALL PROVIDE AND INSTALL TERMINAL BOX, ELECTRICAL CONTRACTOR TO TERMINATE LINE VOLTAGE WIRING. SUBSCRIPT DENOTES DEVICE LOCATION
- (OS)X — STAGE ORCHESTRA SHELL ELECTRICAL DISTRIBUTION STRIP. PROVIDED BY THEATRE CONTRACTOR INTEGRATED INTO ORCHESTRA SHELL FRAMING SYSTEM. SUBSCRIPT DENOTES LOCATION.
- (SE)X — PERFORMANCE LIGHTING DISTRIBUTION STRIP, PIPE MOUNTED ON BATTEN. THEATRE CONTRACTOR SHALL PROVIDE AND INSTALL TERMINAL BOX, ELECTRICAL CONTRACTOR TO TERMINATE LINE VOLTAGE WIRING. SUBSCRIPT DENOTES DEVICE LOCATION

FLOOR MOUNTED

- C1 — FLOOR OUTLET BOX, FLUSH MOUNT WITH AUDITORIUM FLOOR FINISH. FSR FL-400 OR EQUAL CONTROL OUTLETS (NETx2/DMX1IN/DMX2IN). CUSTOM BACK BOX AND COVER PROVIDED BY THEATRE CONTRACTOR. ELECTRICAL CONTRACTOR TO PROVIDE 15A, 120VAC POWER, TERMINATED IN DUPLEX OUTLET, IN FLOOR BOX.
- FB X — FLOOR OUTLET BOX, FLUSH MOUNT WITH STAGE FLOOR FINISH. FSR FL-400 OR EQUAL CUSTOM BACK BOX AND COVER PROVIDED BY THEATRE CONTRACTOR. SUBSCRIPT DENOTES LOCATION

EQUIPMENT RACKS

- RP RK-1 — RELAY PANEL. ELECTRICAL CONTRACTOR TO PROVIDE MINIMUM 200A, 3-PHASE, 4-WIRE WITH GROUND, 120/208VAC FEED TO RACK.
- PL RK-1 — WALL-MOUNTED LIGHTING CONTROL EQUIPMENT RACK. ELECTRICAL CONTRACTOR TO PROVIDE (2) 20A, 120VAC DEDICATED CIRCUITS TERMINATED TO DUPLEX NEMA 5-20R RECEPTACLES IN REAR OF RACK, AND PROVIDE NEW WIREWAY ABOVE, AS NEEDED FOR CONTROL WIRING.

FLAGS

- 1 — TO LIGHTING CONTROL EQUIPMENT RACK
- 2 — TO RELAY PANEL
- 3 — TO MOTORIZED HOIST CONTROL

THEATRE SYSTEMS GENERAL NOTES

1. ALL ELECTRICAL CONDUITS, BOXES AND WIREWAYS DEFINED IN THE THEATRE SYSTEMS DRAWINGS SHALL BE PROVIDED AND INSTALLED BY THE ELECTRICAL CONTRACTOR UNLESS OTHERWISE NOTED.
2. WHERE EXACT DIMENSIONS ARE NOT CALLED FOR, THE SCALE OF THESE DRAWINGS IS SUFFICIENTLY ACCURATE FOR DETERMINING LOCATION OF EQUIPMENT, JUNCTION BOXES, OUTLET BOX WIRE WAYS, PANELS, ETC. WHERE EXACT DIMENSIONS ARE CALLED FOR, THE REFERENCE SURFACE SHALL BE THE FINAL FINISHED SURFACE INCLUDING ANY ACOUSTICAL TREATMENT. DIMENSIONS REFER TO THE CENTER OF THE DEVICE UNLESS OTHERWISE NOTED. ROOM DIMENSIONS ON THESE DRAWINGS HAVE BEEN TAKEN FROM ARCHITECTURAL DRAWINGS. ALL DIMENSIONS MUST BE VERIFIED AND ANY DEVIATIONS CAUSING CHANGES EXCEEDING 0'-3" IN THE LOCATION OF EQUIPMENT MUST BE COORDINATED WITH THE ARCHITECT AND CONSULTANT.
3. DIMENSIONS SHOWN ARE SUGGESTED PLACEMENTS AND ARE PROVIDED FOR INFORMATION ONLY. COORDINATE ALL ELECTRICAL DEVICES AND DIMENSIONED LOCATIONS WITH ARCHITECTURE DRAWINGS. COORDINATE WITH ADJACENT PLATES FOR A UNIFORM APPEARANCE.
4. DRAWINGS ARE NOT TO BE USED FOR ARCHITECTURAL OR ENGINEERING PURPOSES. DRAWINGS SHOULD ONLY BE USED FOR THEATRE SYSTEMS INSTALLATION AND COORDINATION WITH OTHER CONTRACTORS AND SYSTEMS. COORDINATE PATHWAYS FOR ALL THEATRE SYSTEMS RELATED DEVICES WITH ARCHITECTURAL AND ELECTRICAL PLANS.
5. ALL THEATRE SYSTEMS EQUIPMENT DEVICES SHALL BE SECURELY MOUNTED PLUMB AND STRAIGHT TO WALLS, FLOORS, RACKS, OR PIPES (AS APPLICABLE), PER THE MANUFACTURER'S RECOMMENDED MOUNTING PRACTICE.
6. ALL EQUIPMENT SHOWN IN GRAY IS SPECIFIED ELSEWHERE.
7. INSTALL FIRESTOP TO ALL SLAB AND WALL PENETRATIONS PROVIDED FOR THE INSTALLATION OF CABLE AS REQUIRED TO MAINTAIN FIRE RATING OF SLAB OR WALL. INSTALL NON-HARDENING ACOUSTICAL CAULK TO ALL SLAB AND WALL PENETRATIONS. REVIEW ARCHITECTURE DRAWINGS FOR PARTITION TYPES.
8. THE METHOD OF INSTALLATION OF BOXES IN WALLS, AND THE METHOD OF PASSAGE OF CONDUIT AND WIREWAYS THROUGH ACOUSTICALLY SENSITIVE WALLS, SHALL BE COORDINATED WITH THE ACOUSTICAL CONSULTANT AND ARCHITECT.
9. ALL ELECTRICAL FOR THEATRE SYSTEMS EQUIPMENT SHALL BE INSTALLED IN ACCORDANCE WITH LOCAL ELECTRICAL CODE AND SEISMIC REQUIREMENTS.
10. REFER TO ELECTRICAL SPECIFICATION FOR INSTALLATION INSTRUCTIONS FOR FLOOR BOXES, JUNCTION BOXES, PLYWOOD PANELS, GROUNDING CONDUCTORS, BUSBARS, CONDUITS, CABLE TRAYS IN CORRIDORS, METALLIC ENCLOSURES, ELECTRICAL PANELBOARDS AND CIRCUITING. FIRE PROOFING SYSTEMS USED FOR ALL PENETRATIONS MUST BE APPROVED BY APPLICABLE AUTHORITIES PRIOR TO INSTALLATION.
11. ELECTRICAL FEEDS ARE NOT TO BE RUN PARALLEL WITH VIDEO AND/OR AUDIO LINES OR RACEWAYS. IF ELECTRICAL FEEDS MUST BE RUN PARALLEL TO AUDIO/VIDEO LINES, A MINIMUM OF 4'-0" OF SEPARATION MUST BE MAINTAINED.
12. POWER BREAKER PANELS ARE SIZED AND SPECIFIED BY THE ELECTRICAL ENGINEER, REFER TO ELECTRICAL DRAWINGS. ALL CIRCUITS SHALL BE PROTECTED.
13. POWER RECEPTACLES SHOWN ON THE THEATRE SYSTEMS DRAWINGS ARE DEDICATED TO SPECIFIC PERFORMANCE LIGHTING SYSTEMS EQUIPMENT AND ARE SHOWN FOR REFERENCE ONLY. REFER TO ELECTRICAL DRAWINGS FOR ADDITIONAL UTILITY POWER RECEPTACLES.
14. GROUND ALL CONDUITS, CABLE TRAYS, AND JUNCTION BOXES PER THE MANUFACTURER'S RECOMMENDATIONS AND PER ALL APPLICABLE CODES.
15. MAINTAIN MINIMUM BEND RADIUS OF 10x O.D. FOR ALL CONDUITS.
16. PROVIDE CONNECTION HARDWARE, GROUNDING LUGS AND STRAPS, THERMAL EXPANSION PLATES, SUPPORT BRACKETS, SPLICE HARDWARE, RUNWAY DROPOFFS, AND 0'-7" CABLE RETAINING POSTS FOR ALL CABLE TRAY LOCATIONS PER MANUFACTURERS RECOMMENDATIONS AND PER APPLICABLE CODES.
17. ALL POWER CONDUIT, POWER WIREWAYS, AND POWER JUNCTION BOXES ARE SHOWN ON ELECTRICAL DRAWINGS.
18. CONDUIT RUNS ON THE THEATRE SYSTEMS DRAWINGS SHOW ONLY INTERCONNECTION BETWEEN THE TERMINATION POINTS. THE EXACT PATH OF CONDUIT ARE TO BE DETERMINED BY THE ELECTRICAL ENGINEER AND FIELD CONDITIONS.
19. IF DISCREPANCIES EXIST BETWEEN THE EXISTING CONDITIONS AND THE THEATRE SYSTEMS DRAWINGS, REQUEST CLARIFICATION BEFORE PROCEEDING WITH WORK.
20. THEATRE CONTRACTOR SHALL RESTORE CEILINGS AND WALLS AND ANY OTHER SURFACES AFFECTED BY ITS WORK UPON COMPLETION OF WORK, WITH LIKE MATERIALS TO MATCH EXISTING CONSTRUCTION.
21. THE FINISHES FOR ALL JUNCTION BOX FACEPLATES, GRILLES, FLOOR BOXES, AND WALL BOXES SHALL BE BLACK UNLESS OTHERWISE NOTED. COORDINATED WITH THE ARCHITECT FOR OTHER FINISH COLORS. ALL ELECTRICAL BOXES SHALL HAVE THE APPROPRIATE COVERS AND SCREWS INSTALLED BY THE ELECTRICAL CONTRACTOR TO MATCH THE FIT AND FINISH SPECIFIED.
22. IT SHALL BE THE RESPONSIBILITY OF THE THEATRE CONTRACTOR TO VERIFY SIGNAL/CONDUIT PATHWAYS WITH THE ELECTRICAL ENGINEERS DRAWINGS.
23. THEATRICAL CONTRACTOR TO VERIFY ALL DIMENSIONS AND CONDITIONS IN FIELD.
24. ALL FASTENERS TO HAVE LOCKWASHERS OR OTHER APPROVED SELF-LOCKING HARDWARE.
25. ALL CONDUIT SHALL BE METALLIC TYPE ONLY, NO PVC SHALL BE USED. CONDUIT IN SLAB MUST BE PVC COATED METALLIC TYPE OR APPROVED EQUIVALENT.
26. POWER, DATA, CATV, AND PHONE CONDUIT ARE SHOWN ON THE ELECTRICAL DRAWINGS.
27. ALL CONTROL WIRING RUNS SHALL BE SUPPLIED AND INSTALLED BY THE ELECTRICAL CONTRACTOR AND TERMINATED BY THEATRE CONTRACTOR UNLESS OTHERWISE NOTED.
28. SIZE ALL LOAD WIRING AND CONTROL WIRING CONDUIT PER NEC CODE AND BASED ON MANUFACTURER'S WIRING. REQUIREMENTS AS SHOWN ON PERFORMANCE LIGHTING ONE-LINE DIAGRAMS. IF ALTERNATE LIGHTING MANUFACTURER IS USED, CONTRACTOR SHALL COORDINATE WIRING AND CONDUIT REQUIREMENTS TO PROVIDE EQUIVALENT, FULLY OPERATIONAL SYSTEM.
29. SURFACE-MOUNT ELECTRICAL BOXES MUST BE SELECTED TO ENSURE PROPER FIT OF COVER PLATES TO AVOID HAVING SHARP EDGES EXTEND BEYOND THE BOX.

SCOPE OF WORK BETWEEN TRADES

GENERAL CONTRACTOR

1. FURNISH AND INSTALL IN-WALL BLOCKING OR SUPPORT FOR THEATRE SYSTEM MOUNTS.
2. FURNISH AND INSTALL FURNITURE CUTOUTS FOR THEATRE SYSTEMS EQUIPMENT.
3. FURNISH AND INSTALL ALL STEEL STRUCTURAL SUPPORT NOT SPECIFICALLY IDENTIFIED AS THE RESPONSIBILITY OF THE THEATRE CONTRACTOR ON THE THEATRE SYSTEMS DRAWINGS.

THEATRE CONTRACTOR

1. FURNISH DEDICATED DISTRIBUTION PANELS AND RELAY PANELS.
2. FURNISH AND INSTALL ALL STEEL CHANNEL SPECIFICALLY IDENTIFIED AS THE RESPONSIBILITY OF THE THEATRE CONTRACTOR ON THE THEATRE SYSTEMS DRAWINGS OR AS REQUIRED FOR PERFORMANCE LIGHTING SYSTEMS DEVICES.
3. FURNISH, INSTALL, AND TERMINATE CUSTOM ENGRAVED PERFORMANCE LIGHTING SYSTEMS WALL PLATES (ELECTRICAL CONTRACTOR TO TERMINATE LINE VOLTAGE CONNECTIONS).
4. FURNISH AND INSTALL PERFORMANCE LIGHTING SYSTEMS DEVICE WALL MOUNTS.
5. FURNISH, INSTALL, AND TERMINATE PERFORMANCE LIGHTING SYSTEMS DEVICES AS DESCRIBED IN THE THEATRE SYSTEM DOCUMENTS.
6. FURNISH AND INSTALL ALL MOTORIZED RIGGING HOISTS.
7. TERMINATE PERFORMANCE LIGHTING SYSTEMS CONTROL WIRING AT THEATRE CONTRACTOR-PROVIDED DEVICES.

ELECTRICAL CONTRACTOR

1. INSTALL AND TERMINATE DEDICATED DISTRIBUTION PANELS AND RELAY PANELS.
2. FURNISH, INSTALL, AND TERMINATE PERFORMANCE LIGHTING SYSTEMS LINE VOLTAGE LOAD WIRING.
3. PROVIDE AND INSTALL ALL JUNCTION BOXES AND CONDUIT, UNLESS NOTED OTHERWISE.
4. FURNISH, INSTALL, AND TERMINATE MOTORIZED RIGGING CONTROL AND LOAD WIRING.
5. FURNISH AND INSTALL PERFORMANCE LIGHTING SYSTEMS LOW VOLTAGE CABLING.
6. FURNISH AND INSTALL ALL HOUSE LIGHTING SYSTEMS LOW VOLTAGE CABLING.
7. FURNISH AND INSTALL ALL HOUSE LIGHTING DRIVERS, POWER SUPPLIES, AND ACCESSORIES.
8. FURNISH AND INSTALL ALL PERFORMANCE LIGHTING SYSTEMS CONTROL WIRING.

TELECOM CONTRACTOR

1. INSTALL VOICE/DATA NETWORK CABLING (FIBER AND TWISTED PAIR), EXCEPT FOR PERFORMANCE LIGHTING SYSTEMS-SPECIFIC CABLE CALLED FOR ON THEATRE SYSTEMS DRAWINGS.

U*	-HOUSE LIGHT CONTROL	BELDEN #8471 + (1) #14AWG + (2) #16AWG
N*	-LIGHTING NETWORK	BELDEN #1583A
D*	-DMXIN	BELDEN #1583A
DX*	-DMXOUT	BELDEN #1583A

NOTES

1. ALL CONTROL WIRING AND RUNS SHALL BE SUPPLIED BY ELECTRICAL CONTRACTOR, AND TERMINATED BY THE THEATRE CONTRACTOR, UNLESS OTHERWISE NOTED.
2. TOTAL LENGTH OF HOUSE LIGHT CONTROL WIRING RUNS SHALL NOT EXCEED 1,640 FEET (500 METERS).
3. THEATRE CONTRACTOR TO VERIFY LOAD TYPE OF ALL HOUSE LIGHT LOADS PRIOR TO SYSTEM ENERGIZATION.
4. ELECTRICAL CONTRACTOR TO USE #10 AWG THHN WIRING FOR CONNECTION OF THEATRICAL LIGHTING LOADS.
5. CONNECT HOUSE LIGHTING TO PERFORMANCE LIGHTING SYSTEM EQUIPMENT AS SPECIFIED BY ELECTRICAL CONSULTANT.
6. A SEPARATE NEUTRAL IS REQUIRED FOR EACH CIRCUIT.

ARCHITECTURAL CONTROL SYSTEM PROGRAMMING NOTES

1) LIGHTING CONTROL CONSOLE
   a) SHALL CONTROL ALL THE LIGHTING ASSOCIATED WITH STAGE AND THEATRE.
   b) SHALL BE INITIALLY PROGRAMMED AND SET UP BY THEATRICAL CONTRACTOR TO HAVE CONTROL OF ALL CHANNELS, FIXTURES, AND DEVICES.
   c) THEATRE CONTRACTOR SHALL PROVIDE INITIAL MAGIC SHEET SET UP FOR ENTIRE SYSTEM AND INSTRUCTION TO END USER ON MAGIC SHEET FUNCTIONALITY FOR ADJUSTMENT TO CHANGES BY END USER IN THE FUTURE.
   d) THE CONSOLE SHALL AUTOMATICALLY TAKE CONTROL FROM THE ARCHITECTURAL CONTROL SYSTEM AND RELINQUISH IT WHEN CONSOLE IS POWERED OFF.

2) TOUCHSCREEN GUI DEVELOPMENT PROCESS
   a) THE THEATRE CONTRACTOR SHALL INCLUDE TWO (2) TOUCHSCREEN SUBMITTALS AND FUNCTION/GUI REVISIONS IN THE SCOPE OF WORK.
      i) THE THEATRE CONTRACTOR SHALL SUBMIT TOUCHSCREEN GUI SCREEN-SHOTS WITH THE PERFORMANCE LIGHTING SYSTEM SHOP DRAWING PACKAGE. ONE (1) REVISION SHALL OCCUR AFTER CONSULTANT AND OWNER REVIEW.
      ii) ONE (1) REVISION SHALL OCCUR AFTER THE POST-CONSTRUCTION CONSULTANT SITE VISIT AND OWNER TRAINING. ALL TOUCHSCREEN FUNCTIONS SHOULD BE CONFIRMED WITH THE OWNER DURING TRAINING.

3) GENERAL ARCHITECTURAL CONTROL SYSTEM PROGRAMMING
   a) LIGHTING ENTRY STATIONS MUST BE PROGRAMMABLE FOR A MINIMUM OF TWO (2) DMX UNIVERSES SHOULD THE OWNER WISH TO PROGRAM ADDITIONAL LIGHTING INTO THE PRESETS.
      i) ALL ENTRY STATION AND STAGE MANAGER'S TOUCHSCREEN SHALL BE PROGRAMMED AS A TWO-STEP MACRO WHICH RECALLS THE ASSOCIATED PRESET IN "AISLE LIGHTS" ROOM AND "AUDITORIUM" ROOM WITH DEFAULT FADE RATE WITH EXCEPTION OF THE STAGE MANAGER'S STATION "OFF" PRESET -- THIS PRESET WILL ONLY RECALL "OFF" IN THE "AUDITORIUM" ROOM
      ii) THE INTENT OF THE ARCHITECTURAL CONTROL SYSTEM PROGRAMMING IS SUCH THAT THE ONLY PLACE THE OWNER WILL BE ABLE TO TURN THE AISLE/STEP LIGHTS "OFF" IS BY PUSHING THE "OFF" BUTTON AT THE ENTRY STATIONS.
      iii) IN THIS FASHION, THE OWNER WILL HAVE THE AISLE/STEP LIGHTS PROGRAMMED AT THE MINIMUM ALLOWABLE DIMMING LEVEL, AS DIRECTED BY THE ELECTRICAL CONSULTANT, INTO EACH PRESET AND IN THE "OFF" SCENE AT THE TOUCHSCREENS.

4) PAGE-BY-PAGE TOUCHSCREEN FUNCTION DESCRIPTIONS
   a) THE SYSTEM SHALL DEFAULT TO A SPLASH SCREEN.
      i) THE OWNER SHALL SELECT SPLASH SCREEN GRAPHICS IMAGE, IF DESIRED.
      ii) IF DESIRED BY THE OWNER, PROVIDE A PIN OR PASSWORD LOCK ON THE SPLASH SCREEN.
   b) THE TOUCHSCREEN GUI SHALL BE LAID OUT WITH TABS ACROSS THE TOP OF THE SCREEN.
   c) WHEN THE TOUCHSCREEN IS ACTIVATED, THE FIRST TAB SHALL BE NAMED "HOME" AND HAVE THE FOLLOWING FUNCTIONS:
      i) FOUR (4) HOUSE LIGHTING PRESETS: HOUSE FULL, HOUSE HALF, HOUSE GLOW, AND HOUSE OUT.
         (1) THESE SHALL BE SAVED ON PRESETS 21-24.
         (2) PROVIDE A FADER FOR HOUSE LIGHTING THAT CAN BE USED TO TEMPORARILY ADJUST LEVELS.
      ii) TWO (2) TOGGLE BUTTONS WITH WORK LIGHTING PRESETS:
         (1) STAGE WORK LIGHTS ON/OFF.
         (2) STAGE BLUE LIGHTS ON/OFF.
      iii) BUTTON STATION LOCKOUT.
         (1) WITH ACTIVATION OF STATION LOCKOUT, BLUE LIGHTS SHALL TURN ON.
   d) THE SECOND TAB SHALL BE NAMED "PRESETS" AND HAVE THE FOLLOWING FUNCTIONS:
      i) TEN (10) PRESETS.
      ii) RECORD PRESET BUTTON WITH PIN LOCK (IF DESIRED BY OWNER).
   e) THE THIRD TAB SHALL BE NAMED "GROUPS" AND HAVE THE FOLLOWING FUNCTIONS:
      i) GROUPS OF RELAYS BY POSITION (WORK LIGHT POSITIONS, WALL WASHER, WALL BOXES, ETC.).
      ii) PROVIDE GROUP WITH INTENSITY FADER AND COLOR PICKER FOR THE WALL WASHER GROUP.
   f) THE FOURTH TAB SHALL BE NAMED "UTILITY" AND HAVE THE FOLLOWING FUNCTIONS:
      i) DUPLICATE THE STATION LOCKOUT BUTTON.
      ii) END OF DAY ENABLE/DISABLE.
      iii) PROVIDE A METHOD FOR THE OWNER TO CHANGE ALL PIN/PASSWORD LOCKS IN THE SYSTEM ON THIS PAGE.
   g) THE FIFTH TAB SHALL BE NAMED "HELP" AND SHOULD INCLUDE THE CONTACT INFORMATION FOR THE INSTALLING CONTRACTOR AS WELL AS THE MANUFACTURER. CONTRACTOR MAY INCLUDE THEIR LOGO, IF DESIRED.
   h) THE FINAL TABS SHALL BE NAMED "CHANNELS" AND HAVE THE FOLLOWING FUNCTIONS:
      i) INDIVIDUAL CONTROL OVER ALL RELAYS WITH ON/OFF BUTTONS.
      ii) ADD ADDITIONAL PAGES AS REQUIRED TO ACCESS ALL CHANNELS.

5) BUTTON PRESET LIGHTING STATIONS:
   a) PROGRAMMING OF THE INITIAL PRESETS FOR THE BUTTON STATIONS SHALL BE COORDINATED WITH THE OWNER'S REPRESENTATIVES.
   b) BUTTON STATIONS SHALL BE CONFIGURED FOR CONTROL OF ASSIGNED PRESET AS DESCRIBED BELOW:
      i) (E2-1) - PUSH BUTTON STATION SHALL BE INITIALLY FOR CONFIGURED FOR GENERAL USE WITH THE STAGE/THEATRE LIGHTING SYSTEM AS FOLLOWS:
         (1) BUTTON 1 = TOGGLE ON/OFF PRESET 1, PRESS AND HOLD TO DIM
         (2) BUTTON 2 = ALL STAGE/THEATRE CIRCUITS OFF
      ii) (E1-2) - PUSH BUTTON STATION SHALL BE INITIALLY FOR CONFIGURED FOR GENERAL USE WITH THE VESTIBULE LIGHTING AS FOLLOWS:
         (1) BUTTON 1 = TOGGLE ON/OFF LOCAL VESTIBULE LIGHTS, PRESS AND HOLD TO DIM
         (2) BUTTON 2 = ALL LOCAL VESTIBULE CIRCUITS OFF
      iii) (E1-3) - PUSH BUTTON STATION SHALL BE INITIALLY FOR CONFIGURED FOR GENERAL USE WITH THE CONTROL BOOTH LIGHTING AS FOLLOWS:
         (1) BUTTON 1 = TOGGLE ON ALL ARCHITECTURAL LIGHTS IN CONTROL BOOTH
         (2) BUTTON 2 = TOGGLE OFF ALL ARCHITECTURAL CIRCUITS IN CONTROL BOOTH
      iv) (E4-1) - PUSH BUTTON STATION SHALL BE INITIALLY FOR CONFIGURED FOR GENERAL USE WITH THE STAGE/THEATRE LIGHTING SYSTEM AS FOLLOWS:
         (1) BUTTON 1 = TOGGLE ON/OFF PRESET 1, PRESS AND HOLD TO DIM
         (2) BUTTON 2 = TOGGLE ON/OFF BLUE LIGHTS, PRESS AND HOLD TO DIM
         (3) BUTTON 3 = TOGGLE ON/OFF WORK LIGHTS, PRESS AND HOLD TO DIM
         (4) BUTTON 4 = ALL STAGE/THEATRE CIRCUITS OFF

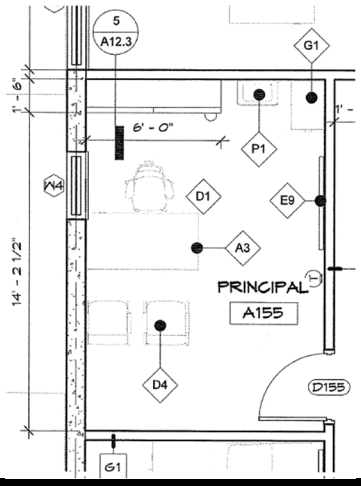
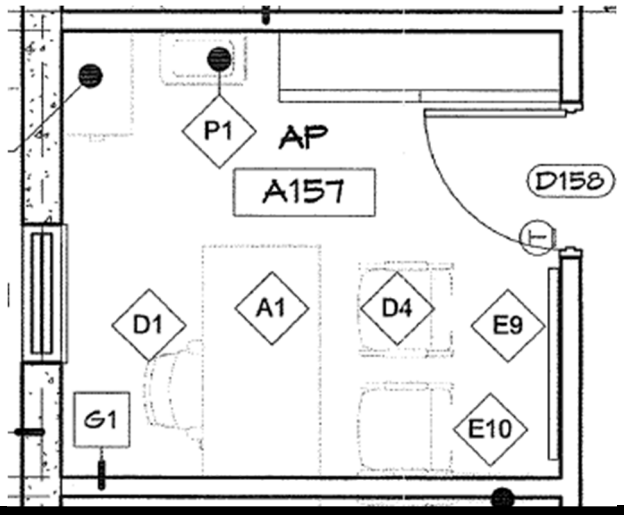
5.0 ROOM REQUIREMENTS



Lobby

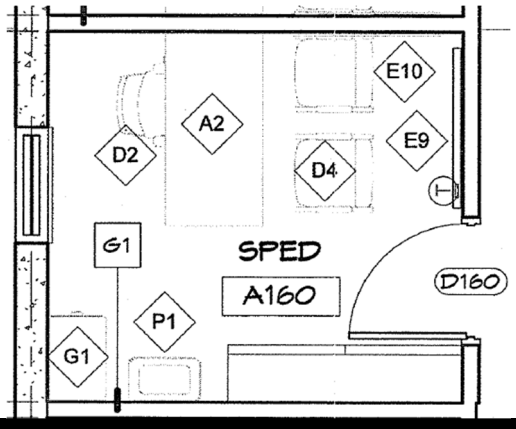
Description	Requirements
Location	A-Wing, Administrative Building, Main Entrance
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Fixed Furnishing	Provide Greeter's Desk for 3 persons.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Locate Fire Alarm Center behind the front desk.
Other Requirements	Electronic access control at the public main entrance doors to the unsecured side of the main entrance. Provide public restroom with typical single occupant restroom requirements; add baby changing station.

5.0 ROOM REQUIREMENTS



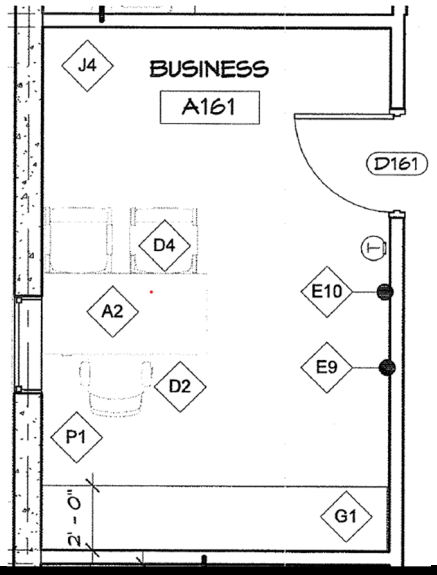
Principal's Office

Description	Requirements
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design.
Floor Finishes	Vinyl Composition Tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Provide room signage.
Fixed Furnishing	Provide base cabinets, countertop, and 3-tier shelving along back wall.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Locate adjacent to courtyard space with window for direct view/supervision; adjacent to conference room and other assistant principal offices.



5.0 ROOM REQUIREMENTS

Assistant Principal's Office (A156, A157, A158, A159)

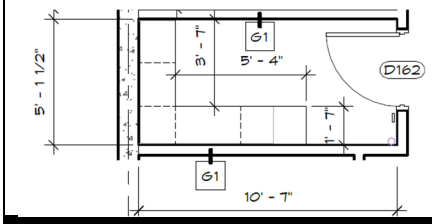


Description	Requirements
Location	A-Wing, Administrative Building.
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Fixed Furnishing	Provide base cabinets, countertop, and 3-tier shelving, min. length 6FT.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Locate adjacent to courtyard space with window for direct view/supervision; adjacent to principal and assistant principal offices.

5.0 ROOM REQUIREMENTS

SPED Related Services Office	
	
Description	**Requirements**
Location	A-Wing, Administrative Building.
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber base.
Ceiling Finishes	Acoustical ceiling tile.
Signage	Room signage.
Fixed Furnishing	Provide base cabinets, countertop, and 3-tier shelving, min. length 6FT.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Locate adjacent to courtyard space with window for direct view/supervision; adjacent to principal and assistant principal offices.

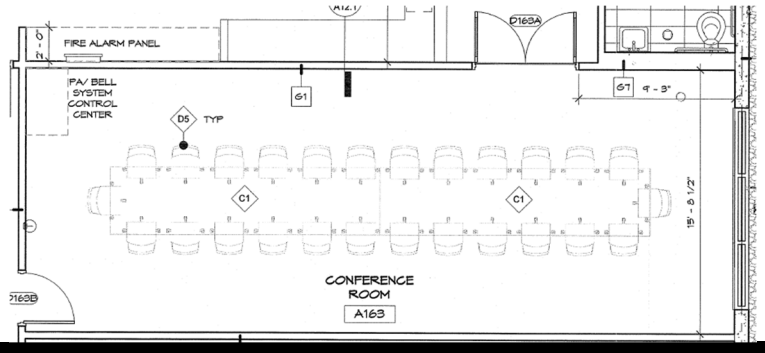
5.0 ROOM REQUIREMENTS



Business Office

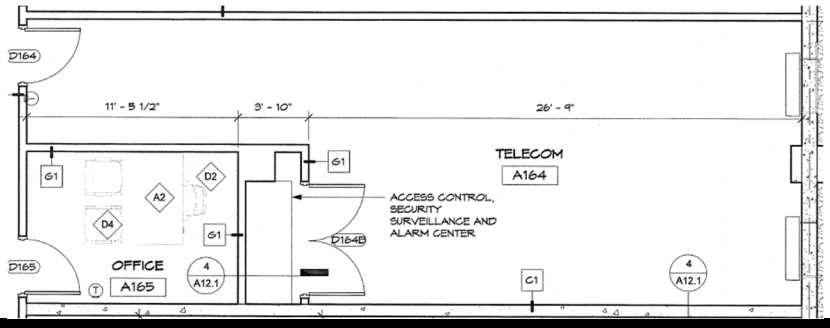
Description	Requirements
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile.
Signage	Room signage; exterior signage for transaction window.
Fixed Furnishing	Provide base cabinets, countertop, and 3-tier shelving along full length of back wall, accommodate office safe.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Locate adjacent to courtyard space with transaction window .

5.0 ROOM REQUIREMENTS



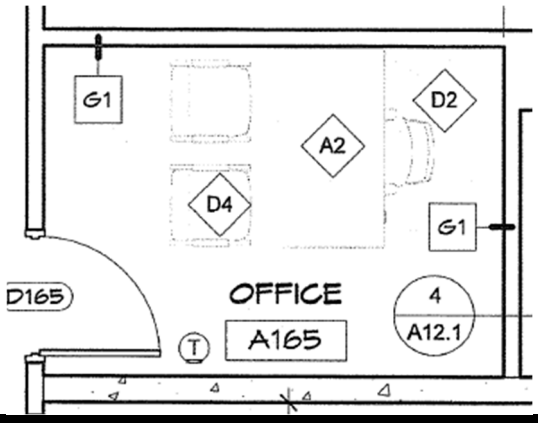
Business Office Storage

Description	Requirements
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Fixed Furnishing	???????
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Locate adjacent to business office.



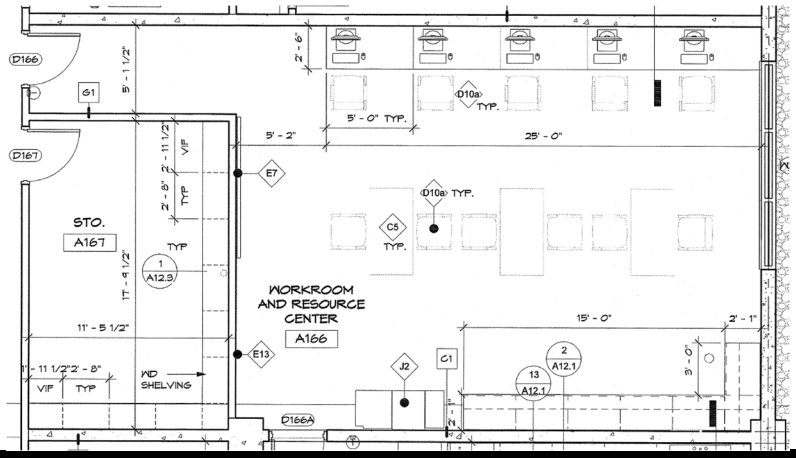
5.0 ROOM REQUIREMENTS

Conference Room



Description	Requirements
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Fixed Furnishing	Provide base cabinets, countertop
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Locate Fire Alarm Center behind the front desk.
Other Requirements	Locate adjacent to lobby, principal, and assistant principal offices. Provide double-door access from lobby space, single door access from principal's office corridor.

5.0 ROOM REQUIREMENTS

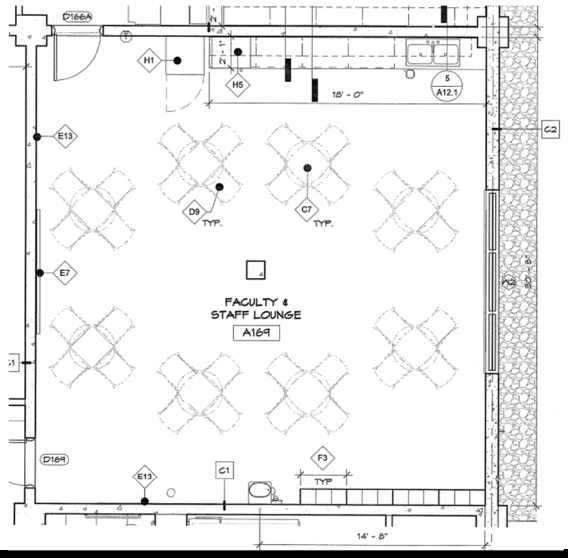


Telecommunication (Telecom) Room	
	
Description	**Requirements**
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Fixed Furnishing	Provide 3FT x 8FT 3” clear closet with countertop at full length of closet for location of building system admin consoles.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Non-water fire suppression.
Other Requirements	Locate access control, security, surveillance and alarm, PA System Admin Console in closet. Locate adjacent to Office A165, principal, and assistant principal offices. Entrance point for campus telecom service.

5.0 ROOM REQUIREMENTS

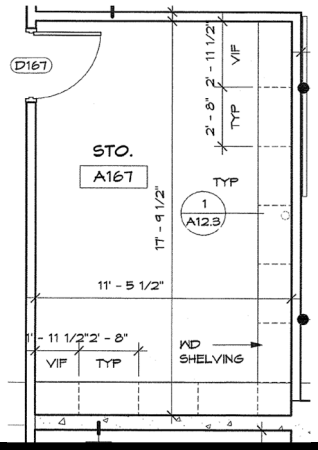
Computer Operator Office	
	
Description	**Requirements**
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Fixed Furnishing	Provide 5-tier, 1FT depth bookshelf at full length of rear wall.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Locate adjacent to telecom room, principal and assistant principal offices.

5.0 ROOM REQUIREMENTS



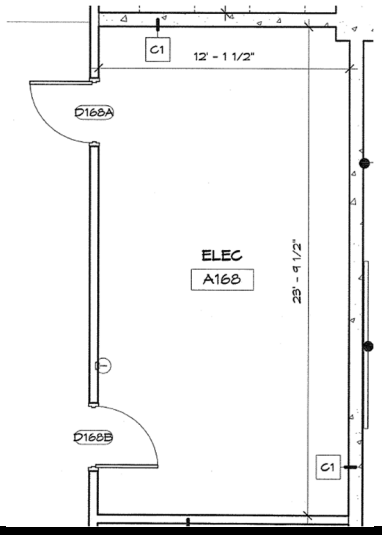
Workroom and Resource Center

Description	Requirements
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Fixed Furnishing	Provide min. 25FT counter space for 5 computer workstations. Provide base cabinets and countertop for open workspace, minimum 18FT.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Provide direct access to faculty and staff lounge; Locate adjacent to principal and assistant principal offices with hallway access to the front desk and a secondary exit to the courtyard covered walkway.



5.0 ROOM REQUIREMENTS

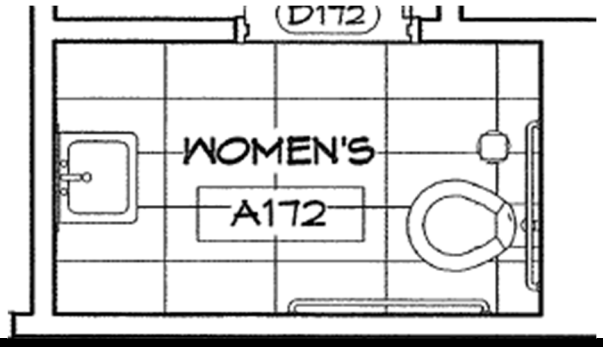
Faculty & Staff Lounge



Description	Requirements
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Fixed Furnishing	Provide base cabinets with countertop and wall mounted cabinet, minimum 18FT.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide 2-compartment sink, floor drain, tankless electric water heater, drinking fountain/ bottle filling station.
Other Requirements	Provide direct access Workroom and Resource Center. Locate adjacent to principal and assistant principal offices with hallway access to the front desk and a secondary exit to the courtyard covered walkway.

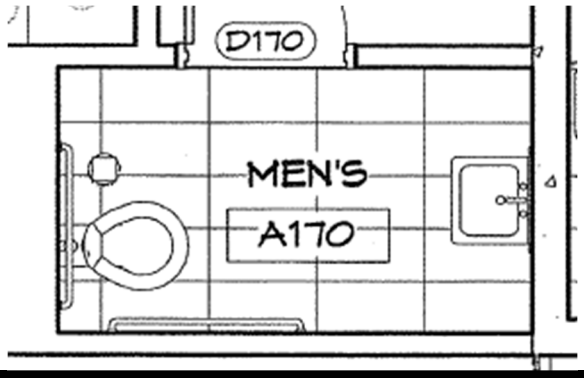
5.0 ROOM REQUIREMENTS

Storage	
	
Description	**Requirements**
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Fixed Furnishing	Provide 6-teir shelving along half of perimeter walls.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Locate adjacent to principal and assistant principal offices with hallway access to the front desk and a secondary exit to the courtyard covered walkway.



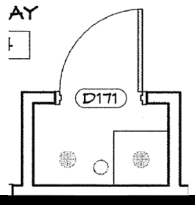
5.0 ROOM REQUIREMENTS

Electrical (Elec) Room



Description	Requirements
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Provide two means of egress. Locate adjacent to principal and assistant principal offices with hallway access to the front desk and a secondary exit to the courtyard covered walkway.

5.0 ROOM REQUIREMENTS

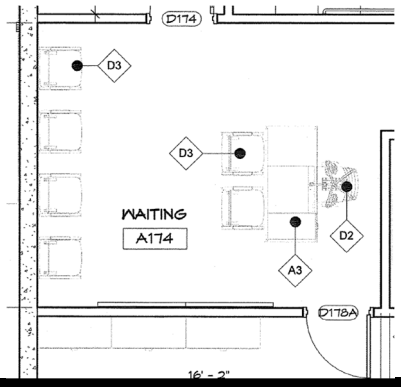


Women's Restroom	
	
Description	**Requirements**
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Porcelain Ceramic Tile
Wall Finishes	Porcelain Ceramic Tile
Ceiling Finishes	Painted gyp. bd.
Signage	Room signage.
Furnishing	None
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide lavatory, water closet, floor drain.
Other Requirements	Provide mirror with stainless steel frame, stainless steel grab bars, robe hook, liquid soap dispenser, paper towel dispenser, toilet tissue holder, waste receptacle.

5.0 ROOM REQUIREMENTS

Men's Restroom	
	
Description	**Requirements**
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Porcelain Ceramic Tile
Wall Finishes	Porcelain Ceramic Tile
Ceiling Finishes	Painted gyp. bd.
Signage	Room signage.
Furnishing	None
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide lavatory, water closet, floor drain.
Other Requirements	Provide mirror with stainless steel frame, stainless steel grab bars, robe hook, liquid soap dispenser, paper towel dispenser, toilet tissue holder, waste receptacle.

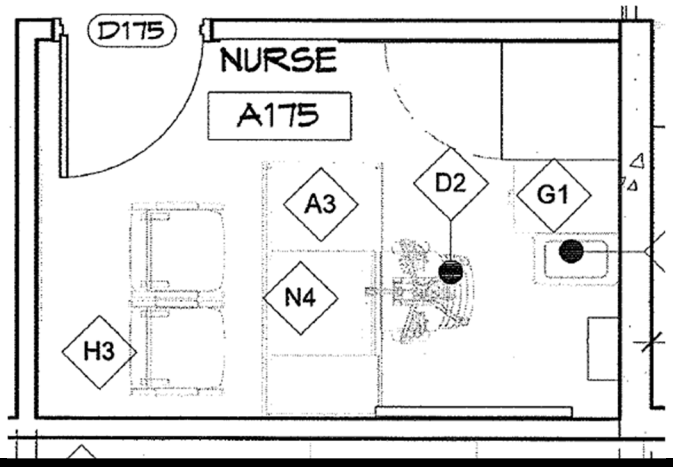
5.0 ROOM REQUIREMENTS



Janitorial (Jan) Closet

Description	Requirements
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Painted gyp. bd.
Signage	Room signage.
Furnishing	None.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide mop sink, floor drain.
Other Requirements	Provide adjustable storage wall mount organizer with 3 grip hooks; 2-tier, built-in shelves with paint finish.

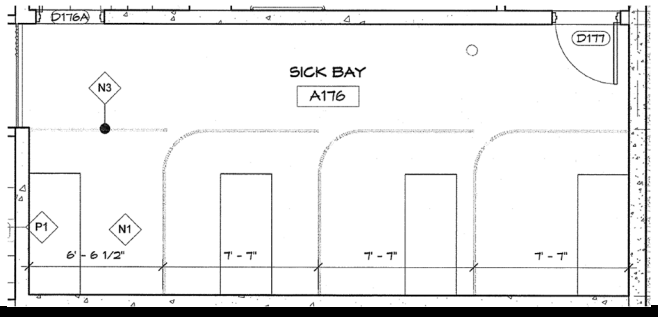
5.0 ROOM REQUIREMENTS



Nurse Office Lobby

Description	Requirements
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Provide direct access to Cumulative Folder Storage. Locate adjacent to principal and assistant principal offices with hallway access to the front desk and a secondary exit to the courtyard covered walkway.

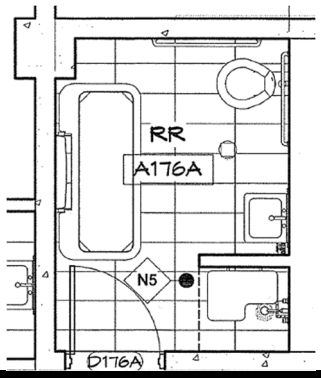
5.0 ROOM REQUIREMENTS



Nurse Office

Description	Requirements
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Fixed Furnishing	Provide 24” base cabinets with countertop/one compartment sink, and wall mounted cabinet.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Provide window for direct view/supervision into Nurse’s Lobby/Waiting Area. Locate adjacent to sick bay.

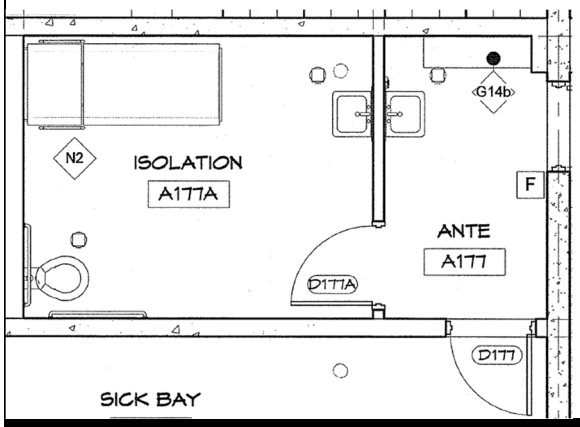
5.0 ROOM REQUIREMENTS



Nurse Office-Sick Bay

Description	Requirements
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Locate adjacent to Nurse's office, Ante and Isolation rooms; provide curtain privacy screen to obstruct view from waiting area; provide direct access to restroom space; provide direct access to the Ante room.

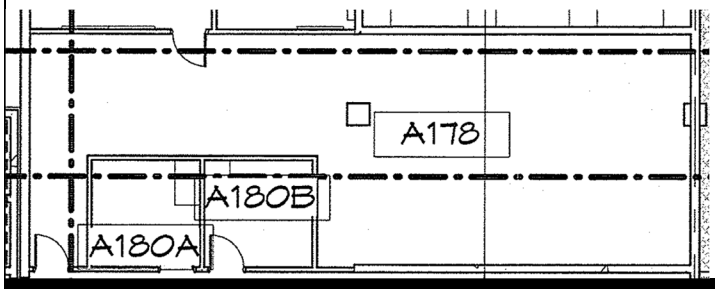
5.0 ROOM REQUIREMENTS



Nurse's Office Restroom

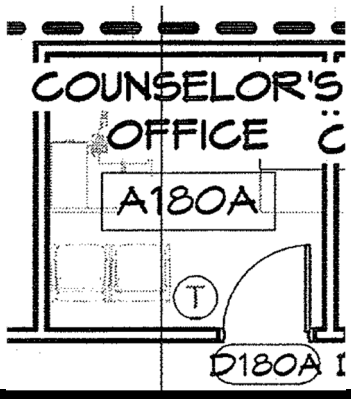
Description	Requirements
Location	A-Wing, Administrative Building, Nurse's Office
Area/Dimensions	Per Programming Document design
Floor Finishes	Porcelain Ceramic Tile
Wall Finishes	Porcelain Ceramic Tile
Ceiling Finishes	Painted gyp. bd.
Signage	Room signage.
Furnishing	None.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide lavatory, water closet, floor drain, shower column, shower drain.
Other Requirements	Provide mirror with stainless steel frame, stainless steel grab bars, robe hook, liquid soap dispenser, paper towel dispenser, toilet tissue holder, waste receptacle.

5.0 ROOM REQUIREMENTS



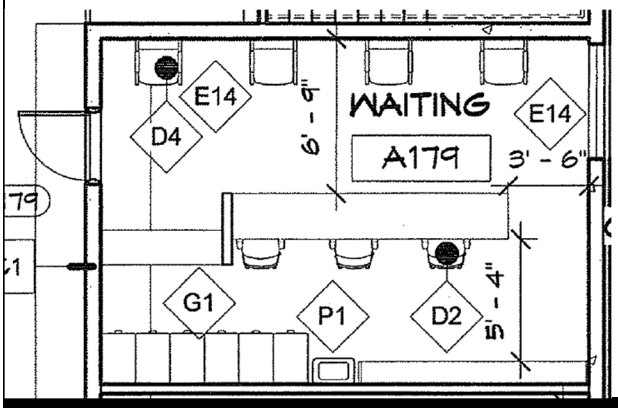
Isolation Room

Description	Requirements
Location	A-Wing, Administrative Building, Nurse's Office.
Area/Dimensions	Per Programming Document design
Floor Finishes	Porcelain Ceramic Tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Fixed Furnishing	None.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide lavatory, water closet, floor drain.
Other Requirements	Provide mirror with stainless steel frame, stainless steel grab bars, robe hook, liquid soap dispenser, paper towel dispenser, toilet tissue holder, waste receptacle.



5.0 ROOM REQUIREMENTS

Cumulative Storage

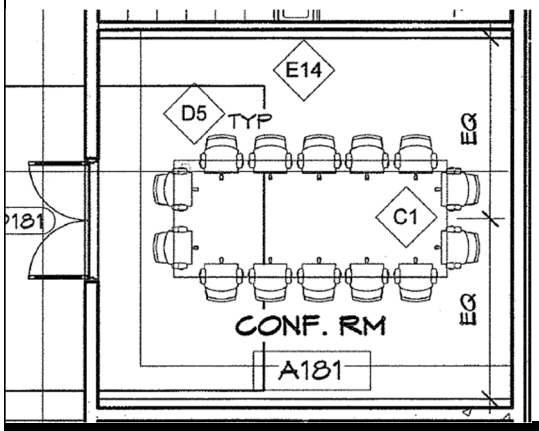


Description	Requirements
Location	A-Wing, Administrative Building.
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Per Programming Document design
Fixed Furnishing	None.
Furnishing	Per FF&E Document. File System?????
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Provide direct access to Counseling office and Nurse’s Office.

5.0 ROOM REQUIREMENTS

Counselor's Office (A180A,A180B, A180C,A180D, A180E, A180F, A180G, A180H)	
	
Description	**Requirements**
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Fixed Furnishing	Provide base cabinets, countertop, and 3-tier shelving, min. length 4FT.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Cluster counselor offices together and locate them adjacent to the counselor's lobby and cumulative storage.

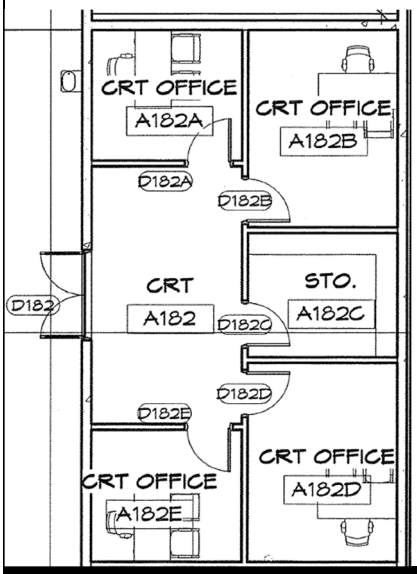
5.0 ROOM REQUIREMENTS



Counseling Department Lobby/Waiting Area

Description	Requirements
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage; Directional signage at courtyard and A-wing corridor.
Fixed Furnishing	None.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Provide direct access to Cumulative Folder Storage; Locate adjacent to counselor offices; primary entrance access may be through a classroom building corridor or directly from a courtyard covered walkway.

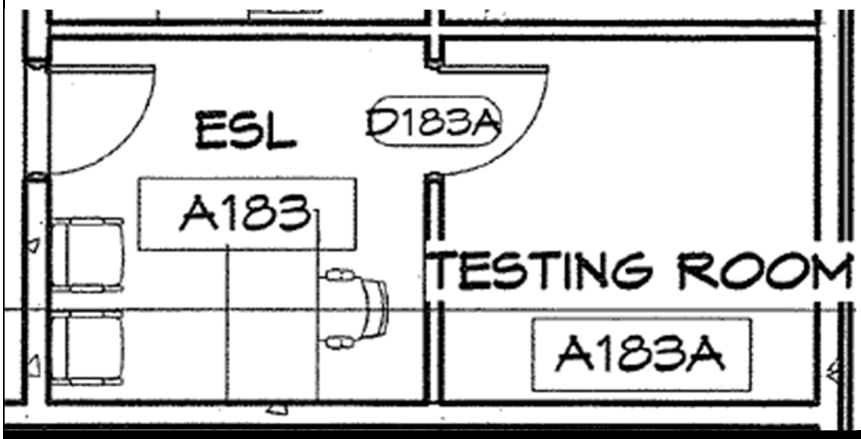
5.0 ROOM REQUIREMENTS



Conference Room

Description	Requirements
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Fixed Furnishing	Per FF&E Document.
Furnishing	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
System Requirements	Locate PA/Bell System Control Center within this space.
Other Requirements	Provide access from interior hallway and lobby; Locate adjacent to principal offices.

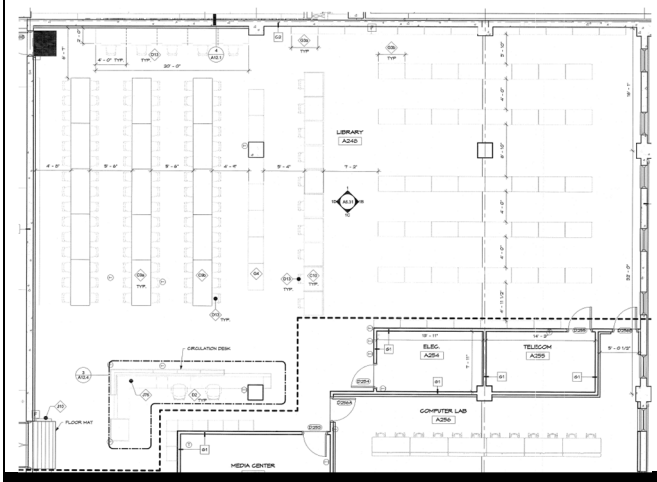
5.0 ROOM REQUIREMENTS



Consulting Research Teacher (CRT) Office

Description	Requirements
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile.
Signage	Room signage.
Fixed Furnishing	Provide 6 tier shelving at storage rooms,
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Locate adjacent to ESL office, testing room, and conference room; Access may be through a classroom building or office corridor or directly from a courtyard covered walkway.

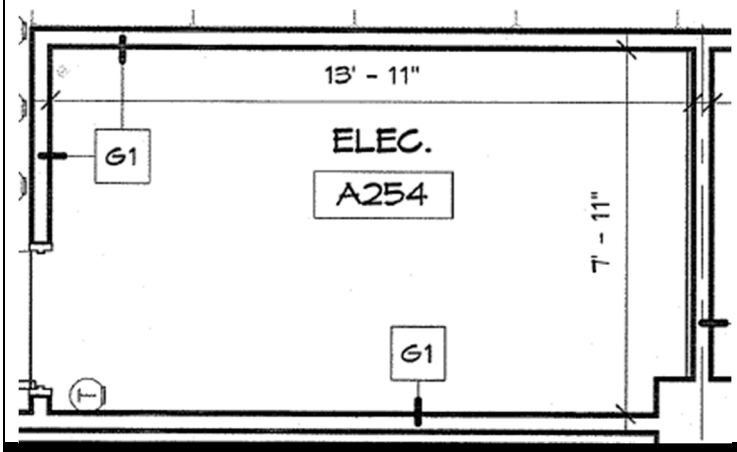
5.0 ROOM REQUIREMENTS



English as a Second Language (ESL) Coordinator Office

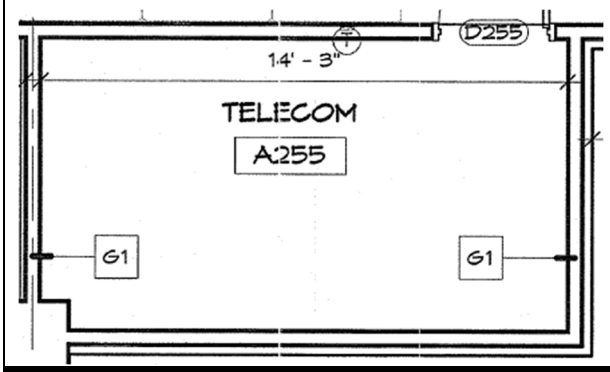
Description	Requirements
Location	A-Wing, Administrative Building
Area/Dimensions	Overall Ideal Plan Dimensions: 10FT 1.5IN x 21FT 2.5IN clear ESL Office: 10FT 5 IN x 10FT 1.5IN Testing Room: 10FT 4.5IN x 10FT 1.5IN Minimum Ceiling Height: 10 FT
Floor Finishes	Provide vinyl composition tile with 4” rubber cove base
Wall Finishes	Provide painted paperless gypsum wallboard or concrete.
Ceiling Finishes	Provide acoustic ceiling tile on aluminum grid system and/or painted gypsum board.
Signage	Provide interior signage with room number and changeable name insert at entrance to each office; interior signage with room number and name at entrance to Testing Room.
Fixed Furnishing	None.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Locate adjacent to CRT office; primary entrance access may be through a classroom building or office corridor or directly from a courtyard covered walkway.

5.0 ROOM REQUIREMENTS



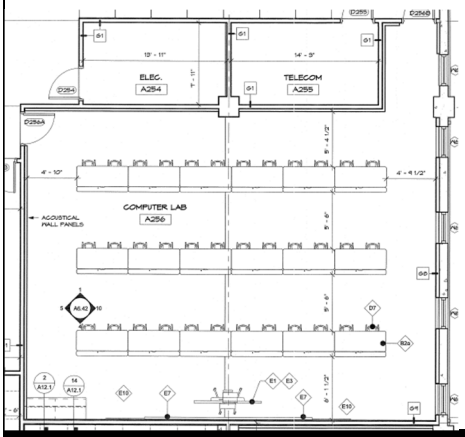
Library- Reading and Stack Area

Description	Requirements
Location	A-Wing, Administrative Building, 2nd floor
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base; acoustical wall panels at reading area.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage; Directional signage at courtyard.
Fixed Furnishing	20FT wall mounted counters at reading area for open computer workstations; min. 24FT 6IN circulation desk with min. 3FT wide book return bin with mobile cart; 5 tier, 40-cube, cubby shelving behind circulation desk.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide clearstory window natural lighting for the reading area.
Other Requirements	Provide direct access from the courtyard covered balcony.



5.0 ROOM REQUIREMENTS

Electrical (Elec) Room

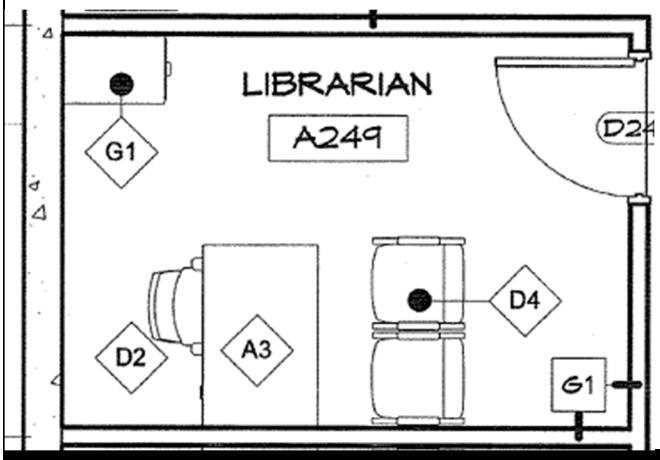


Description	Requirements
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile.
Signage	Room signage.
Fixed Furnishing	None.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	

5.0 ROOM REQUIREMENTS

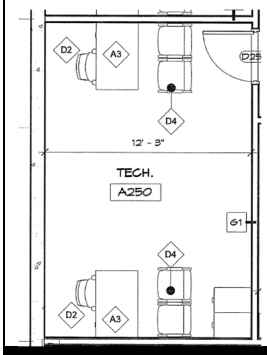
Telecommunication (Telecom) Room	
	
Description	**Requirements**
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile.
Signage	Room signage.
Fixed Furnishing	None.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	

5.0 ROOM REQUIREMENTS



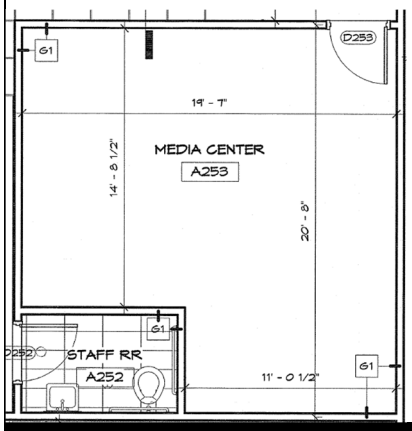
Computer Lab

Description	Requirements
Location	A-Wing, Administrative Building, Library
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base; acoustical wall panels.
Ceiling Finishes	Acoustical ceiling tile.
Signage	Room signage.
Fixed Furnishing	Provide min.6FT base cabinet with counter and overhead cabinets.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Locate adjacent to Library Reading area. Comply with Acoustical Design Criteria.



5.0 ROOM REQUIREMENTS

Librarian's Office

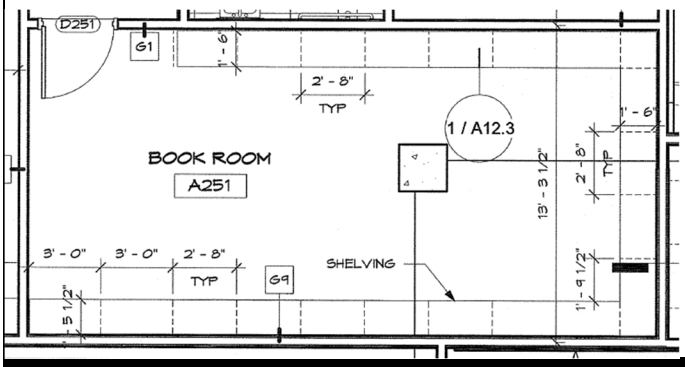


Description	Requirements
Location	A-Wing, Administrative Building, Library
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Fixed Furnishing	None.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Locate adjacent to Technician and Book rooms and staff restroom, accessed from a staff hallway.

5.0 ROOM REQUIREMENTS

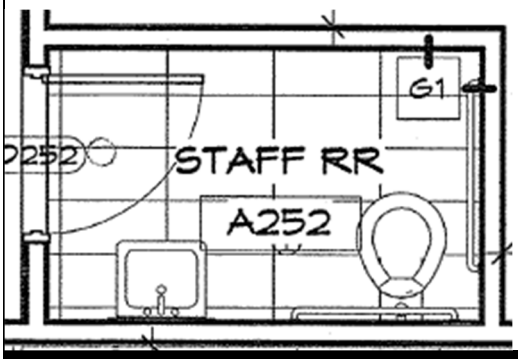
Librarian's Office	
	
Description	**Requirements**
Location	A-Wing, Administrative Building, Library
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile.
Signage	Room signage.
Fixed Furnishing	None.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Locate adjacent to Librarian office, staff restroom, and book room; accessed from a staff hallway.

5.0 ROOM REQUIREMENTS



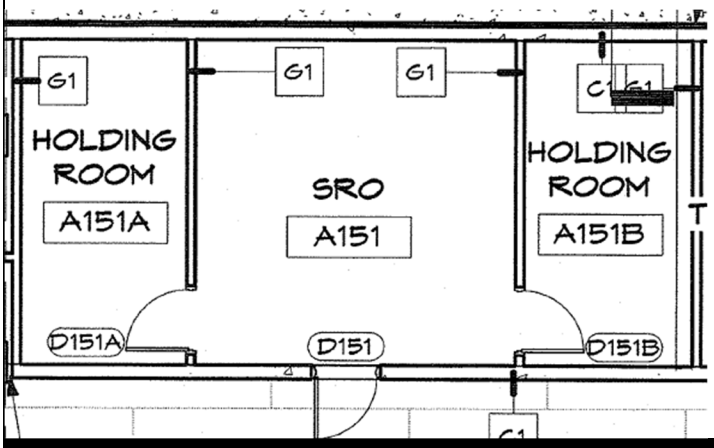
Media Center

Description	Requirements
Location	A-Wing, Administrative Building, Library
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Fixed Furnishing	Provide min.6FT base cabinet with counter and overhead cabinets.
Furnishing	Per FF&E Document. Provide min. 5 person half round/elliptical conference table with wall mounted screen.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	None.



5.0 ROOM REQUIREMENTS

Storage

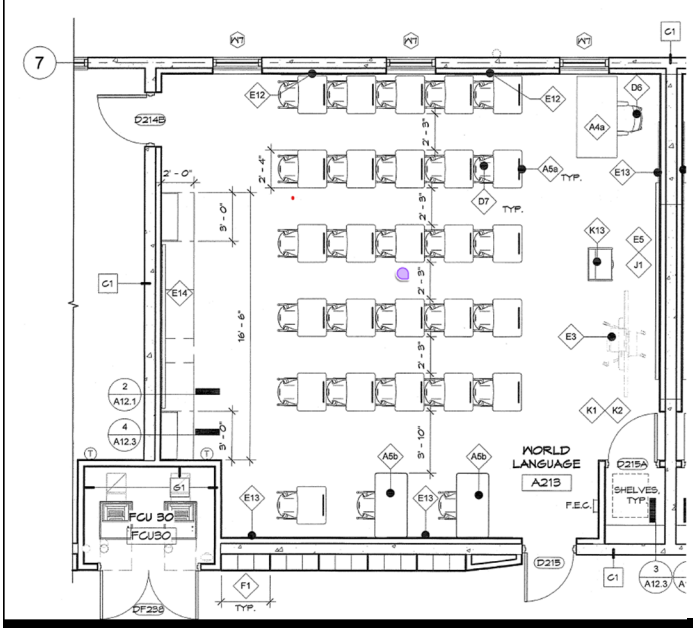


Description	Requirements
Location	A-Wing, Administrative Building, Library
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Fixed Furnishing	Provide min. 56FT 6-tier book shelving along perimeter walls.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	

5.0 ROOM REQUIREMENTS

Library Staff's Restroom	
	
Description	**Requirements**
Location	A-Wing, Administrative Building, Library
Area/Dimensions	Per Programming Document design
Floor Finishes	Porcelain ceramic tile
Wall Finishes	Porcelain ceramic tile
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Fixed Furnishing	None.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide lavatory, water closet, floor drain.
Other Requirements	Locate adjacent to librarian office and technician and book rooms; accessed by staff hallway. Provide mirror with stainless steel frame, stainless steel grab bars, robe hook, liquid soap dispenser, paper towel dispenser, toilet tissue holder, waste receptacle.

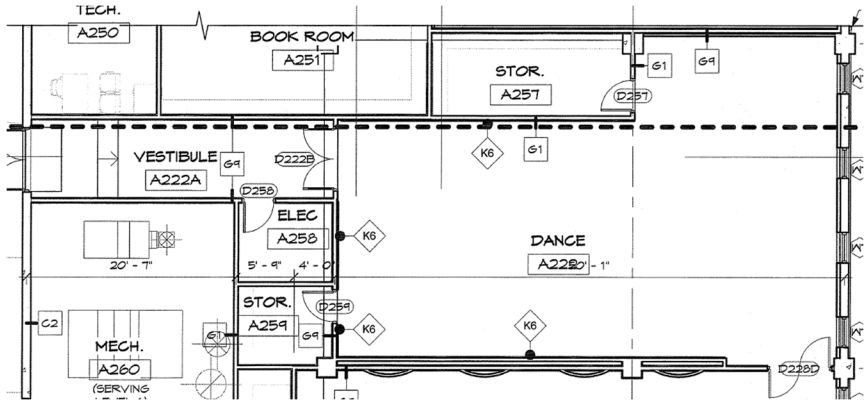
5.0 ROOM REQUIREMENTS



School Resource Officer (SRO) Office

Description	Requirements
Location	Gymnasium, Main Entrance
Area/Dimensions	Overall Ideal Plan Dimensions: 15FT 4 IN x 15FT 8.5IN clear Holding Room: 7FT 4IN x 15FT 8.5IN clear Minimum Ceiling Height: 10 FT
Floor Finishes	Provide vinyl composition tile with 4” rubber cove base
Wall Finishes	Provide painted paperless gypsum wallboard or concrete.
Ceiling Finishes	Provide acoustic ceiling tile on aluminum grid system and/or painted gypsum board.
Signage	Provide interior signage with room number and changeable name insert at entrance to office from hallway; interior signage with room number and name at entrance to each Holding Room.
Fixed Furnishing	None.
Furnishing	None.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Provide keyed locksets from both sides function and vision panels for holding room doors. Locate at the secure side of the Main Entrance to the courtyard space.

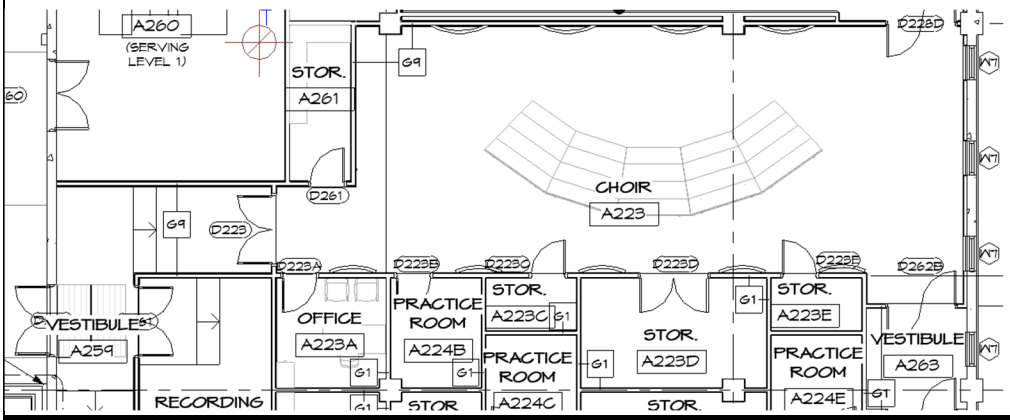
5.0 ROOM REQUIREMENTS



General Education Classrooms (Math, English, Social Studies, Business, Chamoru, World Language, ESL, SPED)

Description	Requirements
Location	A-Wing, B-Wing, and C-Wing Classroom Buildings, Credit Recovery Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile.
Wall Finishes	Plaster & paint exposed concrete walls; paint gyp. bd. walls and furring; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits; Minimum Ceiling Height: 10 FT, allows 8FT soffits. Ensure projection screen visibility if soffits are used
Signage	Room signage.
Fixed Furnishing	Provide min. 16FT base cabinets with countertop; two min. 3FT wide 3 tier open book shelving along the back wall of the classroom. Provide 2-tier shelving along the back of the class storage room.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide PA/Bell/Intercom System.
Other Requirements	Provide two means of egress

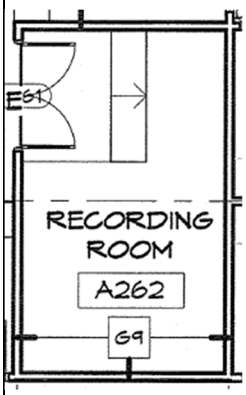
5.0 ROOM REQUIREMENTS



Dance Classroom

Description	Requirements
Location	A-Wing, 2nd floor
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile & sprung floor system.
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Fixed Furnishing	Provide 6-teir shelving along half of each storage room perimeter walls.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide A/V system.
Other Requirements	Comply with Acoustical Design Criteria.

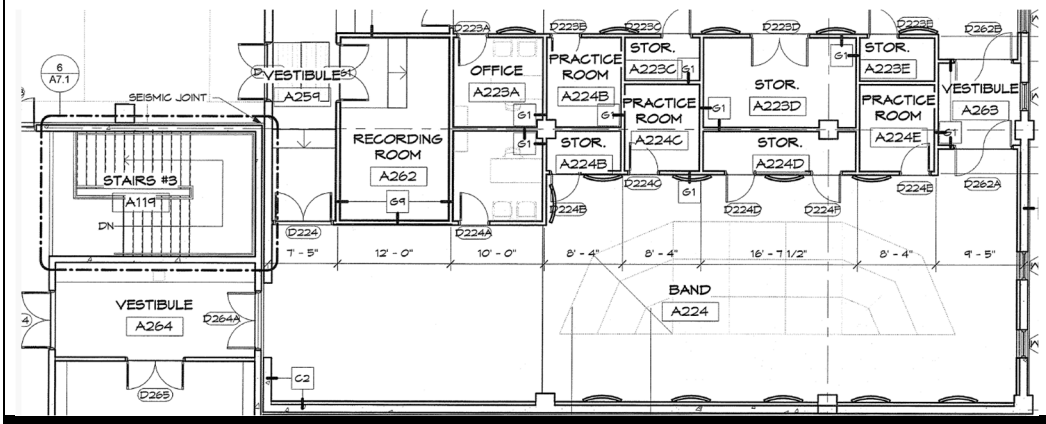
5.0 ROOM REQUIREMENTS



Choir Classroom

Description	Requirements
Location	A-Wing, 2nd floor
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile; sprung floor system.
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base; acoustical diffusers.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits. Minimum Ceiling Height: 14 FT, 9FT in office, storage, and practice rooms; acoustical diffusers.
Signage	Room signage.
Fixed Furnishing	Provide min. 12FT 6IN 6-teir shelving along storage room (A261).
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide AV system.
Other Requirements	Provide two means of egress; vestibule shared with Band Classroom; Comply with Acoustical Design Criteria.

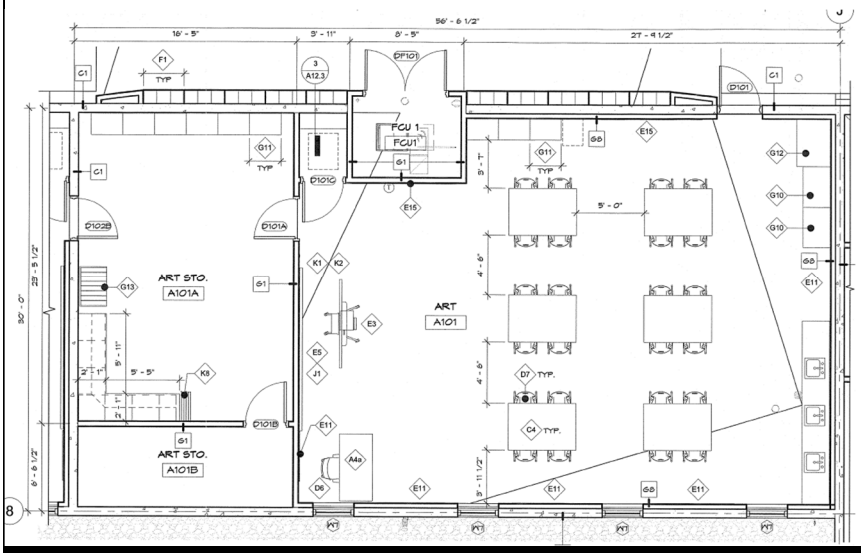
5.0 ROOM REQUIREMENTS



Recording Room

Description	Requirements
Location	A-Wing, 2nd floor Choir and Band Vestibule
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile; sprung floor system.
Wall Finishes	Paint gyp. bd. walls; rubber wall base; acoustical wall panels.
Ceiling Finishes	Acoustical ceiling tile. Minimum Ceiling Height: 9FT
Signage	Room signage.
Fixed Furnishing	None.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide A/V system.
Other Requirements	Locate adjacent to the Band and Choir rooms; Comply with Acoustical Design Criteria;

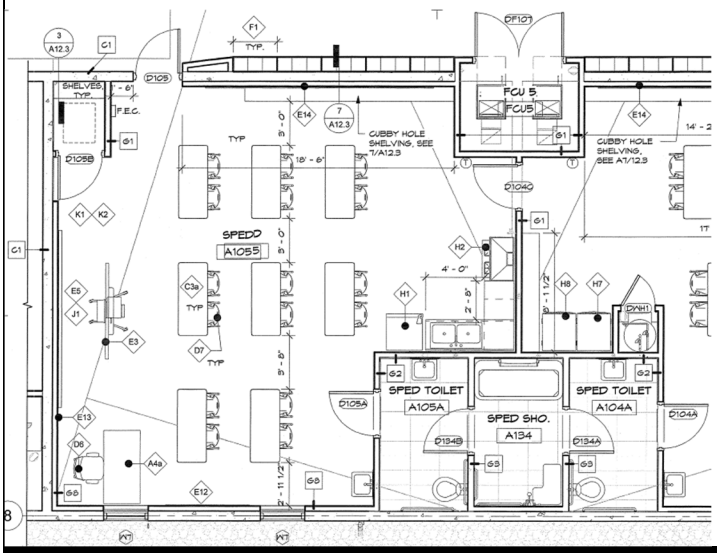
5.0 ROOM REQUIREMENTS



Band Classroom

Description	Requirements
Location	A-Wing, Administration Building 2nd floor
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile; sprung floor system.
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base; acoustical diffusers.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits and acoustical diffusers. Minimum Ceiling Height: 14 FT over classroom practice area, 9FT ACT in office, storage, and practice rooms
Signage	Room signage.
Fixed Furnishing	Provide 30-cube bag cubby shelving; adjustable shelving throughout perimeter walls of band storage room; 21FT 2.5 counter along vestibule with 1 compartment sink at vestibule.
Furnishing	Per FF&E Document. Provide (G15) trophy case.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide AV system.
Other Requirements	Provide two means of egress; vestibule shared with Choir Classroom; Comply with Acoustical Design Criteria. Provide access to the Band Storage room and classroom corridor.

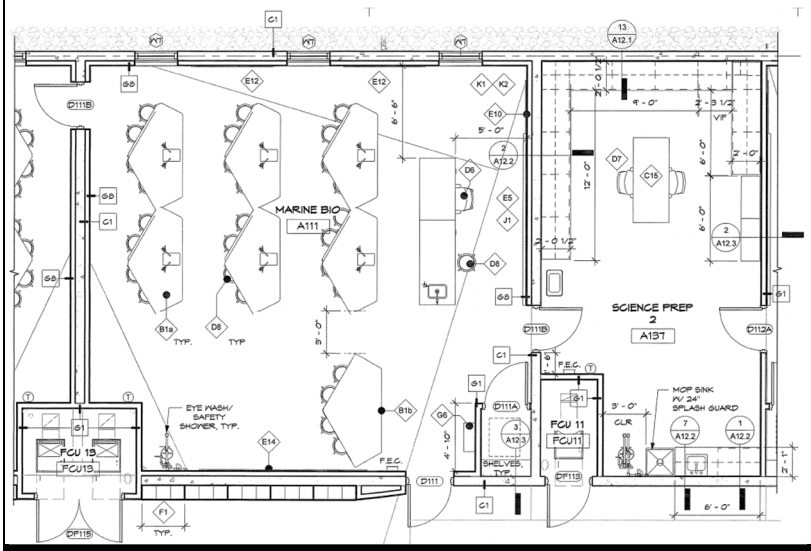
5.0 ROOM REQUIREMENTS



Fine Arts (Art) Classroom

Description	Requirements
Location	A-Wing, Classroom Building 1st floor
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile.
Wall Finishes	Plaster & paint exposed concrete walls; paint gyp. bd. walls and furring; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits; Minimum Ceiling Height: 10 FT, allows 8FT soffits. Ensure projection screen visibility if soffits are used
Signage	Room signage.
Fixed Furnishing	Provide base cabinets with countertop and overhead cabinets in storage room, min. 11FT 4IN.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide one piece stainless steel three-station hand wash trough; floor drain.
Other Requirements	Provide two means of egress.

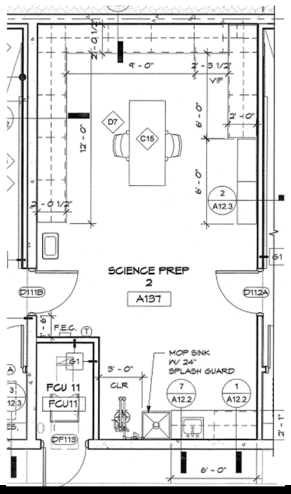
5.0 ROOM REQUIREMENTS



SPED BLS Classroom

Description	Requirements
Location	A-Wing, Classroom Building 1st floor
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile.
Wall Finishes	Plaster & paint exposed concrete walls; paint gyp. bd. walls and furring; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits; Minimum Ceiling Height: 10 FT, allows 8FT soffits. Ensure projection screen visibility if soffits are used
Signage	Room signage.
Fixed Furnishing	(A105) Provide base cabinets with countertop/2 compartment sink and overhead cabinets, min. 8FT 9. (A104) Provide 14IN deep wall mounted counter, min. length 8FT.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide PA/Bell/Intercom System. Provide 2 lavatories, one water closet, 1 shower column (at shared shower room), floor/shower drains
Other Requirements	Provide two means of egress. Locate with non-SPED classrooms.

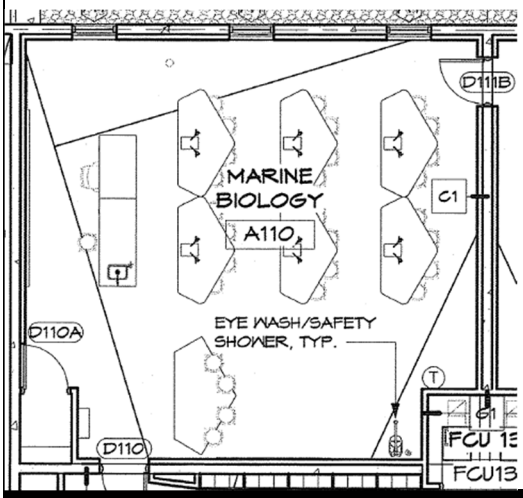
5.0 ROOM REQUIREMENTS



Science Classrooms (Laboratory)

Description	Requirements
Location	A-Wing, Classroom Building 1st floor
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile.
Wall Finishes	Plaster & paint exposed concrete walls; paint gyp. bd. walls and furring; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits; Minimum Ceiling Height: 10 FT, allows 8FT soffits. Ensure projection screen visibility if soffits are used
Signage	Room signage.
Fixed Furnishing	Provide combination min. 6FT x 2FT 6IN 4 drawer single pedestal demonstration table with 1 compartment sink, gas fixtures, GFCI receptacle, and chemical resistant countertop, and 3 drawer single pedestal instructor desk, min. 4FT 6IN x 2FT 6IN.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide PA/Bell/Intercom System. Provide 2 Fume Hoods in Chemistry Classroom (A107). Provide water, power, and gas provisions for student lab tables as required.
Other Requirements	Provide direct access to Science Prep Room shared by 2 science classroom laboratories.

5.0 ROOM REQUIREMENTS

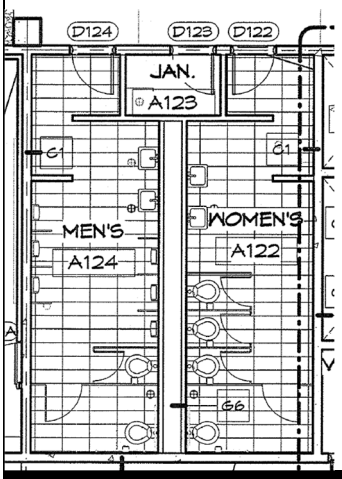


Science Classrooms (Laboratory)- A137, A138, A135

Description	Requirements
Location	A-Wing, Classroom Building 1st floor
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile.
Wall Finishes	Plaster & paint exposed concrete walls; paint gyp. bd. walls and furring; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits; Minimum Ceiling Height: 10 FT, allows 8FT soffits. Ensure projection screen visibility if soffits are used
Signage	Room signage.
Fixed Furnishing	Provide min. 6FT base cabinet with countertop and 1 compartment sink, and overhead cabinets in all science prep rooms. (A138) Provide min. 6FT base cabinet with epoxy resin countertop and backsplash and overhead cabinet; min. 6FT W x 1FT 4IN D x 6FT H open storage cabinets; wall mounted cabinets and with epoxy resin countertop with back splash over mounted storage cabinets for corrosives/acids and flammables. (A137) Provide min. 31FT 6FT base cabinet with countertop with backsplash and overhead cabinet; min. 6FT W x 1FT 4IN D x 6FT H open storage cabinets. (A135)) Provide min. 17FT base cabinet with epoxy resin countertop and backsplash and overhead cabinet; min. 9FT W x 1FT 4IN D x 6FT H open storage cabinets
Furnishing	Refer to FF&E Document. Provide blocking for wall mounted FF&E. Coordinate with Electrical/Telecom to provide infrastructure.
System Requirements	Provide one mop sink w/ splash guard.
Other Requirements	Provide direct access from 2 adjacent science laboratory classrooms.

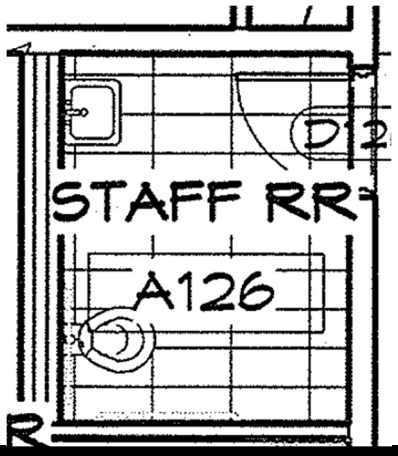
5.0 ROOM REQUIREMENTS

Science Classrooms (Lecture)



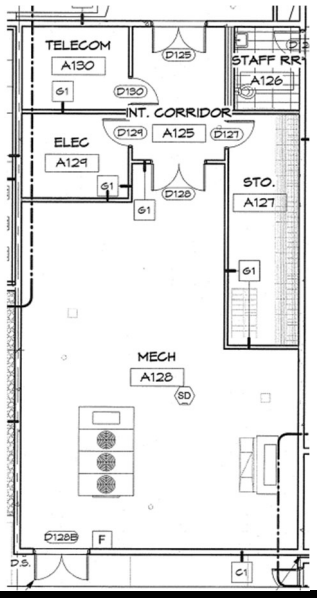
?????????????

Description	Requirements
Location	A-Wing, Classroom Building 1st floor
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile.
Wall Finishes	Plaster & paint exposed concrete walls; paint gyp. bd. walls and furring; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits; Minimum Ceiling Height: 10 FT, allows 8FT soffits. Ensure projection screen visibility if soffits are used
Signage	Room signage.
Fixed Furnishing	
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide PA/Bell/Intercom System.
Other Requirements	Provide two means of egress.



5.0 ROOM REQUIREMENTS

Shared Restrooms

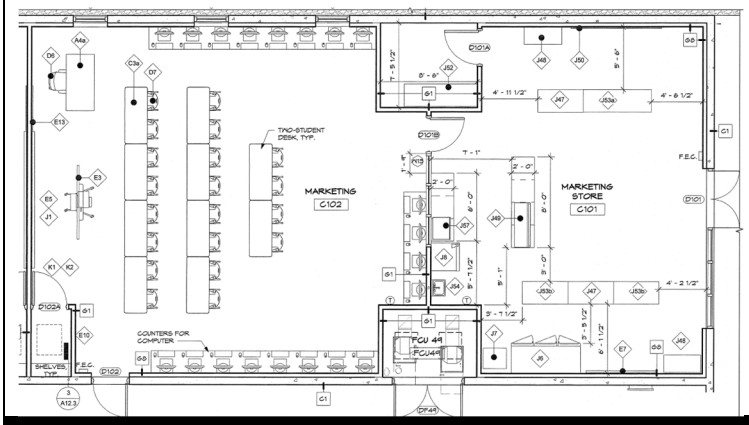


Description	Requirements
Location	A-Wing, B-wing, C-wing
Area/Dimensions	Per Programming Document design
Floor Finishes	Porcelain Ceramic Tile
Wall Finishes	Porcelain Ceramic Tile
Ceiling Finishes	Painted gypsum board.
Signage	Room signage; Directional signage at classroom corridor and courtyard covered walkway.
Furnishing	Phenolic Toilet partitions for water closets and urinal dividers.
System Requirements	Provide lavatory, water closet, urinals, floor drain as required.
Other Requirements	Provide screen walls at entry. Provide mirror with stainless steel frame, stainless steel grab bars, robe hook, liquid soap dispenser, paper towel dispenser, toilet tissue holder. Provide sanitary napkin receptacles at Women’s restrooms.

5.0 ROOM REQUIREMENTS

Staff Restroom	
	
Description	**Requirements**
Location	A-Wing, B-wing, C-wing
Area/Dimensions	Per Programming Document design
Floor Finishes	Porcelain ceramic tile.
Wall Finishes	Porcelain ceramic tile.
Ceiling Finishes	Provide painted gypsum board.
Signage	Room signage; Directional signage at classroom corridor.
Furnishing	None.
System Requirements	Provide mirror with stainless steel frame, stainless steel grab bars, robe hook, liquid soap dispenser, paper towel dispenser, toilet tissue holder, baby-changing station.
Other Requirements	

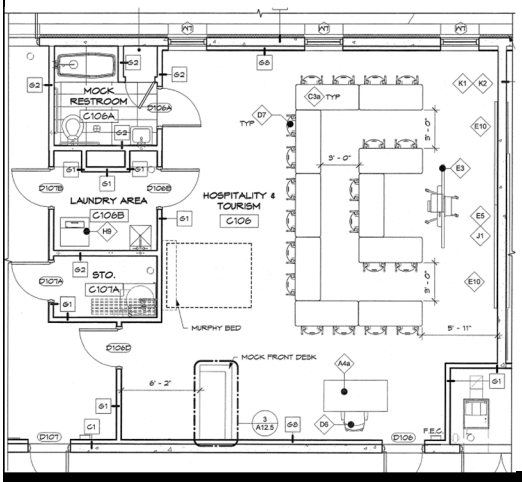
5.0 ROOM REQUIREMENTS



Utility Rooms

Description	Requirements
Location	A-Wing, B-Wing
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Non-water fire suppression.
Other Requirements	Locate mechanical rooms at the ends of the Classroom Buildings. Provide entrance vestibule for mechanical room with access to Telecom Room, Elec. Room, and Storage. Provide direct double door access to unsecured side of the building.

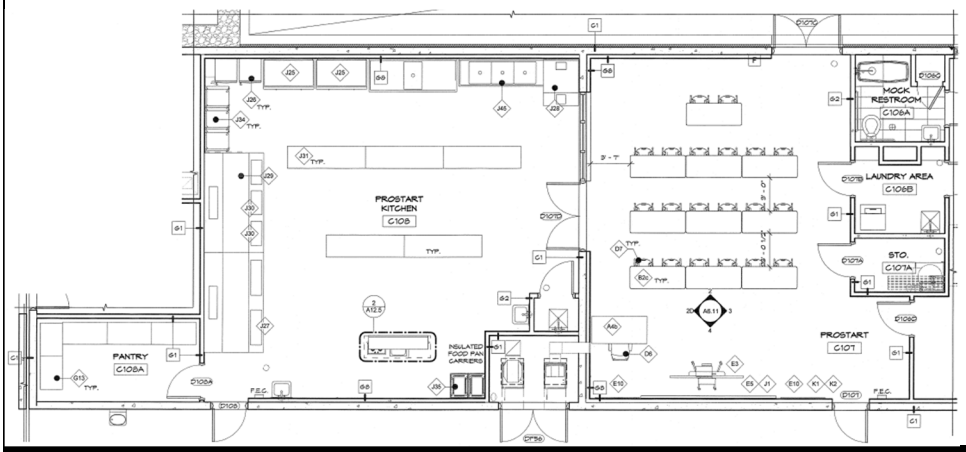
5.0 ROOM REQUIREMENTS



GCC Marketing Classroom and Store Lab

Description	Requirements
Location	C-Wing Classroom Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile.
Wall Finishes	Plaster & paint exposed concrete walls; paint gyp. bd. walls and furring; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits; Minimum Ceiling Height: 10 FT, allows 8FT soffits. Ensure projection screen visibility if soffits are used
Signage	Room signage; Exterior signage for the store.
Fixed Furnishing	Classroom: Provide min. 50FT length counters along the walls of the classroom for 20 computers. Laboratory: Provide min 6FT base cabinets and counter at rear wall of marketing store laboratory; min. 8FT island cabinets with countertop.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide PA/Bell/Intercom System at classroom.
Other Requirements	Provide two means of egress. Provide direct access to Student Store Lab from the courtyard covered walkway.Provide partition between the classroom and store lab with direct access and windows for direct supervision, min. 10FT wide and 2FT 10IN in height.

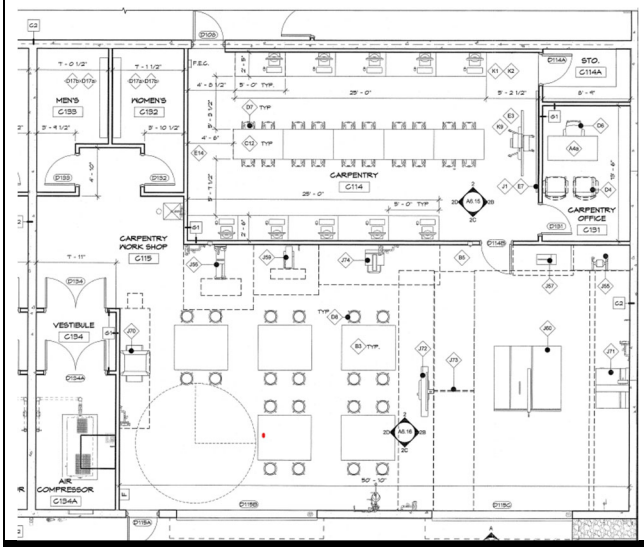
5.0 ROOM REQUIREMENTS



GCC Hospitality & Tourism Classroom

Description	Requirements
Location	C-Wing Classroom Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile.
Wall Finishes	Plaster & paint exposed concrete walls; paint gyp. bd. walls and furring; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits; Minimum Ceiling Height: 10 FT, allows 8FT soffits. Ensure projection screen visibility if soffits are used
Signage	Room signage.
Fixed Furnishing	Provide double pedestal Mock Front Desk with transaction counter Podium, min. 2FT 6IN x 5FT 10IN
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide PA/Bell/Intercom System.
Other Requirements	Provide two means of egress. Provide direct access to Prostart Classroom from classroom and laundry room.

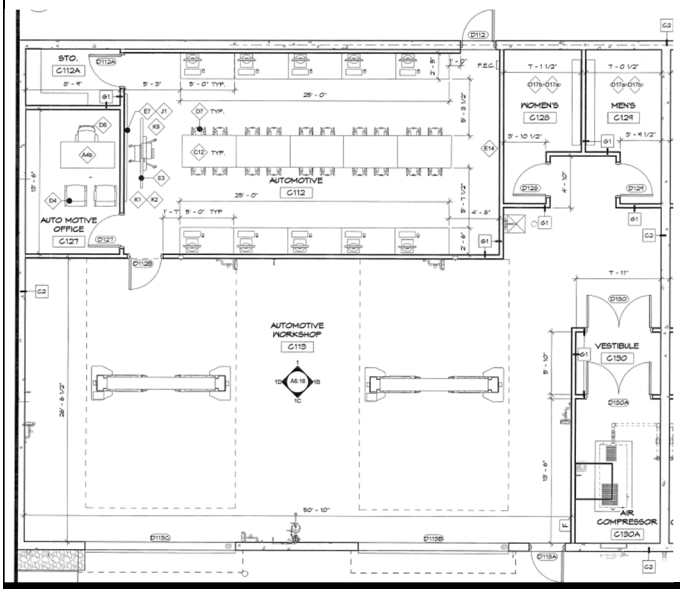
5.0 ROOM REQUIREMENTS



ProStart Classroom and Kitchen Laboratory

Description	Requirements
Location	C-Wing Classroom Buildings
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile at classroom; Quarry Tile at kitchen lab.
Wall Finishes	Plaster & paint exposed concrete walls; paint gyp. bd. walls and furring; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits; Minimum Ceiling Height: 10 FT, allows 8FT soffits. Ensure projection screen visibility if soffits are used
Signage	Room signage.
Fixed Furnishing	(Kitchen Lab) Provide min. 2FT x 6FT cooking demonstration counter with table or ceiling mounted tilting demo mirror, two burner stove top range, and one (1) compartment low-flow handwashing sink.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide handwashing sink and soap dispenser at each entrance from Kitchen Lab. Provide sewer, waste, and vent piping from all fixtures. Provide PA/Bell/Intercom System at classroom.
Other Requirements	Provide two means of egress. Provide direct access to Hospitality & Tourism Classroom and Laundry room; double door access to Cafeteria

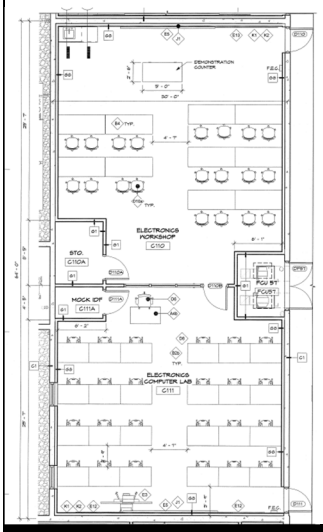
5.0 ROOM REQUIREMENTS



Carpentry Classroom and Workshop

Description	Requirements
Location	C-Wing Classroom Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile. Sealed concrete at workshop, compressor room and vestibule.
Wall Finishes	Plaster & paint exposed concrete walls; paint gyp. bd. walls and furring; rubber wall base at VCT floors only.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits; Minimum Ceiling Height: 10 FT, allows 8FT soffits at classrooms. Ensure projection screen visibility if soffits are used. Painted gyp. bd. and exposed structure at shop spaces.
Signage	Room signage.
Fixed Furnishing	Provide min. 50FT counter space along classroom walls for 10 computer workstations; 6 tier shelving along ½ perimeter walls of classroom storage.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide utility sink at workshop. Provide PA/Bell/Intercom System at classroom.
Other Requirements	Provide two means of egress.

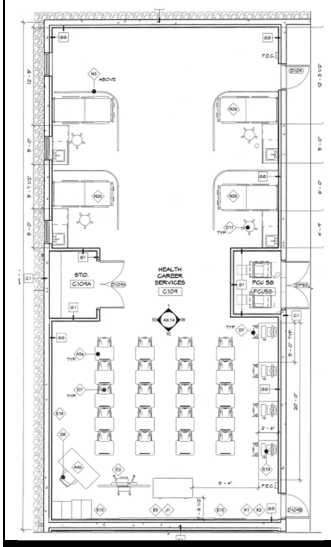
5.0 ROOM REQUIREMENTS



Automotive Classroom and Workshop

Description	Requirements
Location	C-Wing Classroom Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile. Sealed concrete at workshop, compressor room and vestibule.
Wall Finishes	Plaster & paint exposed concrete walls; paint gyp. bd. walls and furring; rubber wall base at VCT floors only.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits; Minimum Ceiling Height: 10 FT, allows 8FT soffits at classrooms. Ensure projection screen visibility if soffits are used. Painted gyp. bd. and exposed structure at shop spaces.
Signage	Room signage.
Fixed Furnishing	Provide min. 50FT counter space along classroom walls for 10 computer workstations; 6 tier shelving along ½ perimeter walls of classroom storage.
Furnishing	Refer to FF&E Document. Provide blocking for wall mounted FF&E. Coordinate with Electrical/Mechanical/Telecom to provide infrastructure.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide utility sink at workshop. Provide PA/Bell/Intercom System at classroom.
Other Requirements	Provide two means of egress.

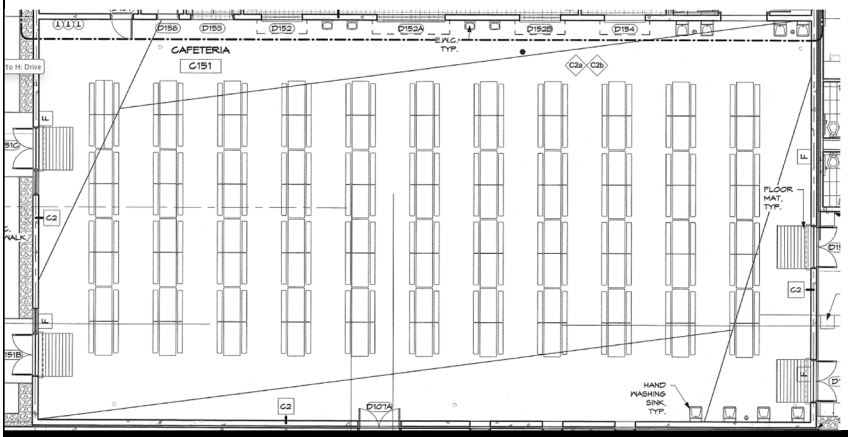
5.0 ROOM REQUIREMENTS



Electronics Technology Computer Lab and Workshop

Description	Requirements
Location	C-Wing Classroom Buildings
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile.
Wall Finishes	Plaster & paint exposed concrete walls; paint gyp. bd. walls and furring; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits; Minimum Ceiling Height: 10 FT, allows 8FT soffits. Ensure projection screen visibility if soffits are used
Signage	Room signage.
Fixed Furnishing	Workshop: Provide min. 6FT x 2FT 6IN 3 drawer double pedestal demonstration table with modesty panel, one duplex general-purpose receptacle on each end, and solid epoxy resin countertop
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide PA/Bell/Intercom System at classroom.
Other Requirements	Provide partition between the classroom and store lab with direct access and windows for direct supervision, min. 10FT wide and 2FT 10IN in height. Provide two means of egress.

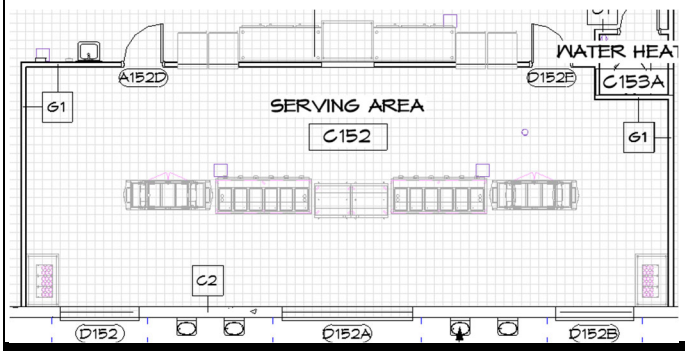
5.0 ROOM REQUIREMENTS



Health Career Sciences (HCS) Classroom and Lab

Description	Requirements
Location	C-Wing Classroom Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile.
Wall Finishes	Plaster & paint exposed concrete walls; paint gyp. bd. walls and furring; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits; Minimum Ceiling Height: 10 FT, allows 8FT soffits. Ensure projection screen visibility if soffits are used
Signage	Room signage.
Fixed Furnishing	Classroom: Provide min. 6FT x 2FT 6IN 3 drawer double pedestal demonstration table with modesty panel, one duplex general-purpose receptacle on each end, and solid epoxy resin countertop; min. 20FT counters along classroom wall for 4 computer workstations. Lab area: Provide min. 5FT cabinet/plumbing shield with epoxy resin countertop and 1-compartment sink with soap and tissue dispenser at each mock triage/sick bed, min. 4 stations.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide PA/Bell/Intercom System.
Other Requirements	Provide two means of egress

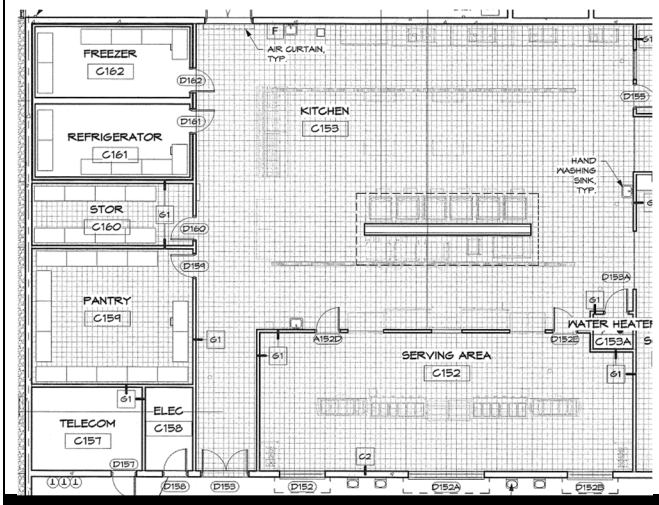
5.0 ROOM REQUIREMENTS



Cafeteria-Dining Hall

Description	Requirements
Location	C-Wing, Cafeteria Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Rubber Tile.
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Smooth ceiling tile and painted gyp. bd. soffits.
Signage	Room signage; Exterior Signage; Directional signage at courtyard.
Fixed Furnishing	None.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide 8 handwashing sinks, floor drains, 2 drinking fountain/ bottle filling station, air curtains at each entrance.
Other Requirements	Provide direct access from GCC Prostart Classroom and Cafeteria Kitchen and secondary exits outside of secured campus, with electronic access and permanent entryway system at each exterior entrance, min.width of door way x 5FT

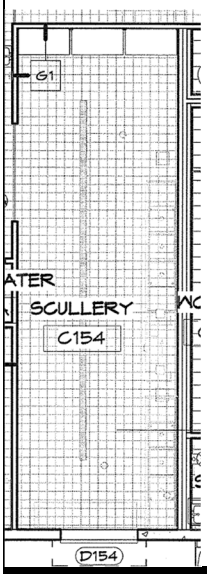
5.0 ROOM REQUIREMENTS



Cafeteria- Service Area

Description	Requirements
Location	C-Wing, Cafeteria Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Quarry tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; Quarry tile cove base.
Ceiling Finishes	Smooth ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide floor drains with trap seals.
Other Requirements	Provide direct access from Cafeteria Dining Hall and Kitchen; min. 4FT W x 3FT H pass through window with counter from cafeteria kitchen; wall openings to accommodate pass-through refrigerators. Accommodate two serving lines.

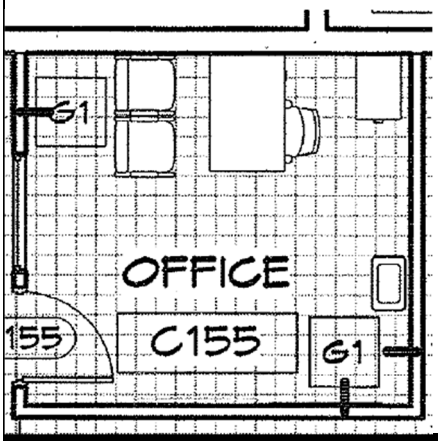
5.0 ROOM REQUIREMENTS



Cafeteria- Service Area

Description	Requirements
Location	C-Wing, Cafeteria Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Quarry tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; stainless steel wall panels behind cooking equipment; quarry tile cove base.
Ceiling Finishes	Smooth ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide handwashing stations at each entrance to the space. Provide floor drains with trap seals.
Other Requirements	Provide direct access to Cafeteria Dining Hall and Service area; secondary double door exit to rear service road, with air curtain.

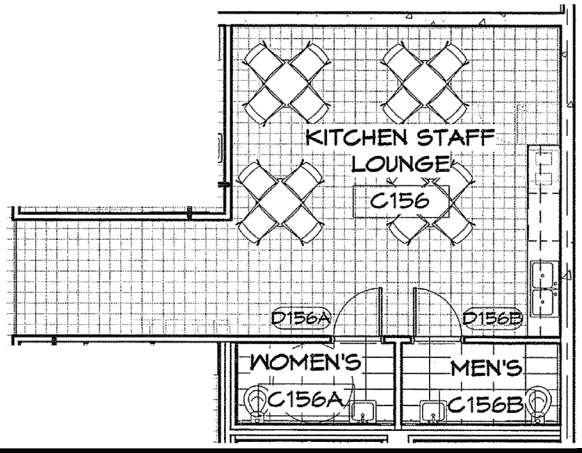
5.0 ROOM REQUIREMENTS



Cafeteria- Scullery

Description	Requirements
Location	C-Wing, Cafeteria Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Quarry tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; quarry tile cove base.
Ceiling Finishes	Smooth ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide floor drains with trap seals.
Other Requirements	Provide access from Cafeteria Kitchen; pass through window to Dining Hall with stainless steel counter and roll up counter shutter.

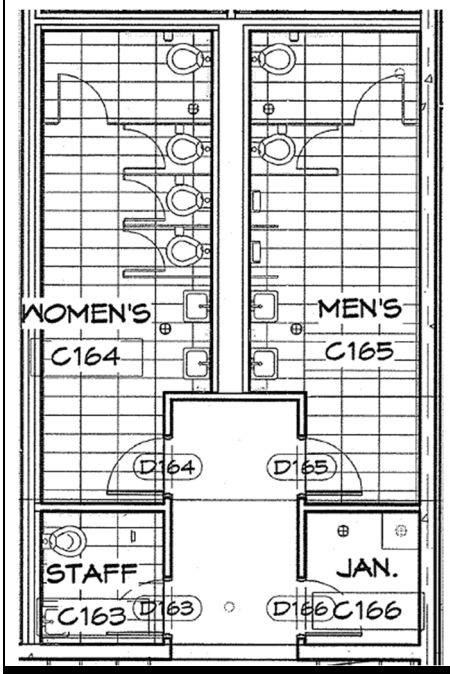
5.0 ROOM REQUIREMENTS



Kitchen Manager's Office

Description	Requirements
Location	C-Wing, Cafeteria Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Quarry tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; quarry tile cove base.
Ceiling Finishes	Smooth ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Provide access from Cafeteria Kitchen; 4FT x 4FT window for direct supervision into kitchen. Adjacent to Kitchen Staff Lounge

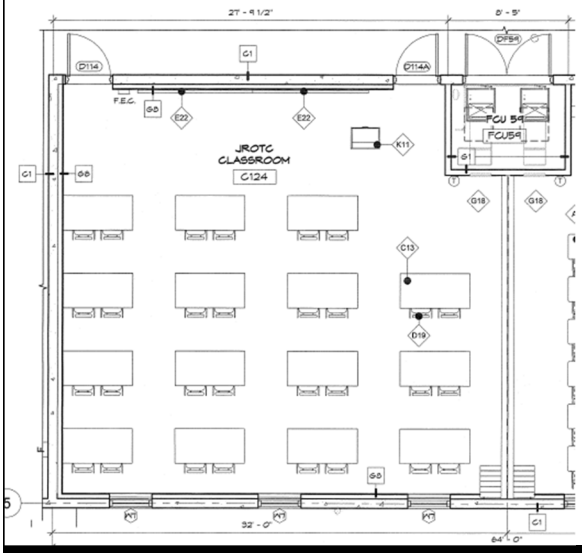
5.0 ROOM REQUIREMENTS



Kitchen Staff Lounge

Description	Requirements
Location	C-Wing, Cafeteria Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Quarry tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; quarry tile cove base.
Ceiling Finishes	Smooth ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Fixed Furnishing	Provide base cabinets with countertop and wall mounted cabinet, minimum 12FT.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide 2-compartment sink, floor drain, tankless electric water heater.
Other Requirements	Provide men and women’s restroom with typical single occupant restroom requirements.

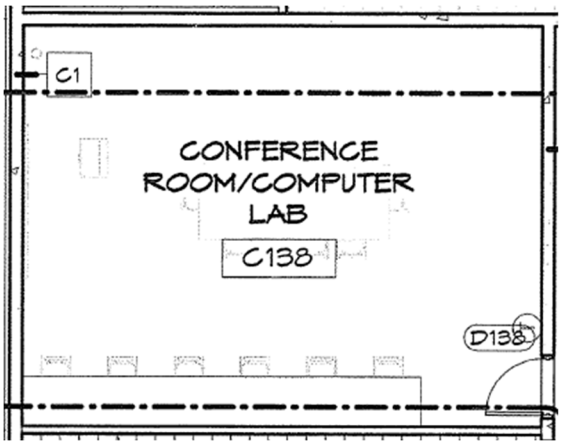
5.0 ROOM REQUIREMENTS



Shared Restrooms

Description	Requirements
Location	C-wing, Cafeteria
Area/Dimensions	Per Programming Document design
Floor Finishes	Porcelain Ceramic Tile; vinyl composition tile
Wall Finishes	Porcelain Ceramic Tile; Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Painted gypsum board.
Signage	Room signage; Directional signage at Cafeteria Dining Hall and courtyard covered walkway.
Furnishing	Phenolic Toilet partitions for water closets and urinal dividers.
System Requirements	Provide lavatory, water closet, urinals, floor drain, mop sink as required.
Other Requirements	Provide mirror with stainless steel frame, stainless steel grab bars, robe hook, liquid soap dispenser, paper towel dispenser, toilet tissue holder. Provide sanitary napkin receptacles at Women's restrooms. Provide adjustable storage wall mount organizer with 3 grip hooks and 2-tier, built-in shelves with paint finish at janitorial closet.

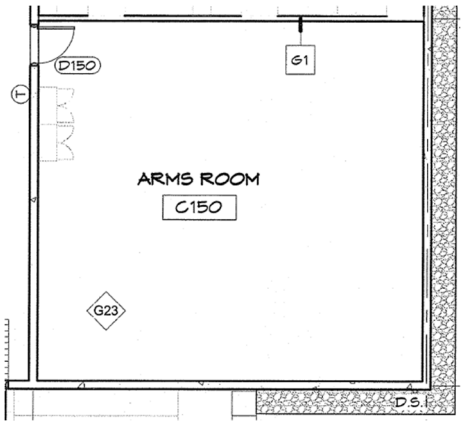
5.0 ROOM REQUIREMENTS



JROTC Classrooms

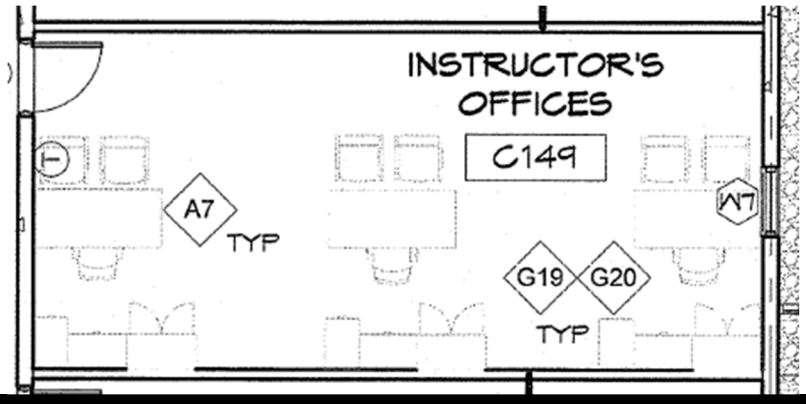
Description	Requirements
Location	C-Wing, JROTC Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide PA/Bell/Intercom system at each classroom.
Other Requirements	Provide movable wall partitions between all JROTC Classrooms.

5.0 ROOM REQUIREMENTS



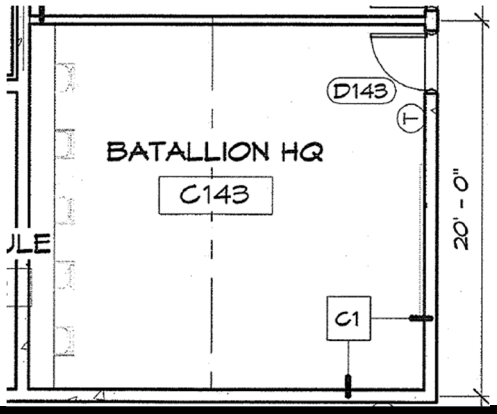
Conference Room/ Computer Lab

Description	Requirements
Location	C-Wing, JROTC Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage
Fixed Furnishing	Provide min. 21FT counter space for 6 computer workstations.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	None.



5.0 ROOM REQUIREMENTS

Arms Room

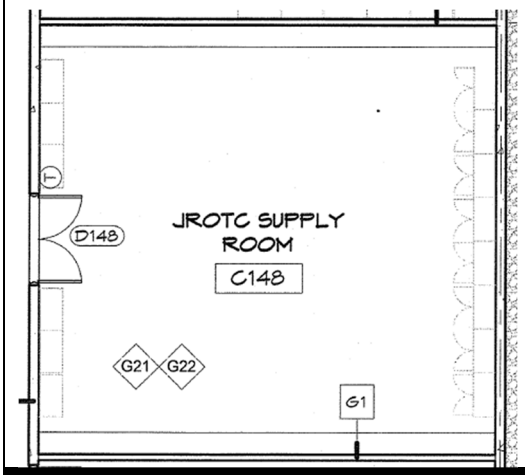


Description	Requirements
Location	C-Wing, JROTC Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Provide heavy duty metal dutch door with double lock and day gate. Locate adjacent to JROTC Instructor's Office with hallway access to Multi-Purpose Training Facility and secondary exit to the campus service road.

5.0 ROOM REQUIREMENTS

JROTC Instructors' Office	
	
Description	**Requirements**
Location	C-Wing, JROTC Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Adjacent to Arms Room and JROTC Supply Room.

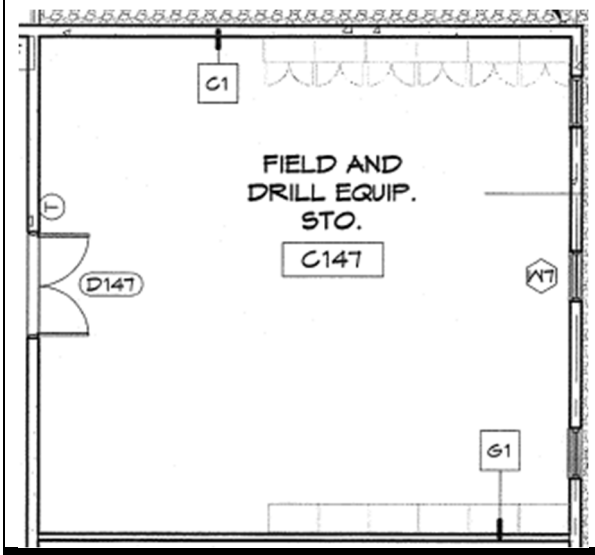
5.0 ROOM REQUIREMENTS



Battallion Headquarters (HQ)

Description	Requirements
Location	C-Wing, JROTC Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Fixed Furnishing	Provide min. 19FT 5.5IN counter to accommodate 5 computer work stations.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	

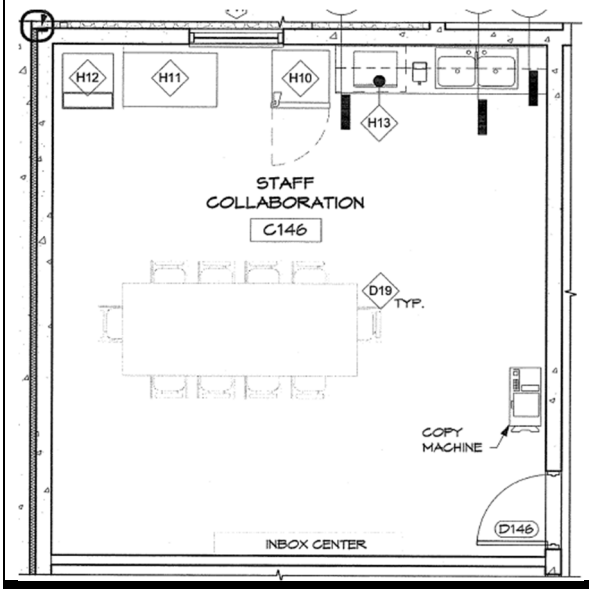
5.0 ROOM REQUIREMENTS



Arms Room

Description	Requirements
Location	C-Wing, JROTC Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Locate adjacent to JROTC Instructor's Office and Field and Drill Equipment Storage with hallway access to Multi-Purpose Training Facility and secondary exit to the campus service road.

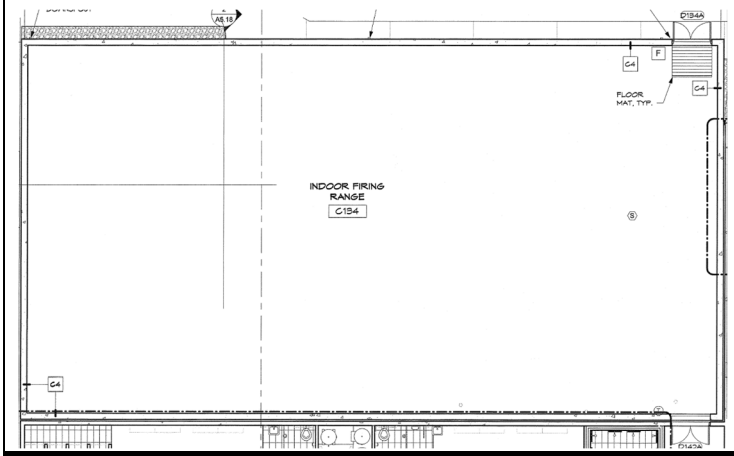
5.0 ROOM REQUIREMENTS



Field and Drill Equipment Storage

Description	Requirements
Location	C-Wing, JROTC Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Locate adjacent to JROTC Supply Room with hallway access to Multi-Purpose Training Facility and secondary exit to the campus service road/ drill pad.

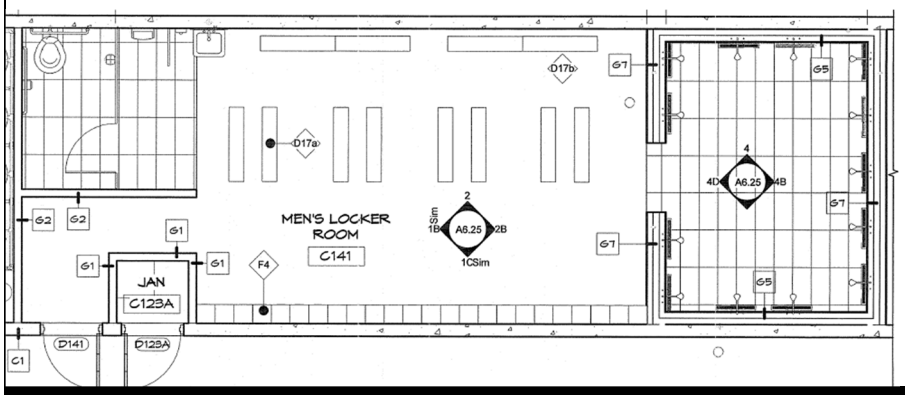
5.0 ROOM REQUIREMENTS



JROTC- Staff Collaboration

Description	Requirements
Location	C-Wing, JROTC Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage
Fixed Furnishing	Provide base and wall mounted cabinets, 9FT in length minimum.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide 2-compartment sink, soap dispenser, tissue dispenser.
Other Requirements	

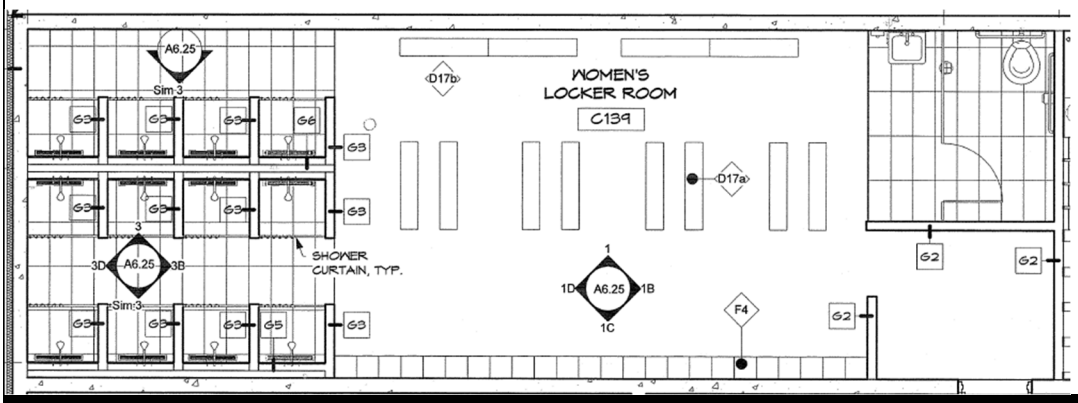
5.0 ROOM REQUIREMENTS



Multi-Purpose Training Facility

Description	Requirements
Location	C-Wing, JROTC Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Locate adjacent to JROTC Locker rooms; provide secondary exit to the campus service road/ parking lot with electronic access control and permanent entry system/mat, min. width of double door x 5FT in direction of travel.

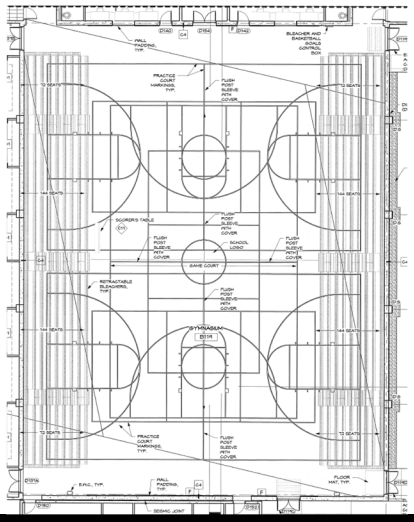
5.0 ROOM REQUIREMENTS



JROTC – Men's Locker Room

Description	Requirements
Location	C-Wing, JROTC Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile; ceramic floor tiles; porcelain ceramic tile at showers and restroom areas.
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base; porcelain ceramic tile at showers and restroom areas.
Ceiling Finishes	Painted gyp. bd.
Signage	Provide room signage.
Fixed Furnishing	Separate each shower with partitions and curtains.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Electrical/Plumbing/Telecom. Provide one wheelchair accessible toilet stall, urinal, and handwashing station.
Other Requirements	Adjacent to JROTC Woen's Locker room. Provide screen walls for interior doors/ entrances into the locker room. Provide stainless steel grab bars, bag hooks at toilet partition, soap dispensers at sink, toilet paper holder, paper tissue dispenser, toilet seat cover dispenser at toilet stall, mirrors at sink.

5.0 ROOM REQUIREMENTS



JROTC – Women's Locker Room

Description	Requirements
Location	C-Wing, JROTC Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile; porcelain ceramic tile at showers and restroom areas.
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base; porcelain ceramic tile at showers and restroom areas.
Ceiling Finishes	Painted gyp. bd.
Signage	Provide room signage.
Fixed Furnishing	Separate each shower with partitions and curtains.
Furnishing	Refer to FF&E Document.

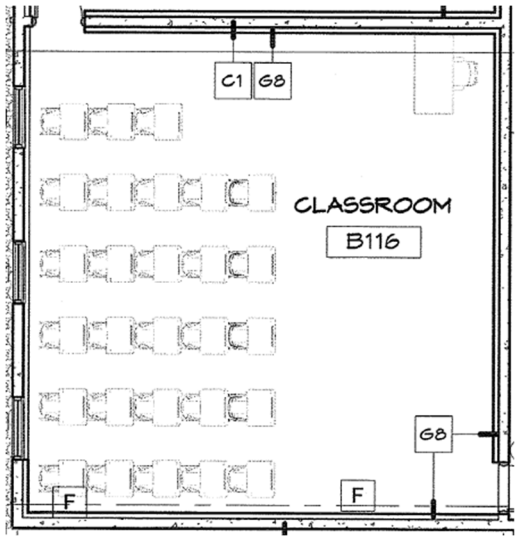
Provide stainless steel grab bars, bag hooks at toilet partition, soap dispensers at sink, toilet paper holder, paper tissue dispenser, toilet seat cover dispenser at toilet stall, mirrors at sink, sanitary napkin receptacle at toilet stalls.

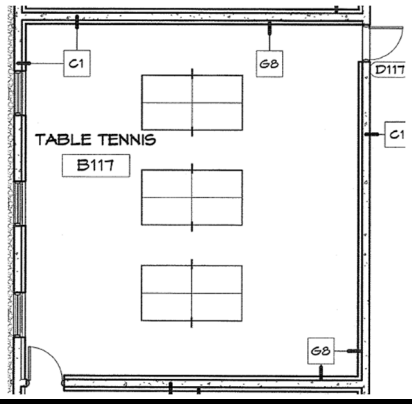
5.0 ROOM REQUIREMENTS



Gymnasium - Courts

Description	Requirements
Location	B-Wing, Gymnasium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Fluid-applied athletic flooring system with regulation basketball and volleyball main game court and two perpendicular basketball and volleyball game court markings.
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base; wall padding on both ends of main game court; acoustical wall panels.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage; Exterior signage; directional signage at courtyard.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide 2 drinking fountain/ bottle filling station. Provide A/V system. Provide PA/Bell System speakers.
Other Requirements	Adjacent to PE Teacher's Offices with hallway access to locker rooms and classrooms. Provide electronic access control at public entrance doors to unsecure sides; permanent entry mats at each exterior entrance, min. width of entry door x 5FT in direction of travel. Provide high windows for natural lighting.

5.0 ROOM REQUIREMENTS



Physical Education (PE) Classroom

Description	Requirements
Location	B-Wing, Gymnasium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Rubber Tile
Wall Finishes	Plaster & paint exposed concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provie PA/Bell/Intercom system.
Other Requirements	Provide 2 means of egress. Provide direct access to Table Tennis Room.

5.0 ROOM REQUIREMENTS

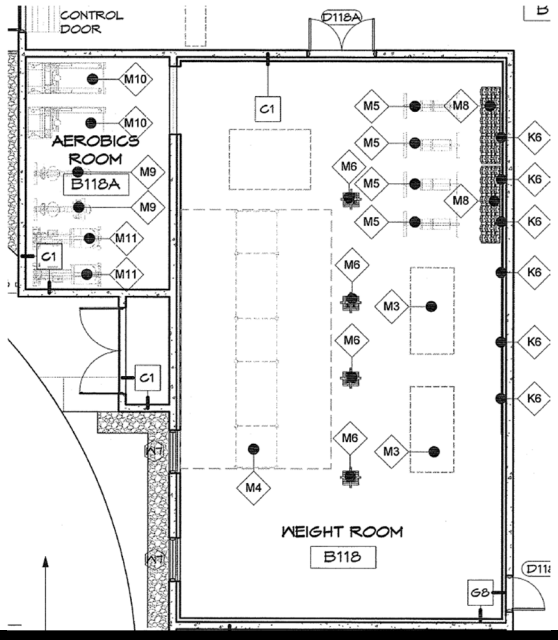


Table Tennis Room

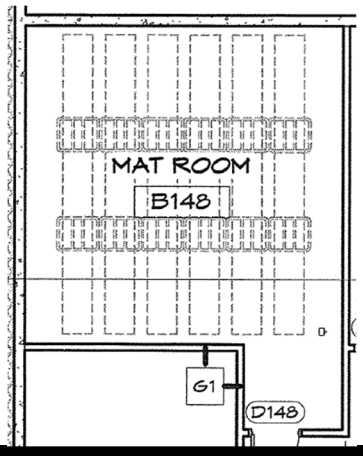
Description	Requirements
Location	B-Wing, Gymnasium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Rubber Tile
Wall Finishes	Plaster & paint exposed concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide PA/Bell/Intercom system.
Other Requirements	Provide direct access to PE Classroom

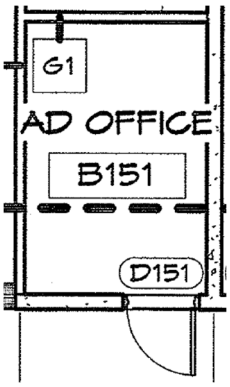
5.0 ROOM REQUIREMENTS



Weight/Aerobics Room

Description	Requirements
Location	B-Wing, Gymnasium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Rubber tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide PA/Bell/Intercom system.
Other Requirements	Provide two means of egress, including one double door for ease of mobility of large room equipment. Locate adjacent to Table Tennis room and Athletic Director's office with hallway access to secondary exit, with electronic access control, to bus drop off area.

.0 ROOM REQUIREMENTS

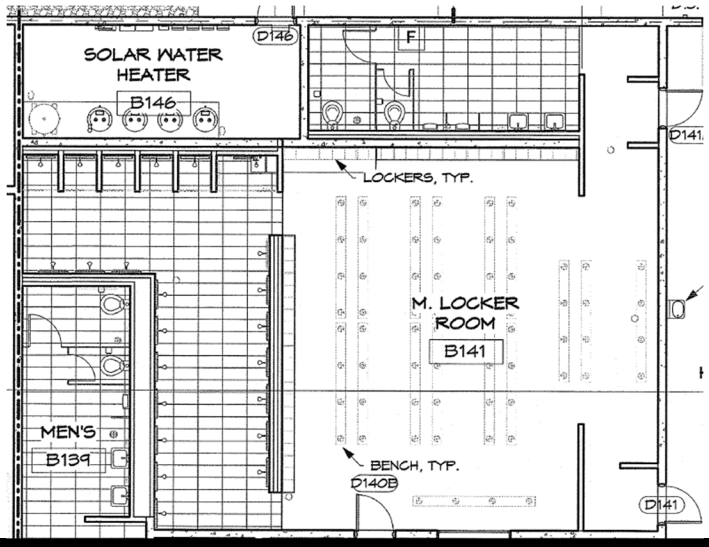


Wrestling Mat Storage Room

Description	Requirements
Location	B-Wing, Gymnasium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Rubber tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Located adjacent storage rooms and Athletic Director’s Office with hallway access to main court space.

5.0 ROOM REQUIREMENTS

Athletic Director's (AD) Office

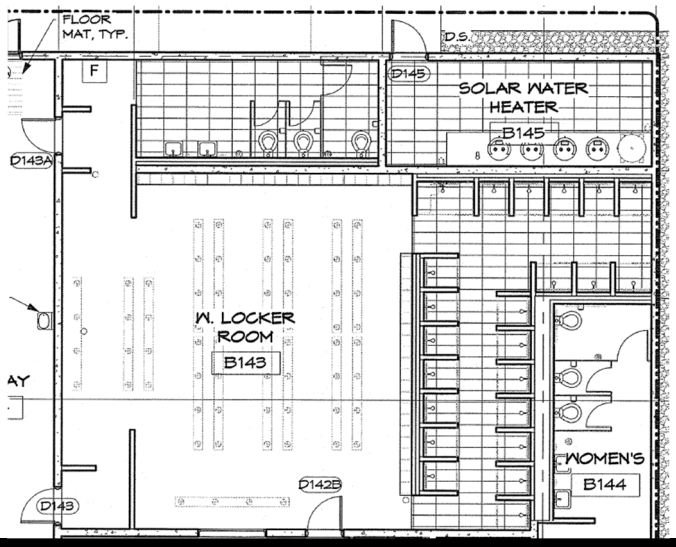


Description	Requirements
Location	B-Wing, Gymnasium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Rubber Tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide PA/Bell/Intercom system.
Other Requirements	Locate adjacent to Mat room, gymnasium storage, and weight rooms.

5.0 ROOM REQUIREMENTS

Laundry Room	
	
Description	**Requirements**
Location	B-Wing, Gymnasium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Rubber Tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide 1 utility sink, 2 tier shelving along wall above washer and dryer. Ice maker.
Other Requirements	Locate adjacent to Athletic Direct’s Office, gymnasium storage, and weight rooms.

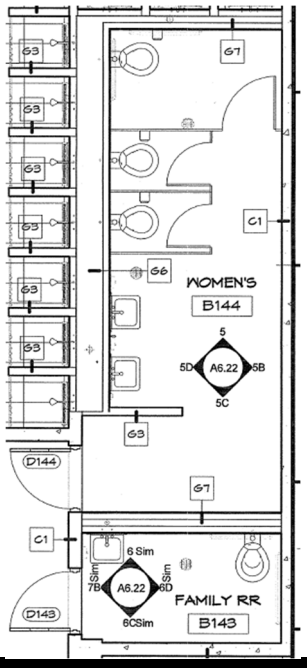
5.0 ROOM REQUIREMENTS



Men's Restroom

Description	Requirements
Location	B-Wing, Gymnasium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Rubber Tile; Porcelain ceramic tile at restroom and shower areas.
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd ; Ceramic Tile, rubber wall base; Porcelain ceramic tile at restroom and shower areas.
Ceiling Finishes	Painted gyp. bd.
Signage	Room signage.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide lavatories, water closets, urinals, showers, floor drains, shower drains. Provide PA/Bell speakers.
Other Requirements	Provide mirrors with stainless steel frame, stainless steel grab bars, robe hooks, liquid soap dispenser, paper towel dispenser, toilet tissue holder, waste receptacle; 6" concrete base for metal lockers. Provide two means of egress with screen walls for interior doors/ entrances into locker room with hallway access to game courts and secondary exit to outdoor sports field with access control for unsecured side of Gymnasium; direct access from Men's PE Office.

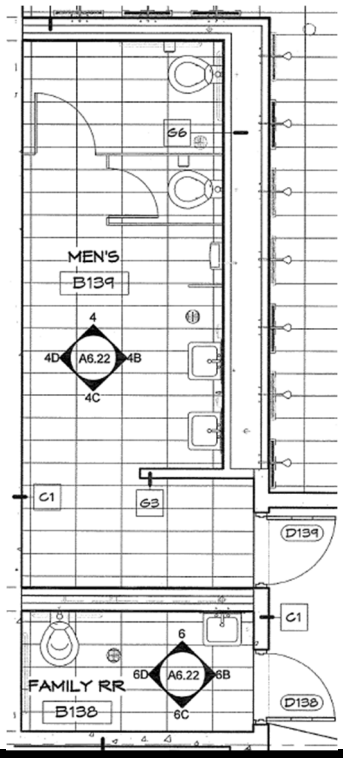
5.0 ROOM REQUIREMENTS



Men's Restroom

Description	Requirements
Location	B-Wing, Gymnasium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Rubber Tile; Porcelain ceramic tile at restroom and shower areas.
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd ; Ceramic Tile, rubber wall base; Porcelain ceramic tile at restroom and shower areas.
Ceiling Finishes	Painted gyp. bd.
Signage	Room signage.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide lavatories, water closets, showers, floor drains, shower drains. Provide PA/Bell speakers.
Other Requirements	Provide mirrors with stainless steel frame, stainless steel grab bars, robe hooks, liquid soap dispenser, paper towel dispenser, toilet tissue holder, waste receptacle; sanitary napkin receptacles at toilet stalls; 6" concrete base for metal lockers. Provide two means of egress with screen walls for interior doors/ entrances into locker room with hallway access to game courts and secondary exit to outdoor sports field with access control for unsecured side of Gymnasium; direct access from Women's PE Office.

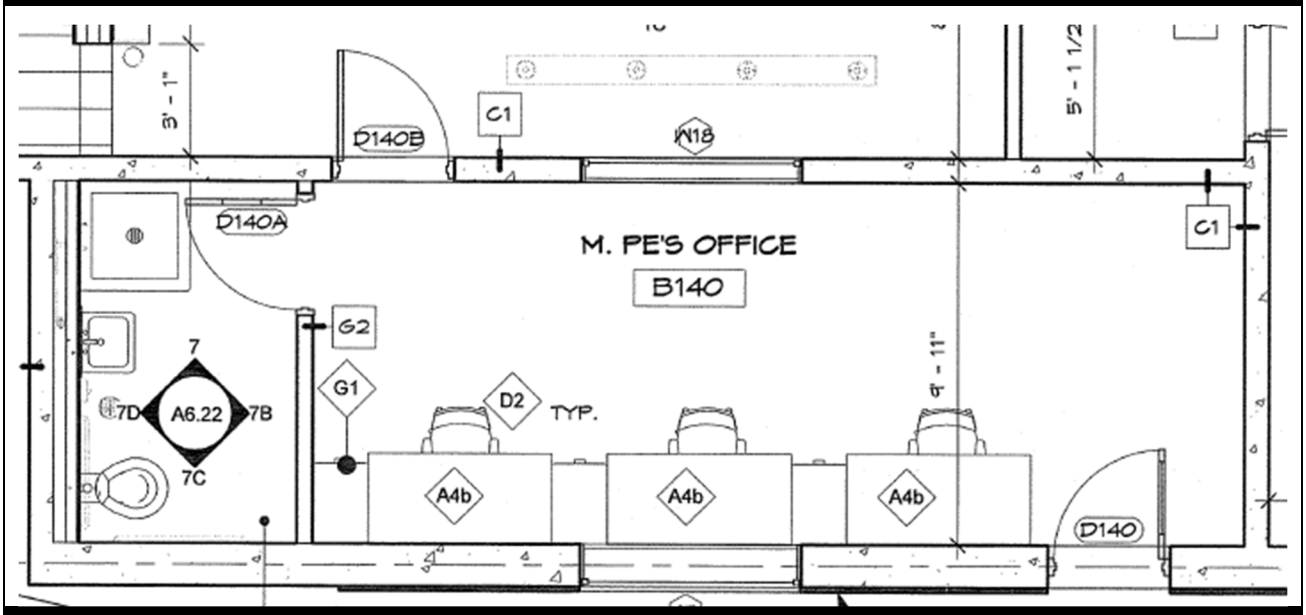
5.0 ROOM REQUIREMENTS



Women's Restroom

Description	Requirements
Location	B-Wing, Gymnasium
Area/Dimensions	Per Programming Document design
Floor Finishes	Porcelain Ceramic Tile
Wall Finishes	Porcelain Ceramic Tile
Ceiling Finishes	Painted gyp. bd.
Signage	Room signage.
Furnishing	Phenolic Toilet partitions for water closets.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide lavatory, water closets, floor drain.
Other Requirements	Provide mirror with stainless steel frame, stainless steel grab bars, robe hook, liquid soap dispenser, paper towel dispenser, toilet tissue holder, waste receptacle; and sanitary napkin receptacle at toilet stalls.

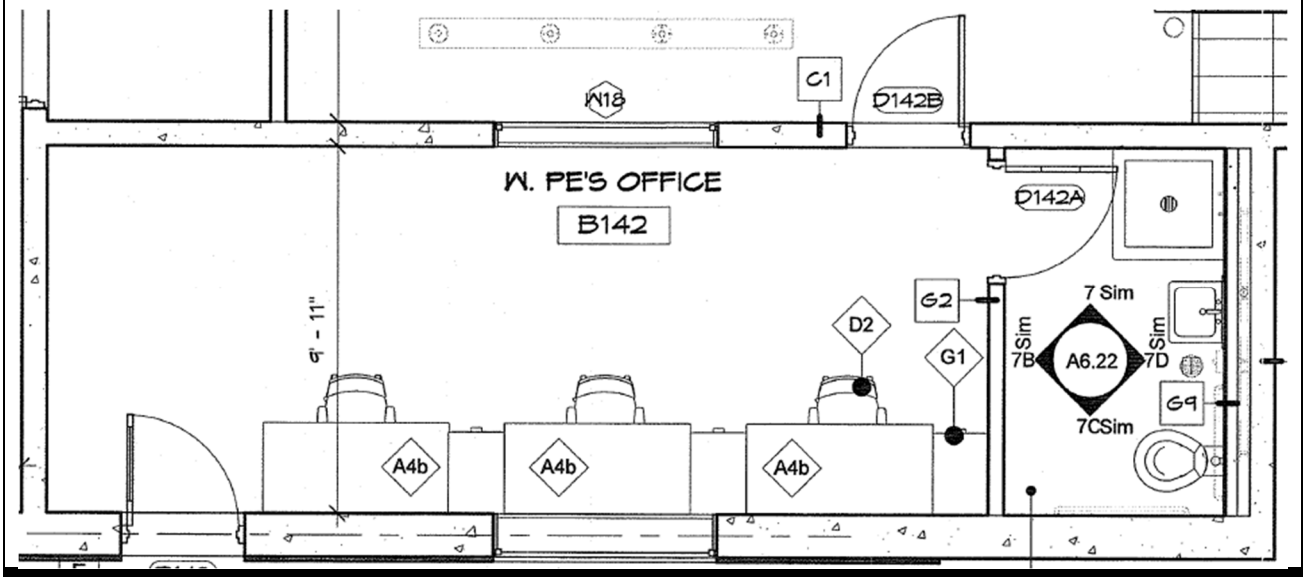
5.0 ROOM REQUIREMENTS



Men's Restroom

Description	Requirements
Location	B-Wing, Gymnasium
Area/Dimensions	Per Programming Document design
Floor Finishes	Porcelain Ceramic Tile
Wall Finishes	Porcelain Ceramic Tile
Ceiling Finishes	Painted gyp. bd.
Signage	Room signage.
Furnishing	Phenolic Toilet partitions for water closets and urinal dividers.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide lavatory, water closet, floor drain.
Other Requirements	Provide mirror with stainless steel frame, stainless steel grab bars, robe hook, liquid soap dispenser, paper towel dispenser, toilet tissue holder, waste receptacle.

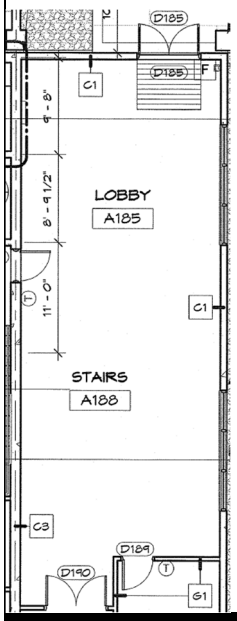
5.0 ROOM REQUIREMENTS



M. PE Teachers' Office

Description	Requirements
Location	B-Wing, Gymnasium
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile; Porcelain ceramic tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber base; Porcelain ceramic tile
Ceiling Finishes	Acoustical ceiling tile; Painted gyp. bd.
Signage	Room signage.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide PA/Bell/Intercom system.
Other Requirements	Locate adjacent to Men's Locker Rooms and Game Courts with one-way window for direct view/supervision. Provide direct access to Men's Locker room and hallway access to game courts. Provide staff restroom with typical single occupant restroom requirements; add shower and shower curtain.

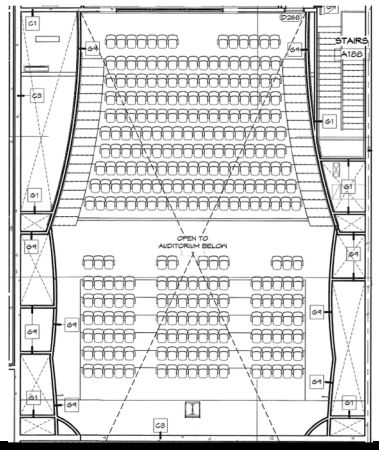
5.0 ROOM REQUIREMENTS



W. PE Teachers' Office

Description	Requirements
Location	B-Wing, Gymnasium
Area/Dimensions	Per Programming Document design; develop design for 4 teachers.
Floor Finishes	Vinyl composition tile; Porcelain ceramic tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber base; Porcelain ceramic tile at restroom and shower area.
Ceiling Finishes	Acoustical ceiling tile; Painted gyp. bd.
Signage	Room signage.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide PA/Bell/Intercom system.
Other Requirements	Locate adjacent to Women's Locker Rooms and Game Courts with one-way window for direct view/supervision. Provide direct access to Women's Locker room and hallway access to game courts. Provide staff restroom with typical single occupant restroom requirements; add shower and shower curtain.

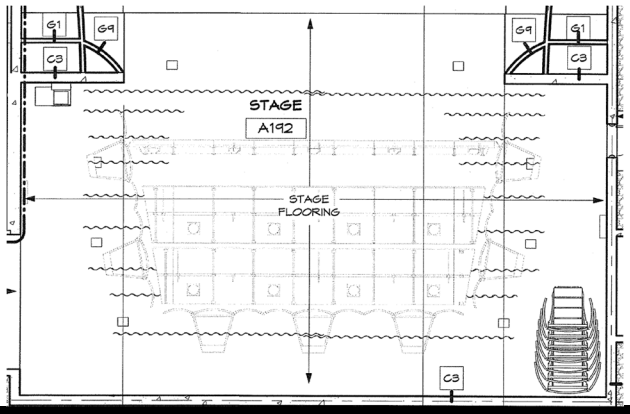
5.0 ROOM REQUIREMENTS



Auditorium-Lobby

Description	Requirements
Location	A-Wing, Auditorium Building, Auditorium Main Entrance
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile
Signage	Room signage; Directional signage at Main entrance.
Furnishing	None
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Locate Building Fire Alarm Control Panel near main entrance.
Other Requirements	Electronic access control at the public main entrance doors. Adjacent to elevator, stairs, and Activity Director's Office with hallway access to restrooms/utility rooms and auditorium. Provide Covered walkway. Provide exterior windows for daylight and views.

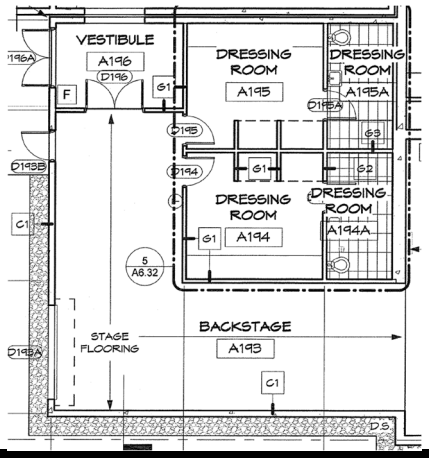
5.0 ROOM REQUIREMENTS



Auditorium-House

Description	Requirements
Location	A-Wing, Auditorium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Rubber tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base; acoustical wall panels at rear wall.
Ceiling Finishes	Painted gyp. bd. and exposed structure; paint gyp.bd. suspended ceiling clouds
Signage	Room signage; Directional signage at A-Wing Hallway.
Furnishing	Refer to FF&E Document. Fabric covered seating.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom. Provide Theater Systems and Audio-Visual systems. Provide aisle egress lighting.
Other Requirements	Provide vestibule for each entrance from auditorium lobby and A-Wing Classroom Building hallway. Provide stadium seating and sloped seating. Provide access to Control Room and stage. Comply with Acoustical Design Criteria.

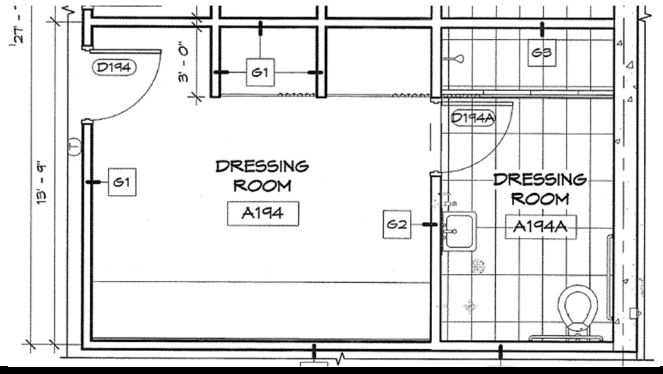
5.0 ROOM REQUIREMENTS



Auditorium-Stage

Description	Requirements
Location	A-Wing, Auditorium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Sprung floor system
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base
Ceiling Finishes	Painted gyp. bd. and exposed structure.
Signage	Room signage.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom/Theater System/Audio-Visual requirements.
Other Requirements	Provide access from Auditorium House and Backstage; secondary exist to parking lot with electronic access control. Comply with Acoustical Design Criteria.

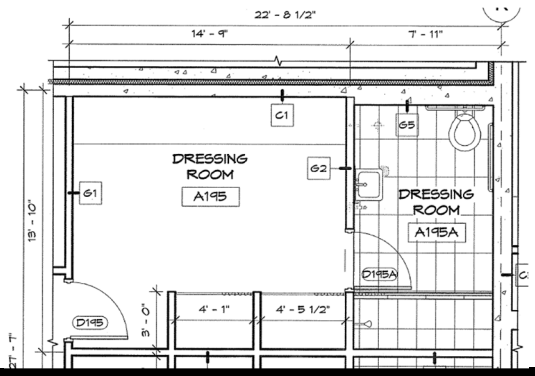
5.0 ROOM REQUIREMENTS



Back Stage

Description	Requirements
Location	A-Wing, Auditorium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Sprung floor system
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base
Ceiling Finishes	Acoustical ceiling tile
Signage	Room signage;
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide Theater Systems and Audio-Visual system.
Other Requirements	Provide access from Auditorium Stage and vestibule entrance from A-Wing Classroom Building hallway; secondary exit to service road with electronic access control; roll up door to service road for mobility of large stage props. Comply with Acoustical Design Criteria.

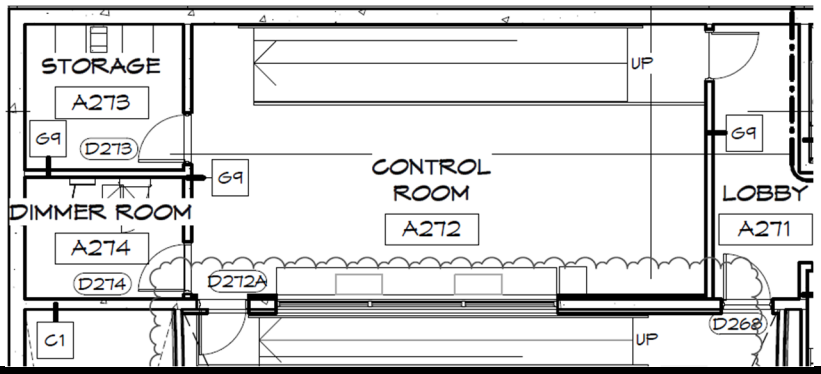
5.0 ROOM REQUIREMENTS



Men's Dressing Room

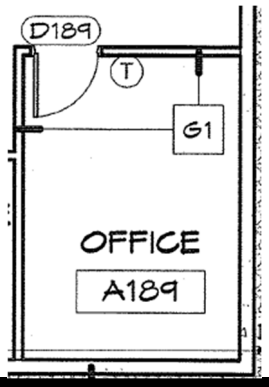
Description	Requirements
Location	A-Wing, Auditorium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Viny composition tile; Porcelain Ceramic Tile at restroom.
Wall Finishes	Plaster and Paint concrete walls; Paint gyp. bd. walls; Porcelain Ceramic Tile at restroom.
Ceiling Finishes	Acoustical ceiling tile; painted gyp. bd at restroom.
Signage	Room signage.
Fixed Furnishing	Provide built-in counter and mirror at full length of dressing room wall, min. 14FT 4IN in length.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom/Theater System/Audio-Visual requirements. Provide lavatory, water closet, shower, floor drain. Provide PA/Bell/Intercom System.
Other Requirements	Provide two dressing rooms with privacy curtain; public restroom with typical single occupant restroom requirements; mirror with stainless steel frame, stainless steel grab bars, robe hook, liquid soap dispenser, paper towel dispenser, toilet tissue holder, waste receptacle, shower curtain. Locate adjacent to Women's Dressing Room with direct access from backstage. Comply with Acoustical Design Criteria.

5.0 ROOM REQUIREMENTS



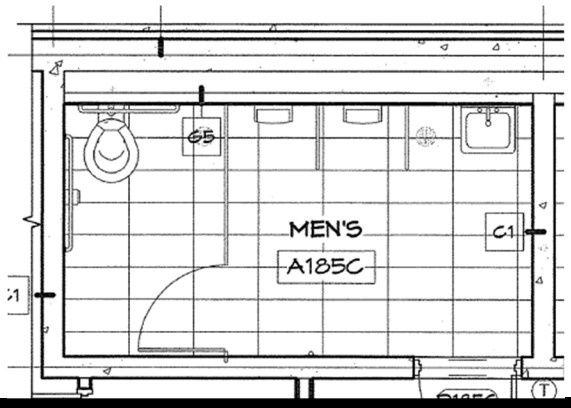
Women's Dressing Room

Description	Requirements
Location	A-Wing, Auditorium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile; Porcelain Ceramic Tile at restroom.
Wall Finishes	Plaster & paint concrete walls; painted gyp. bd; porcelain Ceramic Tile at restroom.
Ceiling Finishes	Acoustical ceiling tile; painted gyp. bd at restroom.
Signage	Room signage.
Fixed Furnishing	Provide built-in counter and mirror at full length of dressing room wall, min. 14FT 4IN in length.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom/Theater System/Audio-Visual requirements. Provide lavatory, water closet, shower, floor drain. Provide PA/Bell/Intercom System.
Other Requirements	Provide two dressing rooms with privacy curtain; public restroom with typical single occupant restroom requirements; mirror with stainless steel frame, stainless steel grab bars, robe hook, liquid soap dispenser, paper towel dispenser, toilet tissue holder, waste receptacle, shower curtain. Locate adjacent to Men's Dressing Room with direct access from backstage. Comply with Acoustical Design Criteria.



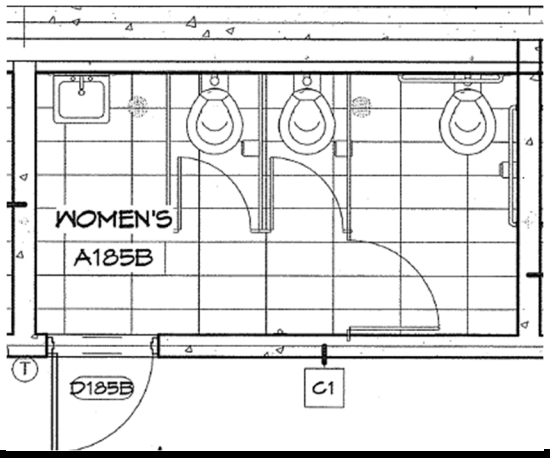
5.0 ROOM REQUIREMENTS

Control Room



Description	Requirements
Location	A-Wing, Auditorium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Rubber tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base
Ceiling Finishes	Acoustical ceiling tile
Signage	Room signage.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom/Theater System/Audio-Visual requirements. Provide PA/Bell/Intercom system.
Other Requirements	Provide direct access from Auditorium House and entrance from elevator lobby; built-in counter adjacent to Auditorium House, min. 18FT; sliding windows for visual monitoring of stage performance; Comply with Acoustical Design Criteria.

5.0 ROOM REQUIREMENTS

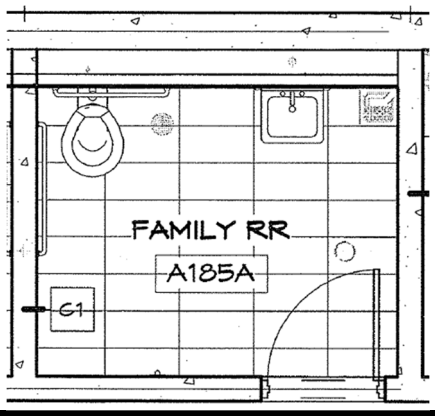


Activity Director's Office	
	
Description	**Requirements**
Location	A-Wing, Auditorium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile.
Signage	Room signage;
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide PA/Bell/Intercom system.
Other Requirements	Provide direct access from Auditorium Lobby. Adjacent to vestibule entrance to auditorium House.

5.0 ROOM REQUIREMENTS

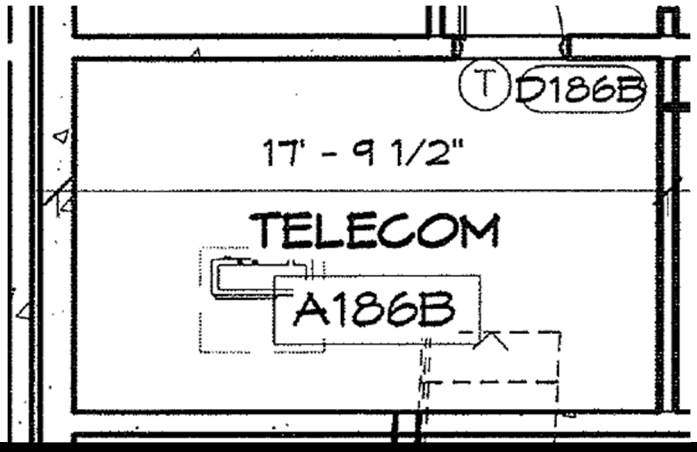
Men's Restroom	
	
Description	**Requirements**
Location	A-Wing, Auditorium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Porcelain Ceramic Tile
Wall Finishes	Porcelain Ceramic Tile
Ceiling Finishes	Painted gyp. bd.
Signage	Room signage; directional signage at lobby.
Furnishing	None
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom/Theater System/Audio-Visual requirements. Provide lavatory, water closet, urinals, floor drain.
Other Requirements	Provide mirror with stainless steel frame, stainless steel grab bars, robe hook, liquid soap dispenser, paper towel dispenser, toilet paper holder; trash receptacle.

5.0 ROOM REQUIREMENTS



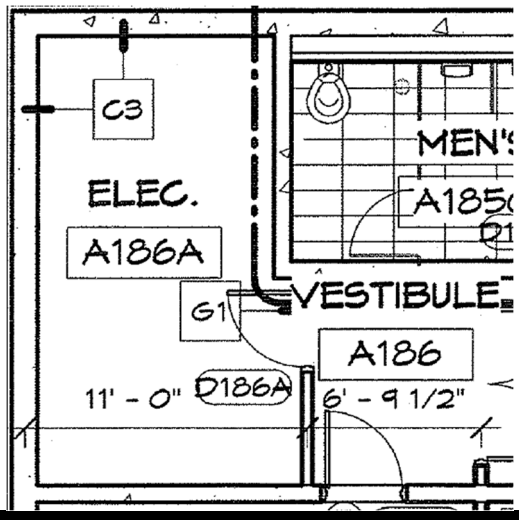
Men's Restroom

Description	Requirements
Location	A-Wing, Auditorium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Porcelain Ceramic Tile
Wall Finishes	Porcelain Ceramic Tile
Ceiling Finishes	Painted gyp. bd.
Signage	Room signage.
Furnishing	None
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom/Theater System/Audio-Visual requirements. Provide lavatory, water closets, floor drain.
Other Requirements	Provide mirror with stainless steel frame, stainless steel grab bars, robe hook, liquid soap dispenser, paper towel dispenser, toilet paper holder; sanitary napkin receptacle at each stall; trash receptacle.



5.0 ROOM REQUIREMENTS

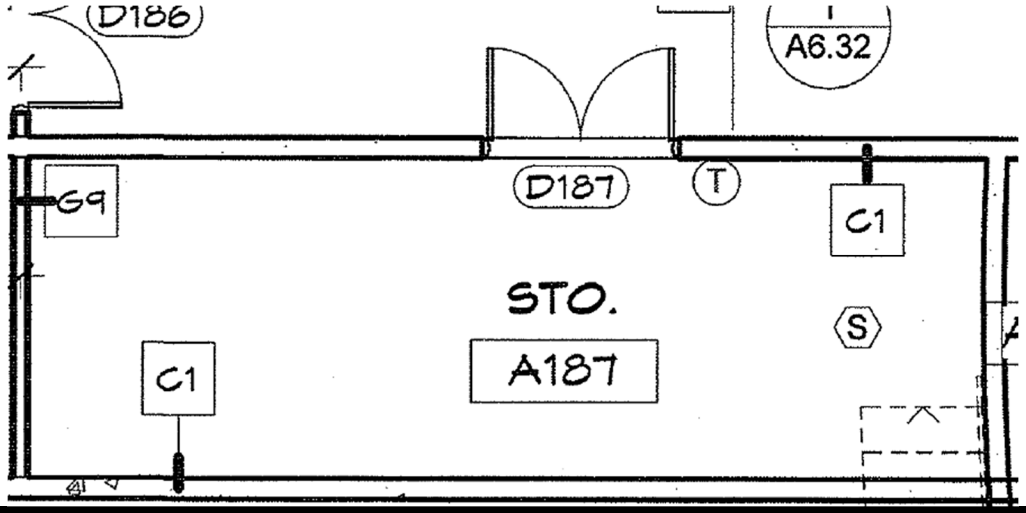
Family Restroom



Description	Requirements
Location	A-Wing, Auditorium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Porcelain Ceramic Tile
Wall Finishes	Porcelain Ceramic Tile
Ceiling Finishes	Painted gyp. bd.
Signage	Room signage.
Furnishing	None
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom/Theater System/Audio-Visual requirements. Provide lavatory, water closets, floor drain.
Other Requirements	Provide mirror with stainless steel frame, stainless steel grab bars, robe hook, liquid soap dispenser, paper towel dispenser, toilet paper holder; trash receptacle; baby changing station.

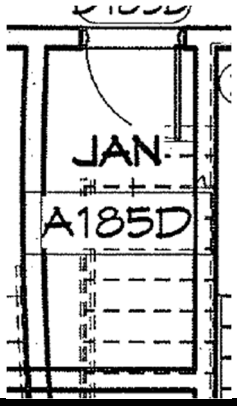
5.0 ROOM REQUIREMENTS

Telecommunication (Telecom) Room	
	
Description	**Requirements**
Location	A-Wing, Auditorium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Furnishing	None
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Non-water fire suppression.
Other Requirements	Locate adjacent to Storage A187, Elec Room A186A, and restroom facilities. Provide vestibule entrance, shared with Elec Room A186A.



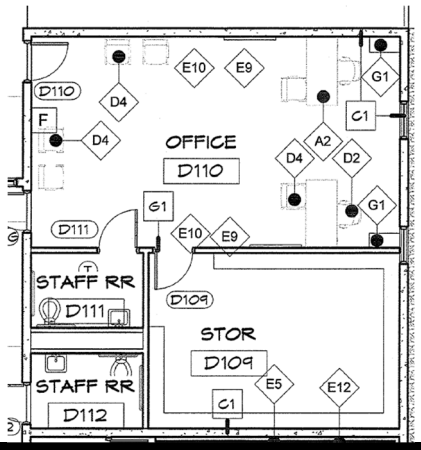
5.0 ROOM REQUIREMENTS

Electrical (Elec) Room



Description	Requirements
Location	A-Wing, Administrative Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Locate adjacent to Telecom Room A186B, and restroom facilities. Provide vestibule entrance, shared with Telecom Room A186B.

5.0 ROOM REQUIREMENTS



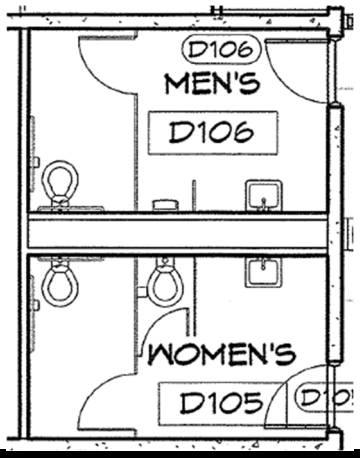
Storage	
	
Description	**Requirements**
Location	A-Wing, Auditorium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Furnishing	None.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Locate adjacent to Telecom Room A187B, restroom facilities, and elevator with hallway access Auditorium Lobby/ public entrance to the covered walkway.

5.0 ROOM REQUIREMENTS

Janitorial (Jan) Closet	
	
Description	**Requirements**
Location	A-Wing, Auditorium Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Painted gyp. bd.
Signage	Room signage.
Furnishing	None.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide mop sink, floor drain.
Other Requirements	Provide adjustable storage wall mount organizer with 3 grip hooks; 2-tier, built-in shelves with paint finish.

5.0 ROOM REQUIREMENTS

Principal's Office

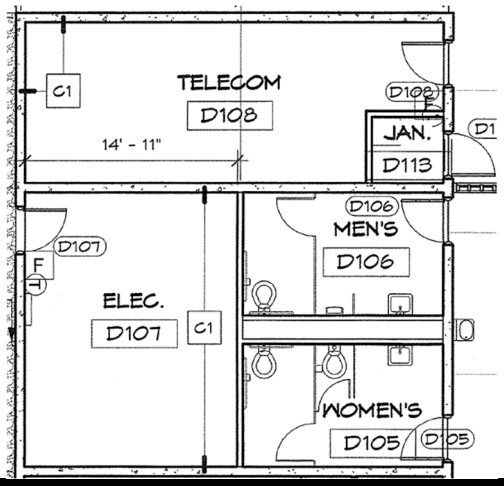


Description	Requirements
Location	Credit Recovery Building
Area/Dimensions	Per Programming Document design.
Floor Finishes	Vinyl Composition Tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Provide room signage.
Fixed Furnishing	Provide base cabinets, countertop, and 3-tier shelving along back wall.
Furnishing	Per FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide PA/Bell/Intercom System control center; Access Control system center; and Security and Surveillance System center.
Other Requirements	Locate at the main entrance to the credit recovery facility as the controlled primary entrance to the facility. Provide restroom with typical single occupant restroom requirements.

5.0 ROOM REQUIREMENTS

Staff Restroom	
	
Description	**Requirements**
Location	Credit Recovery Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Porcelain ceramic tile.
Wall Finishes	Porcelain ceramic tile.
Ceiling Finishes	Provide painted gypsum board.
Signage	Room signage;
Furnishing	None.
System Requirements	Provide mirror with stainless steel frame, stainless steel grab bars, robe hook, liquid soap dispenser, paper towel dispenser, toilet tissue holder, baby-changing station.
Other Requirements	Locate adjacent to Office staff restroom with access from common area.

5.0 ROOM REQUIREMENTS



Shared Restrooms

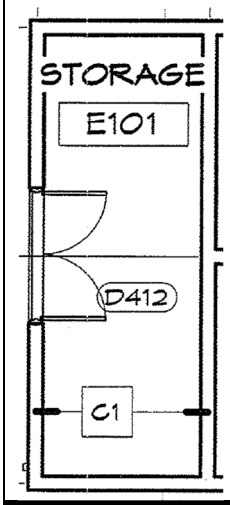
Description	Requirements
Location	Credit Recovery Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Porcelain Ceramic Tile
Wall Finishes	Porcelain Ceramic Tile
Ceiling Finishes	Painted gypsum board.
Signage	Room signage; Directional signage at common area
Furnishing	Phenolic Toilet partitions for water closets and urinal dividers.
System Requirements	Provide lavatory, water closet, urinals, floor drain as required. Provide mirror with stainless steel frame, stainless steel grab bars, robe hook, liquid soap dispenser, paper towel dispenser, toilet tissue holder. Provide sanitary napkin receptacles at Women's restrooms.
Other Requirements	Locate adjacent to utility rooms and Principal's Office.

5.0 ROOM REQUIREMENTS

Utility Rooms

Description	Requirements
Location	A-Wing, B-Wing
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Non-water fire suppression.
Other Requirements	Locate adjacent to main entrance to the credit recovery facility.

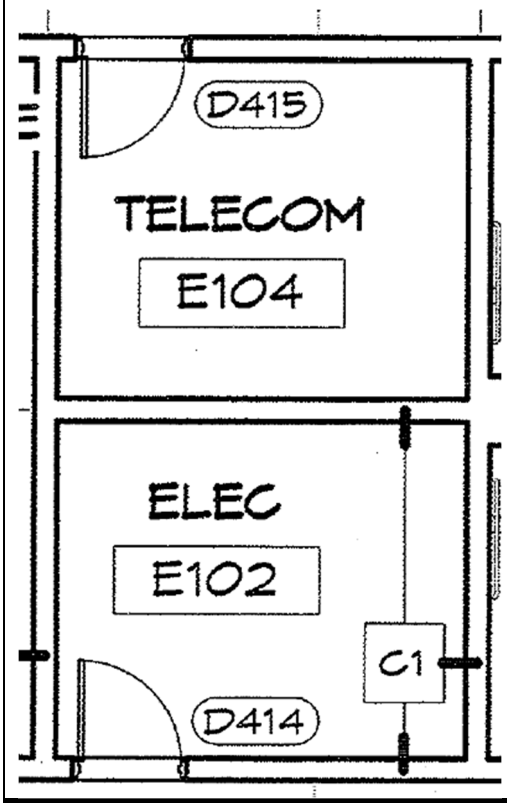
5.0 ROOM REQUIREMENTS



Janitorial (Jan) Closet

Description	Requirements
Location	Credit Recovery Building
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Painted gyp. bd.
Signage	Room signage.
Furnishing	None.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide mop sink, floor drain.
Other Requirements	Provide adjustable storage wall mount organizer with 3 grip hooks; 2-tier, built-in shelves with paint finish. Located adjacent to shared restrooms and utility rooms.

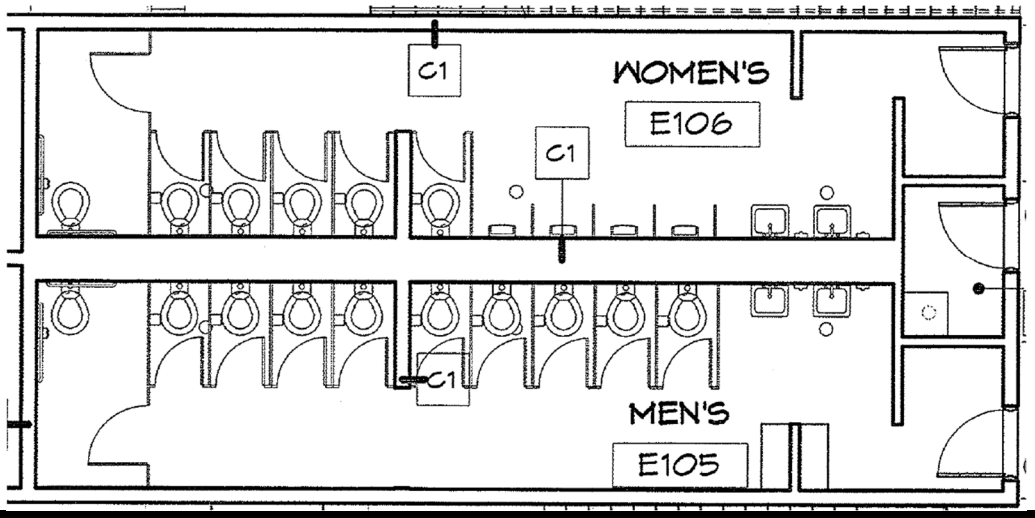
5.0 ROOM REQUIREMENTS



Storage

Description	Requirements
Location	Press Box
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Furnishing	None.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Locate adjacent to utility rooms. Provide double door access for mobility of large sports equipment.

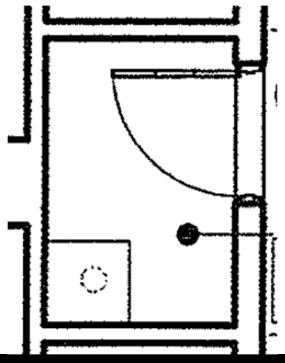
5.0 ROOM REQUIREMENTS



Utility Rooms

Description	Requirements
Location	Press Box
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Acoustical ceiling tile and painted gyp. bd. soffits.
Signage	Room signage.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Non-water fire suppression.
Other Requirements	Locate between storage and shared restrooms.

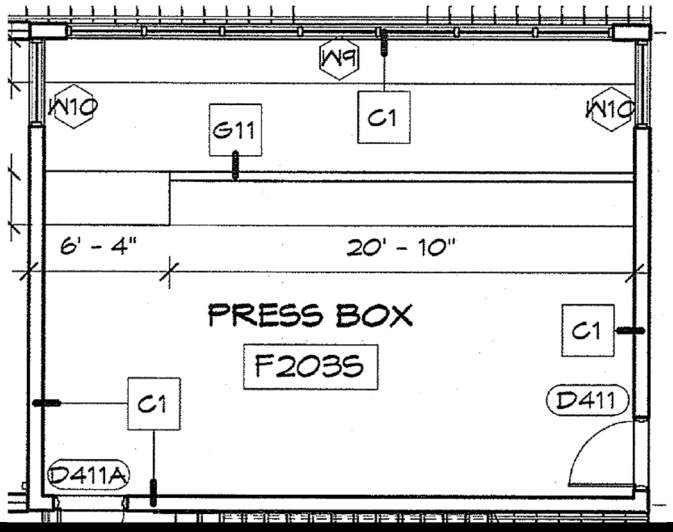
5.0 ROOM REQUIREMENTS



Shared Restrooms

Description	Requirements
Location	Press Box
Area/Dimensions	Per Programming Document design
Floor Finishes	Porcelain Ceramic Tile
Wall Finishes	Porcelain Ceramic Tile
Ceiling Finishes	Painted gypsum board.
Signage	Room signage; Directional signage at walkways
Furnishing	Phenolic Toilet partitions for water closets and urinal dividers.
System Requirements	Provide lavatory, water closet, urinals, floor drain as required.
Other Requirements	Provide screen walls at entry. Provide mirror with stainless steel frame, stainless steel grab bars, robe hook, liquid soap dispenser, paper towel dispenser, toilet tissue holder. Provide sanitary napkin receptacles at Women's restrooms.

5.0 ROOM REQUIREMENTS



Janitorial (Jan) Closet

Description	Requirements
Location	Pressbox
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base.
Ceiling Finishes	Painted gyp. bd.
Signage	Room signage.
Furnishing	None.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements. Provide mop sink, floor drain.
Other Requirements	Provide adjustable storage wall mount organizer with 3 grip hooks; 2-tier, built-in shelves with paint finish.

5.0 ROOM REQUIREMENTS

Press Box

Description	Requirements
Location	Press Box
Area/Dimensions	Per Programming Document design
Floor Finishes	Vinyl composition tile
Wall Finishes	Plaster & paint concrete walls; paint gyp. bd. walls; rubber wall base
Ceiling Finishes	Acoustical ceiling tile
Signage	Room signage.
Furnishing	Refer to FF&E Document.
System Requirements	Refer to Structural/Mechanical/Fire Protection/Electrical/Telecom requirements.
Other Requirements	Locate at second floor level with third floor roof deck access and two means of egress. Provide two tier interior seating levels; built-in counters along full length of wall with panoramic windows and min. 20FT 6IN at second tier.

SECTION 4
Product Data Sheets: Proposed Options To Date

// This page is intentionally blank //

SECTION 1 | DESIGN NARRATIVE

The Design Team's Furniture, Fixtures, and Equipment (FFE) Scope of Work is to specify FFE Items that fall under the Project's Construction Contract. These items will meet applicable Design Standards and will compliment the Interior Design Intent established for the new Simon Sanchez High School. Compliance to GDOE Program Requirements also stands as a key factor in selecting FFE items. Selections will enhance the school's educational environment and will be appropriate for the function of the various spaces.

Where applicable, single source manufacturers will be considered to promote consistent product quality and to also lower production/delivery costs via bulk pricing. This will provide better value for Simon Sanchez High School overall.

Objectives:

- Aesthetically pleasing FFE Items will be chosen without compromising comfort, quality, and budget.
- Tables with adjustable height capability will be specified as necessary to achieve ADA compliance.
- Stackable chairs will be specified, where applicable, so that when they are not in use, they can be stacked for compact storage.
- FFE Selections will be coordinated with SSHS to ensure that they are compatible with current supply or maintenance contracts.

FFE Items will be identified based on which party will provide the items:

- General Contractor/FFE Contractor Scope of Work
- Owner Furnished / Contractor Installed
- Owner Furnished / Owner Installed

Abbreviations

ADA	Americans with Disabilities Act
BLS	Basic Life Skills
CTE	Career Technical Education
CU	Cubic
D	Depth
EA	Each

SECTION 4 | FFE PRODUCT DATA SHEETS

Refer to Furniture Schedules, Sheets A8.18 & A8.19. Subject to compliance with the featured requirements indicated herein, provide products by one of the manufacturers indicated below and receive prior written approval by the Architect. The manufacturer shall certify that the substitute product meets or exceeds the stated design criteria.

A1 Administration Desk
- *10700 Series Desk; Double Pedestal*

A2 Administration Desk
- *10700 Series Desk; Single Pedestal*

A3 Administration Desk
- *10700 Series Desk; Small*

A4a Teacher Desk
- *Use A4b.*

A4b Teacher Desk
- *540 Series Teacher Desk; Double Pedestal*

A5a Single Student Desk
- *Text Series - Student Desks; Adjustable-Height*

A5b Student Desk (ADA)
- *Text Series - Student Desks; Adjustable-Height; 36" W*

A6 Teacher Desk
- *Stahl Double Pedestal L-Shaped Desk with Center Drawer. 66” W x 72”D*

A7 Teacher Desk
- *Use A4b.*

B1a Student Laboratory Workstation
- *Forward Vision II Four Student Workstation*

B1b Student Laboratory Workstation
- *Forward Vision I Four-Student Workstation (ADA)*

B2a Computer Station; 60x30 @ Library Computer Lab
- *Flip Top Technology Table*

B2b Computer Station; 48x30 @ Electronics Lab
- *Flip Top Technology Table*

B2c Computer Station; 60x30 @Business Ed and ProStart
- *Flip Top Technology Table*

B3 Workbench; 64x54 @ Carpentry Work Shop
- *4-Station 12-Locker Workbench*

B4 Workbench; 72x30 @ Electronics Work Shop
- *Industrial Workbench With Drawers*

B5 Workbench; 46x24 @ Carpentry Work Shop
- Adjustable Height Work Table

B6 Workbench ; 46x24
- Adjustable Height Work Table

B8 Workbench ; 30x72
- STEM Demonstration Table – Phenolic Top

C1 Administration Conference Table
- *Modern Conference Room Table*

C2a Cafeteria Tables w/ Seating
- *Mobile Bench Cafeteria Table*

C2b Cafeteria Tables /w Seating - ADA Compliant
- *Mobile Bench Cafeteria Table*

C3a 2-Student Classroom Tables; 60x24
- *Text Series - Tilt-Top Table; 60x24; Adjustable-Height*

C3b 2-Student Classroom Tables; 60x24 -ADA Compliant
- *Text Series - T-Leg Table; 60x24; Adjustable-Height*

C4 Art Studio Table @ Art Room
- *A2 Art Media Carrels*

C5 Activity Table
- *Utility Table; Butcher Block Top; 60x30*

C6 Science Laboratory Table
- *Adjustable Height Science Lab Table*

C7 Cafe Table
- *Mode Cafe Table*

C8 Cafe Table
- *46" Round Table*

C9a Library Study Table
- *Mobile EZ Tilt Table; 36x72*

Product: **HON 10700 Series; 60"W x 30"D; Free-Standing Double Pedestal Desk with Modesty Panel (Or Approved Equal)**

Manufacturer: The HON Company

Location: Principal and Assistant Principals' Offices

10700 Series laminate desks from HON makes a subtle statement for high achievers. Contoured, real hardwood accents and waterfall-shaped edges combine form and function, giving the 10700 Series a luxurious look and feel. Choose from seven rich, distinctive woodgrain laminates to outfit any inspired space, from the private office to the reception area. Desk units, bookcases, stack-ons and storage feature solid, inner-frame construction. Most models ship assembled, and grommets and removable lock cores are included. The contract-grade, high-pressure laminate provides superior resistance to scratches, stains and spills. So go ahead, work with passion and vigor. This desk can take it.

. 

Hutch and Credenza are sold separately.

HON

10700 Series™

LAMINATE DESKS

ICONIC DESIGN.
LASTING PERFORMANCE.

YOU-CENTRIC DESIGN

There's no such thing as the typical office. We all have different needs, which means you want a space that's totally you. Your brand. Your culture. Your work style. Get everything you want and more with the classic 10700 Series. This collection of desk essentials works together to unify your office and express your taste for refined elegance. Contoured solid wood accents. Graceful waterfall edges. Smart storage solutions. Everything working together to make 10700 your lucky number.

Shown with Ignition® seating. Inspired by Balance palette.

JUST YOUR STYLE

Private and focused. Open and collaborative. With the 10700 Series, you can enjoy whatever work style and environment you want. From inviting reception stations to versatile open plan workstations to elaborate private offices, everyone gets exactly what they need. Peninsula, L-shaped or U-shaped worksurfaces. Desk/credenza combinations. The choice is yours. When you go with 10700 Series, you get the work space and storage that help you get the job done.

Shown with Ignition seating. Inspired by Nature palette. hon.com/fabrics-finishes

Regardless of the storage need, the 10700 Series provides the ideal solution. Storage cabinets, modular storage and mobile pedestals allow users to personalize their space. Lateral files and bookcases help organize business materials and display personal items.

Shown with Lota® seating.

Shown with Ignition® seating.

MULTIFUNCTIONAL THINKING

Offices are continuing to shrink, which makes creative storage arrangements more important than ever. 10700 Series stackable storage turns wall space into valuable storage space. Go mobile with pedestals. Get personal in every workstation with modular storage. Conceal files and secure belongings with lateral files and wardrobe towers. It's easy to see how 10700 Series supports the office of tomorrow and the needs of today.

Shown with Nucleus® and Cambia™ seating. Inspired by Sprout palette. hon.com/fabrics-finishes

EXPRESS YOURSELF

Rich laminates. Beautiful glass. Contemporary handles. 10700 Series offers an array of material choices, giving any business culture extensive options to enhance their environment and express their brand. Select scratch-, spill- and stain-resistant high-pressure laminate in one of eight finishes. Specify post or O-legs to create a lighter aesthetic in open areas, while modesty panels increase privacy above and below the worksurface. When you've got choices like these, you're sure to get the look you want...and the quality you deserve.

LAMINATES

Natural Maple | Harvest | Pinnacle | Bourbon Cherry | Cognac | Shaker Cherry | Mahogany | Mocha

10700 SERIES™

10700 Series™ Teaming Workstations shown with Ignition® and Flock® Seating.

10700 SERIES™

Talk about a high achiever! The versatile 10700 Series offers a wide selection of layout configurations — making it easy to get the clean, cohesive look your office needs. Designed to withstand frequent moving and reconfiguration, the 10700 Series boasts contract grade high-pressure laminate and a durable inner-frame construction. Whatever the look you go for, this all-around performer is a smart choice.

FEATURES

- Contoured, solid wood accents and waterfall-shaped edges combine form and function for lasting comfort.
- Make the most of both large and small spaces with flexible storage options that work well together.
- With a variety of mixed materials to choose from, you can customize your look to perfectly match your aesthetic.
- Available in eight woodgrain patterns, our laminate desks are the definition of scratch-, spill- and stain-resistant durability.

Product: **HON 10700 Series; 60"W x 30"D; Free-Standing Desk Shell with Modesty Panel and Mobile Pedestal (Or Approved Equal)**

Manufacturer: The HON Company

Location: Typical Administration Offices

10700 Series laminate desks from HON makes a subtle statement for high achievers. Contoured, real hardwood accents and waterfall-shaped edges combine form and function, giving the 10700 Series a luxurious look and feel. Choose from seven rich, distinctive woodgrain laminates to outfit any inspired space, from the private office to the reception area. Desk units, bookcases, stack-ons and storage feature solid, inner-frame construction. Most models ship assembled, and grommets and removable lock cores are included. The contract-grade, high-pressure laminate provides superior resistance to scratches, stains and spills. So go ahead, work with passion and vigor. This desk can take it.

EXPRESS YOURSELF

Rich laminates. Beautiful glass. Contemporary handles. 10700 Series offers an array of material choices, giving any business culture extensive options to enhance their environment and express their brand. Select scratch-, spill- and stain-resistant high-pressure laminate in one of eight finishes. Specify post or O-legs to create a lighter aesthetic in open areas, while modesty panels increase privacy above and below the worksurface. When you've got choices like these, you're sure to get the look you want...and the quality you deserve.

Product: **Forward Vision™ II Four-Student Workstation w/ Sink and 2-Combination Cold-Water and Gas Fixtures (Or Approved Equal)**

Manufacturer: Diversified Spaces (Formerly Diversified Woodworks)

Location: All Science Classroom Laboratories Except for Physical Science Classroom Laboratories

This workstation is design to allow up to 4 students to work on the one side of the table to allow students to face the instructor during demonstrations. In turn, the instructor can see the students, fixtures, and storage areas from the front of the classroom.

The large work surface, 46"D x 88"W is made of chemical resistant phenolic resin and holds the solid epoxy sink, and two combination cold water and gas fixtures. Data and electrical outlets are provided on the side of the unit. The cabinets provide locked storage space for chemicals, beakers, and other equipment. Side mounted hooks hold book bags off the floor. The units are finished with a chemical resistant, earth-friendly UV finish. Includes two GFI AC duplex outlets. Also available with a flat top (no sink or fixtures). The mechanical area between the storage cabinets is accessed from the front through a removable panel. This model is compact enough to fit multiple units in a small classroom and is easy to assemble.

Product Details

- Dimensions: 88"W x 46"D x 36"H
- Tabletop: 1" thick solid epoxy resin top (Also available in 3/4" phenolic resin surface)
- Constructed of solid oak and oak veneers
- Designed to be used by four students, all facing the instructor
- Diversified Woodcrafts Inc. is SEFA compliant and MAS Certified Green
- Finishing the workstation is rubber base molding and a durable chemical resistant UV finish
- Flat Work surface for maximum workspace
- Full cabinet doors with locks include adjustable shelves
- Two GFI protected AC duplex receptacles and data outlets
- Assembly required
- Product Weight: 503 lbs
- Limited Lifetime Warranty
- Made in the U.S.A.

Product: **Forward Vision™ I Four-Student Workstation w/ Sink and 2-Combination Cold-Water and Gas Fixtures - ADA Compliant (Or Approved Equal)**

Manufacturer: Diversified Spaces

Location: All Science Classroom Laboratories Except for Physical Science Classroom Laboratories

We've taken our most popular workstation and have made it ADA compatible. Constructed of hardwoods and oak veneers and finished with a chemical resistant finish. The 1" epoxy resin top is available with our without a sink and two combination cold water/gas fixtures with paddle handles. The sink includes trap, strainer and stopper. The sloping fronts allows a person in a wheelchair to roll right up to the sink area. The door/drawer cabinet features a dovetailed drawer and storage area with an adjustable shelf, locks and ADA compliant pulls. The door cabinet option includes everything previously listed except the drawer and includes 2 adjustable shelves. The unit also includes 2 GFI protected duplex outlets and rubber base molding. Unit measures: 96"W x 50"D x 34"H.

Product Details

- Tabletop Material: 1" solid epoxy resin top with a drip grove and is resistant to heat and most chemicals
- Wood Material: Solid oak and oak veneer
- Utilities: Two combination water/gas fixtures
  Two GFI protected AC duplex electrical outlets
- Storage: Two locking cabinets w/ adjustable shelves
- Weight Capacity: 600 lbs
- Warranty: Lifetime limited
- Overall Dimensions: 96"W x 50"D x 34"H.
- Sink Dimensions: 12" W x 8" L x 6" D
- Assembly: Assembly Required
- Product Weight: 566 lbs
- Designed to be used by four students, all facing the instructor
- For ADA compliance, front sloping is available to allows a person in a wheelchair to roll right up to the sink area.
- Full cabinet door with ADA compliant pulls, lock and adjustable shelf
- The unit is finished with a chemical resistant, earth-friendly UV finish
- Diversified Woodcrafts Inc. is SEFA compliant and MAS Certified Green
- Made in the U.S.A.

Product: Flip Top Technology Table, 30" x 60" Top (Or Approved Equal)

Manufacturer: Virco, Inc.

Location: Library Computer Lab

Virco's Flip-Top Computer Table offers easy access to cables, wires and surge protectors, making it an excellent choice for your school computer lab. Features include a 6" deep locking flip-top compartment which secures cables, surge protectors, and wires beneath the work surface. The high-pressure laminate top is extremely durable and is supported by a heavy-gauge steel frame. With tops that range in size from 30" to 84" wide, tables can accommodate one, two, and three-student applications.

Product Details

- Models feature a convenient 6" deep lockable flip-top compartment for enhanced wire and cable management
- Top has 2 or 3 scalloped wire management cut outs for ease of passing wires and cables into flip-top compartment.
- Surface: 1-1/8" particleboard-core high pressure laminate work surface
- Frame / Legs: Tubular 15- and 17-gauge steel frame
- Leg Finish: Upper legs have powder-coat paint finish; lower legs are chrome plated
- Adjustable top height of 24" - 34" in 1" increments
- Glides / Casters: Nylon glides
- Warranty: 10 years
- Made in the USA
- Weight: 207.54 lbs
- Certifications: BIFMA, GreenGuard, and CPSIA
- CPU Caddy sold separately.

- 12 built-in vertical opening lockers
- Base has a baked enamel finish
- Includes 4 vises
- SEFA compliant and MAS Certified Green
- Includes a limited lifetime warranty
- Made in the USA

Product: **Center Cabinet Industrial Workbench with Drawers Concept 5; Vulcan Black Cabinet/Drawers (Or Approved Equal)**

Manufacturer: Lyon

Location: Electronics Workshop

KK251WBC05 (Cabinet/Drawers in Dove Gray Shown)

The 251WBC05 industrial workbench with drawers offers both a large worksurface as well as high density storage for small parts or tools. This heavy-duty metal workbench with drawers can be used in lots of places. Use it as an electronic assembly workbench in either a factory or repair shop. You can even use this workshop bench with drawers as high density tool storage for an auto repair shop. Lyon workbenches with storage drawers are the most reliable in the industry.

You can choose both a cabinet color and a drawer color for your heavy-duty workbenches. The smaller parts of the workbench will match the cabinet color. The durable powder coat paint finish will help protect cabinets from harsh use. Lyon proudly makes these steel workbenches in the USA.

HARDWOOD WORK SURFACE

The 251WBC05 industrial workbench with drawers includes a 72”W x 30”D hardwood work surface. This hardwood top is made of many sealed kiln-dried hardwoods. This solid-laminated surface also has 3/16-inch radius rounded edges and is ideal for precision work. The round edges will add comfort when leaning over the heavy-duty industrial workbench to perform tasks. The work surface of this heavy-duty workshop table with drawers offers a weight capacity of 5,000 lbs.

MODULAR DRAWER CABINET

The slender wide modular cabinet of the 251WBC05 industrial workbench includes 5 drawers. These steel drawers slide open on smooth, steel glides. Each heavy-duty drawer can hold up to 400 lbs. All of the drawers fully extend to give easy access to the entire contents of the drawer. The aluminum handles include rounded end caps and will withstand years of use. Each cabinet includes both removable labels and plastic shields for the handles.

The modular cabinet of this workbench features a multiple drawer access. This set up allows more than one drawer to open at once. Each heavy-duty drawer cabinet also includes a standard lock. Use this lock to quickly secure all the drawers closed at one time. Each lock includes two keys.

OPEN PANEL LEGS AND STRINGER

The 251WBC05 industrial workbench with drawers comes with a one-piece, heavy-gauge steel panel leg. Lyon welds the frame of the panel leg so that it offers superior support. The leg levelers of the open table leg help ensure a level installation for your bench height workbench. The panel leg also has two knockouts for a customer supplied electrical outlet. This lets workers have easy access to outlets to plug in any equipment they need.

Our 251WBC05 industrial workbench also includes two leg-to-cabinet stringers. The stringers fits in the space between the panel leg and the cabinet to provide further stability to your workbench.

OPTIONAL ACCESSORIES

The 251WBC05 industrial workbench comes with empty drawers. Keep your 251WBC05 industrial workbench with drawers organized by adding *Slender Wide Layout Kits* to the drawers. The steel partitions and dividers help split the drawer into smaller spaces. Easily move or remove dividers to create the best layout for your stored items. Instantly increase your workspace of these factory workbenches by adding a *Shelf Riser* to store items above the work surface.

<u>Product Details</u>

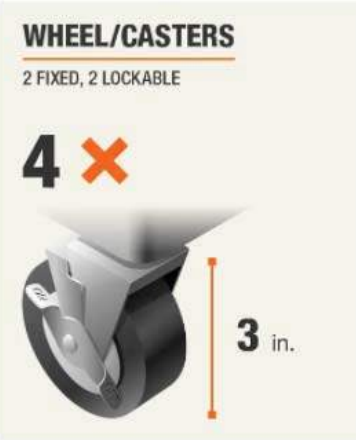
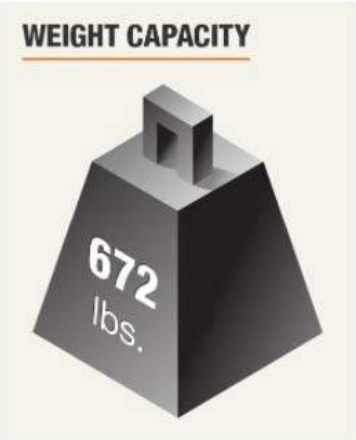
Product: **46 in. Adjustable Height Work Table (Or Approved Equal)**

Manufacturer: Husky

Location: Carpentry Workshop

This 46 in. Husky Work Table's contemporary, adjustable-height feature allows users to have the flexibility to sit or stand while working. Research suggests that there are health benefits to alternating between standing and sitting throughout the day because it both decreases body discomfort and increases blood flow. The ergonomic design could also reduce eye and back strain and boost productivity. The crossbar support can be installed in 2 different locations, depending on your preference. Install the support at the center of the table for an open, 2-sided work area. Or install it along the back of the legs to allow you the versatility of stowing your tool storage and rolling cabinets underneath to further organize your work space. This table allows for mobile use with 3 in. x 2 in. PPR swivel casters with locking brakes. Four level feet are also available to use the table as a stationary work area.





Level feet available to make table stationary.

Product Details

- Assembled dimensions (approximate): 46" W x 24" D x 26"~42 in H
- Work surface dimensions: 46: W x 24"D
- Adjustable Height: 26" ~ 39" H (with leveling feet)
- Adjustable Height: 29" ~ 42" H (with casters)
- Manual crank raises and lowers the work surface height.
- 3 mm steel frame construction with a powder-coated finish to resist rust and corrosion.
- 1.2 in. thick solid woodwork surface with protective coating
- Weight: 87.34 lbs
- Assembly required
- Limited Warranty: 3 years

Product: **16 foot Modern Conference Room Table with Metal Base & Metal Accents (Or Approved Equal)**

Manufacturer: OfficePope.com

Location: Administration Conference Room (2 each) and CRT Conference Room / Mediation Room

- Table top thickness: 1-5/8"
- Optional Power / Data Modules are available.
- 2 cutouts and grommet covers included with the 8' - 16' conference tables.
- Matching Pieces are also available.
- Conference table is very easy to assemble
- Constructed with 100% brand new materials
- Five year warranty.
- FREE SHIPPING to anywhere in the continental United States - Curbside Delivery.

Finish Choices

Power Options

Optional Power / Data Modules are available for $500 each with free shipping. Each power / data module has 2 power ports. 2 USB outlets, and one open port. Made from anodized aluminum in a black or silver metal finish. Black metal power modules for southern tobacco and sand dune tops. Silver metal power modules for stone gray and white ash tops.

Product: **Mobile Bench Cafeteria Table - 30" W x 10'-1" L**
(Or Approved Equal)

Manufacturer: AmTab

Location: Cafeteria

This table folds up easily for storage when you need to free up floor space. It opens and closes smoothly with the assist of a gas cylinder stabilizer. An EZ auto-lock keeps each cafeteria table securely folded during storage. The reinforced 14-gauge steel frame rolls smoothly on four heavy-duty casters that automatically lift off the floor when the table is in use. The tabletop is constructed of solid particleboard with a durable vinyl edging to protect against chipping and peeling. AmTab's Mobile Bench Cafeteria Table is available in several top, frame and edging color options. Made in the U.S.A.

Product: Text Series Tilt-Top Table; 24" x 60" Top w/ Casters (Or Approved Equal)

Manufacturer: Virco, Inc.

Location: 11th/12th Grade English Classrooms, HT Classroom, and Marketing Classroom

Text Series classroom tables, designed by the award-winning team of Peter Glass and Rob Mills, combine elliptical legs, swooping yokes, and arched feet for elegance and versatility. Tables feature a high-pressure laminate work surface and are available in a range of tabletop sizes and top heights including fixed of 30" or an adjustable-height range of 26" to 34", with castors as an option. The options and features make these tables a perfect fit for colleges, universities, public, and private schools.

The TEXT Series Tilt-Top Tables are ideal for selected classrooms, multi-purpose spaces, and other on-campus locations that require variable furniture set-ups. Work surfaces fold vertically for space-saving storage. This top has the ability to tilt from a horizontal to a vertical position by means of locking hinge mechanisms that are hand actuated by a single release mechanism.

Product Details:

- Overall Dimensions: 60" W x 24" D x 30" H
- Weight: 70 lbs
- Metal surfaces are available with a powder coat finish
- Optional grommets.
- Frame / Legs: Tubular steel frame

- Glides / Casters: Casters
- Surfaces: Models are available with a 1-1/8" thick particleboard-core high-pressure laminate work surface with 1-1/8" profile T-mold edge banding
- Optional Features: Grommets, Metal surfaces are available with a powder coat finish
- Assembly required
- Certifications: BIFMA, GreenGuard, CPSIA
- Warranty: 10 years

TEXT® Series – *Technology Tables*

TEXT Series technology tables were designed to meet the needs of technology labs and computer classrooms. Each table includes a perforated steel modesty panel with two generous wire pass-through openings, two grommets and two wire management trays. Models are available with a high-pressure laminate work surface and a 26" to 34" adjustable-height range.

TOP SIZE	ADJ HEIGHT 26"-34"

Sure Edge® Colors

Virco's durable, water-resistant Sure Edge optional finish is available for an expanded range of tables, student desks and combo units.

Sure Edge forms a seamless, chemically bonded seal that prevents food particles from lodging in table-top edges. As a urethane-based sealant that's applied with an innovative anti-bacterial process for extra cleanliness, Sure Edge won't peel or flake; it even resists fading when exposed to direct sunlight.

We offer urethane-based Sure Edge as an option on our tables, desks and combo units. Whether you choose it for your cafeteria or your classrooms, Sure Edge delivers long-lasting moisture resistant protection. Please consult your current Virco price list for the availability of specific models.

Accessories For Optional Configurations

Storage Options

BR BOOKRACK

Virco's welded-on under-seat wire bookrack is still a favorite storage option in many schools.

BH BACKPACK HANGER

Work surfaces for most Virco classroom desks, tables and combo units can be equipped with compact wire backpack hanger.

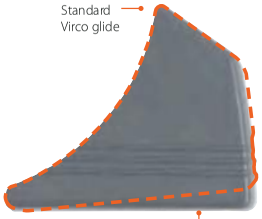
CH CUP HOLDER

This option – available only on collaborative tops with a high-pressure laminate construction – is positioned in the upper right, as shown below.

Glide & Caster Options

UG FIXED GLIDES

UGLIDE - An optional 5-pack of fixed glides is available for most task chairs and lab stools.



C SOFT-WHEEL CASTERS

A 5-pack of twin-wheel soft casters is available for most task chairs and lab stools, while a 4-pack of twin-wheel soft casters is available for 4-leg mobile chairs with standard casters.

U9024CAST - 5-pack for 5-star base models

U9050CAST - 4-pack for 4-leg base models

BG BUMP GLIDES

Rear bump glides – which limit the rocking range of Virco steel-frame rockers – are designed for environments where limited motion may be desired, such as areas for children with severe sensory integration problems or Autism. Bump glides only come in Graphite.

Chair, Tablet Arm and Combo Glide Options

STANDARD NYLON GLIDES

Nylon-base glides – which are standard on most Virco products with glides – provide the best overall performance for multiple floor applications.

FG FELT-BASE GLIDES

Felt-base glides are the best choice for VCT flooring and gym wood flooring applications.

Rocking Chairs are available with a felt strip on the bottom of each leg for flooring applications where a felt contact surface is appropriate. Rocking Chairs are not recommended for use on VCT flooring.

Comfort & Style Options

P PADDED UPHOLSTERED SEAT

A wide range of models from various product lines can be ordered with a padded, upholstered seat. Different upholstery options are available for different product lines.

A ARM REST

Tubular steel arms with molded polypropylene arm rests are available as a field-installed option for Sage™ Contract chairs and as a factory-installed option for various Analogy, Sage and ZUMA models. Virco's standard arm rest color is Graphite. Check with your Virco sales representative for additional color options, minimums and possible extended lead times..

Writing Surface Options

LH LEFT HANDED

Tablet arm units – and combo units without a dual-entry configuration – are standard with a right-handed (left-side entry) configuration. Models with a left-handed (right-side entrance) configuration are available. Specify left-handed when ordering.

TA TABLET ARM

Sage Contract chairs can be modified to serve as chair desks by adding a field-installed articulating tablet arm. Specify a right-handed (SGTARHKD) or left-handed (SGTALHKD) tablet arm when ordering.

Work Surface Options

M HARD PLASTIC TOP

Selected units that are standard with a high-pressure laminate work surface can be ordered with a hard plastic work surface.

L LAMINATE TOP

Selected units that are standard with a hard plastic work surface can be ordered with a particle-board-core, high-pressure laminate work surface.

PL PLYWOOD TOP

Selected units that are standard with a particleboard-core, high-pressure laminate work surface can be ordered with a plywood-core, high-pressure laminate work surface.

AE SURE EDGE

Virco's durable, water-resistant Sure Edge® forms a seamless, chemically bonded seal. Available for most models with a standard high-pressure laminate work surface.

General Product Information

PRODUCT EVALUATION & TESTING

As a service to our customers and to assure superior levels of quality control, Virco tests and evaluates our products according to rigorous standards. Virco's product evaluation program includes applicable performance testing for strength, durability and stability as established by the Business and Institutional Furniture Manufacturer's Association and accepted by the American National Standards Institute.

ANSI/BIFMA TESTED

Virco's 8800 Series chairs; 2000 Series, 3000 Series, 4000 Series tables with standard-height legs, 4300 Series, 53 Series desks and returns, 53VF Series vertical files and 53LF lateral files, 53MP Series mobile pedestal units, 53CAB Series metal storage cabinets, 54VF Series vertical files, 6000, 6100 (Core-a-Gator®), 62000, 6800, 7900, 785 Series student desks, Sigma® Series desks, 751 lift lid student desks, Jr. Executive student desks, 7900 Series desks, 9000 Series, Analogy® Series (except ROCK models), Civitas® Series Seating (except ROCK models), Flip-Top Technology tables, Lunada® Series tables, N2 Series, Metaphor® Series, Parameter® Series desks and returns, Plateau® Series round, rectangular and racetrack tables, Sage™ Series (except ROCK models), Makerspace, TEXT® Series tables, ZUMA® Series (except ROCK models), 120, 121 and 122 Series Stools, included in this catalog have passed applicable performance tests for strength, durability, and stability as established by the Business and Institutional Furniture Manufacturer's Association International and accepted by the American National Standards Institute.

CARE & USE INSTRUCTIONS NOTICE:

To prevent structural failures and possible injury, furniture should not be used other than for its intended purpose and should be inspected regularly, at least annually, for the following: (1) loose or missing fasteners such as screws, rivets or staples, (2) metal fatigue, rust, cracks or broken welds, (3) any problem that causes instability or tipping, (4) any signs of misuse. Furniture that is damaged or appears to be unstable should immediately be removed from service, reported to the facility manager and replaced or repaired. Repairs should only be made using factory-authorized parts and methods. For information on furniture maintenance, repair, or to report furniture which requires service, call Virco toll-free at 800.448.4726. Furniture should be wiped down with mild soap and water as needed.

UPHOLSTERY TESTING

The following Virco upholstery materials pass California Technical Information Bulletin 117, Section E: Contemporary vinyl, Confetti fabric, Express fabric, Linen vinyl, Pacifica fabric, Sedona fabric, Select vinyl, and fabric for Sage™, Parison®, and Analogy® Series upholstered seating models.

FURNITURE WITH OAK FINISH

Virco's Oak finish highlights the grain and color accents of each furniture item. Because they're crafted from natural hardwood, no two pieces of Oak furniture have exactly the same grain pattern and color; instead, variations in grain and color result in uniquely complementary furniture groupings.

60", 72" AND 84" BOOKCASES

To avoid the risk of a serious tip-over accident, these bookcases must be securely anchored to a wall. Refer to the assembly instructions for more information or see page 150 for details.

GUIDELINES FOR STACKING & MOVING FURNITURE

The number of pieces of furniture that can be safely stacked or moved on Virco's mobile storage equipment will vary depending on many factors, including the furniture's height, weight and general design; the speed at which the unit will be moved; the terrain over which it will travel; and the strength of the operator(s). Care should be taken not to stack to the point of unsteadiness. Virco recommends starting with small, easily handled loads and adding one to two pieces of furniture at a time to determine the safe capacity for each set of conditions. Use Virco mobile storage equipment with appropriate Virco furniture only.

NOTE ON PRODUCT PHOTOGRAPHS:

Many of the Virco products in this catalog have been photographed with "props" to illustrate possible product uses. These props are only included with the product when the accompanying caption explicitly indicates this to be the case. When a caption does not specify that props are included when describing a product, the props are not included with the product.

Virco Warranty

Virco will repair or replace, at its option, any Virco furniture or equipment product which proves to be defective in original material or workmanship that may become evident within the first 10 years of the date of purchase and 5 years from the date of purchase for casters, glides, pneumatic cylinders and torsion bars. This is your sole and exclusive remedy. This warranty covers products manufactured after January 1, 2017, as long as product is owned by original purchaser, and is subject to the following limitations:

Limitations:

From the date of purchase, Virco's warranty covers the items below as follows:

10 Years

Laminates, seating controls, all seating, desk, table and storage products unless otherwise indicated in this warranty.

5 Years

Glides, floor rocker foam pad, casters, pneumatic cylinders and torsion bars on mobile folding tables.

1 Year

Chairs with custom logos applied to their upholstered seats and/or backs.

Exclusions:

This warranty excludes:

- Apparent defects caused by abusive or abnormal use of the product.
- Products not assembled, installed or used in compliance with Virco's product instructions or warnings.
- Failures resulting from inadequate inspection and maintenance.
- The effects of normal usage over time.
- Any damage caused during shipment (see the current Virco price list's "Steps to Take When Receiving Shipments" for more information).
- Product modifications not approved by Virco.
- Vinyl and fabric upholstery material, except as may be offered by the mill source.
- Rust caused by natural elements or high exposure to moisture
- Products used for rental purposes.

Natural Materials, Color Variations & Customer's Own Materials

Leather, wood and other natural materials may have intrinsic grains or patterns that are distinguishing features and not regarded as defects. Virco cannot warrant the matching of grains, patterns, textures, colors, or the color-fastness of such materials. In addition, Virco does not warrant Customer's Own Materials (COM) that are chosen and used in a Virco product at a customer's request.

THERE ARE NO IMPLIED WARRANTIES OF FITNESS OR MERCHANTABILITY, AND THERE ARE NO OTHER EXPRESS WARRANTIES BEYOND THE WARRANTIES EXPRESSED HERE. ALL INCIDENTAL OR CONSEQUENTIAL DAMAGES WHICH MAY ARISE, INCLUDING BUT NOT LIMITED TO BUSINESS LOSSES, PERSONAL PROPERTY DAMAGE, AND THIRD PARTY LIABILITIES ARE HEREBY EXPRESSLY EXCLUDED.

TO OBTAIN SERVICE UNDER THIS WARRANTY:

Please contact your local Virco Sales Representative or Customer Service at 800.448.4726.

Sure Edge® Colors

Virco's durable, water-resistant Sure Edge optional finish is available for an expanded range of tables, student desks and combo units.

Sure Edge forms a seamless, chemically bonded seal that prevents food particles from lodging in table-top edges. As a urethane-based sealant that's applied with an innovative anti-bacterial process for extra cleanliness, Sure Edge won't peel or flake; it even resists fading when exposed to direct sunlight.

We offer urethane-based Sure Edge as an option on our tables, desks and combo units. Whether you choose it for your cafeteria or your classrooms, Sure Edge delivers long-lasting moisture resistant protection. Please consult your current Virco price list for the availability of specific models.

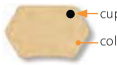
Accessories For Optional Configurations

Storage Options

BR BOOKRACK

Virco's welded-on under-seat wire bookrack is still a favorite storage option in many schools.



BH BACKPACK HANGER

Work surfaces for most Virco classroom desks, tables and combo units can be equipped with compact wire backpack hanger.

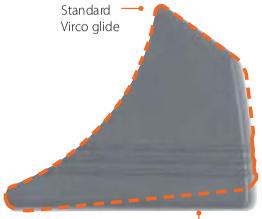
CH CUP HOLDER

This option – available only on collaborative tops with a high-pressure laminate construction – is positioned in the upper right, as shown below.

Glide & Caster Options

UG FIXED GLIDES

UGLIDE - An optional 5-pack of fixed glides is available for most task chairs and lab stools.



C SOFT-WHEEL CASTERS

A 5-pack of twin-wheel soft casters is available for most task chairs and lab stools, while a 4-pack of twin-wheel soft casters is available for 4-leg mobile chairs with standard casters.

U9024CAST - 5-pack for 5-star base models

U9050CAST - 4-pack for 4-leg base models

BG BUMP GLIDES

Rear bump glides – which limit the rocking range of Virco steel-frame rockers – are designed for environments where limited motion may be desired, such as areas for children with severe sensory integration problems or Autism. Bump glides only come in Graphite.

Chair, Tablet Arm and Combo Glide Options

STANDARD NYLON GLIDES

Nylon-base glides – which are standard on most Virco products with glides – provide the best overall performance for multiple floor applications.

FG FELT-BASE GLIDES

Felt-base glides are the best choice for VCT flooring and gym wood flooring applications.

Rocking Chairs are available with a felt strip on the bottom of each leg for flooring applications where a felt contact surface is appropriate. Rocking Chairs are not recommended for use on VCT flooring.

Comfort & Style Options

P PADDED UPHOLSTERED SEAT

A wide range of models from various product lines can be ordered with a padded, upholstered seat. Different upholstery options are available for different product lines.

A ARM REST

Tubular steel arms with molded polypropylene arm rests are available as a field-installed option for Sage™ Contract chairs and as a factory-installed option for various Analogy, Sage and ZUMA models. Virco's standard arm rest color is Graphite. Check with your Virco sales representative for additional color options, minimums and possible extended lead times..

Writing Surface Options

LH LEFT HANDED

Tablet arm units – and combo units without a dual-entry configuration – are standard with a right-handed (left-side entry) configuration. Models with a left-handed (right-side entrance) configuration are available. Specify left-handed when ordering.

TA TABLET ARM

Sage Contract chairs can be modified to serve as chair desks by adding a field-installed articulating tablet arm. Specify a right-handed (SGTARHKD) or left-handed (SGTALHKD) tablet arm when ordering.

Work Surface Options

M HARD PLASTIC TOP

AE SURE EDGE

Virco's durable, water-resistant Sure Edge® forms a seamless, chemically bonded seal. Available for most models with a standard high-pressure laminate work surface.

General Product Information

PRODUCT EVALUATION & TESTING

As a service to our customers and to assure superior levels of quality control, Virco tests and evaluates our products according to rigorous standards. Virco's product evaluation program includes applicable performance testing for strength, durability and stability as established by the Business and Institutional Furniture Manufacturer's Association and accepted by the American National Standards Institute.

ANSI/BIFMA TESTED

Virco's 8800 Series chairs; 2000 Series, 3000 Series, 4000 Series tables with standard-height legs, 4300 Series, 53 Series desks and returns, 53VF Series vertical files and 53LF lateral files, 53MP Series mobile pedestal units, 53CAB Series metal storage cabinets, 54VF Series vertical files, 6000, 6100 (Core-a-Gator®), 62000, 6800, 7900, 785 Series student desks, Sigma® Series desks, 751 lift lid student desks, Jr. Executive student desks, 7900 Series desks, 9000 Series, Analogy® Series (except ROCK models), Civitas® Series Seating (except ROCK models), Flip-Top Technology tables, Lunada® Series tables, N2 Series, Metaphor® Series, Parameter® Series desks and returns, Plateau® Series round, rectangular and racetrack tables, Sage™ Series (except ROCK models), Makerspace, TEXT® Series tables, ZUMA® Series (except ROCK models), 120, 121 and 122 Series Stools, included in this catalog have passed applicable performance tests for strength, durability, and stability as established by the Business and Institutional Furniture Manufacturer's Association International and accepted by the American National Standards Institute.

CARE & USE INSTRUCTIONS NOTICE:

To prevent structural failures and possible injury, furniture should not be used other than for its intended purpose and should be inspected regularly, at least annually, for the following: (1) loose or missing fasteners such as screws, rivets or staples, (2) metal fatigue, rust, cracks or broken welds, (3) any problem that causes instability or tipping, (4) any signs of misuse. Furniture that is damaged or appears to be unstable should immediately be removed from service, reported to the facility manager and replaced or repaired. Repairs should only be made using factory-authorized parts and methods. For information on furniture maintenance, repair, or to report furniture which requires service, call Virco toll-free at 800.448.4726. Furniture should be wiped down with mild soap and water as needed.

UPHOLSTERY TESTING

The following Virco upholstery materials pass California Technical Information Bulletin 117, Section E: Contemporary vinyl, Confetti fabric, Express fabric, Linen vinyl, Pacifica fabric, Sedona fabric, Select vinyl, and fabric for Sage™, Parison®, and Analogy® Series upholstered seating models.

FURNITURE WITH OAK FINISH

Virco's Oak finish highlights the grain and color accents of each furniture item. Because they're crafted from natural hardwood, no two pieces of Oak furniture have exactly the same grain pattern and color; instead, variations in grain and color result in uniquely complementary furniture groupings.

60", 72" AND 84" BOOKCASES

To avoid the risk of a serious tip-over accident, these bookcases must be securely anchored to a wall. Refer to the assembly instructions for more information or see page 150 for details.

GUIDELINES FOR STACKING & MOVING FURNITURE

The number of pieces of furniture that can be safely stacked or moved on Virco's mobile storage equipment will vary depending on many factors, including the furniture's height, weight and general design; the speed at which the unit will be moved; the terrain over which it will travel; and the strength of the operator(s). Care should be taken not to stack to the point of unsteadiness. Virco recommends starting with small, easily handled loads and adding one to two pieces of furniture at a time to determine the safe capacity for each set of conditions. Use Virco mobile storage equipment with appropriate Virco furniture only.

NOTE ON PRODUCT PHOTOGRAPHS:

Many of the Virco products in this catalog have been photographed with "props" to illustrate possible product uses. These props are only included with the product when the accompanying caption explicitly indicates this to be the case. When a caption does not specify that props are included when describing a product, the props are not included with the product.

Virco Warranty

Virco will repair or replace, at its option, any Virco furniture or equipment product which proves to be defective in original material or workmanship that may become evident within the first 10 years of the date of purchase and 5 years from the date of purchase for casters, glides, pneumatic cylinders and torsion bars. This is your sole and exclusive remedy. This warranty covers products manufactured after January 1, 2017, as long as product is owned by original purchaser, and is subject to the following limitations:

Limitations:

From the date of purchase, Virco's warranty covers the items below as follows:

10 Years

Laminates, seating controls, all seating, desk, table and storage products unless otherwise indicated in this warranty.

5 Years

Glides, floor rocker foam pad, casters, pneumatic cylinders and torsion bars on mobile folding tables.

1 Year

Chairs with custom logos applied to their upholstered seats and/or backs.

Exclusions:

This warranty excludes:

- Apparent defects caused by abusive or abnormal use of the product.
- Products not assembled, installed or used in compliance with Virco's product instructions or warnings.
- Failures resulting from inadequate inspection and maintenance.
- The effects of normal usage over time.
- Any damage caused during shipment (see the current Virco price list's "Steps to Take When Receiving Shipments" for more information).
- Product modifications not approved by Virco.
- Vinyl and fabric upholstery material, except as may be offered by the mill source.
- Rust caused by natural elements or high exposure to moisture
- Products used for rental purposes.

Natural Materials, Color Variations & Customer's Own Materials

Leather, wood and other natural materials may have intrinsic grains or patterns that are distinguishing features and not regarded as defects. Virco cannot warrant the matching of grains, patterns, textures, colors, or the color-fastness of such materials. In addition, Virco does not warrant Customer's Own Materials (COM) that are chosen and used in a Virco product at a customer's request.

THERE ARE NO IMPLIED WARRANTIES OF FITNESS OR MERCHANTABILITY, AND THERE ARE NO OTHER EXPRESS WARRANTIES BEYOND THE WARRANTIES EXPRESSED HERE. ALL INCIDENTAL OR CONSEQUENTIAL DAMAGES WHICH MAY ARISE, INCLUDING BUT NOT LIMITED TO BUSINESS LOSSES, PERSONAL PROPERTY DAMAGE, AND THIRD PARTY LIABILITIES ARE HEREBY EXPRESSLY EXCLUDED.

TO OBTAIN SERVICE UNDER THIS WARRANTY:

Please contact your local Virco Sales Representative or Customer Service at 800.448.4726.

Product: **A2 Art Table Series; 60"W x 42"D x 30"H**

Manufacturer: Hann Manufacturing, Inc.

Location: Art Rooms

Item #:51631-8400

This multi-purpose art table is a sturdy and attractive platform for student projects. The base is constructed of solid hard maple with bolt reinforced mortise and tenon joints for strength and maintainability. The heavy base components and wide feet fitted with adjustable floor glides contribute to excellent table stability. The "double-bolt" lower leg spreader and additional upper spreader provide superior rigidity and resistance to loosening. The leg panels are straight. Table top choices include 1-1/4" thick HPL with either 3mm PVC edgebanding or sprayed-on urethane edging and 1-3/4" thick hard maple. Other table options include bookshelves and tote trays. Standard table height is 30".

Product Options

A2-3060PL3 - 1-1/4" x 30" x 60" 'maple grain' patterned HPL top w/ 3mm PVC edgebanding.
A2-3060M - 1-3/4" x 30" x 60" hard maple butcher-block top.
A2-4260PL3 - 1-1/4" x 42" x 60" 'maple grain' patterned HPL top w/ 3mm PVC edgebanding.

A2-4260PLA - 1-1/4" x 42" x 60" 'maple grain' patterned HPL top w/ sprayed-on urethane edging.

A2-4260M - 1-3/4" x 42" x 60" hard maple butcher-block top.

A2-4272PL3 - 1-1/4" x 42" x 72" 'maple grain' patterned HPL top w/ 3mm PVC edgebanding.

A2-4272PLA - 1-1/4" x 42" x 72" 'maple grain' patterned HPL top w/ sprayed-on urethane edging.

A2-4272M - 1-3/4" x 42" x 72" hard maple butcherblock top.

Table option suffixes:

-26 - Indicates 26" table height rather than standard 30"

-BS - Indicates bookshelves

-TT - indicates tote trays

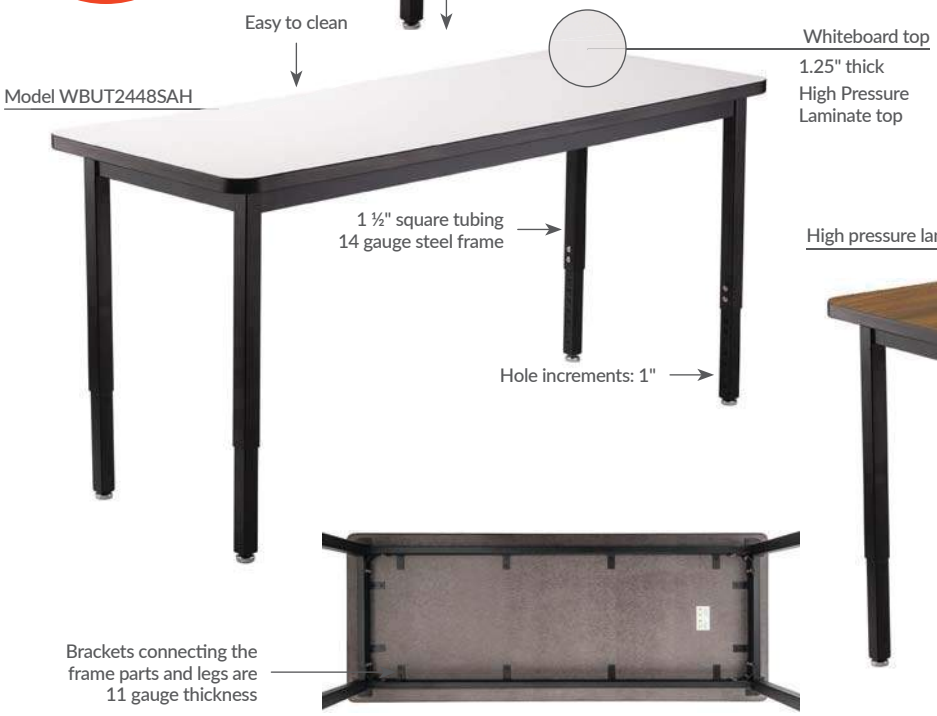
Product: Utility Table; Butcher Block Top; 60x30 (Or Approved Equal)

Manufacturer: National Public Seating

Location: CHamorro Classrooms, Faculty Workroom / Resource Center, and Cumulative File Storage

Play, work, and study with National Public Seating Utility Tables with butcher block top. Designed for Makerspace and STEM learning environments, these tables are scratch resistant, stain-resistant, and made for long term use.

These durable tables have a 1-3/4" Maple wood coated butcher block that provides a durable and elegant presentation while a urethane-based satin finish minimizes the chance of permanent stains. The 16-gauge steel frame apron and 14-gauge legs create a stable footprint and is designed for years of use. The legs lock firmly in place with K-9 external tooth lock washers and heavy-duty temper-free hex screws. The legs also have simple adjust glides for easy mobility.



Product Details

- 1-3/4" Maple wood coated butcher block for an elegant and robust presentation
- Urethane-based satin finish reduces permanent stains
- 16-gauge steel frame apron
- 14-gauge steel legs for a stable footprint
- Legs adjustable in 1" increments
- Overall dimensions: 60"W x 30"D
- Table Height: 22-1/4" ~ 37-1/4"
- Weight: 132 lbs
- Warranty: 10 years

MADE WITH TAMPER-FREE HEX-HEAD SCREWS AND THREADED HARDWARE

Collaborative

Unique table top options allows for team work in STEM Labs and Makerspaces.

Adjustable

14 gauge steel legs adjust in 1” increments giving you many options to configure as you see fit.

Durable

1.5’ square legs, tamper-free threaded hardware on industrial grade table tops provide for rugged use.

Ability to have standard height w/ casters

- Fixed height of 29''
- Cast Iron pedestal Base
- Bolt inside the column for speedy attachment
- T-Mold Edge banding
- Leveling glides protect floors from damage

Product: **46" Round Table (Commercial) - White Granite (Or Approved Equal)**

Manufacturer: Lifetime Products

Location: Credit Recovery Common Room

This Lifetime folding table is a convenient and reliable addition to virtually any application. With an incredible combination of affordability and performance, this table is sure to be an integral component to any operation. Its durable, attractive design makes this folding table great for conference rooms, restaurants, banquet halls, and a variety of other establishments. It has a 2" thick top that will not crack, chip, or peel, and its rugged design makes it an excellent choice for both indoor and outdoor use.

This tabletop is made out of high impact white granite-colored polyethylene. It is stronger, lighter, and more durable than wood. Its legs fold flat against the top, making it ideal for catering and other businesses that need to frequently transport or store tables. Floor caps on the feet of this table prevent surfaces from getting scratched and scuffed. An 18 gauge steel frame is backed by a cross brace, center support brace, and leg locks to make this an extremely sturdy table. Measuring 46" in diameter, this unit's spacious tabletop comfortably accommodates four to five people.

MFR #: 22960

Product Details

- Overall Dimensions: 46" Dia x 29" H
- Finish Color: White Granite
- Frame Material: 18 gauge steel
- Ready to use, easy to maintain and simple to store
- Superior strength and durability
- Rust-resistant powder coated steel frame
- Tabletop Material: High-Density Polyethylene
- Max seating capacity: 5
- Exceeds ANSI/BIFMA standards
- Stain resistant and easy to clean
- This item meets ANSI/BIFMA standards for comfort, safety, sustainability, and durability in furniture
- Made in the USA

Product: Mobile E-Z Tilt Table - Rectangle; 36"x72" (Or Approved Equal)

Product: **Global Industrial™ 60x36 Adjustable Height Workbench; C-Channel Leg - Maple Square Edge - Black (Or Approved Equal)**

Manufacturer: Global Industrial

Location: Automotive Classroom and Carpentry Classroom

Global workbenches are built to withstand years of heavy-duty use. The hardwood top is kiln dried, electronically glued, sanded to 1-3/4" thickness and has laminated edges. Finished with a penetrating mineral oil for a durable high quality appearance. Adjustable height legs feature removable duplex knockouts on front and rear for installation of either a hard wired electrical outlet or an optional plug-in outlet that easily screws into place with no wiring necessary. All steel parts are undercoated for rust resistance and finished with black powder coat. Bench stringer comes with mounting hardware to assemble legs to the bench top.

Product Details

- Overall Dimensions: 60"W x 30"D
- Adjustable Height: 30-7/8" to 36-7/8"
- Top Material: Maple Butcher Block; 1-3/4" thick
- Edge Type: Square
- Adjustable Steel c-channel leg with bracing and base plates for floor anchoring
- Leg Height: 29-1/8" to 35-1/8"H; adjusts in 1-1/2" increments.
- Weight Capacity: 2000 lbs.
- Assembly Required. Bench stringer comes with mounting hardware to assemble legs to the bench top.

Product: Alero Executive Chair (Or Approved Equal)

Manufacturer: Global Industries

Location: Principal and Assistant Principals' Offices

Global's Alero Executive Chair looks stylish and sleek in your office or meeting room. The breathable mesh back with adjustable lumbar support keeps employees comfortable, and the padded seat features a waterfall edge to reduce knee pressure. Adjust the chair tilt, seat height and seat depth to find the perfect sitting position. Arms are height and width adjustable. Choose a chair with or without a headrest.

It is durably constructed out of fiberglass reinforced nylon frame. With all of its features that allow you to sit longer without discomfort, this chair is perfect for anyone that spends most of their day sitting. By allowing you to rock comfortably without heavy pushing, the tension adjustment feature increases or decreases to match body weight and help to reduce muscle fatigue. The tilt movement feature locks into position to accommodate your working posture.

Leather Upholstery

Fabric Upholstery

Features:

- 24.5" Width x 2" Depth x 40.5" Height
- Chair Frame: Fiberglass reinforced nylon frame is very durable.
- Headrest: Optional Headrest is height and angle adjustable to suit your personal preferences.
- Back Support: Back support is made from elasticized, breathable mesh material that provides comfortable support that contours to your body.
- Adjustable Arms: Arms are height adjustable and feature a “sliding armcap” that can be moved forward and rearward to provide better support for keyboarding.
- Lumbar Support: Lumbar support can be moved up and down. Depth can be adjusted by turning the knob.
- Base Options: Standard base is fiberglass reinforced black nylon. Polished aluminum base is optional. Casters are available for both carpet or hard surfaces.

Alero™

adjustability and support

Alero™

Alero combines comfort and performance with exceptional value and design.

In today's modern office where computer related activities are crucial, it is extremely important that one's choice in seating encourages comfort and productivity. Alero's fully upholstered or breathable mesh back and comfortable padded seat create the perfect blend of comfort and design. Many adjustable features and a choice of functional mechanisms ensure the chair will perform well. Choose a sophisticated Multi-tilter for computer intensive activities or a tilter chair for casual offices or meeting rooms. All chairs feature an adjustable lumbar support that allows the user to customize the comfort of the back.

1960-2 High Back Knee-Tilter with adjustable Headrest, shown in GIG GIG1 Stone

1961-2 High Back Knee-Tilter (no Headrest), shown in GIG GIG1 Stone. Also, shown on cover in Momentum OHS Warmth OH12

- Supports Up to 250 lbs
- Disclaimer Statement: Casters supplied with this chair are not suitable for all floor types
- Assembly Required
- Backed by the HON Limited 5-Year Warranty
- Country of Origin: China

Product: Analogy Series Classroom Chair - 18" Seat Height
(Or Approved Equal)

Manufacturer: Virco, Inc

Location: Classrooms with single-student desk and multiple-student tables and Library Computer Lab

Analogy's striking upright design features ergonomic support and durability paired with exceptional value. Four-leg models are built to stack 8-high for added versatility in the learning environment. These chairs feature a tubular steel frame and a comfortable, ergonomically contoured polypropylene shell that flexes to accommodate different body types The Analogy Chairs are available in 12", 14", 16" and 18" seat heights; there's also an Analogy chair with an extra large shell and an 18-1/2" seat height.

The seat shells feature a waterfall front edge to promote good circulation in the user's popliteal arches, lower legs and feet. The chairs also provide an excellent mid-back support and comfort to users of many sizes. The seat has contoured wrap-around flexible ribs, which are dynamically tuned to allow the upper back to flex more easily than the lower sections, a key to combining comfort and support.

Product Details

- Beautiful ergonomic chair that promotes ergonomics and healthy movement in the classroom with a flexible seat back.
- Polypropylene Shell
- 1" diameter 17-gauge tubular steel chromed frame with self leveling nylon swivel glides.

- Waterfall front edge of the seat to promote good circulation in the user's hamstring popliteal arches.

VIRCO COLOR PROGRAM

Virco products are available in an inspiring array of colors and frame finishes, allowing a full range of expression from traditional to modern. Because color has such an impact on how individual products are perceived, and furthermore because a roomful of furniture can read differently than an individual sample, we encourage you to order samples to confirm compatibility with your overall design plan. Please see the back page of this brochure for information on how to order samples.

Virco offers a variety of lead-time specific color programs – please contact your local Virco Sales Representative for more information. Models and color combinations can be found in our price list.

In addition to our Virco color programs, Virco is capable of providing custom colors and finishes for your specific project. Because of the capabilities and processes available in our U.S. Factories, we have the ability to do custom color matches from samples or swatches for plastics, powder coat, laminates, edge treatments, as well as custom logo designs. Extended lead-times may apply on custom projects.

CAUTION: Due to color reproduction variability in printed materials and digital media, Virco recommends that you review product colors on sample coupons or swatches before purchasing to confirm that your product color choices coordinate with the interior spaces for which these products are intended. Virco will provide complimentary sample coupons or swatches for plastic, laminate, powder coat paint and upholstery colors; however, it is the customer's responsibility to request these sample materials. Once you've submitted your request, your Virco Sales Representative will be happy to assist you with this process.

** Mocha is only available on models 162 and 168 folding chairs.*

Virco's Clear Coat is a transparent secondary powder coat finish that adds extra sheen and protection when applied over other Virco paint finishes. Clear Coat cannot be used as a secondary finish over Virco's Natural Steel paint finish.

Natural Steel is our unique finishing process that allows the natural patina of raw steel to show through a protective layer of clear urethane-based powder coat. The authentic nature of the steel, including the heat effects of welding, are clearly visible with this finish.

Virco Stewardship: An Ongoing Commitment

While Virco Stewardship today encompasses a vast array of industry-leading endeavors, Virco Stewardship Initiative can trace its origins back to 1950 when we began working with America's schools as a newly established company. Although terms like "sustainability" and "sustainable business practices" weren't commonly used back then, they accurately describe the vision that inspired Virco's founder, Julian Virtue, to develop long-lasting classroom furniture. As a result of our enduring commitment to product quality and customer service, Virco has grown from a small business with a single customer into the country's largest manufacturer and supplier of furniture for the K-12 market.

RECYCLING

An important advantage of manufacturing at our company-operated facilities in the U.S. is that Virco can control a wide range or recycling and resource recovery processes. Recycling is a key aspect of Virco's commitment to sustainable business practices through our Corporate Stewardship Initiative. Virco started recycling in 1989 with three material categories: scrap metal, office paper and hydraulic oil; now we have more than 40 categories and we've processed over 380,000,000 pounds of recyclables, and even better, updated equipment has resulted in less waste, therefore reducing the need for recycling. Along with our in-house efforts, we've established a "Cash for Cardboard" program that's enabled 35 schools near our Conway facility to earn about $190,000 through recycling. We're proud that the U.S. Environmental Protection Agency recognized our recycling leadership by choosing Virco as a charter member of their WasteWise Hall of Fame in 2003 and as a WasteWise winner for reducing waste in 2019.

GREENGUARD®

In 2005, ZUMA® and ZUMAfrd™ became the first classroom furniture product lines from any manufacturer to earn GREENGUARD indoor air quality certification through the GREENGUARD for Children and Schools program. Today, hundreds of additional Virco classroom furniture models have earned this important certification, now known and GREENGUARD Gold Certification. We're proud to offer you these low-emitting products. See virco.com for link to full list of all GREENGUARD certified products.

Testing: ANSI/BIFMA

Virco is a member of BIFMA, the trade association for business and institutional furniture manufacturers. Since 1973, BIFMA has been the voice of the commercial furniture industry. As a service to our customers and to assure superior levels of quality control, Virco tests and evaluates our products according to rigorous standards. Virco's product evaluation program includes applicable performance testing for strength, durability and stability as established by the Business and Institutional Furniture Manufacturers Association (BIFMA) and accepted by the American National Standards Institute (ANSI).

CPSIA CERTIFICATION

Virco proudly complies with all laws and governmental regulations affecting our products, including the federal Consumer Products Safety Improvement Act of 2008 (CPSIA) and the California Air Resource Board (CARB) regulation on formaldehyde emissions from composite wood. Products purchased by your facility are regulated by CPSIA, which was signed into law on August 14, 2008. CPSIA regulates furniture products (whether for adult or children) that include any lead-containing paint; products intended primarily for children 12 years of age and younger with lead in their components or in the products themselves; and certain products, such as toys and child care articles, that contain phthalates. All applicable Virco products are tested by a third-party laboratory and certified to comply. For more information or to view our CPSIA certificates, please visit virco.com.

General Product Information

PRODUCT EVALUATION & TESTING

As a service to our customers and to assure superior levels of quality control, Virco tests and evaluates our products according to rigorous standards. Virco's product evaluation program includes applicable performance testing for strength, durability and stability as established by the Business and Institutional Furniture Manufacturer's Association and accepted by the American National Standards Institute.

ANSI/BIFMA TESTED

Virco's 8800 Series chairs; 2000 Series, 3000 Series, 4000 Series tables with standard-height legs, 4300 Series, 53 Series desks and returns, 53VF Series vertical files and 53LF lateral files, 53MP Series mobile pedestal units, 53CAB Series metal storage cabinets, 54VF Series vertical files, 6000, 6100 (Core-a-Gator®), 62000, 6800, 7900, 785 Series student desks, Sigma® Series desks, 751 lift lid student desks, Jr. Executive student desks, 7900 Series desks, 9000 Series, Analogy® Series (except ROCK models), Civitas® Series Seating (except ROCK models), Flip-Top Technology tables, Lunada® Series tables, N2 Series, Metaphor® Series, Parameter® Series desks and returns, Plateau® Series round, rectangular and racetrack tables, Sage™ Series (except ROCK models), Makerspace, TEXT® Series tables, ZUMA® Series (except ROCK models), 120, 121 and 122 Series Stools, included in this catalog have passed applicable performance tests for strength, durability, and stability as established by the Business and Institutional Furniture Manufacturer's Association International and accepted by the American National Standards Institute.

CARE & USE INSTRUCTIONS NOTICE:

To prevent structural failures and possible injury, furniture should not be used other than for its intended purpose and should be inspected regularly, at least annually, for the following: (1) loose or missing fasteners such as screws, rivets or staples, (2) metal fatigue, rust, cracks or broken welds, (3) any problem that causes instability or tipping, (4) any signs of misuse. Furniture that is damaged or appears to be unstable should immediately be removed from service, reported to the facility manager and replaced or repaired. Repairs should only be made using factory-authorized parts and methods. For information on furniture maintenance, repair, or to report furniture which requires service, call Virco toll-free at 800.448.4726. Furniture should be wiped down with mild soap and water as needed.

UPHOLSTERY TESTING

The following Virco upholstery materials pass California Technical Information Bulletin 117, Section E: Contemporary vinyl, Confetti fabric, Express fabric, Linen vinyl, Pacifica fabric, Sedona fabric, Select vinyl, and fabric for Sage™, Parison®, and Analogy® Series upholstered seating models.

FURNITURE WITH OAK FINISH

Virco's Oak finish highlights the grain and color accents of each furniture item. Because they're crafted from natural hardwood, no two pieces of Oak furniture have exactly the same grain pattern and color; instead, variations in grain and color result in uniquely complementary furniture groupings.

60", 72" AND 84" BOOKCASES

To avoid the risk of a serious tip-over accident, these bookcases must be securely anchored to a wall. Refer to the assembly instructions for more information or see page 150 for details.

GUIDELINES FOR STACKING & MOVING FURNITURE

The number of pieces of furniture that can be safely stacked or moved on Virco's mobile storage equipment will vary depending on many factors, including the furniture's height, weight and general design; the speed at which the unit will be moved; the terrain over which it will travel; and the strength of the operator(s). Care should be taken not to stack to the point of unsteadiness. Virco recommends starting with small, easily handled loads and adding one to two pieces of furniture at a time to determine the safe capacity for each set of conditions. Use Virco mobile storage equipment with appropriate Virco furniture only.

NOTE ON PRODUCT PHOTOGRAPHS:

Many of the Virco products in this catalog have been photographed with "props" to illustrate possible product uses. These props are only included with the product when the accompanying caption explicitly indicates this to be the case. When a caption does not specify that props are included when describing a product, the props are not included with the product.

Virco Warranty

Virco will repair or replace, at its option, any Virco furniture or equipment product which proves to be defective in original material or workmanship that may become evident within the first 10 years of the date of purchase and 5 years from the date of purchase for casters, glides, pneumatic cylinders and torsion bars. This is your sole and exclusive remedy. This warranty covers products manufactured after January 1, 2017, as long as product is owned by original purchaser, and is subject to the following limitations:

Limitations:

From the date of purchase, Virco's warranty covers the items below as follows:

10 Years

Laminates, seating controls, all seating, desk, table and storage products unless otherwise indicated in this warranty.

5 Years

Glides, floor rocker foam pad, casters, pneumatic cylinders and torsion bars on mobile folding tables.

1 Year

Chairs with custom logos applied to their upholstered seats and/or backs.

Exclusions:

This warranty excludes:

- Apparent defects caused by abusive or abnormal use of the product.
- Products not assembled, installed or used in compliance with Virco's product instructions or warnings.
- Failures resulting from inadequate inspection and maintenance.
- The effects of normal usage over time.
- Any damage caused during shipment (see the current Virco price list's "Steps to Take When Receiving Shipments" for more information).
- Product modifications not approved by Virco.
- Vinyl and fabric upholstery material, except as may be offered by the mill source.
- Rust caused by natural elements or high exposure to moisture
- Products used for rental purposes.

Natural Materials, Color Variations & Customer's Own Materials

Leather, wood and other natural materials may have intrinsic grains or patterns that are distinguishing features and not regarded as defects. Virco cannot warrant the matching of grains, patterns, textures, colors, or the color-fastness of such materials. In addition, Virco does not warrant Customer's Own Materials (COM) that are chosen and used in a Virco product at a customer's request.

THERE ARE NO IMPLIED WARRANTIES OF FITNESS OR MERCHANTABILITY, AND THERE ARE NO OTHER EXPRESS WARRANTIES BEYOND THE WARRANTIES EXPRESSED HERE. ALL INCIDENTAL OR CONSEQUENTIAL DAMAGES WHICH MAY ARISE, INCLUDING BUT NOT LIMITED TO BUSINESS LOSSES, PERSONAL PROPERTY DAMAGE, AND THIRD PARTY LIABILITIES ARE HEREBY EXPRESSLY EXCLUDED.

TO OBTAIN SERVICE UNDER THIS WARRANTY:

Please contact your local Virco Sales Representative or Customer Service at 800.448.4726.

Product: 6200 Series Heavy-Duty Stools with Backrest; Black; 19" ~ 26-1/2" Seat Height (Or Approved Equal)

Manufacturer**:** National Public Seating Corp.

Location: Science Classroom Laboratories (Including Demonstration Counters), and Electronics Work Shop

National Public Seating's Stool gives students a place to sit in your art room or science lab and will not break your budget. The durable construction and classic design are ideal for hands-on educational settings like art rooms, science labs, home economics, or shop classrooms. The scratch-resistant black finish adds a contemporary touch to this popular chair. The spacious 14" diameter seat with a Masonite board will not chip or crack. A flexible 6" high backrest adjusts 2" up or down for excellent support. The welded steel foot ring offers added stability and extra protection from wear and tear. The seat height adjusts from 19" to 26-1/2". This National Public Seating 6200 Series Heavy-Duty Black Steel Stool with Backrest is backed by a 10-year warranty.

NOTA® STANDARD
MUSIC POSTURE CHAIR

Wenger®
Your Performance Partner

Inspired by musicians. Innovative by design.
For almost 70 years, Wenger has shared the passion and enthusiasm of musicians by focusing on the unique needs of music education and performance. Wenger has a proud history of developing innovative products. We were the first to develop a chair specifically designed for music posture because proper posture and alignment is critical for performers to be their best. That spirit of innovation continues. Welcome to the next generation of music posture chairs – the Nota® music posture chair by Wenger.

The design of the Nota chair is based on years of customer research and consultation with medical experts regarding posture principles and key ergonomic issues related to chairs and seating positions. Based on this input and supported by scientific testing, the Nota chair was designed and engineered for optimal comfort, flexibility and proper body support. No other chair promotes easier breathing and freedom of movement or accommodates such a wide variety of seating positions, body types and musical styles. As with all Wenger products, the quality construction and long life of the Nota chair delivers unmatched value for your investment. Discover for yourself how musical inspiration and leading edge innovation combined to create the Nota music posture chair by Wenger.

NOTA® STANDARD MUSIC POSTURE CHAIR

Narrow Convex Back
Helps open the rib cages for better diaphragmatic breathing. Provides lumbar support and allows for greater freedom of movement.

Position-Transition Seat
Allows for a variety of seating positions while still providing support. Proper alignment is encouraged whether the musician is seated back in the "engaged" position, forward in the "perched" position, or angled on the chair.

Rounded Waterfall Front
Helps maintain good circulation, which helps reduce the "fidget factor." Allows one height of chair to accommodate a wider range of body sizes.

Optional desk folds completely out of the way when not in use.

Graphite | Cherry | Fusion Maple | Solar Oak

Black edge banding and support tube assembly.

Seat Contour
Maximum seating comfort over long periods of time. Alleviates pressure points by more evenly distributing the weight of the musician.

Wear resistant polypropylene blend seat and back
Promotes even weight distribution, comfort and a lasting appearance.

Proper Body Support
Mimics the standing posture when seated – the strongest, most natural body position. Reduces the risk of pain and lasting injury.

Ganging Clamps make connecting Nota chairs a snap.

PRODUCT SPECIFICATIONS:

- Wear resistant polypropylene seat and back promote even weight distribution, greater comfort and a lasting appearance.
- Patented design provides two seating zones: "engaged" (rear) and "perched" (forward).
  - The engaged position allows the occupant to sit with a thigh to back angle of 97°.
  - The perched position allows the occupant to sit with a thigh to back angle in the range of 96-106°.
  - A transition area allows users to move seamlessly between zones.
- Each zone enhances performance by promoting a naturally balanced skeletal shape, reducing muscle strain and enabling increased circulation, freedom of movement, and diaphragmatic breathing.
- Narrow convex back provides lumbar support while still allowing for freedom and range of movement.
- Rounded waterfall front allows one height of chair to accommodate a wider range of body sizes.
- Powder coat paint finish for maximum durability. Chrome finish is also available.
- Durable, specially designed floor glides provide stability when seated and ease of movement when arranging chairs.
- Chairs stack for compact storage.
  Note: Accessories prohibit chair stacking.
- Specially designed stacking bumpers provide maximum stability and protection when chairs are stacked.
- Available in heights of 17.5" (445 mm), 19" (483 mm), 20.5" (521 mm).
- Five year warranty.

0330000 Nota Standard Chair, 11 Lbs. (5 kg)

WOOD ADA LOCKER BENCHES

Salsbury wood ADA locker benches combine a traditional look with strength and durability and are an excellent addition to facilities that require accessibility. Constructed of solid butcher block wood, the seating area is 1-1/4" thick, 20" deep, 42" or 48" wide and 18" high. Wood ADA locker benches are available in two (2) configurations, one with back support (39" high) and one without back support (18" high). Wood ADA locker benches with back supports can be placed in an open area while those without back supports are designed to be installed flush against a wall. Each seating area meets ADA requirements and include four (4) 3" diameter bolt mounted pedestals with two (2) mounting holes to secure to the ground. Pedestals feature a durable powder coated black finish. Minor assembly is required.

Product: **Porcelain Magnetic Whiteboard with Aluminum Frame; M1 Series, (Or Approved Equal)**

Manufacturer: Ghent

Location: General Education Classrooms, SPED Classrooms, ESL Classrooms, ProStart Classroom, HT Classroom, Marketing Classroom, HCS Classroom, Electronics Computer Lab, and JROTC Instructional Areas

Offering a superior writing surface and unsurpassed durability, Ghent's Porcelain Magnetic Whiteboards were made with customers in mind. The 28-gauge porcelain-on-steel surface is mounted to a 3/8" backing for added strength. The durable porcelain enameled surface keeps the dry erase board from scratching or denting, even when installed in high-traffic schools and offices. The wear resistant surface does not absorb ink, eliminating staining and ghosting that would otherwise result from repeated use. The easy-to-wipe surface requires less cleaning, achieving a long-lasting bright white surface without the hassle.

Ghent's whiteboard holds magnets and can be used to post bulletins without worrying the announcement will be erased. Boards 3'x5' and larger include 1 marker and 1 eraser. Board is available in eight standard sizes up to 4’x12'. Each board comes in our sleek Satin aluminum frame with an accessory tray and protective end caps. Our SmartPak tray is detached for easier installation and reduced waste and damage during delivery. Our boards are shipped to you in Ghent's worry-free packaging, designed specifically for shipping whiteboards. Ghent's porcelain magnetic whiteboard carries a 50-year warranty and is made in the USA.

Product: Ghent Recycled Rubber Tackboard, 4x6 (Or Approved Equal)

Manufacturer**:** Ghent

Location: Art Rooms

Manufactured from 90% recycled materials, the textured recycled rubber surface on these tackboards stands up to heavy use. The textured surface is fashioned to withstand the toughest conditions. This fade-resistant, stain-resistant surface is also self-healing so pinholes will not show. The elasticity of recycled rubber makes this tackboard the perfect choice for classrooms that use bulletin boards daily. This tackboard is also ideal for locations with specifice health standards as the rubber tack surface is washable and allows disinfection without damaging the surface. Ghent Recycled Rubber Tackboards are available in eight sizes, each featuring an anodized satin aluminum frame. The tackboard surface is available in three colors - Black, Confetti, or Tan Speckled. This tackboard is durable enough to carry a 10-year warranty.

4' × 6' Bulletin Board Shown in Confetti Recycled Rubber

Tackable Surfaces that Meet Sustainability Goals

Tire production is one of the most problematic sources of waste. Ghent's Recycled Rubber Bulletin and Enclosed Boards re-purpose tire waste into a green communication tool that is durable, self-healing and washable. Recycled rubber is an ideal choice in high-traffic, high-use areas such as classrooms and offices.

Environmentally Friendly

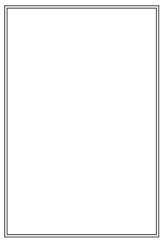
All Recycled Rubber Boards are made using 90% recycled tire material and 10% post-industrial content.

Durable

Boards resist staining and fading and are easily cleaned with a cloth and warm water. Enclosed boards also feature a full-length piano hinge and locking doors for security.

Reliable

Self-healing surface masks pin holes and stands up to years of repeated tacking and use.



Variety

Available in three surface options, four framing choices, and a variety of sizes that can be hung in multiple orientations.

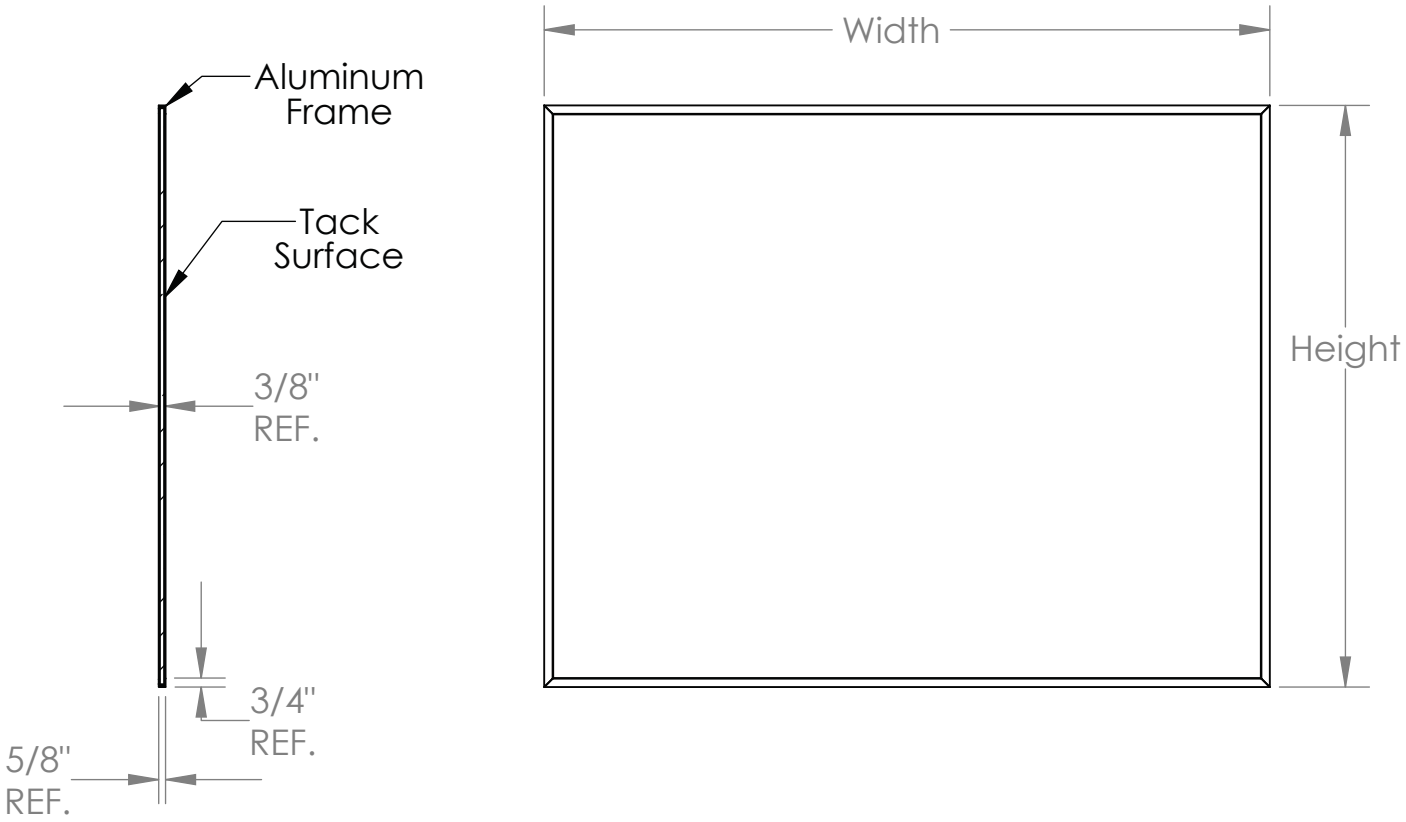
The 1/32" thick, fine-grain cork surface is laminated to a sealed fiberboard back for extra durability. Since the cork is self healing, the board stays smooth; you won't notice holes made by push pins, staples or tacks. The sturdy aluminum frame adds a stylish touch to your cork board. This 4' 1/2" x 8' 1/2" Ghent Traditional Natural Cork Board is backed by a 10-year warranty.



Product Details

- Self-healing fine-grain natural cork
- 1/32" thick, laminated to a sealed fiberboard back

LOCKER FILLERS

Salsbury locker fillers are an ideal option for locker installations that encounter obstructions such as pipes, columns and other obstacles. Corner and in-line top fillers overlap the existing locker tops and are easily attached with hardware (included) providing a finished look to the locker installation. Vertical front fillers include a wall angle slip joint that conceals uneven edges and provides a professional appearance to the locker installation. Locker fillers can be easily field cut for custom installations.

Locker installation with flat tops

LOCKER FILLERS

Salsbury locker fillers are an ideal option for locker installations that encounter obstructions such as pipes, columns and other obstacles. Corner and in-line top fillers overlap the existing locker tops and are easily attached with hardware (included) providing a finished look to the locker installation. Vertical front fillers include a wall angle slip joint that conceals uneven edges and provides a professional appearance to the locker installation. Locker fillers can be easily field cut for custom installations.

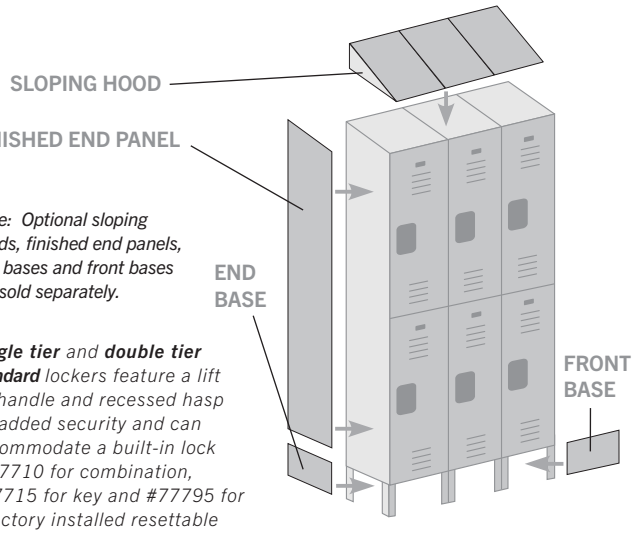
- Built-in combination or key locks
- Combination or key padlocks
- Lockers without legs



15" Wide Standard Lockers Single Tier & Double Tier

15" WIDE STANDARD LOCKERS
SINGLE TIER AND DOUBLE TIER

Constructed of 16 gauge steel, Salsbury 51000 and 52000 series 15" wide standard lockers offer ample space for personal storage needs. 15" wide single tier and double tier standard lockers are available in a gray, tan or blue powder coated finish and as unassembled or assembled units. One wide lockers are 15" wide and three (3) wide lockers are 45" wide. These spacious lockers are six (6) feet high (add 6'' for legs) and are available in 15" and 18" depths. 15" wide standard single tier lockers include an adjustable hat shelf, a double prong ceiling hook and three (3) wall hooks. The 18'' deep standard single tier lockers include a coat rod that can accommodate full length garments. 15" wide double tier standard lockers include a double prong ceiling hook and three (3) wall hooks. Sloping hoods, finished end panels, end bases, front bases, compartment shelves, fillers and lockers without legs are available as options upon request – see all metal locker options and locks on pages 52-53.

Product: Vertical File Cabinet w/ Five Drawers; Legal Size; Black

Manufacturer: Norwood Commercial Furniture (Or Approved Equal)

Location: Offices and Classrooms

Keep your office documents in order with the Norwood Commercial Furniture® Vertical File Cabinet. Double-walled, lockable drawers secure hanging files and important papers. Grip handles and precision ball-bearing slide suspension ensure the drawers easily slide open and closed. Accommodates legal-size papers and files. Includes follower blocks to keep papers from shifting when the drawer isn't full.

Product Details

- Cabinet Material: Galvanized steel
- Handle Material: Aluminum
- Other Info: Meets or exceeds ANSI/BIFMA performance and safety standards; GREENGUARD gold certified
- Overall Dimensions: 18"W x 26-1/2"D x 61-3/8"H
- No assembly required
- Product weight: 103 lbs.

Product: Lateral File Cabinet w/ Four Drawers; Black (Or Approved Equal)

Manufacturer: Norwood Commercial Furniture

Location: Cumulative File Storage

Help teachers and administrators stay organized with the Lateral File Cabinet from Norwood Commercial Furniture. Four double-walled drawers accommodate documents or supplies and feature a full-width pull with precision ball bearing suspension to ensure they open and close smoothly. Includes rails for hanging folders.

Product Details

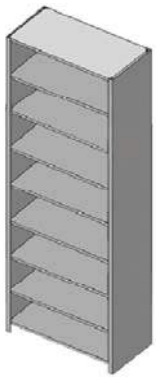
- Overall Dimensions: 42" W x 18-5/8" D x 52-1/2" H
- Product Weight: 196 lbs
- Weight Capacity: 468 lbs
- Drawers accommodate letter-and legal-size documents
- Durable steel construction withstands years of use
- Full-width pulls for easy operation.
- Security: Core-removable lock

- Includes rails for hanging folders.
- Assembly not required
- Meets or exceeds ANSI/BIFMA performance and safety standards
- Greenguard Gold Certified
- Warranty: Lifetime Limited

Product: **Aurora Quik-Lok® Steel Library Shelving; Single-Faced; 88"H x 12"D; Black (Or Approved Equal)**

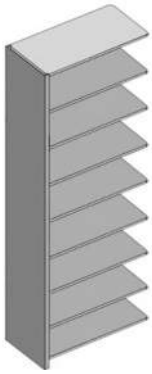
Manufacturer**:** Aurora Storage Products, Inc.

Location: Library



Aurora's Quik-Lok® Shelving has looks, durability, and flexibility - but no braces, hardware or tools. This system can be customized to maximize your space and comes in more standard sizes, colors, and styles than any other brand.

Customized widths and heights provide true design flexibility with your business shelving, library shelving, or any commercial or office storage shelves. Easy-to-assemble and adjustable, Aurora's compact storage solutions are a perfect fit for all your home office and business shelving needs. Shelving systems are a popular choice for facility applications such as healthcare, education, legal, financial, government, law enforcement, industrial/manufacturing, and food service.



Our metal shelving storage units are manufactured with 40% recycled steel and coated with an environment-friendly powder coat that is safe for documents and other stored items.

Our History

For over sixty years Aurora has been a mainstay of librarians who want versatile, sturdy, and beautiful storage for their libraries.

Quik-Lok® Library Shelving

Aurora invented and patented the Quik-Lok® system of shelving which eliminates bolts, sway braces, and protruding hardware that harm priceless library collections. This patented system provides great rigidity with the flexibility to easily reconfigure sections of shelving to change or grow your system.

Expert Design Services

The Aurora Design Department will work with your team to create a customized storage solution taking into consideration growth requirements, accessibility, aesthetics, and budget. If you're challenged for space we can design a system to help your library store more in less space on-site or off-site.

Eco-Friendly Products

We're proud members of the US Green Building Council and have a strong commitment to the environment. Our storage products can help achieve LEED certification.

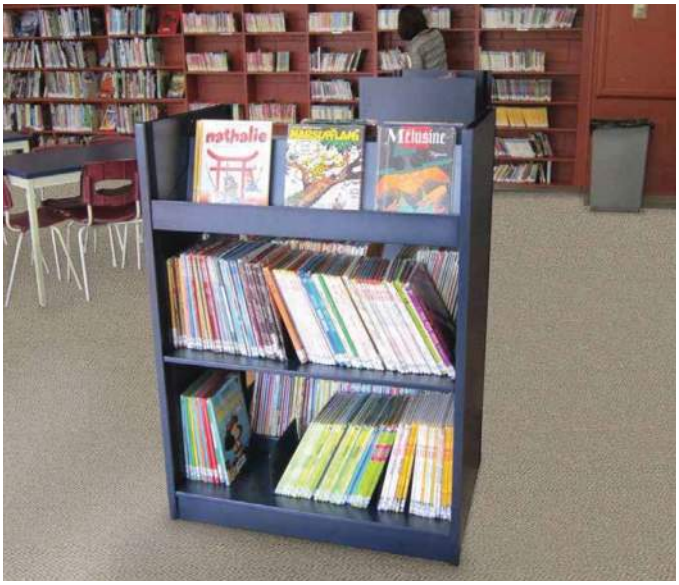
They contain 40% recycled content and are finished with an exceptionally durable, non-VOC powder coat completely harmless to users and the environment.

Aurora Library Shelving: The Smart Choice for Book Storage

Why settle for old-fashioned cantilever shelving for book storage when you can have Aurora Library Shelving?

Aurora Library Shelving features a unique design that's easy to assemble, reconfigures in a snap and eliminates the problems of book storage common to cantilever-style shelving.

FEATURES	BENEFITS
Easy assembly requires no nuts, bolts or hardware	Reduces installation time
Finished, closed end panels are standard	Aesthetically pleasing look
Compact footprint	Saves floor space and provides more storage capacity than cantilever
Absence of protruding hardware	Reduces book damage
Converts from 4-post static to mobile system	Optimizes floor space
More standard sizes	Design flexibility
Superior weight capacity	Eliminates shelf deflection
Simple to reconfigure	System changes as your needs change



EDUCATION

K-12 Library

Many of today's school libraries are short on space and shorter on funds, causing librarians to serve an ever expanding student population with limited resources.

Libraries have morphed into school media centers, true multimedia environments assisting students with so much more than just book circulation.

Aurora can help to fit more media into tight spaces and tight budgets.

Solutions

- Store more books in less space to gain valuable floor space for other activities.
- Choose multimedia accessories uniquely designed for library use to house magazines, movies, games, oversized books.
- Add counter-high units for easy student accessibility, usable work space, and extra gathering places.

Store games and movies

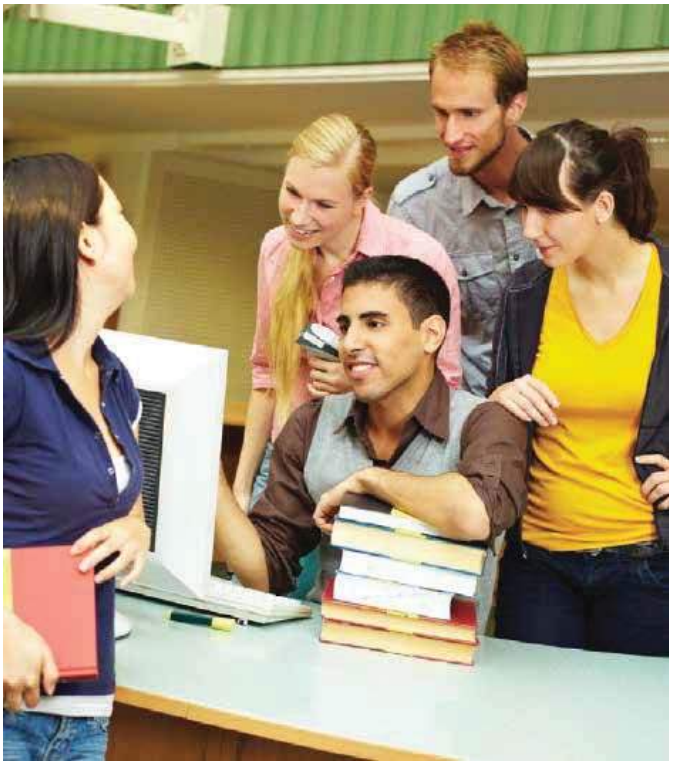
Higher Education

The academic library environment has special storage considerations for main campus collections, decentralized school libraries within a university, archival storage for dissertations and masters theses, or research departments.

Solutions

Space is frequently at a premium, yet acquisitions continue to grow. The design experts at Aurora have solved these challenges for many high profile universities and colleges.

- Aurora's compact 4-post design stores more books than cantilever per square foot.



Archival storage for
dissertations and masters theses

PUBLIC LIBRARY

The Public Library is a community's most valued asset providing a learning site, gathering place, and a setting for activities for all ages.

Demand for services increasing? Space constricting as you add programs? Aurora can design a space-efficient system that optimizes every bit of floor and vertical space.

Solutions

- Flexible, reconfigurable library storage assembles and disassembles easily to change when you do.
- Rugged construction holds up under constant patron use.
- High density mobile library storage option uses 50% less space so you can add study carrels, internet stations, and copiers.

Aurora Shelving Offers a Full Range of Library

- Slotted Shelves (optional)
- Reference Shelves
- Magazine Doors
- Sloping Shelves
- Label Holders
- Newspaper Racks
- Wire Book Supports

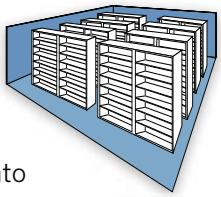
Color Options

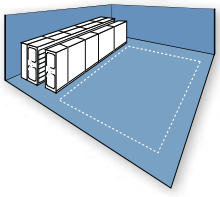
- 31 beautiful colors in Gloss-Tek a document safe finish with no VOC's to harm the environment
- All colors in antimicrobial option

Aurora Library Sizes

Aurora Library Shelving is available in more widths, heights, and depths than any other shelving brand on the market, cantilever included!



Heights
40¼", 64¼", 76¼", 85¼", 88¼", 97¼", 100¼", 121¼"



Depths
Single Entry
9",10",12",13",15",16"
Double Entry
18", 20", 24", 26", 30"

Widths
24", 30", 36", 42", 48"

Mobile Ready

- Turn stationary shelving into mobile ready systems
- Save 50% floor space, or store 100% more

Slat Wall

Wood-Tek

Customize Aurora Library Shelving with Wood-Tek, a premium wood option for shelving end panels, crown molding, and shelf edges.

- Doors, conference tables, atlas stands
- Available in 2 wood species and 4 rich stains
- Custom match available

Library Upright

Library inner wall construction allows easy access to books even in tightly packed rows.

THE 4-POST VS. CANTILEVER DEBATE

Why a common solution is not necessarily the best solution.

VS

FEATURES	AURORA 4-POST	CANTILEVER
Aesthetics	Shelving comes with steel end panels for a clean and polished look.	Open cantilever has unfinished look. End panels are a purchased option.
Compact Footprint	Saves floor space and provides more storage than similar sized cantilever unit.	Add to unit depth to accommodate posts.
Book Damage Prevention	Gusseted uprights provide smooth inner sidewalls so books do not slide or lodge behind uprights.	Shelves can exhibit lateral movement away from slots in cantilever uprights causing material to catch between end bracket and upright.
Adjustability of Shelves	Individually adjustable per side on back-to-back units.	Individually adjustable per side.
Size Selection	Available in 5 widths and 11 depths, more than cantilever shelving.	Limited to a maximum of 36" width for most manufacturers.
Collection Cleanliness	Top canopy shelf is standard, protecting books from dust and water damage from accidental fire sprinkler discharge.	Open top is standard. Canopy is non-standard purchased option.
Mobile Ready	Anchors easily to mobile carriages with no loss of stability or additional hardware.	Must be reinforced with gussets on alternate uprights to make mobile ready, adding to system costs.
Single Unit Stability	Rigid uprights and shelf reinforcements make even a single section of shelving stable.	Lateral racking can occur.

Although cantilever style shelving is often specified for library applications, many professional librarians are choosing Aurora 4-post shelving as a superior alternative.

Illinois Institute of Technology
Chicago, IL

AURORA LIBRARY SHELVING YIELDS HIGHER DENSITY

The University of Illinois chose Aurora Shelving over cantilever-type shelving. University planners studied layouts utilizing both types of shelving and discovered that 1/3 of a million more volumes could be stored on Aurora Shelving vs. cantilever shelving.

- Number of Trays: 48
- Tray Clearance: 4 3/4" H from bottom of tray to the bottom of the tray above
- Overall Dimensions: 46 1/2 W x 22" D x 84"H
- Weight Capacity: 10 lbs. per tote
- Other Info: MAS green certified; SEFA 8 certified
- Warranty: Lifetime limited
- Assembly: Assembly Required
- Product Weight (Lbs): 442

Product: Sanitizing Monitor Eye Safety Storage Cabinet (Or Approved Equal)

Manufacturer: Diversified Spaces (Formerly Diversified Woodcrafts)

Location: Anatomy, Biology, and Chemistry Laboratories

The cabinet holds 6 glasses or 5 goggles to a shelf on 8 shelves. With an average kill rate of 99.2%, the monitor provides excellent protection in 5 minutes. Shuts off automatically if the double doors are opened. Pilot light confirms that the UV lamp is in use. Five minute cycle is controlled by a timer and doors are interlocked with tamper resistant latches. Germicidal lamp has a 20 year limited warranty. Lockable, two keys provided. Wall or shelf mountable with a 7' grounded electrical cord. Underwriters Laboratories Inc. Listed: File # E140818. No direct UV radiation escapes from cabinet when in use. Glasses or goggles are not included.

Product Details

- Ability to clean up to (40) goggles or (48) pairs of safety glasses with a Germicidal lamp in 5 minutes with a kill rate of 99.2%
- Overall Dimensions: 24-1/2" W x 9-1/2" D x 32" H
- Weight: 50 lbs
- Wall or shelf mountable with a 7' grounded electrical cord
- Cabinet is constructed of 24 gauge white enameled steel
- SEFA compliant and MAS Certified Green
- No assembly required
- Warranty: 20 years
- Made in the USA

Product: Microscope Storage Cabinet (Or Approved Equal)

Manufacturer: Diversified Spaces (Formerly Diversified Woodcrafts)

Location: Science Prep Rooms 1 and 3

This microscope storage cabinet from Diversified Woodcrafts is constructed of solid oak, hardwood, and oak veneers. Designed for the science lab, it features a chemical resistant earth-friendly finish.

Product Details

- Solid oak framed glass doors are hinged with three-point locking handles for security.
- Microscopes are stored safely and conveniently on two fixed and three adjustable 1" shelves.
- Adjustable wire dividers allow for storage of microscopes of various sizes and can be removed to use as shelves for general storage.
- Each unit holds 25-30 microscopes, and each individual compartment measures: 7-1⁄4"W x 14"D x 14-1/2"H.
- Dimensions: 48" W x 16" D x 84" H

Product: Corrosive Chemical Storage Cabinet (Or Approved Equal)

Manufacturer: Diversified Spaces (formerly Diversified Woodcrafts)

Location: Science Prep Room 3

The Corrosive Chemical Storage Cabinet is the solution for storing non-flammable acids and corrosive liquids. This storage cabinet is constructed of 3/4" thick exterior grade plywood with a finished top and lined with a 1/4" polyproprylene interior. Included is a removable back panel to access the venting behind the cabinet, 2" plastic containment drip pan, (1) lined adjustable shelf and 99mm pulls. This unit is available in either two doors or single door and is finished in Northwood's UV finish.

Product: **Visual Storage Cabinet; Black; 36''W x 24"D x 72''H**
(Or Approved Equal)

Manufacturer**:** Atlantic

Location: Art Rooms

These cabinets offer convenience, flexibility and mobility. Contents remain secure yet fully visible. Constructed of heavy gauge steel, each shelf has a 200 lb (91 kg) capacity. Features two chrome handles, a three point locking mechanism and four 5" casters, with two that lock. Shelves adjust in 2" increments. Powder coated surface provides a superior finish that is more consistent, durable, and will not mar or chip.

Available in black, blue, dove gray, putty, and sand.

Product: Safco 5-Drawer Steel Flat Files With Base (Or Approved Equal)

Manufacturer**:** Safco

Location: Art Rooms

A classic in flat materials storage. Each handsome unit is self-contained with welded steel construction, wrap-around corners, and a sturdy inner frame. Each 2-1/8" high drawer has ball-bearing side rollers, a stationary back hook, and a piano-hinged front depressor to protect its contents as the drawer is opened and closed.

Safco's Steel Flat Files are available in three sizes and twenty colors, to store standard sheet sizes:

- Small, for sheets up to 24" x 36"
- Medium, for sheets up to 30" x 42"
- Large, for sheets up to 36" x 48"

Use the file units individually on a base or table, or stack them together for a whole bank of files. Each unit is 16-1/2" tall, and the base adds an additional 6" in height. The units stack securely without bolting or brackets, using anti-slip pads (included with each unit). Thus, a 15-drawer ensemble comprising three units and a base will stand slightly more than 55" tall.

Product: Safco Art Rack; 8 Compartments (Or Approved Equal)

Manufacturer**:** Safco

Location: Art Rooms

Safco's Art Rack vertically stores and protects over-sized layouts, original art, mechanicals, and keylines. Upright materials resist warping and are easier to find than stacked or shelved materials.

Tempered hardwood dividers allow for eight, 4¼" wide compartments. It has channels for labeling, top and bottom, allowing you to identify the contents of each storage compartment.

The Art Rack has an attractive, putty-textured vinyl laminate finish. Each rack unit can be stacked vertically, used side-by-side, or used alone. Constructed of a strong wood-core product, the brawny racks easily hold hundreds of pounds of materials.

Product: **Regency 24" x 48" NSF Chrome 4-Shelf Kit with 74" Posts (Or Approved Equal)**

Manufacturer: Regency Tables and Sinks

Location: Kitchen Storage and Pantry

The Regency 24" x 48" NSF chrome shelf kit can optimize the space in food storage areas, janitorial closets, and more with (4) 24" x 48" shelves and (4) 74" posts. The chrome construction gives this shelving kit excellent durability in dry areas. It is easy to keep clean and sanitary, while the open grid design allows for excellent air circulation. The space between the shelves is adjustable, giving you the flexibility to store items of varying heights, such as ingredient bins, boxes, cleaning supplies, and anything else with visibility and accessibility.

These shelves can hold a maximum of 600 lb. each of evenly distributed weight. The unit's high-quality design is commercial grade and delivers the reliable performance every business expects and needs..

Item Number: #460EC2448KIT

Product Details

- Overall Dimensions: 48" W x 14" D x 64" H
- 24" x 48" Shelves With Adjustable Height
- Four 64" stationary knock-down posts ship unassembled to reduce freight cost
- Recommended for use in dry environments
- High-quality, commercial-grade construction
- Assembly Required
- Capacity: 2400 lbs.
- Material: Steel
- Finish: Chrome
- Individual Shelf Capacity: 600 lbs.
- Installation Type: Stationary (No Casters)
- NSF Listed
- Usage: Dry Environments
- Accessories sold separately.

REGENCY NSF CHROME WIRE SHELVING

Regency Space Solutions is your source for quality, affordable wire shelving. Offering a large selection of NSF Listed wire shelves and posts, Regency Space Solutions gives you the freedom to create the perfect shelving unit at the perfect price.

Chrome Plated Wire Shelving

Chrome plated wire shelving is ideal for use in areas in which moisture is at a minimum, including:

- Dry storage
- Garage storage
- Personal storage
- Heated environments
- Warehouse use
- Retail

Quick Assembly

Regency Space Solutions' NSF Listed wire shelving is easy to assemble using split sleeves. Simply snap two split sleeves around each wire post to keep shelves level every time. Use the incrementally notched lines to help you install a level shelf. Each wire shelf comes complete with (4) pairs of split sleeves (eight total split sleeves).

Air Flow

Wire shelving offers unparalleled air flow between and around products thanks to its wire design.

Versatility

Regency Space Solutions' wire shelving offers the rigidity of solid metal with the adjustability of plastic. No tools or hardware required. Simply move the split sleeves up or down the posts for quick, efficient change.

Weight Capacity

- Each shelf up to 48" in length: 600 lbs.
- Longer shelves above 54" in length: 450 lbs.

Wire Shelves

These chrome wire shelves are for use only in dry storage and heated environments. They're made of a durable, chrome plated metal, with a clear epoxy coating.

When combined with additional shelves, posts, and accessories (sold separately), these Regency epoxy-coated chrome wire shelves are capable of holding up to 600 pounds of evenly distributed weight.

- May be used with Regency posts, casters, and handles.
- Chrome plated wire with clear epoxy coating
- NSF Listed

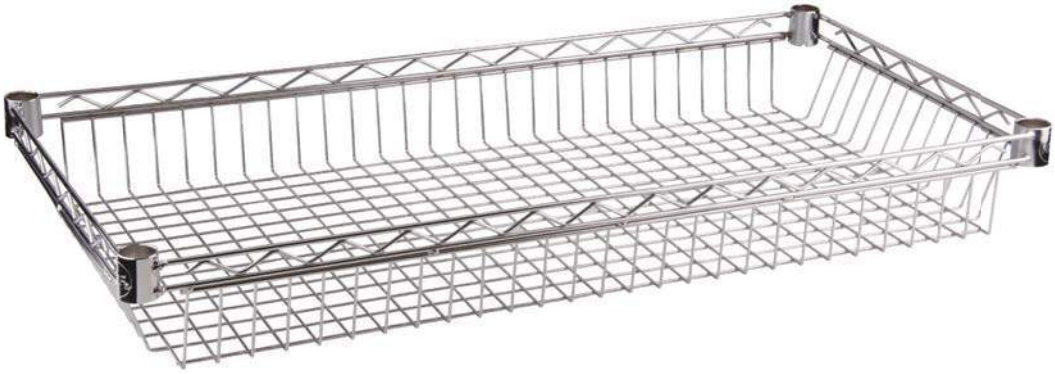
460ECPC86	86	3.10 lbs.

Specialty Shelving



Shelf Basket

- Item #460EC1836BSK
- Width x Length: 18" x 36"
- Weight: 8.38 lbs.

Shelf baskets can be used in place of a traditional flat shelf.

- Able to cradle an array of items, shelf baskets are useful when storing or moving items that may easily roll or fall off of a flat shelf.
- May be used with Regency posts, casters, 18" shelves, and handles.

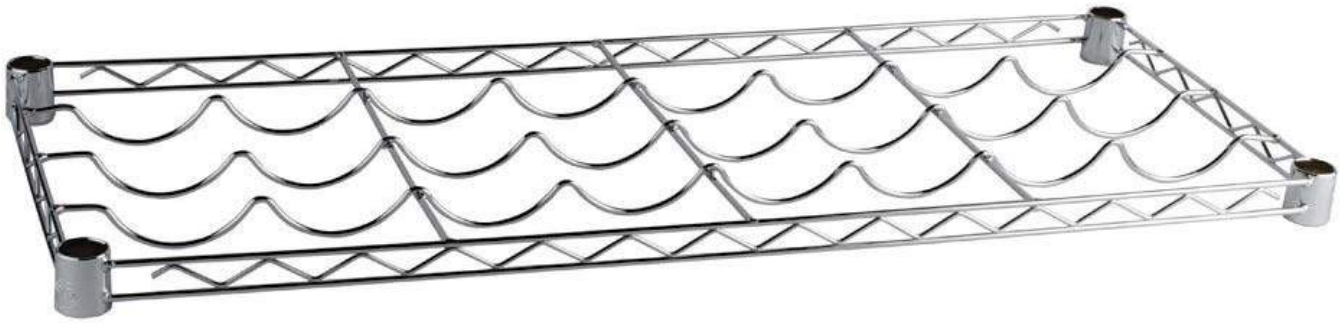
Triangle Shelves

- Item #460EC18TRI
- Dimensions: 19 3/8"W x 14 7/8"L
- Weight: 3.75 lbs.

- Item #460EC24TRI
- Dimensions: 24 7/8"W x 18 1/8"
- Weight: 4.52 lbs.

Triangle shelves create usable space in corners that may otherwise be left empty.

- May be used with Regency posts, casters, and handles.



Wine Shelves

These Regency wire wine shelves are the perfect way to store your finest wine! Because of wine's delicate nature, it is important to store bottles on their sides, and bottles should be slightly tilted, cork down, on the shelf for best quality. The shelf features an attractive chrome finish and is designed for use with 750 mL wine bottles.

Item #	Width x Length (in.)	Weight	Bottle Capacity
460ECWIN1424	14 x 24	3.53 lbs.	5
460ECWIN1436	14 x 36	4.41 lbs.	8
460ECWIN1448	14 x 48	5.29 lbs.	11

Three Sided Frame

These Regency three sided chrome epoxy frames for wire shelving dunnage racks add extra stability to your shelving unit. The three-sided design attaches to all four posts of your shelving unit to make sure that your storage unit is strong and secure, no matter how much you need to store. The chrome epoxy finish is ideal for dry storage environments like dry storerooms, warehouses, garages, and even retail environments.

- NSF Listed

Item #	Width x Length (in.)	Weight
460EC1824FRM	18 x 24	3.13 lbs.
460EC1836FRM	18 x 36	3.60 lbs.
460EC1848FRM	18 x 48	4.23 lbs.
460EC2424FRM	24 x 24	3.46 lbs.
460EC2436FRM	24 x 36	3.93 lbs.
460EC2448FRM	24 x 48	4.34 lbs.

Handles

U-Shaped Handles

- Item #460EC18HANDL - for 18" shelves
  - Weight: 1.71 lbs.
- Item #460EC24HANDL - for 24" shelves
  - Weight: 2.15 lbs.

U-shaped handles may be added onto Regency shelving units or cart to assist in moving them. When combined with casters, these handles give you the ability to create a convenient mobile unit.

- May be used with Regency posts, casters, and standard shelves.

Utility Handle

- Item #460EC18UHAND - for 18" shelves
  - Weight: 4.19 lbs.
- Item #460EC24UHAND - for 24" shelves
  - Weight: 5.29 lbs.

Utility handles may be paired with a compatible shelf or shelves and casters to create a utility cart.

- May be used with Regency posts, casters, and 18" standard shelves.

Casters

- Available in either polyurethane or rubber varieties.

Polyurethane Casters for Utility Cart Handles

- Item #460UCRTCSTR (Non-Braking)
  - Weight: 2.03 lbs.
- Item #460UCRTCSTRB (Braking)
  - Weight: 2.26 lbs.

Polyurethane Casters for Wire Shelving

- Item #4615MPX (Non-Braking)
  - Weight: 2.03 lbs.
- Item #4615MPBX (Braking)
  - Weight: 2.26 lbs.
- Item #460EC26 (4 Pack)

Polyurethane casters glide quietly over everything from concrete and carpet, cracks, and cords.

- Soft, yet resilient material.
- Provides ample cushioning to protect loads and floors.

Rubber Casters

- Item #359PLCB5140
  - Weight: 2.69 lbs.
- Item #460EC25 (4 Pack)

Rubber casters work well on rough, oily, or greasy floors.

- Provides quiet movement, good floor protection, and low initial movement.
- Will not crack with heavy loads.

Heavy Duty Rubber Donut Bumpers

- Item #460RUBRDONT3 - 3½"
  - Weight: 0.36 lbs.
- Item #460RUBRDONT5 - 5½"
  - Weight: 0.90 lbs.

Protect your valuable shelving, equipment, and more with these heavy duty rubber donut bumpers! These bumpers are designed to fit Regency carts and posts above your casters so your walls, doors, and other products are safe during collisions.

Wall Mounting

Wall Mounting Bracket Sets

As part of the Regency Space Solutions' wire shelving collection, these deep wall mounting brackets are designed to mount one Regency Space Solutions chrome wire shelf. They feature a 1/4" diameter chrome plated steel wire for maximum durability and strength. Each bracket is specifically constructed to work with Regency Space Solutions chrome wire shelving.

- NSF Listed

"S" Hook

- Item #4619995Z
- Stainless Steel construction
- Weight: 0.07 lbs.

"S" hooks allow you to install side by side shelves with fewer posts. Four "S" hooks are required per shelf for proper use.

Shelving Split Sleeves

- Item #4619985
- Weight: 0.05 lbs.

These Regency 1" split sleeves are ideal for holding shelves in place around wire shelf posts. The two halves easily snap together around your current shelving to give it support throughout the day. Two halves are required for each post.

Post Clamp

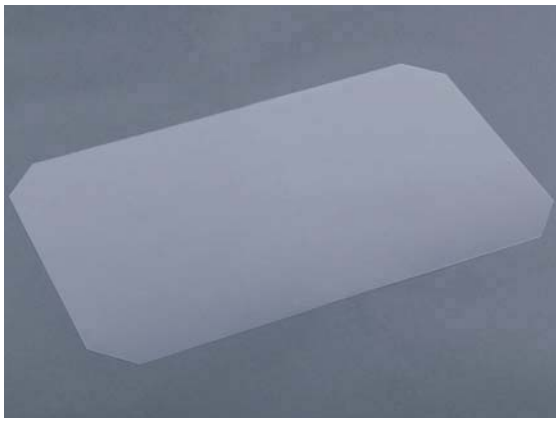
- Item #460ECPCLAMP
- Weight: 0.11 lbs.
- Chrome

Post clamps should be used to connect two posts together for greater side-by-side stability.

Post Foot Plate

- Item #460ECPFOOT
- Weight: 0.09 lbs.
- Chrome

Anchor your shelving unit to the floor by securing it in place with a foot plate.



- Simply screw one foot plate into the end of each post and fasten to the floor.

Shelf Mat Overlays

Use these Regency shelf mat overlays to create a smooth, solid surface over your wire shelving! Made of clear PVC, this shelf mat overlay keeps small items from falling through your open grid shelves and can even help prevent damage to items on lower shelves by containing leaks, drips, and spills. These shelf mat overlays are easily removable for thorough cleaning and for when you need to convert your shelf back to an open grid.

Shelving Warranty Information

Regency Space Solutions NSF epoxy wire shelving is guaranteed to be free from defect in material and construction at the time of shipment. Regency Space Solutions will replace a defective piece for a period of up to one year from the original date of installation, provided they have been properly installed and maintained. Regency Space Solutions is liable to replace the defective piece, but under no circumstances will pay any labor or subsequent damage.

Green and black epoxy finish shelves are covered under warranty against rust formation over more than five percent of the shelving surface up to the fifth year of the original installation.

Chrome finish shelves are covered under warranty against rust formation over more than five percent of the shelving surface up to the first year of the original installation in a dry application. Further, chrome finish shelves are not covered under warranty in any wet application, including but not limited to coolers and freezers.

All shelving is NSF Listed.

Product: **Regency 14" x 48" NSF Chrome Wire 5-Shelf Kit with 64" Posts (Or Approved Equal)**

Manufacturer: Regency Tables and Sinks

Location: Isolation Ante Room

The Regency 14" x 48" NSF chrome shelf kit can optimize the space in food storage areas, janitorial closets, and more with (4) 14" x 48" shelves and (4) 64" posts. The chrome construction gives this shelving kit excellent durability in dry areas. It is easy to keep clean and sanitary, while the open grid design allows for excellent air circulation. The space between the shelves is adjustable, giving you the flexibility to store items of varying heights, such as ingredient bins, boxes, cleaning supplies, and anything else with visibility and accessibility.

These shelves can hold a maximum of 600 lb. each of evenly distributed weight. The unit's high-quality design is commercial grade and delivers the reliable performance every business expects and needs..

Product: **30” Free-standing Electric Radiant Smooth Cooktop Range (Or Approved Equal)**

Manufacturer: GE Appliances

Location: SPED BLS Classroom

Model #:JB480SMSS

Product Details

- ADA Compliant
- Front controls
- 5.0 cu. ft. oven capacity
- Self-clean oven
- Dimensions: 47 H x 30 W x 29 D
- Net Weight: 141 Lbs
- Cooktop Burner: Radiant Smooth
- Element - Left Front: 6" 1500W
- Element -Left Rear: 8" 2000W

- Element - Right Front: 8" 2000W
- Element - Right Rear: 6" 1500W
- Oven Features: 4-Pass Bake Element; 6-Pass Broil Element
- Parts Warranty: Limited 1-year entire appliance
- Labor Warranty: Limited 1-year entire appliance

JB480SM

GE® Free-standing Electric Radiant Smooth Cooktop Range

FEATURES AND BENEFITS

Front controls – Minimize need to reach

5.0 cu. ft. oven capacity – Cook more dishes at once

Self-clean oven – Cleans the oven cavity without the need for scrubbing

Dual-element Bake – Upper and lower elements produce even heat and great results

Removable full-width storage drawer – Store cookware or kitchen accessories

Model JB480SMSS – Stainless steel

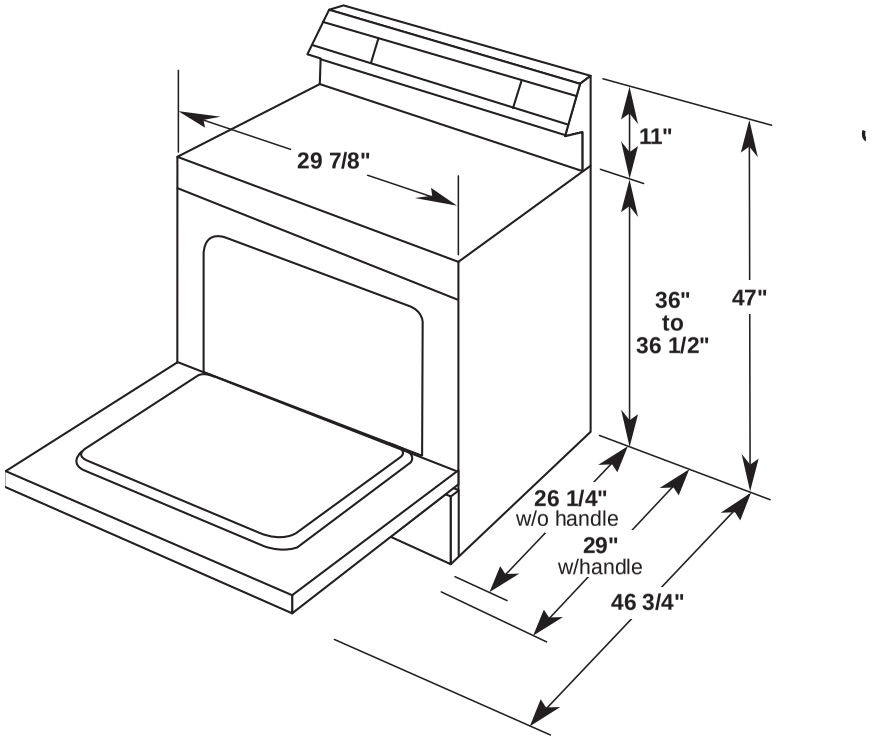
GE APPLIANCES

JB480SM

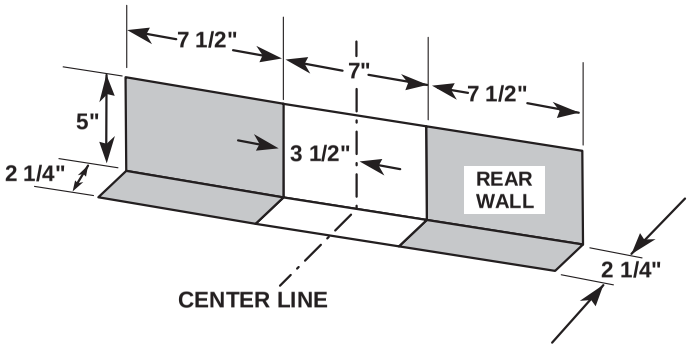
GE® Free-standing Electric Radiant Smooth Cooktop Range

DIMENSIONS AND INSTALLATION INFORMATION (IN INCHES)

RECEPTACLE LOCATIONS



Locally approved flexible service cord or conduit must be used because terminals are not accessible after range installation. See shaded area in drawing for location of electrical outlet box. Recommended outlet locations allow range to be installed directly against wall.



NOTE: This appliance has been approved for 0" spacing to adjacent surfaces above the cooktop. However, a 6" minimum spacing to surfaces less than 15" above the cooktop and adjacent cabinet is recommended to reduce exposure to steam, grease splatter and heat.

INSTALLATION INFORMATION: Before installing, consult installation instructions for current dimensional data and additional requirements.

ADA COMPLIANT

All GE Appliances ranges are equipped with an Anti-Tip device. The installation of this device is an important, required step in the installation of the range.

Specification Revised 9/18

Product: 16.6 Cu. Ft. Top-Freezer Refrigerator (Or Approved Equal)

Manufacturer: GE Appliances

Location: Faculty Staff Lounge, Kitchen Staff Lunchroom, and Nurse's Office / Triage Room

Model #: GTS17GSNRSS

Product Details

- Color: Stainless Steel (Also available in white)
- Dimensions: 28" W x 32-5/8" D x 64-3/4" H
- Total Capacity: 16.6 cu. ft.
- Fresh Food Capacity: 12.6 cu. ft.
- Freezer CapacityL 4.04 cu. ft.
- LED Lighting

- Edge-to-Edge Glass Shelves
- Adjustable Wire Freezer Shelf: Easily adjusts between two positions to accommodate items of all shapes and sizes
- Upfront Temperature Controls: Easy-to-use controls regulate both fresh food and freezer sections
- Made in America: 70 to 90% U.S. Content

Product: **26" Air Cooled Undercounter Half Cube Ice Machine - 222 lb. (Or Approved Equal)**

Manufacturer: Avantco

Location: Gymnasium and JROTC Collaboration / Breakroom

Capable of producing up to 222 lb. of half cube ice per day, these larger footprint undercounters are great for meeting high production and capacity needs of busy restaurants, bars, or cafes. This machine also comes with an 80 lb. bin to store a larger amount of ice once its made.

UC-210-HA

Overall Dimensions:

Width:	26 Inches
Depth:	27 Inches
Height:	38 3/16 Inches

Product Details

- Unit makes up to 222 lb. of half cube ice per day while storing up to 80 lb.
- Durable 304 stainless steel exterior with a polyethylene interior
- Digital controller allows user to quickly identify issues and the current stage of production
- Includes bright LED lights to illuminate the ice bin and a removable air filter for quick cleaning a
- Eco-friendly R290 refrigerant; 115V; NEMA 5-15P

Product: 1.6 cu. ft. Countertop Microwave Oven (Or Approved Equal)

Manufacturer: GE Appliances

Location: Faculty Staff Lounge, Kitchen Staff Lunchroom, and SPED BLS Classrooms

Model #: JES1657SMSS

Product Details

- Color Appearance: Stainless Steel
- 1.6 cu. ft. capacity
- Sensor cooking controls
- Weight and time defrost
- Dimensions: 21-3/4" W x 17- 3/4" D x 12-7/8" H
- Cavity Dimensions: 16-5/8" x 10-1/4
- Weight: 39 lbs.
- 1150 Watts (IEC-705 test procedure)
- Weight And Time Defrost: Simply enter the weight of the food, and the oven automatically sets the optimal defrosting time and power level or set your desired time for defrosting
- Turntable: Glass; Rotates food throughout the cycle
- Turntable Size: 13-5/8" dia.

- Instant On Controls: One-Touch Instant Operation
- Control Lockout: Helps Prevent Accidental Activation
- Add 30 Seconds: Increases Cooking times with one touch
- Timer ON/OFF: Minute timer helps keep you on track
- Warranty: Limited 1-year entire appliance

SPECIAL INSTALLATION REQUIREMENTS:

STACKED INSTALLATION:

-Brackets for stacking dryer over washer are not included with the washer. Order part no. GFA28KITN.

ALCOVE OR CLOSET INSTALLATION:

-If your dryer is approved for installation in an alcove or closet, it will be stated on a label on the dryer back.

-The dryer MUST be exhausted to the outside.

-Minimum clearances between dryer cabinet and adjacent walls or other surfaces are: 0" all sides and top.*

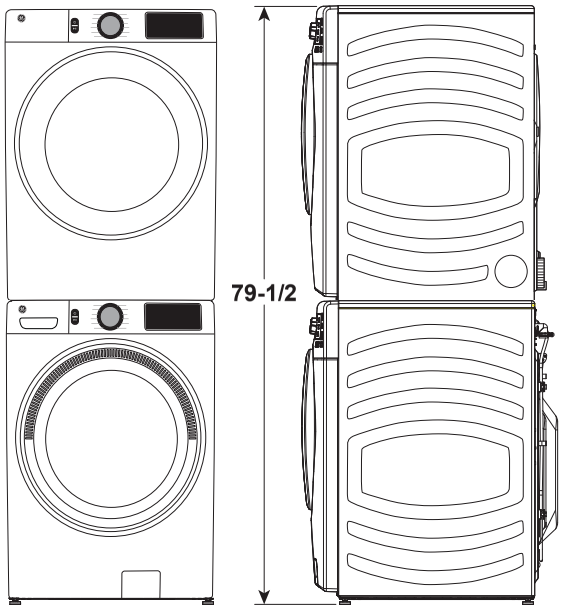
-Closet doors must be louvered or otherwise ventilated and must contain a minimum of 60 sq. in. of open area equally distributed. If this closet contains both a washer and a dryer, doors must contain a minimum of 120 sq. in. of open area equally distributed.

-No other fuel-burning appliance shall be installed in the same closet with a gas dryer.

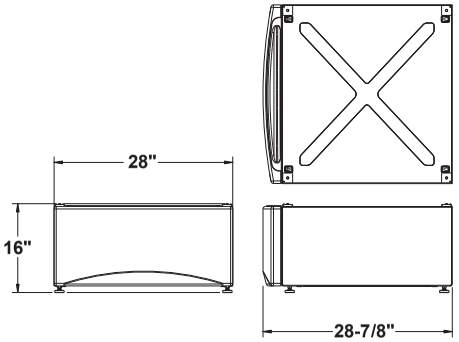
BATHROOM OR BEDROOM INSTALLATION:

-The dryer MUST be exhausted to the outdoors.

-The installation must conform with the local codes, or in the absence of local codes, with the National Electric Code and National Fuel Gas Code, ANSI Z223.

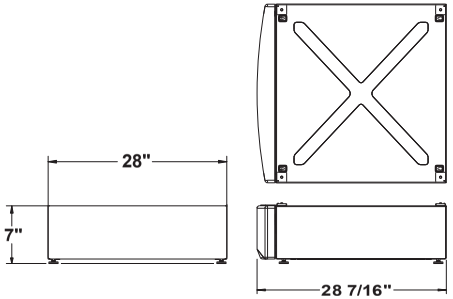


MINIMUM CLEARANCE OTHER THAN ALCOVE OR CLOSET INSTALLATIONS:



-Minimum clearances to combustible surfaces 0" all sides and top.*

FOR MORE INFORMATION ON VENTING KITS AND ACCESSORIES, PLEASE CALL 1-800-GE-CARES.



*For improved performance, a 1/2" clearance is suggested on each side.

GE® 7.8 cu. ft. Capacity Front Load Electric Dryer

DRYER EXHAUSTING INFORMATION –METAL DUCT ONLY

For complete information, see installation instructions packed with your dryer.

DUCTING MATERIALS: For best performance, this dryer should be vented with 4" diameter all rigid metal exhaust duct. If rigid metal duct cannot be used, then UL-listed flexible metal (semi-rigid) ducting can be used (Kit WX08X10077). In special installations, it may be necessary to connect the dryer to the house vent using a flexible metal (foil-type) duct. A UL-listed flexible metal (foil-type) duct may be used ONLY in installations where rigid metal or flexible metal (semi-rigid) ducting cannot be used AND where a 4" diameter can be maintained throughout the entire length of the transition duct. Please see installation instruction packed with your dryer for complete instructions when using flexible metal (foil type) ducting.

Domestic dryer models		Best performance	
		Maximum length of 4" dia. **rigid metal** duct	
		Exhaust hood type	
	Number of 90° turns	**A** 4" opening	**B** 2-1/2" opening
	0	90 ft.	60 ft.
	1	60 ft.	45 ft.
	2	45 ft.	35 ft.
	3	35 ft.	25 ft.
	4	25 ft.	15 ft.

EXHAUST LENGTH CALCULATION:

1. Determine the number of 90° turns needed for your installation. If you exhaust to the side or bottom of dryer, add one turn.
2. The maximum length of 4" rigid (aluminum or galvanized) duct which can be tolerated is shown in the table.

   A turn of 45° or less may be ignored. Two 45° turns within the duct length should be treated as a 90° elbow.

   A turn over 45° should be treated as a 90° elbow.

Dryers must be exhausted to the outside.

CAUTION: For personal safety do not terminate exhaust into a chimney, under any enclosed house floor (crawl space), or into an attic, since the accumulated lint could create a fire hazard or moisture could cause damage. Never terminate the exhaust into a common duct or plenum with a kitchen exhaust, since the combination of lint and grease could create a fire hazard.

Exhaust ducts should be terminated in a dampered wall cap to prevent back drafts, bird nesting, etc. The wall cap must also be located at least 12" above the ground or any other obstruction with the opening pointed down.

FOR MORE INFORMATION ON VENTING KITS AND ACCESSORIES, PLEASE CALL 1-800-GE-CARES.

Specification Revised 5/22

Product: 12/24 Hour Wall Clock (Or Approved Equal)

Manufacturer: Infinity Instruments LTD

Location: All Classrooms

The 12-Inch 12/24 Hour Plastic Wall Clock from Infinity Instruments features reliable quartz movements and a secondary set of red numbers for keeping military time. The shatter-resistant safety lens and high-impact plastic casing ensure durability. Bold numbering on a white background makes reading easy from far away. Operates on a AA battery (not included).

Product Details

- Face Color: White
- Frame Finish: Powder coat
- Frame Material: Shatter-resistant plastic
- Display Type: Arabic dial
- Batteries: 1 AA battery (not included)
- Warranty: 3-year limited
- Diameter: 12"
- Product Weight: 2 lbs.

Product: **Basic 47 Laboratory Hood Package - Fume Hood, Work Surface and Cabinet (Or Approved Equal)**

Manufacturer**:** Labconco

Location: Chemistry Classroom Laboratory

Labconco Basic 47 Laboratory Hood, measuring 47"W x 25"D x 53"H, has an epoxy-coated steel interior and exterior for corrosion resistance to low volume chemical fumes and vapors. It has a compact size for areas with low ceilings or narrow aisles such as trailers or temporary buildings. It requires ducting from 10.13 in OD exhaust opening and features by-pass airflow, airfoil, 100 W incandescent light, internal wiring and switches. It comes with a 0.3 hip blower that is capable of overcoming maximum external static pressure of 0.25 in H2O at 720 CFM that is mounted atop the hood or remotely. 4' Flat Solid Epoxy Work Surface and Protector Acid Storage Cabinet included.

Product Details

- By-pass airflow design
- Durable glacier white powder-coated 16 gauge steel exterior and interior resists chemical exposure
- Vertical-rising tempered safety glass sash
- Adjustable two-piece baffle
- Curved air foil that lifts off for cleaning
- Removable front panel for access to electrical wiring
- Right side fixture panel factory-prepared to accept up to three service fixtures, one electrical duplex and one airflow monitor (kits sold separately)
- Right interior wall factory-prepared for one cupsink and turret (cupsink and turret kit sold separately)
- Powder-coated steel 10.3” OD exhaust connection
- Required Accessories Remote Blower (except Built-In Blower Models), Ductwork, Base cabinet(s) or stand, and Solid Epoxy Flat Work Surface
- Fume Hood Dimensions: 47"W x 25"D x 53"H
- Fume Hood Weight: 370 lbs
- Cabinet Dimensions: 48"W x 22"d
- Cabinet Weight: 170 lbs
- Work Surface Dimensions: 48"W x 30"W x 1.25"H
- Work Surface Weight: 165 lbs

Basic 47 Laboratory Hood

View online: https://www.labconco.com/product/basic-47-laboratory-hood-3/718

Overview

Basic Laboratory Hoods are designed specifically for laboratories, classrooms and light duty applications where safe ventilation is required. Constructed of powder-coated steel, Basic Hoods are economical and have a smaller overall height and depth than traditional hoods so they fit in areas with low ceilings or narrow aisles. Choose from 4 and 6-foot widths.

Both standard and built-in blower models are available.

Catalog Number: 2247400

- Pre-wired 100-watt vapor-proof incandescent light
- Pre-wired light and blower switches

Explosion-Proof Models Feature

- Explosion-proof incandescent light fixture (requires installation; bulb not included)
- Furnished without switches and wiring as these must conform to local codes

Models with Blower Module Feature

- Belt-driven blower with adjustable sheave
- Powder-coated steel base and housing
- Corrosion-resistant coated steel impeller

Options

- 4' and 6' widths
- Versatile built-in blower that mounts on top of the hood liner, above the hood or at a remote location
- Explosion-proof light and blower
- International electrical configurations
- Unassembled hoods

Required Accessories

- Remote Blower (except Built-In Blower Models)
- Ductwork
- Base cabinet(s) or stand
- Solid Epoxy Flat Work Surface

Optional Accessories

- Service Fixture Kits
- Electrical Receptacle Kits
- Cupsink and Turret Kit
- Guardian Airflow Monitor Kit
- Sash Stop Kit
- Right Side Finish Panel Kit

GLASS DOOR MERCHANDISER REFRIGERATOR
MULTIPLE SWING DOORS

Project Name: _____

Project Location: _____

Model #: _____ Quantity: _____

Available Warehouse: _____

EM Series Model: EMSGR69

Refrigeration System
· Bottom mounted, self-contained and fully detachable Blizzard R290 condensing unit uses environmentally friendly, EPA-compliant R290 refrigerant with zero (0) Ozone Depletion Potential (ODP) and three (3) Global Warming Potential (GWP). Blizzard R290 is easily replaceable and requires no on-site brazing.
· Electronically commutated (ECM) fan motors achieve rapid cooling with less energy consumption.
· Full-length air duct ensures optimal cold air distribution.
· Air circulation guard keeps floor vents from obstruction.
· Time-initiated and temperature-terminated auto defrost cycle for seamless operation.
· Large capacity, corrosion-resistant condenser and evaporator coils.
· Self-maintaining, energy-efficient condensate drain pan requires no external drains or electric heaters.
· High performance, auto-reverse condenser fan motor supports compressor ventilation and condenser coil cleaning.
· Pre-wired and ready to plug, 115V/60Hz/1Ph, NEMA 5-15P.

Cabinet Construction
· Heavy duty white coated steel interior / exterior.
· Open spaced interior with no walls between compartments.
· Stainless steel floor interior has rounded corners and detachable drain plug for ease of cleaning.
· 2.5" thick high density polyurethane insulation.
· Six height adjustable screw legs.

Lighting
· Shielded LED bar lighting with on/off switch provides bright, high color illumination at lower heat output.

Doors
· Low emissivity double glass panes reflect UV rays for efficient cooling.
· Black PVC door frames.
· Self-closing with adjustable torsion system for a positive seal.
· Snap-in magnetic door gasket make cleaning and replacement an easy process.
· High strength, die-cast door handles.

Shelving
· Four epoxy coated, steel wire shelves with airflow guard per section.
· Height adjustable stainless steel clips.

Temperature Control
· Multi-function digital controller with easy to read LED display.
· Factory preset temperature, 35°F. Temperature setting range from 33°F to 54°F.
· Audible overheat protection alarm for compressor and condenser coil.

Options
· Additional shelving.
· 3" swivel casters with locks.
· 3.5" – 6" height-adjustable and interchangeable legs.

Operating temperature range is 33ºF ~ 54ºF

Specification Revised 11/21

Product: 90° Quarter Dome Security Mirrors; 48" Diameter (Or Approved Equal)

Manufacturer: The Library Store

Location: Library

Quarter dome mirrors eliminate blind spots in libraries, offices, hallways and warehouses. They allow a person see around obstacles for safety, or monitor a wide area for efficient surveillance. Mounts in a corner and reflects a 90 degree angle image for an overhead view of a perpendicular passageway.

Product Details

- Convex Detection Mirrors are first line of defense against shoplifting and pilferage
- Increases aisle visibility and eliminates blind spots
- Excellent as safety mirrors in preventing accidents
- Mirror is lightweight, fade-proof and unbreakable with top-quality silvering and near-perfect convexing which affords the widest angle of vision

- Mount in corners for a clear 90° view of any room
- Construction: High Impact Acrylic
- Available Sizes:
  - 26" Diameter
  - 48" Diameter
- Made in the USA

Product: **bibliotheca® Tattle-Tape™ EM Grey Detection Gate -Direct Mount, 1 Aisle (Or Approved Equal)**

Manufacturer**:** bibliotheca + 3M

Location: Library

This security system can blend nicely with library decor while keeping the collection entirely secure using the latest DSP technology. Designed for use with Tattle-Tape™ Security Strips, this system detects all EM strips in any orientation. Gates can detect an activated strip leaving the library, significantly reducing false alarms at the gate when people enter. With multiple pedestals used to cover a larger entrance-way, the alarm lights on the gates also identify which aisle caused the alarm. This helps the staff locate items that triggered the alarm faster. With powerful algorithms, the genuine Tattle-Tape™ technology can distinguish between common metal items and any EM strip to yield the most accurate results. This means less false alarms and fewer inconveniences for staff and patrons. Using the latest in DSP technology, the gate can detect EM strips regardless of the orientation within the gates, offering the highest level of detection, even in the nosiest of environments.

Product Details

- Construction: Impact-resistant, molded through-color thermoplastic
- Dimensions: 70"H x 23-1/2"W x 2-1/2"D
- Detect EM security strips on all types of library materials
- Baseplate, buried cable or direct mounting installation options available
- All gates feature built-in multi-color, customer selectable LED lights (blue, cyan, green, magenta, red, white or yellow)
- Variable alarm pattern with adjustable volume
- Available in various aisle configurations up to 5 aisles
- Low frequency minimizes interference with surrounding electronic equipment; can be installed within 18" of metal
- Reduces false alarms by detecting activated strips that are leaving and not sounding for patrons entering
- Detects strips regardless of orientation or how the patron is holding the item
- Bi-directional people counter counts people entering and leaving the library and displays count on control box display for live stats
- Integrated digital display to monitor alarm counts, display traffic counts and diagnostics
- Optional staffConnect™ gate software (sold separately) conveniently displays counts at staff computers and can communicate with libraryConnect™ central management software for reporting (also sold separately)
- ADA-compliant and UL-certified
- Two 38-1/4"H x 16"W panels are included with each upright

bibliotheca Tattle-Tape™ gate

superior security, seamless style

This security system can blend nicely with your library décor while keeping your collection entirely secure using the latest DSP technology. Designed for use with Tattle-Tape™ Security Strips, this system detects all EM strips in any orientation. Along with a selection of built-in LED alarm light colors to choose from, it is completely safe for all magnetic media.

benefits of the Tattle-Tape™ gate

Reduce unwanted alarms
The Tattle-Tape™ gate can detect when an activated strip is leaving the library, significantly reducing false alarms at the gate when people enter. With multiple pedestals used to cover a larger entrance-way, the alarm lights on the gates also identify which aisle caused the alarm, helping staff locate items that triggered the alarm faster.

Integrated with libraryConnect™
Staff can remotely access libraryConnect™ for in-depth statistics and configuration options. This allows staff to remotely upgrade firmware, run monthly reports and change the alarm colors and patterns.

Genuine Tattle-Tape™ technology
With powerful algorithms, the genuine Tattle-Tape™ technology can distinguish between common metal items and any EM strip to yield the most accurate results. This means less false alarms and fewer inconveniences for both users and staff.

Superior detection of items in any orientation
Using the latest in DSP technology, the Tattle-Tape™ gate can detect EM strips regardless of the orientation within the gates, offering the highest level of detection, even in the nosiest of environments.

Integrated, visible people counter
The on-board bi-directional people counter accurately counts the number of people entering and leaving the library. This information is transferred to libraryConnect™ as well as the control box, which has a convenient display for quick access to live stats.

Selectable alarm color and pattern
Both visual and audible security alarm settings are completely configurable by the library. With 8 LED color alarms and patterns to choose from, the Tattle-Tape™ gate ensures both users and staff are alerted of items that have not been properly checked out.

Sleek design with interchangeable graphic sections
We designed our new Tattle-Tape™ gate to fit within new modern and updated library spaces. With easy-to-update panels, your security gates can match your library brand or promote an upcoming program.

Flexible configuration and installation
Simple set-up and maintenance allows our trained technicians to cause little disruption to your library and staff can quickly troubleshoot concerns with our dedicated phone support teams.

Dimensions (w x d x h):	Millimetres: 51 (Max at base) x 597 x 1786 (± 3) Inches: 2.5 (Max at base) x 23.5 x 70.3 (± 0.1)
Weight (per gate):	Kilograms: 36.3 Pounds: 80
Material:	Pantone Cool Grey 4C HIPS
Power:	Supply voltage: 100/120, 220/240 VAC, 50 / 60 Hz Power consumption: 3.0A / 1.5A
Data:	Ethernet (TCP/IP)
Performance:	Optimized for detection of Tattle-Tape™ markers Optimal coverage is achieved within 39.4 inches / 1,000 mm of separation
Alarm:	Multi-color*, customer selectable LED lights Variable alarm pattern and adjustable volume Highly visible integrated digital display to monitor alarm counts, ingoing and outgoing patron traffic, and diagnostics *Available colors: red, cyan, magenta, blue, green, yellow, white, & rotate mode
Standards compliance:	CE, RCM, ETSI, FCC, IC, ADA, DDA, ETL and CSA
Temperature range:	Operating: 10 °C to +40 °C/Storage: –40 °C to +55 °C
Configurations:	Standard configuration can support up to 6 panels to provide total coverage of 6.0m
Installation:	Multiple installation options including direct attachment to the floor with either in floor wiring or a wire way and a baseplate option. The on-board tuning allows the gates to be placed within 45.7cm (18") from any metal objects, giving more freedom than ever to install within confined areas.
Software:	Software is not required for the Tattle-Tape™ gate to operate, however, when used in conjunction with our staffConnect™ gate software, enhanced reporting is available
Additional features:	Integrated bi-directional people counter. Ability to trigger external devices such as CCTV, voice alarms and entry gates.
Options:	Side panels can be customized to fit your libraries décor

- **VBRUHD6 - with Heavy Duty Casters**

VBRU6

Features & Benefits

- A stylish, non-electric portable food bar keeps cold food cold for hours with or without ice, using optional Buffet Camchillers® with food pans or Coldfest® Food Pans and Crocks.
- Holds GN 1/1 Full or Fractional Size Food Pans up to 6" (15 cm) deep with Divider Bars.
- Sneeze Guard Side and End Panels are easy to assemble and are made from clear, durable NSF listed material. Sneeze Guard is fully compliant with current NSF requirements.
- Sneeze Guards and Optional Tray Rails fold down quickly and easily to fit through standard 36" (91,5 cm) wide doorways during transportation and to minimize storage space requirements.
- Two separate storage compartments with lockable doors provide convenient storage for non-perishable items. Each compartment holds up to 50 lbs. (22,7 kg) and measures 17 ½" W x 21 ½" D x 18" H (44,5 x 54,6 x 45,7 cm). Doors swing open from the outside to the middle for easy access from each end.
- Top merchandising shelf is 9" (22,9 cm) wide and can be used to display optional Merchandising Sign Holder for even greater visual appeal.
- Straight Connector and Corner Connector attach easily and securely to expand serving options.
- Double-wall polyethylene construction with foam injected polyurethane provides extra strength and durability. Scratch-resistant textured exterior is easy to clean and will not crack, rust, chip or break.
- NSF listed threaded faucet drain with standard hose hook-up on underside of well can be used for quick and easy draining and cleaning.
- Choose from models with 4 each 6" x 1 ¼" (15,2 x 3,2 cm) standard swivel casters with brakes or 6" x 2" (15,2 x 5 cm) heavy duty swivel casters with brakes.
- Molded-in handle on each end offers stable maneuverability.
- Non-electrical.
- Only sneeze guards and optional accessories require assembly.
- Available in 5 colors.
- Optional accessories include, Tray Rails, End Table, Straight and Corner Connectors, Buffet Camchiller, Well Cover, Divider Bars, GN Food Pans, Coldfest Crocks and Pans, Pumps, Crocks and Salad Bowl Holders, Merchandising Sign Holder, LED Light, and Vinyl Cover.
- Food Bar set-up guides and best practices are available at www.cambro.com/schools.

Architect Specs

The non-electric, portable and modular Versa Food Bar – ULTRA SERIES, shall be a Floor Model Food Bar, Models VBRU5, VBRU6, VBRUHD5, VBRUHD6, manufactured by Cambro Mfg. Co., Huntington Beach, CA 92647 USA. It shall be made of double-wall polyethylene with foam-injected polyurethane. It shall include a clear sneeze guard with clear protective end panels. The interior well shall be 6 ½" (16,5 cm) deep. The sneeze guard and optional tray rails shall fold down to fit through 36" (91,5 cm) wide doorways and to minimize storage space requirements during non-use. It shall have a 9" (22,9 cm) wide merchandising shelf. It shall have molded-in handles on each end. It shall have 2 separate storage compartments with lockable doors that swing open from the outside to the middle. It shall have 4 each 6" x 1 ¼" (15,2 x 3,2 cm) swivel casters with brakes or heavy duty 6" x 2" (15,2 x 5 cm) swivel casters with brakes. It shall have an NSF listed threaded faucet drain with a standard hose hook up on the underside of the well. It shall be NSF listed and available in 5 colors. It shall require minimal assembly. It shall connect with other standard height Versa Food Bars, Versa Work Tables and/or Versa Carts using an optional Corner Connector or Straight Connector. Optional accessories shall include Tray Rails, End Table, Straight and Corner Connectors, Buffet Camchiller®, Well Cover, Divider Bars, GN Food Pans, Coldfest® Crocks and Pans, Pumps, Crocks and Salad Bowl Holders, Merchandising Sign Holder, LED Light, and Vinyl Cover.

Versa Food Bar Colors

- ❑ Black (110)
- ❑ Kentucky Green (519)*
- ❑ Hot Red (158)*
- ❑ Bronze (146)*
- ❑ Navy Blue (186)*

*Made to order. Non-returnable.

Product: VG Series Modular Gas Tilting Braising Pan

Manufacturer: Vulcan

Location: Cafeteria Kitchen

Vulcan VG30

Product Details

See attached.

Item # _____ C.S.I. Section 11420

STEAM

VULCAN

VG SERIES
MODULAR GAS TILTING BRAISING PAN

Shown with enclosed faucet bracket

SPECIFICATIONS

Modular gas tilting braising pan. 36"/46" wide open base. Stainless steel front, sides and 12" legs with adjustable flanged feet. Stainless steel back. Front hinged polished stainless steel pan body with coved interior corners and embossed gallon markings. Stainless steel cooking surface bonded to steel plate. Full width 4" return flange with formed pouring lip and removable strainer. Stainless steel spring assist cover with wrap around handle and condensate lip. Faucet mounting bracket (non-enclosed) field reversible "L" bracket either side. Drop away food receiving pan support mounts under pouring lip. Manually operated pan tilting mechanism with removable handle. Pan can be fully tilted to empty completely with approximately 30 crank revolutions. One 30,000 BTU/hr. burner for each 12" pan width. Burners shut off when pan is tilted 5°. Electronic ignition system for automatic burner light. Solid state temperature controls. Water tight controls and enclosures. Requires a 120/60/1 electrical power supply, 9.0 amps total draw. ¾" rear gas connection and internal gas combination valve with integral regulator.

Exterior Dimensions:

____"w x 35½"d x 40½"h on 12" legs.

CSA design certified. Classified by UL to NSF Std. #4.

SPECIFY TYPE OF GAS WHEN ORDERING.
SPECIFY ALTITUDE WHEN ABOVE 2,000 FT.

- ☐ **VG30** 36" wide open base.
- ☐ **VG40** 46" wide open base.

STANDARD FEATURES

- Stainless steel front, back, sides and 12" legs with adjustable flanged feet.
- Front hinged polished stainless steel pan body with coved interior corners and embossed gallon markings. Stainless steel cooking surface bonded to steel plate. Full width 4" return flange with formed pouring lip and removable strainer.
- Stainless steel spring assist cover with wrap around cool to the touch handle and condensate lip.
- Lid stops in place for vented cooking.
- Faucet mounting bracket (non-enclosed) field reversible "L" bracket either side.
- Drop away food receiving pan support mounted under pouring lip.
- Manually operated anti-jam pan tilting mechanism with removable handle. Pan can be fully tilted to empty completely with approximately 30 crank revolutions.
- One 30,000 BTU/hr. burner for each 12" pan width. Burners shut off when pan is tilted 5°. Electronic ignition system for automatic burner lighting.
- Solid state temperature controls, adjustable from 50°F to 425°F.
- Water tight controls and enclosures.
- Requires a 120/60/1 electrical power supply, 9.0 amps.
- ¾" rear gas connection.
- One year limited parts and labor warranty.
- Combination gas valve with built-in regulator.

OPTIONS

- ☐ Motor driven pan lift with removable manual crank handle.
- ☐ Two inch draw-off valve – left front straight with strainer. (BPDOV-1) Pan support will be removed on VG30.
- ☐ Two inch draw-off valve – left front 90° left with strainer. (BPDOV-2) Pan support will be removed on VG30.
- ☐ Two inch draw-off valve – left side 90° front with strainer. (BPDOV-3)
- ☐ Standard security package includes:
  - Security screws and tackwelds.
    - Includes securing crank handle, pan strainer and non-door type panels.
  - Controls protected by lockable cover.
  - Perforated flue cover.
- ☐ Second year extended limited parts and labor warranty.

ACCESSORIES (Packaged & Sold Separately)

- ☐ Set of four casters, (two locking).
- ☐ Faucet bracket assembly (adds 3" to width) enclosed.
- ☐ (12") (18") double jointed single pantry faucet.
- ☐ (12") (18") double jointed double pantry faucet.
- ☐ Double pantry washdown hose with 16" add-on faucet with backflow preventer.
- ☐ Double pantry washdown hose with backflow preventer.
- ☐ Double pantry pot filler and backflow preventer.
- ☐ Steaming pan insert rack to hold 12" x 20" pans. (Qty. ____)
- ☐ 12" x 20" x 4" stainless steel drain waste pan with clear plastic hose.
- ☐ Catch can with bail handle and drain hose for draw-off valve.
- ☐ Stainless steel perforated boiling basket (12" x 20" x 6" deep) with handles.

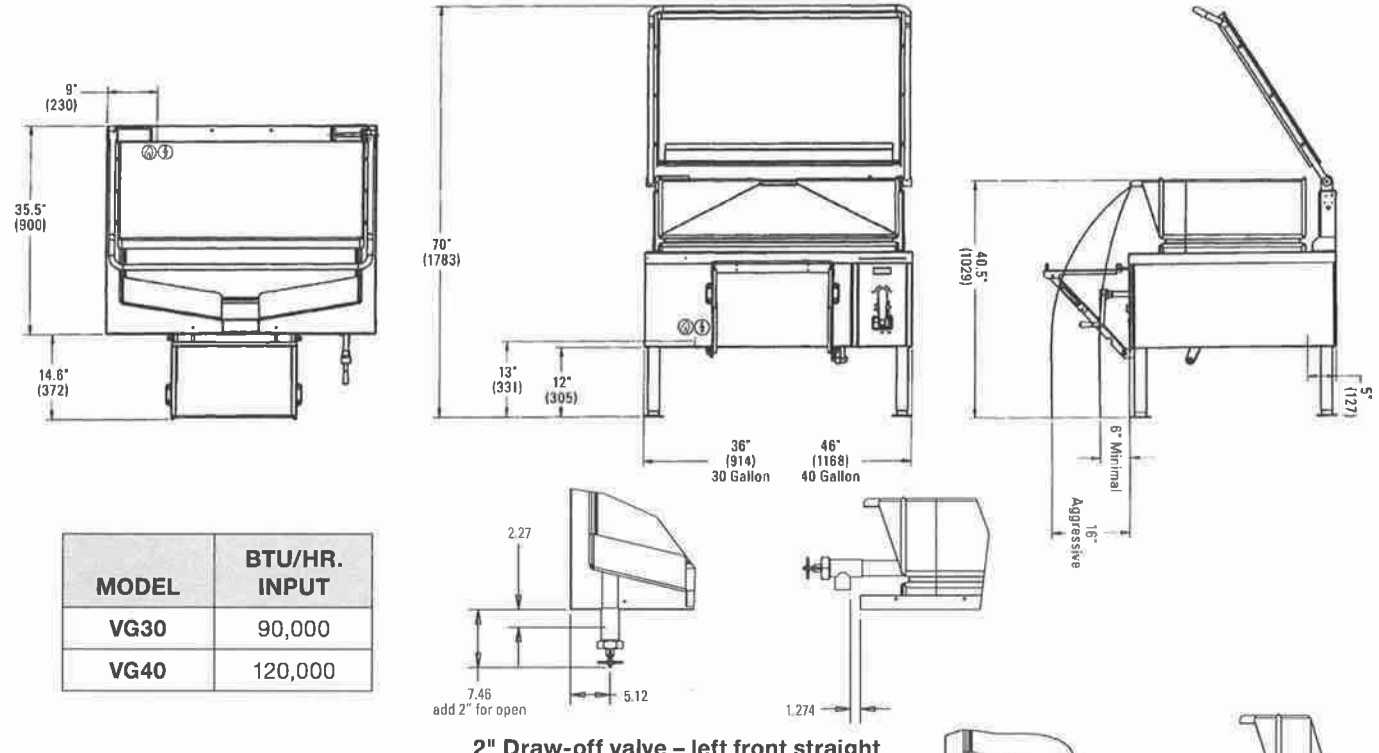
VG SERIES
MODULAR GAS TILTING BRAISING PAN

SERVICE CONNECTIONS:

GAS INPUT: ¾" N.P.T., Nat. 7"-10.5" W.C.; Propane, 11"-13" W.C. See capacity schedule.

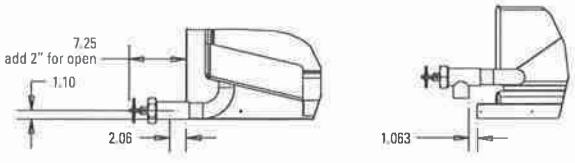
ELECTRICAL CONNECTION: Control circuit ⅞" dia. 120 volt,
1 phase, 15 amps, power cord.



IMPORTANT:

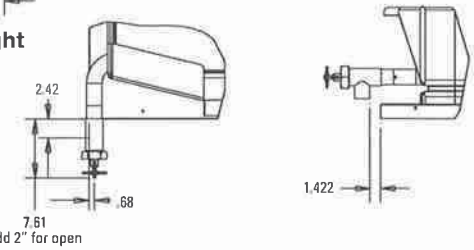
1. A pressure regulator sized for this unit is included. Natural gas 7" W.C., propane gas 11" W.C. supply pressure.
2. Gas line connecting to appliance must be ¾" or larger. If flexible hose with quick connects are used the hose and quick connects BTU flow rate must be a minimum of 120% of the appliance data plate BTU rate.
3. An adequate ventilation system is required for commercial cooking equipment. Information may be obtained by writing to the National Fire Protection Association, Batterymarch Park, Quincy, MA 02289. When writing, refer to NFPA No. 96.
4. These units are manufactured for installation in accordance with ANSZ223.1A (Latest edition), National Fuel Gas Code. Copies may be obtained from the American Gas Association, 1515 Wilson Blvd., Arlington, VA 22209.
5. Clearances:

	Combustible	Non-combustible
Rear	6	0
Sides	2	0



6. This appliance is manufactured for commercial installation only and is not intended for home use.

MODEL	COOKING SURFACE AREA	MAX PAN OPENING	CAPACITY	4 OZ. PORTIONS
VG30	29" x 23"	31" x 28"	30 gal./ 114 liters	960
VG40	39" x 23"	41" x 28"	40 gal./ 152 liters	1280



MODEL	BTU/HR. INPUT
VG30	90,000
VG40	120,000

2" Draw-off valve – left front straight (BPDOV-1)

2" Draw-off valve – left front 90° left (BPDOV-2)

2" Draw-off valve – left side 90° front (BPDOV-3)

- ☐ **960RX** 60" w x 24" d griddle plate
- ☐ **972RX** 72" w x 24" d griddle plate

SPECIFICATIONS

Low profile heavy duty gas griddle, Vulcan Model No._____. Stainless steel front, sides and front top ledge. Fully welded stainless and aluminized steel body frame. 11" low profile cooking height on 4" legs. 1" thick polished steel griddle plate with 12 gage, 4" stainless steel back and tapered side splashes. Grease chute is fully welded to stop grease migration. One 27,000 BTU/hr. "U" shaped aluminized steel burner and mechanical snap action thermostat for each 12" of griddle width. Chrome thermostat knob guards. Temperature adjusts from 200° to 550° F. One pilot safety for every two burners. Manual shut-off valve. 3½" wide stainless steel grease trough. 120V 50/60Hz 1 Amp single phase electric ignition circuit. Plug type is NEMA 5-15 USA. ¾" rear gas connection and gas pressure regulator.

Exterior Dimensions:
_____"w x 33" d x 15½" h on 4" legs.

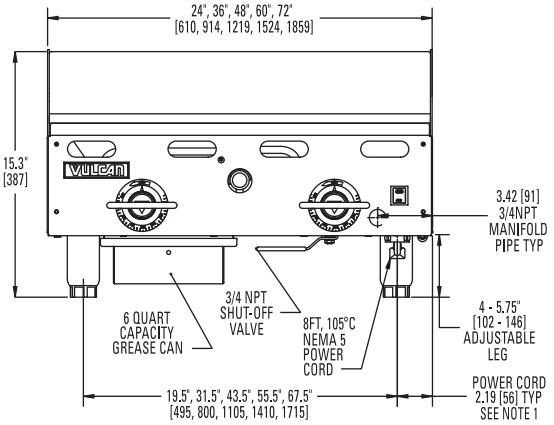
CSA design certified. NSF listed.

SPECIFY TYPE OF GAS WHEN ORDERING.
SPECIFY ALTITUDE WHEN ABOVE 3,999 FT.

STANDARD FEATURES

- Stainless steel front, sides and front top ledge with "Cool Bullnose" design.
- Fully welded stainless and aluminized steel chassis frame.
- 11" low profile cooking height on 4" adjustable legs.
- 1" thick polished steel griddle plate with 12 gage, 4" stainless steel back and tapered side splashes.
- Spatula wide 3½" grease gutter and chute is fully welded for easier cleaning and to stop grease migration.
- One 27,000 BTU/hr. "U" shaped aluminized steel burner for every 12" of griddle width.
- One embedded snap action thermostat per burner with temperature adjust from 200°F to 550°F.
- Large 6 quart stainless steel grease drawer (2 drawers on 60" and 72" models).
- Heavy duty chromed thermostat knob guards.
- One pilot safety valve for every two burners. Safety will completely shut off gas to pilot and burners if pilot extinguishes.
- Manual shut-off valve for gas inlet.
- Dual (manual/electric) ignition.
- Bottom heat shields
- ¾" rear gas connection and gas pressure regulator.
- 120V 50/60Hz 1 Amp single phase with NEMA 5-15 USA plug.
- One year limited parts and labor warranty.

OPTIONAL FEATURES



- ☐ Hexavalent chrome plated cooking surface.
- ☐ 30" deep plate.
- ☐ Stainless steel stand with marine edges and casters.
- ☐ Cutting board, condiment rail, plate rail and banking strip accessories.
- ☐ Full or partially grooved griddle plate.

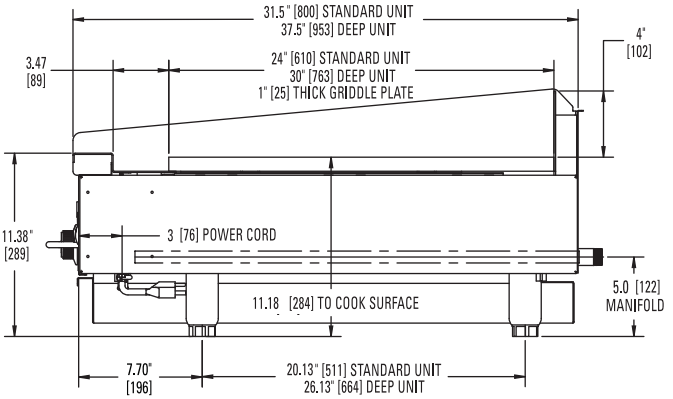
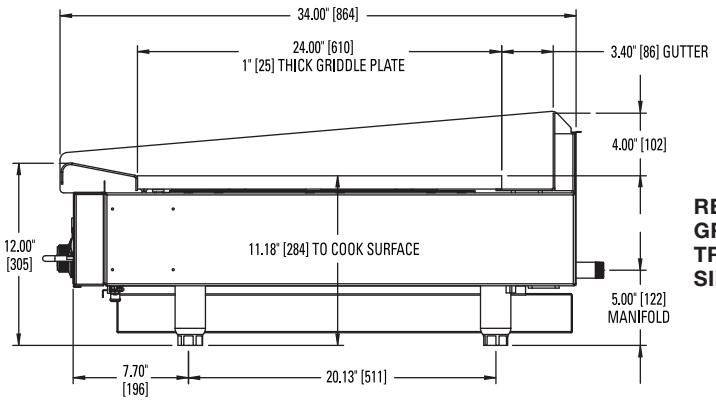
900RX SERIES
HEAVY DUTY GAS GRIDDLES



INSTALLATION INSTRUCTIONS

1. A gas pressure regulator supplied with the unit must be installed;
   Natural Gas 4.0" (102 mm) W.C.
   Propane Gas 10.0" (254 mm) W.C.
2. All models require a 6" (152 mm) clearance at both sides and rear adjacent to combustible and 0" from non-combustible constructions. All models require a 4" (102mm) bottom clearance and must be installed with minimum 4" legs.
3. These units are manufactured for installation in accordance with ANSI/NFPA-70, National Electrical code.
   An adequate ventilation system is required for Commercial Cooking Equipment (NFPA No. 96). Information may be obtained by writing to the National Fire Protection Association, Batterymarch Park, Quincy, MA 02169.
4. These units are manufactured for installation in accordance with National Fuel Gas Code, ANSI-Z223.1/NFPA #54 (latest edition). Copies may be obtained from The American Gas Association, Accredited Standards Committee Z223 @ 400 N. Capital St. NW, Washington, DC 20001, or the Secretary Standards Council, NFPA, 1 Batterymarch Park, Quincy, MA 02169-7471.
   NOTE: In The Commonwealth of Massachusetts
   All gas appliances vented through ventilation hood or exhaust system equipped with a damper or with a power means of exhaust shall comply with 248 CMR.
5. This appliance is manufactured for commercial installation only and is not intended for home use.



FRONT VIEW

NOTES:
1. 2.19" FROM RIGHT FOR 24, 36 & 48" GRIDDLES
   30.00" FROM RIGHT FOR 60" & 72" GRIDDLES
2. ADJUSTABLE LEGS ARE 2" IN DIAMETER.
   LEGS ARE RECESSED 1¼" FROM EACH SIDE.

BOTTOM MOUNTED REACH-IN REFRIGERATOR

MODEL: HBR72HC-1

HBR72HC Solid Door Bottom Mount Refrigerator
Hydrocarbon Series

3 Year Parts/Labor Warranty
Additional 4 Year Compressor Warranty

CABINET CONSTRUCTION

- Stainless steel front, side, and grille (galvanized back & bottom)
- Stainless steel interior
- LED lighting
- Full electronic control with one-touch defrost
- One–piece grille allow easy removal/installation for preventative maintenance
- Door lock (solid doors only)
- Self closing door with 120° stay open feature
- Spring-loaded style hinges
- Plug-in magnetic door gaskets
- Three (3) heavy duty epoxy coated wire shelves per door section
- 6" Casters with two (2) brakes

OPTIONS & ACCESSORIES

- Stainless steel universal tray slide pair, 1 tray slide set for (1) 18" x 26" or (2) 14" x 18" pans (AC)
- Wine models
- 3" caster or 6" legs
- Epoxy shelves
- Shelf clips
- Remote option* (see note on back page)

REFRIGERATION SYSTEM

- Uses environmentally friendly, energy efficient R290 refrigerant, and meets all regulatory requirements for CARB, SNAP, DOE & more
- Hot gas condensate evaporator
- Adaptive defrost
- Epoxy coated evaporator coil
- Maintains product temperatures between 36°F and 38°F

HEATED HOLDING

VPT SERIES
PASS THROUGH HOLDING CABINETS

Model VPT15

UL Listed. UL Listed to Canadian safety standards.
Classified by UL to NSF Std. #4.

SPECIFICATIONS

Vulcan Model No. VPT pass through holding cabinets. Blower motor for gentle and even temperature distribution. Complete with 5" heavy duty casters (2 swivel with brakes and 2 rigid). Simple knob actuated electronic control for holding at temperatures up to 190°F. Adjustable racking will hold 18" x 26" or 12" x 20" pans or a combination of both on 1½" centers. Lip-load racking will hold 18" x 26" pans on 3" centers. Shelving will hold a variety of pan sizes. Cabinet interior and exterior are both constructed out of 20 gauge stainless steel. Recessed side-mounted handles, magnetic action door latch, and full insulation; 1½" in side walls and 2" in top. Integrated stainless steel frame for maximum strength. Field reversible doors. Complete with side mounted cord and plug: NEMA 5-15 for 120 volts and NEMA 6-15 for 208-240 volts. One year limited parts and labor warranty. After the first year, 10-year parts warranty on the heating elements.

Units with adjustable racking:
- ☐ **VPT7** (see reverse for capacities)
- ☐ **VPT13** (see reverse for capacities)
- ☐ **VPT15** (see reverse for capacities)
- ☐ **VPT18** (see reverse for capacities)

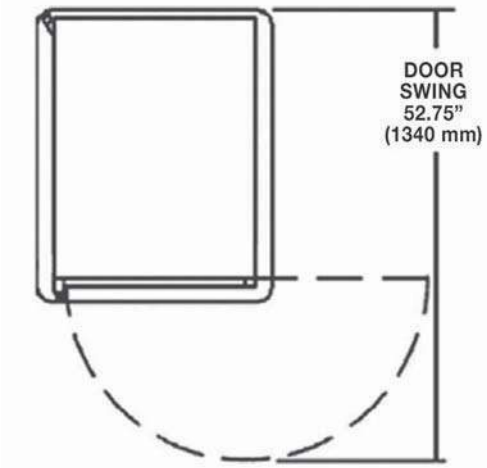
Units with lip-load racking:
- ☐ **VPT7LL** (Fifteen 18" x 26" x 1" sheet pans)
- ☐ **VPT15LL** (Thirty 18" x 26" x 1" sheet pans)

Units with shelves:
- ☐ **VPT7SL** (Three Shelves)
- ☐ **VPT15SL** (Six Shelves)

STANDARD FEATURES

- Pass-Thru Holding Capacity:
  - 18" x 26" sheet pans.
  - 12" x 20" pans, or a combination of both on 1½" centers.
  - Other pan sizes on shelves.
- Blower motor for gentle and even temperature distribution.
- Dutch doors (VPT15 and VPT18).
- 5" heavy duty casters (2 swivel with brakes and 2 rigid).
- Recessed side mounted handles.
- Simple knob actuated electronic control for holding at temperatures up to 190°F.
- Universal tray slides adjustable on 1½" centers. VPT15 & VPT13 ship with 10 pairs of tray slides, VPT7 ships with 5 pairs and VPT18 ships with 15 pairs.
- Interior and the exterior are both constructed out of 20 gauge stainless steel.
- Fully insulated with 1½" in side walls and 2" in top.
- Integrated stainless steel frame for maximum strength.
- Magnetic action door latch.
- Field reversible doors.
- Side mounted cord.
- Complete with cord and plug: NEMA 5-15 for 120 volts and NEMA 6-15 for 208-240 volts.
- One year limited parts and labor warranty. After the first year, 10-year parts warranty on the heating elements.

OPTIONS



- ☐ 208/240 volt
- ☐ Humidity pan
- ☐ Full perimeter bumper
- ☐ Glass Dutch doors (VPT15 & VPT7 only)
- ☐ Wire shelves to sit on tray slides (RACK-VCH)
- ☐ Additional tray slides
- ☐ Mechanical control

SPE72HC Salad Bar
Hydrocarbon Series

MODEL:
SPE72HC-30-S

(shown with optional sneeze guard)

(optional tray slide)

3 Year Parts/Labor Warranty
Additional 4 Year Compressor Warranty

CABINET CONSTRUCTION

- Stainless steel front, sides, top, doors and grille (galvanized back & bottom)
- Interior liner is made of corrosion resistant aluminum
- Lift-off lids standard
- Heavy-duty aluminum pan liner, easy to clean and prevents spills from falling into cabinet while also ensuring coldest air flows across bottom of pans
- Accommodates up to 6" deep food service pans, 4" deep 1/3 size polycarbonate pans are included
- Locking divider bars
- Self-closing doors with 120˚ stay-open feature, on cartridge style hinges
- Easy door removal for service and cleaning
- Field-reversible doors with snap-in door gaskets
- 6" Casters, 2 with brakes
- Two epoxy-coated steel wire shelves per door section

OPTIONS & ACCESSORIES

- Stainless steel exterior with finished back
- Stainless steel interior
- Sneeze guard
- Foldable tray slides
- Door locks
- 3" casters or 6" legs
- Low profile casters
- Shelf dividers
- Pan Supports
- Digital thermometer

REFRIGERATION SYSTEM

- Uses environmentally friendly, energy efficient R290 refrigerant, and meets all regulatory requirements for CARB, SNAP, DOE & more
- Adaptive defrost
- Epoxy coated evaporator coil
- Enhanced airflow maintains temperature between 36º to 38ºF

Sealed Well with Drain

Enclosed Base
HDSW-3-240-BS Shown with Optional TA-255P Casters

UL LISTED

FEATURES:

Heavy duty construction
All welded 300 series stainless steel
Sealed wells with manifold drains
Thermostatic controls
Removable front panel to access elements for ease of service
Supplied with dish shelf
Stainless steel shelf with removable 3/8" thick poly cutting board - Ships K.D.

MATERIAL:

TOP: 18 gauge #304 stainless steel with die stamped pan openings and self rimmed. (12" x 20" opening size)
BODY: 18 gauge #304 stainless steel
LEGS: 18 gauge stainless steel with fully adjustable stainless steel bullet foot
INSULATION: Fiberglass insulation between each compartment
DISH SHELF: 18 gauge #304 stainless steel
CUTTING BOARD: White Thermoplastic
HEAT COMPARTMENT: Sealed well pan with "M" shaped tubular element underneath
PLUMBING: Manifold drain assembly included

ELECTRICAL:

120V units yield 640 Watts
208V/240V dual voltage units yield 825 Watts at 208V and 1100 Watts at 240V
6' electrical cord with plug
Infinite control knobs
Indicator lights

NOTE: For international applications, plug may need to be replaced (by others) in field.

AUTO-FILL ASSEMBLY FOR ELECTRIC HOT FOOD TABLES

MODEL # SU-90

(Available only on sealed Well Units: SW, HDSW, DISW, DISLSW Series)

FACTORY INSTALLED ONLY

Item #: _____ Qty #: _____
Model #: _____
Project #: _____

FEATURES:

Auto-Fill Sensor (Water sensor installed in one basin but will control water levels in all wells).

Quarter-Turn Valve and Drain Outlet supplied with 3/4" NPT Male Connection.

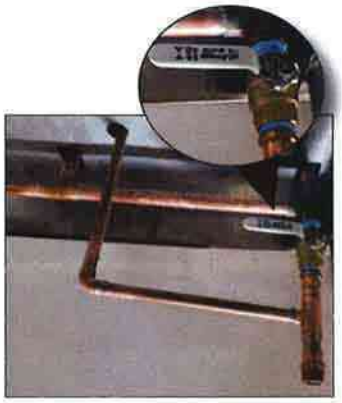
Basin Overflow Drain with continuous drainage.

Water Supply Inlet supplied with 1/2" NPS Connection.
NOTE: Recommended Shut-Off Valve for water supply (By Others).

MATERIALS:

1/2" & 3/4" Copper Pipe
Lead Free Brass Quarter-Turn Ball Valve
Auto-Fill Sensor: 120V/10W
Controlboard: 110VAC

IMPORTANT NOTE:
A **Manifold Drain** (**-M**) Option is required in order for the Auto-Fill to correctly function.
(Included on HDSW Series and not required for DISW-1 Series)



Water will continue to fill until it reaches the Auto-Fill Sensor

Illuminated On/Off Button

Basin Sensor Activates When Water Falls Below 2" Level

Overflow & Drain Assembly With Quarter-Turn Drain Valve

Supplied 1/2" NPS Water Inlet

ST SCHOOL MILK COOLERS

ST58HC Dual Access, Cold Wall
Hydrocarbon Series

MODEL:
ST58HC-W-02

ST58HC -W-02

OPTIONS & ACCESSORIES

- ☐ Wrap around & corner bumpers
- ☐ Custom graphics

3 Year Parts/Labor Warranty
Additional 2 Year Compressor Warranty

CABINET CONSTRUCTION

- White coated steel exterior and stainless steel interior maximum milk crate support.
- Lids, doors, adjustable hinges and door latches made from stainless steel are standard on all units
- Full electronic Control
- Heavy-duty epoxy coated steel wire floor racks standard
- Floor drain is centrally located for easy cleaning, connecting to drain hose with hose adapter
- Flexible compression door gaskets ensure tight seal
- Self-latching doors/lids with safety bumpers
- Exterior thermometer
- Cylinder lock
- 4” Heavy-duty plate casters (2 with locks)
- Maintains continuous milk temperature between 36º - 38ºF

REFRIGERATION SYSTEM

- Refrigeration system uses R290 refrigerant to comply with all environmental concerns
- Automatic, nom-electric defrost
- Epoxy coated evaporator coil

Product: EST-44 Conveyor Dishwasher

Manufacturer: CMA Dishmachines

Location: Cafeteria Kitchen

EST-44

Product Details

See attached.

EST-44/66

High Temperature
Low Temperature
44"/66" Conveyor Dishwasher

Available as Right or Left.
(must specify)

Available as Right or Left.
(must specify)

FEATURES:

- **ENERGY STAR® Approved.**
- Automatic water control system.
- 249 racks / 996 covers per hour.
- Economical to operate. Uses only .49 gallons of water per rack of dishes.
- Single control switch activation.
- Power rinse heater system.
- Unique 3-stage (EST44) washing process provides wash, power rinse and final rinse all in a 44" machine.
- Unique 4-stage (EST66) washing process provides two wash stations, power heated rinse and final rinse all in a 66" machine.
- Automatic soil purging system filters wash water and traps plate debris into an external tray. Tray can be easily removed for cleaning.
- All stainless steel construction offers durable performance and years of trouble-free operation.
- Chemical resistant industrial heaters are proven to be more durable than commercial grade heaters.
- Large 19" opening accommodates larger items and utensils.
- Auto start/stop makes operation more energy efficient.
- Easy to remove and replace curtains for cleaning.
- Includes table limit switch and rack saver clutch system that protects the machine, dishracks and table from damage.
- Stainless steel chemical injection chamber.

Available Options

- Corner Feed Table (left or right must specify)
  FACTORY INSTALLED ONLY
- Vent Hood with 4" x 16" Vent and Damper Control (2 per set)
- Stainless Steel dishtables
- Drain Water Tempering Kit
- "E Temp" CMA booster heater(40° and 70° rise)
  FACTORY INSTALLED ONLY
- Hatco Booster Heater also available (specify voltage & phase)
- Scrap Trap Single Drain Connection Kit
- 208V-240V / 480V
- Sheet Pan Rack P/N: 1154.00
- 6" EXT height accommodates pots and pans and larger sheet pans
- Exhaust Fan Control
- **Note: E-Temp not available single phase 70° rise.**
- **Note: E-Temp standard voltage 208-230V three phase**

Summary Specifications: Model EST-44 / EST-66 Conveyors

The Models EST-44H/ EST-66H high temperature and EST-44L / EST-66L Chemical Sanitizing conveyor dishwashers meets ETL sanitation, UL, and CUL construction standards. The EST-44 / EST-66 performs three separate washing functions including a built-in power rinse, all in a 44" or 66" space. The EST-44 / EST-66 washes up to 243 racks per hour and uses a minimum .49 gallons of water per rack while achieving sparkling, clean, dry dishes. Constructed entirely of stainless steel.

Call For Available Models (800-854-6417 or See web-Site: www.cmadishmachines.com

Advisory: CMA does NOT endorse "Tankless On-Demand" water heaters for use on CMA Dishmachine products. CMA DOES endorse, and highly recommends, the standard "tank" style water heaters, sized properly to handle each particular facility with their water heating requirements.

CAMBRO

Camtainer® Insulated Containers

For Hot and Cold Beverages

Models 100LCD 1½ gallon (5,5 L)
250LCD 2½ gallon (9,4 L)

For Soup (No Spigot)

Model 350LCD 3⅜ gallon (12,7 L)

Item No. _____

Specifier Identification No. _____

Model No. _____

Quantity _____

Features & Benefits

- Attractive design is perfect for front-of the-house hot and cold beverage or soup service. Stacks easily for storage and transportation.
- Serving capacity:
  Model 100LCD - 27 each 7 oz. (210 mL) cups
  Model 250LCD - 45 each 7 oz. (210 mL) cups
  Model 350LCD - 61 each 7 oz. (210 mL) servings
- Single-molded, seamless, double-wall, high-density, polyethylene construction is highly durable, dishwasher safe and resists dings and dents. Textured exterior is scratch-resistant.
- Polyurethane foam insulation provides excellent hot or cold temperature retention for hours. Hot beverages remain hot without the need for a costly external heating source.
- Molded-in handles offer comfortable easy transporting.
- Recessed sturdy plastic latches will not rust or corrode and are protected from being hit or damaged.
- Drip proof recessed spigot (on 100LCD & 250LCD) allows for convenient access. Optional Easy Serve Dispenser lever attaches easily and offers easy and even beverage dispensing.
- Raised edge, spill proof rim prevents spills and leaks during transport.
- Pop-up vent on all models helps to equalize pressure and release steam.
- Self-adhesive beverage labels included for quick identification of contents.
- Optional Condiment Holder and Riser available for 250LCD.
- Optional Camdollies® offer easy transporting.
- Non-electrical.
- No assembly required.
- Available in 8 colors.

Models CD1420, CD2028

StoreSafe

Features & Benefits

- Make any job easier by smoothly transporting stacks of milk crates with these rugged and reliable Camdollies!
- Load capacity:
  - Model CD1313 - 250 lbs. (114 Kg.)
  - Model CD1327 - 300 lbs. (136 Kg.)
  - Models CD1420, CD2028 - 350 lbs. (159 Kg.)
- One-piece seamless, double-wall, high-density polyethylene construction is extremely durable. Won't rust or corrode.
- Rounded corners protect walls, equipment, and furniture from damage.
- Foamed-in-place polyurethane core adds greater structural strength and reduces noise.
- Easy to clean - can be wiped down or steam cleaned.
- All models have four each 3" (7,6 cm) swivel casters, no brake, bolted into molded-in steel plates. Provides quiet service and greater durability when fully loaded.
- No assembly required.
- Available in 7 colors.

Product: Scoot™ Book Truck - 6 Sloped Shelves

Manufacturer: SAFECO

Location: Book Rooms

The Scoot™ Double-Sided Book Cart is a steel book cart with tubular steel legs and black powder coat finish. The dual-sided cart has six slanted shelves, measuring 8"D with 12" between shelves. The book cart includes a height-adjustable file pocket and complements entire Scoot line of product solutions. Mobile cart moves on over-sized casters.

Model # 5335BL

Product Details

- Steel book cart with tubular steel legs and black powder coat finish
- Overall Dimensions: 41-1/2"H x 44-1/4"W x 17-3/4"D
- Product Weight: 62.4 lbs
- Double-sided cart has six slanted shelves 8"D with 12" between shelves
- Includes a height-adjustable file pocket
- Mobile cart on over-sized casters
- Complements entire Scoot line of product solutions

- 20-Gauge steel construction
- Weight Capacity: 50 lbs per shelf
- Includes height adjustable file pocket
- 3 in. casters (2 locking) for easy mobility
- Assembly required
- Green Guard certified
- Warranty: 5 years
- Made in the USA

Scoot™ Book Carts

5335BL

5336BL

- steel cart with tubular steel legs and black powder coat finish
- two styles: single and double sided
- single-sided cart has three slanted shelves 12½"d x 12¼"h
- double-sided cart has six slanted shelves 8"d with 12" between shelves
- includes a height-adjustable file pocket
- mobile on oversized casters
- complements entire Scoot line of product solutions

A Series

Solid Door Reach-In Refrigerators & Freezers

MODEL #178A35RHC

CABINET CONSTRUCTION

Cabinet construction includes white painted aluminum interior and 430 stainless steel exterior.

Foamed-in-place CFC- and HCFC-free polyurethane insulation helps provide structural rigidity and maintain internal temperatures.

Removable one-piece grill for cleaning and servicing.

Door has stay-open feature beyond 90˚ for easy loading, but will self-close under 90˚ to save energy.

REFRIGERATION SYSTEM

Environmentally-safe R290 refrigerant. Bottom-mounted condensing unit positioned for easy maintenance.

Bottom-mounted condensing unit positioned for easy maintenance.

SHELVING

6 gray epoxy-coated steel shelves included.

Each accommodates up to 90 lb.

MODEL FEATURES

Preprogrammed digital controls feature auto-defrost function.

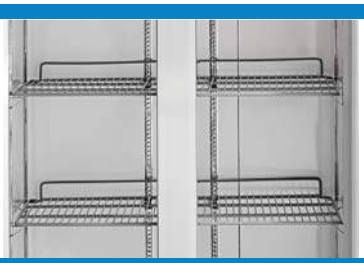
"No stoop" lower shelf raises product to a higher level for easy access.

A SERIES REACH-IN REFRIGERATOR

Keep ingredients within a safe temperature range in a sleek, durable, and easy-to-clean environment

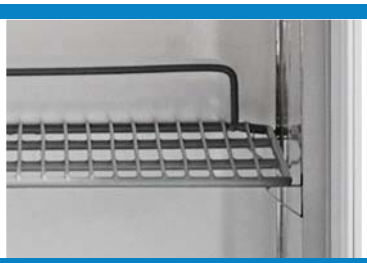
SPECIAL FEATURES

- Easy-to-clean 430 series stainless steel exterior
- Painted aluminum interior
- Self-closing door with convenient stay-open feature
- Temperature range of 33-40°F
- 6 shelves included
- Environmentally-safe R290 refrigerant
- Digital temperature controller with automatic defrost function
- 115V; 1/4 HP
- ETL Safety & Sanitation Listed



★ Conforms to UL & NSF-7 Standards

WARRANTY



RESIDENTIAL: Avantco assumes no liability for parts or labor coverage for component failure, factory defect or any other damages for units installed in non-commercial foodservice or residential applications.

Item #177GRI20FW

Commercial Reach-in Freezer

19.42 Cu. Ft.

Features:

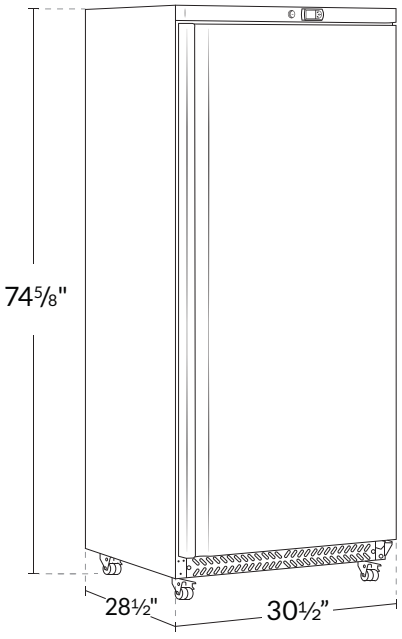
- Interior LED Lighting
- Full Length Door Handle
- Temperature range of -8–(-1°F.)
- Digital temperature controller with automatic defrost function
- 6 poly-coated metal shelves each hold 66 lb.
- ETL Safety and Sanitation listed
- Includes 4 casters (2 brakes, 2 without).
- Eco-friendly R290 hydrocarbon refrigerant.
- Bottom mount condensing unit for more convenient maintenance.
- 115V; 3/4 hp

Cabinet Construction:

Sturdy design features white powder-coated steel exterior and white painted aluminum interior.

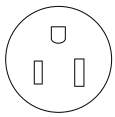
Foamed-in-place CFC- and HCFC-free polyurethane insulation enhances the structural integrity of the cabinet and promotes energy efficiency.

Refrigeration System:



Environmentally-safe R290 refrigerant. Bottom-mounted condensing unit positioned for easy maintenance.

Shelving:



Features 6 poly-coated metal shelves that can each handle up to 66 lb.

Model Features:

- Easy to maneuver with 4 casters, including 2 with brakes to prevent unwanted movement.
- Automatic defrost mode improves the overall effciency of the refrigeration system.
- Full length handle for easy use.
- Digital temperature controller.

Warranty Information

1 Year Limited Replacement Warranty - Valid Only in the Continental United States

Galaxy Kegerators, Chest Freezers, Refrigerated Merchandisers, and Reach-ins Only.
Unless otherwise stated, Galaxy Equipment warrants to the original purchaser of new, qualified Galaxy Equipment units (and all parts thereof), that such equipment will be free from defects in material and workmanship for a period of 1 year from the date of delivery.
If a qualified product is found to be defective during this period, Galaxy Equipment will repair the defective unit, replace any defective parts, or replace the defective unit.

What This Warranty Does Not Cover:

Galaxy Equipment will not warrant coverage for component failure or other damages that arise under the following conditions:

- Failure to install and/or use the unit within proper operating conditions specified by Galaxy Equipment.
- Failure to properly maintain the unit. This includes, but is not limited to, basic preventative maintenance like cleaning the condenser coil.
- Products sold or used outside of the Continental United States.
- Any damage that occurs as a result of negligence or improper handling.
- Overloading or improper loading of the unit in a manner that prevents proper airflow.
- Void in mobile settings.

Additionally, no claims can be made against this warranty for spoilage of products, loss of sales or profits, or any other consequential damages.

Normal wear type parts, such as light bulbs and gaskets, are not included in warranty coverage.

For Warranty Inquiries or Service:

To obtain warranty service, contact the location where you purchased the product:

www.WebstaurantStore.com:
Call 717-392-7472. You must have your order number ready when contacting.

The Restaurant Store:
If you purchased this unit from your local store location, please contact your store directly.

www.TheRestaurantStore.com:
If you purchased this unit online, call 717-392-7261.
You must have your order number ready when contacting.

Failure to contact the designated location prior to obtaining equipment service may void your warranty.

Options

- ☐ Water Hammer Arrestor
- ☐ Scaltrol
- ☐ False Panel (for corner installations)
- ☐ Flanged Feet
- ☐ Front Dress Panel
- ☐ Audible Low Product Alarm
  (available only on 115v models)

Accessories

- ☐ 36-Compartment Rack
  - ☐ 4-1/8” tall (105 mm)
  - ☐ 5-5/8” tall (143 mm)
  - ☐ 7” tall (178 mm)
- ☐ Combination Rack
- ☐ Peg Rack

Specifications

- Uses 1.02 gallons (3.86 liters) water per rack
- 41 (39)* racks per hour
- Single point electrical connection
- Self-draining stainless steel pump eliminates soil/detergent carryover between wash and rinse cycles
- Fill and Dump design disposes of dirty water, replacing it with a fresh water rinse every cycle
- Field convertible from straight to corner and vice versa for flexible installations and applications (kit required)
- 17-1/4” (438 mm) vertical inside clearance
- Built-in chemical pumps and priming switches
- Large removable scrap screen
- Durable stainless steel construction

CASTERS

Each set of Regency casters lets you turn any work table or equipment stand with 4 or 6 standard legs into a mobile work station. With a total weight capacity of 1200 to 1600 lb., these wheels can stand the toughest of tests and are sure to meet your needs. Take your table or equipment on the go and then keep it secure with the flip of a lever, conveniently placed at foot level for easy locking and unlocking.

BULLET FEET

Make sure your table, compartment sink, or dishtable is level and stable by replacing a missing or broken bullet foot with these Regency Bullet Feet! They are designed to fit equipment with 1⅝” outer diameter legs and are adjustable so they can accommodate uneven floors.

FLANGED FEET

If you need to bolt your Regency equipment to the floor for added stability during use, this flanged 3¼” seismic foot is the perfect solution! It is designed to swap out easily for an existing foot on Regency products with legs that measure 1⅝” in outer diameter. Feet like these are typically used to comply with local codes, which require you to secure equipment to the floor, and in situations where keeping your equipment immobile could be useful, like on a food truck.

UNDERSHELVES

Add extra storage space and organization to your kitchen with a Regency adjustable stainless steel work table undershelf! Undershelves provide additional storage for frequently used items like prep tools, cutting boards, bar towels, oven mitts, pans, and trays. These undershelves are adjustable, so you can move them higher or lower to accommodate items of varying sizes. Made of 18 gauge, type 430 stainless steel, Regency undershelves ensure maximum durability and corrosion resistance, and are easy to clean and sanitize.

STAINLESS STEEL OVERSHELVES

Add extra storage space and organization to your kitchen with these Regency stainless steel overshelves! Available in single or double deck, their 18 gauge, type 430 stainless steel construction ensures long-lasting durability to stand up to repeated use. Installation is simple as the whole shelf easily mounts to the end of your table using the “L” brackets, set screws, and wrench provided.

DRAWERS

Keep your kitchen organized by mounting a Regency galvanized steel drawer to the under structure of your work table. Each drawer features an easy-to-clean stainless steel front and moves on ball-bearing sides.

Product: 20-Pan End-Load Sheet Pan Rack

Wish List | Rapid Reorder

Steelton's 20 pan end load bun pan rack is a space-efficient storage solution for your bakery or supermarket.

A 20 pan end load sheet pan rack from Steelton is designed to hold and transport a variety of your most popular baked goods or meats. This rack is durable, high quality, and will save precious space for your catering business, bakery, cafe, supermarket, or restaurant. This rack provides chefs with the ability to store multiple sheet pans in one convenient location and also facilitates proper cooling of your freshly baked treats. Additionally, this rack works well for storing trays of food at hospitals, cafeterias, or health care facilities.

NSF Listed

This item meets the standards imposed by NSF International, which focuses on public safety, health, and the environment.

Generous Storage Capacity

This rack can hold 20 full size sheet pans or 40 half size sheet pans. It can support up to 75 lb. per pair of slides and up to 350 lb. total, making it a heavy-duty and durable option for any business. Each set of slides are spaced 3" apart, which means there will be plenty of room for your treats to cool properly. This generous spacing also gives you the ability to store foods that are not completely flat.

Non-Marking Casters

This space-saving sheet pan rack features 5" non-marking polypropylene swivel casters. These casters are quiet, will not damage your floors, and make transportation a breeze.

Six Cross Supports

This rack features six cross supports for outstanding strength and durability. These supports pair with a curved top design and heavy-duty aluminum construction for the ultimate in sheet pan storage and transportation.

Ships Unassembled

Because this product ships unassembled, you will save money on shipping and processing costs. Once you receive your tray rack, you will find assembly quick and easy.

StoreSafe

Features & Benefits

- Large capacity Camcarts easily handle storing and transporting food for any catering job, large or small, hot or cold foods. May also be used for health care meal tray service.
- GN 1/1 Full Size Food Pan capacity per compartment:
  Model UPC800, UPC800SP
  2 each 8" (20 cm) deep, 3 each 6" (15 cm) deep,
  4 each 4" (10 cm) deep, or 6 each 2½" (6,5 cm) deep
  Also holds GN 1/2 & GN 1/3 Size Food Pans and 4 each Metric Camtrays® (#3253).
  Model UPC1600, UPC1600SP, UPC1600HD, UPCGL1600SP
  4 each 20 cm deep, 6 each 15 cm deep
  8 each 10 cm deep, or 12 each 6,5 cm deep
  Also holds GN 1/2 Long Size Food Pans and 8 each Metric Camtrays® (#3253).
- Store hot and cold foods in the same compartment with the use of the optional ThermoBarrier® Insulated Shelf Divider. Keep food chilled for 8 hours or more with the optional Camchiller®. No external power or ice required.
- Maintain hot food holding temperatures at higher levels and for longer when using two Camwarmers® inside each compartment of the UPC800 models.
- Tough, one piece seamless, double-wall, polyethylene construction is easy to maintain and won't dent, crack, rust, chip or break.
- Thick polyurethane foam insulated compartments and air tight gaskets help retain food quality and temperatures without the use of external heat sources.
- Durable nylon door latches are easy to open and close securely to provide maximum temperature retention. Doors open 270° to the side for easy loading and unloading.
- Vent cap on each compartment allows steam to be released and keeps menu items from becoming soggy.
- Mid-height molded-in vertical handles on the back provide effective maneuvering during transport. Molded-in bumper minimizes damage to walls and furniture.
- Four each 6" (15,24 cm) heavy-duty casters, 2 fixed, 2 swivel, 1 with brake, provide for smooth transporting and maneuvering across all types of terrain.
- UPC1600HD, UPC1600SP and UPCGL1600SP have heavy-duty, hi-modulus 6" (15,24 cm) x 2" (5 cm) 2 fixed, 2 swivel with brake casters.
- Security Package models are ideal for correctional facility use: Tamper-resistant screws on latches, non-removable doors, casters and chassis plates mounted with tamper-resistant bolts, locking hasp for padlocks (padlocks not included).
- Non electrical.
- No assembly required.
- Available in 11 colors.

Product: **Regency 24" x 48" 16-Gauge 304 Stainless Steel Commercial Work Table with Undershelf (Or Approved Equal)**

Manufacturer: Regency Tables and Sinks

Location: Cafeteria Kitchen

Utilize the space in your kitchen with this dependable 24" x 48" 16-gauge, 304-series stainless steel commercial work table from Regency Tables and Sinks. This unit not only provides plenty of room on its work surface, but also offers an 18-gauge, 430-series stainless steel undershelf to supply much needed space for food preparation, storing supplies, and other tasks within your business.

This Regency work table is both easy to clean and easy to maintain thanks to its durable, corrosion resistant material. Plus, it is mounted on (4) sturdy, 1 5/8" stainless steel legs with adjustable, metal, bullet feet for ample support. The top shelf boasts a weight capacity of approximately 560 lb., while the undershelf supports 340 lb. This amount of strength is extremely valuable in a restaurant or bar.

Item Number: #600TS2448S

CASTERS

Each set of Regency casters lets you turn any work table or equipment stand with 4 or 6 standard legs into a mobile work station. With a total weight capacity of 1200 to 1600 lb., these wheels can stand the toughest of tests and are sure to meet your needs. Take your table or equipment on the go and then keep it secure with the flip of a lever, conveniently placed at foot level for easy locking and unlocking.

BULLET FEET

Make sure your table, compartment sink, or dishtable is level and stable by replacing a missing or broken bullet foot with these Regency Bullet Feet! They are designed to fit equipment with 1⅝” outer diameter legs and are adjustable so they can accommodate uneven floors.

FLANGED FEET

If you need to bolt your Regency equipment to the floor for added stability during use, this flanged 3¼” seismic foot is the perfect solution! It is designed to swap out easily for an existing foot on Regency products with legs that measure 1⅝” in outer diameter. Feet like these are typically used to comply with local codes, which require you to secure equipment to the floor, and in situations where keeping your equipment immobile could be useful, like on a food truck.

UNDERSHELVES

Add extra storage space and organization to your kitchen with a Regency adjustable stainless steel work table undershelf! Undershelves provide additional storage for frequently used items like prep tools, cutting boards, bar towels, oven mitts, pans, and trays. These undershelves are adjustable, so you can move them higher or lower to accommodate items of varying sizes. Made of 18 gauge, type 430 stainless steel, Regency undershelves ensure maximum durability and corrosion resistance, and are easy to clean and sanitize.

STAINLESS STEEL OVERSHELVES

Add extra storage space and organization to your kitchen with these Regency stainless steel overshelves! Available in single or double deck, their 18 gauge, type 430 stainless steel construction ensures long-lasting durability to stand up to repeated use. Installation is simple as the whole shelf easily mounts to the end of your table using the “L” brackets, set screws, and wrench provided.

DRAWERS

Keep your kitchen organized by mounting a Regency galvanized steel drawer to the under structure of your work table. Each drawer features an easy-to-clean stainless steel front and moves on ball-bearing sides.

Product: **Regency 96" 16-Gauge Stainless Steel Two Compartment Commercial Sink (Or Approved Equal)**

Manufacturer: Regency Tables and Sinks

Location: Cafeteria Kitchen

This Regency 96" stainless steel two compartment sink with 2 drainboards is constructed from high-quality, 16-gauge type 304 stainless steel, making it more corrosion-resistant and durable than other sinks made from thinner, 18-gauge material. This sink features 2 sturdy, 24" drainboards. It's also dipped a minimum of 1/4" to facilitate better drainage, and the welded construction contributes to the long-lasting use and overall strength of this sink / drainboard combo.

The 12" deep bowls are die-stamped to a minimum of 1/4" to ensure proper drainage. Plus, each bowl includes a 3 1/2" basket strainer to catch food debris, which prevents the drain from clogging. For easy cleaning, each compartment has rounded corners so you can rinse and wipe down the sink.

A 9" tall backsplash is included and comes complete with (2) 1 1/8" diameter holes punched on 8" centers to accommodate 1 faucet (sold separately). This sink also includes a 1 1/2" raised rolled edge, which is 2" tall on the front and both sides to contain splashes and overflow. The legs are constructed of 1 5/8" diameter stainless steel with stainless steel cross-bracing and adjustable plastic feet for added stability. These features serve to prolong the life of your sink while adding exceptional strength to the unit.

Item Number: #600S2232324X

CASTERS

Each set of Regency casters lets you turn any work table or equipment stand with 4 or 6 standard legs into a mobile work station. With a total weight capacity of 1200 to 1600 lb., these wheels can stand the toughest of tests and are sure to meet your needs. Take your table or equipment on the go and then keep it secure with the flip of a lever, conveniently placed at foot level for easy locking and unlocking.

BULLET FEET

Make sure your table, compartment sink, or dishtable is level and stable by replacing a missing or broken bullet foot with these Regency Bullet Feet! They are designed to fit equipment with 1⅝” outer diameter legs and are adjustable so they can accommodate uneven floors.

FLANGED FEET

If you need to bolt your Regency equipment to the floor for added stability during use, this flanged 3¼” seismic foot is the perfect solution! It is designed to swap out easily for an existing foot on Regency products with legs that measure 1⅝” in outer diameter. Feet like these are typically used to comply with local codes, which require you to secure equipment to the floor, and in situations where keeping your equipment immobile could be useful, like on a food truck.

UNDERSHELVES

Add extra storage space and organization to your kitchen with a Regency adjustable stainless steel work table undershelf! Undershelves provide additional storage for frequently used items like prep tools, cutting boards, bar towels, oven mitts, pans, and trays. These undershelves are adjustable, so you can move them higher or lower to accommodate items of varying sizes. Made of 18 gauge, type 430 stainless steel, Regency undershelves ensure maximum durability and corrosion resistance, and are easy to clean and sanitize.

STAINLESS STEEL OVERSHELVES

Add extra storage space and organization to your kitchen with these Regency stainless steel overshelves! Available in single or double deck, their 18 gauge, type 430 stainless steel construction ensures long-lasting durability to stand up to repeated use. Installation is simple as the whole shelf easily mounts to the end of your table using the “L” brackets, set screws, and wrench provided.

DRAWERS

Keep your kitchen organized by mounting a Regency galvanized steel drawer to the under structure of your work table. Each drawer features an easy-to-clean stainless steel front and moves on ball-bearing sides.

1.6 CU. FT. INVERTECH MICROWAVE OVEN

Black Stainless Steel

1.6 Cubic feet 1200 watt Black Stainless Steel microwave with Inverter features innovative cooking technology and a spacious interior. The Inverter technology provides even heating and defrosting so you get great results without overcooking. Sensor buttons let you optimally cook six of the most popular food items with the touch of a button. Choose from ten power levels up to 1200 watts. The large digital display has a clock function and can also display a countdown timer as well as the cooking time remaining. Program up to three favorite time and power combinations for additional one-touch convenience. Easily open or close the microwave with the large, easy-to grip door handle. The Black Stainless Steel exterior looks good in any kitchen.

- Inverter technology for better thawing and reheating
- Pre-programmed sensor menu for optimum heating of popular foods
- Large digital display, easy-to-read control panel, safety lock, interior LED light, glass turntable

INVERTECH

Inverter technology provides even heating and defrosting, helping you make delicious food without overcooking. It can cook continuously at low power settings for accurate results, which helps your food maintain those essential vitamins and

nutrients for optimal taste of your favorite meals.

Control Matters

Quick-Touch Sensor Buttons

No guesswork needed for commonly microwaved foods. Press one of the pre-programmed buttons and the microwave automatically adjusts for different foods.

Simple Matters

Cook or Defrost

For reheating or cooking foods, use Cook Time and choose Power one through ten. Thawing meats, vegetables, or casseroles is easy - the inverter technology prevents overcooking.

Movement Matters

Turntable for Even Cooking

No guesswork needed for commonly microwaved foods. Press one of the pre-programmed buttons and the microwave automatically adjusts for different foods. Cook fresh vegetables, potatoes, reheat a frozen pizza, and more.

Description

Black Retail Counter Measures 72" Wide with Ledgetop Style

This black retail counter is great for handling transactions in a wide variety of stores. The cash wrap stand features a pull-out drawer for storing cash boxes, merchandise bags, extra receipt paper, and writing utensils nearby. This melamine retail counter also features a large ledgetop that gives customers room to place their phones or handbags during checkout. In addition, the cash wrap has a recessed well to conceal unsightly computer and electrical cords to reduce clutter. The sales counter has a large area for further storage, featuring two adjustable or removable shelves to hold merchandising supplies. Choose this 72" wide cash register stand to create an attractive checkout area for your business.

Please Note: We sell this retail sales counter unassembled (knocked down) to save you money on shipping costs. Included with these sales counters is a detailed instruction sheet. Assembly is simple, takes approximately 30 minutes, and requires an assistant.

Product: Glassless Mirror; 8' H

Manufacturer: Mirrorlite

Location: Dance Room and Weight Room

These shatterproof, lightweight mirrors provide a durable and safe alternative to traditional glass mirrors in a wide variety of settings.

Glassless Mirrors are much lighter than equivalently-sized plate glass mirrors, making them much easier and safer to install. They are shatterproof, easy to clean, and have a foam backing that absorbs sound instead of reflecting it. Ideal for dance studios, therapy rooms, bathrooms or dressing rooms and especially home gyms. Many mounting options are available to allow the mirror to best fit the intended space.

Product Details

- Foam back absorbs sound
- Easy to clean with soft cloth
- Perfect for gym or dance studio
- Lighter than normal glass panels
- Shatterproof for additional safety

Product: Screenflex Portable Room Dividers (Or Approved Equal)

Manufacturer**:** Screenflex

Location: Art Rooms

Simply roll one or more of these versatile, portable room dividers into position to divide a room or create an exhibit. They require no assembly and have self-leveling , locking caster wheels for instant stability. Set them up straight, in a curved or angled configuration, or lock several together for unlimited possibilities. Caster covers are included.

The durable fabric-covered panels are stain-resistant, sound-absorbent, and fully tackable - they accept pushpins, tacks, and staples. The partitions can double as a teaching tool when used to display artwork or other instructional materials. The frame is black powder-coated metal, with full-length black painted metal hinges. The fabric is treated with Scotchguard fabric protector.

Product: Portable Lectern

Manufacturer: Zimtown

Location: Carpentry and Automotive Classrooms

With a steel frame and mobility on four wheels, this multipurpose lectern is the best of both worlds with durability and versatility. Suitable for conference rooms, teaming rooms, classrooms, auditoriums, or any space that needs a commanding position from which to reach listeners.

Product Details

- Product Dimensions: 21.26" W x 17.32" D x 45.28" H
- Durable furniture-grade wood with stain and scratch resistant laminate finish top
- 2” casters with brakes on all 4 wheels for mobility
- Made from sturdy iron frame and MDF board, extremely high quality and strong durability
- Durable furniture-grade wood with stain and scratch resistant laminate finish top
- Weight: 30.64 lb
- Assembly required

.

Product: Signature Choral Riser

Manufacturer: Wenger Corporation

Locations: Auditorium Stage

Lightweight, easy to set up, durable choral risers.

Signature® Choral Risers were designed to incorporate every meaningful advantage: classic black styling; safe, simple setup; lightweight handling; superb stability; strong, quiet performance; easy mobility; long-lasting service; an integrated backrail with safety crossbar; and a full fifteen-year warranty. But what you might appreciate most of all is the easy-to-reverse design. You can change your riser arrangement quickly and securely. Optional siderails attach without tools. 3- and 4-step models roll easily through standard doorways. From initial set up through final performance, no other riser performs like Signature.

The Wenger Advantage

- The Ultimate Performance Riser – When superb stability and strong, quiet performance are what you're looking for, choose Signature.
- Safe, Simple Set Up – One person set up in a matter of minutes.
- Easy Mobility Within your Facility – Wheels and patented fold-down design makes maneuvering a breeze.
- Safe, strong, and stable – Your singers will feel confident standing on Signature risers. 150 lb live load capacity per square foot (732 kg capacity per square meter).
- Great Flexibility – Steps reverse for more configuration options.
- Quality Assurance – Fifteen-year warranty.

Product Details

- Patented fold-down design allows easy one-person setup
- Integral backrail with safety crossbar
- Optional easy-to-attach siderails for extra security
- Reversible steps provide the safety of bolted construction and lets you create new setup configurations
- 3- and 4-step riser sets available
- Steel construction for unparalleled stability and quiet performance
- Sturdy, permanently attached backrails with child-height crossbar
- Fifteen-year warranty

SIGNATURE® CHORAL RISER

The riser you've always wanted.

Wenger has reinvented the choral riser with every advantage you can imagine in a single, striking, easy-to-handle design. Classic black styling. Simple setup. Lightweight construction. Superb stability. Smooth mobility that fits through standard doorways. Quick step reversibility. Available in a 3-step or 4-step design with permanent backrail and an optional side rail set (2) for added security. A compact footprint for less storage space. All backed by Wenger's fifteen-year warranty. Wenger Signature Choral Risers – now you can have it all.

3-step Signature Riser shown with optional side rail

4-step Signature Riser shown with optional side rail

SIGNATURE® CHORAL RISER

Step supports are welded steel for maximum stability and strength. Backrails are permanently attached for maximum safety.

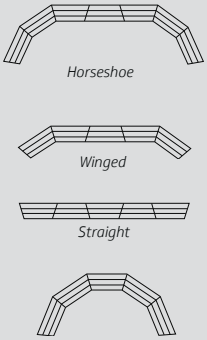
Signature is designed from top-rail to floor to ensure flawless operation and long-lasting good looks. The level of detail is exquisite, with carpet edges protected by structural aluminum extrusions for a finishing touch that adds both distinction and stability.

Both the 3- and 4-step models have a compact footprint. They tuck away into tiny areas, saving you precious storage space. And both Signature models fit through standard doorways.

Signature is easy for one person to roll and control.

Just maneuver it into place and unfold with a single fluid motion.

It sets up without tools to provide excellent stability.



Optional siderails provide additional security for performers of all ages.

RISER STEP REVERSIBILITY

Wenger makes it easy to change riser arrangements. Simply switch the position of the steps on the frame and reverse the horizontal back rail components on the vertical supports.

PRODUCT SPECIFICATIONS:

- Patented fold-down design is easy for one person to set up.
- Steel construction for unparalleled stability and quiet performance.
- Formal black styling is attractive and appropriate for any performance or venue.
- 3-step riser is 6' (1829 mm) wide at back of third step.
- 4-step riser is 6'-6¼" (1988 mm) wide at the back of fourth step.
- Both 3- and 4-step models fit through standard doorways.
- Both models feature a compact footprint for easier storage.
- Sturdy backrail with child-height crossbar.
- Option Siderail Set (2) for additional security is available as an accessory.
- Steps are 18" (457 mm) deep.
- Fifteen-year warranty.
- Assembly required.
- Environmental attributes and LEED compliance can be found at www.wengercorp.com/green-initiatives.php or by contacting your Wenger representative.

Product: Tourmaster Choral Riser

Manufacturer: Wenger Corporation

Locations: Choir Room

The lightweight, easy-to-set-up riser that's perfect for travel.

No other risers fold, roll, set up, or travel so smoothly. In fact, it's easy to take it around tight corners, across the parking lot, into a bus or a van. No wonder it's the #1 choral riser in the world.

Precision engineering and using only the best materials means Tourmaster risers will deliver reliable operation for a long, long time. It ensures that Tourmaster™ Choral Risers are definitely your best traveling riser value.

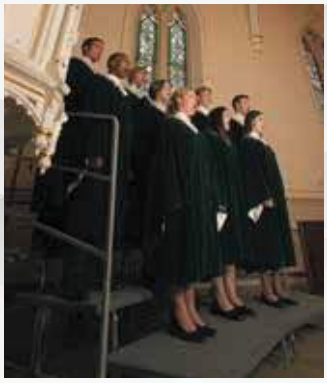
The Wenger Advantage

- #1 Choral Riser in the World – A proven design that can withstand the rigors of institutional use.
- Best Traveling Riser Value – Across country or across town, Tourmaster Risers fold, roll, and travel smoothly.
- Compact Storage Footprint – Minimal storage space required when not in use.
- Safe and Solid – A traveling riser with 125 lb per sq ft load capacity.
- Maximum Flexibility – Complete line of options and accessories available. Steps can be reversed for more configurations.
- Quality Assurance – Warranty.

Product Details

- Durable carpeted plywood steps in both 18" and 24" depth
  (24" option offers extra space for choirs that hold their music)
- Steps can be reversed to create different configurations (tools required)
- Optional 4th-step, backrails and siderails available
- Steel frame with heavy-duty wheels and built-in stair glides stands up to years of use
- 3-step models in 4', 4'-7" and 6' lengths
- Some assembly required
- Fifteen-year warranty

TOURMASTER® CHORAL RISER



The perfect riser for choirs on the go.

Tourmaster is the only choral riser truly designed to go where choirs go. Whether it's up stairs or around tight corners, each Tourmaster choral riser folds up flat and rolls with the stability and ease of a two-wheel cart. They're easy for anyone to maneuver, transport and set-up. Once in place, it takes just 10 seconds to unfold and lock into the upright position. And the Tourmaster Cart is the ideal tool for moving and storing multiple risers. Each cart holds up to four Tourmaster choral risers, backrails and 4th-step additions - the perfect solution for choirs that travel across the hall or across the country. No other comparable riser sets up so easily or stores in less space.

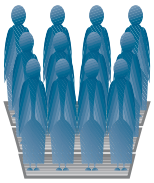
Tourmaster steps come in either 18" or 24" (457 or 610 mm) depths for performers of all ages. Optional backrails and siderails provide added security and a refined look. And like all Wenger products, Tourmaster is built extremely tough to ensure solid performances, year after year.

TOURMASTER® CHORAL RISER

18" (457 MM) 3-STEP 6' (1829 MM) TOURMASTER SETS

GROUP CAPACITY*	UNITS NEEDED	SPACE REQUIRED
12-16	1	6'w x 4'10"d (1829w x 1473d mm)
24-32	2	11'10"w x 6'4"d (3607w x 1930d mm)
36-48	3	17'5"w x 6'3"d (5309w x 1905d mm)
48-64	4	22'5"w x 7'7"d (6833w x 2311d mm)
60-80	5	26'10"w x 9'd (8179w x 2743d mm)
72-96	6	30'7"w x 10'10"d (9322w x 3302d mm)
84-112	7	33'6"w x 12'9"d (10211w x 3886d mm)
96-128	8	35'5"w x 15'd 10795w x 4572d mm

18" (457 MM) 3-STEP 4' (1219 MM) TOURMASTER SETS

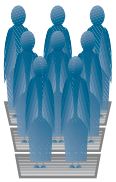


GROUP CAPACITY*	UNITS NEEDED	SPACE REQUIRED
8-12	1	4'3"w x 4'8"d (1295w x 1422d mm)
16-24	2	8'6"w x 5'd (2591w x 1524d mm)
24-36	3	12'7"w x 5'4"d (3835w x 1626d mm)
32-48	4	16'8"w x 6'1"d (5080w x 1854d mm)
40-60	5	20'4"w x 6'8"d (6198w x 2032d mm)
48-72	6	23'10"w x 7'8"d (7264w x 2337d mm)
56-84	7	27'w x 8'8"d (8230w x 2642d mm)
64-96	8	30'w x 9'11"d (9144w x 3023d mm)

24" (610 MM) 3-STEP 4'7" (1397 MM) TOURMASTER SETS

GROUP CAPACITY*	UNITS NEEDED	SPACE REQUIRED
8-12	1	4'7"w x 6'2"d (1397w x 1880d mm)
16-24	2	9'2"w x 6'6"d (2794w x 1981d mm)
24-36	3	13'6"w x 6'10"d (4115w x 2083d mm)
32-48	4	17'10"w x 7'7"d (5436w x 2311d mm)
40-60	5	21'10"w x 8'2"d (6655w x 2489d mm)
48-72	6	25'8"w x 9'3"d (7823w x 2819d mm)
56-84	7	29'2"w x 10'2"d (8890w x 3099d mm)
64-96	8	32'3"w x 11'6"d (9804w x 3505d mm)

18", 4' (457, 1219 mm), 4th-step addition will add space for 3-4 performers per unit. 24" (610 mm), 4th-step addition will add space for 3-4 performers per unit. 18", 6' (457, 1829 mm), 4th-step addition will add space for 4-5 performers per unit.



* First number indicates how many performers will fit on a riser set if all performers stand shoulder to shoulder. Second number indicates how many performers will fit on a riser set if they are all facing center with shoulders overlapping. Numbers include a row of performers standing on the floor. Adult groups should use the lower capacity number.

The 6' x 18" (1829 x 457 mm) Tourmaster accommodates 12 - 16 choir members.

Numbers vary depending on the physical size of members, overlapping shoulders and the use of the ground as an additional row. As a general rule, adult choirs should work with the smaller capacity number.

Note: Choral risers are not designed for dance or active choreography.

The 4' x 18" and 24" (1219 x 457 and 610 mm) Tourmaster accommodates 8 - 12 choir members.

Tourmaster Backrails and Siderails

Backrail Swing Bracket

Siderail Swing Bracket

Optional backrails and siderails are recommended for added security. They attach quickly and securely with swing brackets and without the need for tools.

Tourmaster 4th-Step Addition

An optional 4th-step addition is available for all Tourmaster Choral Risers. The 4th-step addition attaches to each corresponding Tourmaster Riser with integral leg clamps, without the need for tools.

Pops up in just 10 seconds.

Four-foot Tourmaster rolls smoothly and securely down the hall, around tight corners, even down stairs.

For set-up, Tourmaster unfolds easily like an accordion.

Just step on the frame and lift. The Lift Assist mechanism helps you raise the riser and lock it into the upright position.

Once set up, Tourmaster is as solid and stable as heavier fold-and-roll risers.

Take down is just as easy. Just activate the foot-pedal release, push and let down.

Tourmaster Cart
Perfect for moving and storing in your facility or traveling across the country.

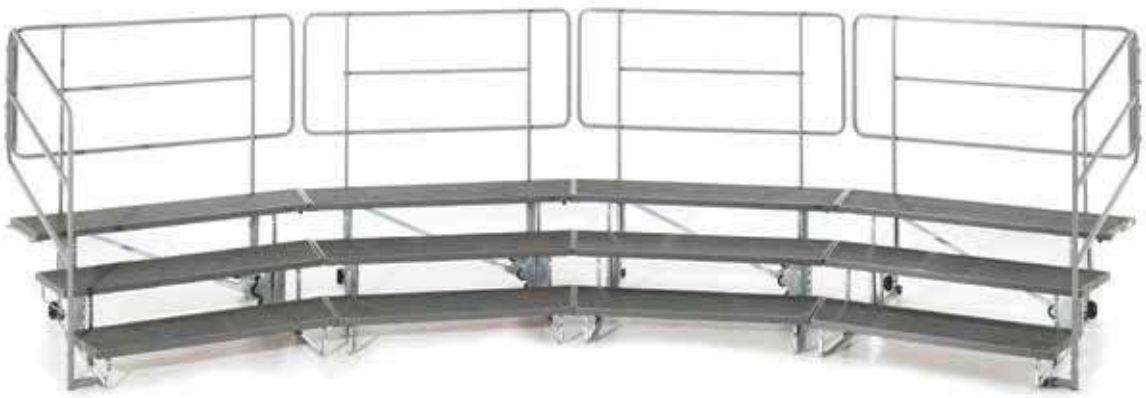
Tourmaster carts are available for 4' and 6' (1219 and 1829 mm) 18" (457 mm) steps, as well as the 24" (610 mm) step Tourmaster riser.

Carts have heavy-duty swivel casters for easy maneuverability and four pairs of Swing Arms that pivot outward for loading risers.

The Tourmaster cart holds up to four risers including four backrails and four 4th-step additions.

Backrails nest together on Backrail Supports for storage or transport.

Risers stack easily, by alternating the direction of the riser positioning wheels.



Each Swing Arm lifts upward and pivots outward for stacking each riser then inserts into holding sockets for a secure fit.

Four 4th-step additions can be stacked on top of the fourth Swing Arm then attached securely to the cart frame with buckled straps.

TOURMASTER® CHORAL RISER

COLORS

Grey

PRODUCT SPECIFICATIONS:

- One-piece design makes set-up extremely fast (10 seconds)
- Easily travels up and down stairs and around tight corners
- Foot pedal activated cross brace locks or releases leg structure automatically
- One person set-up for four-foot model; two people recommended for six-foot model
- Quality construction stands up to years of rough treatment
- Narrow footprint for compact storage
- Heavy-duty wheels and built-in stair glides
- Grey metallic powder-coat finish
- Carpet available in Grey
- Steps are bolted to understructure for maximum security and reduced riser noise
- 3-step/18"-deep (457 mm) model available in 4' and 6' (1219 and 1829 mm) lengths, both with optional 4th-step addition
- 3-step/24"-deep (610 mm) model available in 4'7" (1397 mm) length with optional 4th-step addition
- Swing brackets attach the 4th-step addition to each choral riser without the need for tools
- Steps can be removed and reversed to create semi-circular or straight arrangements as group size changes
- Optional backrail and siderail available for all models
- Backrails comply with OSHA standards and can extend the full riser width to create a continuous backrail when multiple units are placed side-by-side
- 15-year warranty against defects in materials and workmanship

PURCHASE ONLINE!

TOURMASTER CART SPECIFICATIONS:

- Cart holds up to four Tourmaster risers, four backrails and four 4th-step additions
- Buckled straps attach 4th-step additions securely to cart frame
- Backrails nest together on backrail supports
- 6" (152 mm) diameter casters, all 4 casters swivel
- Cart is steel construction with black baked on powder paint
- Lift and rotate swing arms move out of the way to allow risers to be easily loaded and unloaded
- Three cart sizes:
  Cart for 6' (1839 mm) Tourmaster risers with 18" (457 mm) steps, Part number: 024F950
  Cart for 4' (1219 mm) Tourmaster risers with 18" (457 mm) steps, Part number: 024F951
  Cart for 4'7" (1397 mm) Tourmaster risers with 24" (610 mm) steps, Part number: 024F952
- Fits through a standard 36" (914 mm) doorway – 24" (610 mm) riser requires 40" (1016 mm) doorway

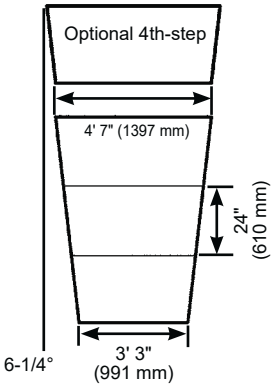
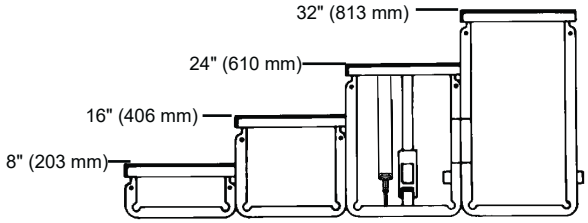
TECHNICAL SHEET

Tourmaster® Choral Risers

- 6' x 18" (1829 x 457 mm) unit 130 lb (59 kg).
  4' x 18" (1219 x 457 mm) unit 103 lb (47 kg).
  4'7" x 24" (1397 x 610 mm) unit 127 lb (58 kg).
- Load rating at 125 lbf/ft^2 (6 kN/m^2)
- Portable 3-step unit, accordion style design folds compactly.
- Ideal for groups that travel.
- Frame is 7/8" (22 mm) 14-gauge square tubing.
- Steps are 19/32" (16 mm) plywood covered with manufacturer's standard grey carpet.
- Step edging is Grey powder-coat paint finish.
- Foot-pedal activated cross brace locks leg structure automatically.
- Built-in reversibility allows for straight or semi-circular configuration.
- Units have 3" (76 mm) non-marring rubber casters, built-in stair glides, two 4" (102 mm) wheels for positioning.
- Available in 4' (1219 mm) and 6' (1829 mm) lengths with 18" (457 mm) usable step depth and 24" (610 mm) usable step depth.
- Environmental attributes and LEED compliance for this product can be found at www.wengercorp.com/GREEN or by contacting your Wenger representative.
- Fifteen-year warranty.





NOTE: Shown with optional back and side rail.

Accessories

- 4th Step Addition:
  - 6' x 18" (1829 x 457 mm) unit 55 lb (25 kg).
    Storage dimensions 5" deep x 22" wide x 94" long (127 x 559 x 2388 mm)
  - 4' x 18" (1219 x 457 mm) unit 45 lb (20 kg).
    Storage dimensions 5" deep x 22" wide x 70" long (127 x 559 x 1778 mm)
  - 24" (610 mm) unit 55 lb (25 kg).
- 4th Step Addition attaches to corresponding Tourmaster Riser with integral leg clamps, no tools needed. Must be removed prior to folding for storage.
- Back rails have positioning wheels so that backrail support bar does not encumber moving riser in setup position. Back rails break down without tools for easy travel.
- Back rails are Grey metallic powder-coat paint finish with quick and easy clamp attachment to 3-step unit or 4th step addition. 42" (1067 mm) height meets OSHA standards.
- 4' (1219 mm) Back rail 24 lb (11 kg).
  6' (1829 mm) Back rail 31 lb (14 kg).
- Optional Side rails 8 lb (22 kg) are Grey metallic powder-coat paint finish and clamp to both the Back rail and the Riser.
- Optional side rails are designed for risers set-up in the standard configuration. They do not fit on units set up in the reverse configuration.

Product: Manhasset™ Symphony 48 Music Stand (Or Approved Equal)

Manufacturer: Manhasset Specialty Company

Location: Band Room and Choir Room

High quality materials and renowned durability are what make the Manhasset 48 Symphony Music Stand the go-to music stand for all schools and serious musicians. This stand is used by more schools than all other music stands combined. The desk of this music stand measures 20"W x 12-1/2"H with a 2-1/4"D lip. The height of this music stand varies infinitely from 26" to 48" (lip to floor), with a maximum overall height of 60- 1/2 inches.

The powder coated, black textured finish is scratch and chip resistant. Easy, automatic, no-knob friction-tilt neck delivers constant tension at any tilt position. Solid-brass bearings, greaseless heavy-duty chrome inner shaft, and the "Magic Finger Clutch" provide one-hand friction grip. The heavy-gauge, all-steel welded base provides excellent stability. This stand comes with a 10-year manufacturer's warranty. Some assembly required.

Product: Manhasset™ 1910 Music Stand Storage Cart (Or Approved Equal)

Manufacturer: Manhasset Specialty Company

Location: Band Room and Choir Room

The Manhasset Storage Cart holds up to 25 concert music stands. This unit is built to allow easy racking and removal of music stands and provides convenient storage. It is made to strict high-quality standards, and with its strong welded steel construction, durable powder-coat finish, high-density polyethylene rail liner wheels, it will provide service for years to come.

It comes packaged with all the nuts and bolts necessary to easily assemble in minutes. Overall dimensions are 22" W x 92"D x 43" H.

Product: Model 2246 Basketball/Multisport Scoreboard (Or Approved Equal)

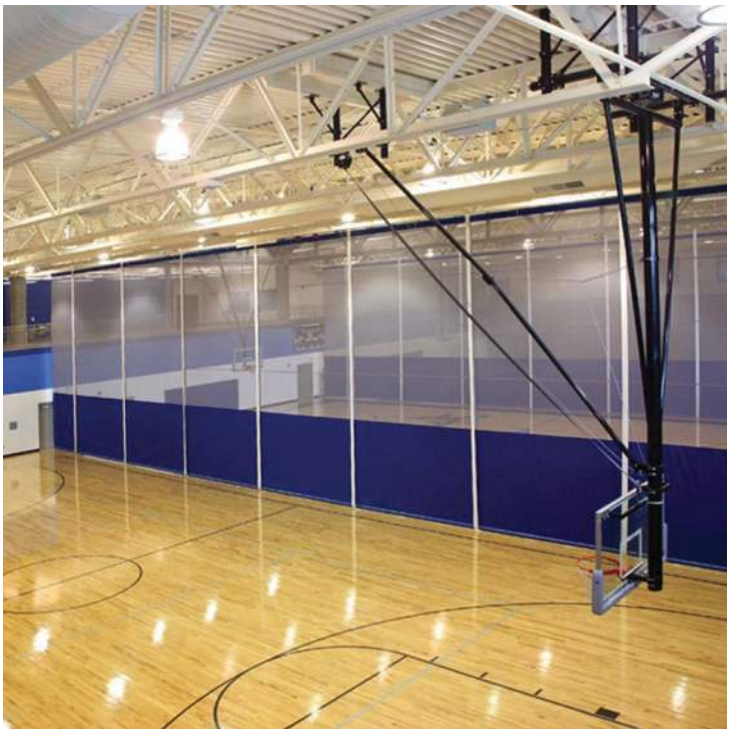
Manufacturer: Varsity Scoreboards

Location: Gymnasium

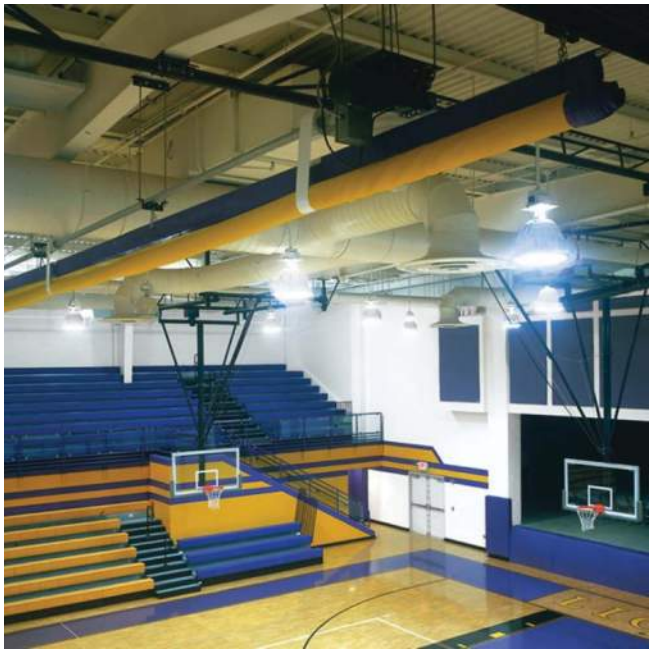
Designed for multiple sport applications, the Model 2246 is an all-around champion. The Model 2246 takes the configuration of the rock-solid Model 2236 and adds 15” displays for Player/Fouls. Conversion kits for Volleyball and Wrestling and a built-in horn are included. Time outs left are optional.

STANDARD COLORS

Product Details



- 15" amber and red super-bright LED numerals are 100,000-hour rated
- 22 gauge galvanneal steel cabinet with powder-coat finish - strongest cabinet in the industry
- 1/10th of a second timing feature in last minute
- Scores 0-199. Clock can count down 99:59 max.
- Includes horn, double bonus and possession indicators, as well as Time Outs Left displays
- Wireless remote control included
- Volleyball and Wrestling captions are available options.
- 5-Year limited warranty
- Dimensions: 8' x 5' x 8"
- Weight: 240 lbs
- Digit Sizes: 15", 2" dots and arrows
- Electrical: 20-amp, 120-volt, 60-hertz, grounded AC circuit
- Black finish and wall-mounted.



Product: Roll-Up Gym Divider Curtains (Or Approved Equal)

Manufacturer: Draper Inc.

Location: Gymnasium

Easy to operate, the Roll-Up Gym Divider Curtains feature a convenient and simple way to divide an area. The curtain hangs from overhead supporting steel structures. Heavy-duty hoist belts rotate a 4" (10 cm) diameter tube at the bottom of the curtain and with the turn of a key this motorized curtain unrolls as needed or rolls up for storage. Weld seams run horizontally the full width of the curtain. This provides a uniform and compact wrap of material onto the bottom batten as the curtain rolls up to its stored position. All hardware is heavy gauge stampings or welded construction.

Product Details:

- Curtain must be square or rectangular shaped. Vinyl coated polyester material is available in 18 oz and 22 oz.
- Maximum dimensions: 130’ wide, 32’ high.
- Minimum clearance recommended is 6" between vertical edges and all fixed objects.
- Outer edge hems are turned and welded to prevent fraying.
- Electronically welded, 1" wide full contact weld seams.
- Belts are flexible and cut straight and true to insure proper wrapping of belt onto drive pipe.
- Belts that guide roll up action are white polyester webbing.
- A 3’ recommended at ends of curtain for egress.
- Total hanging weight approximately ¾ lb per ft^2.
- Stacking dimension is approximately 2’ from drive attachment point.
- Includes electric winch.

GYM DIVIDER CURTAINS ROLL-UP

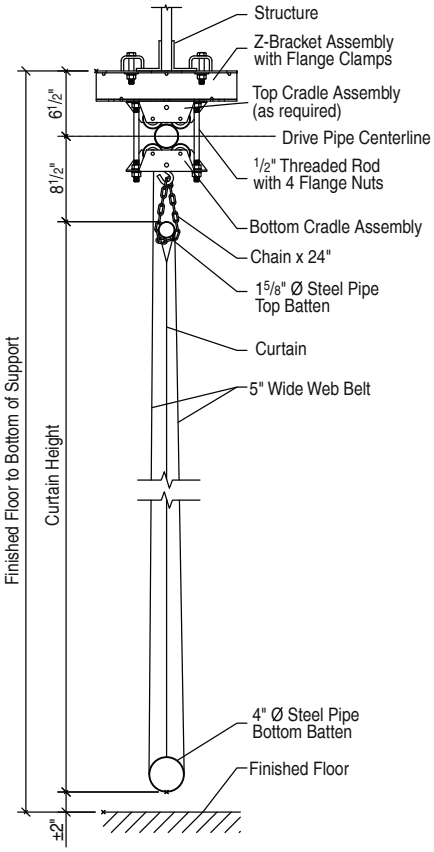
ROLLER ACTION, ROLLS UP FROM BOTTOM

- Easy to operate, the Roll-Up Gym Divider Curtains feature a convenient and simple way to divide an area. The curtain hangs from overhead supporting steel structures. Heavy-duty hoist belts rotate a 4" (10 cm) diameter tube at the bottom of the curtain and with the turn of a key this motorized curtain unrolls as needed or rolls up for storage. Weld seams run horizontally the full width of the curtain. This provides a uniform and compact wrap of material onto the bottom batten as the curtain rolls up to its stored position. All hardware is heavy gauge stampings or welded construction and the vinyl coated polyester material is available in 18 and 22 oz (510 and 624 g).

FEATURES:

- Must be square or rectangular shaped.
- Electronically welded, 1" (25 mm) wide full contact weld seams.
- Outer edge hems are turned and welded to prevent fraying.
- Belts that guide roll up action are white polyester webbing.
- Belts are flexible and cut straight and true to insure proper wrapping of belt onto drive pipe.
- Includes electric winch.

WEIGHTS/MEASURMENTS:



- Maximum dimensions: 32' (9.75 m) high, 130' (39.62 m) wide.
- Stacking dimension is approximately 2' (60.9 cm) from drive attachment point. Minimum clearance recommended is 6" (152 mm) between vertical edges and all fixed objects.
- A 3' (91.4 cm) recommended at ends of curtain for egress.
- Total hanging weight approximately ¾ lb per ft² (3.66 kg/m²).

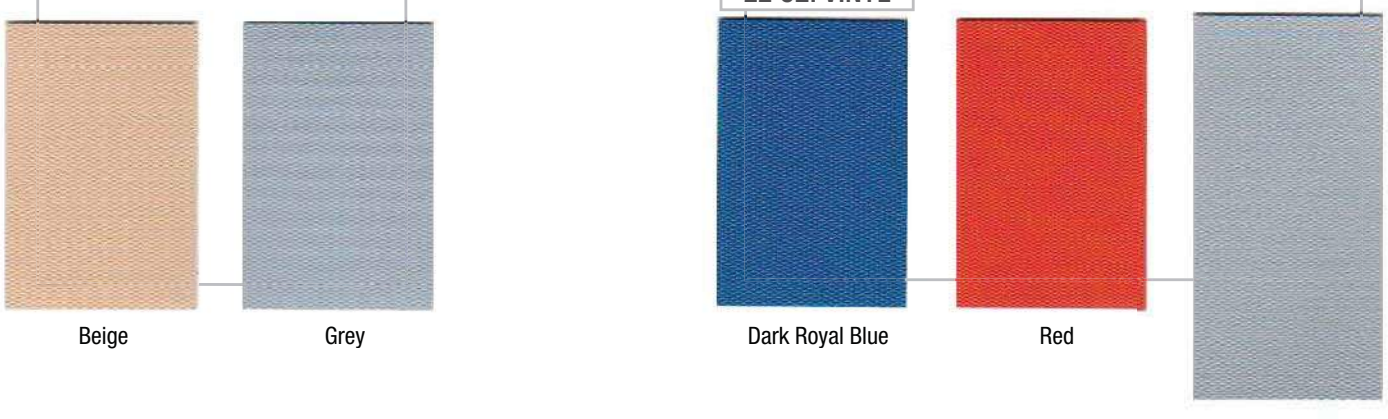
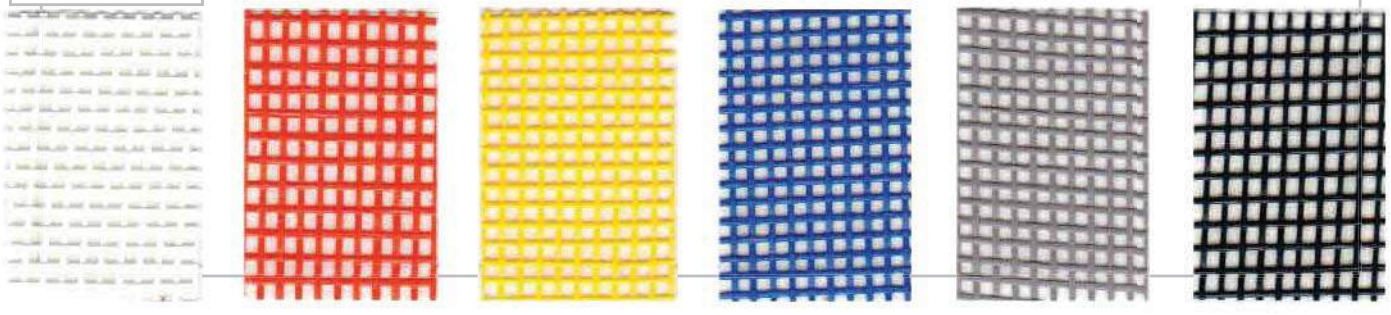
GYM DIVIDERS SWATCH COLORS

SOLID OR MESH STYLE



- Gym Dividers by Draper are constructed of the highest quality reinforced vinyl. Select a vinyl-coated polyester mesh to facilitate air flow, a tough solid vinyl to provide a visual barrier between play areas, or a combination of mesh on top and solid on the bottom.

Additional technical data on reverse side.



18 OZ. VINYL

22 OZ. VINYL

MESH

GYM DIVIDERS SWATCH COLORS

SOLID OR MESH STYLE

- Only the finest quality goods are used in Gym Dividers by Draper. All Fold-Up, Ridge-Fold and Walk-Draw curtain seams run vertically and are electronically welded with a one–inch full contact weld. Vertical seam fusion has a superior construction advantage over horizontal seams in its resistance to tearing and breakaway. Due to the rolling action of Mid-Roll, Top-Roll and Roll-Up Dividers, horizontal seams are required. Vinyl coated polyester materials are flame, fade and mildew resistant, and washable.

SOLID STYLE

Fabric is a durable vinyl coated polyester. Excellent for creating a visual barrier between play areas.

18 OZ. VINYL TECHNICAL DATA
General: Solid fabric is a vinyl coated polyester
Weight: 17 oz. to 19 oz. per square yard (avg. 18 oz. per square yard)
Resistance to rot, mildew and fungus: Excellent
Ultraviolet resistance: Excellent
Fire retardant ratings: ASTM E 84-Class A Rating; NFPA 701 (Test 1) ; California State Fire Marshall (CSFM) Title 19
Off-Gassing/VOCs: UL GREENGUARD GOLD
(see right for technical details)

22 OZ. VINYL TECHNICAL DATA
General: Solid fabric is a vinyl coated polyester
Weight: 20 oz. to 23 oz. per square yard (avg. 22 oz. per square yard)
Resistance to rot, mildew and fungus: Excellent
Ultraviolet resistance: Excellent
Fire retardant ratings: ASTM E 84-Class A Rating; NFPA 701 (Test 2) ; California State Fire Marshall (CSFM) Title 19
Off-Gassing/VOCs: UL GREENGUARD GOLD
(see right for technical details)

MESH

Fabric is vinyl coated polyester woven from textilene yarn in a one-over-one weave pattern. The yarn is composed of pigmented vinyl, 80%, and 1000 denier polyester, 20%. Economical way to divide floor space without creating sight limitations, and at the same time, facilitate air flow.

TECHNICAL DATA
Weight: Avg. 9 oz. per square yard
Resistance to rot, mildew and fungus: Excellent
Ultraviolet resistance: Excellent
Fire retardant ratings: NFPA 701 (Test 1); California State Fire Marshall (CSFM Title 19
Off-Gassing/VOCs: UL GREENGUARD GOLD
(see right for technical details)

GREENGUARD

TECHNICAL DATA
Draper 18 oz. and 22 oz. Divider Curtain Vinyl and Divider Curtain Mesh have been submitted to IAQ (indoor air quality) evaluation in accordance with UL 2811 test method to show compliance with emissions limits on UL 2818 Section 7.1 and 7.2. Materials are tested in accordance with ANSI/BIFMA M7.1-2011 and determined to comply with ANSI/BIFMA X7.1-2011 and ANSI/BIFMA e3-2014e credit 7.6.1, 7.6.2 and 7.6.3. Material emissions of total volatile organic compounds of < 0.22 mg/m3, formaldehyde ≤ 0.0135 ppm, total aldehydes ≤0.043 ppm, individual volatile organic compounds ≤ 1/1000 TLV and ≤ ½ chronic REL and total phthalates ≤ 0.01 mg/m3.

Product: Rogue Deadlift Platform (Or Approved Equal)

Manufacturer: Rogue Fitness

Location: Weight Room

Speed work is an essential component of any strength program, and a dependable platform can build the literal foundation for it. The 8' x 4' Rogue Deadlift Platform features a 2x2" 11-Gauge Steel frame, and ships standard with (2) floor plates. This design allows for safe band use outside of a power rack without having to bolt the platform to the floor (Rouge Fitness's standard Oly Platform, by comparison, requires bolting to the ground for band work).

Customers can quickly assemble the Rogue Deadlift Platform thanks to a bolt-together design and laser-cut / precision-bent gussets. The provided band pegs are extra long to work with longer specialty barbells in addition to standard barbells, and a set of floor clips are included to secure each end of the platform to the ground.

There are several flooring options for this platform:

- Rubber Tiles: An 8 Pack of 24x24x1.5" Rubber Tiles is available with this product.
- Combination of Plywood and Stall Mats: Lay 1 full sheet of 3/4" plywood down as the base. Cut two 2' wide strips of stall mat and one 4x4' piece of 3/4" plywood to be used as a top layer.
- No Flooring

<u>Optional Upgrade - Custom Built Wood Insert Set</u>

To help create and sustain a more level surface when using the floor plates, we're now offering an optional upgrade with a set of (3) pieces of radiata pine plywood, which can be inserted between the steel floor plates. Two of the wood pieces are 47.5" x 27.5" x .375" thick, and the third (middle) piece is 47.5" x 31.75" x .375". Once the wood pieces are inserted between the slats, customers should still use rubber tiles or stall mats as their lifting surface.

SKU# RF0252

Product Details

- Made in the USA with imported rubber tiles
- Length: 8' 4"
- Width: 4' 4"
- 2x2" 11-Gauge Steel frame
- Laser cut and precision bent gussets
- Bolt together design
- (4) Floor clips to secure each end to the ground
- NEW - Optional Wood Insert Set to create more level surface
- Black Powdercoat Finish

Product: Rogue Monster Lite Rig 2.0 - Base Edition (Or Approved Equal)

Manufacturer: Rogue Fitness

Location: Weight Room

The Base Edition of the Rogue Monster Lite Rig 2.0 maintains the specs of the original model, with 3x3" 11-Gauge Steel uprights, 5/8” holes, and a combination of X-43 and X-70 crossmembers. It’s a versatile variation on the heavy-duty Monster Rig that offers full compatibility with Infinity Series crossmembers.

The Monster Lite Rig is manufactured in Columbus, OH, and designed with infinite customization options in mind. Available in four standard lengths (10', 14', 20', 24'), the unit can be expanded by 4' and 6' sections and is compatible with a broad range of accessories, including Monster Lite Plate Storage Posts, Safety Spotter Arms, the Matador, and more.

Well suited to garage gyms and large-scale training facilities, a standard-size Monster Lite Rig can instantly create between 2 and 6 squat/bench stations and 6-14 pull-up stations (see sizing breakdown below). The system includes fully adjustable pull-up bars (with optional Dirty South Bar), all necessary Black Zinc 5/8" bolts and fasteners, Monster Lite J-cups, and 9-foot uprights. 10 Custom Semi Gloss Powdercoat Color Uprights are available, along with the Original Rogue Black Powdercoat. Original Black Powdercoat comes with Bright Zinc 5/8" bolts and fasteners.

- SKU RF06158-24
- 4'+6'+4'+6'+4'
- 6 Squat/Bench Stations
- 14 Pull-Up Stations
- 6 Pair Monster Lite J-Cups
- 12 108" Uprights
- 6 X-43 Parallel Pull-Up Bars
- 10 X-70 Parallel Pull-Up Bars

Product: **SAML-24 Monster Lite Safety Spotter Arms; Pair**
(Or Approved Equal)

Manufacturer: Rogue Fitness

Location: Weight Room

Compatible with all Monster Lite racks, Rogue's heavy-duty 24" Safety Spotter Arms are designed to protect both the weightlifter and the bar itself.

When adding spotter arms to an existing rack, dependability is always the optimum word--particularly for athletes training alone in a home gym or garage gym. This is why Rogue manufactures its Monster Lite Spotter Arms from 3x3" 11-gauge steel tubing, with welded-on end-plates for additional safety and specially designed hitch-pins to lock the spotters in place. The arms feature a UHMW plastic insert on top to protect the knurling of your bars.

Like all products in the Monster Lite line, these spotters feature 5/8" holes and a 5/8" pin, rather than the 1" varieties of the standard Monster Spotter Arms.

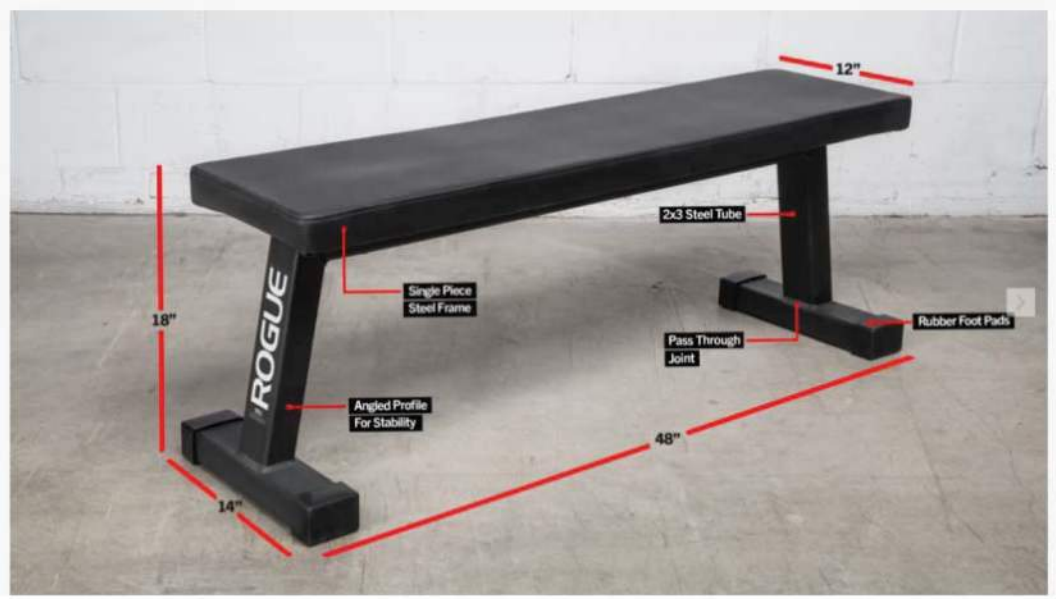
- UHMW plastic inserts
- Monster Lite Compatible
- Made in USA

Product: Rogue Flat Utility Bench 2.0 (Or Approved Equal)

Manufacturer: Rogue Fitness



Location: Weight Room

No nonsense. No limitations. No assembly required. The redesigned Rogue Flat Utility Bench takes the weight bench back to basics, featuring 2x3" 11-gauge steel construction, a high-density Neoprene pad, and a pair of angled, wide-set legs for maximized stability.

Ergonomically designed and built in the USA, the Flat Utility Bench 2.0 ships fully assembled and offers a needed antidote to the wobbly flat benches and unwieldy FID weight benches routinely imported by the big box stores. While easy to maneuver at just 40 pounds, the Flat Utility Bench is also heavy-duty enough for a tank to sit on it. So no matter the size of the athlete or the intensity of the workout, you've got a rock solid foundation underneath you.

Built in Columbus, Ohio, Version 2.0 of the Rogue Flat Utility Bench introduces a new single-piece frame, made from thicker 2x3" 11-gauge steel, notched and formed. We've also replaced the original butt joint at the base of the unit with a stronger pass-through joint. These upgrades not only improve the bench's durability, but also remove any assembly requirements for the user.

Another key update with the Rogue Flat Utility Bench 2.0 is a new angled profile, as the legs jet out slightly to form an even more stable foundation. A set of attachable rubber feet are also now included with each order, replacing the original plastic caps. These attachments not only add another stabilizing element, but also protect your flooring from scrapes and scuffs.

Product Details

- Overall Dimensions: 14" W x 47" L x 18" H
- Foot Print: 14" x 48"
- Steel Notes: 2x3" 11-gauge steel
- Pad Dimensions: 12" W; 2-1/4" thick
- Made in the USA

Product: AB-2 Adjustable Bench (Or Approved Equal)

Manufacturer: Rogue Fitness

Location: Weight Room

With more than 50 combinations of seat and back-rest positions to choose from, the AB-2 Rogue Adjustable Bench can easily adapt to each individual athlete, improving the overall efficiency and productivity of any strength training facility. No matter your size, workout preferences, or available training space, this compact, 11-gauge steel bench provides the rare combination of sturdiness and maneuverability that few other adjustable weight benches even attempt to match.

The AB-2 Rogue Adjustable Bench includes six different seat settings and nine additional back rest positions, making it easily among the most versatile weight benches on the market. Unlike most commercial-brand FID benches, though, this customization element is not achieved at the expense of quality craftsmanship. Made in America, the AB-2 is a direct descendant of the time-tested Nebula 1080 Utility Bench, and includes load-bearing rubber feet for stability, cordura edges for enhanced durability, and a convenient handle and wheels for easy mobility.

RA0280-12

Product Details

- Adapted from the Nebula 1080 "Awesome" Utility Bench
- Weight: 94 lbs.
- Length: 52”
- Pad Width: 12”
- Height: 18”
- Footprint: 51 ¼” x 22 ½”
- Steel: 2 x 2" and 3 x 3" 11-Gauge Steel
- 6 Adjustable Seat Settings
- 9 Adjustable Back Pad Settings (from flat bench to 85 degrees upright)
- Made in the USA

Product: AB-3 Adjustable Bench (Or Approved Equal)

Manufacturer: Rogue Fitness

Location: Weight Room

The heavy-duty Rogue AB-3 Adjustable Bench features the same 50+ seat and back-pad position combinations as our AB-2 Bench, but with unique functionality in either the incline or decline position at each setting.

Built in the USA from 11-gauge steel, the AB-3 is a direct descendant of the time-tested Nebula 1080 Utility Bench, with a sturdy but maneuverable design ideally suited for dynamic training or for gyms serving multiple athletes. An updated spine construction also allows for the connection of a new telescoping foot catch assembly, which locks firmly into place using a simple pop pin. The foot catch sets the user up for movements including the decline bench, decline dumbbell press, and decline sit-ups, among others.

Other standard features on the AB-3 Adjustable Bench include load-bearing rubber feet for stability, cordura edges for enhanced durability, and a convenient handle and wheels for easy mobility.

RF07072

- Includes NEW Decline Bench feature
- 6 Adjustable Seat Settings
- 9 Adjustable Back Pad Settings
- Weight: 117 lb
- Length (with bench flat): 68"
- Pad Width: 12"
- Height: 18"
- Steel: 2x2" and 2x3" 11-Gauge Steel
- Made in the USA

Product: Rogue Vertical Plate Tree 2.0 (Or Approved Equal)

Manufacturer: Rogue Fitness

Location: Weight Room

The simple, old-school plate tree is still the gold standard when it comes to efficient bumper storage at affiliates and garage gyms around the globe. That said, there's always room for a little refinement. Rogue's updated Vertical Plate Tree—built in the USA—improves on traditional models with a reinforced triangle-plate base, optional wheels for mobility, and re-positioned posts that enable full-size Oly plate storage on all three tiers. The unit's new bolt-together design also reduces shipping costs while maximizing overall stability.

Compatible with any and all IWF standard Olympic plates, the Vertical Plate Tree 2.0 is equipped with six 12" long storage posts (three on each side) constructed from 1.5" Schedule 40 pipe. Each of the posts on the roughly four-foot tall tree are evenly spaced at 18.275" on center to offer a good mix of versatility and storage capacity.

Note: Any metal-to-metal contact with the coated storage posts (such as adding and/or removing plates) may cause wear on the finish over time.

SKU# RF0644

Product Details

- 26" , 12" post length L x 24" W x 50" H
- New, Bolt-Together Base Design w/ Triangle Plates
- (6) 12” Plate Storage Posts - Schedule 40 construction
- All 3 Tiers compatible with Full-Size 450mm / 1.9" OD Olympic Plates
- Weight post spacing: 18.275" on center
- Optional Set of (4) Wheels Available (Imported)
- Made in the USA

Product: Rogue HG 2.0 Bumper Plates- 10lb Pair (Or Approved Equal)

Manufacturer: Rogue Fitness

Location: Weight Room

Same quality plates, revamped design. Rogue HG 2.0 Bumpers feature new artwork (still black, still old school), with the consistent dead bounce, durability, and distinctive smooth finish athletes have come to expect from the HG line. These quality, budget-priced plates are the IWF standard 450mm in diameter, but are cut thinner than a lot of comparable bumpers to allow for more weight to be loaded on the bar. HG 2.0's also score an average of 88 on the Shore A Durometer scale, giving them a dead blow on par with a lot of the pricier comp plates in the industry.

Battle-tested at the CrossFit Games and Regionals, HG Bumper Plates are both a high-performance and smart economical choice for any training facility. Check out the wide range of plate sets or simple pairs available to order on the right column, or read the reviews below to see what current HG Bumper owners have to say about the product.

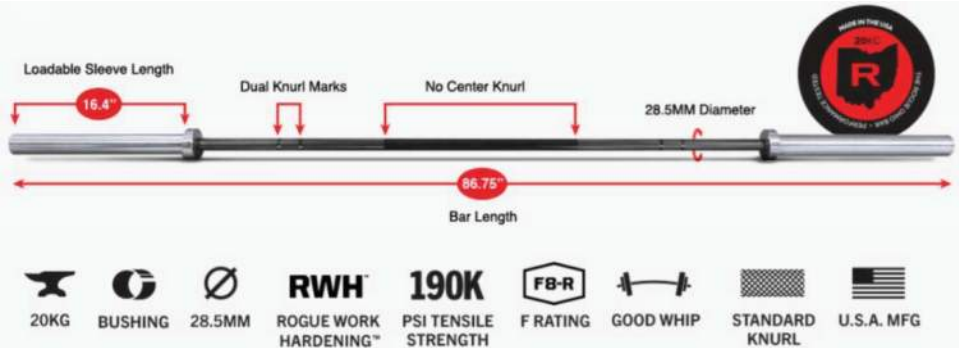
SKU# IP0514-45-2

Product: The Ohio Bar - Black Zinc (Or Approved Equal)

Manufacturer: Rogue Fitness



Location: Weight Room

Each Rogue Ohio Bar is machined and assembled in Columbus, Ohio, and includes a lifetime guarantee against bending. Each bar will come with an Ohio Bar card that has the initials of the Rogue team member that built the bar.

The Ohio Bar is assembled with bronze bushings which act as bearing surfaces between the bar sleeve and bar shaft. The bushing sleeves on the Ohio Bar promise a reliable spin, and their snap ring design maintains optimal stability throughout any type of weightlifting regimen—from basic high school or collegiate strength training programs to intense Crossfit workouts.

Each Ohio Bar finish offers a different level of oxidization protection and has a direct effect on the feel of the knurl. Black Oxide is a mild oxidization protectant process. This type of steel treatment will still require some maintenance but will give the best knurl feel, more like a naked bar. Zinc is a medium oxidization protectant process. This type of steel treatment requires minimal maintenance and is used on The Rogue and Bella Bars.

SKU# RA1571-AN-GM

Product Details

Loadable Sleeve Length: 16.4"
Diameter: 28.5MM
F Rating™: F8-R

Product: OSO Barbell Collars (Or Approved Equal)

Manufacturer: Rogue Fitness

Location: Weight Room

This is the exclusive, Rogue-branded version of the OSO Barbell Collar—an innovative, aircraft-grade aluminum clamp designed are manufactured in Columbus, Ohio.

Sold in pairs and equipped with a rubberized interior lining to protect the bar, OSO Collars deliver a secure, stable hold through repeated, high-impact drops, and allow easy adjustments or removal with a simple lever and lock/unlock mechanism. It's the OSOs unique look, though, that generates the most attention. With this design, that means an industrial gear-style shape in gunmetal gray with the Rogue logo down the side.

SKU# RA1571-AN-GM

Product Details

- Width: 1.5"
- Material: 6061 Billet Aircraft Grade Aluminum
- Rubberized Interior Lining
- Available in Pairs

- Warranty: Lifetime Warranty

Product: Rogue 3-Tier Dumbbell Rack (Or Approved Equal)

Manufacturer: Rogue Fitness

Location: Weight Room

This is the same dumbbell storage rack that Rogue has installed in some of the country's leading collegiate training centers and CrossFit affiliates. With the 3 Tier Dumbbell Rack, you can now securely store up to 30 dumbbells - or 15 pairs - all within a space-efficient 93" x 30" footprint.

This rack is compatible with most Pro-Style and Rubber Hex dumbbells, as well as any weight increment from 5LB to 125LB. Certain Rubber Hex dumbbells may require you to remove the saddle for a better fit.

To better protect both the equipment and the athletes using them, the 3 Tier Rack features rubber-encased saddles and a central rail divider to prevent the dumbbells from sliding, jarring loose, or catching an athlete's hand on a misplacement. The unit is manufactured in the USA, ships fully assembled, and does not need to be bolted to the ground- though laser-cut mountable foot plates are included standard.

SKU# RA0445

Product Details

- Steel: 0.375" Laser Cut Steel End Plates
- Dimensions: 93" L x 30" W x 33" H
- Product Weight: 269 lbs
- Capacity: 30 dumbbells
- Protective Dumbbell Saddles Encased in Rubber
- Steel: 0.375" Laser Cut Steel End Plates
- Ships Fully Assembled
- Made in the USA

Product: Rogue 5-50 LBS Dumbbell Set (Or Approved Equal)

Manufacturer: Rogue Fitness

Location: Weight Room

Also available to order by the pair, Rogue Rubber Hex Dumbbells are available in three complete, standard sets--broken down into 5LB increments. These sets allow you to quickly equip an entire training facility serving any type of athlete, all at an affordable cost.

Rogue Dumbbells feature heavy-duty, rubber-encased heads that help minimize noise and limit wear and tear (to both the bells and your flooring). They also include chrome-plated handles ergonomically designed for a firm but comfortable feel in any grip style.

All smaller Rogue Dumbbells up to 10LB feature a 25MM diameter handle, while those 12.5LB and up have a larger 35MM diameter handle.

SKU# RF0549

Product Details

- 5LB - 50LB Set - Includes pairs of dumbbells from 5LB to 50LB in 5LB increments. 550LB total
- Handle Diameter: 25MM up to 10LB, 35MM for anything over 10LB
- Heavy-duty Rubber Encased Heads: minimize noise, floor damage, and wear and tear on the dumbbells themselves.
- Easy-grip, ergonomic Chrome-Plated Handle
- Proprietary head to handle construction ensures the head does not come loose

Product: Rogue ECHO Bike (Or Approved Equal)

Manufacturer: Rogue Fitness

Location: Weight Room

The Rogue Echo Bike combines heavy-duty steel, precision engineering, and convenient customization to forge a stronger, sturdier fan bike. This overbuilt 127 LB unit provides a rock solid foundation for max output bursts, while still offering easy portability around the gym via a set of 1" polyurethane front wheels. A quiet, belt-driven steel fan blade produces a smooth, consistent ride, while a high-contrast, battery-powered LCD console allows athletes to track intervals, distance, calories burned, heart rate, and more. Rogue Fitness warrants that the ECHO Bike shall be free from defects in material and workmanship for a period of two years from the date of purchase when the product is used under normal uses and conditions and as recommended in the User Guide.

THE ROGUE ECHO BIKE IS COMPATIBLE WITH THESE OPTIONAL ADD-ONS:

- Echo Bike Wind Guard - Plastic shield that covers part of the cage to reduce air blowback. Transparent grey finish.
- Echo Bike Phone Holder - Plastic mount that screws onto the mast of the bike. Holder has inside dimensions of 3.5" wide x 6.125" tall with open north/south ends for taller phones.
- Bottle Cage - Fits a wide variety of bottles currently offered through Rogue, including: BlenderBottle, Camelback Podium Bottle, and most standard 16.9oz water bottles (it is NOT compatible with YETI bottles or larger 32oz Nalgene bottles). Hardware for mounting the cage is already pre-installed on the bike for an easy, convenient install.
- Echo Bike Turf Tire & Handle Kit - The Turf Tire and Handle Kit is designed to replace the standard front foot of the unit, adding a new level of maneuverability to this overbuilt 127 LB "stationary" bike.

Product Details

- Overall Dimensions: 29.875" W x 58.875" D x 52.75" H
- Footprint Dimensions: 23.75" W x 44.5" D
- Weight: 127 lbs
- Weight Capacity: 350 lbs
- Steel Construction: 2x3", 1.25x3", and 1.625x3.125" Steel
- Textured Black Powder Coat Finish
- Belt Driven Steel Fan
- LCD Console Display (Batteries Included) with customizable modes
- Adjustable padded seat with 8 height and 5 front-to-back settings.
- 1.5” Diameter Rubber Grip Handles
- Rubber Leveling Feet
- Metal Pedals
- Front polyurethane wheels allow for mobility
- Assembly required. All hardware and assembly tools included

Product: TRUEFORM Trainer (Or Approved Equal)

Manufacturer: Rogue Fitness

Location: Aerobics Room

The TRUEFORM Trainer is an advanced, non-motorized treadmill that's compact, lightweight, and uniquely simple to use. Equipped with a slightly curved deck (less steep than comparable products in the industry), this innovative manual treadmill design requires no outside power source, relying instead on the athlete's own level of force to determine the pace of the machine. As a result, the TRUEFORM Trainer gives the user greater control of their workout—from a light stroll to an all-out sprint - promoting technically sound running technique, posture, balance, and cadence in the process.

Made from quality formed steel tubing and utilizing 112 sealed steel ball bearings, the TRUEFORM Trainer is overbuilt to the high standard of a pro training facility, with efficiency in space and cost still suited to a home gym. The unit also comes with a convenient LED battery display screen, delivering immediate reports on the runner's pace, speed, distance and time. This display is compatible with Polar heart monitors, as well.

The unit's polyurethane-reinforced Responsive Belt Technology (RBT) and molded thermoplastic elastomer tread not only re-create a more natural running surface, but also react to even the most subtle of changes in movement, including the strike force of the foot, hip position, and posture. When your body isn't in the optimal position, you'll feel it immediately and learn to adjust, developing superior long-term form and better overall results. That's the difference with a well designed, truly manually-operated treadmill.

Product Details

- Brand: Samsara Fitness
- Non-Motorized, Manual Treadmill
- Dimensions: 64” L, 31” W, 63” H
- Running Surface: 17” wide
- Weight: 280 LBS
- LED Display
- Frame and Handrails: 2” steel tubing
- Handrail Uprights: 6” steel tubing
- Bearing Rail: Formed and Welded 7-gauge steel
- Finish: Light Texture Black Powdercoat

Product: **Clinton Alpha Series Treatment Table with Shelving (Or Approved Equal)**

Manufacturer: Clinton Industries

Location: Nurse's Sick Bay and SPED BLS Classroom

13030-30

The ETA (Easy To Assemble) Alpha Series of tables features contemporary styling and durable, all-welded, steel frame construction and a powder-coated finish for great looks and easy maintenance. Because it's Clinton engineered, the ETA Alpha Series saves you money and goes together fast.

Clinton uses only premium, woven knit-backed upholstery that resists stretching and bunching associated with ordinary vinyl upholstery. Plus, Clinton upholstery is topcoated with Perma-Block-3 to resist stains, scuffs and abrasions.

The Clinton 3030 Alpha Series Straight Line Treatment Table is a durable medical exam table with a load capacity of 450 lbs. For added style and easy maintenance the frame is welded, made of steel and powder coated gray. The strong frame construction provides stability, while the 2" firm foam padding provides comfort. The Clinton 3030 treatment table comes ready to assemble with pre-threaded hardware, as well as the tools necessary to assemble.

Product Details

- Features powder-coated, all-steel frame, laminate shelf, storage compartment and adjustable backrest.
- Dimensions: 72" L x 30" W x 31" H
- Easy bolt-through assembly.
- Paper dispenser included.
- Adjustable leg levellers.
- Seamless rounded corner top.
- 2" firm foam padding.
- Heavyweight, knit-backed upholstery.
- Also available with non-adjustable backrest.
- 450 lbs. load capacity under normal use.
- Easy assembly

- 2" x 89.5" *(5.08 cm x 228 cm)* Strap secures with quick fasten hook and loop fastener

Product: Simply 66® Snap System Cubicle Curtains (Or Approved Equal)

Manufacturer: Cubicle Curtain Factory, Inc.

Location: Nurse's Sick Bay and Health Careers Sciences Classroom

Simply 66® Snap System is the original snap cubicle curtain and the highest quality 'one size fits all' easy-maintenance hospital privacy curtain. Choose from a full line of antimicrobial and sustainable designer fabrics**.** Vinyl and disposable liners are available to protect fabric panels in high-risk areas.

Product Details

- Can be used on most any existing ceiling-mounted cubicle curtain track
- No ladders or tools needed to install or remove hospital curtain panels, reducing the risk of fall & installation injuries
- Always be in code with privacy curtain fabric panels that standardize every room in your facility

- Heavy-duty nickel-plated brass snaps are rust-proof & safe for laundering, allow for optional vinyl/disposable snap-on liners to protect designer fabric hospital curtains
- Cost is the same as traditional cubicle curtains; Save on laundry, labor & reorder costs

Intro to CCF

Cubicle Curtain Factory, Inc.

Attention to Detail

Family owned and operated, Cubicle Curtain Factory's cubicle curtains, window treatments and other textile decorative products are fabricated in a 23,000 square-foot air-conditioned manufacturing facility in West Palm Beach, Florida. This provides the ability to keep costs down and reduce order lead times. CCF's skillful and experienced sewing machine operators utilize quality control making sure all products meet only the highest industry and customer standards.

Product Offerings

- New! **Simply Snap™** Affordable Cubicle Curtains
  Interlocking curtains starting at $60.00
- New! **Disposable Curtains** Traditional or Snap
  99.9% Germ Kill – Reduce HAIs
- New! **Off The Hook** Universal Carrier Hook
  Never misplace a curtain hook again
- **Simply 66® Snap System** Cubicle Curtains
  Standardize your facility, reduce cost
- **Traditional Cubicle Curtains & Hardware**
  Designer, Blackout, Disposable & More
- **Decorative Window Treatments & Hardware**
  Sheers, Valances, Cornices, Blinds, etc.
- **White & Silver Anodized Aluminum Track**
  Includes all hardware, carriers & caps
- **Table Toppers, Napkins, Bed Covers & More**

The quality of our service sets a higher industry standard…

The quality of our products sets us apart.

Simply 66® Snap Curtains

The One-Size-Fits-All Snap System

Design. Quality. Service.

Simply 66® Snap Cubicle Curtains

The most desired and purchased snap hospital privacy panel system in the industry

Standardize your Facility

All panels are one size only and fit all mesh and tracks

First Step: Hang the Simply 66® continuous Antimicrobial mesh on your existing ceiling track.

-No need to replace existing cubicle curtain ceiling track. All mesh will fit most every standard hospital privacy curtain track that uses carrier hooks.

-Simply 66® cubicle mesh is manufactured to fit any horizontal cubicle curtain track size in your facility.

-Simply 66® curtain mesh is made to accommodate various ceiling heights in a facility.

-Rustproof, nickel-plated brass grommets placed every 6" along the top hem.

No Ladder Necessary

Snap panels on with ease, no tools or risk of falling off ladder

Second Step: Snap on the first cubicle curtain panel, starting at one side, until you get to the end of that privacy curtain panel.

-For your convenience, all Simply 66® cubicle curtain panels are manufactured with small tabs that show exactly where each Simply 66® privacy curtain panel begins and where it ends.

-All Simply 66® panel cubicle curtains are made to fit ANY Simply 66® mesh top, in any room, in any facility.

Use your Own Track

Installed on existing cubicle track without the need to retrofit

Protect your Simply 66® designer fabric hospital curtain panels with inexpensive Vinyl or Disposable overlay panels for high risk areas.

-Lower hospital curtain laundry costs. Use Simply 66® Disposable cubicle curtain panels in areas where hospital curtains must be laundered regularly.

-Vinyl cubicle curtain panels give the benefit of low maintenance. Simply wipe down after every use, or as often as your facility requires.

Product: **Deluxe Single Door Audit Narcotic Cabinet with Digital Keypad Lock - 24" H x 16" W x 8" D (Or Approved Equal)**

Manufacturer: Omnimed

Location: Nurse's Office / Triage Room

#181486

This Deluxe Single Door Audit Narcotic Cabinet with Digital Keypad helps combat drug theft, provide secure patient drug dispensing, and control healthcare costs. *Programmable audit lock with heavy gauge locking bolt* keeps contents secure and ensures that all lock activity is controlled and traceable. Constructed of durable, heavy duty stainless steel. Meets schedule 2 drug storage requirements. Strong piano hinged door. 4 adjustable aluminum shelves for added storage capacity. Top of the cabinet lifts so that the unit can be flipped to accommodate left or right door swing.

If audit capabilities are required, the *Audit Digital Lock Security Software Package* is a required accessory. With the optional Audit Digital Software Package item# 181490, the digital lock can be programmed for up to 250 individual users and you can trace the last 1,500 access attempts.

Product Details

- Constructed of durable, heavy duty stainless steel
- Meet schedule 2 drug storage requirements
- Strong hinged door and 4 adjustable aluminum shelves for added storage capacity
- The ambi top of the cabinet lifts so that the unit can be flipped to accommodate left or right door access
- Pre-drilled holes are reinforced with stainless steel mounting discs for secure wall attachment
- Low battery indicator
- 6-AA battery pack; premium brand Alkaline batteries recommended (not included)
- Jump start battery override available through mini USB communications port allows the user, with a valid credential, to access the CompX eLock when the batteries are exhausted
- This product does not ship with any mounting hardware due to the number of different mounting specifications each facility may have.

OMNIMED Narcotic Cabinets

Improve business efficiency • Improve employee workplace safety • Improve patient care & management

Deluxe Narcotic Cabinet **#181486**

CompX eLock LV5 Flash Drive

CompX elock LV5 USB Cable

Deluxe Narcotic Cabinet - with Audit Digital Lock

#181486 - Audit Narcotic Cabinet with Keypad Lock
#181487 - Audit Narcotic Cabinet with Keypad and HID Proximity Reader
#181488 - Audit Narcotic Cabinet with Keypad and HID iClass Reader

Constructed of durable, heavy duty stainless steel and meet schedule 2 drug storage requirements. They have a strong piano hinged door and four adjustable aluminum shelves for added storage capacity. The ambi top of the cabinet lifts so that the unit can be flipped to accommodate left or right door access. A programmable audit lock with its heavy gauge locking bolt keeps contents secure and ensures that all lock activity is controlled and traceable. The #181490 Audit Software Package is a required accessory for this lock. The package allows the software to control and audit the locking system and includes programming and flash drive to transfer information to and from the lock. One Audit Software Package is required per facility. These units are warranted for life & include 1 year on the locks.

- Ambi top for left/right outer door access
- Pre-drilled holes reinforced with stainless steel mounting discs
- Measures 24”H by 16”W by 8”D
- Low battery indicator
- 6-AA battery pack; premium brand Alkaline batteries recommended
- Jump start battery override available through mini USB communications port allows the user, with a valid credential, to access the CompX eLock when the batteries are exhausted
- Unit Has lifetime Warranty (1 Year On Locks)

Audit Software Package #181490

Basic lock functions may be performed at the lock without the software. Efficient administration and full audit capability may only be achieved once the software has been installed. Lock can be programmed for up to 250 individual users.

- Mini USB: transfers information directly from the lock to the computer
- Provides a comprehensive audit trail of the last 1,500 access attempts

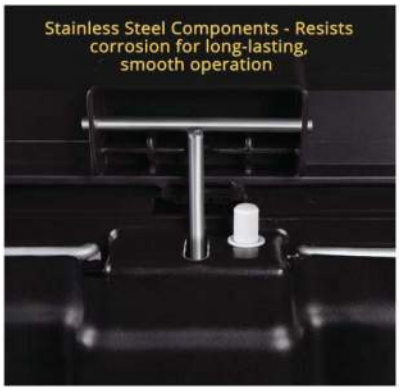
OMNIMED

800.257.2326 • www.omnimedstore.com

Product: **Streamline® Step-On Container; 13-Gallon; Beige or Gray (Or Approved Equal)**

Manufacturer: Rubbermaid Commercial Products

Location: Classrooms and Offices



The Rubbermaid Commercial Streamline® Step-On Container features a slim profile and small footprint to fit in tightest spaces. Streamline® Step-On containers are constructed with premium-quality materials and meet the needs of any environment with efficiency, safety, and durability.

Product Details

- Wide design with a small footprint hugs the wall to provide maximum volume while using space efficiently
- Quiet and controlled lid closure reduces noise
- Convenient foot pedal allows hands-free waste disposal while the tall pedal clearance allows easy foot access
- Internal hinge design prevents wall damage
- Liner retainer band securely holds garbage bags
- Capacity: 13 gallons
- Dimensions: 18"W x 11.5"D x 28.3"H
- Weight: 8.5 lbs.
- Material: Plastic
- Opening Mechanism: Step-On

STREAMLINE™ STEP-ON

Blending aesthetics and best-in-class durability, Streamline™ Step-On containers have a slim profile and small footprint, which maximize space to fit in the tightest spaces. Color-coded bins meet regulatory needs.

SLOW CLOSE LID

Quiet and controlled lid-closure minimizes noise to enhance guest and patient satisfaction.

OUTLASTING DURABILITY

New, redesigned lid hinge improves performance and increases durability.

IMPROVED PRODUCTIVITY

Liner retainer band and cinch easily and securely hold polyliners.

SUITED FOR ANY SPACE

RE: GDOE Simon Sanchez High School – Exterior Noise Study Report (DLAA #20-019)

Dear Mr. Prudente:

DLAA conducted noise measurements to assess the existing and expected future exterior noise environment at the location of the Simon Sanchez High School project. The following report includes the project's recommended exterior noise criteria, a summary of the results of our noise measurements and analysis, and recommendations for the exterior glazing to meet the interior noise design criteria.

Please note our recommendations are based on meeting acoustical objectives only and should be reviewed by qualified personnel prior to implementation.

DESIGN CRITIERA

The exterior shell of the building, including all walls, windows, and exterior doors, should be selected such that the spaces inside of the building are quiet enough to meet the project's interior noise design criteria. ANSI/ASA S12.60-2010/Part 1 "Performance Criteria, Design Requirements, and Guidelines for Schools, Part 1: Permanent Schools" establishes the interior noise level criteria for core learning spaces due to outdoor exterior noise sources at 35 dBA and 55 dBC and further specifies composite OITC criteria for façade elements for hourly noise levels exceeding 55 dBA Leq.

NOISE MEASUREMENTS

Measurement Procedure

Continuous 24-hour long-term environmental noise level measurements were conducted at one location (L1) in the access road south of the existing sports fields approximately 230 feet set back from Juan Jacinto Drive from January 18 through January 20, 2022, to assess the existing noise environment. The meter was calibrated in the field before and after measurements were conducted.

The measurement location is shown in **Figure 1** below. This location represents the loudest expected noise levels at classrooms throughout the project.

The measurements recorded the overall A-weighted sound level (LA_{eq}) and C-weighted sound level (LCeq) in 1-hour intervals, as well as the average sound level in each octave and one-third octave frequency band. Statistical metrics, such as the L_{MAX}, L_{MIN}, L_{90}, L_{50}, L_{10} and L_{01} were also measured in terms of overall A-weighted level, octave, and one-third octave bands. The primary noise source was traffic noise from Juan Jacinto Drive, with audible contributions from traffic along Marine Corps Drive. Depending on the hour, noise from local sports field activities and pedestrians along the access road contributed to the noise environment.

Figure 1: Measurement Location

Measurement Results

Traffic noise from cars, trucks, motorcycles, and buses were prevalent throughout the measurement period, as well as noise from overhead airplanes.

Measurements were conducted during the COVID-19 pandemic, however DLAA understands full in-person classes had resumed at the school at the time of the survey. Since roads immediately surrounding the project site are primarily used for school access, noise levels at the site are not expected to be significantly affected by reduced tourist traffic on Guam. Therefore, noise levels presented below are considered a reasonable expectation of noise levels for the site due to typical local traffic conditions.

The LA_{EQ} and LCeq during school hours were recorded. School hours are defined as 8:00AM-4:00PM. The maximum overall sound levels (L_{MAX}) and minimum overall sound levels (L_{MIN}) during school hours were also recorded. **Table 1** below summarizes the results at each measurement location during the entire measurement period.

Table 1: Measurement Result Summary (8AM to 4PM)

Meter	3-day L_{eq} dBC	3-day L_{eq} dBA	Maximum Hourly LA_{eq} dBA	Minimum Hourly LA_{eq}
Location 1	67	54	59	49

Attached **Figure 2** shows a detailed graphs of the L_{EQ} levels recorded at Location 1 throughout the entire measurement period.

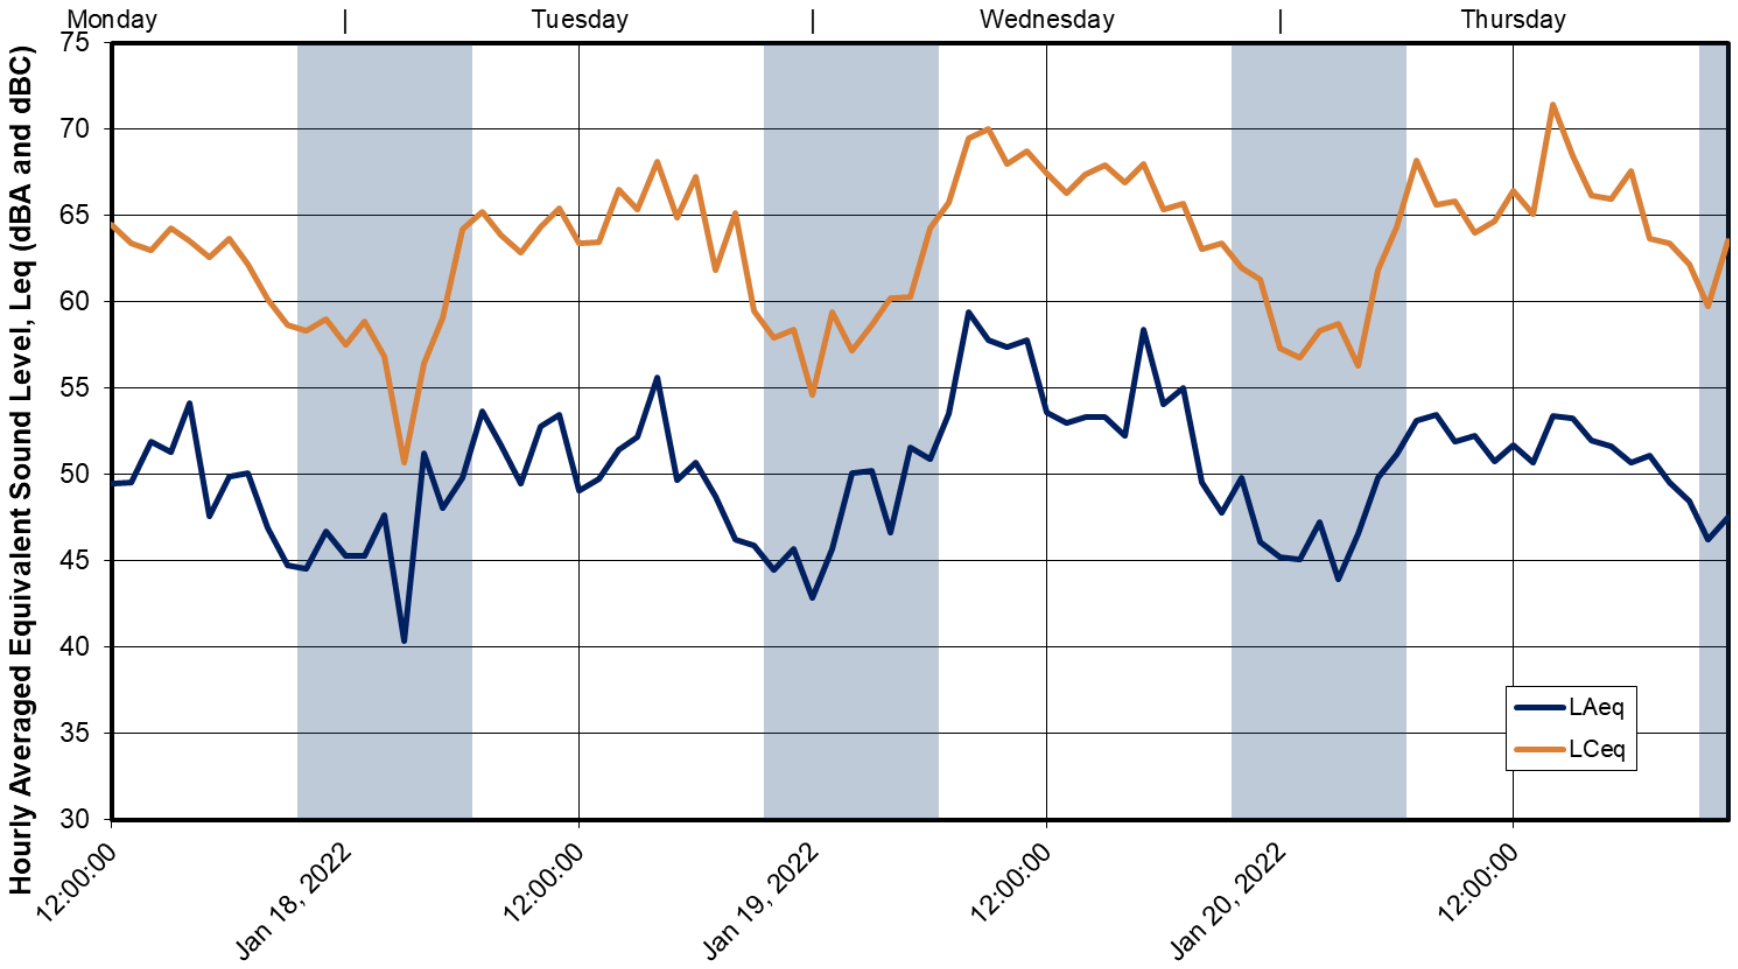
D. L. ADAMS ASSOCIATES
acoustics | performing arts | technology

EXTERIOR WINDOW AND LANAI DOOR RECOMMENDATIONS

Criteria for classroom windows is based on meeting 35 dBA and 55 dBC interior noise levels and established in based on maximum hourly LAeq noise levels. Unless noted otherwise, all OITC / STC ratings are based on a complete window assembly performance, including glazing, framing, hardware, etc.

Based on the results of acoustic testing on site, the entire façade must provide a minimum OITC 34 rating, including the exterior wall and window. With the currently shown 10" thick pre-cast concrete panels, a minimum OITC 25 rated window, glazed with standard 1" IGU (consisting of two layers of 1/4" glazing separated by a 1/2" air space, STC 35/OITC 28) will be sufficient to reduce exterior traffic noise to levels at or below the background noise criteria for all classrooms on the project.

Please feel free to contact us if you have any questions or comments.



Sincerely,

Lucas Johnson
Project Consultant

RE: Simon Sanchez High School Auditorium – Initial Acoustical Design Guidelines (DLAA #20-019)

Dear Mr. Prudente:

This report summarizes discussions between DLAA, TRMA and the SSHS GDOE Design Committee regarding best practices for the auditorium design. Discussions occurred throughout January 2021. The intent of this report is to serve as a guide, providing general concepts and "rules of thumb" for the design architect and design team members at early stages of project development. More detailed recommendations will follow in subsequent reports as the design progresses.

Acoustical Criteria

From our discussions to date, DLAA understands the primary function of the auditorium will be for band, choral and orchestral concerts as well as dance presentations, with secondary functions identified for lectures, award ceremonies, and video presentations. The high school does not currently include a theatre program, however limited functionality for theatrical performance is requested to allow flexibility should such a program develop in the future. This report provides initial recommendations for acoustical criteria of the Simon Sanchez High School Auditorium spaces only. Acoustical recommendations for all other buildings associated with the development will be provided separately. Theatre and A/V systems recommendations are not included herein, but will be included in future Basis of Design Narratives.

Room Acoustics

Room acoustics includes all phenomena associated with how sound travels and persists within an enclosed space. The most relevant room acoustics concepts for this auditorium include room shaping and reverberation time.

Room Shaping

Room shaping considers how the walls, ceiling, floor, and audience seating areas are aligned to provide a comfortable and easy visual and auditory experience during a performance. Important concepts include sightlines, side wall shaping, rear wall textures, floor sloping, balcony design,

shaping and placement of ceiling hung baffles, etc. In general, the following "rules of thumb" should be considered when creating the initial auditorium layout:

- Room Dimensions:
  - Room Volume: 300 cubic feet per person.
  - Room height-to-width ratio: > 0.7.
  - Minimize distance between stage and audience.
- Seating area
  - Minimize back-to-back and center-to-center seat spacing within life-safety and comfort guidelines.
  - Stagger seating.
  - Seating area slope: Between 7 and 26 degrees.
  - Seating area width to extend no more than 30 degrees from vertical plane of proscenium opening.
- Balconies
  - Depth of underbalcony should not exceed height of balcony opening. Depth-to-opening ratio 1:1.
  - Slope underside of balcony so that it is visible from the stage.
  - The rear row under the balcony should be able to see the front 1/3 of the auditorium ceiling.
  - Top balcony row should be less than 65 feet above the stage
  - Proscenium opening should be high enough so that back row of balcony can see the bottom 7 feet of the stage rear wall.
- Ceiling
  - Include suspended sound reflective, pre-manufactured ceiling clouds. Slight convex curvature is preferred over flat planes.
  - The ceiling directly above the proscenium to be of hard material, and angled upwards from the proscenium opening. The proscenium edge of this ceiling should be oriented to continue the angle established by the orchestra shell ceiling.
- Walls
  - Side walls nearest stage to fan outward from stage and include a hard finish.
  - The auditorium rear wall should include a diffusive shape, with large-scale irregularities. The rear wall should not be flat/parallel to the proscenium opening.
  - Avoid parallel flat surfaces.
- Orchestra shell maximum depth: 30 feet
- Orchestra pit 14 to 16 ft^2 per person

Reverberation Time

Reverberation time is the time required for a sound to decrease 60 decibels in an enclosed space, identified as RT60. The ideal reverberation time for a space is a function of its use and volume. Generally, effective speech communication requires a lower RT60, while musical performance requires longer RT60. For multi-use facilities, such as high school auditoriums, it can be difficult to balance the needs of all potential uses for the space. However, based on the latest discussions with the Fine Arts department and DOE design committee members, DLAA understands the primary function of this auditorium is for musical performance. Therefore, the RT60 of the space

will be designed towards the longer range recommended for multi-use facilities. Additional speech reinforcement can be provided by audio systems when understanding spoken word is more important than the musical environment.

Based on available preliminary plans and the recommended 300 ft^3 per person, the room volume of the auditorium will be approximately 180,000 cubic feet. The recommended RT60 for the space is as follows:

- 1.7 seconds with orchestra shell in place
- 1.3 seconds without orchestra shell in place and orchestra pit open

While precise quantities and locations of acoustically absorptive materials will be determined as the design progresses, for initial planning purposes the following finish guidelines are recommended:

- Audience seating to be fabric-covered with cushioned back and seat.
- Floor under seating area to be concrete.
    - Carpet flooring everywhere else.
- Hard surface walls (e.g., gypsum, concrete, metal) towards front of auditorium.
- Irregularly shaped, hard rear wall.
- Hard (e.g, gypsum, metal) ceiling baffles located toward front of auditorium.

Sound Isolation

Reducing sound transfer to the Auditorium space will be critical to audience and performer satisfaction in the space. **Table 1** below presents our initial recommendations for partition sound isolation criteria and wall types within the Fine Arts Building based on preliminary plans. **Table 2** presents sound isolation criteria for floor/ceiling assemblies. DLAA's schematic wall type details are included as attachments.

Table 1: Wall Types at Critical Adjacencies

Adjacency		STC	DLAA Recommended Wall Types	Notes
Auditorium	Lobby	65	CONC-2	1
	Corridor/Mezzanine	65	CONC-2	1
	Stairwell	70	CONC-2	1
	Backstage /Dressing Rooms/Offices	75	CONC-2A	1
Band Room	Office (Band Director)	45	WA-01	
	Corridor	60	CONC-2 OR WA-23	1
	Band Practice Room	60	CONC-2 OR WA-23	1
	Stairwell	60	CONC-2 OR WA-28	1
	Storage Room	45	WA-01	

Table 1: Wall Types at Critical Adjacencies

Adjacency		STC	DLAA Recommended Wall Types	Notes
Choir Room	Office (Choir Director)	45	WA-01	
	Corridor	60	CONC-2 OR WA-23	1
	Choir Practice Room	60	CONC-2 OR WA-23	1
	Storage	45	WA-01	
Practice Room	Corridor	60	CONC-2 OR WA-23	1
Office	Corridor	50	WA-09	
Control Room	Auditorium	60	WA-11	
	Corridor/Mezzanine	50	WA-09	
Classroom	Corridor	45	WA-01	
	Storage	45	WA-01	
	Restroom	53	WA-08	
Dance Room	Band Practice Room	60	CONC-2 OR WA-23	1
	Corridor	50	WA-09	

Notes: 1. Concrete wall recommendations assume minimum 6” thick cast-in-place normal weight concrete or 8” thick grout-filled CMU.

Table 2: Floor/Ceiling Assembly STC and IIC ratings

Adjacency		STC	IIC	Notes
Rooftop with Mech. Equipment	Classroom / Auditorium / Rehearsal Room	75	--	Where occurs, minimum 8” concrete slab and Type 3 ceiling with double gypsum. Refer to CLG-00.
Band/Choir Room	Band/Choir Room	65	70+	8” CIP slab + Type 1 Wire Suspended Ceiling (Double layer gypsum). Refer to CLG-00. Hard floor finish (vinyl, LVT, wood) on resilient underlayment.
	Practice Room	65	60	8” CIP slab and Type 1 Wire Suspended Ceiling.
	Office	60	--	8” CIP slab and Type 1 Wire Suspended Ceiling.
	Storage Room (Above)	45	--	Minimum 6” CIP Slab.
	Classroom	60	50	8” CIP slab and Type 1 Wire Suspended Ceiling LVT flooring will require acoustical underlayment.

Doors

Auditorium ingress and egress doors should be STC-rated assemblies. These are packaged systems, where the door panel, frame, hardware, threshold, seals, etc., are tested together as an assembly, according to the ASTM E90 standard. These doors require automatic door bottoms, and full perimeter sound seals, as recommended and provided by the door manufacturer. Undercuts are not allowed for ventilation on STC-rated doors. The following list provides initial recommendations for door minimum STC ratings in the Fine Arts Building:

- Auditorium Entry/Exit: STC 50.
    - Standard solid core or hollow metal (stuffed with honeycomb) doors are acceptable where vestibules are used for ingress/egress. Such doors will require full perimeter sound seals, including an automatic door bottom. Hollow metal frames to be stuffed completely with grout or 3 pcf mineral wool.
- Band/Choir Room Entry: STC 45.
- Practice Rooms: STC 45.

Mechanical Systems

Table 3 lists the background noise level requirements per space.

Table 3: HVAC Noise Design Guide

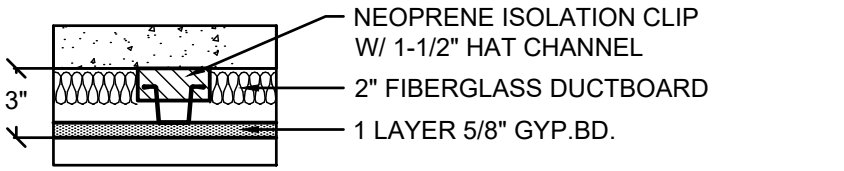
Space	NC/RC Criteria	Notes
Auditorium	25-30	
Band Room	25-30	
Choir Room	25-30	
Practice Room (Recording Capabilities	20-25	
Lobby	40	
Classroom	35	
Dance Room	35	

The following general guidelines and best practices are presented to help the engineer design an acoustically acceptable HVAC system in the Fine Arts Building:

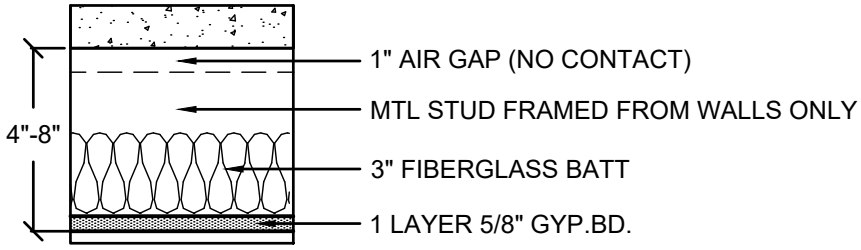
- At minimum 3 equivalent duct diameters of straight duct between fire damper and diffuser/grilles.
- Select grilles/diffuser rated at least 10 NC points below the room requirement. Plaque-style diffusers are preferred over louvered.
- Use rectangular duct as much as possible.
- Assume fiberglass lining minimum 30 feet from outlet/inlet of fans, AHUs, etc.
- Do not locate mechanical equipment, including VAVs, over noise-sensitive spaces.
- Maximize distance between AHUs, chillers, condensers, or any other mechanical system and walls of Fine Arts Building.

- For best practices HVAC system noise control, refer to DLAA details HVAC-01, HVAC-06, HVAC-72, HVAC-73, HVAC-74, HVAC-75 and HVAC-78.

This concludes our preliminary input regarding the Fine Arts Building Acoustics at this time. More detailed recommendations will be provided in future reports as the design develops. Please feel free to contact us if you have any questions or comments.



Sincerely,



Lucas Johnson
Senior Consultant

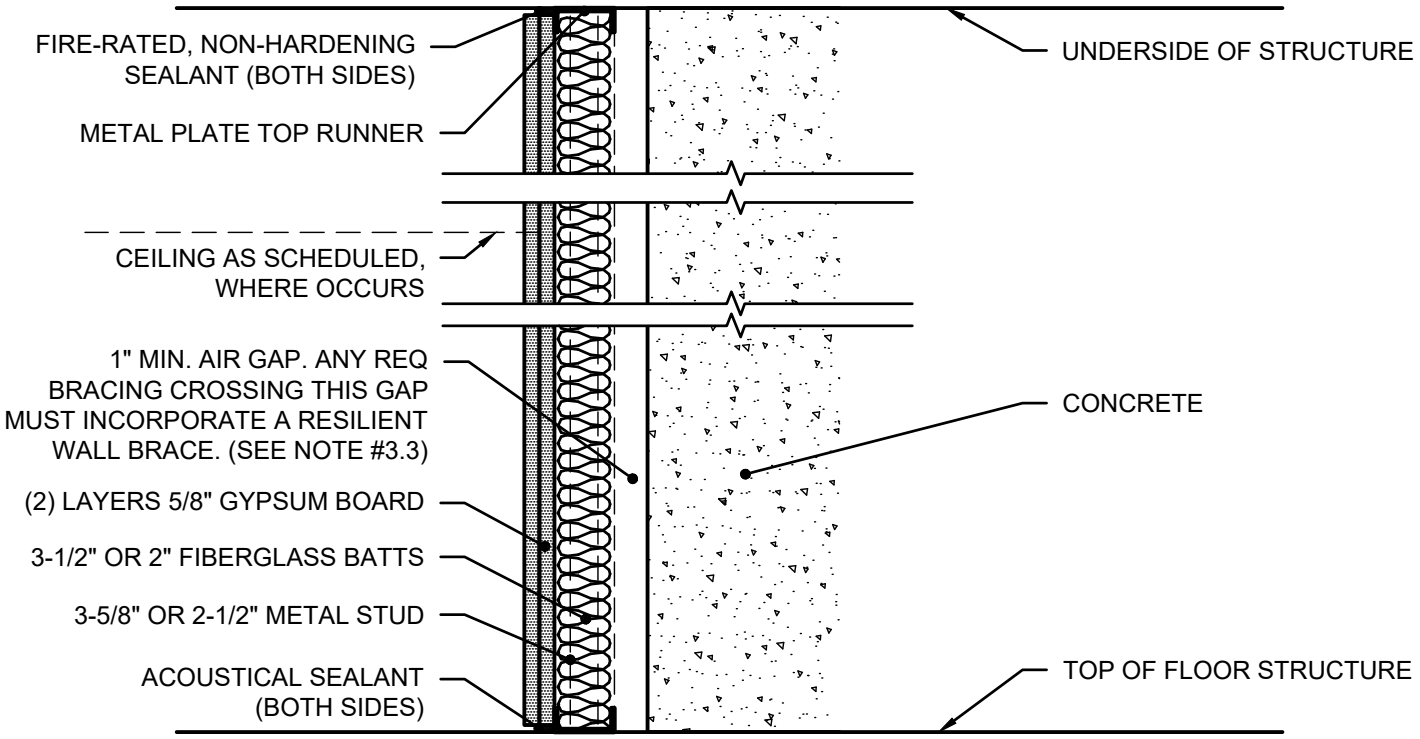
PROJECT: Simon Sanchez High School - Auditorium

PROJECT NO:	DATE:	DETAIL:
20-019	February 2021	CLG-00

CONCRETE WALL W/ SINGLE LAYER GYPSUM BOARD FURRED OUT (1-SIDE)

GENERAL NOTES:



1. SEAL AIR TIGHT AT FLOOR, SIDES, & CEILING ON BOTH SIDES WITH RESILIENT NON-HARDENING FIRESTOP OR ACOUSTICAL SEALANT. HEAD-OF-WALL FIRE RATED SEALANT FLEXIBILITY SHALL BE BASED ON MAXIMUM STRUCTURAL DEFLECTION.
2. SEAL ALL DUCT, PIPE, CONDUIT & STRUCTURAL PENETRATIONS WITH ACOUSTICAL SEALANT OR FIRE STOPPING, AND THE CAVITY IN-BETWEEN PACKED WITH LOOSE FIBERGLASS OR MINERAL FIBER. SEAL ALL WALL INTERSECTIONS AND CONTROL JOINTS.
3. IN STC RATED PARTITIONS WHERE GYPSUM BOARD IS FURRED AWAY FROM CMU OR CONCRETE WITH AN AIR GAP, THE FOLLOWING SHALL APPLY:

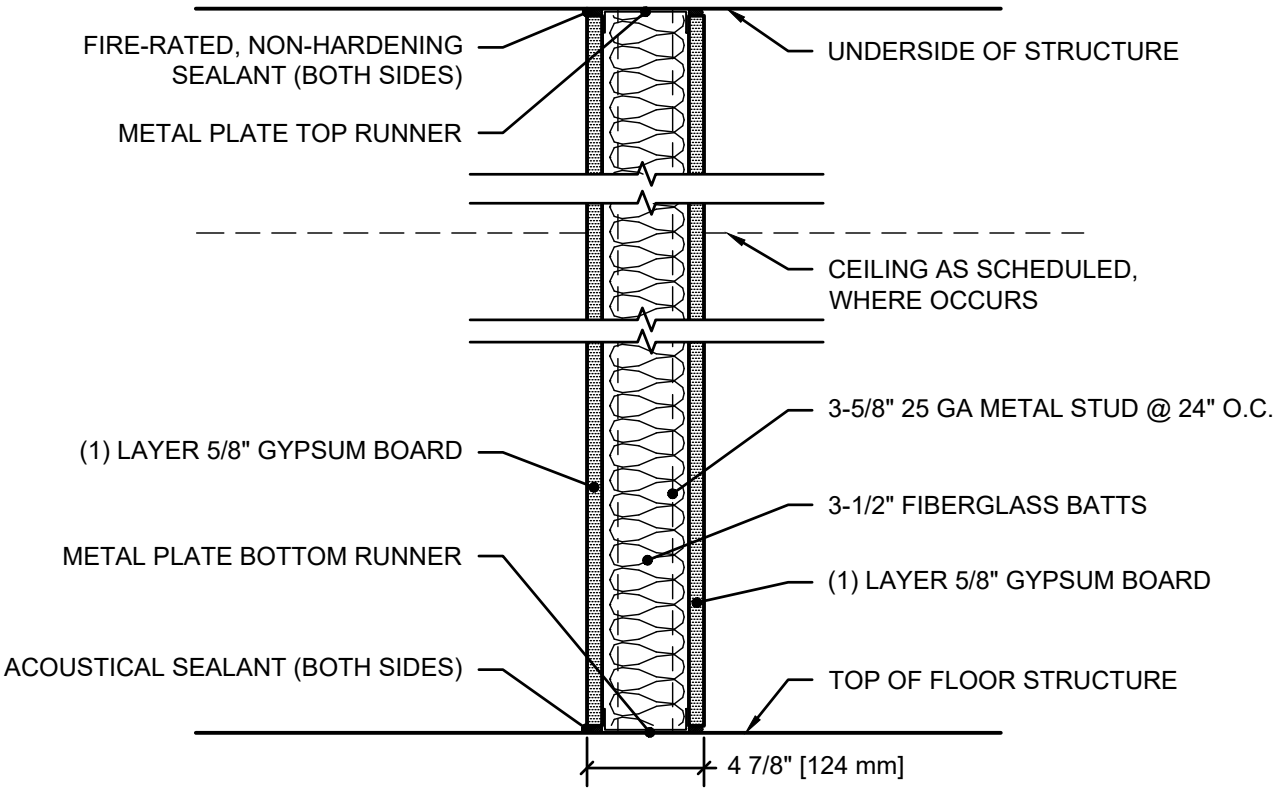
   3.1. CONDUIT FOR ELECTRICAL BOXES SHALL ONLY BE ATTACHED TO STUD WALL AND MUST NOT CONTACT THE CONCRETE WALL.

   3.2. SEAL ALL OUTLET BOXES WITH ACOUSTICAL OR FIRE-RATED PUTTY PADS (E.G. KINETICS TYPE ISOBACKER).

   3.3. NO BRACING SHOULD BE USED BETWEEN STUDS AND CONCRETE WALL WHENEVER POSSIBLE. IF REQUIRED, ONLY RESILIENT WALL BRACES SHOULD BE USED SUCH AS KINETICS UNIBRACE-L, PSB, OR EQUAL.

CONCRETE WALL W/ SINGLE LAYER
GYPSUM BOARD FURRED OUT (1-SIDE)

GENERAL NOTES:



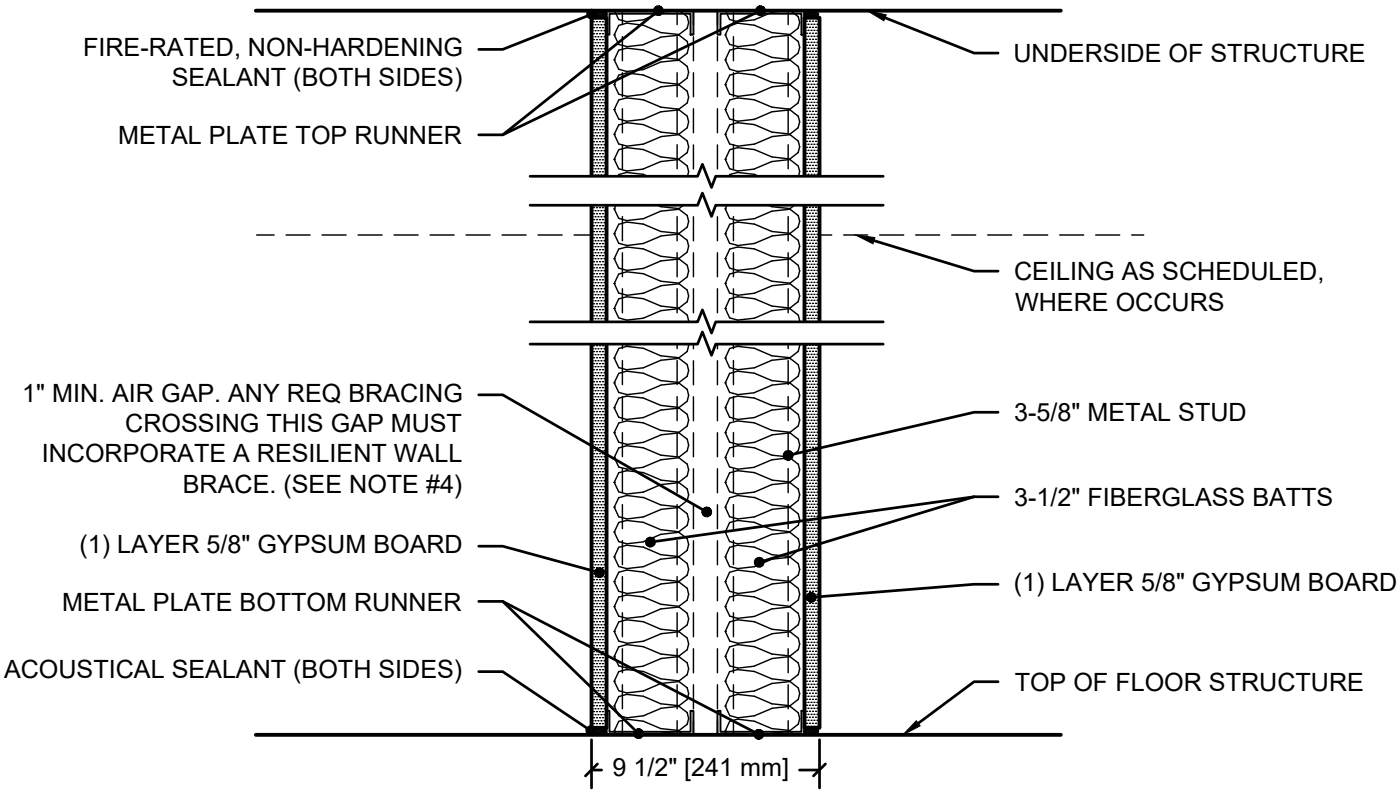
1. SEAL AIR TIGHT AT FLOOR, SIDES, & CEILING ON BOTH SIDES WITH RESILIENT NON-HARDENING FIRESTOP OR ACOUSTICAL SEALANT. HEAD-OF-WALL FIRE RATED SEALANT FLEXIBILITY SHALL BE BASED ON MAXIMUM STRUCTURAL DEFLECTION.
2. SEAL ALL DUCT, PIPE, CONDUIT & STRUCTURAL PENETRATIONS WITH ACOUSTICAL SEALANT OR FIRE STOPPING, AND THE CAVITY IN-BETWEEN PACKED WITH LOOSE FIBERGLASS OR MINERAL FIBER. SEAL ALL WALL INTERSECTIONS AND CONTROL JOINTS.
3. IN STC RATED PARTITIONS WHERE GYPSUM BOARD IS FURRED AWAY FROM CMU OR CONCRETE WITH AN AIR GAP, THE FOLLOWING SHALL APPLY:

   3.1. CONDUIT FOR ELECTRICAL BOXES SHALL ONLY BE ATTACHED TO STUD WALL AND MUST NOT CONTACT THE CONCRETE WALL.

   3.2. SEAL ALL OUTLET BOXES WITH ACOUSTICAL OR FIRE-RATED PUTTY PADS (E.G. KINETICS TYPE ISOBACKER).

   3.3. NO BRACING SHOULD BE USED BETWEEN STUDS AND CONCRETE WALL WHENEVER POSSIBLE. IF REQUIRED, ONLY RESILIENT WALL BRACES SHOULD BE USED SUCH AS KINETICS UNIBRACE-L, PSB, OR EQUAL.

SINGLE LAYER GYPSUM BOARD WALL
SINGLE 3-5/8" METAL STUD

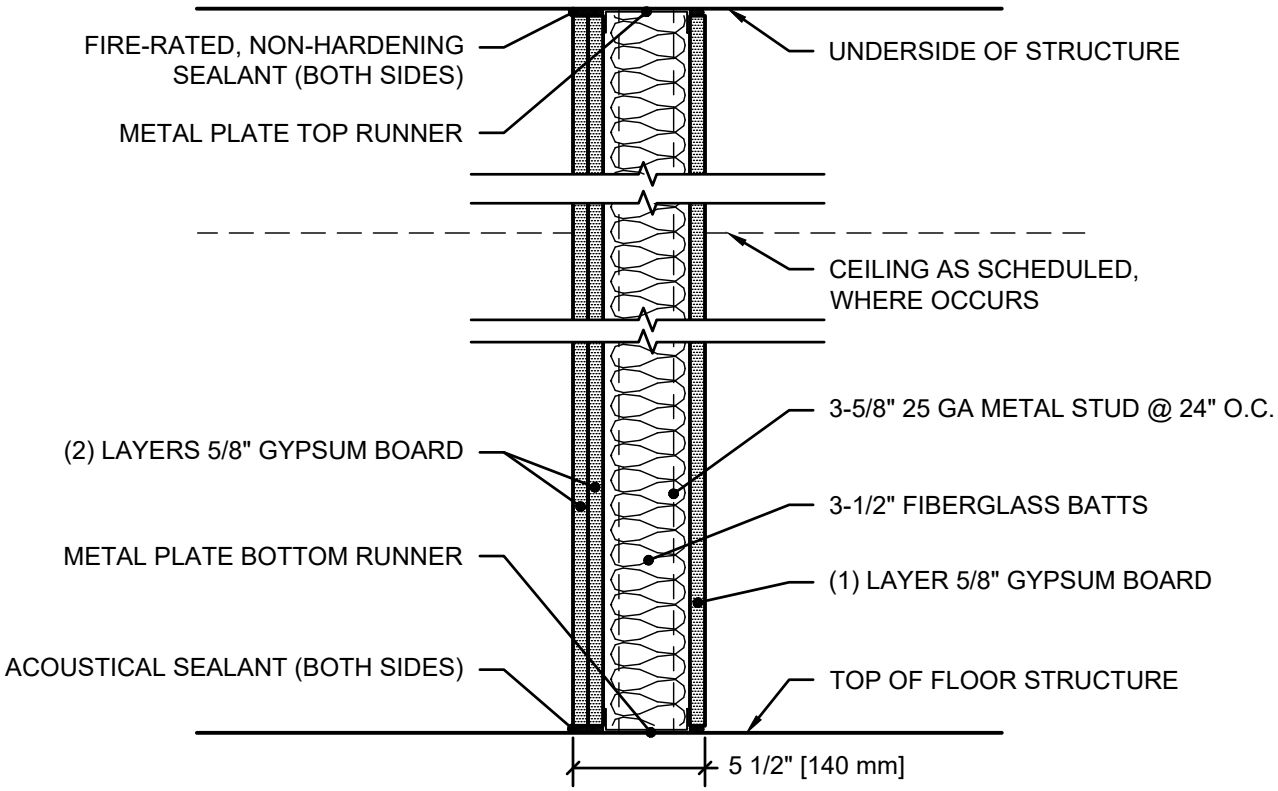


(PARTITION WIDTH IS APPROXIMATE)

GENERAL NOTES:

1. SEAL AIR TIGHT AT FLOOR, SIDES, & CEILING ON BOTH SIDES WITH RESILIENT NON-HARDENING FIRESTOP OR ACOUSTICAL SEALANT. HEAD-OF-WALL FIRE RATED SEALANT FLEXIBILITY SHALL BE BASED ON MAXIMUM STRUCTURAL DEFLECTION.
2. SEAL ALL DUCT, PIPE, CONDUIT & STRUCTURAL PENETRATIONS WITH ACOUSTICAL SEALANT OR FIRE STOPPING, AND THE CAVITY IN-BETWEEN PACKED WITH LOOSE FIBERGLASS OR MINERAL FIBER. SEAL ALL WALL INTERSECTIONS AND CONTROL JOINTS.
3. OUTLET BOXES MOUNTED ON OPPOSITE SIDES OF STC RATED GYPSUM BOARD PARTITIONS SHOULD BE SEPARATED BY A MINIMUM OF 24-INCHES HORIZONTALLY. IF OUTLETS MUST BE WITHIN 6 - 24-INCHES OF EACH OTHER, THEN BOTH OUTLET BOXES MUST BE SEALED WITH FIRE RATED PUTTY PADS. NO BACK-TO-BACK OUTLETS ARE ALLOWED.
4. WALL ASSEMBLY STC RATING ASSUMES 25GA STUDS, 24" O.C. UNLESS OTHERWISE NOTED. LOWER (I.E. THICKER) GAGE STUDS OR CLOSER STUD SPACING WILL LOWER THE STC RATING OF THE WALL ASSEMBLY.

SINGLE LAYER GYPSUM BOARD WALL
WITH DOUBLE 3-5/8" METAL STUDS

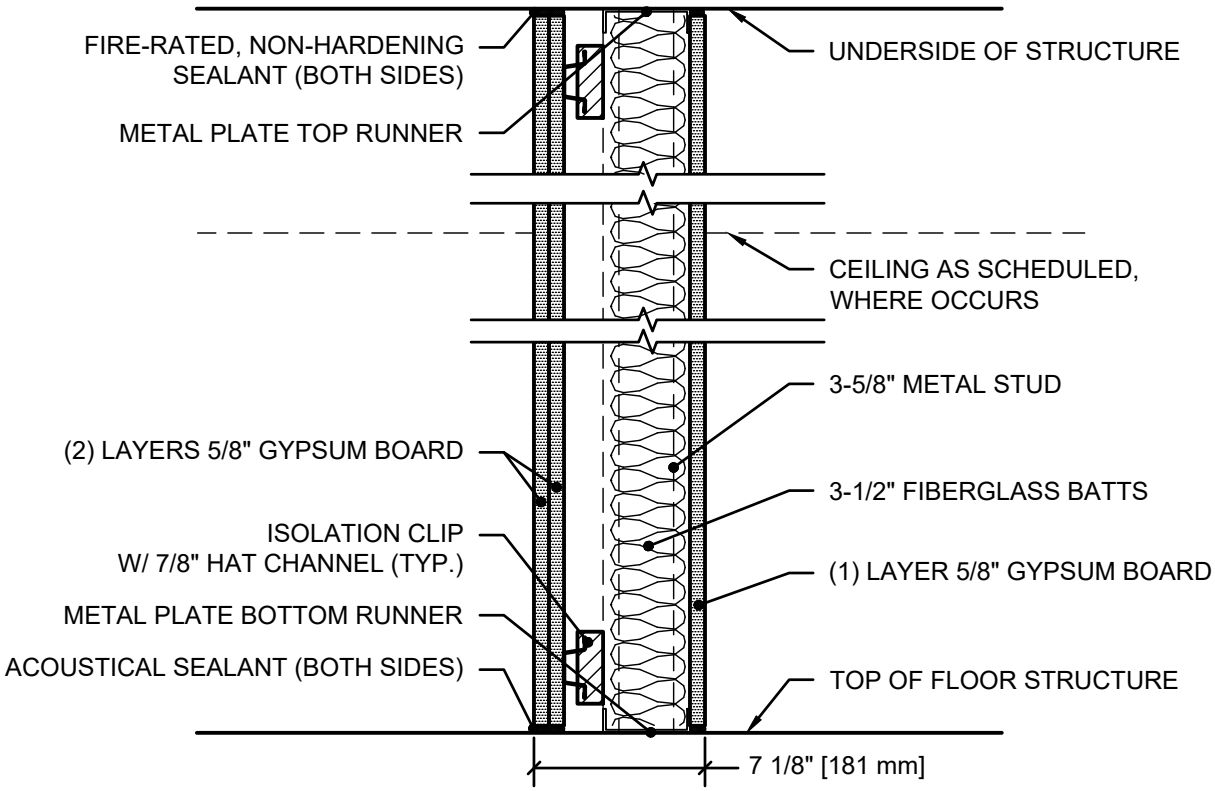


(PARTITION WIDTH IS APPROXIMATE)

GENERAL NOTES:

1. SEAL AIR TIGHT AT FLOOR, SIDES, & CEILING ON BOTH SIDES WITH RESILIENT NON-HARDENING FIRESTOP OR ACOUSTICAL SEALANT. HEAD-OF-WALL FIRE RATED SEALANT FLEXIBILITY SHALL BE BASED ON MAXIMUM STRUCTURAL DEFLECTION.
2. SEAL ALL DUCT, PIPE, CONDUIT & STRUCTURAL PENETRATIONS WITH ACOUSTICAL SEALANT OR FIRE STOPPING, AND THE CAVITY IN-BETWEEN PACKED WITH LOOSE FIBERGLASS OR MINERAL FIBER. SEAL ALL WALL INTERSECTIONS AND CONTROL JOINTS.
3. OUTLET BOXES MOUNTED ON OPPOSITE SIDES OF STC RATED GYPSUM BOARD PARTITIONS SHOULD BE SEPARATED BY A MINIMUM OF 24-INCHES HORIZONTALLY. IF OUTLETS MUST BE WITHIN 6 - 24-INCHES OF EACH OTHER, THEN BOTH OUTLET BOXES MUST BE SEALED WITH FIRE RATED PUTTY PADS. NO BACK-TO-BACK OUTLETS ARE ALLOWED.
4. NO BRACING SHOULD BE USED ACROSS DOUBLE STUDS WHENEVER POSSIBLE. IF REQUIRED, ONLY RESILIENT WALL BRACES SHOULD BE USED SUCH AS KINETICS UNIBRACE-L, PSB, OR EQUAL.

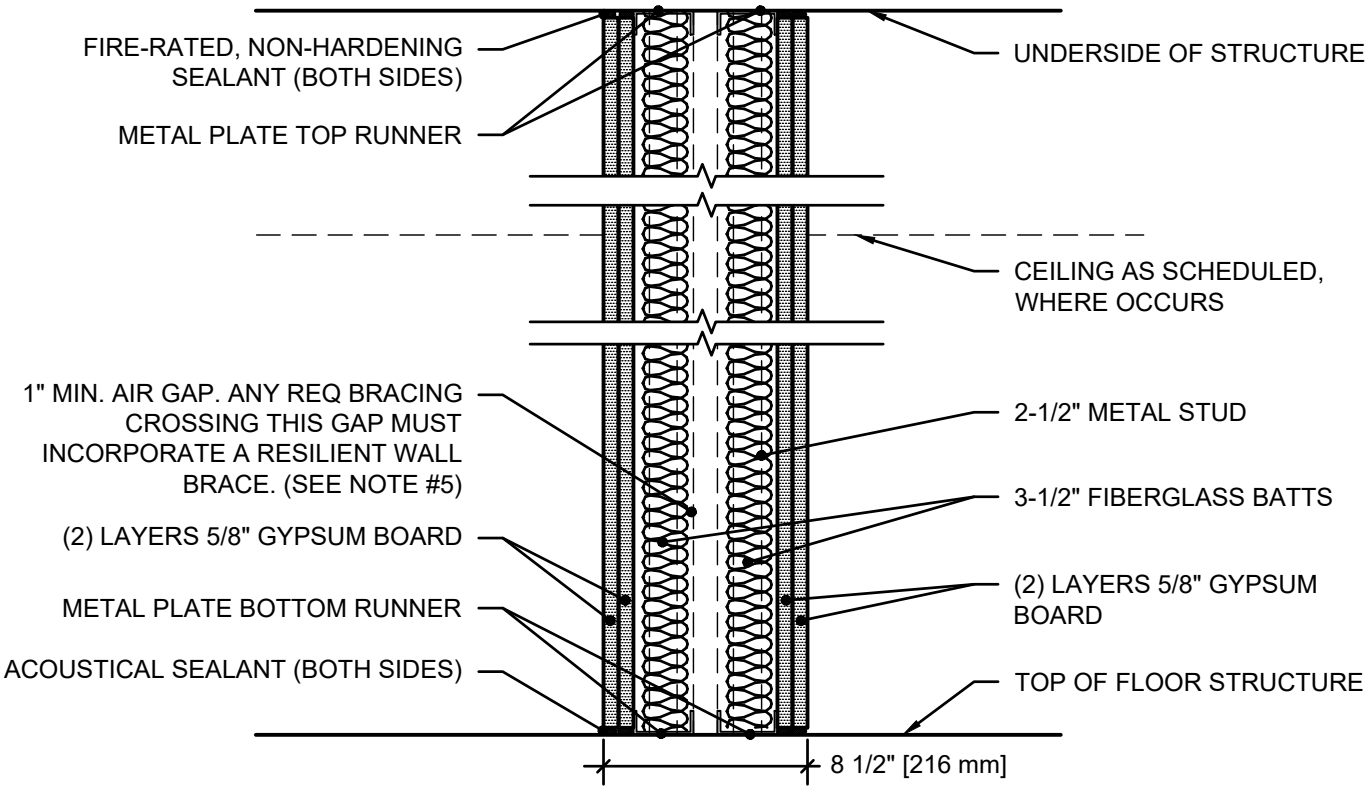
UNBALANCED GYPSUM BOARD WALL
WITH SINGLE 3-5/8" METAL STUD



(PARTITION WIDTH IS APPROXIMATE)

GENERAL NOTES:

1. SEAL AIR TIGHT AT FLOOR, SIDES, & CEILING ON BOTH SIDES WITH RESILIENT NON-HARDENING FIRESTOP OR ACOUSTICAL SEALANT. HEAD-OF-WALL FIRE RATED SEALANT FLEXIBILITY SHALL BE BASED ON MAXIMUM STRUCTURAL DEFLECTION.
2. SEAL ALL DUCT, PIPE, CONDUIT & STRUCTURAL PENETRATIONS WITH ACOUSTICAL SEALANT OR FIRE STOPPING, AND THE CAVITY IN-BETWEEN PACKED WITH LOOSE FIBERGLASS OR MINERAL FIBER. SEAL ALL WALL INTERSECTIONS AND CONTROL JOINTS.
3. OUTLET BOXES MOUNTED ON OPPOSITE SIDES OF STC RATED GYPSUM BOARD PARTITIONS SHOULD BE SEPARATED BY A MINIMUM OF 24-INCHES HORIZONTALLY. IF OUTLETS MUST BE WITHIN 6 - 24-INCHES OF EACH OTHER, THEN BOTH OUTLET BOXES MUST BE SEALED WITH FIRE RATED PUTTY PADS. NO BACK-TO-BACK OUTLETS ARE ALLOWED.
4. ALL JOINTS IN 2-LAYER GYPSUM BOARD PARTITIONS SHALL BE STAGGERED. TAPE & SEAL EACH LAYER SEPARATELY.
5. WALL ASSEMBLY STC RATING ASSUMES 25GA STUDS, 24" O.C. UNLESS OTHERWISE NOTED. LOWER (I.E. THICKER) GAGE STUDS OR CLOSER STUD SPACING WILL LOWER THE STC RATING OF THE WALL ASSEMBLY.

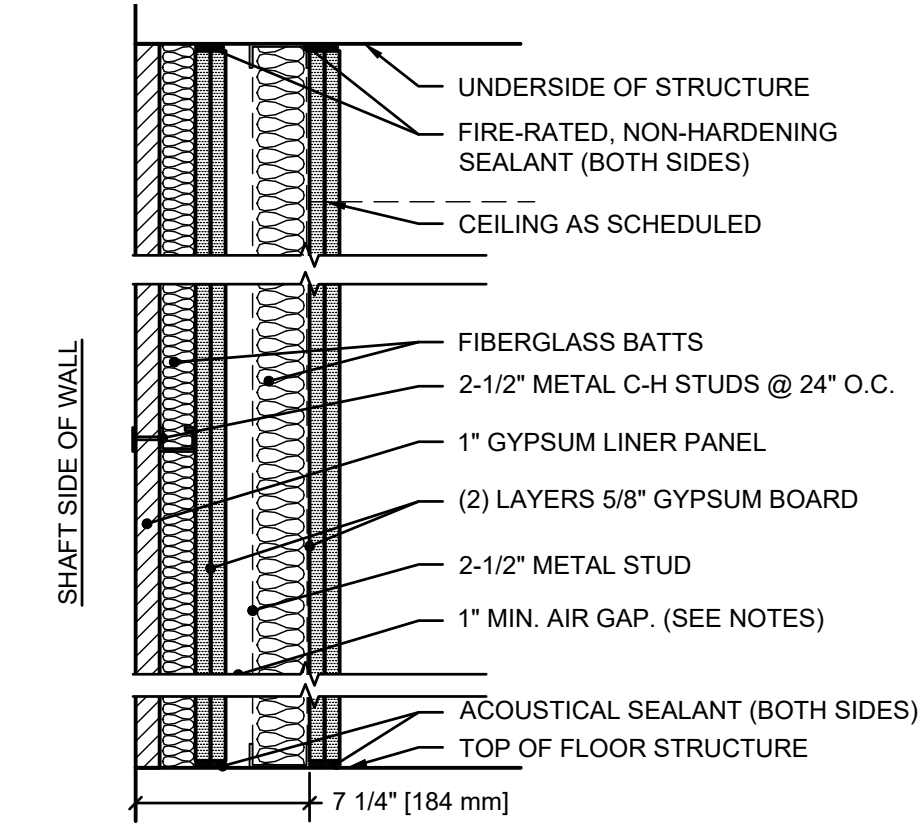


UNBALANCED GYPSUM BOARD WALL
SINGLE 3-5/8" METAL STUD W/ ISOLATION CLIP

GENERAL NOTES:

1. SEAL AIR TIGHT AT FLOOR, SIDES, & CEILING ON BOTH SIDES WITH RESILIENT NON-HARDENING FIRESTOP OR ACOUSTICAL SEALANT. HEAD-OF-WALL FIRE RATED SEALANT FLEXIBILITY SHALL BE BASED ON MAXIMUM STRUCTURAL DEFLECTION.
2. SEAL ALL DUCT, PIPE, CONDUIT & STRUCTURAL PENETRATIONS WITH ACOUSTICAL SEALANT OR FIRE STOPPING, AND THE CAVITY IN-BETWEEN PACKED WITH LOOSE FIBERGLASS OR MINERAL FIBER. SEAL ALL WALL INTERSECTIONS AND CONTROL JOINTS.
3. OUTLET BOXES MOUNTED ON OPPOSITE SIDES OF STC RATED GYPSUM BOARD PARTITIONS SHOULD BE SEPARATED BY A MINIMUM OF 24-INCHES HORIZONTALLY. IF OUTLETS MUST BE WITHIN 6 - 24-INCHES OF EACH OTHER, THEN BOTH OUTLET BOXES MUST BE SEALED WITH FIRE RATED PUTTY PADS. NO BACK-TO-BACK OUTLETS ARE ALLOWED.
4. ALL JOINTS IN 2-LAYER GYPSUM BOARD PARTITIONS SHALL BE STAGGERED. TAPE & SEAL EACH LAYER SEPARATELY.
5. ACCEPTABLE ISOLATION CLIPS INCLUDE: KINETICS ISOMAX, PLITEQ GENIE CLIP, AND PAC INTL. RSIC-1.

DOUBLE LAYER GYPSUM BOARD WALL
WITH DOUBLE 2-1/2" METAL STUDS

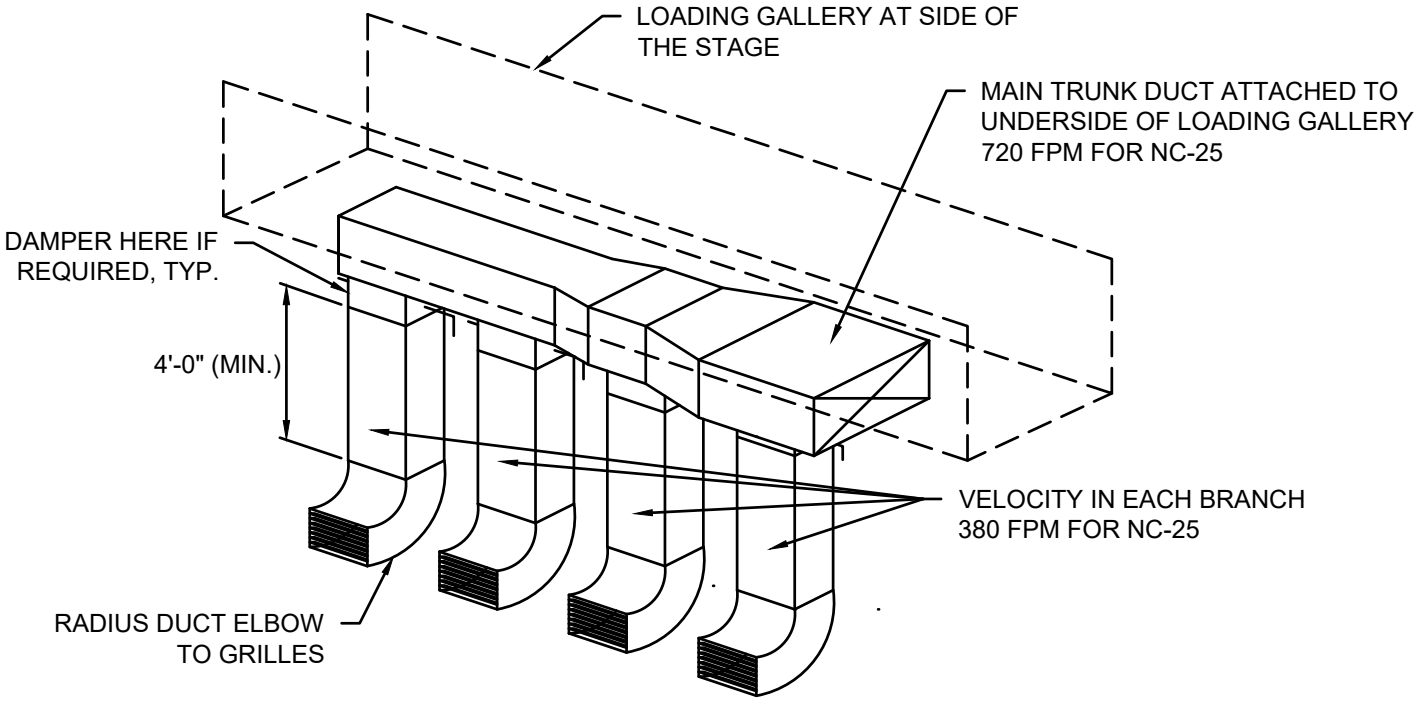


(PARTITION WIDTH IS APPROXIMATE)

GENERAL NOTES:

1. SEAL AIR TIGHT AT FLOOR, SIDES, & CEILING ON BOTH SIDES WITH RESILIENT NON-HARDENING FIRESTOP OR ACOUSTICAL SEALANT. HEAD-OF-WALL FIRE RATED SEALANT FLEXIBILITY SHALL BE BASED ON MAXIMUM STRUCTURAL DEFLECTION.
2. SEAL ALL DUCT, PIPE, CONDUIT & STRUCTURAL PENETRATIONS WITH ACOUSTICAL SEALANT OR FIRE STOPPING, AND THE CAVITY IN-BETWEEN PACKED WITH LOOSE FIBERGLASS OR MINERAL FIBER. SEAL ALL WALL INTERSECTIONS AND CONTROL JOINTS.
3. OUTLET BOXES MOUNTED ON OPPOSITE SIDES OF STC RATED GYPSUM BOARD PARTITIONS SHOULD BE SEPARATED BY A MINIMUM OF 24-INCHES HORIZONTALLY. IF OUTLETS MUST BE WITHIN 6 - 24-INCHES OF EACH OTHER, THEN BOTH OUTLET BOXES MUST BE SEALED WITH FIRE RATED PUTTY PADS. NO BACK-TO-BACK OUTLETS ARE ALLOWED.
4. ALL JOINTS IN 2-LAYER GYPSUM BOARD PARTITIONS SHALL BE STAGGERED. TAPE & SEAL EACH LAYER SEPARATELY.
5. NO BRACING SHOULD BE USED ACROSS DOUBLE STUDS WHENEVER POSSIBLE. IF REQUIRED, ONLY RESILIENT WALL BRACES SHOULD BE USED SUCH AS KINETICS UNIBRACE-L, PSB, OR EQUAL.

FINE ARTS FACILITY STAIR SHAFT WALL

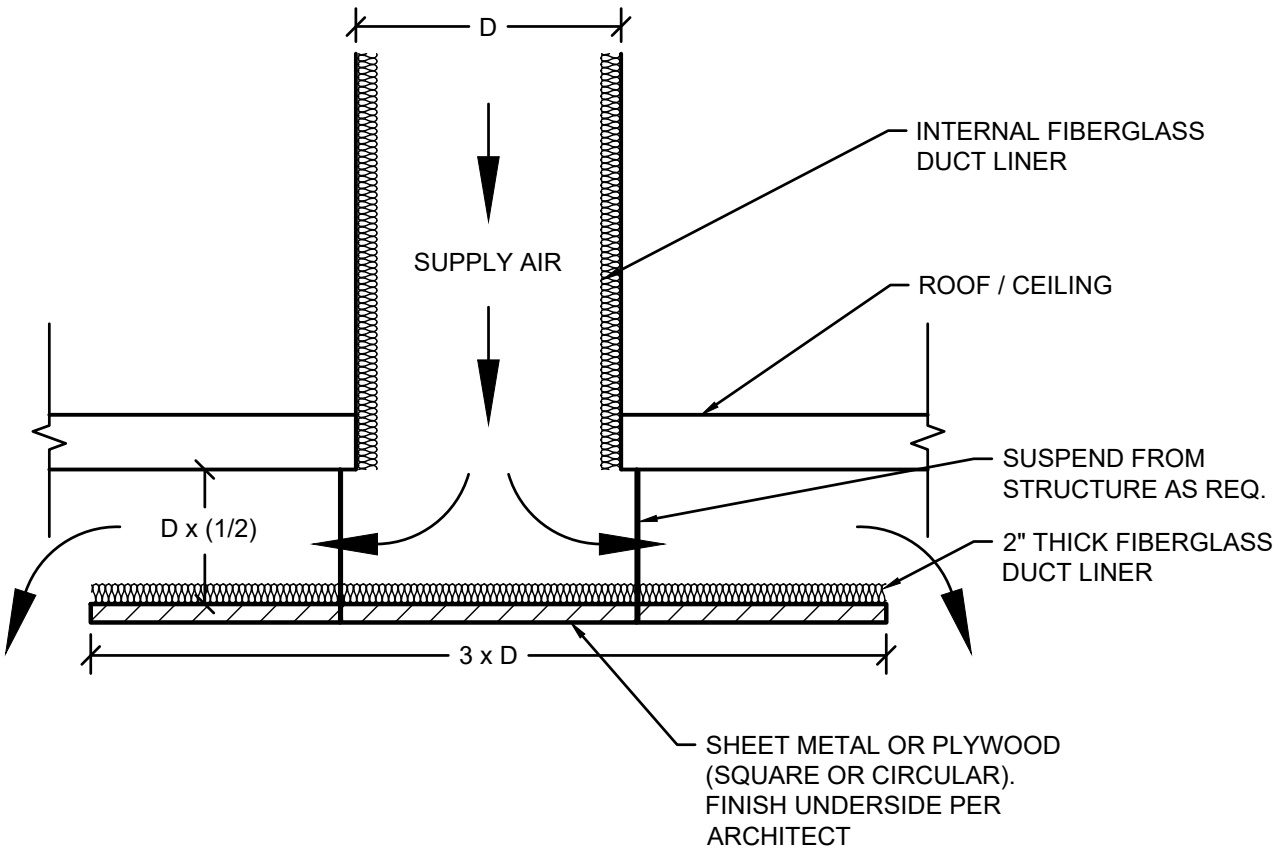


(PARTITION WIDTH IS APPROXIMATE)

GENERAL NOTES:

1. SEAL AIR TIGHT AT FLOOR, SIDES, & CEILING ON BOTH SIDES WITH RESILIENT NON-HARDENING FIRESTOP OR ACOUSTICAL SEALANT. HEAD-OF-WALL FIRE RATED SEALANT FLEXIBILITY SHALL BE BASED ON MAXIMUM STRUCTURAL DEFLECTION.
2. SEAL ALL DUCT, PIPE, CONDUIT & STRUCTURAL PENETRATIONS WITH ACOUSTICAL SEALANT OR FIRE STOPPING, AND THE CAVITY IN-BETWEEN PACKED WITH LOOSE FIBERGLASS OR MINERAL FIBER. SEAL ALL WALL INTERSECTIONS AND CONTROL JOINTS.
3. OUTLET BOXES MOUNTED ON OPPOSITE SIDES OF STC RATED GYPSUM BOARD PARTITIONS SHOULD BE SEPARATED BY A MINIMUM OF 24-INCHES HORIZONTALLY. IF OUTLETS MUST BE WITHIN 6 - 24-INCHES OF EACH OTHER, THEN BOTH OUTLET BOXES MUST BE SEALED WITH FIRE RATED PUTTY PADS. NO BACK-TO-BACK OUTLETS ARE ALLOWED.
4. WALL ASSEMBLY STC RATING ASSUMES 25GA STUDS, 24" O.C. UNLESS OTHERWISE NOTED. LOWER (I.E. THICKER) GAGE STUDS OR CLOSER STUD SPACING WILL LOWER THE STC RATING OF THE WALL ASSEMBLY.
5. NO BRACING SHOULD BE USED ACROSS AIR GAP WHENEVER POSSIBLE. IF REQUIRED, ONLY RESILIENT WALL BRACES SHOULD BE USED SUCH AS KINETICS UNIBRACE-L, PSB, OR EQUAL.

ON-STAGE DUCT CONFIGURATION AND VELOCITIES



NOTES
TOTAL SLOPE AT EACH TRANSITION TO BE 1:4 (15 DEGREES) OR LESS.

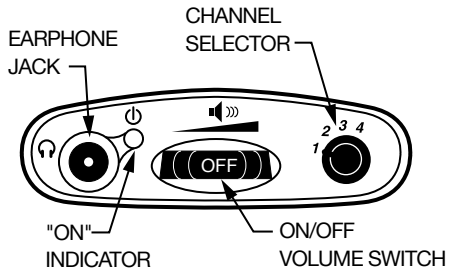
WIR RX22-4

SoundPlus™ Infrared Receiver



The RX22-4 is a four-channel infrared receiver, compatible with transmitters operating on the 2.3-3.8 MHz frequency bandwidth. The sleek, comfortable design features a convenient rotary channel selector and an easy-to-use on/off/volume control. The RX22-4 can be used with mono or stereo headphones and earphones, or a neckloop. Dual infrared detectors provide maximum sensitivity and operating range.

SoundPlus™ Infrared Receiver

WIR RX22-4 Receiver:

RX22-4 TOP

RX22-4 FRONT

Receiver Style:	Body-Pack, dual-lens detector, lanyard
Size:	4.1" L x 2.85" W x 1.2" H (104.1 mm x 72.4 mm x 30.4 mm)
Weight:	4.5 oz (127 g) with batteries
Color and Material:	Black
Lanyard:	3 ft (.91 m), allows receiver to be worn around the neck
Operating Temperature:	-10° C to +50° C
Battery Type:	2 x AA, alkaline (BAT 001) or NiMH (BAT 026)
Battery Life:	Alkaline: 60 hours, NiMH: 30 hours/charge
Battery Drain:	25 mA, nominal
Charging Contacts:	For use only with CHG 3512
Carrier Frequency:	Channel 1: 2.3 MHz, Channel 2: 2.8 MHz
	Channel 3: 3.3 MHz, Channel 4: 3.8 MHz
De-Emphasis:	50 uS
FM Deviation:	±50 kHz
Signal-to-Noise Ratio:	60dB min.
Squelch:	Receiver squelches (mutes) at 28 dB S/N ratio
Frequency Response:	25 Hz to 16 KHz, +1 dB, -3 dB, electrical response
Total Harmonic Distortion:	Less than 1%, electrical response
Controls:	ON/OFF/VOLUME: combination thumbwheel knob
	Channel Selector: four-position rotary switch
Indicators:	Red LED "ON" indicator, flashes to indicate Low battery
Audio Output Jacks:	3.5 mm stereo mini phone jack Accepts 3.5 mm mono or stereo phone plug
Audio Output Power:	15 mW max at 32 Ω
Acoustic Output:	125 dB SSPL90 with HED 021; 110 dB SSPL90 w/ EAR 013
Sensitivity:	Better than 1 nW/cm2 for 40 dB signal-to-noise ratio
Approvals:	CE, FCC, RoHS, WEEE
Warranty:	5 years on receiver, 90 days on accessories
Compatible Headphones/ Earphones:	Mono or stereo, 8-32 ohms, 3.5 mm mini phone plug, HED 021, HED 026, EAR 013, EAR 014, EAR 022, NKL 001

NOTE: SPECIFICATIONS SUBJECT TO CHANGE WITHOUT NOTICE!

SoundPlus™ Infrared Receiver

Bid Specs:

The receiver shall be a body-pack type with IR detector lens behind face of the unit. The unit shall have a lanyard for hands-free operation. The receiver shall have a rotary-type volume control. The receiver shall operate for 60 hours with two AA alkaline batteries and for 30 hours per charge with NiMH AA batteries. The receiver shall be charged without battery removal via charger contacts in the case. A drop-in charger accessory shall recharge the batteries in 16 hours when used with CHG 3512 charger. The receiver shall be housed in an impact resistant plastic case with a hinged battery door that does not separate from the receiver. The receiver shall receive 2.3 MHz, 2.8 MHz, 3.3 MHz or 3.8 MHz modulated IR signals with 50 µS de-emphasis. The receiver shall have a 3.5 mm stereo phone jack and accommodate low-impedance mono or stereo earphones and headphones. The receiver shall accommodate neckloop telecoil couplers. The receivers shall provide 125 dB SSPL90 output with HED 021 headphone and 110 dB SSPL90 with EAR 013 earbud-type earphone.

The system electrical frequency response shall be 25 Hz to 16 kHz, +1, -3 dB and the S/N ratio shall be 60 dB. The receiver shall have CE, FCC RoHS and WEEE approval. The receiver shall be covered by a five-year parts and labor warranty, excluding earphones, headphones, batteries and chargers.

The receiver shall be the Williams AV model WIR RX22-4.

ERK Series
enclosure

The ERK Series 19" welded stand-alone / gangable enclosures. Advanced manufacturing techniques provide highest quality and lowest price.

features:

- Fully welded construction
- 2,500 lb. weight capacity
- 1/8" thick structural steel internal braces
- UL Listed in the US and Canada
- Seismic certified (when used with ERK-Z4 option) with an Ip value of 1.5
- 22" OD width, available 20", 25" or 28" OD depth
- 1/2" , 3/4", 1" & 1-1/2" electrical knockouts on removable split rear plates top and bottom, easily removable for cable pass-through. Top plates additionally include UHF / VHF knockouts
- Standard front, optional rear 11-gauge 10-32 threaded, fully adjustable rackrail with numbered rackspace increments
- Keylocked solid rear door standard, optional vented rear doors available
- Optional front doors available
- Configurable top options on 44, 40, and 35 space sizes
- Durable black textured powder coat finish

ERK-4425

specifications:

EIA compliant 19" stand-alone / gangable equipment rack shall be Middle Atlantic Products model # ERK-__-__(see chart for available models). Overall dimensions of rack shall be __"H x __"W x __"D (refer to chart). Useable height shall be __ rackspaces, useable depth shall be __" (refer to chart). Rack shall be of fully welded construction. Weight capacity shall be 2,500 lbs. ERK shall be finished in a durable black powder coat. ERK shall come equipped with one pair of fully adjustable 11-gauge steel rackrail with tapped 10-32 mounting holes in universal EIA spacing, black e-coat finish and numbered rackspaces. ERK shall include solid locking rear door standard and solid sides with vertical slotted vent pattern at top and bottom (and laser knockouts for cable pass-through on 44, 40, and 35 space models). Top and bottom of ERK shall feature vertical slotted vent pattern. ERK shall have removable split rear knockout panels with 1/2", 3/4", 1", and 1-1/2" electrical knockouts installed in base and a removable rear knockout panel with 1/2", 3/4", 1", and 1-1/2" electrical knockouts and BNC knockouts for UHF/VHF antennae installed in top. Grounding and bonding stud shall be 1/4-20 threaded (1 location), bonding stud shall be 10-32 threaded (3 locations). ERK Series enclosures shall satisfy the 2005 & 2010 Editions of ASCE Standard 7; 2006, 2009 & 2012 editions of the IBC; 2007, 2010 & 2013 editions of the CBC; 2010 editions of the NBC and 2012 edition of the BCBC for use in areas of high seismicity, Occupancy Category IV facilities. Seismic design force is an assumed Site Class D soil conditions, and top floor or rooftop installations. Design for High Importance or Post-disaster installation uses an importance factor (Ip or Ie) of 1.5 when used with ERK-Z4 seismic floor anchor bracket. ERK shall be UL Listed in the US to UL2416 (NWIN) and Canada to CSA C22.2 No. 60950-1. ERK shall be GREENGUARD Gold Certified. ERK Series Series shall meet the RoHS EU Directive 2011/65/EU. ERK shall be manufactured by an ISO 9001 and ISO 14001 registered company. ERK shall be warrantied to be free from defects in material or workmanship under normal use and conditions for the lifetime of the product.

Customizable specification clips available at middleatlantic.com

EIA/TIA COMPLIANT

SEISMIC CERTIFIED

RoHS

c UL us LISTED

GREENGUARD GOLD

PRODUCT CERTIFIED FOR LOW CHEMICAL EMISSIONS
UL.COM/GG
UL 2818

PEP ecoPASSPORT®

options:

- Front doors shall be model #FD-XX (solid), VFD-XX (vented, 22% open area), LVFD-xx (vented 63% open area-not available for 27 space rack) PVFD-44 (vented plexi), (X=# of rackspaces of ERK rack)
- Rear door, vented, shall be ERK-VRD-XX, Cable management shall be ERK-RDC-XX (XX= # of rackspaces of ERK Rack)
- Top panels for 35, 40 or 44 space ERK, multiple styles available including model #ERK-ST (solid), ERK-10FT (10" fan), ERK-6FT (two 6" fans) ERK-4FT (three 4-1/2" fans), ERK-VT (vented) and ERK-LVT (large perf vented) see A&E spec 96-01063 for more details
- Caster base, four casters shall have a total weight capacity of 1300 pounds, model # CBS-ERK-YY (Y= cabinet depth), raises racks 3.9" (commercial grade) or 4.1" (fine floor)
- Rear rail kit, 11-gauge, 10-32 threaded, sold in pairs, hardware included, model #ERK-RRXX (X=# of rackspaces)
- Seismic compliancy floor anchor kit, model # ERK-Z4
- 18, 21 and 27 space ERK come preconfigured with solid top that includes knockouts to accommodate up to two 4-1/2" fans, or included vent panels
- Optional bonding kit for UL-2416 (NWIN) compliance shall be PET-K-RD (for rear door to enclosure), PET-K-RDC (for cable management rear door to enclosure), PET-K-EXT (for extender bay to enclosure)
- Extender bay adds 3" of usable depth, front mount shall be ERK-(44, 40)-F-EXT3, rear shall be ERK-(44,40)-R-EXT3
- Grommet for 4" electrical knockout in side of ERK shall be model # GK4 and include 4 pieces
- Gland grommet for 4" electrical knockout in side of ERK shall be model #GK-4G. 4 Pieces.
- Slide out option available (See AXS Spec sheet 96-055S)

ERK Series

configured A/V enclosure

Configured A/V enclosure ships complete with the most commonly used accessories.

features:

- Integrated fan top
- Configurable rear door with bottom vent, solid locking front door
- 3-1/4" wide vertical lacer strip (height varies based on model)
- Six horizontal lacer bars
- Twelve 8" Velcro® cable management straps
- Thin power strip, 20 Amp, 20 outlet with cord (44 space enclosures) or 2 qty. thin power strip, 20 Amp, 10 outlet with cord (35 & 40 space enclosures)
- Leveling feet
- 100 qty. 10-32 mounting hardware

ERK-4425-AV

specifications:

EIA compliant 19" stand-alone / gangable equipment rack shall be Middle Atlantic Products model # ERK-__-__-AV(see chart for available models). Overall dimensions of rack shall be __"H x __"W x 25"D (refer to chart). Useable height shall be __ rackspaces, useable depth shall be 23-1/2". Rack shall be of fully welded construction. Weight capacity shall be 2,500 lbs. ERK shall be finished in a durable black powder coat. Solid front door and vented, locking and latching rear door and all structural elements shall be finished in a durable black powder coat. Rack shall come equipped with two pairs of 11-gauge steel rackrail with tapped 10-32 mounting holes in universal EIA spacing, black e-coat finish and numbered rackspaces. Rack shall include 100 qty. 10-32 mounting screws. Rack shall be equipped with one 3-1/4" vertical lacer strip Middle Atlantic Products model # LACE-__-OP (refer to chart), four 'L' shaped straight and two 4" offset horizontal lacer bars and twelve, 8" Velcro® straps for cable management. The ERK shall have a solid locking rear door standard and solid side panels with vertical slotted vent pattern at top and bottom with laser knockouts for cable pass-through. Rack shall have feature integrated fan top, Middle Atlantic Products model # ERK-4FT-285CFM for active thermal management. The ERK-4FT-285CFM shall consist of three 4-1/2" fans and airflow shall be 285 CFM. Rack shall have removable split rear knockout panels with 1/2", 3/4", 1" and 1-1/2" electrical knockouts and top BNC knockouts for UHF/VHF antennae. Grounding and bonding stud shall be 1/4-20 threaded (1 location), bonding stud shall be 10-32 threaded (3 locations). ERK Series enclosures shall satisfy the 2005 & 2010 Editions of ASCE Standard 7; 2006, 2009 & 2012 editions of the IBC; 2007, 2010 & 2013 editions of the CBC; 2010 editions of the NBC and 2012 edition of the BCBC for use in areas of high seismicity, Occupancy Category IV facilities. Seismic design force is an assumed Site Class D soil conditions, and top floor or rooftop installations. Design for High Importance or Post-disaster installation uses an importance factor (Ip or Ie) of 1.5 when used with ERK-Z4 seismic floor anchor bracket. . ERK-__-AV shall include a high-density thin power distribution and shall be Middle Atlantic Products model # PDT-____-NS with __ outlets and 20 amps (refer to chart). Thin power distribution shall be ____" long (refer to chart) x 1" deep x 1.9" wide. J-Box shall be 2" deep x 2" wide. Thin power distribution shall feature __ NEMA 5-20R outlets. Corded power strip includes 20 amp protection and mounting hardware. Corded model shall be terminated with 10-foot power cord and a NEMA 5-20P plug. PDT Series shall feature a black anodized finish. ERK shall be UL Listed in the US to UL2416 (NWIN) and Canada to CSA C22.2 No. 60950-1. ERK shall be GREENGUARD Gold Certified. ERK shall be RoHS EU Directive 2002/95/EC and 2011/65/EU compliant. ERK shall be manufactured by an ISO 9001 and ISO 14001 registered company. ERK shall be warrantied to be free from defects in material or workmanship under normal use and conditions for the lifetime of the product.

DN-500BD MKII

Blu-Ray, DVD and CD/SD/USB Player

Key Features:

- Plays Blu-Ray, DVD, CD and files from SD/USB media
- Supported Blu-Ray disc formats: BD25, BD50, BD-RE, BD-ROM and BD-R
- Supported DVD formats: DVD, DVD+R, DVD+RW and DVD-RW
- Supported audio disc formats: CD, CD-R, CD-RW, DTS Music Disc (DTS Audio CD, 5.1 Music Disc), HDCD, Super Video CD (SVCD) and Video CD (VCD)
- SD/USB supported video, audio and picture file formats: .3gp, .asf, .avi, .dat, .divx, .mkv, .mov, .mp4, .mpg, .m2ts, .ogm, .rmvb, .tp, .ts, .wmv, .ass, .smi, .srt, .ssa, .sub, .ape, .flac, .m4a (AAC), .mp3, .wav, .gif, .jpg (or .jpeg) and .png
- USB/SD file systems: FAT16, FAT32 and NTFS
- Discrete 7.1ch analog audio output
- XLR balanced audio output
- RS-232C and IP control capability
- Power-on Play button eliminates extra steps, and provides simplified, ultra-fast startup
- Panel lock and IR remote lock functions prevent unwanted or accidental operation
- Improved, easy-to-read OLED display
- OSD (On Screen Display) hiding mode eliminates unwanted menu items and disc transport icons
- Transport controls located conveniently on the front panel
- Repeat mode offers an uninterrupted playback loop
- Occupies only a single rack space (1RU)

Overview:

DENON PROFESSIONAL'S VERSATILE DN-500BDMKII BLU-RAY PLAYER

The Denon Professional DN-500BDMKII Blu-ray disc and media player is a compact, high performance unit that handles all popular optical video and audio CD playback formats for unrivaled capability from a single disc playback device. For even more versatility, front-loading SD and USB ports deliver access to video, audio and picture files such as AVI, MOV, MP4, MP3, WAV, FLAC, GIF, JPEG, PNG, and more.

The DN-500BDMKII offers a tremendous amount of performance and flexibility in a space-saving single rack unit (1RU) chassis. It provides the wide range of connection and control capabilities that are essential to the professional user, making it ideal for use in corporate A/V, education, theaters, house of worship, and more. These include RS-232C and IP controllability and XLR balanced audio outputs. The DN-500BD also has discrete 7.1 channel analog outputs

Specifications:

- Digital System
  - System
    - Digital media player (Blu-ray Disc, DVD, CD, SD, USB device [mass storage class]) AVCHD playback format
  - Supported Disc Formats
    - Blu-ray Disc: BD25, BD50, BD-ROM, BD-R, BD-RE
      - BD25, BD50, BD-ROM, BD-R, BD-RE
    - DVD:
      - DVD, DVD+R, DVD-R, DVD+RW, DVD-RW
    - CD:
      - CD, CD-R, CD-RW, DTS Music Disc (DTS Audio CD, 5.1 Music Disc), HDCD, Super Video CD (SVCD), Video CD (VCD)
  - Supported File Formats
    - Video:
      - .3gp, .asf, .avi, .dat, .divx, .mkv, .mov, .mp4, .mpg, .m2ts, .ogm, .rmvb, .tp, .ts, .wmv
    - Subtitles:
      - .ass, .smi, .srt, .ssa, .sub
    - Audio:
      - .ape, .flac, .m4a (AAC), .mp3, .wav, .wma
    - Picture:
      - .gif, .jpg (or .jpeg), .png
  - Supported File Systems
    - FAT16, FAT32, NTFS
    - SD card with 128GB total capacity
    - USB drive (mass storage class) with 2 TB total capacity
  - Video
    - Resolutions
      - Auto, 480i/576i, 480p/576p, 720p, 1080i, 1080p
    - Aspect Ratios
      - 16:9 Full, 16:9 Normal, 4:3 Pan & Scan, 4:3 Letterbox
    - System
      - NTSC, PAL, Multi (if supported by TV)
    - HDMI Color Space: 4
      - RGB PC Level, RGB Video Level, YCbCr (4:4:4), YCbCr 4:2:2
  - Decoding
    - Video:
      - DivX 3, 4, 5, 6; DivX HD; MPEG-1; MPEG-2; MPEG-4; MPEG-4 AVC (H.264); VC-1 (Windows Media Video); Xvid
    - Audio:
      - AAC; Dolby Digital; Dolby Digital Plus; Dolby TrueHD; DTS Digital Surround; DTS-HD; WMA
  - Audio
    - Analog Outputs
      - Output Level (balanced XLR):
        - +4 dBu = +1.786 dBV
      - Output Level (unbalanced RCA):
        - +6 dBV
    - Digital Output
      - Output Level (coaxial):
        - 0.5V, 75â„¦
      - Signal Format:
        - AES/EBU

for simple connection to powered speakers or signal management devices.

The Denon Professional DN-500BDMKII will play virtually every Blu-ray, DVD, and audio CD format, making it easy to utilize multiple disc formats within a system. Supported formats include BD25, BD50, BD-RE, DVD, DVD+R, DVD+RW, DVD-R, DVD-RW and Audio CD (CD-R, CD-RW), DTS Music Disc, and HDCD. Using the built-in LAN port, users may optionally access additional content via BD Live.

In addition to its extremely high performance and wide range of format playback capabilities, the DN-500BDMKII anticipates your requirements and operational patterns by providing features that maximize the unit's ease of use.

The Denon Professional DN-500BDMKII combines no-compromise performance, wide-ranging connection and control capability, and compatibility with virtually every disc and digital file format there is—all in a compact single rack space unit. Its unique combination of performance, versatility and compact size is ideally suited to the professional user.

- Surround Audio
  - DTS-Master Audio, DTS-HD High Resolution Audio, DTS Digital Surround, Dolby TrueHD, Dolby Digital (AC-3), Dolby Digital Plus (7.1ch)
- Frequency Response:
  - 20 Hz – 20 kHz (+0.5 dB)
- Signal-to-Noise Ratio:
  - > 100 dB (A-weighted)
- Total Harmonic Distortion:
  - < 0.05%
- Dynamic Range:
  - > 100 dB (A-weighted)
- Headroom:
  - 6 dB
- Channel Separation:
  - > 90 dB

- Outputs
  - (2) XLR audio outputs (L/R, balanced)
  - (2) RCA audio outputs (L/R, unbalanced)
  - (8) RCA audio outputs (7.1 surround sound)
  - (1) Coaxial digital audio/visual output
  - (1) HDMI audio/visual output
  - (1) RJ-45 LAN port
  - (1) 9-pin D-Sub female RS-232C port
  - (1) IEC power connection
- Communication
  - Remote Control
    - Infrared protocol, > 200 mV transmission output level
  - Serial Remote
    - Connector:
      - 9-pin D-Sub female, RS-232C
    - Mode:
      - Full duplex
    - Baud Rate:
      - 9600 or 38400 bps (selectable)
  - Ethernet
    - Connector:
      - LAN port
    - Standards:
      - Ethernet (10 Mbps), Fast Ethernet (100 Mbps)
  - Environmental Conditions
    - Operating temperature:
      - 41 – 95 °F (5 – 35 °C)
    - Operating humidity:
      - 25 – 85%, no condensation
  - General
    - Power
      - Connection:
        - IEC
      - Requirement:
        - 100–240 VAC, 50/60 Hz
      - Consumption:
        - 15 W typical, < 0.5 W standby
    - Dimensions (width x depth x height, with rack ears)
      - 19.00" x 10.75" x 1.73" (483 mm x 273 mm x 44 mm)
    - Weight (with rack ears)
      - 5.9 lbs. (2.7 kg)

Q-SYS Core 110f

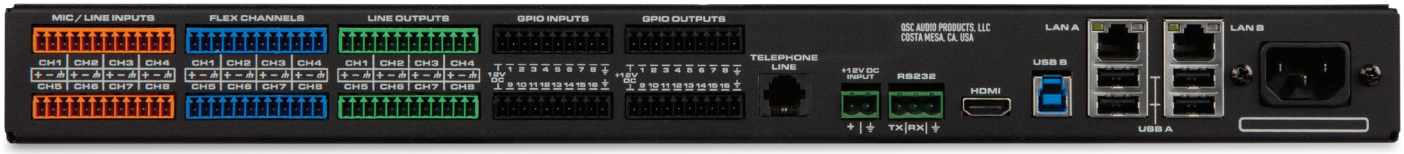
Unified Core

Features

- 128x128 Network Audio Channels
- 16x16 USB Audio Channels
- 24 Channels of Total Analog Audio
- 8 Configurable Flex Channels
- 16x16 GPIO Logic Ports
- 16 Channels of Routable AEC
- Multiple Instance VoIP Lines
- Single POTS Telephone line
- 3 Year Warranty

The Q-SYS™ Core 110f provides a solution for small, single room allowing the Q-SYS platform to accommodate every-day, simple projects up to the largest Enterprise scale deployments. QSC's software based DSP Platform Q-SYS, gives the systems integrator and end-user a unified software design tool and feature set suitable for projects of any scale. The continuity of the Q-SYS software based DSP platform is unique within the competitor space and allows the Q-SYS Core 110f to leverage all the features that are available across the entire Q-SYS Platform to be used in the following applications: Acoustic Echo Canceling (AEC) and sound reinforcement in small to large meeting or multipurpose rooms, sound reinforcement in performance venues such as house of worship and theater, background music systems, wide area paging in airports, convention centers and hospitals.

The Q-SYS Core 110f is a multipurpose software based digital audio signal processor with a total of 8 balanced analog line level audio inputs and 8 balanced analog line level audio outputs. In addition to the fixed 8x8 analog audio I/O, the Core 110f features a software definable bank of 8 balanced analog audio Input/Output Flex Channels, a unique QSC innovation, where each channel can be independently configured during design or run time as either a microphone/line level input or a line level output. As such, the Core 110f offers class leading 24 analog I/O density plus additional specialized I/O such as VoIP, POTS, Internal Media Playback/Recording HDD and USB.



The Q-SYS Core 110f supports a class leading USB audio device port connection that enables the processor to appear in a Microsoft Windows or Mac OS host operating system simultaneously as both a USB Audio and Communications device. The USB Device port (B type) implementation supports up to 16x16 digital audio channels in a flexible, design time configuration environment that can advertise as multiple virtual USB device instances to the host operating system concurrently over a single physical USB connection. In addition to the USB Device port, the Core 110f provides 6 USB Host ports (A type) which enable the Core to host external USB devices and future Q-SYS peripheral products.

Benefits

- **Class leading I/O:** Q-SYS Core 110f has 24 analog I/O + USB, POTS and VoIP simultaneously in a single rack space and one SKU, offering the best cost to I/O ratio in a single chassis product available on the market from any manufacturer.
- **Flex Channels:** Nearly all the flexibility of a card based DSP solution without the cost and inconvenience of multiple SKU's and custom parts ordering.
- **Unified software platform:** Single training investment in one software design tool rather than needing to learn several platforms to scale from small to large systems or support different applications.
- **Industry leading hardware design:** Future proof investment in standards based software and computer technology running on Intel processors.
- **Industry first, software based DSP:** Q-SYS suite of conferencing technology applications built and owned by QSC from the ground up allowing for continued refinement.
    - o Software based routable AEC; no additional hardware needed
    - o SIP Softphones offering multiple instances per Q-SYS Core; no additional hardware needed
    - o Gain sharing and gating automixers
- **True IT Software Integration:** The Core 110f provides more than just networked audio integration and is not just another hardware DSP. Q-SYS is primarily a software platform that offers greater software integration functionality such as native support for LDAP contact server integration, SNMP monitoring, SIP Softphones, and software based routable AEC implementation; it truly is a next generation AV/IT product that is free of the fixed hardware limitations seen in competing products.

Key Features

- 128x128 networked audio channels (Q-LAN / AES67), reduced to 64x64 when using Video Bridging capability on built-in USB-B port.
- Up to 24 configurable analog audio I/O
- 8 mic/line level analog audio inputs
- 8 line level analog audio outputs
- 8 Flex Channel mic/line level analog audio inputs or outputs
- Up to 16 assignable and routeable AEC processor instances
- Dual Gigabit Ethernet ports with assignable application resources offering any combination of VoIP, Q-LAN Control, Q-LAN audio or network redundancy
- Up to 16x16 channels of digital audio in and out via software definable USB instances advertised to the host operating system
- 16 General Purpose Inputs (GPI) x 16 General Purpose Outputs (GPO)
- Internal Universal Power Supply plus 12 Volt DC External Power Supply input for redundancy or non-mains power supply sources
- Single software platform for system configuration, control and monitoring via Q-SYS Designer software over Ethernet with support for static or Auto/DHCP TCP/IP addressing
- POTS telephone interface via a standard RJ-11 connector
- Supports up to 4 VoIP Softphone instances in addition to the onboard POTS telephone interface
- Fully compatible with all existing and future Q-SYS accessories such as IO Frames, Paging Stations, and Touch Screen Control Surfaces running Q-SYS user control interfaces
- CE marked, UL listed, and RoHS compliant
- Covered by QSC Systems 3-year warranty

Q-SYS Core 110f

A&E SPECIFICATIONS

The system processor shall provide up to 128 x 128 networked audio channels individually configurable as either Q-LAN or AES67 formatted networked audio, channel count will reduce to 64 x 64 when using video bridging capability on the built-in USB-B device port. The system processor shall support 24 total analog I/O capacity and shall be presented in the following groupings; 8 Mic/Line inputs, 8 Line outputs and 8 Flex Channel I/O which shall be software definable analog inputs or outputs in single channel increments in any combination ratio.

The system processor shall have the following front panel controls and indicators: blue monochrome OLED display with page forward capacitive touch button, Unit ID capacitive touch button, Power On blue LED, Two USB A Type ports. The system processor shall provide a monochrome 304x96 blue OLED graphics display displaying the device name, design name and system status, LAN A and B settings, and the firmware version. Device Status shall be displayed on the OLED display including I/O status, muting, level present indication, and system status.

On the rear panel, the system processor shall have one 3-pin RS232 Euro Block Connector, HDMI Video Out, 16 GPI general purpose control inputs on 20-pin Euro Block Connector, 16 GPO general purpose control outputs on 20-pin Euro Block Connector. Q-SYS Network: LAN A RJ45 1000 MBps only, LAN B: RJ45 1000 MBps only. The dimensions of the System processor shall be 1.75” x 19” x 11.12” (44 mm x 483 mm x 356 mm).

The system processor shall store a single design which can be comprised of components, wiring, links, text, and graphics on a single or multiple schematic pages. Designs shall include any of the following DSP function blocks, test and measurement components, control components, and layout components: Acoustic Echo Cancellers, SIP Softphone instances, USB Audio host and device blocks, Audio Players, Audio Streaming components, Crossfaders, Crossovers, Delay components, Auto Gain control elements, Compressors, Gates, Duckers, Expanders, Ambient Noise Compensators, Limiters, Gain blocks, Graphic Equalizers, Parametric Equalizers, FIR Filters, All-Pass Filters, Band-Pass Filters, Band-Stop Filters, High-Pass Filters, Low-Pass Filters, FIR High-Pass filters, FIR Low-Pass Filters, Dual-Shelf Equalizers, Notch Filters, Meters, Matrix Mixers, Gain-Sharing Automatic Mixers, Gated Automatic Mixers, Signal Routers, Public Address Routers, Room Combiners, Signal Presence Meters, Tone Generators, Tone and Noise Generators, Dual Trace FFT Measurement Modules, Real Time Analyzers, Signal Injectors, and Signal Probes.

The system processor shall support custom user control interfaces on either proprietary touch screen controllers, or network computers utilizing a control application, or iOS devices on Wi-Fi. Custom control interfaces shall be capable of having multiple user-selectable pages with different controls on each.

The system processor and control engine shall be the QSC Q-SYS Core 110f Flex Channel Processor.

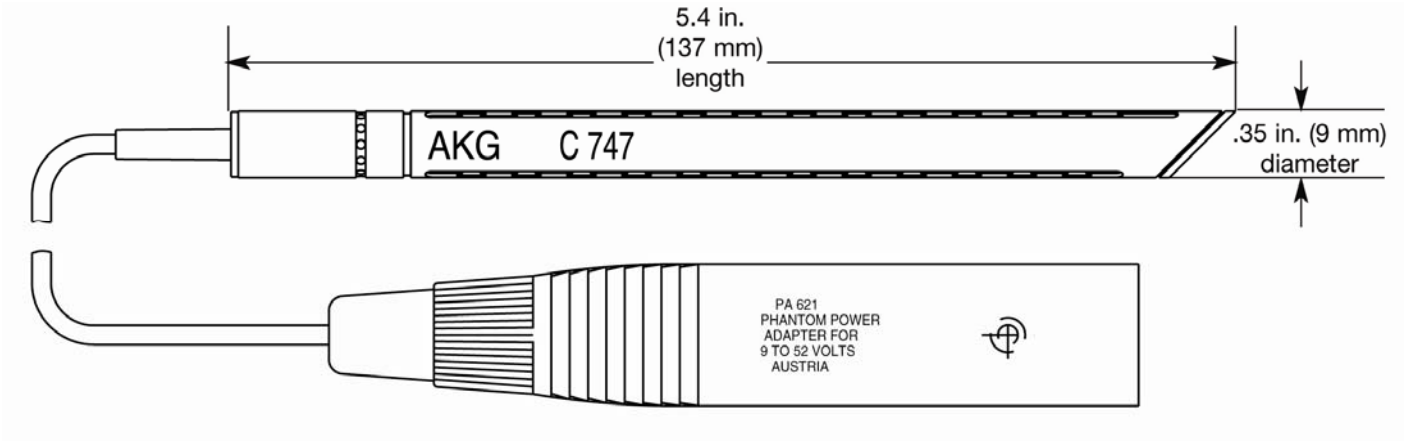
Theater, onstage miking
Broadcast and recording

- Immune to RF interference
- Speech optimized frequency range
- Enhanced hypercardioid polar pattern
- High SPL capability
- Premium microphone for ubiquitous application

C 747 V11

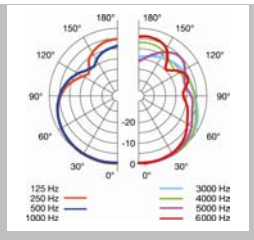
A History of Sound: The C 747, the so called „pencil microphone“, was first built in 1987. Due to its excellent technical specifications, especially the wide and flat frequency range, it was used for the recording of all kinds of musical instruments, even those with very low frequencies. Because of its brilliant sound reproduction and its inconspicuous optical appearance, it was quickly known as an ideal overhead microphone.
Thank to the narrow polar pattern it solved the crosstalk problem (when recording multiple instruments at once) and the problem of picking up sounds from distant spots in a room. But for all that, due to the help of the acoustically well balanced, short interference tube, it didn't face one of the biggest problems of most shotgun microphones – the change of the polar pattern over the frequency. This is one of many reasons why this microphone found its way into a great number of Broadcast Stations, Recording Studios, Theatres, Opera Houses, Churches, Conference Rooms and Lecture Halls.



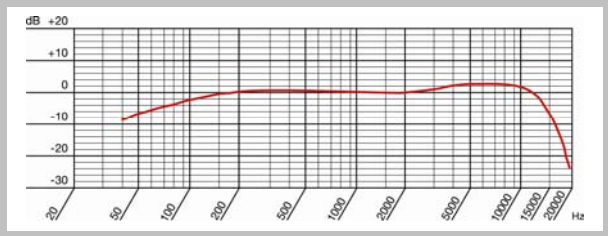
Another big advantage of the C 747 is that the microphone will not change the sound or level too much even when the person speaking is moving a lot. So it came that the C 747 finally found its way into installed sound systems as a perfect speech and lectern microphone. The C 747 is now one of the most versatile microphones in the AKG product range and over the years it has been available in various versions and model types such as hanging module, capsule for modular gooseneck microphones and in a boundary layer microphone.

What's New in V11: As it is more and more used in conference applications, we carefully redesigned the C 747 to better cope with some specific installed sound issues.
The new C 747 V11 will have an integrated RFi shield to block out unwanted interference by mobile phones, wireless mics and the like. Also we have fine tuned the frequency response to give especially the spoken word an outstanding presence, without changing the flavour of the classic C 747 sound.

An enhanced polar pattern provides consistent off-axis rejection to control ambient noise and feedback in acoustically difficult environments. This makes the C 747 V11 an excellent choice for noisy discussion groups or reverberant pulpits while it is forgiving enough to clearly pick up talkers moving around in front of the microphone. A switchable LF roll-off filter suppresses mechanical noise. The low-impedance transformerless preamp operates on 9 to 52 V phantom power.
The C 747 V11 ships with an extensive accessory set including a shock mount/adapter, mini gooseneck, stand adapter, mounting clamp, thread link, and windscreen.



Architects' and Engineers' Specifications



The microphone shall be a directional condenser type utilizing a combination of gradient and interference actions to produce a well defined hypercardioid polar pattern.
The microphone shall be no larger in diameter than 0.35 in. (9 mm), and the finish shall be stage blue. On-axis frequency response shall be maintained within the range of 30 Hz to 18 kHz, as measured at 1 meter. Microphone sensitivity shall be at least 8.5 mV/Pa, and the self A-weighted noise level of the microphone shall be no higher than 21 dB. The microphone shall operate in a sound field of 133 dB-SPL with no greater than 1% THD.
The microphone shall operate on phantom powering, covering the range from 9Vdc to 52Vdc. The microphone shall be the AKG Acoustics Model C 747 V11

Specifications:

Polar pattern:	hypercardioid
Frequency response:	30 Hz to 18,000 Hz
Sensitivity:	8,5 mV/Pa (-42 dBV)
Impedance:	< 400 ohms
Equivalent noise level:	21 dB-A
Signal/Nose ratio:	73 dB (A-weighted)
Maximum SPL:	133 dB
Powering:	9 to 52 V phantom power (DIN 45596)
Current consumption:	< 2 mA
Cable:	3 m (10 ft.)
Finish:	stage blue
Dimensions:	9 dia x 137 mm (0.35 dia. x 5.4 in.)
Net/shipping weight:	25 / 750 g (0.9 oz./1.7 lbs.)
Item number:	2226Z00110

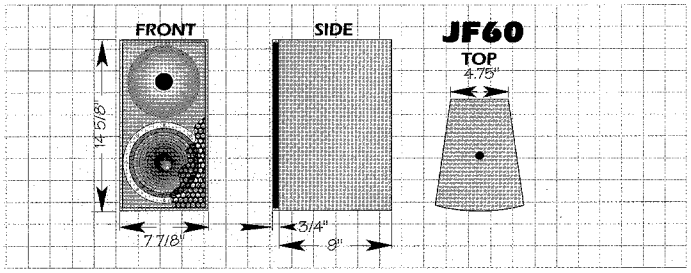
FORSYTHE SERIES

JF Series

High Definition Full Range Systems

Compact Systems With Unique Capabilities

JF Series systems have been engineered for a diverse set of applications that share certain key requirements. Among these are flat power response and consistent dispersion, high output with minimal distortion, compact, unobtrusive packaging, and exceptional power handling.



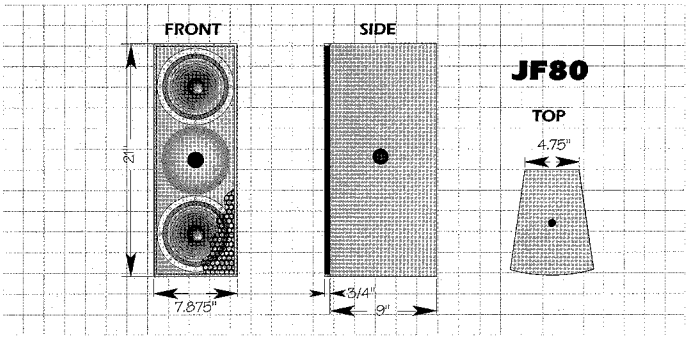
Combining high output, linear response and consistent dispersion is difficult enough when size is not a factor. When the total package must be as small as 7.5" x 9" x 14.5", the challenges become enormous. In developing the JF Series, EAW engineers integrated new ideas from such acclaimed products as the KF300 Virtual Array™ system, the SM200 high-definition stage monitor, and the MS63 Ultimate Fidelity Nearfield system. They have also developed new approaches to minimize enclosure volume. Proprietary waveguides and purpose-designed woofers optimize power response across the operating bandwidth. Complex crossovers incorporate driver protection and up to five bands of parametric equalization for linear response in both passive and bi-amped operation. Wide conical coverage allows vertical or horizontal mounting. A comprehensive hardware system facilitates stand-mounting, flying or hanging.

The result of this comprehensive engineering effort is a group of systems that set new standards of performance and versatility. Compatible with EAW subwoofers for extended bass output, JF Series systems offer advanced solutions for a wide range of portable and permanent applications. Their advanced construction technology was developed for world renowned EAW concert touring systems. With materials such as exterior-grade cross-grain laminated hardwood, water-resistant glue joints, recessed hardware, vinyl-coated perforated steel grills and exterior finishes chosen for durability, these systems are designed for long trouble-free operating life.

EAW

EASTERN ACOUSTIC WORKS, INC. One Main Street, Whitinsville, MA 01588 ▪ (508) 234 - 6158 ▪ FAX (508) 234 - 8251

JF60 Ultra-Compact System



The JF60 combines a single 6.5" carbon fiber cone woofer with a WGP™ waveguide-coupled soft dome tweeter in an enclosure that measures only 7.9" x 9" x 14.7". Exceptionally stiff, the carbon fiber mid/bass cone functions as a true piston for minimal distortion at maximum output levels. Carbon fiber is inherently resistant to damage from water and UV radiation.

The soft dome tweeter exhibits higher internal damping and lower inherent ringing than metal domes. This allows accurate reproduction without ear-fatiguing "sizzle" from bell mode resonance distortion.

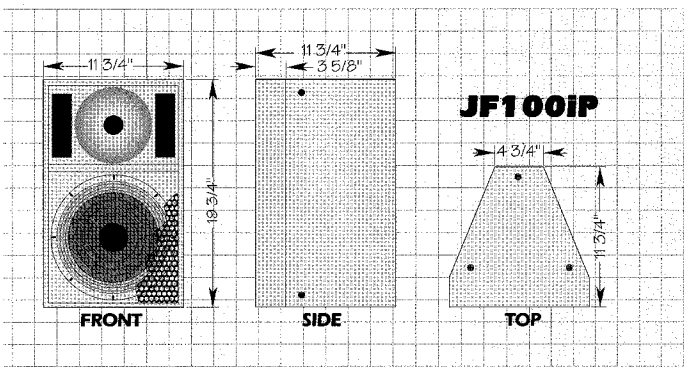
The JF60 crossover's transfer function is optimized for phase-coherent summing at the crossover point. Driver protection circuitry and parametric equalization are also integrated into the complex network.

The JF60 tweeter is coupled to the air using a specially designed WGP™ waveguide. This unique loading technique produces the consistent coverage of an exponential horn, without the throat distortion typically found in such devices. The result is stunningly natural and open reproduction.

JF80 Ultra-Compact System

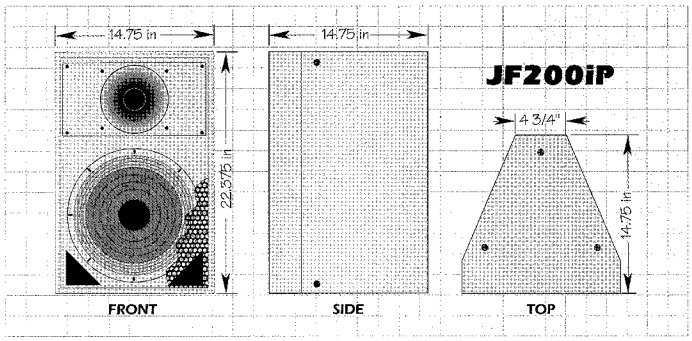
The JF80 packs a pair of 6.5" carbon fiber midbass cones and a 1" compression driver on a WGP™ waveguide into a package that measures only 7.5" x 9" x 21".

The JF80's unique HF subsystem combines the sweet and open high end of a dome tweeter with the increased output capability of a traditional horn and compression driver. The use of dual carbon fiber woofers doubles power handling capacity, while the use of a compression driver increases total system sensitivity. The end result is a 6 dB increase in maximum SPL in an enclosure that is nearly as compact as the JF60.



EAW's proprietary WGP™ subsystem produces a wide conical coverage pattern that is consistent over the system's extended operating bandwidth. Optimum power response helps to maintain the reflected energy in correct frequency balance, producing a more natural sound.

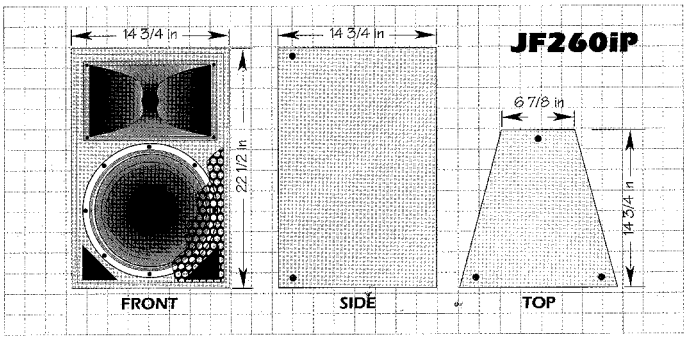
JF60/JF80 Applications



Virtually invisible yet able to cover large areas, these systems are ideal wherever the sound system must avoid obscuring architectural details. Versatile hardware includes fittings for Omnimount 75 Series and stand mounts. The JF80's unique yoke mount allows angled mounting on a wide range of stands . Applications include:

- theatrical production
- underbalcony and delay fills
- high-output distributed systems
- stage lip systems
- high-quality background/foreground music systems.

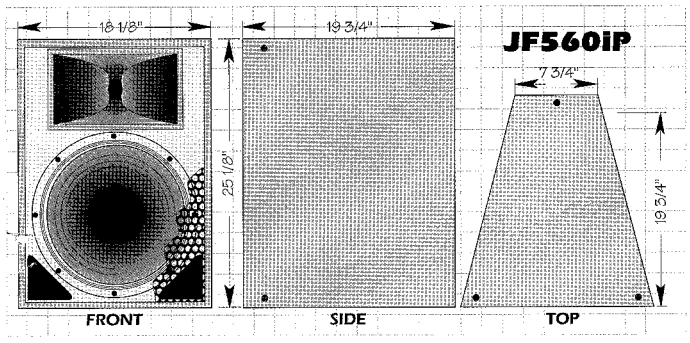
JF100i/JF200i High Definition Full Range Systems



The JF100i is only 11.75" x 11.75" x 19.125", yet produces 124 dB SPL from its 10" vented woofer and 1" compression driver, mounted on EAW's proprietary WGP™ waveguide. The JF200i is only 14.75" x 14.75" x 22.5", yet produces peak SPLs of 126 dB from a 12" vented woofer and 2" compression driver, coupled to the air using a new larger version of EAW's proprietary WGP™ high frequency device. Complex crossover networks produce linear response in either full passive or bi-

amped operation. EAW CCEP™ processors are recommended for optimum bi-amped performance (see below for options).

The JF100i and JF200i are available in portable Road versions for small band PA, A/V presentations, etc. Hardware includes recessed handles and internal stand mount sockets: Tee nuts for external stand mount brackets are also included. For fixed installations, Permanent configurations are available without handles or stand mounts, but with steel-reinforced hanging points on the top and sides, and tee nuts for Omnimount 100 Series (JF100i) or 300 Series (JF200i) brackets.

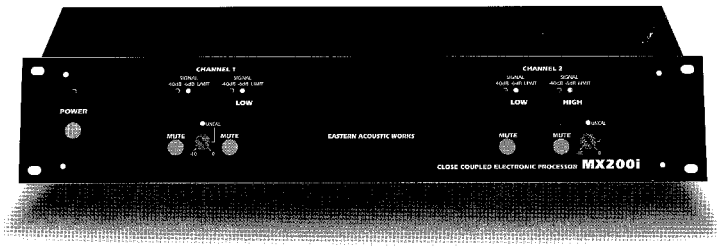


JF260 High Definition Full Range System

The ultra-compact JF260 is engineered for smaller and medium-range installations requiring the highest levels of definition in live and recorded sound reproduction at concert sound pressure levels.

The JF260 employs a purpose-designed 12" woofer and a 2" compression driver mounted on a 60° x 45° constant coverage horn. Performance is similar to the JF200i, but with somewhat greater maximum SPL and tighter directional control above 900 Hz. This combination helps preserve intelligibility in reverberant spaces without the need for large distributed systems. The complex crossover network includes rear-panel switching for bi-amp or full range passive operation. EAW CCEP™ processors are recommended for optimum bi-amped performance (see below for options).

JF560 High Definition Full Range System



Installations desiring exceptional fidelity in live and recorded sound reproduction at concert sound pressure levels find that the JF560 is an excellent choice. Performance is similar to the acclaimed JF200i, but with slightly higher overall output capability and tighter directional control above 900 Hz.

The JF560 employs a 2" compression driver mounted on a 60° x 45° constant coverage horn. The high-output 15" woofer is crossed over using a complex network equalized for optimal power response in bi-amped or passive modes. Bi-amped performance can be enhanced with the use of EAW CCEP™ processors (see below for options).

The JF260 and JF560 are available in Road configurations for portable applications, with recessed handles, internal stand mount sockets and tee nuts for external stand mounts. Permanent versions include steel-reinforced top and side hanging points and mounting hardware for Omnimount 300 Series brackets.

JF Series Processors & Subwoofers

Closely Coupled Electronic Processing™ is an integral element of EAW system design. Close Coupling™ adjusts parameters such as crossover frequency, slope and filter shape, driver protection thresholds, phase compensation and parametric equalization to each specific system. The results are maximum

linearity and phase coherence with minimal processor interaction. The MX200i processor is available in specific configurations for bi-amping the JF100i, JF200i, JF260 and JF560. A rear panel switch configures the internal crossover network for bi-amp or full range passive operation.

While they are designed for full range operation in passive or bi-amped modes, all JF Series systems require subwoofers for high-level reproduction of the lowest octaves. The JF Series has been engineered for smooth coupling with EAW SB Series subwoofers. Special MX200i configurations are available for powering the JF60 and JF80 with SB Series subwoofers. When using the JF100i, JF200i, JF260 and JF560 with subwoofers, special configurations of the MX300i CCEP™ processor provide optimum performance.

Preliminary Specifications

World-class service and support

Your time is valuable, especially when you have a problem affecting your business. Cisco 350 Series switches are backed by Cisco SMARTnet® Total Care™ which provides affordable peace-of-mind coverage. Delivered by Cisco and backed by your trusted partner, this comprehensive service includes software updates and access to the Cisco Support Center, and it extends technical service to three years.

Cisco SMB products are supported by professionals in the Cisco Support Center, a dedicated resource for small business customers and networks, with locations worldwide that are specifically trained to understand your needs. You also have access to extensive technical and product information through the Cisco Support Community, an online forum that enables you to collaborate with your peers and reach Cisco technical experts for support information.

Product specifications

Table 1 gives the product specifications for the Cisco 350 Series Switches.

Table 1. Product specifications

Feature	Description		
Performance			
Switching capacity and forwarding rate	**Model Name**	**Capacity in Millions of Packets per Second (mpps) (64-byte packets)**	**Switching Capacity in Gigabits per Second (Gbps)**
All switches are wire speed and nonblocking	SF350-08	1.19	1.6
	SF352-08	4.17	5.6

	SG350-52MP	77.38	104.0
Layer 2 Switching			
Spanning Tree Protocol	Standard 802.1d Spanning Tree support Fast convergence using 802.1w (Rapid Spanning Tree [RSTP]), enabled by default Multiple Spanning Tree instances using 802.1s (MSTP); 8 instances are supported Per-VLAN Spanning Tree Plus (PVST+) and Rapid PVST+ (RPVST+); 126 instances are supported		
Port grouping/link aggregation	Support for IEEE 802.3ad Link Aggregation Control Protocol (LACP) • Up to 8 groups • Up to 8 ports per group with 16 candidate ports for each (dynamic) 802.3ad link aggregation		
VLAN	Support for up to 4,094 VLANs simultaneously Port-based and 802.1Q tag-based VLANs; MAC-based VLAN; protocol-based VLAN; IP subnet-based VLAN, Management VLAN Private VLAN with promiscuous, isolated, and community port Private VLAN Edge (PVE), also known as protected ports, with multiple uplinks Guest VLAN; unauthenticated VLAN Dynamic VLAN assignment via RADIUS server along with 802.1x client authentication CPE VLAN		
Voice VLAN	Voice traffic is automatically assigned to a voice-specific VLAN and treated with appropriate levels of QoS Auto voice capabilities deliver networkwide zero-touch deployment of voice endpoints and call control devices		
Multicast TV VLAN	Multicast TV VLAN allows the single multicast VLAN to be shared in the network while subscribers remain in separate VLANs. This feature is also known as Multicast VLAN Registration (MVR)		

© 2020 Cisco and/or its affiliates. All rights reserved.

Feature	Description
VLAN Translation	Support for VLAN One-to-One Mapping. In VLAN One-to-One Mapping, on an edge interface C-VLANs are mapped to S-VLANs and the original C-VLAN tags are replaced by the specified S-VLAN
Q-in-Q	VLANs transparently cross a service provider network while isolating traffic among customers
Selective Q-in-Q	Selective Q-in-Q is an enhancement to the basic Q-in-Q feature and provides, per edge interface, multiple mappings of different C-VLANs to separate S-VLANs Selective Q-in-Q also allows configuring of Ethertype (TPID) of the S-VLAN tag Layer 2 protocol tunneling over Q-in-Q is also supported
Generic VLAN Registration Protocol (GVRP)/Generic Attribute Registration Protocol (GARP)	Generic VLAN Registration Protocol (GVRP) and Generic Attribute Registration Protocol (GARP) enable automatic propagation and configuration of VLANs in a bridged domain
Unidirectional Link Detection (UDLD)	UDLD monitors physical connection to detect unidirectional links caused by incorrect wiring or cable/port faults to prevent forwarding loops and blackholing of traffic in switched networks
Dynamic Host Configuration Protocol (DHCP) Relay at Layer 2	Relay of DHCP traffic to DHCP server in different VLAN; works with DHCP Option 82
Internet Group Management Protocol (IGMP) versions 1, 2, and 3 snooping	IGMP limits bandwidth-intensive multicast traffic to only the requesters; supports 2K multicast groups (source-specific multicasting is also supported)
IGMP Querier	IGMP querier is used to support a Layer 2 multicast domain of snooping switches in the absence of a multicast router
Head-Of-Line (HOL) blocking	HOL blocking prevention
Loopback Detection	Loopback detection provides protection against loops by transmitting loop protocol packets out of ports on which loop protection has been enabled. It operates independently of STP
Layer 3	
IPv4 routing	Wirespeed routing of IPv4 packets Up to 990 static routes and up to 128 IP interfaces
IPv6 routing	Wirespeed routing of IPv6 packets
Layer 3 Interface	Configuration of Layer 3 interface on physical port, LAG, VLAN interface, or loopback interface
Classless Interdomain Routing (CIDR)	Support for classless interdomain routing
Policy-Based Routing (PBR)	Flexible routing control to direct packets to different next hop based on IPv4 or IPv6 ACL

© 2020 Cisco and/or its affiliates. All rights reserved.

Feature	Description
DHCP Server	Switch functions as an IPv4 DHCP server serving IP addresses for multiple DHCP pools/scopes Support for DHCP options
DHCP relay at Layer 3	Relay of DHCP traffic across IP domains
User Datagram Protocol (UDP) relay	Relay of broadcast information across Layer 3 domains for application discovery or relaying of bootP/DHCP packets
Security	
Secure Shell (SSH) Protocol	SSH is a secure replacement for Telnet traffic. SCP also uses SSH. SSH v1 and v2 are supported
Secure Sockets Layer (SSL)	SSL support: Encrypts all HTTPS traffic, allowing highly secure access to the browser-based management GUI in the switch
IEEE 802.1X (Authenticator role)	802.1X: RADIUS authentication and accounting, MD5 hash; guest VLAN; unauthenticated VLAN, single/multiple host mode and single/multiple sessions Supports time-based 802.1X Dynamic VLAN assignment
Web-based authentication	Web based authentication provides network admission control through web browser to any host devices and operating systems
STP Bridge Protocol Data Unit (BPDU) Guard	A security mechanism to protect the network from invalid configurations. A port enabled for BPDU Guard is shut down if a BPDU message is received on that port
STP Root Guard	This prevents edge devices not in the network administrator's control from becoming Spanning Tree Protocol root nodes
STP loopback guard	Provides additional protection against Layer 2 forwarding loops (STP loops)
DHCP snooping	Filters out DHCP messages with unregistered IP addresses and/or from unexpected or untrusted interfaces. This prevents rogue devices from behaving as DHCP Servers
IP Source Guard (IPSG)	When IP Source Guard is enabled at a port, the switch filters out IP packets received from the port if the source IP addresses of the packets have not been statically configured or dynamically learned from DHCP snooping. This prevents IP Address Spoofing
Dynamic ARP Inspection (DAI)	The switch discards ARP packets from a port if there are no static or dynamic IP/MAC bindings or if there is a discrepancy between the source or destination addresses in the ARP packet. This prevents man-in-the-middle attacks
IP/MAC/Port Binding (IPMB)	The preceding features (DHCP Snooping, IP Source Guard, and Dynamic ARP Inspection) work together to prevent DOS attacks in the network, thereby increasing network availability
Secure Core Technology (SCT)	Makes sure that the switch will receive and process management and protocol traffic no matter how much traffic is received
Secure Sensitive Data (SSD)	A mechanism to manage sensitive data (such as passwords, keys, and so on) securely on the switch, populating this data to other devices, and secure autoconfig. Access to view the sensitive data as plaintext or encrypted is provided according to the user-configured access level and the access method of the user

© 2020 Cisco and/or its affiliates. All rights reserved.

Feature	Description
Trustworthy systems	Trustworthy systems provide a highly secure foundation for Cisco products Run-time defenses (Executable Space Protection [X-Space], Address Space Layout Randomization [ASLR], Built-In Object Size Checking [BOSC])
Private VLAN	Private VLAN provides security and isolation between switch ports, which helps ensure that users cannot snoop on other users' traffic; supports multiple uplinks
Layer 2 isolation Private VLAN Edge (PVE) with community VLAN	PVE (also known as protected ports) provides Layer 2 isolation between devices in the same VLAN, supports multiple uplinks
Port security	Ability to lock source MAC addresses to ports and limits the number of learned MAC addresses
RADIUS/TACACS+	Supports RADIUS and TACACS authentication. Switch functions as a client
RADIUS accounting	The RADIUS accounting functions allow data to be sent at the start and end of services, indicating the amount of resources (such as time, packets, bytes, and so on) used during the session
Storm control	Broadcast, multicast, and unknown unicast
DoS prevention	Denial-Of-Service (DOS) attack prevention
Multiple user privilege levels in CLI	Level 1, 7, and 15 privilege levels
ACLs	Support for up to 1K rules Drop or rate limit based on source and destination MAC, VLAN ID or IPv4 or IPv6 address, IPv6 flow label, protocol, port, Differentiated Services Code Point (DSCP)/IP precedence, TCP/UDP source and destination ports, 802.1p priority, Ethernet type, Internet Control Message Protocol (ICMP) packets, IGMP packets, TCP flag; ACL can be applied on both ingress and egress sides Time-based ACLs supported
Quality of Service	
Priority levels	8 hardware queues
Scheduling	Strict priority and Weighted Round-Robin (WRR) Queue assignment based on DSCP and class of service (802.1p/CoS)
Class of service	Port based; 802.1p VLAN priority based; IPv4/v6 IP precedence/Type of Service (ToS)/DSCP based; Differentiated Services (DiffServ); classification and remarking ACLs, trusted QoS Queue assignment based on DSCP and class of service (802.1p/CoS)
Rate limiting	Ingress policer; egress shaping and rate control; per VLAN, per port, and flow based; 2R3C policing
Congestion avoidance	A TCP congestion avoidance algorithm is required to minimize and prevent global TCP loss synchronization

Feature	Description
Standards	
Standards	IEEE 802.3 10BASE-T Ethernet, IEEE 802.3u 100BASE-TX Fast Ethernet, IEEE 802.3ab 1000BASE-T Gigabit Ethernet, IEEE 802.3ad Link Aggregation Control Protocol, IEEE 802.3z Gigabit Ethernet, IEEE 802.3x Flow Control, IEEE 802.1D (STP, GARP, and GVRP), IEEE 802.1Q/p VLAN, IEEE 802.1w Rapid STP, IEEE 802.1s Multiple STP, IEEE 802.1X Port Access Authentication, IEEE 802.3af, IEEE 802.3at, IEEE 802.1AB Link Layer Discovery Protocol, IEEE 802.3az Energy Efficient Ethernet, RFC 768, RFC 783, RFC 791, RFC 792, RFC 793, RFC 813, RFC 826, RFC 879, RFC 896, RFC 854, RFC 855, RFC 856, RFC 858, RFC 894, RFC 919, RFC 920, RFC 922, RFC 950, RFC 951, RFC 1042, RFC 1071, RFC 1123, RFC 1141, RFC 1155, RFC 1157, RFC 1213, RFC 1215, RFC 1286, RFC 1350, RFC 1442, RFC 1451, RFC 1493, RFC 1533, RFC 1541, RFC 1542, RFC 1573, RFC 1624, RFC 1643, RFC 1700, RFC 1757, RFC 1867, RFC 1907, RFC 2011, RFC 2012, RFC 2013, RFC 2030, RFC 2131, RFC 2132, RFC 2233, RFC 2576, RFC 2616, RFC 2618, RFC 2665, RFC 2666, RFC 2674, RFC 2737, RFC 2819, RFC 2863, RFC 3164, RFC 3176, RFC 3411, RFC 3412, RFC 3413, RFC 3414, RFC 3415, RFC 3416, RFC 4330
IPv6	
IPv6	IPv6 host mode; IPv6 over Ethernet; Dual IPv6/IPv4 stack IPv6 neighbor and router discovery (ND); IPv6 stateless address autoconfiguration; Path Maximum Transmission Unit (MTU) discovery Duplicate Address Detection (DAD); ICMP version 6 DHCPv6 stateful client IPv6 over IPv4 network with Intrasite Automatic Tunnel Addressing Protocol (ISATAP) tunnel support USGv6 and IPv6 Gold Logo certified
IPv6 QoS	Prioritize IPv6 packets in hardware
IPv6 ACL	Drop or rate limit IPv6 packets in hardware
IPv6 First Hop Security	RA guard ND inspection DHCPv6 guard Neighbor binding table (snooping and static entries) Neighbor binding integrity check
Multicast Listener Discovery (MLD v1/2) snooping	Deliver IPv6 multicast packets only to the required receivers
IPv6 applications	Web/SSL, Telnet server/SSH, ping, traceroute, Simple Network Time Protocol (SNTP), Trivial File Transfer Protocol (TFTP), SNMP, RADIUS, syslog, DNS client, Telnet Client, DHCP Client, DHCP Autoconfig, IPv6 DHCP Relay, TACACS+
IPv6 RFCs supported	RFC 4443 (which obsoletes RFC2463): ICMP version 6 RFC 4291 (which obsoletes RFC 3513): IPv6 address architecture RFC 4291: IPv6 addressing architecture RFC 2460: IPv6 specification RFC 4861 (which obsoletes RFC 2461): neighbor discovery for IPv6

Feature	Description	
	RFC 4862 (which obsoletes RFC 2462): IPv6 stateless address autoconfiguration RFC 1981: path MTU discovery RFC 4007: IPv6 scoped address architecture RFC 3484: default address selection mechanism RFC 5214 (which obsoletes RFC 4214): ISATAP tunneling RFC 4293: MIB IPv6: textual conventions and general group RFC 3595: textual conventions for IPv6 flow label	
Management		
Web user interface	Built-in switch configuration utility for easy browser-based device configuration (HTTP/HTTPS) Supports simple and advanced mode, configuration, wizards, customizable dashboard, system maintenance, monitoring, online help, and universal search	
Smart Network Application	Smart Network Application (SNA) is an innovative network-level monitoring and management tool embedded in Cisco 100 to 500 Series switches. It can discover network topology, display link status, monitor events, apply configurations, and upgrade software images across multiple switches in the network (Note: Management of your network using Smart Network Application requires the use of either a 350, 350X, or 550X Series switch model as a part of your network)	
SNMP	SNMP versions 1, 2c, and 3 with support for traps, and SNMP version 3 User-based Security Model (USM)	
Standard MIBs	lldp-MIB lldpextdot1-MIB lldpextdot3-MIB lldpextmed-MIB rfc2674-MIB rfc2575-MIB rfc2573-MIB rfc2233-MIB rfc2013-MIB rfc2012-MIB rfc2011-MIB RFC-1212 RFC-1215 SNMPv2-CONF SNMPv2-TC p-bridge-MIB q-bridge-MIB rfc1389-MIB rfc1493-MIB	rfc2668-MIB rfc2737-MIB rfc2925-MIB rfc3621-MIB rfc4668-MIB rfc4670-MIB trunk-MIB tunnel-MIB udp-MIB draft-ietf-bridge-8021x-MIB draft-ietf-bridge-rstpmib-04-MIB draft-ietf-hubmib-etherif-mib-v3-00-MIB draft-ietf-syslog-device-MIB ianaaddrfamnumbers-MIB ianaifty-MIB ianaprot-MIB inet-address-MIB ip-forward-MIB ip-MIB

Remote Monitoring (RMON)	Embedded RMON software agent supports 4 RMON groups (history, statistics, alarms, and events) for enhanced traffic management, monitoring, and analysis	
IPv4 and IPv6 dual stack	Coexistence of both protocol stacks to ease migration	
Firmware upgrade	• Web browser upgrade (HTTP/HTTPS) and TFTP and upgrade over SCP running over SSH • Upgrade can be initiated through console port as well • Dual images for resilient firmware upgrades	
Port mirroring	Traffic on a port can be mirrored to another port for analysis with a network analyzer or RMON probe. Up to 8 source ports can be mirrored to one destination port. A single session is supported	
VLAN mirroring	Traffic from a VLAN can be mirrored to a port for analysis with a network analyzer or RMON probe. Up to 8 source VLANs can be mirrored to one destination port. A single session is supported	
DHCP (options 12, 66, 67, 82, 129, and 150)	DHCP options facilitate tighter control from a central point (DHCP server) to obtain IP address, autoconfiguration (with configuration file download), DHCP relay, and hostname	
Secure Copy (SCP)	Securely transfer files to and from the switch	
Autoconfiguration with Secure Copy (SCP) file download	Enables secure mass deployment with protection of sensitive data	

© 2020 Cisco and/or its affiliates. All rights reserved.

Feature	Description
Text-editable config files	Config files can be edited with a text editor and downloaded to another switch, facilitating easier mass deployment
Smartports	Simplified configuration of QoS and security capabilities
Auto Smartports	Applies the intelligence delivered through the Smartport roles and applies it automatically to the port based on the devices discovered over Cisco Discovery Protocol or LLDP-MED. This facilitates zero-touch deployments
Textview CLI	Scriptable command-line interface. A full CLI as well as a menu-based CLI is supported. User privilege levels 1, 7, and 15 are supported for the CLI
Cloud services	Support for Cisco FindIT Network Manager and Cisco Active Advisor
Embedded Probe for FindIT Network Manager	Support for embedded FindIT Network Probe running on the switch. Eliminates the need to set up a separate hardware or virtual machine for the FindIT Network Probe on site
Cisco Network Plug and Play (PnP) agent	The Cisco Network Plug and Play solution provides a simple, secure, unified, and integrated offering to ease new branch or campus device rollouts or for provisioning updates to an existing network. The solution provides a unified approach to provision Cisco routers, switches, and wireless devices with a near-zero-touch deployment experience Supports Cisco PnP Connect
Localization	Localization of GUI and documentation into multiple languages
Login banner	Configurable multiple banners for web as well as CLI
Other management	Traceroute; single IP management; HTTP/HTTPS; SSH; RADIUS; port mirroring; TFTP upgrade; DHCP client; BOOTP; SNTP; Xmodem upgrade; cable diagnostics; ping; syslog; Telnet client (SSH secure support); automatic time settings from Management Station
Time-based port operation	Link up or down based on user-defined schedule (when the port is administratively up)
Time-based PoE	Capability for power to be on or off based on a user-defined schedule to save energy
Power Efficiency	
Energy Detect	Automatically turns power off on Gigabit Ethernet and 10/100 RJ-45 port when detecting link down. Active mode is resumed without loss of any packets when the switch detects the link up
Cable length detection	Adjusts the signal strength based on the cable length for Gigabit Ethernet models. Reduces the power consumption for shorter cables
EEE Compliant (802.3az)	Supports IEEE 802.3az on all copper Gigabit Ethernet ports
Disable port LEDs	LEDs can be manually turned off to save on energy
Time-based port operation	Link up or down based on user-defined schedule (when the port is administratively up)
Time-based PoE	Capability for power to be on or off based on a user-defined schedule to save energy

Feature	Description
General	
Jumbo frames	Frame sizes up to 9K bytes. The default MTU is 2K bytes
MAC table	16K addresses
Discovery	
Bonjour	The switch advertises itself using the Bonjour protocol
Link Layer Discovery Protocol (LLDP) (802.1ab) with LLDP-MED extensions	LLDP allows the switch to advertise its identification, configuration, and capabilities to neighboring devices that store the data in a MIB. LLDP-MED is an enhancement to LLDP that adds the extensions needed for IP phones
Cisco Discovery Protocol	The switch advertises itself using the Cisco Discovery Protocol. It also learns the connected device and its characteristics via Cisco Discovery Protocol
Power over Ethernet (PoE)	
802.3af PoE, 802.3at PoE+, or 60W PoE are delivered over the RJ-45 ports within the listed power budgets	The following switches support 802.3at PoE+, 802.3af PoE, and Cisco prestandard (legacy) PoE on any of the RJ45 network ports. 60W PoE is also supported on selected RJ-45 network ports Maximum power of 60W is delivered to any of the 60W PoE ports, and maximum power of 30W is delivered to any of the other RJ45 network ports, until the PoE budget for the switch is reached The total power available for PoE per switch is as follows

Model Name	Power Dedicated to PoE	Number of Ports That Support PoE
SF352-08P	62W	8
SF352-08MP	128W	8
SF350-24P	185W	24 (4 support 60W PoE)
SF350-24MP	375W	24 (4 support 60W PoE)
SF350-48P	382W	48 (8 support 60W PoE)
SF350-48MP	740W	48 (8 support 60W PoE)
SG350-8PD	124W	8
SG350-10P	62W	8
SG355-10P	62W	8
SG350-10MP	124W	8
SG350-28P	195W	24 (4 support 60W PoE)
SG350-28MP	382W	24 (4 support 60W PoE)
SG350-52P	375W	48 (8 support 60W PoE)
SG350-52MP	740W	48 (8 support 60W PoE)

Feature	Description
PoE powered device and PoE passthrough	In addition to AC power, compact switch models can work as PoE powered devices and be powered by PoE switches connected to the uplink ports. The switch can also pass through the power to downstream PoE end devices if required Maximum of 60W can be drawn per uplink port if the peer PoE switch supports 60W PoE. When multiple uplink ports are connected to PoE switches, the power drawn from these ports is combined When AC power is connected and functioning properly, it will have priority over the PoE powered device function. The PoE powered device function will then act as a backup power source to the AC power. The PoE powered device function will be the primary power source for the switch if AC power is not connected

Model	Power Option	Available PoE Power (W)	Can Switch Be Powered with Uplinks?
SG350-10P	1 PoE uplink	0W	Yes
	2 PoE uplink	0W	Yes
	1 PoE+ uplink	0W	Yes
	2 PoE+ uplink	22W	Yes
	1 60W PoE uplink	22W	Yes
	2 60W PoE uplink	50W	Yes
	AC power	62W	Yes
SG350-10MP	1 PoE uplink	0W	Yes
	2 PoE uplink	0W	Yes
	1 PoE+ uplink	0W	Yes
	2 PoE+ uplink	22W	Yes
	1 60W PoE uplink	22W	Yes
	2 60W PoE uplink	50W	Yes
	AC power	128W	Yes
SG355-10P	1 PoE uplink	0W	Yes
	2 PoE uplink	0W	Yes
	1 PoE+ uplink	0W	Yes
	2 PoE+ uplink	22W	Yes

Package Contents				
• Cisco 350 Series Managed Switch • Power Cord (Power Adapter for select SKUs) • Mounting Kit • Console Cable • Quick Start Guide				
Minimum Requirements				
• Web browser: Chrome, Firefox, Edge, Safari • Category 5 Ethernet network cable • TCP/IP, network adapter, and network operating system (such as Microsoft Windows, Linux, or Mac OS X) installed on each computer in the network				

Ordering information

Table 2 provides ordering information for the Cisco 350 Series Switches. Table 3 gives region- and country-specific information, and Table 4 provides MGE transceiver ordering information.

Table 2. Cisco 350 Series Switches ordering information

Model Name	Order Product ID Number	Description
Fast Ethernet		
SF350-08	SF350-08-K9-xx	• 8 10/100 ports
SF352-08	SF352-08-K9-xx	• 8 10/100 ports • 2 Gigabit copper/SFP combo
SF352-08P	SF352-08P-K9-xx	• 8 10/100 PoE+ ports • 2 Gigabit copper/SFP combo • 62W PoE power budget
SF352-08MP	SF352-08MP-K9-xx	• 8 10/100 PoE+ ports • 2 Gigabit copper/SFP combo • 128W PoE power budget

Model Name	Order Product ID Number	Description
SF350-24	SF350-24-K9-xx	• 24 10/100 ports • 2 Gigabit copper/SFP combo + 2 SFP ports
SF350-24P	SF350-24P-K9-xx	• 24 10/100 PoE+ ports (4 support 60W PoE) • 2 Gigabit copper/SFP combo + 2 SFP ports • 185W PoE power budget
SF350-24MP	SF350-24MP-K9-xx	• 24 10/100 PoE+ ports (4 support 60W PoE) • 2 Gigabit copper/SFP combo + 2 SFP ports • 375W PoE power budget
SF350-48	SF350-48-K9-xx	• 48 10/100 ports • 2 Gigabit copper/SFP combo + 2 SFP ports
SF350-48P	SF350-48P-K9-xx	• 48 10/100 PoE+ ports (8 support 60W PoE) • 2 Gigabit copper/SFP combo + 2 SFP ports • 382W PoE power budget
SF350-48MP	SF350-48MP-K9-xx	• 48 10/100 PoE+ ports (8 support 60W PoE) • 2 Gigabit copper/SFP combo + 2 SFP ports • 740W PoE power budget
Gigabit Ethernet		
SG350-10	SG350-10-K9-xx	• 8 10/100/1000 ports • 2 Gigabit copper/SFP combo
SG350-10P	SG350-10P-K9-xx	• 8 10/100/1000 PoE+ ports • 2 Gigabit copper/SFP combo • 62W PoE power budget
SG355-10P	SG355-10P-K9-xx	• 8 10/100/1000 PoE+ ports • 2 Gigabit copper/SFP combo • 62W PoE power budget
SG350-10MP	SG350-10MP-K9-xx	• 8 10/100/1000 PoE+ ports • 2 Gigabit copper/SFP combo • 124W PoE power budget
SG350-10SFP	SG350-10SFP-K9-xx	• 8 SFP Gigabit slots • 2 Gigabit copper/SFP combo
SG350-20	SG350-20-K9-xx	• 16 10/100/1000 ports • 2 Gigabit copper/SFP combo + 2 SFP ports
SG350-28	SG350-28-K9-xx	• 24 10/100/1000 ports • 2 Gigabit copper/SFP combo + 2 SFP ports
SG350-28P	SG350-28P-K9-xx	• 24 10/100/1000 PoE+ ports (4 support 60W PoE) • 2 Gigabit copper/SFP combo + 2 SFP ports • 195W PoE power budget
SG350-28MP	SG350-28MP-K9-xx	• 24 10/100/1000 PoE+ ports (4 support 60W PoE) • 2 Gigabit copper/SFP combo + 2 SFP ports • 382W PoE power budget

© 2020 Cisco and/or its affiliates. All rights reserved.

Model Name	Order Product ID Number	Description
SG350-28SFP	SG350-28SFP-K9-xx	• 24 SFP Gigabit slots • 2 Gigabit copper/SFP combo + 2 SFP ports
SG350-52	SG350-52-K9-xx	• 48 10/100/1000 ports • 2 Gigabit copper/SFP combo + 2 SFP ports
SG350-52P	SG350-52P-K9-xx	• 48 10/100/1000 PoE+ ports (8 support 60W PoE) • 2 Gigabit copper/SFP combo + 2 SFP ports • 375W PoE power budget
SG350-52MP	SG350-52MP-K9-xx	• 48 10/100/1000 PoE+ ports (8 support 60W PoE) • 2 Gigabit copper/SFP combo + 2 SFP ports • 740W PoE power budget
Multi-Gigabit Ethernet		
SG350-8PD	SG350-8PD-K9-xx	• 6 10/100/1000 PoE+ ports • 2 2.5G PoE+ ports • 2 Multigigabit/SFP+ combo • 124W PoE power budget

* Each combo port has one 10/100/1000 Ethernet port and one SFP Gigabit Ethernet slot, with one port active at a time.

The -xx in the Product Order ID Number is a country-/region-specific suffix. For example, the complete PID of SG350-28P for the United States is SG350-28P-K9-NA. Please refer to Table 3 for the correct suffix to use for your country/region.

Table 3. Country/region suffix for product order ID number

Suffix	Country/Region
-NA	USA, Canada, Mexico, Colombia, Chile and rest of Latin America
-BR	Brazil
-AR	Argentina
-EU	EU, Russia, Ukraine, Israel, United Arab Emirates, Turkey, Egypt, South Africa, Indonesia, Philippines, Vietnam, Thailand, Korea
-UK	United Kingdom, Saudi Arabia, Qatar, Kuwait, Singapore, Hong Kong, Malaysia
-AU	Australia, New Zealand
-CN	China
-IN	India
-JP	Japan
-KR	Korea

The products may also be available in a country/region not listed in Table 3. Not all product models are offered in all countries/regions. For Korea, either -EU or -KR suffix will be used depending on product models. Please consult with your local Cisco sales representative or Cisco partners for more details.

Table 4. MGE transceiver ordering information

MGE Transceivers	
MGBSX1	1000BASE-SX SFP transceiver, for multimode fiber, 850 nm wavelength, support up to 500 m
MGBLX1	1000BASE-LX SFP transceiver for single-mode fiber, 1310 nm wavelength, supports up to 10 km
MGBLH1	1000BASE-LH SFP transceiver, for single-mode fiber, 1310 nm wavelength, support up to 40 km
MGBT1	1000BASE-T SFP transceiver for Category 5 copper wire, supports up to 100 m

A powerful, affordable foundation for your small business network

As you strive to make your employees as productive and effective as possible, your business applications and information and the network that delivers them become ever more vital parts of your business. You need a technology foundation that can meet your business's needs today and in the future and that delivers the right feature set at the right price. The Cisco 350 Series portfolio of managed switches provides the reliability, performance, security, and capabilities you need to power your business.

Cisco Capital

Flexible payment solutions to help you achieve your objectives

Cisco Capital makes it easier to get the right technology to achieve your objectives, enable business transformation and help you stay competitive. We can help you reduce the total cost of ownership, conserve capital, and accelerate growth. In more than 100 countries, our flexible payment solutions can help you acquire hardware, software, services and complementary third-party equipment in easy, predictable payments. Learn more.

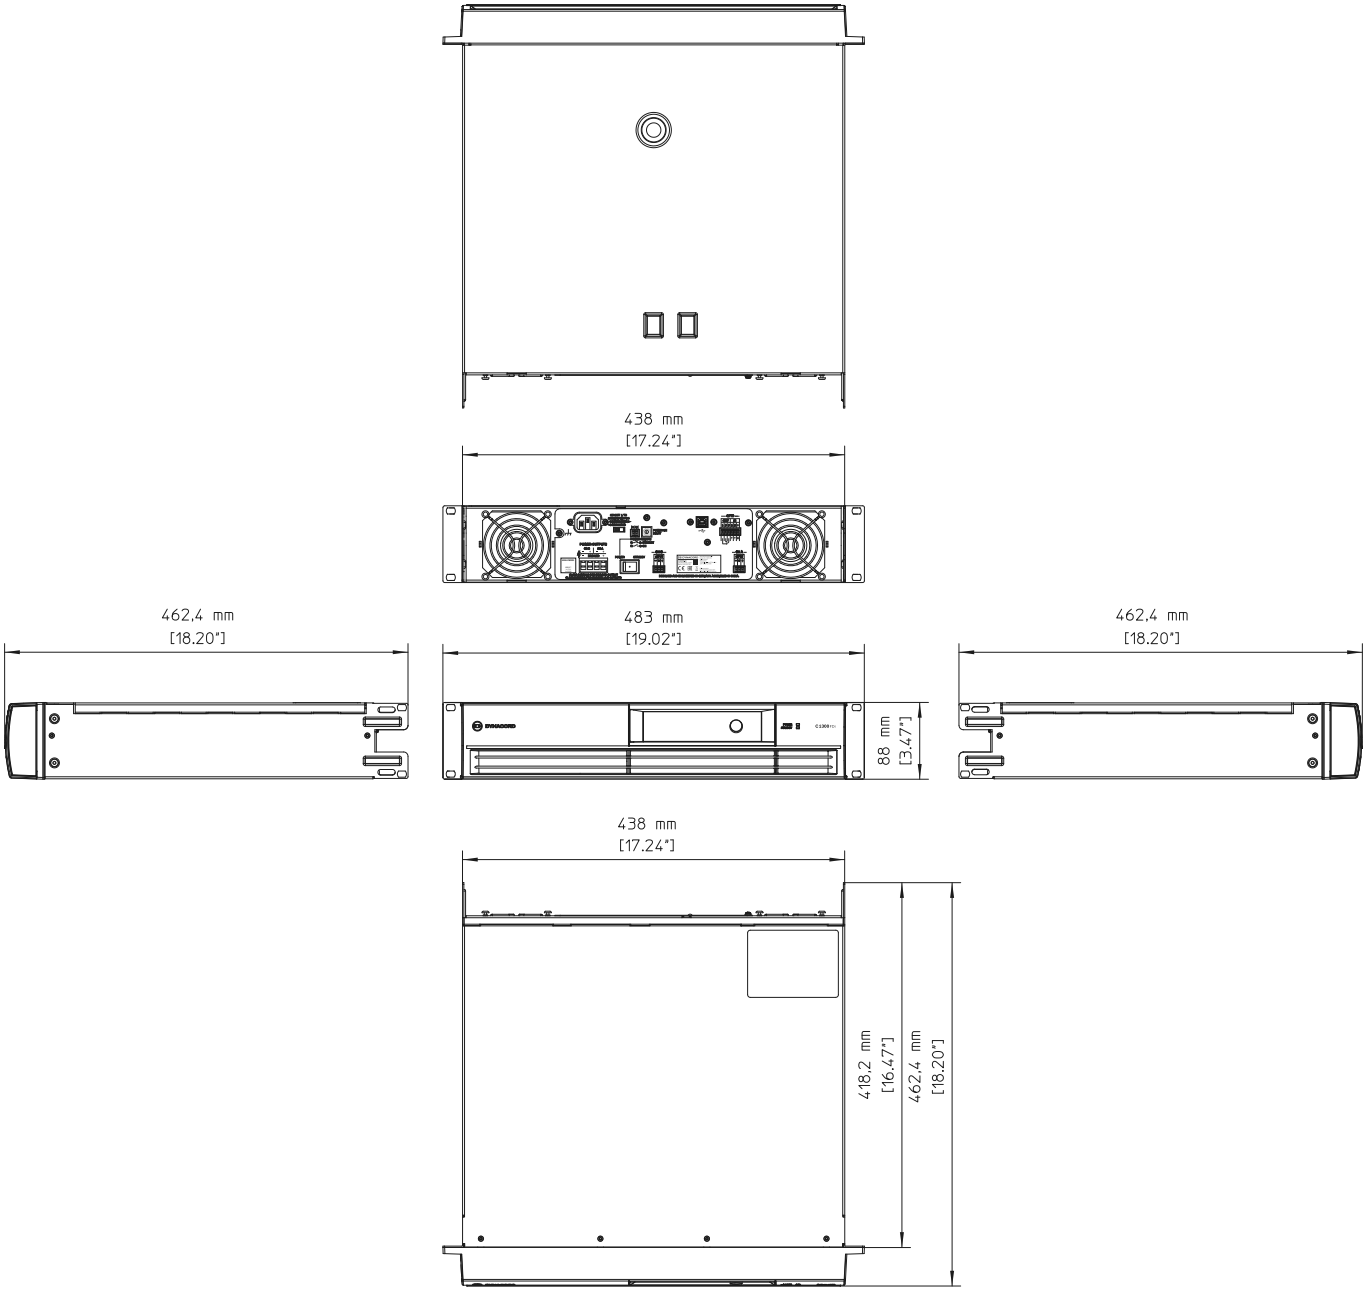
C1800FDi DSP power amplifier 2x950W, install

- Installation DSP amplifier, Euroblock connectors
- Fully integrated professional speaker processing with FIR Drive technology
- Market leading acoustic performance and rock solid reliability
- Low Z and 70/100V operation and power saving standby mode
- Intuitive system control software, makes setup and control easy

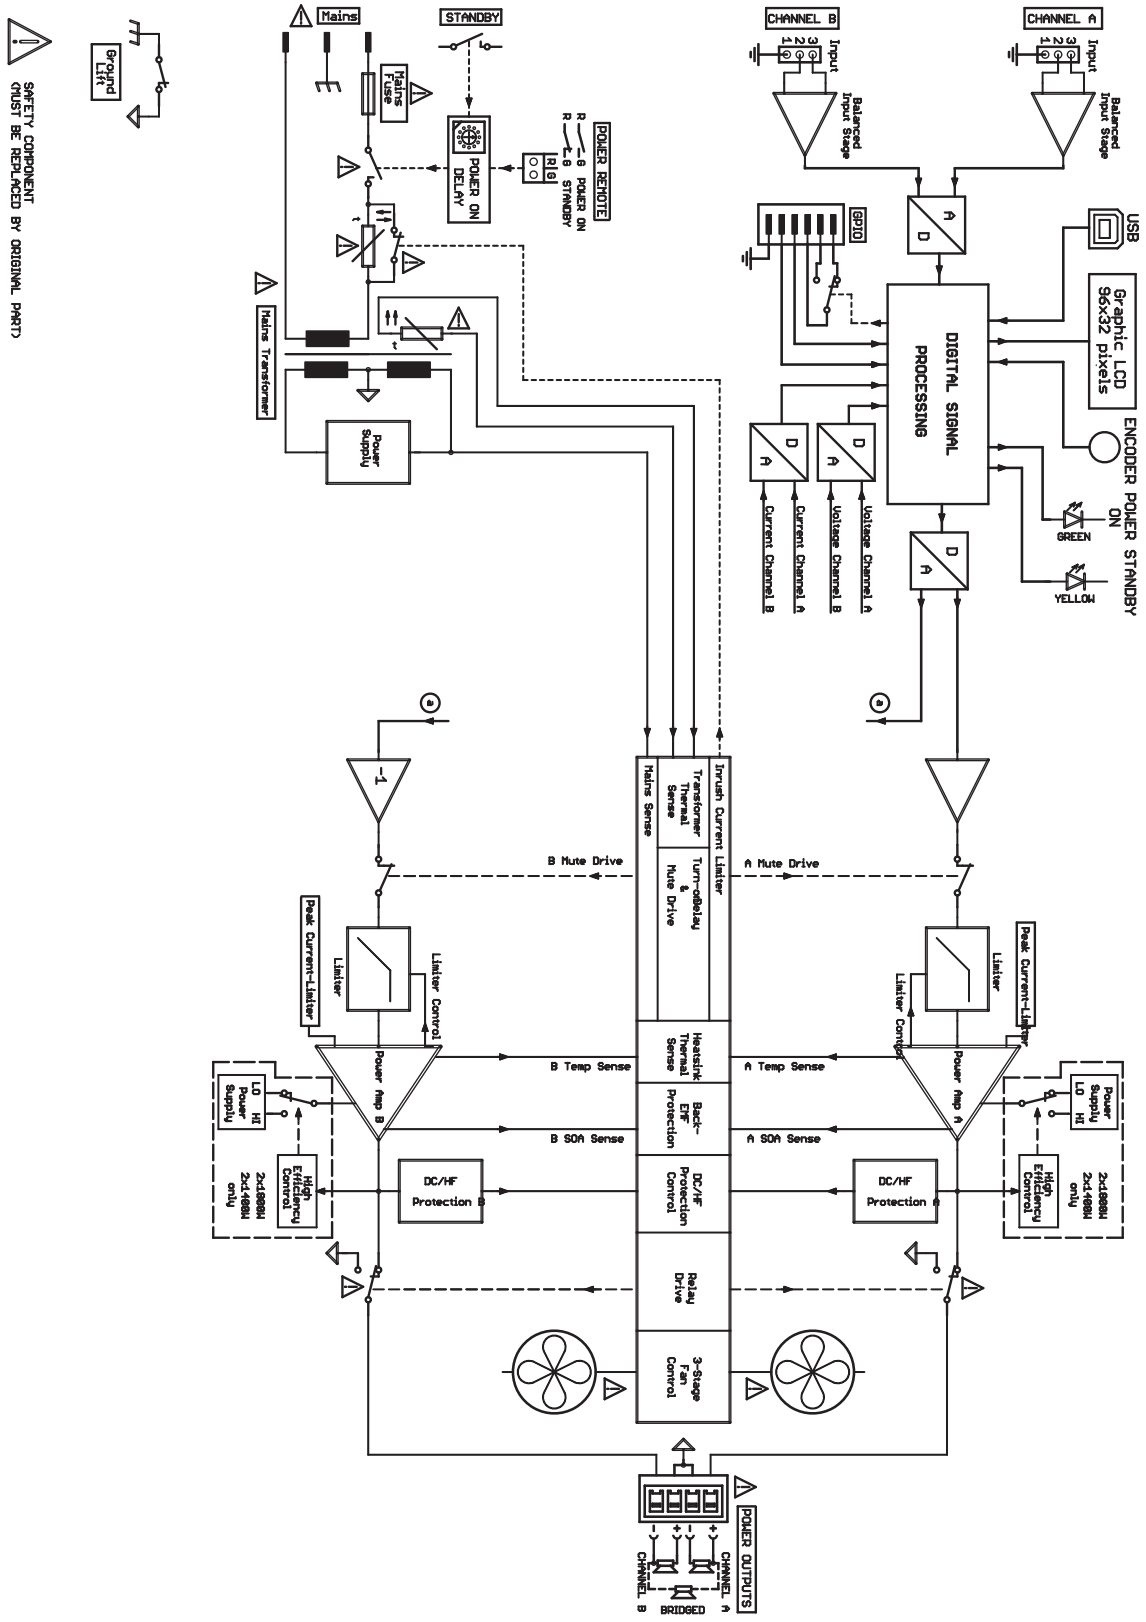
Technical specifications

Load Impedance	2 Ω	2.6 Ω	4 Ω	8 Ω
Maximum Output Power, Single Channel	1600 W	1300 W	950 W	480 W
Maximum Output Power, Dual Channel	1400 W	1200 W	850 W	450 W
Maximum Output Power, Bridged	-	-	2800 W	1700 W
Direct Drive Load Capability Dual Channel Bridged	**70 V Operation** 2 x 1250 W (-1.5 dB) Not recommended[1]		**100 V Operation** Not available[2] 1 x 1250 W (-1.5 dB)	
Maximum RMS Voltage Swing THD = 1%, 1 kHz	65.1 V			
Voltage Gain Ref.1 kHz	32.0 dB			



THD at 600 W/4 Ω MBW = 80 kHz, 1 kHz	< 0.05%
IMD-SMPTE, 60 Hz, 7 kHz	< 0.1%
DIM30, 3.15 kHz, 15 kHz	< 0.05%
Maximum Input Level	+21 dBu
Crosstalk ref. 1 kHz, at 100 W/4 Ω	< -80 dB
Frequency Response, ref. 1 kHz	10 Hz to 21 kHz (±1 dB)
Input Impedance, Active Balanced	20 k Ω
Signal to Noise Ratio Amplifier, A-weighted, ref to Max. Output Power @ 8 Ω	>105 dB

Output Noise, A-weighted	< -68 dBu
Output Stage Topology	Class AB
Power Requirements	240 V, 230 V, 120 V or 100 V; 50 Hz to 60 Hz (factory configured)
Power Consumption 1/8 Maximum Output Power @ 4 Ω	700 W
Mains Fuse	240 V/230 V: T12AH; 120 V/100 V: T25AH
Protection	Audio limiters, high temperature, DC, HF, Back-EMF, Peak current limiters, Inrush current limiters, Turn on delay
Cooling	Front-to-rear, 3-stage-fans
Ambient Temperature Limits	+5°C to +40°C (40°F to +105°F)
Safety Class	I
Color	Black
Dimensions (W x H x D), mm	483 x 88 x 462.4
Weight	15.2 kg (33.5 lb)



Remote Power ON/GPIO	Power remote via switch, delay time selectable Floating relay contacts (show protect mode) Inputs for preset selection
Signal Processing	FIR Filters, Audio Limiters Output delay per channel, 31 band GEQ per channel, PEQ per channel, Load impedance
Accessories	RMK15 (rear rack mount kit), Multi Amplifier Remote Control (MARC) software

Test signal for max. output power according IHF-A-202 (Dynamic-Headroom, burst 1 kHz/20 ms on/480 ms off/low level -20 dBu).

Direct drive load capability
The direct drive load capability is a measure for the total wattage that can be driven in 70 V/100 V operation mode. A load capability value of 1250 watts means that this amplifier can drive e.g. 50 loudspeakers at a voltage tab of 25 watts. The dB value in parentheses indicates the delta to maximum modulation. In cases where the maximum modulation is not required you can use the smaller amplifier model.
[1]This operation mode is not recommended due to the efficiency reasons. Please use the next smaller amplifier for this mode.
[2]Direct drive mode not available for this configuration.

ELECTRIC Paragon V

TAB-TENSIONED, CEILING- OR WALL-MOUNTED

Paragon V electric projection screen the largest tab-tensioned screen Draper® offers. Its size makes it ideal for auditoriums or lecture halls. Tab-tensioned screens provide a perfectly flat viewing surface with better image quality. RF welded tabs create a more durable seal that eliminates separation and stickiness. This heavy-duty screen provides smooth, quiet, and reliable operation.

THIS SCREEN IS TAB-TENSIONED
RF welded tabs eliminate stickiness and tab separation. Tabs warranted against separation for five years. Tab-tensioned screens provide a perfectly flat viewing surface with better image quality.

FEATURES

- Image area fully framed with black. Standard 12" (30 cm) black drop at top of viewing area.
- Includes extruded aluminum case with white finish.
- Bottom closure panel provides easy access for service or maintenance.
- Rear projection surfaces available.
- Includes a 110V, 3-position switch (standard).

WARRANTY

draperinc.com/warranty.aspx

OPTIONS

- **Viewing Surfaces:** TecVision®, OptiFlex™ (tensioned), CineFlex™ (rear projection), and ClearSound families.
- Optional wall-mounting brackets and ceiling trim flange kit.
- Low-voltage modules and controls or 220V options are available.

SIZES

- **Case dimensions** 13¼" high x 12" deep (34 cm x 30 cm). Optional extra drop may increase case length.
- **Maximum image width** up to 24' (732 cm) wide, depending on surface.
- 16:10 FORMAT: 234" to 335" (850 to 594 cm) diagonal.
- 16:9 HDTV FORMAT: 227"to 324" (576 to 822 cm) diagonal.
- 4:3 NTSC/PAL FORMAT: 250" to 30' (635 to 914 cm) diagonal.
- AV FORMAT: from 13' 6" x 18' (411 cm x 549 cm) to 18' x 24' (549 cm x 732 cm) viewing area.
- Custom sizes available.

SPEC FILE

Product Number : PT-**RZ21K**

Product Name : 3-Chip DLP™ Projector

Specifications

Main unit

Power supply		AC 200V-240V, 7.7A, 50/60Hz The light output will decrease to approximately 1/2 when using the projector with AC 100V to AC 120V [9.6A].
Power consumption		1,510 W (1,525 VA [AC200V]) (0.3 W with Standby Mode set to Eco*1, 4 W with Standby Mode set to Normal) 1,217W (Normal Mode), 972 W (Eco Mode) Operating Temperature: 25 °C (77 °F), Altitude: 700m (2,297ft), IEC627087: 2008 Broadcast contents, Picture mode: Standard, Dynamic contrast [2]
BTU value		Max 5,159 BTU
DLP™ chip	Panel size	24.4 mm (0.96 inches) diagonal (16:10 aspect ratio)
	Display method	DLP™ chip × 3, DLP™ projection system
	Pixels	6,912,000 (1920 x 1200 x 3) pixels
Refresh rate		120 Hz*2
Lens		Optional (no lens included with this model), powered zoom, powered focus lens
Light source		Laser Diode (Laser class: Class 1)*Class 3R for North America.
Illumination life of set		Varies depending on operation mode setting. 20,000 hours at half luminance (Normal) 24,000 hours at half luminance (Eco) * IEC62087: 2008 Broadcast contents, Dynamic contrast [3] (NORMAL/ECO Temperature: 30°C (86°F), Altitude 700m (2,297 ft),Dynamic Contrast [3] Under conditions of 0.15 mg/m^3 of particulate matter
Screen size (diagonal)		1.78–25.4 m (70–1,000 in) with 16:10 aspect ratio 1.78–15.24 m (70–600 in) with the ET-D75LE8, 16:10 aspect ratio 3.05–15.24 m (120–600 in) with the ET-D75LE95, 16:10 aspect ratio
Brightness		21,000 lm (Center)*3*5 / 20,000 lm (Normal)*4*5
Center-to-corner uniformity		90 %
Contrast*3		20,000:1 (Full On/Full Off, Dynamic Contrast Mode: 3)
Resolution		1920 x 1200 pixels
Scanning frequency	Video/YC	fH:15.73KHz fV:59.94Hz, fH:15.63KHz fV:50Hz
	RGB	• Resolution: 640 x 400 pixels to 1920 x 1200 pixels • Dot clock frequency: 162MHz or less • PIAS (Panasonic Intelligent Auto Scanning)
	YPBPR(YCBCR)	• Resolution: 480i/576i to 1920 x 1080 pixels • Dot clock frequency: 148.5MHz or less • The SYNC/HD and VD terminals do not support 3 value SYNC.
	DVI	• Moving image signal resolution: 480i*6/576i*6 to 1920x1080 Still image signal resolution: 640 x 400 to 1920 x 1200 (non-interlace) • Dot clock frequency: 25 MHz to 162 MHz
	HDMI/DIGITAL LINK	• Moving image signal resolution: 480i*6/576i*6 to 1920x1080 Still image signal resolution: 640 x 400 to 1920 x 1200 (non-interlace) • Dot clock frequency: 25 MHz to 162 MHz
	SDI	SD-SDI signal HD-SDI signal 3G-SDI signal
Optical axis shift		Vertical (from center of screen) ±55 % (±44 % with ET-D75LE6, +68 % – +78 % with ET-D75LE95) (powered) Horizontal (from center of screen) ±20 % (±15 % with ET-D75LE6, ±12 % with ET-D75LE95) (powered)

NOTE: Optical axis shift function cannot be operated when used with the ET-D75LE50.

	Y, P_B, P_R (Y, C_B, C_R)	Y: 1.0 Vp-p (including sync signal), PB/PR (CB/CR): 0.7 Vp-p, 75 ohms
	DVI-D IN	DVI-D 24-pin ×1 Single link, DVI 1.0 compliant, HDCP compatible
	HDMI IN	HDMI 19-pin x1 HDCP compatible, Deep Color compatible
	SDI IN 1	BNC × 1 SD-SDI signal SMPTE ST 259 compliant HD-SDI signal SMPTE ST 292 compliant 3G-SDI signal SMPTE ST 424, 425-2 compliant Dual link HD-SDI (LINK A) signal SMPTE ST 372 compliant Dual link 3G-SDI (Link 1) signal SMPTE ST 425-3 compliant
	SDI IN 2	BNC × 1 SD-SDI signal SMPTE ST 259 compliant HD-SDI signal SMPTE ST 292 compliant 3G-SDI signal SMPTE ST 424, 425-2 compliant Dual link HD-SDI (LINK B) signal SMPTE ST 372 compliant Dual link 3G-SDI (Link 2) signal SMPTE ST 425-3 compliant

Terminals	DIGITAL LINK	RJ-45 HDBaseT™ compliant, HDCP compatible, Deep Color compatible
	3D SYNC1 IN/OUT / MULTI PROJECTOR SYNC IN	BNC × 1, IN : TTL Hi-z OUT : TTL max10mA
	3D SYNC2 OUT / MULTI PROJECTOR SYNC OUT	BNC × 1, TTL max10mA
	SERIAL IN	D-sub 9-pin × 1 for external control (RS-232C compliant)
	SERIAL OUT	D-sub 9-pin × 1 for link control
	REMOTE 1 IN	M3 jack × 1 for wired remote control
	REMOTE 1 OUT	M3 jack × 1 for link control
	REMOTE 2 IN	D-sub 9-pin × 1 for external control (parallel)
	DIGITAL LINK/LAN	RJ-45 × 1 for network connection, 100Base-TX PJLink™ (class 2) compatible, Art-Net compatible
	DC OUT 5V	USB connector (type A) x 2 for power supply only (DC 5V, Max 2A)
Power cord length	3.0 m(9 ft 10 in)	
Cabinet materials	Molded plastic	
Dimensions (W × H × D)	598 × 270 × 725 mm (23 17/32″ x 10 5/8″ x 28 17/32″) (not including protruding parts)	
Weight*9	Approximately 49kg (108 lbs) (not including lens)	
Operation noise*3	46dB	
Laser Classification	Laser Class	USA and Canada: Class 3R (IEC 60825-1:2007) Other countries or regions: Class 1 (IEC/EN 60825-1:2014)
	Risk Group	Risk Group 3 (IEC 62471-5:2015)
Operating environment	Operating temperature: 0–50 °C (32–122 °F)*10; Operating humidity: 10–80 % (no condensation)	

Remote control unit

Power supply	DC 3 V (AAA/R03/LR03 battery × 2)
Operation range	Approx. 30 m (98 ft 5 in) when operated from directly in front of the signal receptor
Dimensions (W × H × D)	47.5 x 181.5 x 27.5 mm (1-7/8" x 7-5/32" x 1-3/32")
Weight	Approx. 150g (5.3 ozs.) (including batteries)

Supplied accessories

Power cord with secure lock (×2) Wireless/wired remote control unit (×1)
Batteries for remote control (AA/R6 type ×2) Lens hole cover (× 1) Lens drop-prevention screw (× 1)

Optional accessories

Fixed-focus lens (0.364:1)	ET-D75LE95	Fixed-focus lens (0.370:1)	ET-D3LEU100*12
Fixed-focus lens (0.694:1)	ET-D75LE50/ET-D3LEW50	Zoom lens (0.645-0.850:1)	ET-D3LEW200*12
Zoom lens (0.924-1.10:1)	ET-D75LE6/ET-D3LEW60	Zoom lens (1.30-1.67:1)	ET-D75LE10
Zoom lens (1.26-1.72:1)	ET-D3LEW10	Zoom lens (1.67-2.41:1)	ET-D75LE20/ET-D3LES20
Zoom lens (2.40-4.66:1)	ET-D75LE30	Zoom lens (2.40-4.66:1)	ET-D3LET30*12
Zoom lens (4.62-7.38:1)	ET-D75LE40	Zoom lens (4.61-7.41:1)	ET-D3LET40*12
Zoom lens (7.34-13.8:1)	ET-D75LE8/ET-D3LET80*12	Optional Fisheye Lens	ET-D3LEF70*12
Stepping Motor Kit	ET-D75MKS10*13	Lens Fixed Attachment	ET-PLF10
DIGITAL LINK Switcher	ET-YFB200G	Digital Interface Box	ET-YFB100G
Ceiling Mount Bracket (for High Ceilings)	ET-PKD520H	Ceiling Mount Bracket (for Low Ceilings)	ET-PKD520S
Ceiling Mount Bracket (Projector Mount Bracket)	ET-PKD520B	Frame	ET-PFD510
Geometry Manager Pro Software Upgrade Kit	ET-UK20	Auto Screen Adjustment Upgrade Kit	ET-CUK10
Auto Screen Adjustment Upgrade Kit (PC)	ET-CUK10P		

Early Warning Software (ET-SWA100*) *The symbol at the end of the part number will vary depending on the type of license.

Compatible Software

Logo Transfer Software Smart Projector Control (iOS/android) Multi Monitoring and Control Software

***1 When Standby Mode is set to ECO, network functions such as power on over LAN will not operate. Additionally, only certain commands can be received for external control using the serial terminal.**
***2 Refresh rate varies depending on scanning frequency.**
***3 Measurement, measuring conditions, and method of notation all comply with ISO 21118 international standards.**
***4 The value of the light output at the center region of the projected image is extracted based on the light output measurement method defined by the ISO/IEC 21118:2012 international standards.**
***5 In AC200V, When using a projection lens other than ET-D75LE95.**
***6 Pixel-Repetition signal(dot clock frequency 27.0MHz) only**
***7 Only the vertical keystone correction angle can be corrected in the direction in which the projector body moves away from the screen.**
***8 When [VERTICAL KEYSTONE] and [HORIZONTAL KEYSTONE] are used simultaneously, correction cannot be made exceeding total of 55°.**
***9 Average value. May differ depending on the actual unit.**
***10 Operating temperature is 0–45 °C (32–113 °F) when used in locations from 1,400 m to 4,200 m (4,593 ft to 13,779 ft) above sea level. When the [PROJECTOR SETUP] menu → [OPERATION SETTING] → [OPERATING MODE] is set to [NORMAL], and the operating environment temperature exceeds the following value, the light output may be reduced to protect the projector.**
•When using the projector at an altitude lower than 2,700m (8,858') above sea level: 35°C (95°F)
•When using the projector at an altitude between 2,700m (8,858') and 4,200m (13,780') above sea level: 25°C (77°F)
***11 For details, see the Spec File of the individual lens.**
***12 Please update to the latest firmware.**

BUSINESS

AW-UE150W [White Model]
AW-UE150K [Black Model]
4K Integrated Camera

AW-RP150GJ
Remote Camera Controller

Panasonic's 4K 60p/50p*1 12G-SDI Supported PTZ Camera the Industry's First*2

*1: Actual output format is UHD (3840 x 2160) 59.94p/50p. *2: Internal investigation, Oct. 2018.

AW-UE150

4K 60p/50p*1 Output, High-Magnification Zoom and Wide-Angle Shooting for Flexible Video Production

AW-UE150W
4K Integrated Camera
[White Model]

AW-UE150K
4K Integrated Camera
[Black Model]

• Power supply not included. An AC adaptor or PoE++ HUB is required.

The next-generation PTZ camera supports high-quality video production in stadium, lecture halls, churches and other venues. Smooth and high-quality 4K 60p/50p*1, high-magnification zoom and a wide shooting angle expand the range of the PTZ camera's applications. The camera is equipped with a variety of interfaces and supports simultaneous 4K/HD operation which allows for versatility in current and future production systems.

High-Quality 4K 60p/50p*1 Shooting

3840 x 2160 4K output and 59.94p/50p*1 shooting achieve extremely smooth video, even in live sports and other environments containing rapid movement.

■ Output format

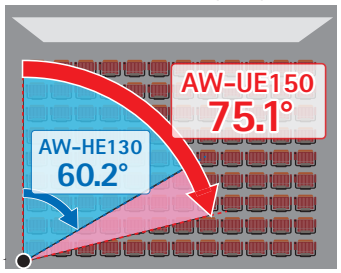
4K	2160/59.94p, 2160/50p, 2160/29.97p*2, 2160/25p*2, 2160/24p*2, 2160/23.98p*2
HD	1080/59.94p, 1080/50p, 1080/29.97p*2, 1080/29.97PsF, 1080/25p*2, 1080/25PsF, 1080/23.98p*3, 1080/24p*2, 1080/23.98p*2, 1080/23.98PsF, 1080/59.94i, 1080/50i
	720/59.94p, 720/50p

1.0-type MOS Sensor Mounted

The large 1.0-type MOS sensor enables high sensitivity shooting with low noise. The sensor boasts a light-capturing area that is approximately four times larger than that of the 1/2.3-type sensor to guarantee a wide dynamic range.

Optical 20x Zoom / Industry's First* 75.1° Horizontal Wide-Angle Shooting

Adding "i zoom" to our optical 20x zoom, maintains high resolution while enabling ultra-high resolution 32x zoom in HD mode and 24x zoom in 4K mode. This enables distant subjects to be captured clearly. Furthermore, 75.1° horizontal wide-angle shooting enables capture of the entire area, even when installation space is limited.



* Internal investigation, Nov. 2018.

■ Optical 20x Zoom Image Quality

* Images are simulated.

■ Horizontal 75.1° Shooting Range

HDR (HLG) Support*4

The camera supports HDR (High Dynamic Range) to prevent blown-out highlights and blocked-up shadows and enable picture quality close to that of the naked eye. Conforms to BT.2020.

HDR Mode OFF

HDR Mode ON

* Images are simulated.

Optical Image Stabilizer (OIS) Loaded

Vibrations of the mounted surface caused by doors opening and closing, audio systems and other installed equipment are automatically corrected to ensure stable shooting.

Night Mode Support

Equipped with Night Mode for infrared shooting. The use of IR rays in low-light situations enables shooting in situations that would normally be difficult, such as when capturing wildlife (image output is black and white).

* Images are simulated.

Incredible Pan and Tilt Performance

Pan and tilt operate from a minimum speed of 0.08°/s to a maximum of 180°/s in high-speed mode. This is approximately 3 times the speed of our current product*5 for rapid capture of the intended target. Furthermore, a low noise level of NC35 or less has been ensured when operating in normal mode, which is perfect for shooting in quiet environments*6.

■Comparative Pan / Tilt Speeds

Approx. 3 times the conventional speed

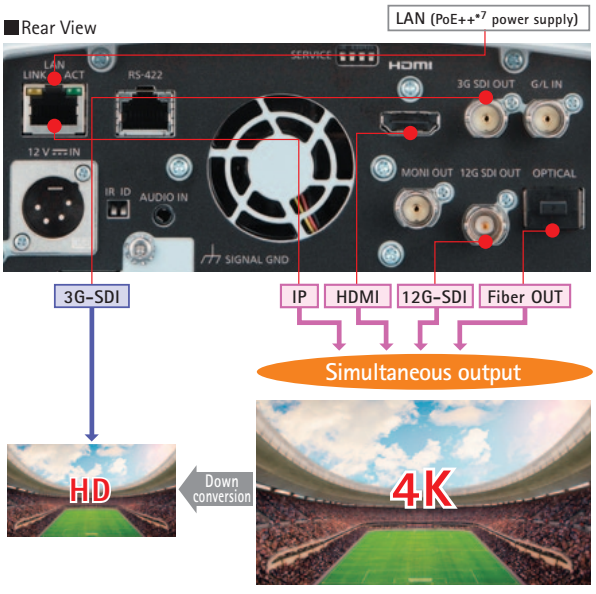
Our current product*5 — Maximum speed of 60°/s

AW-UE150W/K — Maximum speed of 180°/s (in high-speed operation mode)

Cropping Function

Images shot in 4K can be output in their entirety while simultaneously cropping parts of those images. The cropping position can be specified from a maximum of 3 locations to enable simple operation from the Remote Camera Controller AW-RP150GJ, a web browser or other operations screen.

* Images are simulated.



Equipped with a large Tally Lamp that is easy to see from a distance

Multiple Interfaces Supported

A wide range of outputs are supported: 12G-SDI, 3G-SDI, HDMI, IP and even Optical Fiber output. The addition of 4K/HD simultaneous output guarantees the right output for the operation at hand. 4K video can be down converted to HD directly within the camera.

■Rear View

* Images are simulated.

*1: Actual output format is UHD (3840 x 2160) 59.94p/50p.
*2: Native output.
*3: It denotes "1080/23.98p over 59.94i".
*4: The display color space does not completely comply with BT.2020. The color balance is shifted to display according to the BT.2020 color gamut.
*5: Comparison with our current product, AW-HE130W/K.
*6: Quietness, stationary accuracy, etc., in high-speed mode may vary from normal mode.
*7: Abbreviation of Power over Ethernet Plus Plus. Conforms to IEEE802.3bt.

Adaptive Matrix prevents color overloaded from blue LEDs*

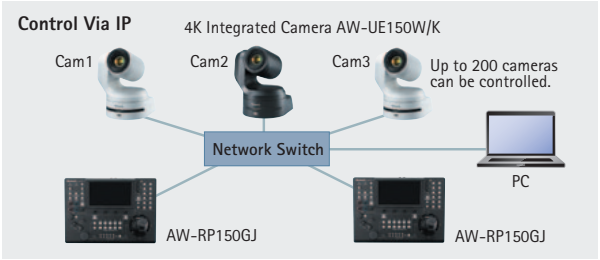
Equipped with an Adaptive Matrix function that automatically controls matrix calculation coefficients. This enables shooting while preventing color overloaded, even during live events and on stages with strong blue LED lights.

*Use may require a software version update.

WEB UI Improved

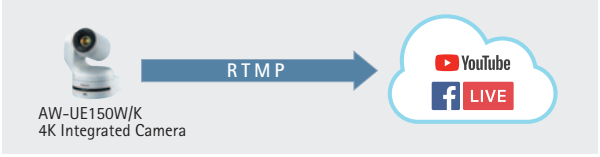
Camera IP image output, settings and control can be performed using a web browser on a computer connected via an IP network. In addition to PCs and Macs, iPads, iPhones*, Androids and other mobile devices can be used for operation, and this pursuit of easy-to-use interfaces has enabled smooth camera control from remote locations.

*Use may require a software version update.



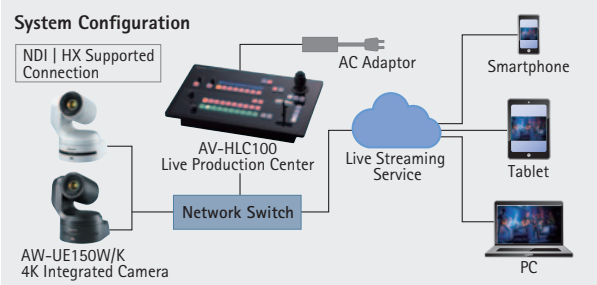
Camera control screen (Windows operation depicted.)

• For supported browsers, see specifications on page 10.



AW-RP150GJ Connection for Large-Scale Production Systems

IP connection from the Remote Camera Controller AW-RP150GJ through a HUB (switching hub) enables control of up to 200 AW-UE150W/K units. Furthermore, a single AW-UE150W/K unit can be controlled from up to 5 AW-RP150GJ units.



Direct Broadcast via RTMP (Real-Time Messaging Protocol)

RTMP (Real-Time Messaging Protocol) is supported to enable direct upload of video to live-streaming services such as YouTube Live and Facebook Live. This means a live stream can be broadcast directly from the camera.

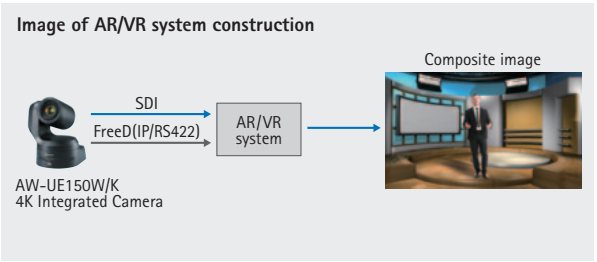
NDI | HX Compatibility for Excellent Video Streaming Quality

The AW-UE150W/K can be upgraded to an NDI | HX compatible model if purchasing a license. Highly efficient NDI | HX compatibility enables high-quality video to be encoded and transmitted in real-time and input signals to be directly sent to a switcher (AV-HLC100) without the need for an IP decoder.

* 4K image output not supported in NDI|HX mode.
* Contact your local Panasonic reseller for further information.
• NDI|HX, a technology of NewTek, Inc.

JPEG Image Saving Function Equipped*

Up to 100 still images can be captured and saved as JPEG files to the built-in camera memory.



*Use may require a software version update.

FreeD Support for Construction of AR/VR Systems*

Connection with AR/VR systems has been enabled via FreeD-compliant command output. Camera tracking information (pan/tilt/zoom/focus/iris) is output according to a synchronizing signal to facilitate construction of virtual systems without an encoder.

AR: Augmented Reality
VR: Virtual Reality

*Use may require a software version update.

* Images are simulated.

SR Series

WALL MOUNT RACKS

The SR Series Wall Mount Racks address the increased need for space-saving solutions. They are not only ideal for smaller installations or to house system distribution points, but can be deployed in many more spaces within a facility. The innovative design allows the rack to pivot open 90° on a floor base to provide quick and convenient access to rear equipment connections without needing to leave an aisle behind the solution.

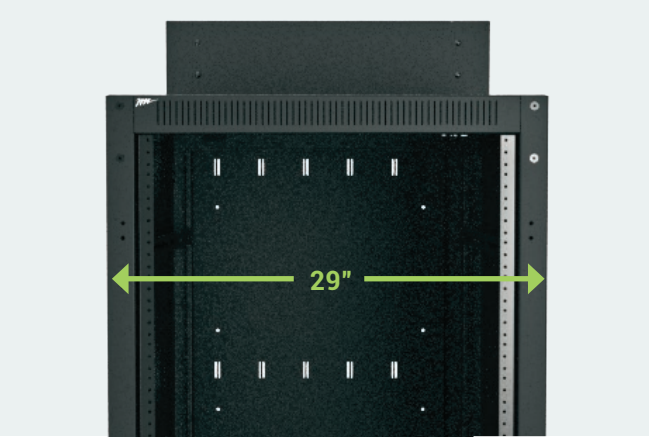
FEATURES

- Pivots 90º on floor base to easily access rear equipment connections for more overall space savings than a full height, floor standing enclosure
- Installation ease with the patented Tool Free Quick-Mount™ system for center section mounting to the backpan
- "Bonus" 4 rackspaces in base for mounting a UPS or other equipment
- Additional 3 rackspaces at the top for patching and other small equipment mounting
- Industry's first seismic rated wall rack series, delivering tip and/or vibration resistance when its desired or required

- Standard, adjustable front 10-32 threaded rackrail with numbered spaces for built-in cable management
- Flexible cable entry access at the top, bottom and sides of the rack with additional knockouts for electrical box and fans
- Sub plate allows mounting of 89D blocks and other connectivity accessories
- Options available to meet the needs of your installation requirements:
  - Corner mounting or side-by-side rack installation capability with the optional zero clearance latch
  - Choices of plexi, solid, or vented doors available depending upon desired level of visibility and need for additional airflow
- Up to 500 lb. UL load capacity rating and a 335 lb. Seismic load capacity rating

Wide SR Series

WALL MOUNT RACKS



Enhancing the SR Series Wall Rack portfolio, the new, wider models provide ample room on either side of the cabinet for proper dressing, organization and management of high density cabling, improving cable integrity, thermal management and the overall aesthetics in the rack. The Wide SR Series Pivoting Wall Rack not only boasts a neat, organized look but maintains the same benefits of the existing line—high capacity for rackspace availability and weight of equipment much like a floor standing rack, but with the space saving benefits of wall mounted cabinets.

The innovative design allows the rack to pivot open 90° on a floor base to provide quick and convenient access to rear equipment connections without needing to leave an aisle behind the solution. Ideal for when that easy access is essential and for heavier installations that will connect to on-wall cabling or pull boxes, the Wide SR Series Wall Rack is a multi-application cabinet that allows mounting of AV, security, broadcast and data equipment in the same space for endless flexibility.

FEATURES

- Additional width allows ample room for high density cabling—providing neat aesthetics, improved thermal management, and greater signal integrity
- Pivots 90º on floor base to easily access rear equipment connections for more overall space savings than a full height, floor standing enclosure
- Installation ease with the patented Tool Free Quick-Mount™ system for center section mounting to the backpan
- "Bonus" 4 rackspaces in base for mounting a UPS or other equipment
- Options available to meet the needs of your installation requirements
- Industry's first seismic rated wall rack series, delivering tip and/or vibration resistance when its desired or required

- Standard, adjustable front 10-32 threaded rackrail with numbered spaces for built-in cable management
- 4" plastic fingers available to help route your cables and reduce cable strain
- Flexible cable entry access at the top, bottom and sides of the rack with additional knockouts for electrical box and fans
- Sub plate allows mounting of 89D blocks and other connectivity accessories
- Standard options available to meet the needs of your installation requirements:
  - Corner mounting or side-by-side rack installation capability with the optional zero clearance latch
  - Choices of plexi, solid, or vented doors available depending upon desired level of visibility and need for additional airflow
- Up to 500 lb. UL load capacity rating and a 335 lb. Seismic load capacity rating

MT-702 7" Modero G5 Tabletop Touch Panel

MT-702 (FG5969-53) Tabletop Touch Panel

Overview

The MT-702 / 7" Modero G5 Tabletop Touch Panel is a premium user interface that includes the G5 graphics engine and delivers superior performance. Designed specifically for dedicated room control, this elegantly-styled touch panel provides fast and smooth animations and transitions, along with a quad-core processor that provides more than enough processing power to run the most demanding applications today and in the future. The MT-702 also includes a built-in web browser and document viewers, enabling users to access real-time information during meetings or lectures.

The MT-702 is built for usability, offering edge-to-edge capacitive touch glass with multi-touch capabilities. The distinctive, low-profile design is engineered to sit perfectly on a table without obstructing views, and comes with a variety of mounting options for added security and convenience.

Common Applications

- The MT-702 is ideal for boardrooms, conference rooms or auditoriums where a premium control surface is needed to provide access to multiple functions simultaneously while remaining elegantly unobtrusive.
- In Higher Education, the MT-702 is ideal for lecture halls, auditoriums, performing arts theaters and boardrooms that require extensive control capabilities.
- In residences, it is perfect for kitchens, bedrooms or home offices where it can be used to manage systems throughout the home.

Features

- **G5 Graphics Engine and Quad Core Processing** – The most powerful processing in the industry delivers smooth gesturing, swiping, dynamic reordering, enhanced animation with transitions all at higher speeds for an experience any user will enjoy.
- **Simplified Enterprise Touch Panel and Firmware Updates** – Deploy and update touch panel files and firmware files from a network URL for simplified company-wide updates.
- **Built-in Web Browser and Content Viewers** – Conveniently simplifies accessing and presenting real-time content and documents during meetings. Simply preview files accessed via the native web browser, USB, or cloud storage apps. Easily update or disable apps using the onboard G5 App Update Manager.

- **Adjustable Security Modes** – With the ability to select from high security or custom modes, administrators can customize the panel's security levels for access, networking and communication.
- **Perfect From Any Angle** – Includes In-Plane Switching (IPS), which delivers the widest viewing angles and the most accurate color reproduction on the market.
- **Enhanced User Experience** – The Modero Series features intuitive UI functionality including: gesturing, swiping, dynamic reordering and enhanced animation capabilities.
- **View and Select Dynamic Data with Listview Buttons** – Display a listing of entries generated by a dynamic data source (e.g. phonebook contacts, call logs, RSS feed or other real time data sources) enabling the user to scroll or search to make a selection. Demos are available in the UI Resource Center.

Specifications

TOUCH SCREEN DISPLAY	
Display Type	TFT Active Matrix Color LCD
Display Size (WH)	Landscape: 6.4" x 4.0" (162mm x 103mm) 7.5" (192mm) diagonal
Viewable Area (WH)	Landscape: 5.9" x 3.7" (151mm x 94mm) 7.0" (178mm) diagonal
Resolution (WH)	Landscape: 1280x800
Aspect Ratio (WH)	Landscape: 16:9
Brightness	330 cd/m2
Contrast Ratio	800:1
Color Depth	16.7M colors
Illumination	LED
Touch Overlay	Projected Capacitive, multi-touch support, 3 simultaneous max
Viewing Angle	Vertical ± 89°, Horizontal ± 89°

MEMORY	
SDRAM	2 GB
Flash	16 GB
Maximum Project Size	12 GB flash, available for apps and touch panel files

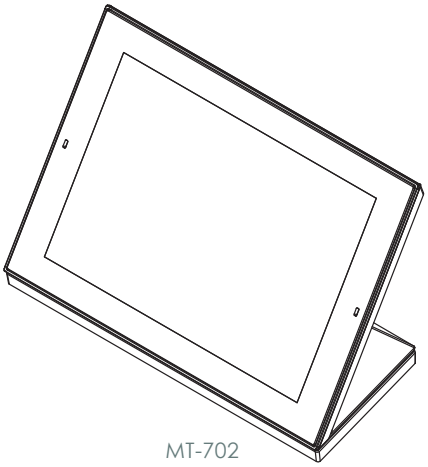
COMMUNICATIONS	
Ethernet	10/100 Auto MDI-X port, RJ-45 connector. Supported IP and IP-Based Protocols: UCP, TCP, ICMP, ICSP, IGMP, DHCP, SSH, FTP, DNS, RFB (for VNC), HTTP
USB	(1) USB host 2.0, Type A ports (1 with limited physical access requiring right angle connection): Firmware upgrade, touch panel file transfer, document and image viewing, HID peripherals
Bluetooth	Mouse/Keyboard: HID Profile v1.1 (requires external USB-BT adapter)

VIDEO	
Supported Video Codecs	MPEG-2-TS: MPEG-2 Main Profile @ High Level up to 720p at 25 fps (decode only) MPEG-2-TS: H.264 High Profile @ Layer 4, AAC-LC up to 720p at 25 fps (decode) MJPEG up to 720p at 25 fps (decode only)
Supported Video Transport Streams	MPEG-TS for MPEG-2 and H.264; HTTP for MJPEG
Max Number of Active Video Streams	Two decode

AUDIO	
Speakers	4 ohm, 2 Watt, 300 Hz cutoff frequency
Supported Audio Codecs	MP2 Layer I and II, MP3 (8 kHz, 11.025 kHz, 12 kHz, 16 kHz, 22.05 kHz, 24 kHz, 32 kHz, 44.1 kHz, 48 kHz) AAC-LC (8 kHz, 96 kHz) G.711 with µLaw (VoIP encode/decode at 8 kHz)
File Formats	WAV, MP3 (as part of touch panel file only - no USB storage)

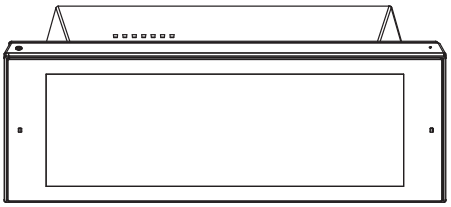
GRAPHICS ENGINE	
AMX G5	G5 enhanced feature set supporting multi-touch and gestures, scrolling, transitions, applications - See TPD5 Operations Guide for more information

EMBEDDED APPLICATIONS	
Viewer Applications	PDF, JPEG, BMP, PNG, TIFF, GIF, PowerPoint, .doc, .docx, .xls, .xlsx, .ppt, .pptx
Remote Management	VNC Server
Video Conferencing	Skype, the MT-702 receives audio/video and returns audio



FRONT PANEL COMPONENTS	
Sleep Button	Sleep button to activate sleep mode and powering off. Also provides access to setup pages (can be disabled)

CONNECTIONS	
Ethernet	10/100 Auto MDI-X port, RJ-45 connector through cable extension
USB	(1) USB host 2.0, Type A ports
Power	PoE (Power over Ethernet), 802.3af, class 3



ENVIRONMENTAL	
Temperature (Operating)	32° F to 104° F (0° C to 40° C)
Temperature (Storage)	4° F to 140° F (-20° C to 60° C)
Humidity (Operating)	20% to 85% RH
Humidity (Storage)	5% to 85% RH
Power ("Heat") Dissipation	On: 39.2 BTU/hr Standby: 19.8 BTU/hr

GENERAL	
Dimensions (HWD)	4.52" x 7.36" x 3.34" (115mm x 187mm x 85mm)
Weight	1.6 lbs (0.73 Kg)
Power Consumption	Full-On: 11.5 W maximum Standby: 5.8 W Shutdown: 1 W
Start-Up Inrush Current	Not applicable due to PoE standard
External Power Supply Required	AMX recommends using one of these AMX approved PoE power supplies (not included): • PS-POE-AF-TC, PoE Injector, 802.3AF Compliant (FG423-83) • NXA-ENET8-POE+, Gigabit PoE Ethernet Switch (FG2178-64)
Regulatory Compliance	FCC Part 15 Class B C-Tick CISPR 22 Class B CE EN 55022 Class B and EN 55024 CB Scheme IEC 60950-1 IC IEC/EN-60950 UL 60950-1 RoHS/WEEE compliant
Included Accessories	• MXA-USB-C, USB Port Cover Kit, Modero X/S Series Touch Panel (FG5968-18) • HPG-10, 3/4" Mini-Grommet (FG570-01-10K) • MXA-CLK, Modero X/S Series Cleaning Kit (FG5968-16)
Optional Accessories	MOUNT • MSA-STMK-07, Secure Table Mount Kit, for Modero 7" Tabletop Touch Panel (FG2265-17) VIDEO • MXA-MPL, Modero Multi Preview Live (FG5968-10)

LAST REVISED: 10/09/2018

About AMX by HARMAN
Founded in 1982 and acquired by HARMAN in 2014, AMX® is dedicated to providing AV solutions for an IT World. AMX solves the complexity of managing technology with reliable, consistent and scalable systems comprising control, video switching and distribution, digital signage and technology management. AMX systems are deployed worldwide in conference rooms, classrooms, network operation/command centers, homes, hotels, entertainment venues and broadcast facilities, among others. AMX is part of the HARMAN Professional Group, the only total audio, video, lighting, and control vendor in the professional AV market. HARMAN designs, manufactures and markets premier audio, video, infotainment and integrated control solutions for the automotive, consumer and professional markets.

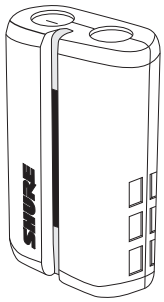
ULX-D® DIGITAL WIRELESS SYSTEMS

SPECIFICATIONS (SUBJECT TO CHANGE)

RF Carrier Range	174–216 MHz, 470–865 MHz, 1492–1525 MHz, 1785–1805 MHz Note: Varies by region (See Frequency Range and Ouput Power table)
Working Range	100 m (328 ft) Note: Actual range depends on RF signal absorption, reflection and interference.
RF Tuning Step Size	25 kHz, varies by region
Image Rejection	>70 dB, typical
RF Sensitivity	-98dBm at 10^{-5} BER
Latency	<2.9 ms
Audio Frequency Response	ULXD1: 20 Hz – 20 kHz (±1 dB) ULXD2: 30 Hz – 20 kHz (±1 dB) Note: Dependent on microphone type
Audio Dynamic Range System Gain @ +10	XLR Analog Output: >120 dB, A-weighted Dante Digital Output (Dual and Quad receivers): 130 dB (typical), A-weighted
Total Harmonic Distortion –12 dBFS input, System Gain @ +10	<0.1%
System Audio Polarity	Positive pressure on microphone diaphragm produces positive voltage on pin 2 (with respect to pin 3 of XLR output) and the tip of the 6.35 mm (1/4-inch) output.
Operating Temperature Range	–18 °C (0 °F) to 50 °C (122 °F) Note: Battery characteristics may limit this range.
Storage Temperature Range	–29°C (–20°F) to 74°C (165°F) Note: Battery characteristics may limit this range.

FREQUENCY RANGE

Band	Range (MHz)	Transmitter Output (mW)
V50	174 to 216	1/10/20
V51	174 to 216	1/10/20
G50	470 to 534	1/10/20
G51	470 to 534	1/10/20
G52	479 to 534	1/10
H50	534 to 598	1/10/20
H51	534 to 598	1/10/20
H52	534 to 565	1/10
J50	572 to 636	1/10/20
K51	606 to 670	1/10
L50	632 to 696	1/10/20
L51	632 to 696	1/10/20
P51	710 to 782	1/10/20
R51	800 to 810	1/10/20
JB (Tx only)	806 to 810	1/10
AB (Rx and Tx)	770 to 810	"A" band (770.250-805.750): 1/10/20 "B" band (806.125-809.750): 1/10
Q51	794 to 806	1/10/20
X52	902 to 928	1/10/20
X50	925 to 932	1/10
X51	925 to 937.5	1/10
X52	902 to 928	0.25/10/20
X53	902 to 907.5; 915 to 928	0.25/10/20
X54	915 to 928	0.25/10/20
Z16	1240 to 1260	1/10/20



*Note: Not all frequencies available in all regions. Contact your authorized Shure dealer for availability.

NOTE:

This Radio equipment is intended for use in musical professional entertainment and similar applications. This Radio apparatus may be capable of operating on some frequencies not authorized in your region. Please contact your national authority to obtain information on authorized frequencies and RF power levels for wireless microphone products.

RECHARGEABLE POWER MANAGEMENT (sold separately)

SB900A RECHARGEABLE BATTERY

ULX-D transmitters are compatible with the SB900A lithium-ion rechargeable battery, which provides over 9 hours of continuous use and precise tracking of remaining life and charge cycle details.

SBC200 DUAL DOCKING RECHARGING STATION

This compact and portable unit charges batteries while in transmitters or out. Up to 4 SBC200's can be chained toget.her to run off one power supply.

SBC220 2-BAY NETWORKED CHARGING STATION

Enables docked charging and storage for any combination of two SB900A batteries or ULXD1, ULXD2 wireless transmitters. When connected to a network, the charging status of each transmitter can be viewed remotely. Up to four SBC220 units can be linked together to share power and network connectivity.

SBC800 EIGHT BATTERY RECHARGING STATION

This compact and portable unit charges up to 8 SB900A batteries to full capacity within 3 hours, with status LEDs to indicate power levels. SB900A batteries fit securely in the charger for easy, efficient storage and transport.

BATTERY RUNTIMES

(Note: Frequency Band Dependent)

BATTERY TYPE	1 MW	10 MW	20 MW
SB900A	> 9 hours	> 9 hours	> 7 hours
Alkaline	> 8 hours	> 8 hours	< 6 hours
NiMH	> 8 hours	> 8 hours	< 6 hours
Li-primary	10-16 hours	10-16 hours	7-9 hours

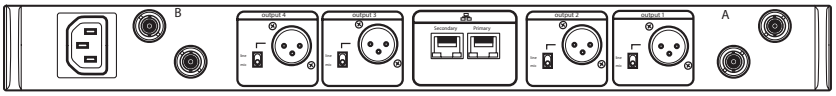
COMPONENT SPECIFICATIONS
ULXD4Q QUAD CHANNEL DIGITAL WIRELESS RECEIVER



OVERVIEW

The Shure ULXD4Q Quad Channel Digital Wireless Receiver offers four channels of uncompromising audio quality, RF signal stability, and advanced setup features in a space-efficient single rack unit. Digital wireless processing delivers premium 24-bit/48 kHz audio and RF spectrum efficiencies that dramatically increase the number of available compatible channels. With an expansive set of enhanced features including AES 256-bit encryption for security and Dante™ digital networking for audio over Ethernet, the ULXD4D delivers the most wireless performance per square inch.

- Four receivers in a rugged 1RU metal chassis with internal power supply
- Individual gain controls, LED meters, and XLR outputs for each channel
- Up to 64 MHz tuning range (region dependent)
- Digital predictive switching diversity
- High Density mode optimizes ULX-D systems to simultaneously operate significantly more channels in applications up to 30 meters
- RF cascade ports allow distribution of RF signal to another unit
- Optimized scanning automatically finds, prioritizes, and deploys the cleanest frequencies to transmitters over IR sync
- Bodypack Frequency Diversity ensures uninterrupted audio for mission-critical applications
- AES 256-bit encryption-enabled for secure transmission
- Audio summing routes two or more audio channels to combinations of receiver outputs. Use each channel's gain adjustment to reach the desired mix.
- Dante Domain Manager compatible
- Two receivers in a rugged 1RU metal chassis with internal power supply
- Individual gain controls, LED meters, and XLR outputs for each channel
- Ethernet networking for streamlined frequency coordination and deployment across multiple receivers
- Interference detection and alerts provided on both the receiver and WWB6
- Up to 60 dB independently adjustable gain for each channel
- Wireless Workbench® 6 software integration for advanced coordination, monitoring, and control AMX/Crestron control
- Compatible with the AXT600 Axient™ Spectrum Manager
- Intuitive front panel LCD menu and controls with lockout feature
- Upgraded LCD with adjustable contrast and brightness
- Audio and RF LED meters with peak indicator
- Switchable mic/line output level
- Remoteable ½ wave antennas

SPECIFICATIONS

(SUBJECT TO CHANGE)

Dimensions	44 mm x 482 mm x 274 mm (1.73 in. x 18.97 in. x 10.79 in.), H x W x D
Weight	3.45 Kg (7.6 lbs), without antennas
Housing	Steel; Extruded Aluminum
Power Requirements	100 to 240 V AC, 50–60 Hz, 0.32 A max.

RF OUTPUT

Spurious Rejection	>80 dB, typical
Connector Type	BNC
Impedance	50 Ω
Bias Voltage	12 - 13 V DC, 150 mA maximum, per antenna

AUDIO INPUT

Gain Adjustment Range	–18 to +42 dB in 1 dB steps (plus Mute setting)
Configuration	XLR: Balanced (1=ground, 2=audio +, 3=audio –)
Impedance	100 Ω
Full Scale Output	LINE setting= +18 dBV, MIC setting= –12 dBV
Mic/Line Switch	30 dB pad
Phantom Power Protection	Yes

CASCADE OUTPUT

Connector Type	BNC: For connection of 1 additional receiver
Configuration	Unbalanced, passive
Impedance	50 Ω
Insertion Loss	0 dB

COMPONENT SPECIFICATIONS
ULXD2 WIRELESS HANDHELD TRANSMITTER

OVERVIEW

The Shure ULXD2 is a handheld wireless transmitter compatible with ULX-D® Digital Wireless Systems. Offering premium 20 Hz – 20 kHz audio quality, advanced rechargeability options, and a wide selection of interchangeable Shure microphone heads, the ULXD2 delivers uncompromising wireless performance for professional sound reinforcement applications. The ULXD2 is offered with SM58®, SM86, SM87A, Beta 58A®, Beta 87A, and Beta 87C.

- 20 Hz to 20 kHz range with flat frequency response (actual response is microphone dependent)
- AES 256-bit encryption-enabled for applications where secure transmission is needed
- >120 dB dynamic range
- 1, 10, and 20 mW selectable RF output power
- 5 segment battery fuel gauge
- Shure lithium-ion rechargeable battery pack provides up to 9 hours of battery life, precision metering, and zero memory effect
- Up to 8 hours continuous use with 2 x AA batteries
- Backlit LCD with easy to navigate menu and controls
- Available with TA4M and LEMO3 input connectors
- 100 meter (300 ft) operating range
- Rugged metal construction
- Frequency and power lockout

ULXD2
Wireless Handheld Transmitter

SPECIFICATIONS (SUBJECT TO CHANGE)

Gain Offset Range	0 to 21 dB (in 3 dB steps)
Battery Type	Shure SB900A Rechargeable Li-Ion or LR6 AA batteries 1.5 V
Battery Runtime @ 10 mW	Shure SB900A: up to 9 Alkaline: 8 hours See Battery Runtime Chart
Dimensions	256 mm × 51 mm (10.1 in. × 2.0 in.) L × Dia. V50, V51 Bands: 278 mm × 51 mm (10.9 in. × 2.0 in.) L × Dia.
Weight	340 g (12.0 oz.), without batteries V50, V51 Bands: 348 g (12.3 oz.), without batteries
Housing	Machined aluminum

AUDIO INPUT

Configuration	Unbalanced
Maximum Input Level 1 kHz at 1% THD	145 dB SPL (SM58), typical Note: Dependent on microphone type
Preamplifier Equivalent Input Noise (EIN) System Gain Setting ≥ +20	120 dBV, A-weighted, typical

RF OUTPUT

Antenna Type	Integrated Single Band Helical
Occupied Bandwidth	<200 kHz
Modulation Type	Shure Proprietary Digital

COMPONENT SPECIFICATIONS
ULXD1 WIRELESS BODYPACK TRANSMITER

OVERVIEW

The ULXD1 is a wireless bodypack transmitter compatible with ULX-D® Digital Systems. With a rugged yet lightweight aluminum case, the ULXD1 delivers uncompromising audio quality and RF performance, AES 256-bit encryption for secure transmission, and advanced rechargeability options for professional sound reinforcement applications.

- 20 Hz to 20 kHz range with flat frequency response (actual response is microphone dependent)
- AES 256-bit encryption-enabled for applications where secure transmission is needed
- >120 dB dynamic range
- 1, 10, and 20 mW selectable RF output power
- 5 segment battery fuel gauge
- Shure lithium-ion rechargeable battery pack provides up to 9 hours of battery life, precision metering, and zero memory effect
- Up to 8 hours continuous use with 2 x AA batteries
- Backlit LCD with easy to navigate menu and controls
- Available with TA4M and LEMO3 input connectors
- 100 meter (300 ft) operating range
- Rugged metal construction
- Frequency and power lockout

ETC®

Element 2 Console

Eos® Series

100V 115/120V 230/240V

GENERAL INFORMATION

Designed for venues using primarily conventional lighting, the Element 2 control console provides the powerful features of the Eos system in an economical and simplified package. In addition to keypad commands, True LTP Channel Faders provide hands-on control of intensity and can be used to set manual levels and edit recorded cues and submasters. Moving Light Controls are available to facilitate the use of conventional accessories like moving mirror heads, color scrollers or gobo rotators, or to make controlling small numbers of moving lights simple and direct. Element 2 can be backed up by another Element 2, ETCnomad™ 6144 or ETCnomad Puck™ 6144 mini-computer.

FEATURES

- 1,024 or 6,144 outputs
- 32,768 control channels (any number from 1 - 99,999)
- Up to 99 discrete users
- Partitioned control
- Master playback pair with 100mm faders
- 40 45mm faders x 100 pages for configurable faders, for channel, submaster and palette/preset, timing and effect master playback control
- User-definable direct selects
- Four discrete palette types (IFCB)
- Presets function as “all palette”
- Effects provide dynamic relational and absolute progressive behavior
- Central information area (CIA) accesses the browser and other controls
- Configurable high-density channel display, with format and flexi-channel modes
- Up to six abstract color spaces, tinting, spectrum and fade path tools.
- User configurable, interactive Magic Sheets
- ETCNet2™ and Net3™ (powered by ACN), ArtNet and Avab® UDP network output protocols
- Show import from Obsession, Express™, Expression®, Emphasis®, Congo®, Cobalt®, Grand MA1, Grand MA2, Safari and Strand 500/300 Series
- Two individually configurable Ethernet ports
- Multiple MIDI and/or SMPTE TimeCode Inputs, Analog/Serial Inputs, OSC transmit/recieve
- Virtual Media Server function for pixel mapped effects, images, animations
- Support for multiple languages, including English, German, Spanish, French, Italian, Japanese, Korean, Russian and Chinese (Simplified and Traditional)

ORDERING INFORMATION

Element 2

MODEL	DESCRIPTION
Element 2 - 1K	Element 2, 1,024 outputs (minimum)
Element 2 - 6K	Element 2, 6,144 outputs (maximum)
Element 2 - 5K Up	After-sale 5K upgrade
ETCnomad 512	Client for Mac/PC

Output protocols are distributed using ETCNet2 DMX Nodes or Net3 DMX/RDM Gateways. I/O Gateways and Show Control Gateways provide switch closure functionality, MIDI and SMPTE TimeCode.

Element 2 Accessories

MODEL	DESCRIPTION
Net3 RVI3	Net3 Remote Video Interface
ETCpad	ETC Portable Access Device
Element 2 - FC	Element 2 Flightcase

Eos Family Offline Editor software for Mac and PC platforms is called ETCnomad and is available for download from www.etcconnect.com

Element 2 requires Windows 7 compatible external monitors, 1280x1024 minimum resolution, standard, touch or multi-touch

SHIPS WITH:

- Dust cover
- One Littlite
- Mouse and mousepad
- Two active display-port to DVI adapters
- One locking IEC power cord

SPECIFICATIONS

SYSTEM CAPACITY

- 1,024 or 6,144 Outputs
- 32,768 Control Channels (devices)
- 10,000 Cues
- One Cue List
- 999 Submasters
- 100 Fader Pages
- 4 x 1,000 Palettes (Intensity, Focus, Color, Beam)
- 1,000 Presets (all palette)
- 1,000 Groups
- 1,000 Effects (relative, absolute or step)
- 99,999 Macros
- 1,000 Snapshots
- 1,000 Curves
- 1,000 Color Paths
- Supports two external display-port monitors at 1280x1024 minimum resolution, with optional touch or multi-touch control
- Solid-state hard drive
- Five USB ports for flashdrives, pointing devices, keyboards

DISPLAY FUNCTIONS

- All show data may be viewed on a single external monitor. External views may be posted separately or expanded across a maximum of two monitors. Three user-configurable workspaces per display, with split-screen/sizing controls.
- The Central Information Area accesses:
  - Browser
  - File Management
  - System Defaults
  - Show Defaults
  - Desk Defaults
  - Partition Definitions
  - Network Configuration
  - Show Data Utilities
  - Print to PDF
  - Record Target Lists
  - Patch functions
  - Help
  - Electronic alpha-numeric keyboard
  - Command Line
  - Selected Cue
  - Error messages
  - Context-Sensitive Control
  - Parameter Categories and individual parameters
  - Filters
- Channel Displays
  - Live channel or table view
  - Blind cue, palette, preset and group views, in list, channel, table and spreadsheet formats
  - User-configurable to show required parameters and/or parameter categories (IFCB)
  - Flexi-channel to determine which channels to display
  - Zoom allows user to define how many channels are viewed
  - Color-coded intensity levels indicate direction of move

SPECIFICATIONS

  - Color-coded non-intensity levels indicate change from previous state
  - Graphic differentiation of moving lights, single parameter devices and unpatched channels
- Magic Sheets
  - User-defined interactive display layouts
  - Objects and images may be imported
- Patch Views
  - Patch by channel
  - Patch by address
  - Patch by Device List (RDM)
  - Assign proportional patch value, curve and, preheat value for intensity
  - Swap pan and tilt
  - Invert pan and tilt
  - Custom fixture editor
  - User configurable shutter order
- Playback Status Display
  - Accesses status of 100 fader pages
  - Expanded cue list for selected cue, optional dynamic countdown of active cues
- Cue List Index
- Effect Editor
- Group Editor
- Park Display
- Dimmer Monitoring
- Submaster List
- Fader Config Display

PLAYBACK CONTROLS

- Master Playback crossfade pair with two 100mm potentiometers, Go and Stop/Back
- 100 pages of 40 45mm faders, each configurable as:
  - IFCB Palette/Preset Lists or single instances
  - Configurable Grand Master with Blackout
  - Additive or Inhibitive Submaster, with user-configurable button/slider behavior
  - Channel faders
  - Filtered Manual Timing Master
- Rate Controller
- Playback fader controls include:
  - Load to assign content
  - Timing Disable
  - Release
  - Freeze
  - Manual Override
  - Rate
  - Background Enable/Disable
  - 10 Priority States
  - 10 Background Priority States
  - Parameter and channel filters
- Macros
  - May be set to play background or foreground
  - Startup and Shutdown Macros
  - Disconnect Macros

SPECIFICATIONS

MANUAL CONTROL

- Channel selection from keypad and/or multi-touch direct selects
- Lists constructed with +, -, thru
- Intensity set with level wheel, keypad, level button, full and out
- Select Last recalls last sequential channel selection set
- Select Manual selects all channels with manual values
- Select Active selects all channels with intensity above zero
- Ordered groups
- Offset; including even, odd, random and reverse
- Fan
- Sneak
- User-definable home
- Home by parameter, parameter category or all non-intensity parameters
- Capture
- Park at level
- Scaled park for temporary percentage adjustment
- Recall-from and Copy-to commands
- About provides detailed view of selected channels or record targets
- Undo
- Highlight and Lowlight, with optional user-definable Rem Dim
- Lamp controls to strike and douse arc sources, calibrate devices

PROGRAMMING FEATURES

- Channel Functions
  - Non-intensity parameters set via numeric entry or pageable encoders
  - Encoders support software-controlled tactile response
  - Local display of color and gobo images
  - Color matching to gel selector
  - Color Path, color tinting and color spectrum tools.
  - Apply discrete time and delay per channel parameter
- Palette and Preset Functions
  - Record and Update
  - Toggle display to absolute data
  - Up to 999 decimal values may be inserted between any two whole numbers
- Effects
  - Create live or blind
  - Pattern-based relative dynamic effects
  - Absolute effects
  - Step effects
  - Channel level overrides
  - Cue level overrides
  - Entry mode determines how parameters enter effects
  - Exit mode determines how parameters depart effects
- Cue Recording
  - Cue List HTP/LTP Intensity
  - Cue List Priority and Background Priority
  - Fader as progress controller, manual or intensity master
  - Record manual values or channels in use
  - Auto playback of recorded cues
  - Auto-mark instructions
  - Block at cue or parameter level

SPECIFICATIONS

  - Follow or hang times
  - Out of sequence link
  - Loop functions
  - Cue level parameter category timing
  - 20-part multi-part cues
  - Cue-level rate override
  - Up to 999 decimal cues between each two whole-numbered cues
  - Execute List
    - Triggers snapshot
    - Triggers macros
    - Show-control triggers
    - Analog triggers
  - Update and Update Trace functions
  - Undo record and delete
- Submaster Recording and Playback
  - 999 additive or inhibitive submasters
  - Bump button timing for fade up/dwell/fade out
  - Exclusive or Shielded Mode
  - Background enable/disable
  - Restore to background or minimum value
  - LTP/HTP intensity
  - Fader as progress controller or intensity master
  - Priority and Background Priority status
- Curves
  - Assignable in patch to modify dimmer output ramp
  - Assignable at cue or cue part level to modify intensity crossfade profile or non-intensity parameter ramping

MOVING LIGHT CONTROLS

- On-Demand Moving Light controls include labeling and current parameter value on connected display monitor
- Flip and Home functions
- Parameters selectable on screen for mouse-based or touchscreen control or command-line actions

INTERFACES

- Two individually configurable ethernet ports
- ETCNet2, Net3 (powered by ACN), ArtNet and Avab UDP output protocols
- Four DMX/RDM ports
- Contact-closure triggers via D-Sub connector
- Two video connectors support display-port external displays (1280x1024) with optional single-touch or multi-touch screen control
- USB multipurpose (five ports)
- OSC Transmit/Receive
- UDP Transmit/Receive
- MIDI TimeCode, MIDI Show Control through Gateway
- SMPTE TimeCode through Gateway
- Contact closure (12 analog inputs, 12 SPDT contact outputs, RS-232) through Gateway

ELECTRICAL

- AC input (100 - 240V at 50/60 Hz)
- Power consumption (less external monitors) approximately 1 amp at 120V or 230/240V

PHYSICAL

ETC Paradigm Architectural Control Processor

Unison Control Series

GENERAL INFORMATION

The Paradigm Architectural Control Processor is designed for easy interaction and rapid response. The Paradigm ACP's built-in memory and processing power works with vast amounts of lighting control data and is fast enough to process 1,024 simultaneous fades over any of its native protocols.

APPLICATIONS

- Houses of worship
- Schools
- Restaurants
- Hotels
- Museums
- Casinos
- Ballrooms

FEATURES

- Designed for use in Unison DRd and ERn enclosures
- Point of Control Interface: easy-to-read system display shows the user pertinent system information
- Supports Calculated Energy Reporting for configured loads when used in a Central Control Server System.
- LinkConnect: using Echelon® LonTalk® protocol with LinkPower, the two-wire topology-free system gives you the freedom to put stations where you need them
- NetConnect: Makes use of low-cost, easy-to-install Cat5/5e with PoE to connect touchscreen stations and other devices to a networked Paradigm System
- USBConnect: support for USB flashdrives for configuration upload and download
- QuickLoad: SD Media support for upload, and backup of configuration data
- LightDesigner Access: Web browser interface for easy modification, activation and monitoring of your system configuration and status
- LocalAccess: user control at the interface, including creation of timed events and editing of presets or sequences
- Secure-It Access Control: multiple levels of secure user access at the interface

REGULATORY AND COMPLIANCE

- cULus Listed
- CE Compliant

ORDERING INFORMATION

Paradigm Architectural Control Processor

MODEL	DESCRIPTION
P-ACP	Unison Paradigm Architectural Control Processor

Compatible Power and Control Enclosures

MODEL	DESCRIPTION
DRd	Unison Dimming Enclosure (12 and 24 circuits)
ERn	Unison External Control Enclosure

Unison Paradigm System Accessories

MODEL	DESCRIPTION
P-SPM-E	Unison Paradigm Station Power Module
P-REP	Unison Paradigm ERn Repeater Module
P-DREP	Unison Paradigm ERn Dual Repeater Module
P-REP-W	Unison Paradigm Wall-Mount Repeater
P-DREP-W	Unison Paradigm Wall-Mount Dual Repeater
P-REP-RM	Unison Paradigm Rack-Mount Repeater
P-DREP-RM	Unison Paradigm Rack-Mount Dual Repeater

SPECIFICATIONS

MECHANICAL

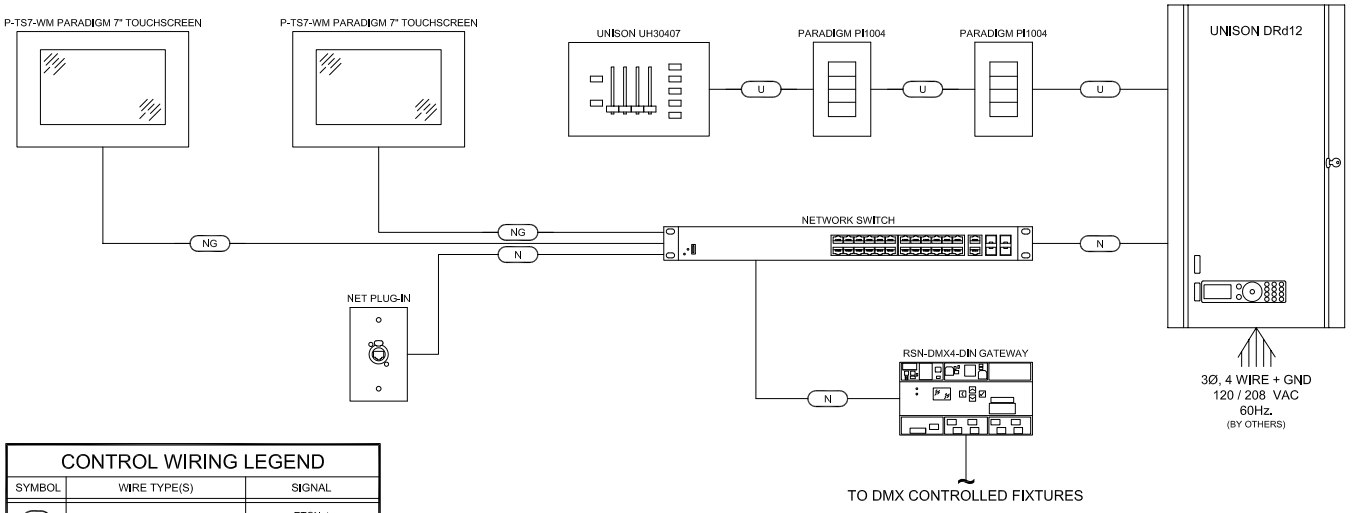
- Designed for use in the Unison DRd Rack Enclosure Series and Unison ERn Control Enclosure Series
- Microprocessor-based, solid-state technology to provide multi-scene lighting and building controls
- Fully-contained plug-in module with no discrete wire connections
- Tool-free installation
- Front-panel user interface with backlit LCD and alphanumeric button panel
- Support of RJ-45 Ethernet, Secure Digital (SD) and Universal Serial Bus (USB) media on the front panel

ELECTRICAL

- No discrete wiring connections required for use in a dimming or control enclosure
- Echelon® LinkPower® communications with remote devices, including button stations, button/fader stations, touchscreen stations, sensors, and third party LonMARK compliant products
- Hot swapable
- System configuration and programming information stored in flash memory
- Support of ESTA BSR E1.17 Advanced Control Networks (ACN) and ESTA BSR E1.31 (sACN) Protocols
- Supports EIA-RS232 serial protocol for bi-directional command and communication with third-party equipment
- Two discrete ESTA DMX512A ports, configurable as input or output ports*
- Four dry-contact closure inputs
- Four contact-closure outputs, rated 1 A at30 VDC

*When used in a Dimming Enclosure, the second DMX port is always an output

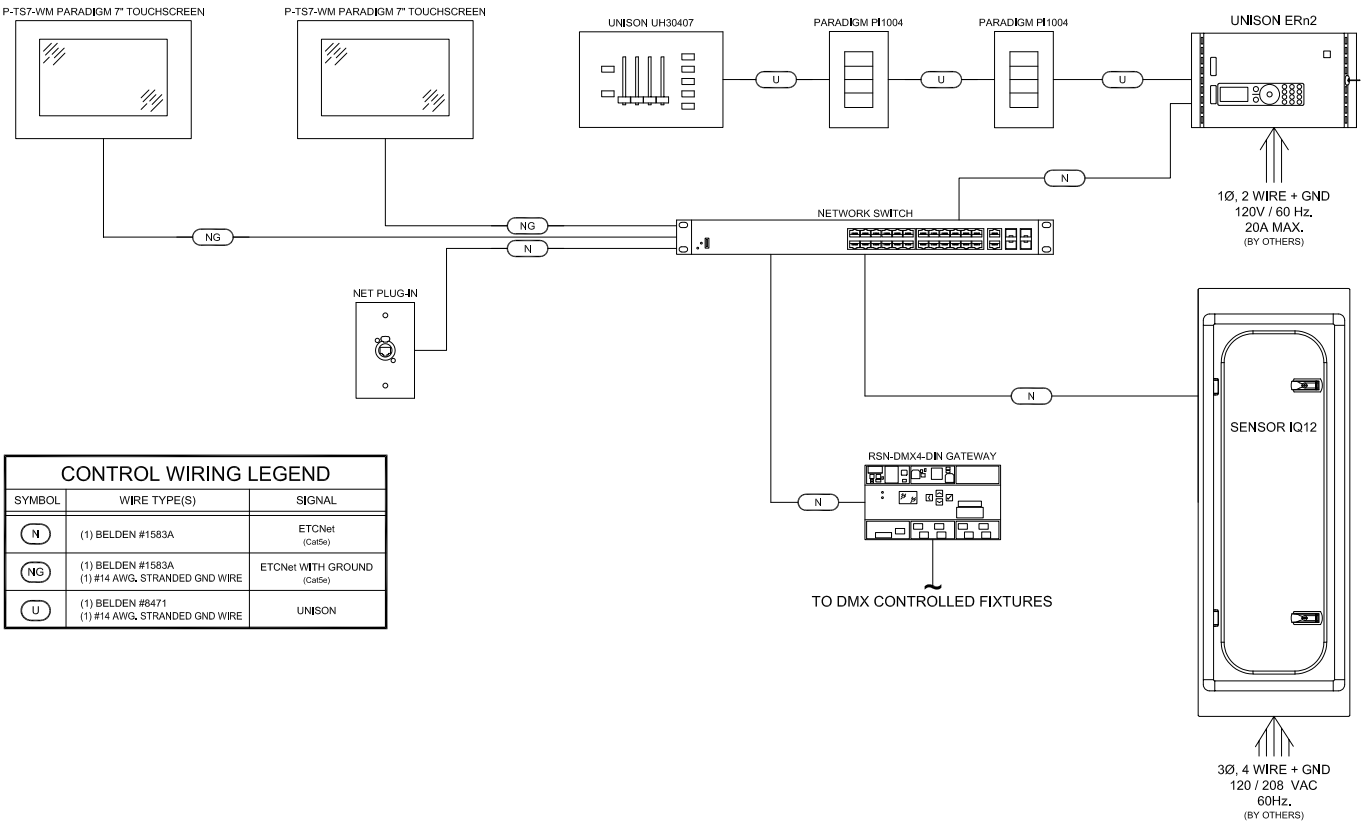
THERMAL



- Ambient room temperature: 0°–40° C / 32°–104° F
- Ambient humidity: 10–90% non-condensing

SPECIFICATIONS

FUNCTIONAL



- Capacity
  - Supports 1,024 channels of control per control processor
  - Supports up to 63 stations per control processor
- System
  - Net3 system interoperability including sACN
  - Network Time Protocol for real-time clock synchronization supporting real and astronomical events
  - Supports two physical DMX ports, each configurable as an input or output
  - Provides configuration of DRd dimming operations
  - Up to 12 control processors per system
  - Addition of processors to a system proportionately increases the overall capacities
- Serial Input/Output
  - Eight-bit word length, parity selection and one or two stop bits
  - Fully customizable input and output messages
  - Bi-directional
- Configuration Data
  - Remote upload from a connected PC running LightDesigner or another connected Paradigm ACP
  - Stored in removable solid-state memory for easy transfer to another Paradigm ACP
- Local User Interface
  - Control functionality for control channels, zones, fixtures, groups, presets, macros, walls and sequences
  - Ability to schedule timed events (add/edit/delete)
  - Transfer of configuration using removable media
  - Transfer of configuration to and from touchscreen stations using removable media
- User Access Controls
  - Two user accounts – Administrator and User, local to each processor
- Web User Interface
  - Internal web server accessible via Ethernet port
  - Activate and deactivate presets
  - Schedule timed events (add/edit/delete)
  - Displays status information and log files
  - Configuration of processor settings
  - Supports configurable user login security options
- Diagnostics
  - Standard and Critical Event logging
- Stations
  - Connected to a Paradigm processor via topology-free LinkConnect, or star-topology NetConnect
  - Discovery and binding accomplished from the local user interface or LightDesigner
- Operation
  - Configurable DMX output refresh rate
  - Support for 16-bit DMX attributes
  - User configurable arbitration for multiple internal and external source data

ETC® Unison® Paradigm® Inspire® Control Stations

Paradigm Control Series

GENERAL INFORMATION

Sophisticated and stylish - with the control you need. These LinkConnect-powered stations are designed to initiate preset, zone, and space controls for your entire lighting system. They communicate efficiently with a single space or the rest of the Paradigm family of lighting controls to provide necessary control for any installation. Paradigm Inspire are an elegant way to add control to any facility.

APPLICATIONS

- Education
- Hospitality
- Healthcare facilities
- Office buildings
- Conference rooms
- Meeting rooms
- Retail

FEATURES

- LinkConnect: two-wire topology-free system gives you the freedom to easily place stations wherever they are needed
- Fastener-Free Faceplate System: no visible means of attachment
- Decorator style face plates available in one-, two-, three- and four-gang options
- Color control: the four button with fader station provides live feedback and control for:
  - Variable Color: Intensity, Saturation and Hue
  - Variable White: Intensity, Tint and Color Temperature
- Color condition: rear-illuminated indicators that reflect system status using RGB LEDs. Allowing for customized control indication on a per-button basis
- Laser engraved legend system with custom button labeling available

GENERAL

- UL and cUL LISTED
- CE marked
- CA Title 24 compliant

ORDERING INFORMATION

Paradigm Inspire Stations

MODEL	DESCRIPTION
PI1001-_	Inspire 1-Button Control Station
PI1002-_	Inspire 2-Button Control Station
PI1004-_	Inspire 4-Button Control Station
PI1006-_	Inspire 6-Button Control Station
PI1008-_	Inspire 8-Button Control Station
PI1104-_	Inspire 4-Button with Fader Control Station

Enter station color code in __ space provided:

1 = Cream (RAL 9001), 3= Grey (RAL 7001), 4 = Black (RAL 9004), 5 = Signal White (RAL 9003)

Stations flush-mount (F) in industry-standard gang boxes. (By others)

Surface mount boxes available from manufacture upon request.

Compatible Control Systems

MODEL	DESCRIPTION
P-ACP	Paradigm Architectural Control Processor

Note: A Paradigm Station Power Module (P-SPM) is required

SPECIFICATIONS

FUNCTIONAL

- Zone or preset control from any station
- RGB button illumination for activity status
- Button functions include: preset selection, record mode activation, station lockout, raise, lower, macro activation, zone on/off control, timed-event override and wall open/close or toggle
- Fader functions include: zone or group intensity, color control, variable white control
- Custom button functionality programmable via LightDesigner configuration software
- Programmable electronic lockout levels
  - Allows for programming of individual lockout levels

MECHANICAL

- 1, 2, 4, 6 and 8 buttons or 4 buttons with rotary fader
- Gangable for custom applications
- Enclosed electronics assembly
- Cantilevered switch arrays with replaceable button caps
- No visible means of attachment
- Flush-mount in industry standard backbox, RACO 690 or equivalent
- Surface-mount backboxes available from ETC upon request
- Constructed of injection-molded, ABS plastic in four RAL standard colors:
  - Cream (RAL 9001)
  - Grey (RAL 7001)
  - Black (RAL 9004)
  - White (RAL 9003)

ELECTRICAL

- Connect via LinkConnect two-wire control network utilizing low-voltage Class 2 wiring
  - Topology-free and polarity-independent wiring over Belden 8471 or equivalent and one #14 ESD drain wire
  - Wiring may be bus, loop, home run or any combination of these
- All station terminations utilize removable connectors
- UL and cUL LISTED, CE marked

THERMAL

- Ambient room temperature: 0-40°C / 32-104°F
- Ambient humidity: Maximum 90% non-condensing

ETC

Unison Paradigm 7” Touchscreen

Unison Control Series

GENERAL INFORMATION

Paradigm Touchscreens use high-resolution, color displays that are bright and easy to read. The touch-sensitive panels provide audible and visual feedback that show when commands are fully registered. Designed to your specifications with ControlDesigner software, the Touchscreen’s intuitive graphics guide users quickly through lighting and control options.

APPLICATIONS

- Houses of worship
- Hotels
- Convention centers
- Meeting rooms
- Schools
- Restaurants

FEATURES

- 7” WVGA (800x480), 24-bit color LCD touchscreen
- ColorPicker – Support for HSB color picker for dynamic selection of color with LED and multiparameter fixtures
- Timed Event creation, edit, and override from setup menu
- Ready-When-You-Are – built in proximity and ambient light sensors make sure the station is ready to respond when you are about to use it
- Electronic Lockout - configurable, software based access level control with multiple levels of access utilizing numeric pass codes
- NetConnect – making use of low-cost, easy to install Cat5 with PoE to connect LCD stations to a networked Paradigm System
- LinkConnect – using Echelon® LonTalk® protocol with LinkPower, the two wire topology-free system gives you the freedom to put stations where you need them
- USBConnect – Support for USB flash drives for configuration upload and download
- QuickLoad – SD Media support for upload, and backup of configuration data
- Support of standard or custom graphical control pages

ORDERING INFORMATION

Paradigm 7” Touchscreen

MODEL	DESCRIPTION
P-TS7-_	Paradigm 7” Touchscreen

Insert station color selection in the __ space provided:

1 = Cream (RAL 9001)

2 = Ivory (RAL 1015)

3 = Gray (RAL 7001)

4 = Black (RAL 9004)

5 = Signal White (RAL 9003)

Paradigm 7” Touchscreen Mounting Options

MODEL	DESCRIPTION
P-LCD-FBB	7” Touchscreen Flush Back Box
P-LCD-SBB	7” Touchscreen Surface Back Box
P-LCD-SLBB	7” Touchscreen Surface Back Box - Locking Cover
P-TS7-RM	Paradigm 7” Touchscreen Rack Mount Kit

Paradigm 7” Touchscreen Locking Covers

MODEL	DESCRIPTION
P-LCD-LC-_	7” Touchscreen Hinged Locking Cover

Notes: Insert Locking Cover color selection in the __ space provided using the color chart above.

Note: Locking covers use the standard flush mount backbox for recesses mount applications

SPECIFICATIONS

FUNCTIONAL

- Built-in setup display, separate from user configured pages
- Configuration upload from the following sources:
  - LightDesigner software
  - Paradigm Architectural Control Processor
  - SD media, via built in SD card slot
  - USB Flash Drive, via built in USB port
- Ability to store multiple configurations on one touchscreen and select which configuration is active from an on-screen menu
- Allows 30 separate control pages
- Individual zone control
- Preset record and selection
- Room Combine Controls
- Preset, color, sequence, macro, and custom function activation
- Change, initiate, or override timed events
- Multi-level electronic lockout
- Custom controls configured from LightDesigner software
- Custom graphics from ControlDesigner software

MECHANICAL

- Color LCD display with projected capacitive touchscreen interface with LED backlight
- 178 degree horizontal and vertical viewing angle
- Low-profile aluminum bezel finished in a fine-texture powder coat paint
- No visible means of attachment
- Manufacturer provided back boxes for surface and flush mount applications
- Adjustable brightness and contrast for low light conditions
- 7” WVGA, display (800x480)

ELECTRICAL

- Connection to Paradigm Control System utilizes standard Ethernet (CAT5/ 5e)
  - Powered by Power over Ethernet, PoE Class 2 (6-watts)
  - Requires ground wire
- Optional connectivity using low voltage Class II LinkConnect wiring
  - Topology free and polarity independent wiring over Belden 8471 or equivalent plus two #16 for 24 VDC AuxPower
  - Requires ground wire
  - Wiring may be bus, loop, home-run or any combination of these
- Meets or exceeds EN60950-1, N55103-1, En55103-2 and IEC1000-4-2

THERMAL

- Ambient room temperature: 0°–40° C (32°–104° F)
- Ambient humidity: 10–90% non-condensing

REGULATORY AND COMPLIANCE

- cULus Listed
- CE Compliant
- RoHS compliance

ETC®

DMX/RDM Four-Port Gateway

PoE 802.3af

Gateway Series

GENERAL INFORMATION

ETC's DMX/RDM Four-Port Gateway provides data distribution using the quality and reliability of ETC's network technology. Built for Net3 using industry-standard streaming ACN and sACN, the Four-Port Gateway unlocks the power of your networked system. The Four-Port Gateway also uses bidirectional Ethernet communication with other network devices to send or receive DMX512 and Remote Device Management (RDM) signals.

APPLICATIONS

- Roadhouses
- Touring
- University/professional theaters
- Convention halls
- Tech tables
- Stage manager panels
- System integration

FEATURES

- Distributes DMX and RDM data to any input/output device over Ethernet
- Supports Net3 protocol powered by ACN
- DMX/RDM Output/Input
- Simple configuration and service of each port
- LCD screen for labeling, status and configuration information
- Power and Network status indicators
- Power over Ethernet (PoE) or external DC power supply
- Configurable using Net3 Concert Software

ORDERING INFORMATION

Four-Port Gateways

MODEL	DESCRIPTION
N34G-4OUT	4-port DMX/RDM Gateway - 4 Output
N34G-4IN	4-port DMX/RDM Gateway - 4 Input
N34G-4TERM	4-port DMX/RDM Gateway - 4 Terminal Strip
N34G-4RJ	4-port DMX/RDM Gateway - 4 RJ45 Connectors
N34G-DIN	4-port DMX/RDM Gateway - DIN-rail Mount

Four-Port Gateway Components

MODEL	DESCRIPTION
N34G-FB	Gateway - includes 4 blank plates
N34G-MM	Input Module - Male 5-pin XLR
N34G-FM	Output Module - Female 5-pin XLR
N34G-TM	Terminal Strip Module - Input or Output
N34G-RJM	RJ45 Module - Input or Output
N34G-BM	Blank Module - For any unused port

Four-Port Gateway Accessories

MODEL	DESCRIPTION
N34G-FP4F	Gateway Front-Panel Kit - DMX 4 Out[1]
N34G-4P2M2F	Gateway Front-Panel Kit - DMX 2 In 2 Out[1]
PS-INTL	Gateway Universal Power Supply[2]
N3GA-RM	Gateway Rack-Mount Kit
N3GA-HBU	Gateway Hanging-Bracket Kit with U-Bolt

[1]Does not include required Rack-Mount kit

[2]PS-INTL includes plugs for United States/Japan, Europe, and Great Britain. Compatible with Four-Port, Two-Port, Show Control and I/O Gateways.

SPECIFICATIONS

FUNCTIONAL

- Supports Net3/ACN (ANSI E1.31 and E1.17)
- Supports RDM (ANSI E1.20)
- Supports USITT DMX512-A (ANSI E1.11)
- USITT DMX512 and ANSI E1.11 DMX512-A compliant
- Advanced Input Patch (AIP) allows any incoming address to be associated with any sACN address
- Flexible Output Patch (FOP) allows a 512-address universe to begin at any output address
- Support for per-address- or per-universe-level priority

MECHANICAL

- Menu button for backlight/paging control
- Backlit LCD display for identification and status reporting and basic configuraton.
- Rack-Mount/Portable/Touring
  - Fabricated from 16-gauge cold-rolled steel
  - Black, Fine-textured, powder-coat finish
  - C-clamp and U-bolt hardware available
  - Half 19" equipment rack width allows for up to eight DMX ports in 1U height
- DIN-rail
  - Extruded aluminium enclosure
  - Mounting complies with DIN43880 (35/7.5 rail)
  - DIN installation enclosure availabl
- Network, power and data activity LED indicators
  - Blue power indicator, green network activity indicator
  - Bi-color DMX activity indicator
- Front-panel RJ45 for connection to lighting network
- Reset button for hard reset or forced reboot

PROCESSOR

- Maximum delay time from input to output not greater than one packet time
- Selectable DMX refresh rate with a maximum at least 40Hz

ENVIRONMENTAL

- Ambient operating temperature: 0° to 40°C (32° to 104°F)
- Operating humidity: 5% - 95% non-condensing
- Storage temperature: -40° to 70°C (-40° to 158°F)

ELECTRICAL

- Compliant with IEEE 802.3i for 10BASE-T, 802.3u for 100BASE-TX and 802.3af for Power over Ethernet
- Optional 8-28vDC power input for use with non-PoE systems
- Maximum five-watt current draw
- CE compliant and ETL listed

MODULAR DMX PORTS (NON DIN-RAIL MODELS)

- Supports up to four DMX ports independently configurable as inputs or outputs
- Module options include:
  - XLR 5-Pin Male DMX input connector
  - XLR 5-Pin Female DMX output connector
  - RJ45 DMX connector
  - Terminal strip connector
- Fully optically-isolated input from the Gateway electronics
- Withstands fault voltages of up to 250VAC
- Integrated DMX/RDM termination

SPECIFICATIONS

CONFIGURATION

- Configuration provided by Net3 Concert
  - Supports up to 512 DMX addresses per port
  - Supports up to 63,999 Streaming ACN universes
- Up to 2,048 channels in combination of data input or output
- DMX data input or output configurable by user
- Multiple outputs of a single DMX universe (DMX splitter) from a single Gateway
- Supports discrete DMX universe outputs per port
- Multiple sources may be combined to the network with each source or address allowed an independent priority
- Individual port start address and offset
- User-configurable labeling

ADDITIONAL INFORMATION

DMX512

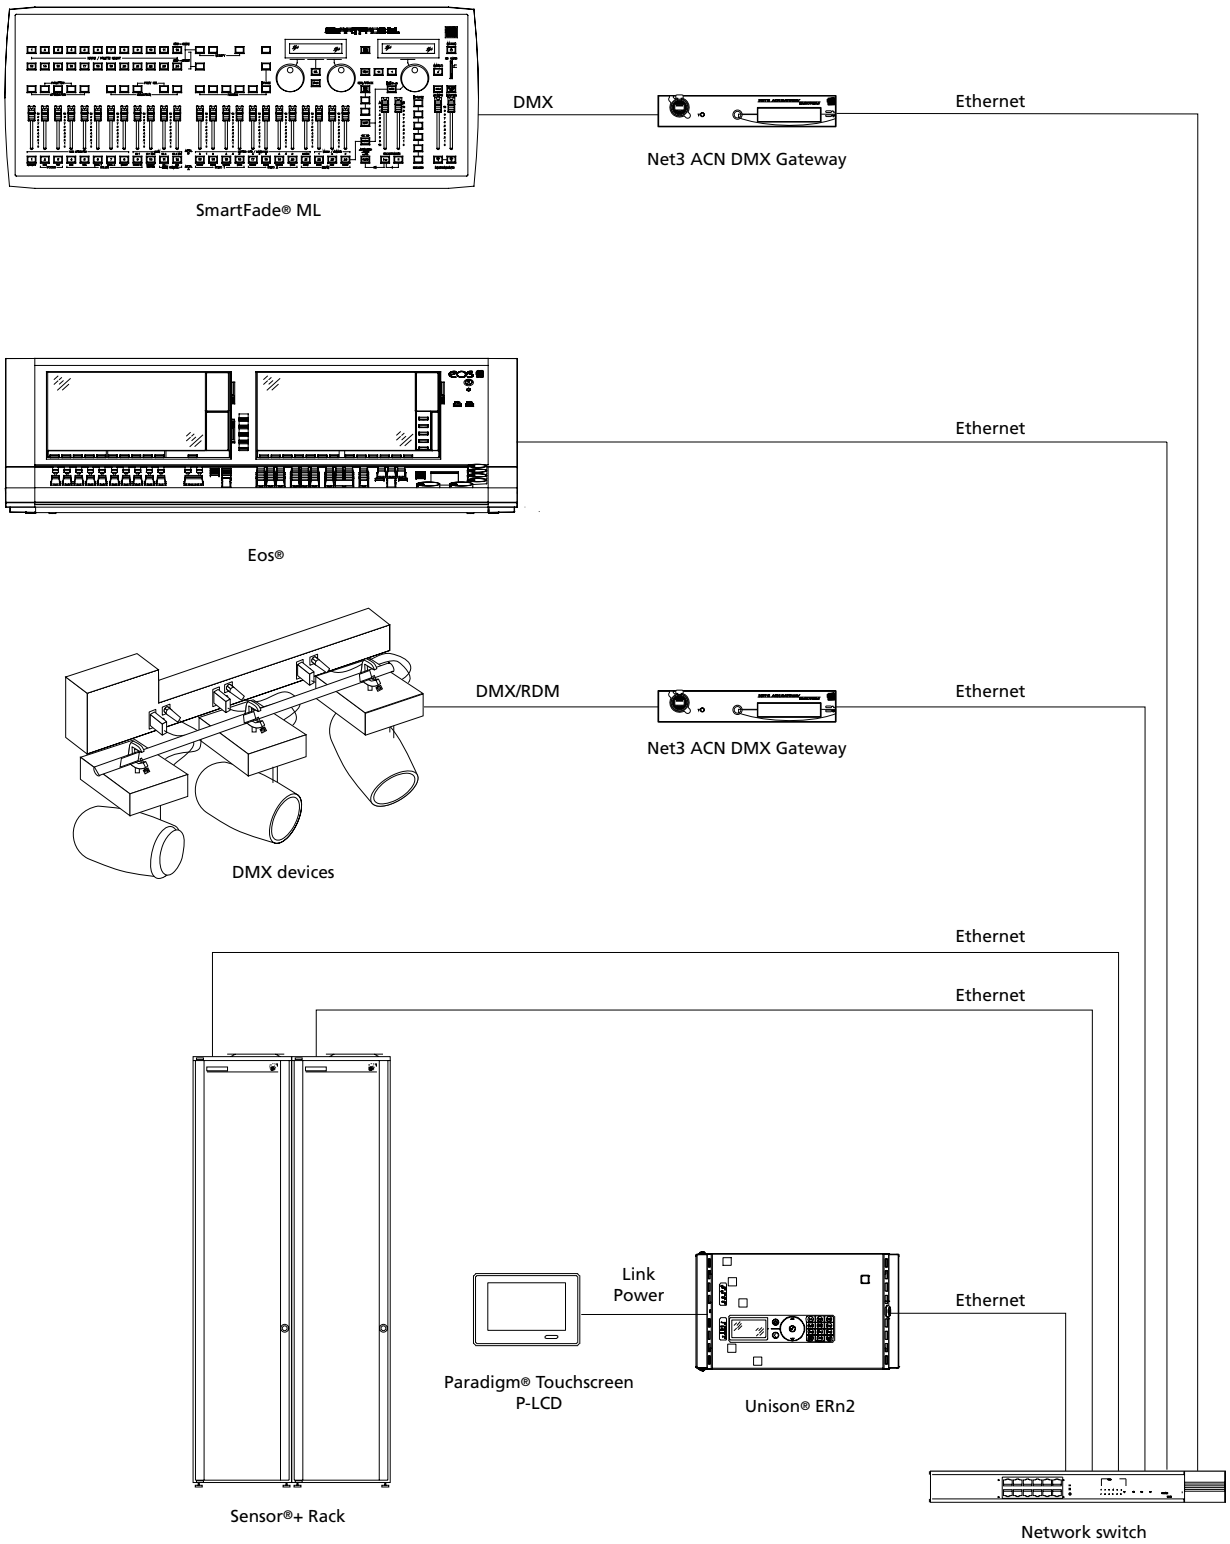
Often shortened to DMX (Digital Multiplex), this communication protocol is used mainly to control dimmers and multi-parameter fixtures. A universe of DMX is defined as 512 channels. DMX sends a nearly continuous stream of level information for each control channel. It is a form of RS-485 digital serial communication.

RDM

Remote Device Management (ANSI E1.20) is a protocol enhancement to DMX512 that allows low-speed bidirectional communication between a system controller and attached RDM devices over a standard DMX line. This protocol will allow remote configuration, status monitoring, and management of devices.

sACN

Streaming ACN (ANSI E1.31), sends DMX-style control over TCP/IP networks. It provides a fast and efficient mechanism to transport the well-understood DMX protocol over Ethernet using an industry-standard protocol.



ACN

Architecture for Control Networks (ANSI E1.17) is a standard for high-speed bidirectional communication over TCP/IP on Ethernet network infrastructure. ACN is an open suite of protocols used between network devices for the purposes of greater and more adaptive control.

NET3

ETC's enhanced implementation of the standard ACN Protocol Suite (ANSI E1.17 and E1.31) including additional communication protocols for specialized applications and support of legacy systems.

ETC 120 V Sensor IQ Intelligent Breaker System

Power Control Series

Type(s)

Project

Date

Notes

GENERAL INFORMATION

ETC's Sensor IQ Intelligent Breaker System provides mains-fed power distribution for up to 48 branch circuits in the industry's most compact footprint. Sensor IQ breakers combine high-inrush rated overcurrent protection, switched power control, and power usage/breaker status reporting in a single device. With built-in station, sensor, DMX and TimeClock controls and Ethernet connectivity, plus optional 0–10 V dimming, DALI output , contact inputs, and isolated ground bar for audio loads, the Sensor IQ integration opportunities are limitless.

APPLICATIONS

- Theaters
- Schools
- Houses of worship
- Conference centers
- Studios
- Arenas and stadiums

FEATURES

- Mains Feed: Three-phase 120 / 208 V four-wire plus ground or single (bi) phase 120 / 240 V three-wire plus ground
- 12-, 24- or 48-position breaker subpanel
- Breakers
  - Hydraulic magnetic breaker with high inrush trip curve
  - 22 kA SCCR (up to 65 kA series rated with main breaker)
  - Freely mix one-, two- and three-pole breakers up to 30 A
  - Integrated air-gap relay switching
  - Integrated on/off/tripped and connected load feedback
  - No power required for handle operation at the breaker
- Echo, sACN, DMX-512, TimeClock, or stand-alone control
- Built-in EchoConnect power supply for up to 6 Echo stations/sensors and 5 output products
- Built-in network interface provides:
  - Advanced control of relays over streaming ACN (sACN)
  - Measured energy usage reporting per branch circuit
  - Web UI for configuration
- Available 0–10 V, contact input or DALI control cards
- UL924 Listed emergency control bypass with load shedding

ORDERING INFORMATION

Panel Models

MODEL	DESCRIPTION
IQ12MLO	120 / 208 V 12-circuit breaker panel, main lug only
IQ12	120 / 208 V 12-circuit breaker panel, MCB optional
IQ24	120 / 208 V 24-circuit breaker panel, MCB optional
IQ48	120 / 208 V 48-circuit breaker panel, MCB optional
IQ12-1	120 / 240 V 12-circuit breaker panel, MCB optional
IQ24-1	120 / 240 V 24-circuit breaker panel, MCB optional
IQ48-1	120 / 240 V 48-circuit breaker panel, MCB optional

Note: Select surface or recess door below

Door Options

MODEL	DESCRIPTION
IQ DOOR 120-12MLR	Recess-mount door for IQ12MLO
IQ DOOR 120-12MLS	Surface-mount door for IQ12MLO
IQ DOOR 120-12R	Recess-mount door for IQ12/IQ12-1
IQ DOOR 120-12S	Surface-mount door for IQ12/IQ12-1
IQ DOOR 120-24R	Recess-mount door for IQ24/IQ24-1
IQ DOOR 120-24S	Surface-mount door for IQ24/IQ24-1
IQ DOOR 120-48R	Recess-mount door for IQ48/IQ48-1
IQ DOOR 120-48S	Surface-mount door for IQ48/IQ48-1

Optional Main Disconnects

MODEL	DESCRIPTION
IQ-MB100A22K*	Main Breaker: 120 / 208 V, 100 A, 22 kA SCCR
IQ-MB100A65K	Main Breaker: 120 / 208 V, 100 A, 65 kA SCCR
IQ-MB200A22K	Main Breaker: 120 / 208 V, 200 A, 22 kA SCCR
IQ-MB200A65K	Main Breaker: 120 / 208 V, 200 A, 65 kA SCCR
IQ-MB225A65K	Main Breaker: 120 / 208 V, 225 A, 65 kA SCCR
IQ-MB250A22K	Main Breaker: 120 / 208 V, 250 A, 22 kA SCCR
IQ-MB400A65K	Main Breaker: 120 / 208 V, 400 A, 65 kA SCCR
IQ1-MB100A22K*	Main Breaker: 120 / 240 V, 100 A, 22 kA SCCR
IQ1-MB200A22K	Main Breaker: 120 / 240 V, 200 A, 22 kA SCCR
IQ1-MB400A65K	Main Breaker: 120 / 240 V, 400 A, 65 kA SCCR
IQ-MF1003P	Main Fuse: 120 / 208 V, 100 A, 65 kA SCCR
IQ-MF2003P	Main Fuse: 120 / 208 V, 200 A, 65 kA SCCR
IQ1-MF1002P	Main Fuse: 120 / 240 V, 100 A, 65 kA SCCR
IQ1-MF2002P	Main Fuse: 120 / 240 V, 200 A, 65 kA SCCR

*100 A, 22 kA SCCR Main Breaker kits are not compatible with IQ48 panels.

NOTE: IQ panels with Main Fuse Kits to increase SCCR must be fed by an upstream breaker that is rated at the amperage of the fuse kit or greater.

Please see page 4 for Echo power requirement and supply information.

Please see page 5 for more accessory information.

SPECIFICATIONS

REGULATORY AND COMPLIANCE

- Breakers Listed to UL 489
- Enclosures listed to UL 67, UL 508, UL 924
- Complies with ANSI DMX512-A standard
- Complies with ANSI E1.31 streaming ACN standard

USER INTERFACE

- Graphical display
- Button interface
  - 0-9 number entry
  - Up, down and back-arrow navigation with enter
  - Test shortcut for local activation of preset, sequence and set level overrides
- USB interface for uploads of setup and software updates
- Onboard Web UI for simple configuration and management

BREAKER

- Hydraulic magnetic breaker maintains trip curve through entire thermal range, reducing nuisance tripping Bus connection type: Stab on
- One, two or three poles
- UL 489 Listed
- 15 A, 20 A or 30 A
- 50/60 hz frequency
- Inrush-pulse tolerance: 25 times rated current for half-cycle
- Integrated hall-effect sensors detect contact positions
- Integrated solenoid for remote operation
- Trips on overload even if handle is forcibly held in the "on" position
- Load lugs accept 14-6 AWG load wiring
- Multi-conductor rated output terminal
- Integral mechanically held air gap relay
- Integral current sensing
- Integral position and trip sensing
- Supports manual control of relay state using breaker handle without power
- Control and status provided by contact pads directly at bottom of the breaker case. No external wires or connections required for control or feedback
- Remote Feedback for breaker state, breaker type, current draw and phase voltage
- Visible state indication:

LED	HANDLE	INDICATION
LED on	Handle on	Output active
LED off	Handle on	Remotely controlled off
LED off	Handle off	Breaker tipped/Manually off

BREAKER CONTROL OPERATIONAL RATINGS

- No load-remote switching 1,000,000 cycles
- 24 A Resistive 100,000 cycles
- 15 A Electronic ballast (LED) 100,000 cycles
- Handle operations 10,000 cycles
- Duty cycle of 6 full cycles (12 operations) per minute
- Supports voltage isolation of 4000 V RMS
- Utilizes latching state relays
- Relays are mechanically held

SPECIFICATIONS

MECHANICAL

- Enclosure constructed of 16-gauge steel finished in black, fine-textured, scratch-resistant powder coat paint
- Removable outer panel includes integral locking door to limit access to electronics, breakers and local relay overrides
- Full front access with no side clearance required
- Removable covers for access to Class 1 and Class 2 wiring
- Complies with California building code - seismic zone four

ELECTRICAL

- Mains feed power input to support 120 / 208 V three-phase four-wire or 120 / 240 V bi-phase three-wire plus ground
- Max current input: 100 A at 12 circuits, 200 A at 24 circuits and 400 A at 48 circuits
- Quiescent draw: <10 W with relays at steady state
- Optional isolation between chassis and equipment grounding
- Short-circuit current rating: 22,000 A or 65,000 A symmetrical (see chart a right)
- Overloads occurs at 50 operations of 600% of rated current
- Integrated current transformer
- Current measurement range of 1–30 A. The maximum crest factor of primary current is 2.5
- Feeder entry supported at top or top side
  - Bottom or bottom side entry supported by rotating enclosure during installation
- Load wire entry supported on top, sides or bottom

SHORT-CIRCUIT CURRENT RATING AND LUG SIZING

TYPE	MAX RATING	SCCR RATING	INPUT LUG WIRE SIZE
Main Lug	100 A,200 A, 400 A	22 kA	2x6 AWG-250 kcmil (or 1x500 kcmil w/ kit for 48ckt panels), 1x6 AWG-350 kcmil neutral (dual lug on 48-channel panel), 1x14 AWG-2/0 ground (1x6 AWG-350 kcmil on 48 channel panel)
Main Breaker	100 A	22 kA	1x4 AWG-1 AWG
	100 A 200 A 225 A	65 kA 22 kA, 65 kA 65 kA	1x1AWG-300 kcmil
	250 A	22 kA	1x4 AWG-300 kcmil
	400 A	65 kA	2x3/0 AWG-250 kcmil
Main Fuse	100 A	65 kA	2x6 AWG-250 kcmil
	200 A	65 kA	2x6 AWG-250 kcmil
Branch Breaker	15 A, 20 A, 30 A	22 kA	6-18AWG solid or stranded class B, C, K; 10,12 or 14 AWG dual conductor
Branch GND/ Neutral	NA	NA	6-14 AWG

Note: Main feed lugs accept copper or aluminum wire; branch breakers accept copper wire only.

SPECIFICATIONS

ENVIRONMENTAL

- Thermal: 0°–40° C (32°–104° F) operating temperature
  - 24 A circuit (30 A breaker) - 1.4 W, 4.8 BTU/hr
  - 16 A circuit (20 A breaker) - 1 W, 3.4 BTU/hr
- Humidity; 5–95% non-condensing
- Complies with ESD immunity to IEC standard 1000-4-2

FUNCTIONAL

- **System-Wide control**
  - DMX input
    - Per-circuit patching
    - Per-circuit patch exclusions
    - Per-circuit threshold
    - 0-200 prioritization (matches sACN priorities)
  - Choice of DMX loss behavior: Hold last look or wait time
  - sACN input
    - Circuit-by-circuit patching
    - Circuit-by-circuit patch exclusions
    - 0-200 prioritization (matches sACN priorities)
  - Choice of sACN loss behavior: Hold last look or wait time
  - Global data loss behavior
  - UL 924 emergency lighting with load shedding
    - Load shedding requires a UPS Control Backup Wiring Kit (7131K1817) and Uninterruptable Power Supply (UPS) by others
    - UPS to supply 800 W–2400 W AC power to control processor
- **Application/Space segmented Control**
  - Space segmenting: up to 16 spaces per panel
  - Power sequencing
  - One 16-step sequence per space
  - Presets: up to 64 per space configurable via local UI or Echo Inspire control stations
    - Presets 1-16 can be configured remotely via Echo Access or integrated Web UI
  - Zone control: up to 16 zones per space
  - TimeClock (up to 50 events)
    - Event types: Preset and sequence activation, Flick warn
    - Timed hold (24 hours max.)
    - Auto-timed hold
    - Indefinite holds
    - Scheduled event overrides
    - Calendar and time of day based event scheduler
    - Holiday shut off
    - Astronomical time events: sunrise/sunset offsets
  - Integral station power supply (for up to six stations with up to six power panels connected)
- **Global monitoring**
  - Per circuit
    - Breaker-trip notification
    - Relay state
    - Current draw per circuit
    - Phase voltage
    - Energy usage
  - Per space
    - Active sequences
    - Active presets
    - Zone levels
    - Active-clock events

SPECIFICATIONS

OPTION CARDS AND ACCESSORIES

0-10 Dimming Option

- 24 outputs of 0–10 V sink dimming control rated for 400 mA per output

Contact Input Option

- 24 dry contact inputs which can be used to:
  - trigger presets and sequences, which will play at the priority configured for architectural sources, or;
  - directly control one or more outputs. The priority of these outputs is configurable. If nothing is configured, the last action takes precedence

DALI Control Option

- 24 control loops of broadcast DALI control
- Each loop supports up to 64 ballasts
- External DALI power supply required

Ride Thru Option

- Short-term power backup of control electronics
- Automatically engages when power is lost
- Recharges during normal power operation

UPS Backup Kit for Load Shedding

- Allows Power Control Processor to be powered via external UPS (by others)
- Required for load shedding applications
- UPS provides power to drive relays off when normal power is lost
- UPS for each Sensor IQ panel must by UL 924 Listed and rated for a minimum of 200 W peak load

Branch Circuit Fuse Kit

- Aids engineers in selective coordination* of emergency circuits

*Note: Selective coordination is a study on emergency systems that assures that an overcurrent on the output of any downstream branch circuit results in that branch tripping/clearing before the upstream mains breakers.

Echo Power Requirements

EchoConnect:	One unit of output power
Auxiliary Power:	Not required

Built-in EchoConnect Power Supply

EchoConnect:	Provides 6U of control power and an additional 5U of output power*
Auxiliary Power:	Not provided

*Note: Built in power supply can be disabled.

Echo Presets

Supports 64 Echo Presets per space; up to 16 Echo spaces

For more information, download the Echo Quick Guide.

SENSOR IQ BREAKERS

GENERAL INFORMATION

ETC's Sensor IQ breaker is a high-quality, UL 489 Listed circuit breaker which incorporates the ability to rapidly switch the load using an internal solenoid when the breaker is in the 'on' position. The IQ breaker is designed with a high-inrush trip curve to handle the demands of modern entertainment and architectural lighting fixtures. IQ's unique hydraulic-magnetic trip mechanism maintains this trip curve throughout the operating temperature of the breaker, giving you outstanding protection against nuisance tripping.

A variant of the breaker without switching is available for standard breaker applications.

Sensor IQ breakers are designed for use in Sensor IQ panels only.

Intelligent Breakers with Switching

Sensor3 120 V Series

Type(s)

Project

Date

Notes

GENERAL INFORMATION

Sensor3 power control systems provide high-density, professional features and exceptional reliability for lighting applications requiring top-of-the-line power control.

APPLICATIONS

- Professional and academic theatres
- Production studios
- Concert and performance halls
- Theme parks
- Themed retail and dining venues
- Hotels
- Multipurpose convention centers
- Arenas and stadiums
- Houses of worship

FEATURES

- Rugged industrial construction
- 100,000 A Short Circuit Current Rating (SCCR)
- Standard system monitoring with optional Advanced Features (AF) per-circuit reporting
- Adaptable modular design
- Up to 96 power control channels per enclosure
- Two 2.4 kW circuits or two 1 kW electronic low voltage circuits per module
- 6-, 12-, 24-, and 48- module enclosures available
- Direct Ethernet control-signal input (Net3, sACN)
- Advanced configuration editing over network
- Two DMX512-A inputs
- Built-in Echo power supply with direct support for
  - Up to six connected Echo sensors or stations
  - Up to five additional Echo power devices
- Uses up to 8 out of 255 assignable control spaces
  - Up to 16 zones per space
  - Up to 16 presets per space
  - 1 programmable sequence per space
- For more information on Echo control products visit etcconnect.com/Echo

SPECIFICATIONS

GENERAL

- Enclosures available in four sizes:
  - 6 modules, 12 circuits maximum
  - 12 modules, 24 circuits maximum
  - 24 modules, 48 circuits maximum
  - 48 modules, 96 circuits maximum
- Dual-density modules (two circuits per module)
- Operating temperature: 0°–40° C (32°–104° F)
  - Electrical room HVAC systems must maintain the specified ambient temperature at the enclosure at all times.
- Relative humidity: 10-90% non-condensing

MECHANICAL

- Rugged 16-gauge steel construction
- Fine-textured, scratch-resistant epoxy paint
- Top and bottom conduit access through removable panels (SR3-48) or knockouts (SR3-6, SR3-12, and SR3-24)
- Keyed module slots prevent insertion of incompatible module types
- Front access to all wiring and terminations
- Full-height locking door
- Electrostatic air filter easily removed from door for periodic cleaning
- High-efficiency cooling system with reporting
- High-visibility LED status beacon

ELECTRICAL

- SR3 enclosures accept the following feeds:
  - Three-phase 120 / 208 VAC
  - Single-phase 120 / 240 VAC
- Line feed frequencies from 47–63 Hz
- Line feed voltage range is 91–139 VAC
  - Max main transformer tap recommended is 135 V to allow for line fluctuation
- Short Circuit Current Rating: 100,000 A RMS symmetrical

CONTROL ELECTRONICS

- CEM3 Power Control Processor
- UL 924 Listed panic input for emergency lighting control
- Full number pad for fast access to dimmer override and setup
- Supports Dimmer Doubling
- System, enclosure, and diagnostic reporting standard
- Per-circuit reporting available with AF enclosures and modules

CONTROL POWER BACKUP OPTIONS

- Ride-thru Option (RTO):
  - Seamless transfer to backup power upon loss of incoming line power
  - Provides backup power for at least 6 seconds during power loss
  - Automatically recharges from power feed
- Battery Pack Option (BPO):
  - Seamless transfer to battery power upon loss of normal power
  - Provides backup power for 30 minutes during normal power loss
  - Automatically recharges from power feed during normal power conditions
  - Two hour recharge time from full discharge

REGULATORY AND COMPLIANCE

- All enclosures are cULus Listed

SR3 POWER ENCLOSURE CHART

Model Number Key (e.g. SR3AF-61P)

CEM Control Backplane - Identifies which control module the enclosure supports. Example: SR3 enclosures support the CEM3 module.

NOTE: All SR and SR+ series enclosures can be upgraded to support a CEM3 processor, which is required to support ThruPower modules.

AF - Indicates an enclosure with installed Advanced Features (AF) cards for per-circuit feedback. Requires AF power control modules for full advanced functionality.

NUMBER - Indicates the number of available module slots. See module datasheet for details on how many circuits each module provides per slot.

1P - Indicates a bi-phase 3-wire feed enclosure. Enclosures without a phase designation are three-phase, 4-wire feed.

6-Module (12 Channel) Enclosures

MODEL	POWER INPUT	FEED LUGS*	LOAD LUGS	MOUNTING	AF	ND	DUAL CEM
SR3-6	3P | 120 / 208 V | 100 A MAX	Dual 120 mm^2 - 16 mm^2	25 mm^2 - 2.5 mm^2	Wall	N	N	N

SR3AF-481P	1P | 120 / 240 V | 800 A MAX**	Dual 300 mm^2 - 35 mm^2	25 mm^2 - 2.5 mm^2	Floor	Y	N	N
SR3AF-48-TERM***	3P | 120 / 208 V | 800 A MAX**	Dual 300 mm^2 - 35 mm^2	25 mm^2 - 2.5 mm^2	Floor	Y	N	N

*Note: Feed lugs are suitable for aluminum or copper wire. Aluminum feeds are limited to 600 A max.

**Note: Power feeds above 800 A up to 2,000 A require the addition of a 30" auxiliary enclosure.

***Note: This enclosure features an integrated aux bay with load lugs.

Sensor Power Control Modules

Sensor 120 V Series

Type(s)

Project

Date

Notes

GENERAL INFORMATION

Sensor power control modules are designed for use in all SR3 modular enclosures. Whether you need forward-phase or reverse-phase SCR dimming, relay control, or the flexible control of our ThruPower modules, Sensor has you covered.

Most modules provides two circuits of control for a wide range of applications. Advanced Features (AF) modules enable dimmer-specific feedback of load circuit data in SensorAF enclosures. All modules feature modular installation and removal, fully magnetic circuit breakers, and rock-solid construction.

APPLICATIONS

- Tungsten lighting
- Low voltage lighting
- Non-dim loads
- Moving lights, fog machines, and powered effects
- Electronic transformers
- Electronic LED power supplies
- 2-wire Fluorescent ballast
- 2-wire Fluorescent ballast with integrated battery backup
- 3-wire Fluorescent ballast
- 4-wire Fluorescent ballast (requires ETC Response 0-10 V Gateway)
- Quartz lighting
- Neon lighting
- Cold Cathode lighting

FEATURES

- High-density modular assembly
- Die-cast aluminum chassis
- Fully magnetic circuit breakers
- Temperature sensors

ADVANCED FEATURES (AF)*

- Built-in per-circuit voltage and current sensing
- Advanced Features error messages:
  - Load dropped below recorded value
  - Load increased over recorded value
  - Circuit breaker tripped
  - Dimmer module removed
  - Dimmer load absent

*Access to AF features require an AF-equipped Sensor enclsoure or pack

REGULATORY AND COMPLIANCE

- cULus Listed for use in Sensor Dimming Enclosure

SPECIFICATIONS

GENERAL
- Rated for continuous duty at 100% of rated load
- 1.2 kW, 1.8 kW, 2.4 kW, 6 kW, and 12 kW circuits

PHYSICAL
- Modular plug-in assemblies
- Cast aluminum chassis, finished with textured epoxy paint
- Keyed to prevent insertion in inappropriately rated enclosure positions

CIRCUIT BREAKERS
- Fully magnetic to eliminate nuisance tripping
- 20x inrush current rating
  - (PhaseAdept and ELV modules rated at 10x inrush)
- 125%, 10–100 seconds, must-trip rating
- Rated for 100% switching duty applications

SHORT CIRCUIT RATINGS
- 100,000 A Short Circuit Current Rating (SCCR)
- Modules withstand hot-patching of cold loads up to full rating

POWER DEVICE
- Sealed, patented assembly
- Field-replaceable with screwdriver
  - Power devices on PhaseAdept and ELV modules are not field-replaceable
- Two back-to-back SCRs per circuit (D20 and TR20 modules)
- Per-circuit LED indicators
- Mechanical held air gap relay
- Integral bonded heatsink
- Integral temperature sensor

FILTERING
- High quality toroidal filters (see module chart for rise times)

DIMMING
- Dimming of 2 and 4-wire fluorescent ballast is dependent on lamp ballast combination. 4-wire fluorescent control requires Response 0-10 V Gateway. Contact ETC.
- Phase dimming performance for LED lamps varies considerably depending on the manufacturer and model. Visit http://www.etcconnect.com/compatibility/ for details on a variety of specific lamps and information on how to send samples to ETC for testing.
- PhaseAdept (LED) modules provide forward- or reverse-phase dimming and are compatible with any ETC Unison DR, Unison DRd or Sensor enclosure, including legacy products
- ELV modules provide forward- or reverse-phase dimming and are compatible with Sensor+ and Sensor3 enclosures

SR3 DIMMER MODULE CHART

Model Number Key

Module Type - Identifies the function of the module: TR (ThruPower), D (Dimmer), R (Relay), CC (Constant), LED (PhaseAdept), ELV (Electronic Low Voltage)

NUMBER - Identifies the rated max current per circuit within the module; for example, a D20 module provides dimming for two 20A circuits

AF - Module provides advanced features (AF) feedback per circuit; requires Sensor rack with AF cards for full functionality

HR - High rise time module, includes AF functionality

F - Three-wire fluorescent ballast dimming module

FB - Two-wire fluorescent ballast dimming module with non-dimmed circuit for integral emergency lighting battery packs

AFM - Module body without electronics for rack slots without branch circuits; ensures proper air flow and rack cooling

CEM3 Power Controller

ETC Power Control Series

100V 115/120V 230/240V

GENERAL INFORMATION

The Sensor3™ Control Electronics Module (CEM3) is ETC's new platform for power control. CEM3 manages priority-based Ethernet, DMX and Preset control for ultra-smooth 16-bit dimming, fast activation of relays, and instant-on support for emergency-lighting systems. Energy usage, system status, and quick changes to circuit setup can be accessed at its intuitive facepanel or remotely at the lighting console.

APPLICATIONS

- Professional and educational theaters
- Production studios
- Performance halls
- Retail and dining
- Houses of worship
- High-density architectural dimming
- Touring and Portable dimming

FEATURES

- **Net3™ Uplink** - Connect to the Net3 lighting network using the ethernet jack on the front of the control module
- **USB QuickLoad** - Back up system settings and upgrade software
- **Point of Control Interface** - Easy-to-read systems display shows the user-pertinent system information
- **Live Control Override -** For presets, set level, and dimmer check
- **Local Menu** - Access to setup features and control directly at the control processor
- **Backup Looks** - 64 presets with programmable fade times and priority allows for take control, pile on, or live control failover sources to ensure that your show will never go black!
- **Connect to Console** - System and rack feedback to live control desks is standard
- **Quick Setup Wizard** - Builds a simple system in a single step
- **Advanced Features (AF)** - Adds dimmer-specific reporting
- **ETC Dimmer Doubling™** - Increase your individually controllable fixtures without adding extra circuits (supported only at 60hz)
- **RideThru** - Optional accessory that supports the processor electronics for a few seconds during a power outage
- **Battery Pack** - Optional accessory that supports the processor electronics for several minutes during a power outage

CEM3 Accessories

MODEL	DESCRIPTION
RK	Retrofit kit for Sensor standard and AF racks

SPECIFICATIONS

GENERAL

- Universal Control Electronics Module
- Direct Ethernet connectivity for dimmer levels, feedback and system control
- UL, cUL LISTED and CE Marked
- UL 924 LISTED for Emergency Lighting Control

PHYSICAL

- Formed-steel body
- Die-cast facepanel finished with textured epoxy paint
- Slide-in module installs and removes without tools
- Spring-loaded module release
- Airflow sensor to ensure adequate airflow

ELECTRICAL

- Accepts:
  - Single phase
  - Three phase WYE or Delta
- Universal Voltage range 91-139V and 181-259 VAC*
- Line-feed frequencies from 47-53Hz and 57-63Hz
- Automatic frequency-variation compensation
- Two configurable DMX512 inputs (2500V opto-isolated)

*Note: Suggested maximum main transformer tap 135V or 255V to allow for line fluxuation.

CONTROL FEATURES

- Eight-line by 20-character graphical LCD for system configuration, live control, and status display
- Full number pad for quick access to dimmers
- Shortcut buttons for Setup, About, and live control
- Five status LED indicators: Power, Network activity, DMX-A DMX-B, and Panic
- 64 user-programmable presets
- Single Panic circuit with flexible programming
- Replacement CEM3 automatically loads rack configuration
- Configuration backups saved on USB or network
- Dimmer outputs regulate to maintain constant power ±1V
- Individual output scale voltage settings for load-wiring compensation
- Selectable Firing Modes: Normal, Forward Phase, Reverse Phase, Dimmer Doubled, Sinewave, and Fluorescent
- Control Modes: Dimmed, Switched, Latch/lock, Always On, and Off
- Selectable Dimmer Output Curves: Linear, Modified Linear, Square, Modified Square, Sensor 2.0, and five custom curves
- 16-bit fade resolution (> 30,000-Step Resolution per 1/2 cycle)
- Selectable Data Loss Behavior

FEEDBACK

- All Sensor racks with CEM3 modules include basic system diagnostic reporting
- Standard rack feedback includes: DMX input status, rack power status, and rack temperature
- Advanced Features (AF) provides dimmer-specific status and load feedback (requires AF dimmer rack and AF dimmer modules)

LOCAL PROGRAMMING

LOCAL LIVE CONTROL

- Set Levels, Preset Activation, and Dimmer Check

STATUS (ABOUT)

- All modules: module type, mode, control source, module location, and overtemp
- AF modules: module removed, breaker trip, recorded and actual load
- Rack: temperature, rack type, Run Hours
- Network: IP address, SubNet mask, Gateway and active link
- Rack Data Ports: status for DMX A and B, and sACN
- About Rack Power: frequency, voltage per phase, and voltage headroom
- About Software: version number

SETUP

- Setup dimmer: Firing Mode, Curve, Scale Voltage and Name
- Patch
- Set rack priority per DMX port
- Data Loss Behavior: Hold last Look, Wait and Fade, Play Preset
- Name the rack (using ACN)
- Custom dimmer numbering
- Get Config and save Config to USB

GENERAL INFORMATION

The ETC ColorSource Spot brings together the affordability of a four-color light engine with the build-quality and support of an ETC product. Using a unique mix of red, green, blue and lime LED emitters, the ColorSource Spot offers an amazing range of color and depth, unlike other low-cost LED fixtures. Because it utilizes standard ETC optics, adapters and accessories, it is a versatile solution for any lighting need.

APPLICATIONS

- Theatres and performance spaces
- Houses of worship
- Universities and schools
- Hospitality
- Retail
- Exhibition centers
- Meeting rooms
- Clubs
- Cafetoriums

PRODUCT FEATURES

- ETC's RGB-L array (red, green, blue and lime)
  - Also available in Deep Blue, which replaces the blue LEDs with indigo for rich, saturated blues and magentas
- Simple user interface with seven-segment display
- powerCON® in and thru
- DMX/RDM in and thru (5-pin XLR)
- LED droop compensation
- Optically calibrated
- Tour-ready, aluminum housing
- Combine with available adapters to transform your fixture into a fully functional Fresnel or CYC light

ORDERING INFORMATION

ColorSource Spot Light Engine with Shutter Barrel

(For use with fixed-field lens tubes only)

MODEL	DESCRIPTION	ETL PART NUMBER	CE PART NUMBER	
CSSPOTS	ColorSource Spot with shutter barrel, black	7413A1001	7413A1201	
CSSPOTDBS	ColorSource Spot Deep Blue with shutter barrel, black	7413A1041	7413A1241	

ColorSource Spot Light Engine Body

(For use with zoom lens tubes and adapters and for retrofit of existing fixtures)

MODEL	DESCRIPTION	ETL PART NUMBER	CE PART NUMBER	
CSSPOT	ColorSource Spot, body only, black	7413A1000	7413A1200	
CSSPOTDB	ColorSource Spot Deep Blue, body only, black	7413A1040	7413A1240	

Color options: -1 = white, -5 = silver gray, -8 = custom colors.
Fixture ships with a soft-focus diffuser in a gobo holder, a c-clamp and a 1.5 m powerCON power-input cable with a connector of choice. See page six for connector options.
Please note: Lens tubes to be ordered separately. C-clamps included in NA regions only.

PRODUCT SPECIFICATIONS

Source

LED details	60 Lumileds LUXEON® Rebel LED
Max lumens	6,932
Lumens per watt	42.4
L70 rating (hours to 70% output)*	54,000 hours (both variants)

Color

Colors used	Spot: Red, green, blue, lime Spot DB: Red, green, indigo, lime
Color temperature range	Color mixing
Calibrated array	Yes
Red shift	No

Optical

Beam angle range	Swappable lens tubes between 5-90 degrees
Gate size	79-24 mm
Aperture size	6.25–14 in (depending on lens tube)
Pattern projection	Yes
Pattern size	A or B
Camera flicker control/Hz range	1,200 Hz (default) and 25,000 Hz (via RDM)
Notes	Can be used with LED CYC and Fresnel adapters

Control

Input method	DMX512 via 5-pin XLR connector
Protocols	DMX512/RDM
Modes (footprint)	4 modes, see page 7
RDM configuration	Yes
UI type	Seven-segment, three-button interface
Local control	Yes
Onboard presets	Yes (12)
Onboard sequences	Yes (5)
Onboard effects	No
FixtureLink	Yes
Notes	15-bit virtual dimming engine

Electrical

Voltage range	100–240 VAC 50/60 Hz
Input method	powerCON power in and thru
Inrush	28 A at 120 V (First half-cycle) 46 A at 240 V (First half-cycle)
Fixtures per circuit	9 fixtures (15 A power thru connector) or 10 fixtures (R20 module or similar)
Wattage typical/standby	168 W/1.19 W at 100 V 166 W/2.07 W at 120 V 166 W / 1.5 W at 240 V
Current draw typical/ standby	1.69 A/0.05 A at 100 V 1.39 A/0.05 A at 120 V 0.72 A/0.05 A at 240 V

Thermal

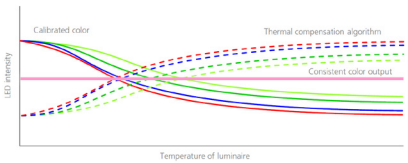
Ambient operating temp	0°–40° C (32°–104° F)
Fan (controllable)	Yes (no)
Droop compensation	Yes
dB range	21.2 dBA average at 1 m
BTUs/hour	504.78

Physical

Materials	Die-cast, all metal housing
Color options	Black, white, silver, or custom color
Mounting options	Yoke
IP rating	IP20
Weight	7.7 kg (17 lb) (without lens)
Included accessories	Hanging yoke, 1.5 m power cable, soft-focus diffuser in an A-size gobo holder
Notes	See page 6 for power cable options

Warranty

Fixture	5 years
LED array	10 years



Regulatory and Compliance

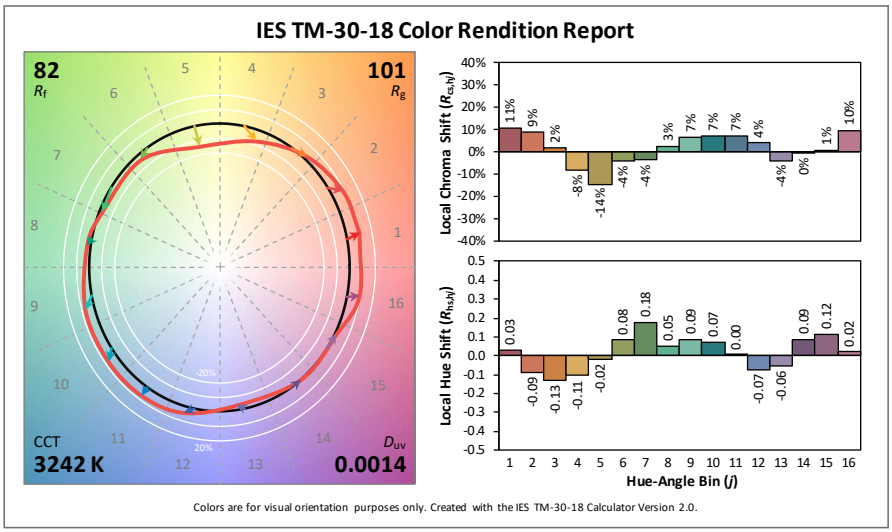
Approved regulatory standards	cETLus Listed Conforms to UL 1573 Listed Conforms to UL 924 Listed Certified to CSA C22.2 No. 166 Listed Certified to CSA C22.2 No. 141 Listed CE Compliant EAC Compliant

***Note about LED luminaire lifetime:**
ETC utilizes a nationally recognized third-party lab for luminaire testing according to IES LM-84. See etcconnect.com/About/News/ETC-Fixture-Ratings-and-Warranties-Extended.aspx.

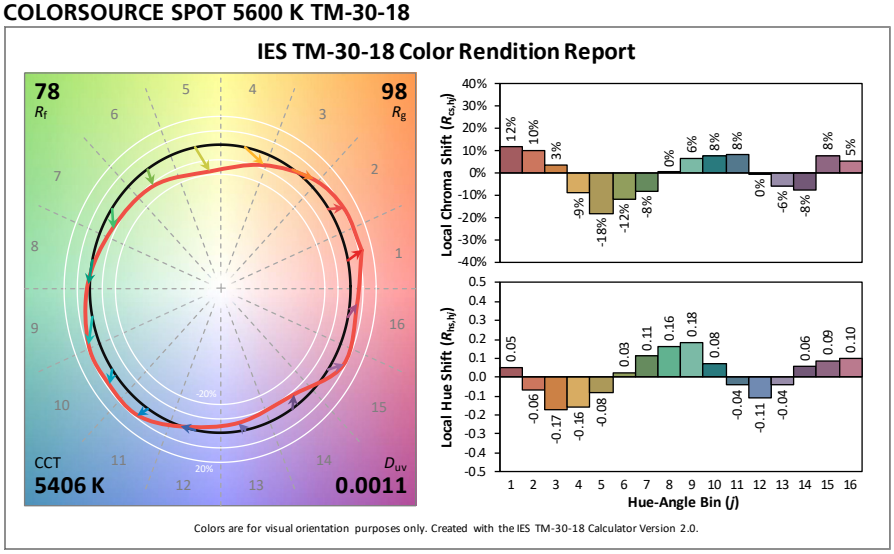
All LED sources experience some lessening of light output and some color shift over time. LED output will vary with thermal conditions. In individual situations, LEDs will be used for different durations and levels. This can eventually lead to minor alterations in color performance, necessitating slight adjustments to presets, cues or programs.

PRODUCT FEATURES

LED DROOP COMPENSATION
ETC's custom software adjusts for the changes that naturally occur as LEDs heat up and cool down so you never have to worry about color shift.



RGB-L ARRAY
The custom four-color blend of LEDs incorporates a hint of lime to increase spectral reach and color depth.



SIMPLE USER INTERFACE
The simple seven-segment display and navigation buttons enable quick setup and recall of built-in presets.

COLOR METRIC INFORMATION

ColorSource Array options – Original vs. Deep Blue

Original ColorSource fixtures use an RGB-L array where the 'B' represents the use of blue LEDs. ColorSource Deep Blue replaces those blue LEDs with a deeper 'Royal Blue' (indigo) LED. How does this impact your color mixing? Please reference the color chart.

Original ColorSource fixtures can reach any color within the dark shaded triangle while the ColorSource Deep Blue fixtures can reach any color within the light shaded triangle. While much of these areas overlap, there is a portion of each range that can only be reached by the respective color array (A=Original, B=Deep Blue).

DPSJ-X	25 ft powerCON-to-Edison input power cable with inline switch	7400B7030 (not CE)	

Power Input Cables

Use information below to order 5 ft power input leads with factory-fitted connectors. CE fixtures ship with powerCON to bare end cables in the box.

MODEL	DESCRIPTION	PART NUMBER	
DPA-A	5 ft powerCON to parallel blade U-ground (Edison) connector	7410B7037-A (not CE)	
DPA-B	5 ft powerCON to 20 A two-pin and ground (stage pin) connector	7410B7037-B (not CE)	
DPA-C	5 ft powerCON to grounded 20 A twistlock connector	7410B7037-C (not CE)	
DPA-X	5 ft powerCON to bare-end power input lead	7410B7037-X (not CE)	

Power Thru Jumpers

Note: Power thru jumpers connect to a fixture's output (thru) connector to provide a link to successive fixtures.

MODEL	DESCRIPTION	PART NUMBER	
DPJ-5	5 ft powerCON-to-powerCON fixture-to-fixture jumper	7410B7020	
DPJ-10	10 ft powerCON-to-powerCON fixture-to-fixture jumper	7410B7010	

Diffusers

The Soft Focus Diffuser fits into a standard A-size pattern holder and delivers beautiful, homogenized light. You can also use the Soft Focus Diffuser with patterns for dappled and soft-edge projections.
The Smooth Wash Diffuser is used when extra-smooth blending of multiple ColorSource Spot luminaires is required. The smooth wash diffuser is placed into the gel-frame slot of the lens tube.

MODEL	DESCRIPTION	PART NUMBER	
S4LED-SFD	Soft Focus Diffuser (included)	7460A4019	
S4LED-SWD6	Smooth Wash Diffuser for 6.25 in gel frame slots	7460K1001	
S4LED-SWD7	Smooth Wash Diffuser for 7.5 in gel frame slots	7460K1002	
S4LED-SWD12	Smooth Wash Diffuser for 10° lens tubes	7460K1003

ColorSource PAR

ColorSource Series

Type(s)

Project

Date

Notes

GENERAL INFORMATION

ColorSource PAR offers a quality of build and light that has never been seen in an affordable wash fixture. Using ETC's RGB-L color system, the ColorSource PAR provides a rich, bright light unlike any other LED wash light in its class.

APPLICATIONS

- Theatres and performance spaces
- Houses of worship
- Universities and schools
- Hospitality
- Retail
- Exhibition centers
- Meeting rooms
- Clubs
- Cafetoriums

PRODUCT FEATURES

- Three array options:
  - Original RGB-L (Red/Green/Blue/Lime)
  - Deep Blue RGI-L (Red/Green/Indigo/Lime)
  - Pearl (Warm and Cool White), see separate datasheet
- Homogenized optics
- Simple user interface with seven-segment display
- powerCON® in and thru
- 5-pin XLR
- LED droop compensation
- Optically calibrated
- Tour-ready, aluminum housing

ADDITIONAL ORDERING INFORMATION

Power Input Cables

Use information below to order 5 ft power input leads with factory-fitted connectors. CE Fixtures ship with powerCON to bare end cables in the box.

MODEL	DESCRIPTION	PART NUMBER (NOT CE)	
DPA-A	5 ft / 1.5 m powerCON to parallel blade U-ground (Edison) connector	7410B7037-A	
DPA-B	5 ft / 1.5 m powerCON to 20 A two-pin and ground (stage-pin) connector	7410B7037-B	
DPA-C	5 ft / 1.5 m powerCON to grounded 20 A twistlock connector	7410B7037-C	
DPA-X	5 ft / 1.5 m powerCON to bare-end power input lead	7410B7037-X	

Power-Thru Jumpers

Note: Power-thru jumpers connect to luminaire's output (thru) connector to provide link to successive luminaires.

MODEL	DESCRIPTION	PART NUMBER	
DPJ-5	5 ft powerCON to powerCON fixture-to-fixture jumper	7410B7020	
DPJ-10	10 ft / 3.0 m powerCON to powerCON fixture-to-fixture jumper	7410B7010	

Luminaire Accessories

MODEL	DESCRIPTION	PART NUMBER	
CSPARFSY	Yoke with floor-stand attachment	7412K1000	
400BD	Barn door (use only as a flexible top hat for diminishing aperture glare, not for beam shaping)	PSF1019	
407CF	Color frame (use for round and oblong lenses)	7061A3007	
400L	Egg crate louver	PSF1028	
400PTH3	Top hat 3 in / 76 mm tube	PSF1022	
400PTH6	Top hat 6 in / 152 mm tube	PSF1023	
400PHH	Half hat 6 in tube	PSF1027	
400CC	C-Clamp (does not ship with fixture) (not CE)	7060A2009 (not CE)	
400SC	Safety cable (30 in / 762 mm)	7060A1022	
DPSJ-25	25 ft / 7.6 m powerCON-to-Edison input power cable with inline switch	7400B7030 (not CE)	

CONTROL

DMX Input Channel Profiles

DMX Profile	DMX Channels	Channel Assignments	Notes
5ch (Default)	5	1-Intensity 2-Red 3-Green 4-Blue 5-Strobe	Lime is mixed automatically.
RGB	3	1-Red 2-Green 3-Blue	
1ch	1	1-Intensity	This mode controls the intensity of Preset 1.
Dir	6	1-Intensity 2-Red 3-Green 4-Blue/Indigo* 5-Lime 6-Strobe	Original ColorSource PAR fixture uses blue in channel 4. Deep Blue ColorSource PAR fixture uses indigo in channel 4.

ColorSource CYC

ColorSource Series

Type(s)	
Project	
Date	
Notes	

GENERAL INFORMATION

The ColorSource CYC is a dedicated cyclorama fixture designed with the sole purpose of creating beautiful, smooth washes of light on a cyclorama or wall. And it delivers! This is the first ETC fixture to use this innovative five-color mix of red, green, blue, lime, and indigo for expanded range and color control.

PRODUCT FEATURES

- All LED (RGBI-L)
- Rich, bright light
- Fanless operation
- Stand-alone presets and sequences
- Simple setup and user interface

ORDERING INFORMATION

ColorSource CYC

MODEL	DESCRIPTION	ETL PART NUMBER	CE PART NUMBER	
CSCYC	ColorSource CYC fixture, black	7415A1000	7415A1200	

Color Options: Fixture ships standard in black. For additional colors please use the below color code suffix:

Add -1 for white, -5 for silver or -8 for custom color.

Notes: C-clamp sold separately

COLORSOURCE CYC SHIPS WITH:

- Hanging yoke
- Power cable

PRODUCT SPECIFICATIONS

Source

LED details	42 Lumileds LUXEON® C LEDs
Max lumens	4,117
Lumens per watt	31
L70 rating (hours to 70% output)	50,000 hours (estimate pending LM84 test data)

Color

Colors used	Red, green, blue, indigo and lime
Color temperature range	Variable
Calibrated array	Yes
Red shift	No

Optical

Beam angle range	N/A (asymmetrical)
Gate size	N/A
Aperture size	N/A
Pattern projection	No
Pattern size	N/A
Camera flicker control/Hz range	1,200 Hz (default) and 25,000 Hz (via RDM)
Notes	The ColorSource CYC has a built in accessory for spill control

Control

Input method	DMX-512 via 5-pin XLR connector
Protocols	DMX
Modes (Footprint)	5 channel- IRGBS (5) Direct- IRGBILS (7) 1 channel- I (1) RGB- RGB (3)
RDM configuration	Yes
UI type	7-segment address display
Local control	Yes
Onboard presets	Yes (12)
Onboard sequences	Yes (5)
Onboard effects	No
Fixture-to-fixture control	Yes
Notes	Local level control via UI

Electrical

Voltage range	100–240 VAC, 50/60 Hz
Input method	powerCON in and thru
Inrush	39 A (first half-cycle) at 120 V 74 A (first half-cycle) at 240 V
Fixtures per circuit	9 using power thru connector (or 10 per 20 A switched circuit, R20 module or similar)
Wattage Typical/ Standby	133 W / 1.4 W at 120 V 116 W / 1.2 W at 240 V
Current draw	1.11 A at 120 V 1.11 A at 240 V

Thermal

Ambient operating temp	0°–40° C (32°–104° F)
Fan (controllable)	No (N/A)
Droop compensation	Yes
dB range	18.5 dBA average at 1 m
BTUs/hour	453

Physical

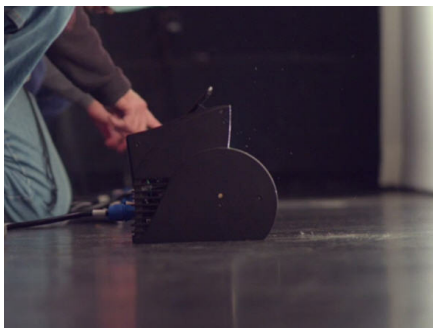
Materials	Die-cast aluminum and plastic
Color options	Black, white, silver or custom color
Mounting options	Yoke and floor
IP rating	IP20
Weight	10.3 lb (4.67 kg)
Included accessories	Hanging yoke, power cable
Notes	See accessories list for power cable options

Warranty

Fixture	5 years
LED array	10 years

Regulatory and Compliance

Approved regulatory standards	cETLus to UL 1573 CSA C22.2 No. 166 CE Compliant EAC Compliant

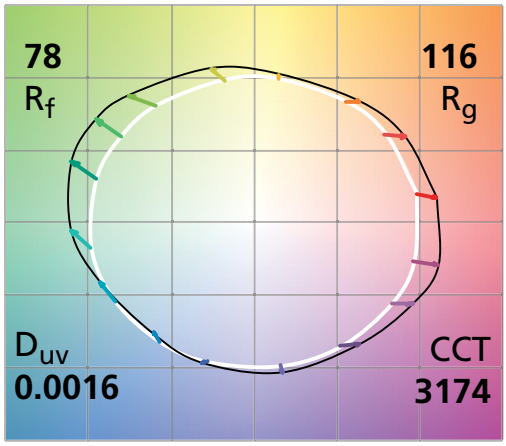


***Note about LED luminaire lifetime:**
ETC utilizes a nationally recognized third-party lab for luminaire testing according to IES LM-84. See etcconnect.com/About/News/ETC-Fixture-Ratings-and-Warranties-Extended.aspx.

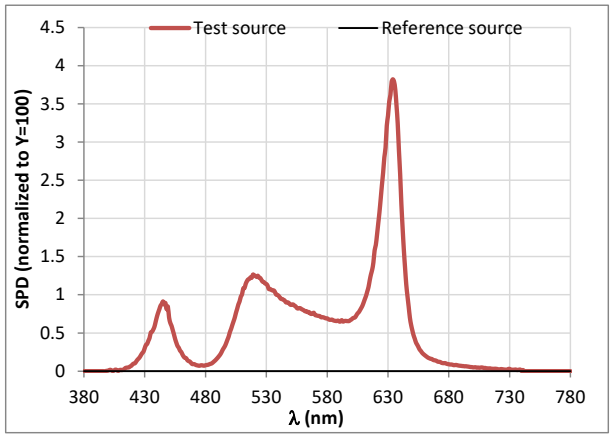
All LED sources experience some lessening of light output and some color shift over time. LED output will vary with thermal conditions. In individual situations, LEDs will be used for different durations and levels. This can eventually lead to minor alterations in color performance, necessitating slight adjustments to presets, cues or programs.

PRODUCT FEATURES

UNIQUE 5-COLOR ARRAY
ColorSource CYC uses a unique blend of red, green, blue, indigo and lime LEDs.



COMPACT DESIGN
The ColorSource CYC was designed to fit onto even the tightest of stages.



FAN-FREE
No fan means a quieter stage.

ETC® P1500E and P1500E/480 Fixed Speed Stage Electric

Prodigy® Low Profile Hoist Series

GENERAL INFORMATION

APPLICATIONS

Prodigy Low Profile Hoists provide a simple, low cost way to lift heavy lights for storage or for production. Prodigy P1500E is especially useful for the front of house where an extremely low profile allows the hoist and cable management system to disappear into the plenum in the smallest space requirement in the industry. Larger high schools and other facilities with wider proscenium openings can be equipped with front-of house-lighting or onstage lighting pipes without the added cost of catwalks.

These hoists resolve space and access challenges for schools, night clubs, houses of worship or other places where there is no means to access lighting above the stage or audience. With motorized hoists, it will not be necessary to climb ladders or scaffolds to install or service lighting. Instead, the motorized battens can be lowered to working level and allow workers to easily install and service equipment that can be raised to performance or storage positions high above the stage floor.

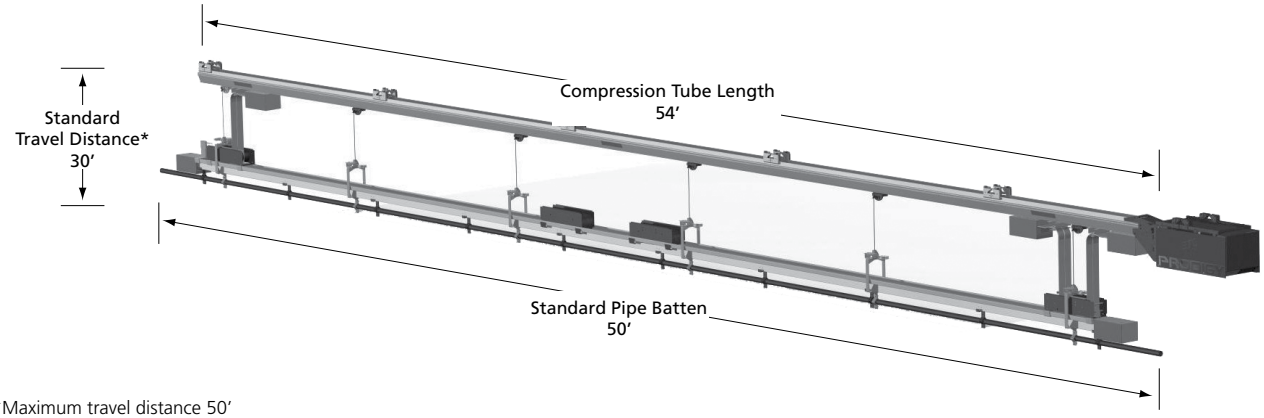
ETC Prodigy hoists are manufactured in a family of sizes from house light hoists up to machines designed to carry heavy loads.

FEATURES

- LIGHT WEIGHT: Powerhead weighs less than 580 pounds
- SMALL SIZE: Powerhead is only 17 3/8" high x 50 11/16" long x 17 13/16" wide
- COMPACT CABLE MANAGEMENT SYSTEM: Front of house and stage electrics hoists store in 30" of height yet feed up to 48 20 Amp circuits
- TRUE LIFTING CAPACITY: TRUE LIFTING CAPACITY: Hoists are rated by their working load limit (WLL), the amount of weight that can be suspended from the batten in a standard configuration. The total motor lifting capacity is shown in the "Total Lifting Capacity" area in the tables below
- UNIQUE PRODIGY HYBRID DRUM: Powerhead manages up to 7 liftlines plus one operating line for cable management in a machine 1/3 the size of other hoists
- FAIL-SAFE MOTOR BRAKE AND PRODIGY LOAD BRAKE: Two independent braking systems assure safe overhead lifting
- HIGHER DUTY CYCLES: Minimal braking pressure significantly reduces brake pad temperature and increases duty cycle of the hoist
- BUILT-IN LIMIT SWITCHES AND ENCODERS: With visual setting indicators for more efficient installation
- DMX or Ethernet data wiring available

GENERAL INFORMATION

- MID-TRAVEL PRESET POSITION: A third stop position that is re-settable by the user
- COMPRESSION TUBE: Channel snaps in place to interface with facility structure and neutralize additional horizontal loads on the building
- BUILT IN SLACK LINE DETECTOR: Standard on all hoists
- BUILT IN LOAD PROFILING: Standard on all hoists
- RIGHT ANGLE CABLE ADJUSTER (RACA): Unique trim clamp saves up to 14" of building height and allows greater batten travel. The RACA permits rapid trim adjustment even under load
- BUILT TO PLASA/ANSI STANDARDS: motorized hoist (draft) standards
- UL LISTED



BENEFITS OF PRODIGY HOISTS

- Light weight – less load on the building and easier to install
- No additional lateral forces imposed on the building – lateral forces neutralized in the compression tube
- Anywhere-positioning of loft blocks along compression tube so lift line placement is not dependent on building structural layout
- May be attached to almost any structure that can support the weight of the hoist + lifted load such as bar joists
- Compatible with QuickTouch®, QuickTouch+® and Foundation® Control systems
- Easy limit switch adjustment with visible LED light indicators
- Low noise operation
- Prewired connector strip for up to 48 20 Amp circuits with up to 4 DMX and a CAT5 outlet
- Connector strip also works as a cable tray and roller guide system to manage flat feeder cable

ETC® P1500E and P1500E/480 Fixed Speed Stage Electric

Prodigy® Low Profile Hoist Series

HOIST STANDARD CONFIGURATION P1500E

*Maximum travel distance 50'

STANDARD SAFETY FEATURES

- Load Profiling – Senses load change variances
- Dual Braking System – A Primary Load Brake and a Motor Brake
- Limit Switches – 1 Top limit plus top overtravel limit switch
  1 Bottom limit plus bottom overtravel limit switch
- Slack Line Detection – Standard equipment. Slack line detection of lifting line will shut the system down should any line become slack
- Built-in Load cell – Standard equipment to provide continuous load profiling and monitoring

HOIST OPTIONS

P1500E STAGE ELECTRIC FIXED SPEED HOIST	
Batten length	Up to 76'
Travel distance	Up to 50'
Number of Circuits	Up to 48 20 Amp circuits

DWR Series

wall mount rack

pivoting, sectional wall cabinet is ideal for larger systems in both secured and non-secured areas

features:

- Available in 17”, 22”, 26” and 32” overall depths with 15”, 20”, 24” and 30” of useable depth
- Tool-Free Quick-Mount™ system for easy, one-person mounting of the center section to the backpan on the jobsite
- Center section rear channel accommodates slim power to save space
- Optional minimum-clearance latch allows side-by-side or interior corner mounting
- Reversible padlockable center section is keyed differently from optional front door for security
- 2” knockouts, 4” knockouts for Wiremold 4000® Series raceways, and knockouts for UCP Series universal connector panels on side
- Grounding/bonding stud in top and bottom of center section and backpan facilitates proper grounding and bonding of electronic equipment, as per NEBS and NEC standards
- Finished in a durable black textured powder coat
- UL listed in the US and Canada

see inside for important information regarding useable depths

specifications:

EIA compliant 19” wall mount rack shall be Middle Atlantic Products model # DWR-__-__ (refer to chart). Overall dimensions shall be 23.4” W x __” H x __” D (refer to chart). Weight capacity shall be __ lbs. Tool-Free Quick-Mount™ system enables one-person installation. Useable depth shall be __” (refer to chart) and shall extend into the back pan 3.5”. Center section and back pan shall be steel, phosphate pre-treated and finished in a black textured powder coat. Adjustable rackrail shall be constructed of 11-gauge steel with tapped 10-32 mounting holes in universal EIA spacing with black e-coat finish and marked rack spaces. Rack shall be constructed to swing open for component cabling access, center section shall pivot for either left or right opening. Rack shall have a rear knockout panel with 1/2”, 3/4”, 1”, 1-1/2”, 2” and 3” electrical knockouts installed in base, and a rear knockout panel with 1/2”, 3/4”, 1”, 1-1/2”, 2” and 3” electrical knockouts, and BNC knockouts for UHF/VHF antennas installed in top. Large laser knockout on back pan shall have a 12-1/2” x 12-1/2” cutout for electrical pull-box. Fan knockouts on top and bottom shall allow for installation of up to four 4-1/2” fans. Rack shall have 2” knockouts, 4” knockouts for Wiremold 4000® Series raceways, and knockouts for UCP Series universal connector panels on the side. Top, bottom and sides shall feature vertical vent pattern. DWR Series enclosures shall satisfy the 2013 CBC; 2012 IBC & ASCE 7-10 (2010 Edition) for use in areas of high seismicity, using an assumed Site Class D soil condition with lateral force requirements for protecting 155 lbs. of essential equipment in locations with the highest level of seismicity and top floor or rooftop installations with an Importance factor (Ip) of 1.5 when used with DWRSR-ZL Latch. DWR Series shall be OSHPD approved for fixed equipment anchorage in California healthcare facilities. Rack shall be UL Listed in the US and Canada to the UL-2416 (NWIN) Category when used with optional bonding kit, model # PET-K-__. DWR Series shall meet all enclosure requirements towards PCI DSS (Payment Card Industry Data Security Standard) Compliance. Rack shall be GREENGUARD Gold Certified. Rack shall be manufactured by an ISO 9001 and ISO 14001 registered company. Rack shall be warrantied to be free from defects in materials or workmanship under normal use and conditions for the lifetime of the rack.

ADC Silent Steel® 280 Series Track

Instructions for Hand Operated Models: 280, 281, 282, 280-A, 283-N, 283-R

Call 800-223-1624 or email for CWANA full system pricing.

Parts and track channel can be ordered below.

SILENT STEEL® is the most famous name in heavy-duty stage tracks. The model 280 steel series is used in the majority of stage installations with heavy weight curtains of any length, and is particularly quiet in operation. Models 281 and 282 are for use with especially heavy curtains. They are identical to Model 280 except neoprene-tired ball-bearing carriers are supplied with Model 281, while larger diameter floor and end pulleys and heavy duty nylon-tired ball-bearing carriers are furnished with Model 282.

Model 280 series tracks cannot be curved, and they use one carrier per foot of track.

Ordering a track system for drapery or scenery requires some expert advice. Get great advice and track system pricing quickly by submitting a request for a Custom Track System Quote online. Once your quote request is submitted, we'll contact you to validate information and guide you through the selection process. Don't worry if you don't have all answers upfront. We're here to help.

Silent Steel® 280 Series Complete Track System (CWANA*)

The Model 280 steel series is used in the majority of stage installations with heavy weight curtains of any length.

Compare View Comparison

Price Ranges

2800 Silent Steel® Track Channel

14 gauge galvanized steel.

Compare View Comparison

Price Ranges

$270.06 - $662.88

2800A Silent Steel® Track Channel

12 gauge aluminum or supplied with a black anodized finish.

Compare View Comparison

Price Ranges

$385.98 - $716.82

1483INV Inverted Leg Wall Bracket

Allows the tracks to be mounted closer to the ceiling.

Compare View Comparison

Price Ranges

$62.07

1483UNI Universal Wall Bracket

Wall Bracket used with bi-parting or one way track systems. 280/170/140/132 series tracks.

Compare View Comparison

Price Ranges

$70.65

2801 Single Carrier

Block constructed of nylon material supported from ball-bearing with 2 heavy duty polyethylene wheels.

Compare View Comparison

Price Ranges

$13.47 - $14.70

2801A Single Carrier with Steel Block and Gate

Carrier block is constructed of plated steel and is supported from 2 heavy-duty polyethylene wheels mounted via a ball-bearing in the carrier body.

Compare View Comparison

Price Ranges

$35.40 - $40.63

2801B Single Carrier with Steel Block

Block constructed of nylon material supported from ball-bearing with 2 heavy duty polyethylene wheels and steel block.

Compare View Comparison

Price Ranges

$18.23 - $23.48

2802 Master Carrier

Block constructed of plated steel supported from 2 ball-bearings with 4 heavy duty polyethylene wheels and 2 cable clips.

Compare View Comparison

Price Ranges

$47.26 - $53.96

2802B Master Carrier with Brake

One foot in length and features nylon-tired, ball-bearing wheels.

Compare View Comparison

Price Ranges

$416.22

2802B4 Master Carrier with Brake

This custom unit is similar to the 2802B but is 4 feet in length and features nylon-tired, ball-bearing wheels.

Compare View Comparison

Price Ranges

$411.62

2803 Live End Pulley

Equipped with 2 oil-impregnated sleeve-bearing nylon wheels.

Compare View Comparison

Price Ranges

$111.32 - $134.63

2803-B Center Take-Off Pulley

This pulley is used when it is necessary to route the operating cables perpendicular to the track at track elevation.

Compare View Comparison

Price Ranges

$357.53

2803-F Flying Live End Pulley

This live-end pulley is only used with flying type curtain machines.

Compare View Comparison

Price Ranges

$385.25

2803-H Horizontal Live End Pulley

This pulley routes the operating lines horizontally and at a 90 degree angle relative to the track

Compare View Comparison

Price Ranges

$119.38

2804 Dead End Pulley

Equipped with 1 oil-impregnated sleeve-bearing nylon wheel.

Compare View Comparison

Price Ranges
$59.12 - $74.83

2805 Adjustable Floor Pulley

Steel side plates, equipped with 1 oil-impregnated sleeve-bearing nylon wheel.

Compare View Comparison

Price Ranges
$82.87 - $125.88

2806 Basic Floor Pulley for 280

Non-adjustable type with oil impregnated sleave bearing nylon wheel.

Compare View Comparison

Price Ranges
$73.05

2807 Lap Clamp

For attaching double-sectioned track at center overlap.

Compare View Comparison

Price Ranges
$13.18 - $27.90

2808 Hanging Clamp

Recommended spacing: 7 feet. Steel chain or cable suggested for track suspension.

Compare View Comparison

Price Ranges
$8.64 - $12.64

2808-ID Hanging Clamp with Cord Support

Used to support the operating cord/cable on track systems with large spans where the cord/cable may sag between the center overlap and the end pulleys.

Compare View Comparison

Price Ranges
$52.27

2809 End Stop

Prevents carriers from moving beyond selected position in track.

Compare View Comparison

Price Ranges
$8.51 - $12.66

2809 R End Stop 28 Rotodraper

Used with 28 or 28A Rotodraper

Compare View Comparison

Price Ranges
$10.15

2814 Pipe Clamp

For 1-1/4" I.D. Schedule 40 pipe.

Compare View Comparison

Price Ranges
$16.42 - $19.80

2815 Pipe Clamp

For 1-1/2" I.D. Schedule 40 pipe.

Compare View Comparison

Price Ranges
$16.95 - $21.04

2816 Pipe Clamp

For 2" I.D. Schedule 40 pipe.

Compare View Comparison

Price Ranges
$16.17 - $24.36

2821 Wall Bracket

4-1/2" long x 2" wide x 5-3/8" high

Compare View Comparison

Price Ranges
$27.06 - $31.50

2822 Pocket Bracket

1- 3/4" long x 2" wide x 5-5/8" high

Compare View Comparison

Price Ranges
$25.34 - $28.14

2823 Ceiling Bracket

Ceiling Bracket used when it is not possible to attach directly to ceiling.

Compare View Comparison

Price Ranges
$34.86 - $38.30

2824 Splice Clamps

Two piece 11 gauge clamp for joining and extending track sections.

Compare View Comparison

Price Ranges
$87.45 - $113.77

2824-A Ceiling Splicing Clamp

Two piece 11 gauge clamp for joining track sections.

Compare View Comparison

Price Ranges
$91.46 - $126.94

2825 Rubber Bumper

Attachment to 2801 Single Carriers. Function as noise reducer.

Compare View Comparison

Price Ranges
$0.20

2826 Rubber Spacer

For use with Back-Pack guides to provide quieter operation.

Compare View Comparison

Price Ranges
$0.28

2827 Rubber Spacer

For use with Back-Pack guides to provide quieter operation.

Compare View Comparison

Price Ranges
$0.47

2827A Rubber Spacer

For use with Back-Pack guides to provide quieter operation.

Compare View Comparison

Price Ranges
$0.60

2833 Back Pack Guide

Provides sliding door effect.

Compare View Comparison

Price Ranges
$7.31 - $10.41

2833-A Back Pack Guide

Used with Model 283-N and Model 283-R manually operated tracks.

Compare View Comparison

Price Ranges
$10.65 - $13.77

2834 Back Pack Guide

For machine operated tracks.

Compare View Comparison

Price Ranges
$7.29 - $10.29

2840 Masking Master Carrier

For moving panels or side masking curtains.

Compare View Comparison

Price Ranges
$267.15

2848 Space Saver

Used to reduce the amount of curtain stacking.

Compare View Comparison

Price Ranges
$9.27

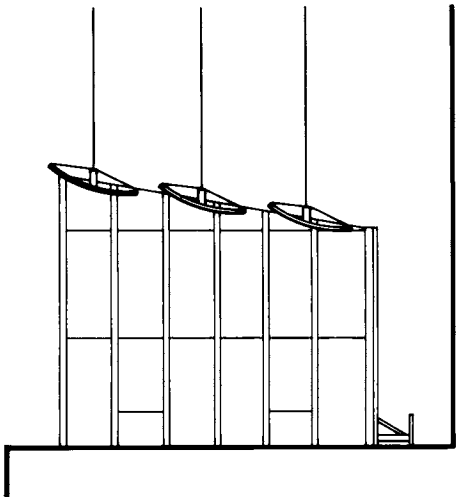
TECHNICAL SHEET

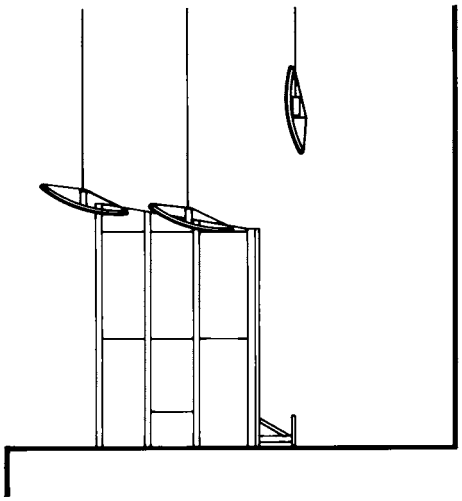
Diva® Acoustical Shell

General



- Mobile towers and rows of ceiling panels form a full stage acoustic enclosure when placed together on stage
- Separate air transporter or wheeled mover easily lifts and moves the towers
- Towers nest for storage backstage, ceiling panels hang from rigging and are stored in fly-loft
- Towers and ceilings are constructed from composite, stressed skin panels
- Finishes available include:
  - Wilsonart® High Pressure Laminate
  - Hardwood Veneer stained and finished to match space requirements
  - Painted panels with Sherwin-Williams® Kem® Aqua painted finish
- Tower and ceiling panel framework is constructed of aluminum
- Door, wing and ceiling panel hinges feature self-lubricating bearings for continuously smooth and quiet operation
- Trim strips on towers prevent backstage light from shining between the panels and may be painted to complement the shell
- Patented designs
- Five-year warranty
- Environmental attributes and LEED compliance for these products can be found at www.wengercorp.com/GREEN or by contacting your Wenger representative

Because of the component nature of the Diva Acoustic Shell, different configurations may be created by using different numbers of towers and ceiling panels.
For instance, fewer towers and ceiling rows can be used to create a smaller shell for chamber music or choral performances.

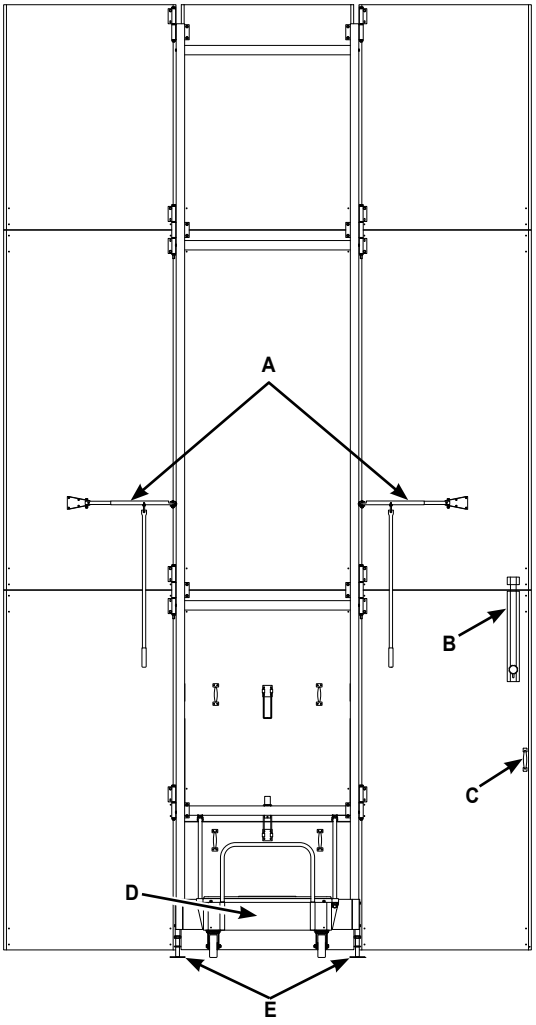


Front View

Performance position.

Side View

Full set of towers and ceiling panels used for a full ensemble.

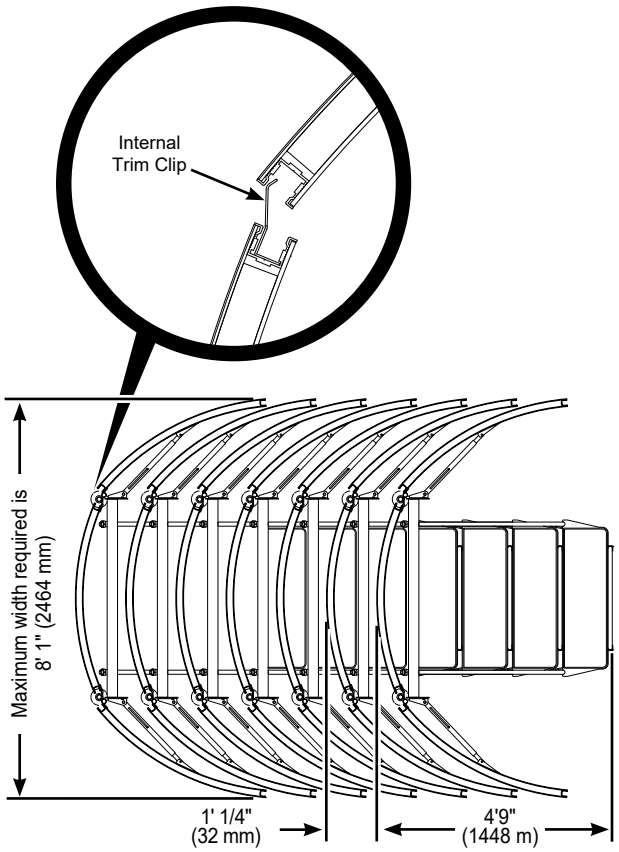


Side View

Fewer towers and ceiling panels used for a smaller ensemble.

Tower

- All towers feature panels with a 5' (1524 mm), 10' (3048 mm) or 20' (6096 mm) radius curve
- Each tower consists of one center panel and two adjustable wing panels
- Towers are available in heights from 16' (4877 mm) to 32' (9754 mm). Custom towers can be as high as 40' (12192 mm).
- Lower wing panels can be used as a door as required
- Double doors allow access of large equipment, including concert grand pianos
- Framework of towers and base are constructed of extruded aluminum and steel weldments
- Diagonal bracing between the tower frame and the base distributes weight over several areas of the tower assembly
- Each tower is equipped with a counterweighted base assembly for stability
- A telescoping wing-stay locks tower wings in performance or storage positions
- Extruded aluminum bearings incorporate bronze Oilite® bearings
- Each tower incorporates leveling adjustment mechanisms
- Towers nest one within another to minimize storage space
- The back side of towers are painted black
- Five-year warranty



Back View

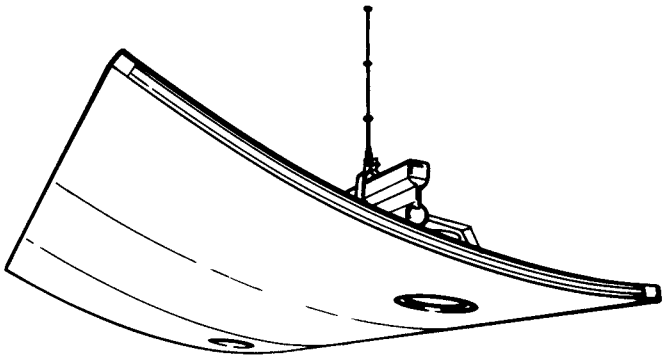
Telescoping wing-stays lock wings into performance and storage positions (A).

The door lock (B) and door handle (C).

The counterweighted base (D) provides shell stability when shell is stationary or being moved on stage.

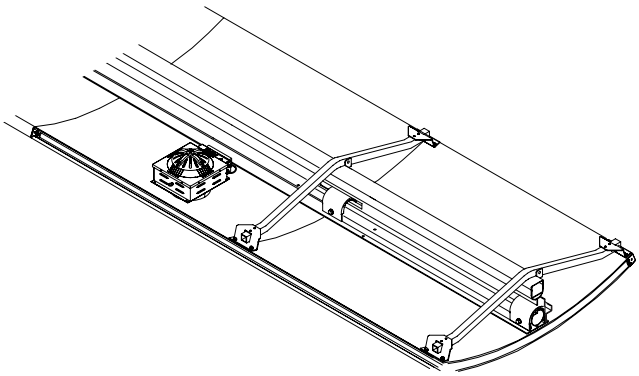
The shell rests on leveling pads (E) for uniform set-up on uneven floors.

4' 9" (1448 mm) first tower, add 1' 1/4" (32 mm) each additional tower.



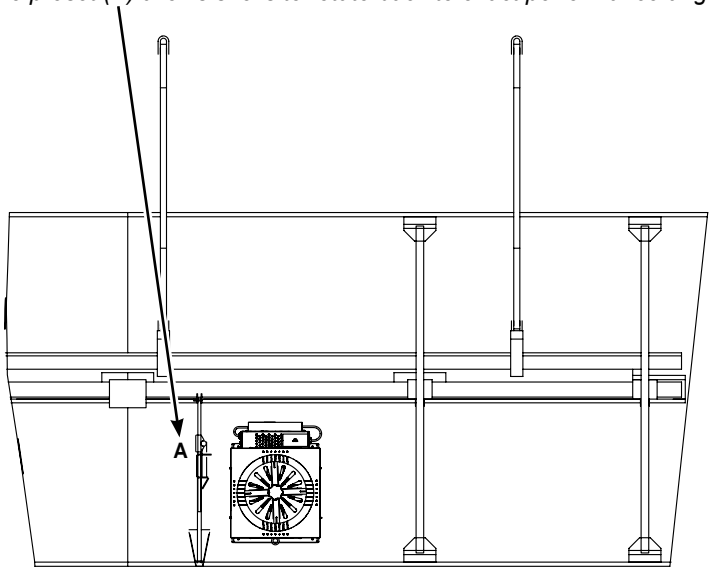
Top View

Showing how Diva Towers nest together in the storage position, minimizing required storage space.



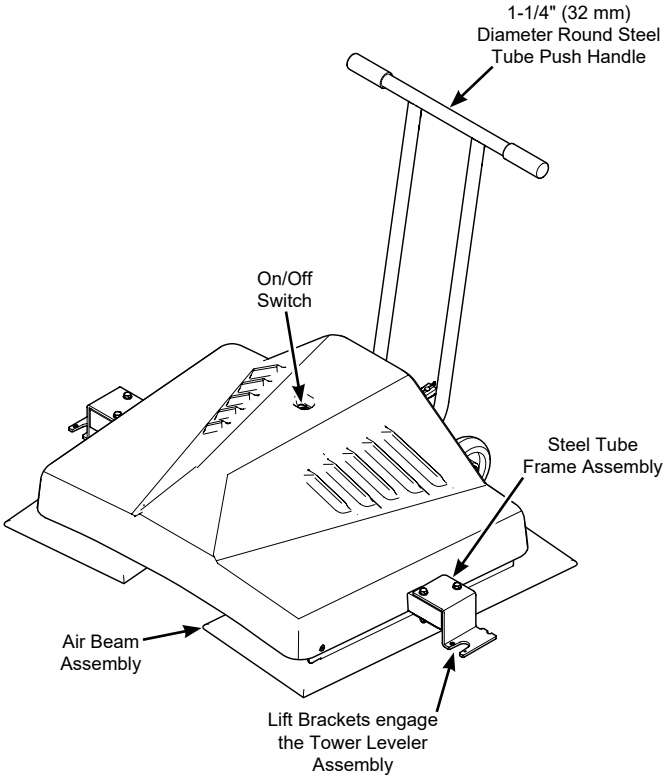
Shell Ceiling Panels

- Shell ceiling panels have either 5' (1524 mm), 10' (3048 mm) or 20' (6096 mm) radius curves and are available in various single or triple configurations
- Ceiling panels store in a vertical position, and rotate to pre-set, adjustable performance angles
- Ceiling panels are balanced so that each row requires no more than two people to deploy
- Shell ceiling panels feature an integral aluminum alloy truss and hang from stage rigging pipe battens
- Extruded aluminum hinges incorporate bronze low friction acetyl bearings
- Ceiling storage profile can be as little as 13-1/2 (343 mm)
- The back side of ceiling panels are painted black
- Optional integrated Wenger® Lieto™ LED light fixtures are available
- Ceiling panel truss features an ETL rated integral raceway so separate plug strips are not required
- Five-year warranty

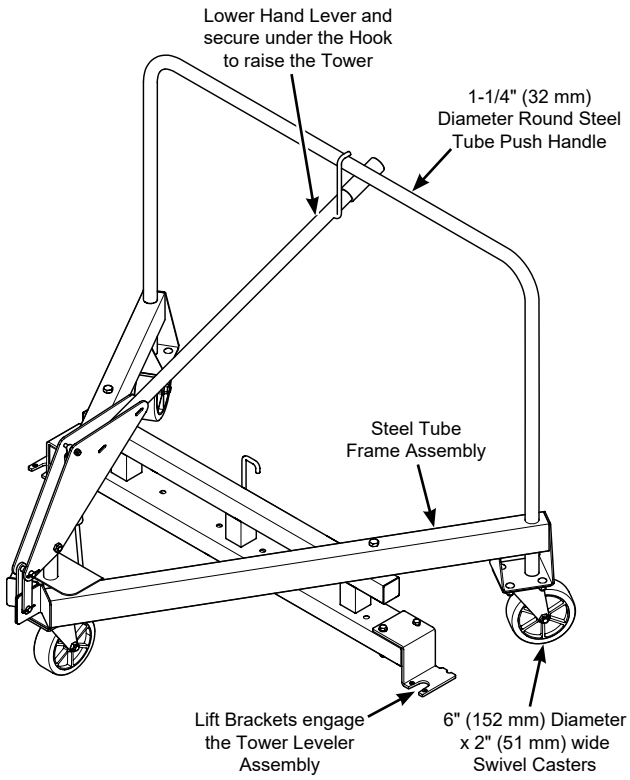


Ceiling panels with built-in truss hang from stage rigging.

Ceiling panels feature the option of integrated Wenger Lieto LED light fixtures.



Ceiling panels easily tilt into storage position.
Adjustable preset (A) allows shells to rotate back to exact performance angle.



Rear View of a 10' (3048 mm) radius ceiling panel.

Tower Transporters

- A separate air transport unit makes lifting and transporting the towers an easy job
- A cushion of air carries most of the tower's weight, which prevents damage to stage floor
- Moves the tower easily in any direction, so it is easier to position
- Requires standard 110-volt 15 amp circuit
- A wheeled mover is also available
- Five-year warranty

Air Transporter

Wheeled Mover

The Air Transporter lifts majority of the tower weight and maneuvers shell in all directions for exact placements and easy mobility to and from storage.

VINYL COMPOSITION TILE (VCT) **Standard Excelon® Imperial® Texture**

Product Information

Construction - Vinyl Composition Tile
International Specifications - ASTM F1066 - Class 2 Through Pattern, ISO 10595, Type II
Overall/Wear Layer Thickness - 1/8 in. (3.2 mm), 3/32 in. (2.4 mm)
Factory Finish - Fast Start®
Installation - Adhesives: S-515, S-525
Maintenance Options - Polish

1/8" and 3/32" sizes are stocked for these colors: 51830, 51835, 51839, 51858, 51859. All other colors are stocked in 1/8" size; 3/32" is available on a special order basis, minimum order quantity of 45,000 sq ft² (4181 m²).

*Testing at loads above 125 psi is outside the scope of the test method. Since testing is conducted on uninstalled flooring, results do not consider the performance of the adhesive, underlayment, or subfloor. These test results are not an indicator of the installed flooring system performance. **Using the James Machine as described in D2047 and as directed in UL 410 for floor covering materials (FCM) using a leather foot under dry conditions. The application of site-applied floor sealers, polishes and other types of finishes routinely used to maintain resilient flooring materials will change the walking surface and consequently the SCOF value.

Smooth Rubber Tile, Marbleized M627 Mariner, M137 Cinnabar, M626 Tangerine, M198 Ivory

Red List Chemical Free

proudly made in the USA

rubber tile

- Free of Red List chemicals, PVC, phthalates and halogens. The ReNew palette is also cork-infused and contains 13% bio-based content from rapidly renewable resources.
- Made in the U.S.A. and meets GREENGUARD GOLD, FloorScore®, NSF332 Platinum and CHPS criteria. At end of life, this product can be recycled through the IMPACT take-back program.
- Designed for high durability and ease of maintenance throughout the product life cycle.
- Stands up well to constant traffic from wheelchairs, shopping carts, luggage carriers or dollies and resists scuffing, gouging, most chemicals and common substances.
- Provides underfoot comfort, reduced noise from foot traffic and has an inherent slip resistance.
- All colors available at a Single Price Point within your selected palette. ReNew palette is available in Smooth, Hammered and Textured profiles only. Fiesta® and Symmetry palettes are available in Dimensions profiles as a special order.

RAISED DESIGN, SMOOTH FINISH AND DIMENSIONS PROFILES

- Seven Raised Design profiles: Slate Design, Low Profile Raised Design, Textured Design, Raised Square Design, Raised Circular Vantage Profile, Hammered and Warning Tile Design – designed for high durability and ease of maintenance throughout the product life cycle. Most profiles available 19-11/16" x 19-11/16" tile sizes and 1/8" gauge.
- Smooth finish: Available in 19-11/16" x 19-11/16", 12" x 12" and 36" x 36" tile sizes and 1/8" and 3/16" gauges.
- Three Dimensions profiles: Cradle, Random and Stripe. Designed for high durability and ease of maintenance throughout the product life cycle. Available in 19-11/16" x 19-11/16" tiles and 1/8" gauge.

Robbins SPORTS SURFACES Classic 110

PULASTIC CLASSIC 110

A seamless multi-purpose sports floor that provides strength and performance for all levels of play and competition

25 YEAR WARRANTY!

PULASTIC® SPORTS FLOORING

- Pulastic Classic 110 is approved according to the EN 14904 Standard - Category P1
- Approved by FIBA and IHF
- Manufactured under ISO 9001, ISO 14001, and CSR Level 3 (ISO 26000)
- Good resiliency for comfort and injury prevention
- Seamless, non-porous and smooth surface for easy maintenance, repair and resurface options
- Excellent contact noise reduction for outstanding acoustic isolation
- Sustainability through high content of recycled and rapidly renewable raw materials
- Water based finish for very low odor during installation and maximum indoor clean air protection during use
- Outstanding mechanical strength and wear resistance for optimal life cycle cost and maximum usability

HARLEQUIN

Harlequin **Activity®**

Harlequin Activity is a permanently installed sprung floor system, based on the well-established 'triple-sandwich' construction originated by Harlequin over 30 years ago. It's a fully floating system with no fixings to the sub-floor and can be laid on any reasonably smooth and flat surface without prior preparation.

Harlequin Activity is shock-damped to avoid a 'trampoline' effect and provides area and point elasticity to offer identical characteristics across the whole floor. An 'industry standard' choice, when correctly reinforced, it can withstand heavy loading including retractable seating.

Harlequin Activity is only available for installation by our Contracts Division. Activity can be installed with a Harlequin vinyl performance surface for all types of dance. A hardwood surface is available for specifiers who need a surface for multi-purpose use, including traffic by the general public, full stage entertainment, ballroom dance, or when required to match existing décor.

Activity with Vinyl Surface

Activity with Hardwood Surface

Specification Guide

Installation	Permanent
Finish	Harlequin Vinyl Performance or Approved Hardwood Surface
Weight	37-40 lbs/yd² (vinyl surface) 47-50 lbs/yd² (hardwood surface)
Overall Thickness	2⅛" (2.125) nominal (vinyl surface) 2¼" (2.25) nominal (hardwood surface)
Testing Standards	DIN 18032-2
Average Shock Absorption (Min. 53%)	59.4%
Vertical Deformation (Min. 2.3mm)	3.8mm
Area Deflection (Max 15%)	7.2%
Rolling Load (Min. 1500N)	>1500 N

Harlequin Sprung Floor Application Guide

Along with Harlequin Activity, we offer additional sprung flooring options, which are listed below along with the recommended surface. These recommendations are based on experience and customer preference only. Please contact a Flooring Specialist to determine which option best suits your requirements.

STONE LOOK

SIZES

		Thickness	Sq. Ft./ Carton	Pieces/ Carton
24 x 24 Floor Tile*	(23-5/8" x 23-5/8") (60.00 cm x 60.00 cm)	3/8"	15.50	4
12 x 24 Floor Tile	(11-3/4" x 23-5/8") (29.85 cm x 60.0 cm)	5/16"	13.45	7

* Textured finish available in 24 x 24 size only.

APPLICATIONS

	Target DCOF wet	Suitable
Dry & Level – Interior Floor	N/A	✔
Wet & Level – Interior Floor	≥ 0.42	✔*
Shower Floors (Residential or Light Commercial)	≥ 0.42	
Exterior Floor Applications (including patios, pool decking & other wet areas with minimal footwear)	≥ 0.60	✔**
Ramps & Inclines	≥ 0.65	
Walls/Backsplashes	N/A	✔
Countertops	N/A	✔
Pool Linings	N/A	

A DCOF value of ≥0.42 is the standard for tiles specified for level interior spaces expected to be walked upon when wet, as stated in ANSI A137.1-A326.3. For more information about DCOF and the DCOF AcuTest™, visit daltile.com/DCOF.

APPLICATION NOTES:

Suitable for exterior applications (provided it is noted as suitable in the applications chart above) in freezing and non-freezing climates, when proper installation methods are followed.

* Matte and Textured only.

** Textured only.

PERFORMANCE CHARACTERISTICS

	ASTM#	Textured Result	Matte Result	Polished Result
Water Absorption	C373	< 0.5%	< 0.5%	< 0.5%
Breaking Strength	C648	> 275 lbs	> 275 lbs	> 275 lbs
Scratch Hardness	MOHS	8.0	6.0	5.0
Chemical Resistance	C650	Resistant	Resistant	Resistant

For additional information on test results, visit us at: daltile.com/information/TestResults.

TRIM

	Type	Number	Size	Pieces/ Carton
	Floor Bullnose*	S44F9	4 x 24	12
	Cove Base◂	P36C9TB	6 x 12	22
	Cove Outcorner◂	PC36C9TB	1 x 6	15

Cove base trim is intended to coordinate with floor tile in the standard 90-degree installation position.

Cove base and cove corner trim are suitable for non-freezing climates only.

* Available in Matte and Polished finishes only.

◂ Available in Matte finish only.

INSTALLATION

Grout Joint Recommendation	Shade Variation
1/8" (3/16" when installing tile with a length 15" or greater in a staggered brick-joint pattern; overlap should not exceed 33%.)	Medium (V2)

DURABILITY

Floor Surface Wear Resistance

1 Residential Bathrooms | 2 All Residential Areas | 3 All Residential / Light Commercial* | 4 All Residential / Commercial*

* Polished finish only.
* Matte and Textured finishes only.

NOTES

Since there are variations in all fired ceramic and natural products, tile and trim supplied for your particular installation may not match samples. Final confirmation should be made from actual tiles and trim prior to installation. Manufactured in accordance with ANSI A137.1 standards.

Not for use on ramps. Water, oil, grease, improper drainage and certain footwear can create slippery conditions. Floor applications expected to be exposed to these conditions require extra caution in product selection.

For additional information refer to "Factors to Consider" at: daltile.com/Factors.

Special consideration needs to be given when installing tiles greater than 15 inches. Please refer to daltile.com/LargeTiles for more information.

Special care should be taken when grouting with dark pigmented colors. A grout release is recommended to prevent finely powdered pigments from lodging in the pores of the surface. Use of a latex modified thin-set is recommended for installation.

PRE-CONSUMER RECYCLED MATERIALS

DURABILITY

Floor Surface Wear Resistance

1	Residential Bathrooms	3	All Residential / Light Commercial
2	All Residential Areas	4	All Residential / Commercial

NOTES

Strong random shading enhances the natural beauty of this product. To achieve optimal results, tile should be selected from multiple cartons and shading arrangement planned prior to installation.

Since there are variations in all fired ceramic products, tile and trim supplied for your particular installation may not match these samples. Final color selection should be made from actual tiles and trim and not from tile samples or color reproductions. Manufactured in accordance with ANSI A137.1 standards.

Water, oil, grease, etc. create slippery conditions. Floor applications with exposure to these conditions require extra caution in product selection. Abrasive surface suitable for use on ramps.

For additional information refer to "Factors to Consider" at daltile.com/Factors.

Special care should be taken when grouting, a grout release is recommended to prevent finely powdered pigments from lodging in the pores of the tile surface.

It is necessary to follow the proper procedures and recommendations from the grout and maintenance products' manufacturers.

GYM

SIMON SANCHEZ HIGH SCHOOL CIVIL NARRATIVE

1. Earthworks and Grading

Clear, grub, and grade the site as called for in the design. Site grading is based on the concept of providing a positive drainage flow that brings run offs away from buildings or structures. In general practice, cut and fill slopes should not be steeper than 2 horizontal to 1 vertical (2H:1V) in which vegetation or grass ground cover can be satisfactorily established and properly maintained. Areas disturbed by construction and grading activities will be fine graded and planted or seeded with grass for erosion control. In addition, careful consideration was used in locating drainage flow patterns to make sure the resulting gradient and related discharge velocities will not cause erosion.

2. Storm Sewer Management System

All storm runoff within the site will be contained and collected using area drains, catch basins, field inlets, and localized shallow depressions. They will be conveyed via underground drainage pipes or swales, whichever is appropriate, towards the proposed percolation basin.

Percolation Basin with a storage depth of deeper than 2 feet and are expected to hold water for more than 24 hours shall be provided with chain link fence around the basin's perimeter. The basin shall include a maintenance service access road and gate. Due to limited open space at the SSHS site, the percolation basin will be located on the south-west side of the FBLG property right west of the proposed multi-purpose fields. The percolation basin is also sized to accommodate stormwater flows from FBLG Middle School.

Location of the proposed percolation basin is located inside the 1,000 feet radius Wellhead Protection Zone (WPZ) from existing water production wells in the area. Stormwater runoffs from parking lots and roadways must be handled and treated as per requirements outlined in the CNMI and Guam Stormwater Management Manual and as approved by Guam EPA.

3. Sewer System

The sewer system for this project will be connected to the existing sewer located near the southwest property corner. The connection will involve installation of new sewer manhole on the existing sewerline. This existing sewerline, which also served the existing SSHS, is a 12-inch sewerline that connects to the 24-inch main sewerline on Marine Corps Drive (Route 1). The expected wastewater loads from the new SSHS is not expected to result in the overloading as the new school is a replacement of the old one.

The design of the sewer system in this project will be in accordance with the Guam Water Works Standards for Sewer and all any other applicable design manuals, technical

manuals, or other applicable technical reference. Flows and pipe capacities will be calculated using the Manning formula. Manholes will be provided at all change of directions and spaced not more than 400 feet apart. The minimum manhole diameter will be 48 inches and with a 30 inch diameter "Traffic Rated" manhole frame and cover. Sewer mains shall be a minimum of 8 inches diameter, building laterals shall be a minimum of 6 inches diameter. Curved sewer lines will not be allowed.

4. Water System

Water supply for this project will be connected to an existing 10-inch waterline that runs along Juan Jacinto Drive. This information is based on GWA Water System Map and the point of connection(s) is shown in the design drawings. An 8-inch looped system water line will be provided so that any single point of failure in the line, flows can still be supplied to the facility.

There are several existing fire hydrants located at the site. However, these will be impacted by the proposed new improvements and will be removed and replaced. Based on hydrant flow test conducted by WM Engineering Services, LLC, dated 04 November 2020, water system at or near the project site has static and residual pressures of 61 psi and 44 psi respectively.

Flow metering and backflow prevention device will be provided near the point of connection to the existing water main.

The project includes construction of a fire water storage tank and fire pumps room. Fire lines are supplied and pressurized by booster pumps.

5. Pavements

Flexible pavement structural sections shall be based on recommendations outlined in the Subsurface Soil Investigation Report for the New Simon Snachez High School, prepared by Geo-Engineering & Testing, Inc. dated 31 August 2022

6. Parking and Pedestrian Paving

Provide parking and pedestrian paving as shown in the Concept Drawings.

7. Barriers/Bollards

Provide barriers/bollards at corners of building or structure located near road edge and site fire hydrants.

8. Perimeter Fencing and Gates

Provide perimeter fencing and gates as shown in the Concept Drawings. Perimeter fencing and gates shall be chain link fence and minimum of 6 feet high.

9. Erosion and Sediment Controls

During construction, temporary erosion and sediment controls must be implemented in accordance with Guam EPA's Guam Soil and Sediment Control Regulations.

10. Turf Establishment

Newly graded areas and areas disturbed during construction, including Contractor's laydown/ staging area, shall be provided with 4 inches thick top soil and hydroseeded with Bermuda grass. Grass shall be maintained until a 95% ground cover is attained. Install on-grade temporary irrigation or other means for plant establishment and a 365-day landscape maintenance period.

LANDSCAPE ARCHITECTURE:

GENERAL PARAMETERS

- **Project Description**

  The scope of work includes, but is not limited to, the installation of new trees, shrubs, and lawn. Design also incorporates a main quad courtyard surrounded by the A and B-Wing, and GCC Classrooms, JROTC and Administration Building ring. The open space is programmed with learning zones based on the educational curriculum, a performance stage and open lawn for campus events, student gathering and covered study spaces, product and built-in seating opportunities, and planters to help create outdoor rooms accommodating groups of varied sizes and activities. The campus will be fitted with strategically located secured and anchored trash and recycling receptacles, bicycle racks. Special concrete pavement textural finishes from the campus main arrival are carried into the quad ring of buildings and central courtyard, highlighting the arrival sequence and celebrated areas.

  Primary and secondary pathway circulation from the parking areas to campus buildings and between building and sports facilities are provided connecting campus uses. Planter islands within and around the parking lots are utilized to capture and filter pavement runoff as a storm water management function. Hedge planting proposed to screen parking areas, and canopy trees are provided within and around parking lots to provide buffering and shade. Landscaping around the buildings is limited to grass, accent, and shade trees, and strategically located foundation shrubs and groundcover, with safety, security, and ease of maintenance in mind.

- **Existing Conditions**

  The existing building within a portion of the project site will be demolished following the completion of the new campus buildings. No existing trees or palms within the project site or existing campus will be salvaged or relocated into the new campus plan. A tree/palm protection plan could be developed as necessary for the material remaining. Consideration should be given to protect trees and palms that may be nesting sites for the Micronesian Starling. Large expanses of lawn protect the site from erosion and are healthy due to the frequent rains. A habitat of a native snail species was discovered along the southern edge of the site which is planned to be fenced and protected during construction with an additional setback boundary implemented prohibiting any disturbance or site work.

LANDSCAPE BASIS OF DESIGN

- **Key Issues or Requirements**
  - Low-maintenance plants, xeriscaping principles utilizing native plant species as well as adaptable plants for LID storm water management have been considered.
  - No non-native invasive plants or palm species known to be susceptible to invasive beetle species have been specified in the planting design.
  - Reference and strictly follow all requirements and procedures listed in the Coconut Rhinoceros Beetle (CRB) and Little Fire Ant (LFA) Management Procedures (Ver4. Revised 08.02.2021)

- A permanent automatic irrigation, with 'water-sense' rain and moisture sensors, has been designed to accommodate the planting areas around the main campus quad buildings and within the central courtyard space only. The water source is supplied by rainfall harvesting tanks and a filtration and pump system designed and provided by the project's design engineers.

- Lockable quick couplers or hose bibs on an irrigation mainline are strategically located through the areas without automatic irrigation convenient for seasonal and intermittent hand-watering of fields and maintenance washdown purposes.

- Stormwater management, water conveyance, and detention systems have been coordinated and implemented throughout the site with the civil engineers and may be highlighted as an educational component of Best Management Practices and consciousness of minimizing adverse impacts to the environment and resources.

- Provide positive surface drainage away from building and structures across pavement and planting areas to drainage swales, detention areas, and drain inlets.

- Provide a two-foot-wide gravel maintenance strip with poly containment edger around the buildings at areas adjacent to landscape planting areas.

- Guarantee landscaping for a period of one year starting after the completion of the landscape establishment and maintenance period. Provide a 365-day Landscape Establishment and Maintenance period. Landscaping Guarantee and Establishment and Maintenance periods must commence on the date that the inspection by the Contracting Officer shows that all landscaping under this contract has been satisfactorily installed.

- Provide 4" of topsoil for lawn areas and fine grade. All green waste generated from clearing and grubbing tasks and construction activities must be managed, processed, and reused on site.

- Contractor is required to prepare a green waste management plan that will be included in their overall waste management plan. Contractor is required to monitor green waste piles weekly for CRB infestation. If there is an infestation, the piles must go through a grinder/shredder prior to resuming compost activities.

- Prevent erosion from occurring by providing erosion control measures as required by Federal, Guam, and local regulatory requirements.

- Provide a planting soil mixture composed of a least 50 percent native soil blended with 50 percent amended topsoil or soil amendments based on a soil analysis test results with recommendations for all natural grass lawn areas and tree/palm planting pit backfill material. All newly created planting pits must be, at a minimum, twice as wide and equally as deep as the plant's root ball. Set tops of plant root balls even with adjacent finish grades. All trees must be provided with fertilizer tablets, quantity based on manufacturer's recommendations, and wood stakes with broad nylon fabric ties and expandable trunk guards. Provide an aluminum header (black) separating groundcover and lawn areas.

- Hydroseed areas to be turfed. Natural grass species in the hydroseed slurry must include a mixture of 50% Common Bermuda grass and 50% Centipede grass. Repair and restore all existing grass areas that are damaged by construction including access, storage and lay down areas. Restore by means of hydro-seeding and provide same guarantee and maintenance as for new landscape areas. Grass all graded areas, including areas that tie back into the existing site, outside of the landscape limit of work. Provide temporary irrigation system for establishment of lawn areas.

- **Planting**

The objective of the landscape design is to enhance the campus environment and the physical and psychological experience of the students, staff, and visitors. The landscape design has been created to provide comfort and natural greenery within the campus spaces. Layered planting compositions aim to soften and complement building forms and materials and provide a safe environment by allowing clear sightlines through and across student gathering areas. Canopy shade trees and foundation planting help the campus' facility of buildings to become more inviting, accessible, and tolerable within its surroundings and function as a daily institutional destination.

- **Site Trees**

Shade trees improve the environmental quality and help reduce energy consumption and disperse throughout the site's larger open spaces. Other smaller shade and accent trees help to enhance the site and "soften" and compliment the architecture and provide character. Tree placements create open spaces as well as provide privacy between the buildings. Cluster planting is intended to create a relaxed environment and is located to accommodate underground utilities.

Provide one(1) 25-gallon minimum size container canopy shade tree for every six parking stalls. Avoid conflicts with light pole fixtures, utilities, and utility lines. Provide a minimum of twenty-sq. ft. planting area for each tree root ball. Trees with large pods or seeds with dye color should not be used in parking areas.

- **Foundation Planting**

Foundation planting around the footprint of buildings and adjacent planter areas include shrubs, groundcover, and grass with small to medium accent site trees. The objective of foundation planting is to anchor the building with natural greenery, provide cooling and shade, soften structures and hardscape, and provide a visually approachable and pleasant environment for students, staff, visitors, and views from beyond the property edges. It is important that the placement of plants should provide visibility so as to not allow people or feral animals to easily hide unnoticed.

- **Screen Planting**
  - Wherever possible, shrubs are incorporated around utility and equipment (as allowed) to provide screening and softening.
  - Provide shrubs for screening of mechanical equipment/walls, dumpster enclosures, and other obstructions that do not present an aesthetic view from the street.

- **Educational Learning Gardens**

  These areas adjacent to A and B-Wings are deliberately left clear and open for academic programming, customized by teaching staff and or students. Landscape edging has been provided to separate ornamental planting from educational garden components. Electrical outlets have been provided in proximity to the convenience of any necessary lab equipment requiring power.

- **Bio-swales / Stormwater Retention (By Civil)**

  Grassed bio-swales capture and convey surface stormwater to open grassed retention basins which are depressions at the surrounding finished grade typically at the low points of the site. These features are intended to "clean" the impurities and materials and slowdown velocities and hold the water allowing natural percolation into the ground minimizing contaminates and excessive water volumes lessening inundation and impacts to inlets, storm drain systems, and waterways.

- **Hardscape**

The primary objective of the hardscape design is to provide safe and accessible circulation within the campus property for students, staff, and visitors. The hardscape design also helps to organize outdoor spaces of varied sizes, provides flexible open space for event gatherings, seating and studying, physical and passive activity, while providing a unique, vibrant, and expressive outdoor educational environment.

- **Walkway Circulation and Paving**

  Pedestrian pathways, beginning at the property limit access points are intended to be clearly defined and visible upon approach. Crosswalks are striped as per local code requirements as shown on the civil engineering drawings, fully accessible to wheelchairs and have tactile strips for the visually impaired. Planting adjacent to driveway crossings shall be void, minimal, or maintained so as to not obstruct visibility of drivers and pedestrians. Curb planter extensions are implemented to assist with wayfinding by providing clearly marked circulation points, shortening crosswalks, and discouraging crossing between vehicles. Materials and finishes are standard.

  Color and finish variation via integral and topically applied color, broom, stamped, and sandblasted concrete, are introduced to the walkways and pavement at the main frontage drop-off between the Administration Office and Gymnasium. Design articulation of the paving flatwork continues between the classroom building clusters and within the campus courtyard main quad. The layout of the walkways allows direct access for students, staff, and maintenance needs with primary and secondary routes. Contemporary forms provide flow, movement, avoid monolithic appearances, create spaces/outdoor rooms, and introduce visual interest from ground and the second level corridor views down into the courtyard.

  The planter area shapes, sizes, corner radii, and similarly the articulated pavement design around the planter areas may be simplified to three to four standard shapes rotated to still provide a varied appearance.

Proper lighting should also be provided for safety, security, and per code requirements in the parking areas and outdoor spaces of the campus. Campus events may extend or occur after daylight hours and are to be considered and coordinated, as necessary.

- **Performance Stage and Event Lawn**

  The area of the elevated performance and event stage is approximately 1,700 sq. ft. including steps and accessible ramp, with code compliant hand and guard railings (as required), sloped up to the stage level. This courtyard centerpiece also doubles as a student gathering flexible space during non-event times where furniture can be placed for an outdoor classroom and study or lounge area. Lighting and electrical points for the campus' audiovisual needs shall be provided and coordinated with the project's architects and engineers. A shade and weather structure over the stage is recommended as the budget allows.

- **Built-in Seating Walls**

  Cast in place or precast concrete seating walls are durable and long-lasting. The seat or bench walls are clean and simple in form, with no voids or crevasses throughout all surfaces and between seating wall sections where trash can collect, be hidden, or items can be stuffed into. Strategically located, the seating walls help guide circulation and minimize students cutting through planter areas, damaging plants, and irrigation equipment, compacting soil, impacting drainage, impeding plant growth and recovery.

  Planting soil can be bermed up against seat walls along planters, creating slight elevation change and dynamic visual interest in a flat space. As the wall structure is robust to incorporate power points with lockable covers in select locations for campus events. It's recommended that the top seating surface is very smooth or polished for ease of cleaning if marked or vandalized.

  The length and radii for the seat walls along the geometric shaped planters may be simplified yet should still provide a varied appearance, strategically placed barriers to minimize pathways cutting through planters, and provide vertical edges for varied size group gatherings.

- **Furniture Fixtures and Equipment (FF&E)**

  All furniture fixtures and equipment must be outdoor rated, sturdy. and robust. Construction should be simple with easily replaceable and readily available components if damage occurs. Consideration should be given to modular, footing anchors, lockability, and the weight of the furniture pieces to minimize or avoid unwanted movement.

  The appearance/form of furniture and fixtures is recommended to be inspiring and creative providing interest and color in the outdoor educational environment. Electrical points and lighting fixtures to be coordinated with the project's architect and engineers.

- **Installation and Maintenance**

  Equipment or personnel shall not move outside the designated construction zone. The Contractor will be responsible for all materials and labor for the repair of all unauthorized vegetation impacts. Damaged vegetation replacement will occur onsite and require

maintenance and monitoring comparable to the landscape requirements and will include appropriate native or acceptable species selection from the Plant Schedule or an approved list in the Guam Landscaping Guidelines.

The landscape design is intended to be simple with ease of maintenance in mind. The shrub locations and layout, groundcover beds, and edging of the lawn/turf area are convenient for access and mowing. The selection of the trees and shrubs, and the composition of groundcovers attempts to minimize water usage and maintenance efforts.

Provide complete landscape maintenance, including but not limited to, lawn mowing, edging, tree pruning, pest and disease inspection/treatment, debris removal, monitoring and adjusting of temporary irrigation system watering/schedule, natural grass area weed control, fertilizing, debris removal, dead planting replacement and tree stake and tie adjustments, throughout the 365-day landscape establishment and maintenance period. If landscape installation is done in phases, each phase shall have a 365-day landscape establishment and maintenance period once the premaintenance inspection for that phase is approved. At the completion of the landscape establishment and maintenance period the landscape subcontractor must install two double bag watering systems per tree and fill each watering bag with water. Each must be able to hold approx. twenty-gallons of water for a total of eighty-gallons of water per tree. One week prior to the completion of the landscape establishment and maintenance period and after the removal of the temporary irrigation system the landscape subcontractor must aerate all natural grass areas to a minimum depth of four-inches using a hollow tine aerator.

Maintenance after plant installation should be frequent and thorough for the successful establishment of the plants. The condition of new plantings should be checked regularly. Maintenance includes watering, weeding, cultivating, fertilizing, addressing disease and insect control, and employing selective pruning to remove dead, dying, or broken branches.

Root barriers along pavement edges to prevent tree roots from uplifting the paving are specified in strategic locations.

An electronic PDF copy of an ongoing landscape planting and irrigation operation and maintenance manual and schedule to be provided to the Owners for continuing reference including but not limited to mowing, trimming/pruning, fertilization, adding topsoil, aeration, green waste mitigation.

- **Irrigation (Outdoor Water Use for Planting)**

  During the landscape establishment and maintenance period, provide a temporary on-grade irrigation system utilizing water-conserving, highly efficient, automatic irrigation equipment with a reduced pressure backflow preventer, rain shut off device and controller to irrigate all landscaped areas with plantings.

  Where practical, provide a separate irrigation system for trees from other plant material (natural grass). At the completion of the landscape establishment and maintenance period, the temporary irrigation system will be removed.

  Any damage to the new landscape due to the presence and removal of the temporary irrigation system will be replanted at no cost to the Owner.

A temporary irrigation system shall be provided to support establishment for all new planting areas for the recommended duration of a one-year maintenance period. Although a permanent automatic irrigation system is designed for the main quad courtyard and areas adjacent to the building ring, a pressurized irrigation mainline system is strategically located within all remaining planted areas including all athletic fields for intermittent, seasonal, and spot treatment watering as needed during any dry periods, and for washdown maintenance of paved and hardscape areas. The mainline system will include quick coupler valves and or hose-bibs in sub-grade valve boxes and spaced at approximate 50-foot intervals.

A watering schedule will be required to be submitted for approval prior to the start of the landscape establishment and maintenance period indicating how watering will be scheduled, accounting for seasonal changes in rain amounts and air temperatures (provide rain gauge), to assist the newly installed plants to transition from everyday watering to no water by the end of the maintenance period. The intent is to assist the new plant material in acclimating to natural rain fall as a future source of water. The watering schedule will include infrequent deep watering periods to promote deep root structures to assist plant material through periods of drought.

The Main Quad Courtyard irrigation system incorporates rainwater catchment systems (designed by the project's civil engineer) for building re-use of roof runoff and greywater.

- **Plant Material List**

Botanical Name	Common Name
Small Tree	
Cordia subcordata	Niyoron
Jatropha integerrima	Jatropha
Medium Canopy Tree	
Aglaia mariannensis	Mapunao
Cassia fistula	Golden Shower Tree
Filicium decipiens	Fern Tree
Plumeria obtusa	Singapore Plumeria
Large Canopy Tree	
Barrington asiatica	Fish Kill Tree
Calophyllum inophyllum	Daok
Hernandia sonora	Nonak
Clumping Palm	
Ptychosperma macarthurii	Macarthur Palm
Shrubs	
Cordyline fruticosa 'Emerald Green'	Emerald Green Ti Plant
Cordyline fruticosa 'Red'	Red Ti Plant
Crinum asiaticum	Crinum Lily
Pseuderanthemum reticulatum	Golden 'El Dorado'

- **Ground Covers**

Cuphea hyssopifolia	False Heather
Dianella tasmanica 'Variegata'	Variegated Flax Lily
Ficus microcarpa 'Green Island'	Dwarf Wax Ficus
Microsorum scolopendria 'Lauae Iki'	Lauae Iki Fern
Monstera deliciosa	Monstera
Vitex roundifolia	Pohinahina

- **Lawn / Grass**

Cynodon dactylon	Bermuda Grass

STRUCTURAL DESIGN NARRATIVE

GENERAL

CODES AND STANDARDS

Recommend utilizing the most current Building codes as follows:

- (IBC 2021) or the latest edition of the International Building Code (IBC) for the Design Build Contract.
- American Society of Civil Engineers (ASCE) 7-16, Minimum Design Loads for Buildings and Other Structures is still applicable.
- American Concrete Institute (ACI) 318-19, Building Code Requirements for Structural Concrete and Commentary
- American Institute of Steel Construction (AISC), Sixteenth Edition, Steel Construction Manual
- Steel Joist Institute (SJI), The 45th Edition
- American Society of Testing and Materials (ASTM)
- PCI Design Handbook, 7th Edition – American Concrete Institute

MATERIALS FOR CONSTRUCTION

Concrete

- All cast-in-place concrete will have a 28-day minimum compressive strength of 4,000 psi.
- All Pre-Cast Concrete will have a 28-day minimum compressive strength of 5,000 psi.

Reinforcing Steel

- Reinforcing steel shall comply with ASTM A706/ASTM A706M, Grade 60. ASTM A615/A615M Grade 60 shall be permitted if:
  - The actual yield strength based on mill tests does not exceed F_y by more than 18,000 psi; and
  - The ratio of the actual tensile strength to the actual yield strength is not less than 1.25.
  - The minimum elongation in 8 inches shall be at least 14 percent for bar sizes No. 3 through No. 6, at least 12 percent for bar sizes No. 7 through No. 11 and at least 10 percent for bar sizes No. 14 and No. 18.

Steel Joists/Joist Girders

- Steel joists shall conform to the latest standard specification for open web joists/joist girders of the (SJI) Steel Joist Institute.

STRUCTURAL SYSTEMS

The buildings listed below follow a typical structural system approach:

- Classroom Buildings
- Administration Building and Library
- Cafeteria
- Gymnasium
- Auditorium
- GCC Building
- JROTC Building and Firing Range
- Credit Recovery Building
- Press Box
- Generator Building
- Pump Buildings
- Canopies and Covered Walkway
- Miscellaneous Structures: Dug-Out, Bus-Stop, Guard-Post
- Sports Field Lighting

The typical structural systems follow:

Foundations – The building may be supported using conventional reinforced concrete continuous wall spread footings and individual column spread footings to support wall and column loads, respectively. Footings should bear on existing limestone subgrade or on a layer of well-compacted sand and gravel fill. The continuous footing would be able to span and bridge over potential soft soil pockets, if encountered. There may be a requirement for tie/grade beams on certain buildings. Foundation criteria and selection will depend on the soil investigation findings and recommendations from a Geotechnical Engineer. (Preliminary Geotechnical Recommendations dated 22 June 2022 are provided for reference.)

Ground Slab – Building floor slabs may be a reinforced concrete slab on grade. Large expansive areas will require construction and separation joints to control cracking.

Walls – The main support walls may be doubly, or singly special reinforced cast-in-place or precast concrete walls designed as vertical load-bearing shear walls. Precast/Prestressed concrete walls designed as vertical load-bearing shear walls may be considered.

Frames – Open-web steel joists/joist girders may support floor and roof loads. Conventional Cast-in-Place Reinforced Concrete Beam-Column Frames may be considered were appropriate to meet span requirements.

Floor & Roof Slab – Building elevated floor and roof slabs may consist of a composite metal deck with reinforced concrete topping supported by open-web steel joists. Precast/Prestressed Concrete Double Tees or Precast/Prestressed Concrete Planks with

reinforced concrete may be considered were appropriate to meet span requirements. The topping slabs provide a rigid diaphragm for the transfer of lateral loads to the seismic and lateral resisting elements of the structure. Chord steel is located at the slab perimeters where required. Conventional Cast-in-Place Reinforced Concrete Slabs may be used on shorter spans and where appropriate.

Seismic - Reinforced Concrete (Cast-in-Place or Precast/Prestressed) shear walls may provide lateral resistance to seismic loads. The reinforced concrete slabs and concrete toppings on elevated floor and roof slab diaphragms may be designed to distribute loads to shear walls.

Wind - The reinforced concrete (Cast-in-Place or Precast/Prestressed) walls will provide lateral wind load resistance for both in-plane and out-of-plane shear and bending, respectively.

DESIGN FLOOR LOADS

Live Loads (minimum):

- Classrooms – 40 psf
- Corridors above first floor – 80 psf
- 1st Floor Corridors – 100 psf
- Offices – 50 psf
- Cumulative folder file room – 150 psf
- Library Stack Rooms – 150 psf
- Lobbies and 1st Floor corridors – 100 psf
- Reading Rooms – 60 psf
- Assembly areas and Theatres – fixed seats – 60 psf
- Assembly areas and Theatres – stage floors – 150 psf

Dead Loads:

- Equipment Floor Load – 100 psf minimum or electrical equipment weight plus equipment pads, whichever is greater.
- Floor Finish Weight – Dictated by the selected Architectural finishes.

DESIGN ROOF LOADS

Live Loads (minimum):

- Minimum 20 psf.

Dead Loads:

- HVAC Equipment Weight – The roof is designed to support all HVAC equipment and be supported directly off the roof framing system.
- Solar Panels – Roof shall be designed to support the Solar panel system and associated framing.

- Metal Deck – 2.0 psf
- Membrane – 1.0 psf
- Insulation – 2.0 psf
- Mechanical + Electrical – 3.0 psf
- Fire Protection – 2.0 psf
- Misc. Dead – 10 psf

STRUCTURAL BASIS OF DESIGN

Chord steel is located at the slab perimeters where required.

Seismic - Reinforced concrete shear walls will provide lateral resistance to seismic loads. The reinforced concrete topping elevated floor and roof slab diaphragms will be designed to distribute loads to shear walls.

Wind - The reinforced concrete walls will provide lateral wind load resistance for both in-plane and out-of-plane shear and bending, respectively.

CLASSROOM BUILDINGS:

Building Description

The new Classrooms will consist of two-story buildings measuring 255'-0" by 100'-0" for A Wing West, 195'-0" by 110'-0" for A Wing East, and 266'-0" by 110'-0" for B Wing. These classroom buildings are connected through corridors. The building structural system is a Special Reinforced Concrete Bearing and Shear Wall system with composite metal decks with reinforced concrete topping elevated floor and roof slabs supported by open-web steel joists. The building is supported on continuous wall spread footings and individual column spread footings or other foundation types as recommended by the Geotechnical Engineer. (Preliminary Geotechnical Recommendations dated 22 June 2022.)

DESIGN FLOOR LOADS

Live Loads (minimum):

- Classrooms – 40 psf
- Corridors above first floor – 80 psf
- 1st Floor Corridors – 100 psf

Dead Loads:

- Equipment Floor Load – 100 psf minimum or electrical equipment weight plus equipment pads, whichever is greater.
- Floor Finish Weight – Dictated by the selected Architectural finishes.

DESIGN ROOF LOADS

Live Loads (minimum):

- Minimum 20 psf.

Dead Loads:

- HVAC Equipment Weight – The roof is designed to support all HVAC equipment and be supported directly off the roof framing system.
- Solar Panels – Roof shall be designed to support the Solar panel system and associated framing.

Dead Loads (for joist design):

- Metal Deck – 2.0 psf
- Membrane – 1.0 psf
- Insulation – 2.0 psf
- Mechanical + Electrical – 3.0 psf
- Fire Protection – 2.0 psf
- Misc. Dead – 10 psf

ADMINISTRATION BUILDING and LIBRARY:

Building Description

The new Administration and Library building will be a two-story building measuring 60'-0" by 159'-0". The Administration building has various spaces including offices, nurse's area, faculty lounge, conference rooms, storage rooms, cumulative folder file room, and common areas that will be located on the 1st Floor. The library contains a book stack and reading area, computer laboratory, storage rooms, and offices which are all located on the 2nd Floor. The building structural system is a Special Reinforced Concrete Shear Wall building frame system with a composite metal deck with reinforced concrete topping elevated floor and roof slabs supported by open-web steel joists and girders. The building is supported on continuous wall spread footings and individual column spread footings or other foundation types as recommended by the Geotechnical Engineer. (Preliminary Geotechnical Recommendations dated 22 June 2022.)

DESIGN FLOOR LOADS

Live Loads (minimum):

- Offices – 50 psf
- Cumulative folder file room – 150 psf
- Library Stack Rooms – 150 psf
- Lobbies and 1st Floor corridors – 100 psf
- Corridors above 1st Floor – 80 psf
- Reading Rooms – 60 psf

Dead Loads:

- Floor Finish Weight – Dictated by the selected Architectural finishes.
- Equipment Floor Load – 100 psf minimum or electrical equipment weight plus equipment pads, whichever is greater.

DESIGN ROOF LOADS

Live Loads (minimum):

- Minimum 20 psf.

Dead Loads:

- HVAC Equipment Weight – The roof is designed to support all HVAC equipment and be supported directly off the roof framing system.
- Solar Panels – The roof is designed to support the Solar panel system and associated framing.

Dead Loads (for joist design):

- Metal Deck – 2.0 psf
- Membrane – 1.0 psf
- Insulation – 2.0 psf
- Mechanical + Electrical – 3.0 psf
- Fire Protection – 2.0 psf
- Misc. Dead – 10 psf

CAFETERIA:

Building Description

The new Cafeteria will be a single-story building measuring 120'-0" by 114'-0". Half of the building area will consist of dining rooms, while the remaining half will include the kitchen, storage rooms, serving station, pantry, walk-in refrigerator and freezer, and equipment room. The building structural system is a Special Reinforced Concrete Bearing and Shear Wall system with a composite metal deck with reinforced concrete topping roof slab supported by open-web steel joists. The building foundation system will consist of continuous wall spread footings with individual column spread footings or other foundation types as recommended by the Geotechnical Engineer. (Preliminary Geotechnical Recommendations dated 22 June 2022.)

DESIGN FLOOR LOADS

Live Loads (minimum):

Dining Rooms – 100 psf

Dead Loads:

- Floor Finish Weight –Dictated by the selected Architectural finishes.
- Equipment Floor Load – 100 psf minimum or electrical equipment weight plus equipment pad, whichever is greater.

DESIGN ROOF LOADS

Live Loads (minimum):

- Minimum 20 psf.

Dead Loads:

- HVAC Equipment Weight – The roof is designed to support all HVAC equipment and be supported directly off the roof framing system.

Dead Loads (for joist design):

- Metal Deck – 2.0 psf
- Membrane – 1.0 psf
- Insulation – 2.0 psf
- Mechanical + Electrical – 3.0 psf
- Fire Protection – 2.0 psf
- Misc. Dead – 10 psf

GYMNASIUM:

Building Description

The new Gymnasium will be a single-story building measuring 180' – 0" by 168' – 0", with various fitness and locker rooms located along the North and East sides of the main gymnasium respectively. The building structural system is a Special Reinforced Concrete Bearing and Shear Wall system with a composite metal deck with reinforced concrete topping roof slab supported by open-web steel joists. The building foundation system will consist of continuous spread footings to support walls or other foundation types as recommended by the Geotechnical Engineer. (Preliminary Geotechnical Recommendations dated 22 June 2022.)

DESIGN FLOOR LOADS

Live Loads (minimum):

- Gymnasiums – Main Floor and Balconies: 100 psf
- Bleachers – 100 psf
- Platforms (assembly) – Portable Stage – 100 psf

Dead Loads:

- Equipment Floor Load – 100 psf minimum or electrical equipment weight plus equipment pad, whichever is greater.
- Floor Finish Weight – Dictated by the selected Architectural finishes.

DESIGN ROOF LOADS

Live Loads (minimum):

- Minimum 20 psf.

Dead Loads:

- HVAC Equipment Weight – The roof is designed to support all HVAC equipment and be supported directly off the roof framing system.
- Solar Panels – The roof is designed to support the Solar panel system and associated framing.

Dead Loads (for joist design):

- Metal Deck – 2.0 psf
- Membrane – 1.0 psf
- Insulation – 2.0 psf
- Mechanical + Electrical – 3.0 psf
- Fire Protection – 2.0 psf
- Misc. Dead – 10 psf

AUDITORIUM:

Building Description

The new Auditorium will be a one-story building measuring 59'-0" by 134'-0", with a stepped fixed seating area overlooking the stage. The Auditorium will consist of an elevator room, dressing rooms, storage area, lobby, office, and vestibules. The building system is a Special Reinforced Concrete Bearing and Shear Wall structural system with a composite metal deck with reinforced concrete topping elevated floor and roof slabs supported by open-web steel joists. The building is supported on continuous wall spread footings or other foundation types as recommended by the Geotechnical Engineer. (Preliminary Geotechnical Recommendations dated 22 June 2022.)

DESIGN FLOOR LOADS

Live Loads (minimum):

- Assembly areas and Theatres – fixed seats – 60 psf
- Assembly areas and Theatres – stage floors – 150 psf
- 1st Floor corridors – 100 psf

Dead Loads:

- Floor Finish Weight –Dictated by the selected Architectural finishes.

DESIGN ROOF LOADS

Live Loads (minimum):

- Minimum 20 psf.

Dead Loads:

- HVAC Equipment Weight – The roof is designed to support all HVAC equipment and be supported directly off the roof framing system.
- Solar Panels – The roof is designed to support the Solar panel system and associated framing.

Dead Loads (for joist design):

- Metal Deck – 2.0 psf
- Membrane – 1.0 psf
- Insulation – 2.0 psf
- Mechanical + Electrical – 3.0 psf
- Fire Protection – 2.0 psf
- Misc. Dead – 10 psf

GCC BUILDING:

BUILDING DESCRIPTION

The new GCC Building will be a one-story building measuring 260'-0" by 75'-0" east side and 248'-0" by 58'-0" west side. The building structural system is a Special Reinforced Concrete Bearing and Shear Wall system with a composite metal deck with reinforced concrete topping elevated floor and roof slabs supported by open-web steel joists. The building is supported on continuous wall spread footings and individual column spread footings or other foundation types as recommended by the Geotechnical Engineer. (Preliminary Geotechnical Recommendations dated 22 June 2022.)

DESIGN FLOOR LOADS

Live Loads (minimum):

- First-floor corridors – 100 psf
- Classrooms – 40 psf

Dead Loads:

- Equipment Floor Load – 100 psf minimum or electrical equipment weight plus equipment pad, whichever is greater.
- Floor Finish Weight –Dictated by the selected Architectural finishes.

DESIGN ROOF LOADS

Live Loads (minimum):

- Minimum 20 psf.

Dead Loads:

- HVAC Equipment Weight – The roof is designed to support all HVAC equipment and be supported directly off the roof framing system.

Dead Loads (for joist design):

- Metal Deck – 2.0 psf
- Membrane – 1.0 psf
- Insulation – 2.0 psf
- Mechanical + Electrical – 3.0 psf
- Fire Protection – 2.0 psf
- Misc. Dead – 10 psf

JROTC BUILDING:

Building Description

The new JROTC building will be a one-story building measuring 177' – 0" by 119' – 0", with various classrooms as well as an indoor firing range for airsoft guns and archery. The building structural system is a Special Reinforced Concrete Bearing and Shear Wall system with a composite metal deck with reinforced concrete topping elevated floor and roof slabs supported by open-web steel joists. The building is supported on continuous wall spread footings and individual column spread footings or other foundation types as recommended by the Geotechnical Engineer. (Preliminary Geotechnical Recommendations dated 22 June 2022.)

DESIGN FLOOR LOADS

Live Loads (minimum):

- Classrooms – 40 psf
  1st Floor corridors – 100 psf

Dead Loads:

- Floor Finish Weight –Dictated by the selected Architectural finishes.

DESIGN ROOF LOADS

Live Loads (minimum):

- Minimum 20 psf.

Dead Loads:

- HVAC Equipment Weight – The roof is designed to support all HVAC equipment and be supported directly off the roof framing system.

Dead Loads (for joist design):

- Metal Deck – 2.0 psf
- Membrane – 1.0 psf
- Insulation – 2.0 psf
- Mechanical + Electrical – 3.0 psf
- Fire Protection – 2.0 psf
- Misc. Dead – 10 psf

CREDIT RECOVERY BUILDING:

Building Description

The new Credit Recovery building is a one-story building measuring 80' – 0" by 96' – 0", with various classrooms, office, storage, telecom, and electrical room. The building structural system is a Special Reinforced Concrete Bearing and Shear Wall structural system with reinforced concrete topped composite metal deck elevated floor and roof slabs supported by open-web steel joists. The building is supported on continuous wall spread footings or other foundation types as recommended by the Geotechnical Engineer. (Preliminary Geotechnical Recommendations dated 22 June 2022.)

DESIGN FLOOR LOADS

Live Loads (minimum):

- Classrooms – 40 psf
- 1st Floor Corridors – 100 psf

Dead Loads:

- Equipment Floor Load – 100 psf minimum or electrical equipment weight plus equipment pad, whichever is greater.
- Floor Finish Weight –Dictated by the selected Architectural finishes.

DESIGN ROOF LOADS

Live Loads (minimum):

- Minimum 20 psf.

Dead Loads:

- HVAC Equipment Weight – The roof is designed to support 120 psf in isolated areas for the anticipated HVAC equipment and be supported directly off the roof framing system
- Solar Panels – The roof is designed with an additional 30 psf of superimposed dead load to support the Solar panel system and associated framing.

Dead Loads (for joist design):

- Metal Deck – 2.0 psf
- Membrane – 1.0 psf
- Insulation – 2.0 psf
- Mechanical + Electrical – 3.0 psf
- Fire Protection – 2.0 psf
- Misc. Dead – 10 psf

PRESS BOX:

Building Description

The new Press Box is a two-story building measuring 48' – 6" by 22' – 0". The building structural system is a Reinforced Concrete Bearing and Shear Wall system with a monolithic cast-in-place reinforced concrete roof slab. The building is supported on continuous spread footings or other foundation types as recommended by the Geotechnical Engineer. (Preliminary Geotechnical Recommendations dated 22 June 2022.)

DESIGN FLOOR LOADS

Dead Loads:

- Equipment Floor Load – 100 psf minimum or electrical equipment weight plus equipment pad, whichever is greater.

DESIGN ROOF LOADS

Live Loads (minimum):

- Minimum 20 psf.
- Third-Floor roof was designed for 50 psf to account for roof-top recreational gathering.

PUMP & GENERATOR BUILDING:

Building Description

The new Pump and Generator building is a single-story Reinforced Concrete Bearing and Shear Wall structural systems with a monolithic cast-in-place reinforced concrete roof slab. The buildings are supported on continuous spread footings or other foundation types as recommended by the Geotechnical Engineer. (Preliminary Geotechnical Recommendations dated 22 June 2022.)

DESIGN FLOOR LOADS

Dead Loads:

- Equipment Floor Load – 100 psf minimum or electrical equipment weight plus equipment pad, whichever is greater.

DESIGN ROOF LOADS

Live Loads (minimum):

- Minimum 20 psf.

Miscellaneous Structures: Multi-Purpose Field "Dug Out"

Building Descriptions

The Multi-Purpose field "Dug-Out" is a 3-sided-wall structure with a 30' – 0" long wall, 8'-0" long walls on each side. The structural system is a Reinforced Concrete, Singly Reinforced Wall system with a monolithic cast-in-place reinforced concrete roof slab. The building is supported on continuous spread footings or other foundation types as recommended by the Geotechnical Engineer. (Preliminary Geotechnical Recommendations dated 22 June 2022.)

DESIGN FLOOR LOADS

Dead Loads:

- Floor Finish Weight –Dictated by the selected Architectural finishes.

DESIGN ROOF LOADS

Live Loads (minimum):

- Minimum 20 psf.

Wind Loads (minimum):

- 92 psf (uplift)

Canopies and Covered Walkways:

Building Descriptions

The Canopies and Covered Walkways are Reinforced Concrete framing systems with suspended roof slabs supported by reinforced concrete beams and columns. The structural system uses moment resisting frames, reinforced concrete columns and beams to support loads on the structure. The buildings are supported on individual spread footings or other foundation types as recommended by the Geotechnical Engineer. (Preliminary Geotechnical Recommendations dated 22 June 2022.).

DESIGN ROOF LOADS

Live Loads (minimum):

- Minimum 20 psf.

Miscellaneous Structures: Bus-Stop

Building Descriptions

The Bus-Stop is a Reinforced Concrete framing system with 8'-4" cantilevered roof slab supported by reinforced concrete beams and columns. The structural system uses reinforced concrete columns and beams to support the governing uplift wind load on the structure. The building is supported on individual spread footings or other foundation types as recommended by the Geotechnical Engineer. (Preliminary Geotechnical Recommendations dated 22 June 2022.)

DESIGN FLOOR LOADS

Dead Loads:

- Floor Finish Weight –Dictated by the selected Architectural finishes.

DESIGN ROOF LOADS

Live Loads (minimum):

- Minimum 20 psf.

Wind Loads (minimum):

- 67 psf (uplift)

Miscellaneous Structures: Guard Post

Building Descriptions

The new Guard Post is a single-story building measuring 9'-4" by 9' – 4". The building structural system is a Reinforced Concrete Bearing and Shear Wall system with a monolithic cast-in-place reinforced concrete roof slab. The building is supported on continuous spread footings or other foundation types as recommended by the Geotechnical Engineer. (Preliminary Geotechnical Recommendations dated 22 June 2022.)

DESIGN FLOOR LOADS

Floor Live Loads:

- Minimum 10psf to account for persons assigned to the structure

Dead Loads:

- Floor Finish Weight –Dictated by the selected Architectural finishes.

DESIGN ROOF LOADS

Live Loads (minimum):

- Minimum 20 psf.

Sports Field Lighting

Descriptions

The Sports Field Lighting are pre-engineered 90'-0" high Reinforced Concrete poles. The poles have a minimum embedment depth of 23'-0". The sports field lighting pole foundations are concrete drilled piers or other foundation types as recommended by the Geotechnical Engineer. (Preliminary Geotechnical Recommendations dated 22 June 2022.)

DESIGN FLOOR LOADS

Dead Loads:

- Weight of the lighting system, and poles

DESIGN ROOF LOADS

Wind Loads (minimum):

- 21.42 kips acting on the pole and light fixtures

Mechanical HVAC System

GENERAL MECHANICAL SCOPE OF WORK

The new Simon Sanchez High School Building will be provided with high efficiency Mechanical HVAC System. The work will include of Designing and providing construction documents for new air conditioning and ventilation systems.

This statement of work (SOW) documents will be used as a reference requirement for the DB Contractor to provide constructions documents complete with approved design and construction drawings, specifications, permit and clearances, equipment, materials, architectural/engineering design services, and other necessary documents to complete the project.

CRITERIA AND REFERENCE

Design shall be in accordance with the following codes, standards, and regulations. If dates are not given for reference standards or criteria, the latest edition is to be used. The more stringent shall govern where discrepancies occur.

- ASHRAE 15 Safety Standard for Refrigeration Systems, 2016
- ASHRAE 34 Designation and Safety Classification of Refrigerants, 2016
- ASHRAE 62.1 Ventilation for Acceptable Indoor Air Quality, 2016
- ASHRAE 90.1 Energy Standard for Buildings Except Low-Rise Residential Buildings, 2016
- ASHRAE Handbook, Fundamentals, 2017
- ASHRAE Handbook, HVAC Applications, 2015
- IMC International Mechanical Code, 2009
- IPC International Plumbing Code, 2009
- IFC International Fire Protection Code, 2009
- IBC International Building Code, 2009
- NFPA Standards
- SMACNA HVAC Duct Construction Standards, Metal and Flexible, 2005
- SMACNA Round Industrial Duct Construction Standards, 2013
- Guam Tropical Energy Code, 2017 Edition

AIR CONDITIONING AND VENTILATION SYSTEM

Air conditioning and ventilation systems will be provided for the entire building in accordance with the requirements of Guam Local Codes and GDOE Specification dated July 04, 2017. Heat load calculation will be provided using computer programs in accordance with calculation procedures described in the ANSI/ASHRAE/ACCA standard 183.

Outside Conditions (Cooling 1.0%)

Summer	88	Degrees F dry bulb	Winter	N/A	Degrees F
	31	Degrees C dry bulb		N/A	Degrees C
	79	Degrees F wet bulb			
	26	Degrees C wet bulb			

Inside Conditions (Offices, Classroom, Gymnasium, Auditoriums, GCC)

Summer	72-78	Degrees F dry bulb	Winter	N/A	Degrees F
	26	Degrees C dry bulb		N/A	Degrees C
	50 to 60%	Percent RH			

Design calculations will be provided to size and select the air-conditioning and ventilation systems for the entire facilities to meet the system requirements from GDOE energy efficiency requirements of Guam Tropical Energy Code and Building Sustainability.

Ventilation rates will be calculated and provided with systems in accordance with ASHRAE Standard 62.1, *Ventilation for Acceptable Indoor Air Quality*.

Provide exhaust ventilation for the restroom, storage, and janitor closet. The make-up air for the bathroom will be supplied from the administration area air-conditioning system. Provide exhaust ventilation system for the laboratory fume hood and laboratory room in GCC Class.

Provide balancing dampers for all supply, return, exhaust and make-up air ductwork systems serving the building for air balancing and distribution. Provide smoke detectors in the air supply distribution system in reference to international code and standard.

Provide each zone with its own limited range of control, as allowed by the control system central workstation.

SPECIFIC BUILDING AIRCONDITIONING AND VENTILATION SYSTEM DESCRIPTION

Classrooms and GCC:

Provide Variable Refrigerant Flow (VRF) for all classrooms. The Fan Coil Unit will be constant volume ducted type with ducted return. The FCU will be located at the corridor closet that serve two classroom each FCU. The unit will be provided with UV Light to mitigate any molds and bacteria at the cooling coil. The classrooms will also be providing with Dedicated Fresh Air Unit that will be located at Mechanical room. The Dedicated Fresh Air Unit will be a modular ducted type Air Handling unit that will be designed to treat the outside air to be supplied inside the zone area. The DOAS will also be provided with reheat to provide comfort temperature and reduce humidity. Each floor will have its own Dedicated Fresh Air Unit and directly supplied at each classroom. The corridor will also be provided with an independent air-conditioning system. The corridor air-conditioning unit will be constant volume Floor mounted AHU. The Mechanical room will also be provided with air-conditioning supplying from corridor ac. The Air-cooled condensing unit (ACCU) will be located at the mechanical yard at the ground level provided with concrete breeze block for typhoon protection. The option if permitted by the GDOE is to locate the ACCU at the rooftop provided with access for maintenance. The restroom, storage and janitor closet will be provided with exhaust ventilation system. The exhaust fan will be ducted type and located on the roof.

Provide in-line exhaust ventilation systems to Marine Biology, Anatomy, Biology and Physics rooms which will most likely conduct science experiments and activities. Provide exhaust ventilation on the Chemistry Room and Science Preparation rooms. Provide fume hood with couple exhaust fan to extract fumes during testing and preparation activities in the chemistry room. Provide DOAS system serving the chemistry room for air pressurization and balancing. Provide rangehood to serve within the SPED Classroom during school activity.

The GCC Classrooms will be zone in accordance with specific classes. The air-conditioning system will be DX Ducted Constant Volume Split Type Floor Mounted Air-handling Unit. The fresh air will be supplied through Central Dedicated Outdoor Air Unit (DOAS). The GCC Building with Automotive class workshop will be provided with an Industrial exhaust ventilation system. Battery charging station will be provided with explosion proof motor and hydrogen sensor for exhaust ventilation. The carpentry shop will be provided with central dust control and exhaust ventilation system. The laboratory classrooms will also be provided with Fume Hood and exhaust ventilation. The compressor room will be provided with exhaust ventilation. Provide ducted exhaust ventilation systems and exhaust fans to serve the restrooms and janitor closet. Provide in-line centrifugal exhaust fans that are certified to meet AMCA 210 for the Men's & Women's

restroom, Staff restroom, Mock room & Compressor room. Provide roof exhaust ventilator for Automotive Room and Carpentry Workshop for ventilation. Provide ceiling/bathroom exhaust fan to serve the janitor closet. Provide Kitchen Ventilation to Prostart Kitchen room. Provide dryer exhaust duct to serve in the laundry area.

Administration Building

Provide Ducted Type Variable Volume Air Handling System with Dedicated Outside Air Unit at the first floor of the Administration Building. The air-conditioning system is direct expansion. Each room or zone will be provided with a Variable Air Volume Box (VAV) located inside ceiling and with zone control thermostat. The AHU unit will be Variable Air Volume and quantity to be determined.

Provide Package Type Ducted Roof Top Air Conditioning System directly coupled with Dedicated Outside Air Unit on the second floor of Administration building. The Package Roof Top (PCU) will be located on the roof provided with roof curb with stainless steel sheet metal flashing. The PCU unit will be Variable Air Volume and quantity to be determined.

Provide ducted exhaust ventilation systems and exhaust fans to serve the Men & Women restrooms, Lobby Toilet, Staff restrooms, Isolation toilet rooms, Bed Area and janitor closet. Provide in-line centrifugal exhaust fans that are certified to meet AMCA 210 for the Staff restroom on the second floor. Provide ceiling exhaust fan for the Men & Women restroom, Lobby Toilet, Isolation room, Bed Area, and Janitor Closet.

Main Entrance

Provide Variable Refrigerant Flow (VRF) Air conditioning system for Main Entrance Building. The Fan Coil Unit will be a wall mounted type with a room-controlled thermostat located in each room for HR, SRO, Storage, & Ticket Booth room. The ACCU unit will be located on the roof provided with roof curb, equipment concrete pad, vibration isolators, SSTL. – tie down, supports and other related accessories.

Gymnasium Building

Provide Package Type Ducted Roof Top Air Conditioning System directly coupled with Dedicated Outside Air Unit. The Package Roof Top (PCU) will be located on the roof provided with roof curb with stainless steel sheet metal flashing. The PCU unit will be Variable Air Volume and quantity to be determined. Provide ducted exhaust ventilation systems and exhaust fans to serve the restrooms and janitor closet. Provide in-line centrifugal exhaust fans that are certified to meet AMCA 210 for the Men's & Women's restroom and locker room, family restroom, staff restroom and janitor closet. Provide in-line dryer exhaust booster fan to serve in the laundry area. Provide sidewall exhaust fan for the Solar Water Heater Storage rooms. Provide occupancy

sensor control for the exhaust fans serving the family restrooms and staff rooms. Provide multi-speed exhaust fans serving the Men's & Women's restroom and Locker room.

Cafeteria Building

Provide Package Type Ducted Roof Top Air Conditioning System directly coupled with Dedicated Outside Air Unit. The Package Roof top (PCU) will be located on the roof provided with roof curb with stainless steel sheet metal flashing. The PCU unit will be Variable Volume and quantity to be determined. The main kitchen will be provided with Kitchen Exhaust Ventilation system. Provide air-curtains at the entrance of the dining area to separate the space from any odor, bacteria, or air particles, (vice versa) from the conditioned space to the outdoors. Provide ducted exhaust ventilation systems and exhaust fans to serve the restrooms and janitor closet. Provide in-line centrifugal exhaust fans that are certified to meet AMCA 210 for the Men's & Women's Employee and Customer's restroom and Staff restroom. Provide ceiling/bathroom exhaust fan to serve the janitor closet. Provide occupancy sensor control for the customer's men & women restroom and staff room.

Auditorium Building

Provide Package Type Ducted Roof Top Air Conditioning System directly coupled with Dedicated Outside Air Unit serving the Auditorium Seating and Stage Area. The Package Roof top (PCU) units will be located on the roof provided with roof curb with stainless steel sheet metal flashing. The PCU unit serving the Second Floor Common Area and Backstage will be single zone Variable Air Volume Air Conditioning system. The main auditorium seating area and stage area will be single zone Variable air volume provided with duct silencer. The HVAC system design for the auditorium shall be in compliance with the room's sound/acoustical requirements. The Ground Floor Common Area will be provided with Multi Zone Variable Air Volume Package Type Roof Top Air Conditioning System. Provide ducted exhaust ventilation systems and exhaust fans to serve the restrooms and janitor closet. Provide in-line centrifugal exhaust fans that are certified to meet AMCA 210 for the Men's & Women's restroom, Dressing room & Family restroom. Provide ceiling/bathroom exhaust fan to serve the janitor closet.

JROTC

Provide Package Type Ducted Roof Top Air Conditioning System with Dedicated Outside Air Unit serving the office and common space. The DOAS unit will supply conditioned outside air to the Packaged Roof Top unit and directly to the classrooms and common areas. Provide Variable Refrigerant Flow (VRF) system for the classrooms. The Fan Coil Unit will be constant volume ducted type with ducted return. The FCU will be located at the corridor closet that serves two classrooms with each FCU unit. The unit will be provided with UV Light to mitigate

any molds and bacteria at the cooling coil. The VRF outdoor unit will be located on the roof provided with equipment concrete pad, vibration isolators, SSTL. -tie down, supports and other related accessories. Provide Computer Room Air-Conditioning Unit (CRAC) to the ARMS Room. The CRAC Unit will be DX-Split System with the ACCU located on the roof provided with roof curb with equipment concrete pad, vibration isolators, SSTL. – t down, supports and other related accessories. Provide ducted exhaust ventilation systems and exhaust fans to serve the restrooms, locker rooms and janitor closet. Provide in-line centrifugal exhaust fans that are certified to meet AMCA 210 for the Men's & Women's restroom, Men and Women's Locker room, and Staff restroom. Provide ceiling/bathroom exhaust fan to serve the janitor closet. Provide occupancy sensor control for the staff room.

Credit Recovery

Provide Package Type Ducted Roof Top Air Conditioning System with Dedicated Outside Air Unit serving the common space. The DOAS unit will supply conditioned outside air to the Packaged Roof Top unit and directly to the classrooms. Provide Variable Refrigerant Flow (VRF) system for the classrooms. The Fan Coil Unit will be constant volume ducted type with ducted return. The FCU will be located at the corridor closet that serves two classrooms with each FCU unit. The unit will be provided with UV Light to mitigate any molds and bacteria at the cooling coil. The VRF outdoor unit will be located on the roof provided with equipment concrete pad, vibration isolators, SSTL. -tie down, supports and other related accessories. The Package Roof top (PCU) will be located on the roof provided with roof curb with stainless steel sheet metal flashing. Provide ducted exhaust ventilation systems and exhaust fans to serve the restrooms and janitor closet. Provide in-line centrifugal exhaust fans that are certified to meet AMCA 210 for the Men's & Women's restroom. Provide ceiling/bathroom exhaust fan to serve the janitor closet.

Press Box

Provide Variable Refrigerant Flow (VRF) for Press Box Room and Electrical Room. The Fan Coil Unit will be a wall mounted type with a room-controlled thermostat. The Telecom Room within the Press Box Building will be provided with a Single DX-Split System, with a wall mounted type Fan Coil Unit with a room-controlled thermostat. Provide ducted exhaust ventilation systems and exhaust fans to serve the restrooms and janitor closet. Provide in-line centrifugal exhaust fans that are certified to meet AMCA 210 for the Men's & Women's restroom. Provide ceiling/bathroom exhaust fan to serve the janitor closet.

AIRCONDITIONING AND VENTILATION SYSTEM SPECIFICATION

Provide minimum 6-inch-thick concrete housekeeping pads and vibration isolators under all floor-mounted equipment and Air-cooled condensing unit. Equipment for areas with acoustical requirements shall be provided with spring vibration isolators as required,

Provide the outdoor mechanical HVAC enclosure on the Leeward side of the building opposite of the prevailing or trade winds that carry salt-laden air that would speed up the corrosion process.

All outdoor mechanical equipment HVAC cooling and condenser coils must be provided with a manufacturer approved coating system. The heat transfer rating shall be as installed. For unitary air-conditioning equipment located outdoor including air-cooled condensing units and packaged units, provide a copper tube/aluminum fin condenser coil with a 10,000-hour salt spray test per ASTM B117 standard or better for both condenser coil, cabinet casings, chassis, and internal components and an ultraviolet (UV) topcoat on the coating to prevent UV degradation. Spray-on application is acceptable by a certified applicator for the coating product inside a shop in a controlled environment. No field or job site coating application allowed. Provide with stainless steel fasteners only.

Provide insulated galvanized steel ductwork constructed, braced, reinforced, installed, supported, and sealed in accordance with the IMC and Sheet Metal and Air-Conditioning Contractors' National Association (SMACNA) standards inside conditioned space. All ductwork exposed to outdoor condition or conveying untreated air shall be stainless steel.

Provide insulated, stainless-steel ductwork constructed, braced, reinforced, installed, supported, and sealed per SMACNA standards for outside air ductwork.

Ductwork shall be designed to the pressure class required for the pressure of the air-conditioning system provided. All supply return and outside air ducts shall be sealed to Seal Class A and leak tested if its pressure class is greater than 1-inches of water column.

Provide grilles, registers, and diffusers of aluminum construction. Exterior devices and ducts shall be stainless steel. Laboratory Exhaust ventilation system shall be stainless steel construction Devices shall include bird screens, louvers, dampers, and fasteners.

Provide stainless steel ductwork constructed, braced, reinforced, installed, supported, and sealed per the IMC and SMACNA standard for shower areas and ductwork connecting outside air louvers to Dedicated Outdoor Air or Air-conditioning and Ventilation system.
For equipment’s located on the roof, provide roof curb with stainless steel sheet metal flashing. Provide stainless steel fasteners, bolts & nuts, and stainless-steel tie-down. Provide equipment with vibration isolators, concrete pads (where applicable), supports and other related accessories.

Provide grilles, registers, and diffusers shall be aluminum with stainless steel screws and fasteners. Ceiling diffusers and registers shall be provided with anti-smudge devices. Diffusers, registers, and grilles shall be similar. Supply grilles shall be double deflection type. Provide opposed blade dampers as face of registers, diffusers, and grilles. Do not locate diffusers near operable windows or doors to the exterior to prevent humid air from coming into contact with the diffuser or register resulting in condensation. Where there is potential for outside air to come

into contact with supply terminal devices, use supply air registers or grills. Locate supply registers and diffusers to ensure proper air distribution throughout the entire conditioned space.

EXHAUST SYSTEMS

Provide stainless steel ductwork constructed, braced, reinforced, installed, supported, and sealed in accordance with the IMC and SMACNA standards

Provide ducted exhaust ventilation systems and exhaust fans to serve all ventilated zones of the facility. Provide in-line centrifugal exhaust fans that are certified to meet AMCA 210 and zoned for the building. Provide fans with non-spark construction in the Laboratory rooms, Science rooms, Chemistry rooms, Anatomy rooms, Biology rooms and other classrooms which will conduct testing and experimenting substances and other scientific laboratory activities per school educational program. Provide an in-line dryer booster fan for laundry areas including exhaust ductwork system to vent air to the exterior side of the building.

PACKAGE UNITS

The Dedicated Outside Air Unit (DOAS unit) shall be 100-percent Outside Air Makeup Air-Conditioning Unit to precondition outside air prior to distributing to zone area.

Provide high efficiency Direct Expansion Ducted Package Type Air-conditioning with hot gas by-pass for humidity control. The unit shall be mounted on concrete pad with vibration isolators, Stainless Steel tie-down, anchors, bolts & nuts and other accessories. The Ducted Type Package air-conditioning unit will have capability for humidity control between 50-60% RH.

DIRECT DIGITAL CONTROLS (DDC)

A Direct Digital Control (DDC) will be provided. The control will be following ASHRAE Standard 135 building controller as the main interface for the building control system.

PLUMBING BASIS OF DESIGN

GENERAL

CODES AND STANDARDS

- International Building Code (IBC), 2009 Edition
- International Plumbing Code (IPC), 2009 Edition
- ASHRAE Handbook – HVAC Applications, 2015
- ASPE Plumbing Engineering Design Handbook; Vol. 1 - Fundamentals of Plumbing Engineering 2013 and Vol. 2 - Plumbing Systems 2014
- Guam Tropical Energy Code, 2017 Edition
- Recommended Standards for Wastewater Facilities (Ten State Standards)
- Standard Construction Details – The City of Palm Coast, Florida.
- Manufacturers Brochures and Catalogs

MATERIALS FOR CONSTRUCTION

Domestic water piping, Treated Rainwater/Non-potable water piping

- Water distribution piping shall be Type K, hard drawn copper for underground installations.
- Water distribution piping shall be Type L, hard drawn copper for above ground installations.
- Fittings for copper tubing shall be cast bronze or wrought copper with soldered ends using tin-antimony solder.
- Mineral fiber insulation with vapor barrier shall be provided on domestic hot water supply piping throughout.

Sanitary waste and vent piping

- Underground piping shall be ABS pipes & fittings.
- Aboveground piping shall be hubless, cast iron with heavy duty couplings.
- Pipe insulation shall be provided on all drainage piping that may be subject to condensation.

Liquefied Petroleum Gas (LPG) piping

- Aboveground piping shall be galvanized steel pipe & fittings.
- Underground piping shall be polyethylene pipe.
- Control valves shall be listed for LPG service.

Compressed air piping

- Piping shall be schedule 40, steel, meeting the requirements of ASTM A53/A53M, black or hot-dip zinc coated with threaded fittings

Rainwater/ Storm drainage piping

- Underground piping shall be ABS plastic pipes & fittings.
- Aboveground piping shall be hubless, cast iron with heavy duty couplings.

PLUMBING SYSTEMS

The plumbing system in Simon Sanchez High School consists of all fixtures, potable cold and hot water piping and equipment, piping insulation, water heating equipment, sanitary waste and vent piping systems, and other specialty piping and equipment within 5 feet of the buildings.

The typical plumbing systems are as follow:

Fixtures, Faucets and Fixture Fittings

All plumbing fixtures shall be high efficiency low-flow type fixtures for water conservation. The toilets and shower rooms shall be provided with EPA Water Sense-labeled plumbing fixtures and faucets. ADA compliant fixtures shall be provided as shown in the architectural floor plans. Provide all fittings, connections and accessories required for a complete and usable system.

Gooseneck type lavatory faucets shall be provided in toilet and shower areas. Electric water coolers, refrigerated type with bottle filler, shall be provided in classroom buildings, Cafeteria and Gymnasium. Provide washing machine utility box for clothes washers.

Floor drains and shower drains shall be provided in toilets, kitchen, shops, laundry, science laboratories, shower rooms and cafeteria dining hall. Floor sinks shall be provided for mechanical and utility rooms. Stainless steel, NSF-listed trench drains, and floor sinks shall be provided in Cafeteria kitchen area. Funnel drains shall be provided in FCU rooms and Solar Water Heater rooms.

Utilities

Water supply shall be piped to the buildings from the GWA utility system. The record of Hydrant Flow Test as of November 4, 2020, have 61 psi static, 44 psi residual and 544 gpm flow rate.

The building drainpipe shall be connected to the main sewer line and will be coordinated with the civil engineer.

Domestic water distribution system

Cold water supply shall be provided to support the toilets, showers, kitchens, science laboratories, art rooms, GCC classroom/shops, break rooms, utility rooms, laundry and emergency fixtures.

The domestic water distribution system shall include pipes, fittings and accessories. Provide water hamme1r arrestors.

Provide shut-off valves on service lines entering the building in accessible locations. Provide isolation valves at supply to fixtures to provide ease of maintenance. Provide hose

bibbs with vacuum breaker along the exterior of buildings for general maintenance use and in roof decks for mechanical equipment cleaning. Provide hose bibbs with vacuum breaker in classroom and gymnasium public restrooms, and in cafeteria kitchen for maintenance.

Provide backflow preventers on make-up water supply for rainwater tanks. Locate backflow preventers in easily accessible location and near the tank's enclosure.

Provide piping supports in accordance with the IPC.

Test piping for leaks in accordance with the International Plumbing Code (IPC) installation requirements.

All potable water piping shall be chlorinated and disinfected in accordance with American Waterworks Association (AWWA) and EPA requirements and standards.

Hot water supply system

Hot water supply shall be provided in the kitchen areas, science laboratories, and showers. Provide water heaters complete with control system, gauges and ASME rated combination pressure and temperature relief valve. Electric tank type water heater shall be Energy Star certified. Tankless electric water heaters shall be multiple or point-of-use type.

Solar photovoltaic system shall have water heaters with two photovoltaic resistive heating elements each rated to 1000 watts. PV system shall generate electricity from PV modules and PV Inverters. The water heater backup electrical grid element rated 3380 watts will ensure hot water availability when solar heat is not available. The hot water system shall include vertical steel storage tank, hot water recirculating pump and thermal steel expansion tank.

Storage type water heating equipment shall be mounted on a concrete pad and secured to the building structure with strapping and fasteners. Provide service clearances in accordance with manufacturer's recommendations around all equipment.

Sanitary waste and vent system

Provide p-trap primer for floor drains that are not receiving condensate drains from the air-conditioning units. Provide cleanouts.

Provide single sump pump in pits below the lowest floor of Classroom A-Wing, B-Wing, and Auditorium. Complete system with controls, high-water level alarm actuator, and audible or visual alarm.

Utilize individual and common vent for vent systems where applicable. Design vent system per IPC. Vents thru the roof shall be terminated not less than 12 inches above the roof.

Roof drainage system

Provide roof drains that are compatible with the roofing system. Roof catchment areas shall collect rainwater for water closets and urinal flushing and for landscape irrigation.

Other roof drains not included in the roof catchment areas shall have drain system connected to the storm runoff by civil design.

Special plumbing systems where required are as follow:

Grease interceptors – Grease interceptors shall be provided in the kitchen areas.

Solid interceptors – Solids interceptors shall be provided in the Art room area.

Oil-water separator – Oil-water separator shall be provided in the Automotive workshop area.

Dilution tanks – Dilution tanks shall be provided in the Science Laboratory area.

Liquefied Petroleum Gas (LPG) Supply – LPG supply storage tanks and piping shall be provided for the kitchen area in Cafeteria, for the kitchen area in GCC ProStart/Kitchen room, and for science classrooms in A-Wing.

RAINWATER COLLECTION AND DISTRIBUTION SYSTEM

A rainwater catchment system shall be utilized for use in water closets and urinals in selected buildings to reduce water consumption and achieve sustainability goals.

A wet system plumbing configuration shall be utilized to transfer harvested rainwater from the roof, underground through pipes and up to the rainwater harvesting tank. Roof drains shall receive rain fall over the roof catchment areas. The network of downspout system shall collect the rainwater to an underground piping to the vortex type fine filter installed above the tank's full capacity water level. The vortex type fine filter shall remove debris to the rainwater before diverting to storage tanks and discharge drain to daylight or splash block. The underground piping shall have a drip type drain valve in a percolation chamber to drain the residual rainwater. Provide cleanout handholes for underground rainwater piping. The roof catchment area shall have secondary storm drain system connected directly to the storm runoff system by civil design.

Each system shall utilize 1-each above ground Fiberglass Reinforced Plastic (FRP) panel type storage tank assembly with associated pump enclosed in a dedicated pump house. The tank is sized for a 2 to 3-days drought period and shall include level controls, overflows, floating filters and vents. The tank's overflow pipe shall drain to daylight for excess rainwater during collection process. For tank's maintenance, a normally closed drain valve at the bottom of the tank shall drain to daylight. Municipal makeup tied into the storage tank shall ensure that adequate supply of water will always be available. Makeup domestic water supply from GWA meter shall have backflow preventer assembly.

The treatment and distribution system shall consist of packaged duplex booster pump assembly with pump control panel, hydropneumatic tank for pressure control, sediment and carbon filters to remove debris and prevent organic growth, water softener, UV light for disinfection, motorized valves interlock with pump control and other accessories. The treated rainwater shall supply the water closets and urinals across the school facility and shall supply for landscape irrigation during off-peak schedule.

Provide concrete pad and supports on all pump room equipment. Provide service clearances in accordance with manufacturer's recommendations around all equipment.

There shall be 4 separate Zones for rainwater harvesting and distribution: (1) for Administration, Auditorium, and A-Wing located at Lower East (2) for GCC located at Lower West, (3) for B-Wing and Gymnasium located at Upper East, and (4) for JROTC located at Upper West.

Rainwater collection system in Zone 3 (Upper East) shall be connected to emergency power service for typhoon shelter facility use in Gymnasium building.

PLUMBING REQUIREMENTS

CLASSROOM BUILDINGS:

CLASSROOM A-WING

A. Science Laboratories
Science Laboratories/classrooms will have 8 student-workstation sinks, a teacher demonstration table with sink, and OSHA compliant emergency shower and eye/face wash station in each laboratory. Sinks shall be provided with cold & hot water, gas assemblies for Bunsen burners, and sanitary sewer systems.

Science preparatory rooms will have prep sinks, mop sinks and OSHA compliant emergency shower and eye/face wash stations. Emergency shower and eye/face wash station in each science classrooms shall include flow activation alarms and shall be interlocked with the fire alarm system.

Hot water system shall utilize solar photovoltaic system complete with PV modules, PV Inverters, hot water storage tank, hot water recirculating pump and thermal expansion tank.

Point-of-use, in-floor application chemical dilution tanks with threaded lid shall be provided for each sink in science laboratories/classrooms and science prep room to collect and treat acid wastes before discharging to the sanitary drainage system.

A 2-each 125-gallon LPG supply storage tank and piping shall be provided for the Science Laboratories, supplying gas on each workstation. Clearly labeled manual control valve will be located in the Preparatory Rooms. Concrete enclosure with lockable gates shall be provided.

B. SPED Classrooms
SPED Basic Life Skills classrooms will have a kitchen sink, clothes washer and dryer, restroom and a shower. Cold and hot water and sanitary sewer system shall be provided.

A light-duty tank type electric water heater shall be provided for hot water supply.

C. Art Rooms
Energy star rated tankless electric water heater for multiple lavatories shall be provided.
Solids interceptors for on-floor installation shall be provided in each Art rooms.

D. Restrooms
The rainwater distribution system for fixture flushing of water closets and urinals in A-Wing restrooms shall share system with Administration and Auditorium Building. Rainwater tanks are located south of the A-Wing (East) building.

CLASSROOM B-WING

The rainwater catchment and distribution system for fixture flushing of water closets and urinals in B-Wing Building shall share system with Gymnasium. Rainwater tanks are located north of B-Wing building.

ADMINISTRATION BUILDING and LIBRARY:

Provide cold water connection to private restroom lavatories, electric water cooler and mop sink. Provide cold and hot water connections to lavatories in nurse's office, nurse room restroom, ante room and isolation room. Provide cold and hot water connection for pantry sink. Provide hose bibb with vacuum breaker and floor sinks in the mechanical room.

Energy star rated tankless electric water heater for multiple lavatories shall be provided in the Isolation and Ante area. A tankless electric water heater shall also be installed for shower and lavatory in the Nurse's restroom.

Energy star rated tankless electric water heater for single point-of-use under-the-counter shall be provided in the Faculty Lounge pantry sink.

The rainwater catchment and distribution system for fixture flushing of water closets and urinals in Administration Building shall share system with A-Wing and Auditorium. Rainwater tanks are located south of the A-Wing (East) building.

CAFETERIA:

A high-efficient heavy duty commercial use, tank type electric water heater complete with valves and piping shall be provided for the kitchen area to serve hot water supply on ware washing units and sinks.

A 1,000-gallon cast-in-place concrete grease interceptor shall be provided for kitchen waste.

A 500-gallon horizontal LPG supply storage tank and LPG distribution piping shall be provided for the cooking equipment in the kitchen area.

Provide hand sinks, drinking fountains and floor drains in dining hall. Domestic cold water shall be supplied to hand sinks and drinking fountains, and to plumbing fixtures in public restrooms.

Non-potable water from rainwater Zone-4 (Upper West) shall be utilized for hose bibbs on the exterior of the building.

GYMNASIUM:

Provide cold water connections for public lavatories and electric water coolers. Provide cold and hot water connections for private lavatories, showers, mop sink, laundry tub, washing machine utility box, and janitor sink. Provide high and low electric water coolers in locker room hallway. Provide hose bibbs with vacuum breaker in locker room restrooms. Provide linear floor drains for the Locker Room showers, floor drains in Restrooms and funnel drains in Solar Water Heater rooms.

Hot water supply shall utilize solar photovoltaic system complete with PV modules, PV Inverters, hot water storage tank, hot water recirculating pump and thermal expansion tank. There shall be a separate system for the men and women's locker rooms.

Rainwater catchment and distribution system for fixture flushing of water closets and urinals in Gymnasium shall share system with B-Wing Building. Rainwater tank and pump room are located north of B-Wing building.

AUDITORIUM:

Provide cold water connections for wall-mounted lavatories, mop sink, and hose bibb with vacuum breaker. Provide elevator sump pump complete with controls, accessories and force drainpipe to floor sink. Provide floor drains in restrooms.

The rainwater catchment and distribution system for fixture flushing of water closets and urinals in Auditorium shall share with the system for the Administration and A-Wing Building. Rainwater tank and pump room are located south of the A-Wing (East) building.

GCC BUILDING:

A. ProStart

A 2-each 125-gallon LPG supply storage tank and piping shall be provided for the kitchen area in the GCC ProStart room. Concrete enclosure with lockable gates shall be provided.

A grease interceptor shall be provided for kitchen waste treatment.

A heavy-duty tank-type electric water heater and hot water return pump shall be installed in the laundry area to serve clothes washer, kitchen sinks and dishwasher in ProStart Kitchen.

B. Carpentry and Automotive

Combination emergency shower and eye/face wash stations shall be provided in the Carpentry & Automotive shops. Emergency shower shall include flow activation alarms and will be interlocked with the fire alarm system.

Compressed air supply system shall be provided in the GCC Carpentry and Automotive shops. Packaged type air compressor with storage tank & controls, compressed air distribution piping, quick connect fittings and hose reels shall be provided in each shop.

Oil-water separator shall be provided in the Automotive workshop for waste treatment.

C. Marketing Store Lab

Provide cold water connections for wall-mounted handwashing station.

D. Hospitality & Tourism

Provide cold and hot water connections for fixtures in mock restroom.

E. ProStart Kitchen Lab

Provide cold and hot water connections for handwashing stations, kitchen sinks and dishwashing machine.

F. Electronics Workshop

Provide cold water connections for wall-mounted handwashing station.

G. Health Career Services

Provide cold water connections for wall-mounted handwashing station.

H. Restrooms

The rainwater catchment and distribution system for fixture flushing of water closets and urinals is located west of the GCC building.

JROTC BUILDING:

Provide cold water connections for public lavatories, ice maker and mop sink. Provide cold and hot water connections for showers and pantry sink. Provide hose bibb with vacuum breaker at exterior and at roof for maintenance use. Provide linear floor drains for the Locker Room showers, floor drains in Restrooms and funnel drains in FCU rooms.

Energy star rated tankless electric water heater for single point-of-use shall be provided for the shower in the Staff Restroom. Energy star rated tankless electric water heater for single point-of-use shall be provided for pantry sink in the Staff Collaboration room.

Hot water supply for showers in locker rooms shall utilize solar photovoltaic system complete with PV modules, PV Inverters, hot water storage tank, hot water recirculating pump and thermal expansion tank.

The rainwater catchment and distribution system for fixture flushing of water closets and urinals is located north of Cafeteria building.

CREDIT RECOVERY BUILDING:

Provide floor mounted, flush valve water closets. Provide wall-mounted urinals. Provide wall-mounted lavatories with lever handles for accessibility. Provide mop sink and floor drains. Provide hose bibb with vacuum breaker at exterior and at roof for maintenance use.

Domestic cold-water system shall be supplied in public restrooms.

PRESS BOX:

Provide floor mounted, flush valve water closets. Provide wall-mounted urinals. Provide wall-mounted lavatories with lever handles for accessibility. Provide mop sink and floor drains. Provide hose bibb with vacuum breaker at exterior and at roof for maintenance use.

Provide two outdoor shower and foot rinse stations with clearly labeled shut-off valves located inside. Provide floor drains at each outdoor shower and foot rinse station.

Domestic cold-water system shall be supplied in public restrooms.

PUMP & GENERATOR BUILDING:

PUMP ROOM

Provide floor sink for equipment drain and filter backwash and connect to sewer system.

GENERATOR BUILDING

Provide hose bibbs with vacuum breaker along the exterior of the building for general maintenance use. Provide OSHA compliant emergency shower and eye wash station for the generator room.

Fire Protection Basis of Design

CRITERIA AND REFERENCE

The design shall be in accordance with the following codes, standards, and regulations.

- New Simon Sanchez Specification dated July 04, 2017.
- IMC International Mechanical Code, 2009
- IPC International Plumbing Code, 2009
- IFC International Fire Protection Code, 2009
- IBC International Building Code, 2009
- NFPA Standards

FIRE PROTECTION SITE REQUIREMENTS:

Fire Access Road

Unimpeded access shall be provided to the site for fire department use. The road shall provide access to buildings, and the fire apparatus shall have access to within 150 feet of all portions of the exterior walls of the first story of the building measured by an approved route around the facility. (IFC 503) The 150 feet dimension can be increased if authorized by AHJ.

Fire apparatus access road shall have a minimum width of 20 feet. Dead-ends at the access roads in excess of 150 feet shall be provided with turnaround provision.

Fire-Flow Requirements (hydrant)

Fire flow requirements will be base on the largest building, which is the A-wing classroom building. The total floor area is around 38,000 sq. feet. Based on the IBC 2009 Appendix B (non-mandatory requirements), the recommended fire flow is 5,750 gpm with an allowable reduction of up to 75% when the building is protected with a fire sprinkler system. The final fire flow requirement is 1500 gpm at 20 psi (with allowed reduction).

Based on the hydrant flow test conducted, the available fire flow is 875 gpm at 20 psi. Though it may be below the recommended fire-flow, this is the prevailing situation in most areas on the island.

An Electric motor driven fire pump with 10,000 gals break tank shall be provided to serve all buildings in the facility.

BUILDING CODE & LIFE SAFETY REQUIREMENTS:

I. A - Wing, Auditorium and Admin Building

A. Occupancy Classification
Building Occupancy Classification: Mixed Use Occupancy, Separated. (IBC 508)
The North wing Building is composed of Classroom Building A-Wing, Auditoruim and Adminitration Building. The building will have Educational Group E (IBC 305), Assembly A-1 (IBC 303) and Busines Group B (IBC 304) occupancies. The provision of Separated Occupancies (IBC 508.4) shall be met.

IBC occupancies: Separated occupancies (IBC 508.3)

a. Assembly Group A-1
b. Educational Group E
c. Business Group B

B. Type of Construction
Noncombustible and limited combustible materials will be used for the proposed building elements to meet Type II-B construction.

C. Allowable Building Height (IBC Tables 503) (with the allowable increase for having sprinkler protection):

a. Assembly Group A-1 : 3 Stories / 75 feet.
b. Educational Group E : 4 Stories / 75 feet.
c. Business Group B : 4 Stories / 75 feet.

D. Allowable Building Area
The building allowable floor areas are as follows (with the allowable increase for having sprinkler protection):

a. Assembly Group A-3: 38,500 ft^2
b. Educational Group E: 43,500 ft^2
c. Business Group B: 92,000 ft^2

The allowable building areas for each separated occupancies will not be exceeded. In addition, sum of the ratios of the actual building areas of each occupancy shall not exceed 1.

E. Rating of Structural Components
The required fire-resistance ratings of the building elements for the proposed structure based on Type II-B construction are as follows:

Element	Material	Rating
Primary Structural Frame	Noncombustible	0 hr
Exterior Bearing Walls*	Non-combustible	0 hr*
Interior Bearing Walls	Non-combustible	0 hr
Exterior Nonbearing Walls*	Non-combustible	0 hr*
Interior Nonbearing Walls	Non-combustible	0 hr
Floor Construction	Noncombustible	0 hr
Roof Construction	Noncombustible	0 hr

* For the fire rating requirements of the exterior wall of see “Required Building Separation of Exposure Protection.”

F. Fire-Rated Walls and Partitions
Group A and Group E occupancies have similarities; both are people-intensive occupancies. No required separation between Group A and Group E per IBC Table 508.1 but must be separated from all other occupancies.Group B shall be separated from Group A and Group E occupancy.

Access corridors are not required to be fire-resistance rated per IBC Table 1018 since the building is protected by a fire sprinkler system.

G. Required Building Separation or Exposure Protection
Exposure wall protection shall be based on fire separation distance per IBC Table 602.

H. Means of Egress Requirements:
Egress requirements shall be based on the requirements of each separated occupancy. o. Means of egress components like corridors, stairways, and exteriors exit doors shall be sized to provide sufficient capacity.

The minimum number of exits shall be based on the calculated occupants and complies with the table below:

TABLE 1021.1
MINIMUM NUMBER OF EXITS FOR OCCUPANT LOAD

OCCUPANT LOAD (persons per story)	MINIMUM NUMBER OF EXITS (per story)
1-500	2
501-1,000	3
More than 1,000	4

The means of egress shall be arranged to meet the common path and travel distance requirements.

Maximum Travel Distances: 250 feet
Maximum Dead-end corridor: 50 feet

Maximum Common Path: 30 feet (Group A), 75 feet (Group E)

I. Occupancy Load Calculation for Egress Requirements:
Occupant load calculation shall be based on the actual usage of the area as indicated on IBC Table 1004.1 as listed below:

Classroom areas: 20 ft^2/occupant (net)
Shops and other vocational areas: 50 ft^2/occupant (net)
Assembly with table and chairs: 15 ft^2/occupant (net)

G. Fire Suppression System
A fire sprinkler system is required for buildings with Group A-1 occupancies that exceed 12,000 ft^2 and Group E occupancies that exceed 12,000 ft^2. The fire sprinkler system shall be installed in accordance with NFPA 13.

H. Fire Alarm System
A Fire Alarm system shall be provided in accordance with IBC 907.5. The fire alarm system shall provide occupant notification. In Group A, occupancy with an occupant load of 1000 or more, the audible occupant notification shall be by voice alarm.

II. B- Wing Classroom Building

A. Occupancy Classification
Building Occupancy Classification:
The building will be classified as single occupancy, Educational Group E (IBC 305).

B. Type of Construction
Noncombustible and limited combustible materials will be used for the proposed building elements to meet Type II-B construction.

C. Allowable Building Height (IBC Tables 503) (with the allowable increase for having sprinkler protection):
   a. Educational Group E: 4 Stories / 75 feet.

D. Allowable Building Area
The building's allowable floor areas are as follows (with the allowable increase for having sprinkler protection):

   a. Educational Group E: 23,500 ft^2

The allowable building areas for Group E occupancy will not be exceeded.

E. Rating of Structural Components

The required fire-resistance ratings of the building elements for the proposed structure based on Type II-B construction are as follows:

Element	Material	Rating
Primary Structural Frame	Noncombustible	0 hr
Exterior Bearing Walls*	Non-combustible	0 hr*
Interior Bearing Walls	Non-combustible	0 hr
Exterior Nonbearing Walls*	Non-combustible	0 hr*
Interior Nonbearing Walls	Non-combustible	0 hr
Floor Construction	Noncombustible	0 hr
Roof Construction	Noncombustible	0 hr

* For the fire rating requirements of the exterior wall of see “Required Building Separation of Exposure Protection.”

F. Fire-Rated Walls and Partitions
Access corridors are not required to be fire-resistance rated per IBC Table 1018 since the building is protected by a fire sprinkler system.

G. Required Building Separation or Exposure Protection
Exposure wall protection shall be based on fire separation distance per IBC Table 602.

H. Means of Egress Requirements:
Egress requirements shall be based on the requirements of each separated occupancy. o. Means of egress components like corridors, stairways, and exteriors exit doors shall be sized to provide sufficient capacity.

The minimum number of exits shall be based on the calculated occupants and complies with the table below:

TABLE 1021.1
MINIMUM NUMBER OF EXITS FOR OCCUPANT LOAD

OCCUPANT LOAD (persons per story)	MINIMUM NUMBER OF EXITS (per story)
1-500	2
501-1,000	3
More than 1,000	4

The means of egress shall be arranged to meet the common path and travel distance requirements.

Maximum Travel Distances: 250 feet
Maximum Dead-end corridor: 50 feet
Maximum Common Path: 75 feet

I. Occupancy Load Calculation for Egress Requirements:
Occupant load calculation shall be based on the actual usage of the area as indicated on IBC Table 1004.1 as listed below:

Classroom areas: 20 ft^2/occupant (net)
Shops and other vocational areas: 50 ft^2/occupant (net)
Assembly with table and chairs: 15 ft^2/occupant (net)

J. Fire Suppression System
A fire sprinkler system is required for buildings with Group E occupancies that exceed 12,000 ft^2. The fire sprinkler system shall be installed in accordance with NFPA 13. A fire pump with a break tank will be provided to serve all buildings in the facility.

K. Fire Alarm System
A Fire Alarm system shall be provided in accordance with IBC 907.5. The fire alarm system shall provide occupant notification during a fire alarm event.

L. Hazardous Materials
Hazardous materials stored or used in the building shall be limited to the quantities listed in IBC 2009 Table 307. When the maximum allowable amount is exceeded, the area will be classified as Group H occupancy and must be separated from the rest of the building using fire-rated construction.

III. Gymnasium

A. Occupancy Classification
Building Occupancy Classification: Assembly Occupancy A-1 and A-4
The building will have Assembly Group E (IBC 305) and Assembly A-5 (IBC 303) occupancies. The provision of Separated Occupancies (IBC 508.4) shall be met.

IBC occupancies: Separated occupancies (IBC 508.3)
   a. Assembly Group A-4 Gymnasium
   b. Educational Group E Classrooms

B. Type of Construction
Noncombustible and limited combustible materials will be used for the proposed building elements to meet Type II-A construction.

C. Allowable Building Height (IBC Tables 503) (with the allowable increase for having sprinkler protection):
   a. Assembly Group A-4 : 3 Stories / 75 feet.
   b. Educational Group E : 4 Stories / 75 feet.

D. Allowable Building Area
The building allowable floor areas are as follows (with the allowable increase for having sprinkler protection):
   a. Assembly Group A-4: 28,500 ft^2

b. Educational Group E: 43,500 ft^2

The allowable building areas for each separated occupancies will not be exceeded. In addition, sum of the ratios of the actual building areas of each occupancy shall not exceed 1

E. Rating of Structural Components
The required fire-resistance ratings of the building elements for the proposed structure based on Type II-A construction are as follows:

Element	**Material**	**Rating**
Primary Structural Frame	Noncombustible	1 hr
Exterior Bearing Walls*	Non-combustible	1 hr*
Interior Bearing Walls	Non-combustible	1 hr
Exterior Nonbearing Walls*	Non-combustible	0 hr*
Interior Nonbearing Walls	Non-combustible	0 hr
Floor Construction	Noncombustible	1 hr
Roof Construction	Noncombustible	1 hr

* For the fire rating requirements of the exterior wall of see “Required Building Separation of Exposure Protection.”

J. Fire-Rated Walls and Partitions
No fire-rated separation required between Group A-4, and Group E

Access corridors are not required to be fire-resistance rated per IBC Table 1018 since the building is protected by a fire sprinkler system.

K. Required Building Separation or Exposure Protection
Exposure wall protection shall be based on fire separation distance per IBC Table 602.

L. Means of Egress Requirements:
Egress requirements shall be based on the requirements of the most restrictive occupancy. Means of egress components like corridors, stairways, and exteriors exit doors shall be sized to provide sufficient capacity.

The minimum number of exits shall be based on the calculated occupants and complies with the table below:

TABLE 1021.1
MINIMUM NUMBER OF EXITS FOR OCCUPANT LOAD

OCCUPANT LOAD (persons per story)	MINIMUM NUMBER OF EXITS (per story)
1-500	2
501-1,000	3
More than 1,000	4

The means of egress shall be arranged to meet the common path and travel distance requirements.

Maximum Travel Distances: 250 feet
Maximum Dead-end corridor: 50 feet
Maximum Common Path: 30 feet (Group A),

M. Occupancy Load Calculation for Egress Requirements:
Occupant load calculation shall be based on the actual usage of the area as indicated on IBC Table 1004.1 as listed below:

Assembly with table and chairs: 15 ft^2/occupant (net)
Assembly with fixed seating shall be based on the actual number of fixed seats. For seats without arm dividing arms, the occupant load shall be based on a seating length of 18 inches per person.

G. Fire Suppression System
A fire sprinkler system is required for buildings with Group A-1 and Group A-4 occupancies that exceed 12,000 ft^2. The fire sprinkler system shall be installed in accordance with NFPA 13. A fire pump with a break tank will be provided to serve all buildings in the facility.

H. Fire Alarm System
A Fire Alarm system shall be provided in accordance with IBC 907.5. The fire alarm system shall provide occupant notification. In Group A, occupancy with an occupant load of 1000 or more, the audible occupant notification shall be by voice alarm.

IV. GCC Building

Occupancy Classification
Building Occupancy Classification:
The building will be classified as single occupancy, Educational Group E (IBC 305).

A. Type of Construction
Noncombustible and limited combustible materials will be used for the proposed building elements to meet Type II-B construction.

B. Allowable Building Height (IBC Tables 503) (with the allowable increase for having sprinkler protection):
   a. Educational Group E: 4 Stories / 75 feet.

C. Allowable Building Area

The building allowable floor areas are as follows (with the allowable increase for having sprinkler protection):

a. Educational Group E: 43,500 ft^2

The allowable building areas for Group E occupancy will not be exceeded.

E. Rating of Structural Components

The required fire-resistance ratings of the building elements for the proposed structure based on Type II-B construction are as follows:

Element	**Material**	**Rating**
Primary Structural Frame	Noncombustible	0 hr
Exterior Bearing Walls*	Non-combustible	0 hr*
Interior Bearing Walls	Non-combustible	0 hr
Exterior Nonbearing Walls*	Non-combustible	0 hr*
Interior Nonbearing Walls	Non-combustible	0 hr
Floor Construction	Noncombustible	0 hr
Roof Construction	Noncombustible	0 hr

* For the fire rating requirements of the exterior wall of see “Required Building Separation of Exposure Protection.”

J. Fire-Rated Walls and Partitions

Access corridors are not required to be fire-resistance rated per IBC Table 1018 since the building is protected by a fire sprinkler system. Fire barrier between the JROTC and GCC building will be provided to have two separate fire areas.

K. Required Building Separation or Exposure Protection

Exposure wall protection shall be based on fire separation distance per IBC Table 602.

L. Means of Egress Requirements:

Egress requirements shall be based on the requirements of each separated occupancy. o. Means of egress components like corridors, stairways, and exteriors exit doors shall be sized to provide sufficient capacity.

The minimum number of exits shall be based on the calculated occupants and complies with the table below:

TABLE 1021.1
MINIMUM NUMBER OF EXITS FOR OCCUPANT LOAD

OCCUPANT LOAD (persons per story)	MINIMUM NUMBER OF EXITS (per story)
1-500	2
501-1,000	3
More than 1,000	4

The means of egress shall be arranged to meet the common path and travel distance requirements.

Maximum Travel Distances: 250 feet
Maximum Dead-end corridor: 50 feet
Maximum Common Path: 75 feet

M. Occupancy Load Calculation for Egress Requirements:
Occupant load calculation shall be based on the actual usage of the area as indicated on IBC Table 1004.1 as listed below:

Classroom areas: 20 ft^2/occupant (net)
Shops and other vocational areas: 50 ft^2/occupant (net)
Assembly with table and chairs: 15 ft^2/occupant (net)

G. Fire Suppression System
A fire sprinkler system is required for buildings with Group E occupancies that exceed 12,000 ft^2. The fire sprinkler system shall be installed in accordance with NFPA 13. A fire pump with a break tank will be provided to serve all buildings in the facility.

H. Fire Alarm System
A Fire Alarm system shall be provided in accordance with IBC 907.5. The fire alarm system shall provide occupant notification during a fire alarm event.

I. Hazardous Materials
Hazardous materials stored or used in the building shall be limited to the quantities listed in IBC 2009 Table 307. When the maximum allowable amount is exceeded, the area will be classified as Group H occupancy and must be separated from the rest of the building using fire-rated construction.

V. JROTC Building

Building Code & Life Safety Requirements:

A. Occupancy Classification
Building Occupancy Classification:
The building will be classified as single occupancy, Educational Group E (IBC 305).

B. Type of Construction

Noncombustible and limited combustible materials will be used for the proposed building elements to meet Type II-B construction.

C. Allowable Building Height (IBC Tables 503) (Basic):
   a. Educational Group E: 3 Stories / 75 feet.

D. Allowable Building Area
The building allowable floor areas are as follows (with the allowable increase for having sprinkler protection):

   a. Educational Group E: 43,500 ft^2

Actual Building area
   a. Educational Group E JROTC Building: 17,680 ft^2

The allowable building areas for Group E occupancy will not be exceeded.

E. Rating of Structural Components
The required fire-resistance ratings of the building elements for the proposed structure based on Type II-B construction are as follows:

Element	**Material**	**Rating**
Primary Structural Frame	Noncombustible	0 hr
Exterior Bearing Walls*	Non-combustible	0 hr*
Interior Bearing Walls	Non-combustible	0 hr
Exterior Nonbearing Walls*	Non-combustible	0 hr*
Interior Nonbearing Walls	Non-combustible	0 hr
Floor Construction	Noncombustible	0 hr
Roof Construction	Noncombustible	0 hr

* For the fire rating requirements of the exterior wall of see “Required Building Separation of Exposure Protection.”

F. Fire-Rated Walls and Partitions
Access corridors are not required to be fire-resistance rated per IBC Table 1018 since the building is protected by a fire sprinkler system.

G. Required Building Separation or Exposure Protection
Exposure wall protection shall be based on fire separation distance per IBC Table 602.

H. Means of Egress Requirements:

Egress requirements shall be based on the requirements of each separated occupancy. o. Means of egress components like corridors, stairways, and exteriors exit doors shall be sized to provide sufficient capacity.

The minimum number of exits shall be based on the calculated occupants and complies with the table below:

TABLE 1021.1
MINIMUM NUMBER OF EXITS FOR OCCUPANT LOAD

OCCUPANT LOAD (persons per story)	MINIMUM NUMBER OF EXITS (per story)
1-500	2
501-1,000	3
More than 1,000	4

The means of egress shall be arranged to meet the common path and travel distance requirements.

Maximum Travel Distances: 200 feet
Maximum Dead-end corridor: 20 feet
Maximum Common Path: 75 feet

I. Occupancy Load Calculation for Egress Requirements:
Occupant load calculation shall be based on the actual usage of the area as indicated on IBC Table 1004.1 as listed below:

Classroom areas: 20 ft^2/occupant (net)
Shops and other vocational areas: 50 ft^2/occupant (net)

G. Fire Suppression System
A fire sprinkler system is required for buildings with Group E occupancies that exceed 12,000 ft^2. A fire sprinkler system shall be installed in accordance with NFPA 13. A fire pump with a break tank will be provided to serve all buildings in the facility.

H. Fire Alarm System
A Fire Alarm system shall be provided in accordance with IBC 907.5. The fire alarm system shall provide occupant notification during a fire alarm event.

I. Hazardous Materials
Hazardous materials stored or used in the building shall be limited to the quantities listed in IBC 2009 Table 307. When the maximum allowable amount is exceeded, the area will be classified as Group H occupancy and requires to be separated from the rest of the building using fire rated construction

VI. Credit Recovery Building

A. Occupancy Classification
Building Occupancy Classification:
The building will be classified as single occupancy, Educational Group E (IBC 305).

B. Type of Construction
Noncombustible and limited combustible materials will be used for the proposed building elements to meet Type II-B construction.

C. Allowable Building Height (IBC Tables 503) (Basic):
   a. Educational Group E: 3 Stories / 75 feet.

D. Allowable Building Area
The building allowable floor areas are as follows (with the allowable increase for having sprinkler protection):

   a. Educational Group E: 43,500 ft^2

Actual Building area
   a. Educational Group E JROTC Building: 17,680 ft^2

The allowable building areas for Group E occupancy will not be exceeded.

E. Rating of Structural Components
The required fire-resistance ratings of the building elements for the proposed structure based on Type II-B construction are as follows:

Element	**Material**	**Rating**
Primary Structural Frame	Noncombustible	0 hr
Exterior Bearing Walls*	Non-combustible	0 hr*
Interior Bearing Walls	Non-combustible	0 hr
Exterior Nonbearing Walls*	Non-combustible	0 hr*
Interior Nonbearing Walls	Non-combustible	0 hr
Floor Construction	Noncombustible	0 hr
Roof Construction	Non-combustible	0 hr

* For the fire rating requirements of the exterior wall of see “Required Building Separation of Exposure Protection.”

J. Fire-Rated Walls and Partitions
Access corridors are not required to be fire-resistance rated per IBC Table 1018 since the building is protected by a fire sprinkler system.

K. Required Building Separation or Exposure Protection
Exposure wall protection shall be based on fire separation distance per IBC Table 602.

L. Means of Egress Requirements:
Egress requirements shall be based on the requirements of each separated occupancy. o. Means of egress components like corridors, stairways, and exteriors exit doors shall be sized to provide sufficient capacity.

The minimum number of exits shall be based on the calculated occupants and complies with the table below:

TABLE 1021.1
MINIMUM NUMBER OF EXITS FOR OCCUPANT LOAD

OCCUPANT LOAD (persons per story)	MINIMUM NUMBER OF EXITS (per story)
1-500	2
501-1,000	3
More than 1,000	4

The means of egress shall be arranged to meet the common path and travel distance requirements.

Maximum Travel Distances: 200 feet
Maximum Dead-end corridor: 20 feet
Maximum Common Path: 75 feet

M. Occupancy Load Calculation for Egress Requirements:
Occupant load calculation shall be based on the actual usage of the area as indicated on IBC Table 1004.1 as listed below:

Classroom areas: 20 ft^2/occupant (net)
Shops and other vocational areas: 50 ft^2/occupant (net)

G. Fire Suppression System
A fire sprinkler system is required for buildings with Group E occupancies that exceed 12,000 ft^2. A fire sprinkler system shall be installed in accordance with NFPA 13. A fire pump with a break tank will be provided to serve all buildings in the facility.

H. Fire Alarm System
A Fire Alarm system shall be provided in accordance with IBC 907.5. The fire alarm system shall provide occupant notification during a fire alarm event.

I. Hazardous Materials
Hazardous materials stored or used in the building shall be limited to the quantities listed in IBC 2009 Table 307. When the maximum allowable amount is exceeded, the area will be classified as Group H occupancy and requires to be separated from the rest of the building using fire rated construction

ELECTRICAL

I. Electrical System Description

Provide an electrical system consisting of Service Entrance Wiring and Equipment, Switchboards, Distribution and Lighting Panelboards, Conduits, Feeder and Branch Circuits, Lighting and Branch Wiring, Emergency Generator, Provisions for Connection of Portable Generator, Transfer Switches, Metering, Emergency Lighting and Power, Grounding, Lightning Protection System, and Telecommunication system (outlets, cabling, pathways, cabinets, grounding, etc.) including accessories and devices as necessary and required for a complete and usable system.

Select electrical characteristics of the power system to provide a safe, efficient and economical distribution of power based upon the size and types of electrical loads to be served. Use distribution and utilization voltages of the highest level that is practical for the load to be served.

Provide a minimum of 15 percent spare circuit and load capacity at all levels of the power distribution system including any stand-by power systems.

Provide an interior distribution system consisting of insulated conductors in conduit.

Design and installation of the electrical system must be in accordance with NFPA and other Codes and Regulations, to include but not limited to the following:

- International Building Code (IBC), 2009
- NFPA 70 National Electrical Code, 2023
- NFPA 101 Life Safety Code, 2024
- NFPA 110, Standard for Emergency and Standby Power Systems, 2025
- Illuminating Engineering Society (IES) of North America
- IEEE C2 National Electricity Safety Code (NESC)
- BICSI Telecommunications Distribution Methods Manual
- ANSI/TIA Standards
- Guam Energy Tropical Code
- Guam Power Authority (GPA)
- Department of Public Works (DPW)
- Guam Fire Department (GFD)
- IES RP-3-20 Recommended Practice: Lighting Educational Facilities

II. General System Requirements

Provide an Electrical System complete in place, tested, and approved, as specified throughout this RFP, as needed for a complete, usable and proper installation. Install all equipment in accordance with the criteria, regulations, and the manufacturer's

recommendations. Where the word "should" is used in the manufacturer's recommendations, substitute the word "must".

Perform a short circuit and selective coordination study at the design stage to establish the basis for the system design and to enable completion of an initial arc flash analysis. Provide a final coordination study based on the as-built configuration of the system. Provide a complete coordination study that includes a system one-line diagram, short circuit and ground fault analysis, and protection coordination plots. Show on the one-line diagram all electrical equipment and wiring to be protected by the overcurrent devices including breakers and fuses. Prepare the coordination curves to determine the required settings of protective devices to assure selective coordination. Graphically illustrate on a log-log scale that adequate time separation exists between series devices, including the utility company upstream devices where applicable. Plot the specific time-current characteristics of each protective device in such a manner that all applicable upstream devices will be clearly shown on one sheet. Develop a table to summarize the settings, selected for each protective device. Complete an arc flash evaluation in accordance with NFPA 70E, IEEE Std 1584 (including Amendments 1 and 2), and IEEE Std 1584.1 to determine personal protective clothing (PPE) requirements for work on energized electrical equipment. Utilize computerized software and submit along with the printed report of the study, the editable electronic copy (model and database) used to perform the study.

Sustainability: Provide electrical systems and components that support project sustainability and energy goals.

Seismic Bracing: Bracing of electrical equipment to resist seismic events is required based on site seismic design criteria and building importance factor.

Electrical Testing: Test new electrical equipment in accordance with NETA acceptance testing specifications.

Corrosive Environment: All equipment installed at exterior or non-conditioned space (not provided with air-conditioning) must be provided in stainless steel enclosure(s). All equipment and enclosures installed outdoors must be Nema 4X rated. All associated fasteners, hardware, climbing rungs, metal boxes, framing, access covers, hinges, etc. must also be stainless steel.

III. Site Electrical

Connect to the existing GPA primary system, 13.8 kV, three phase, three wire, 60 Hertz electrical power system.

Locate equipment (transformers, switches, etc.) and underground structures (manholes and handholes) in locations accessible to GPA.

A. Underground Electric Conductors, Raceways, and Ductbanks: Provide a medium voltage and a 600 volt secondary underground electrical power distribution systems.

Underground electrical must be installed in concrete encased ductbank when under the following conditions.

a. Underground primary
b. Under paved road, sidewalk, and parking lot
c. Where subject to vehicular traffic, including non-paved areas that may encounter vehicular traffic

B. Manholes and Handholes: Manholes and handholes must be traffic rated where subject to vehicular traffic.

IV. Site and Area Lighting

Provide site and area lighting for exterior and security, including underground distribution, handholes, grounding, poles, fixtures, and controls as required for a complete and usable system. Provide site and area lighting consisting of pole mounted exterior lighting for the following:

1. Access roads and Parking lots
2. Vehicular gates
3. Pedestrian gates
4. Sports Fields
    a. Football Field
    b. Track & Field
    c. Softball Field
    d. Baseball Field
    e. Tennis Courts

Provide low-level exterior lighting at all pedestrian walkways. Provide building mounted exterior lighting throughout the building perimeter for general illumination.

A. Exterior Lighting Fixtures and Controls: Provide LED type lighting fixtures, complete with lamps. Coordinate color and finish of luminaire with the Government. All exterior luminaire housing must be stainless steel or aluminum. Provide high impact acrylic or high-performance glass lens. Polycarbonate lens must not be provided. All fasteners, connectors and internal metal parts of luminaires must be either aluminum or stainless steel.

   Except for sports lighting, provide an automatic lighting control system for exterior lighting fixtures utilizing lighting contactors, time switches, and photocell switches such that lighting will automatically turn "ON" and turn "OFF". Provide automatic controls with manual override (hand-off-auto) switches. Provide separate, dedicated HOA switches for each type and area (building, security, parking, etc.) to allow separate control of each type/area. For sports lighting, provide controls as indicated.

B. Lighting Poles: Except for sports lighting, provide tapered concrete poles complete with concrete foundations. At access roadway and parking lot lighting, include a 30”

high concrete pedestal. For high mast sports lighting, provide metal poles complete with concrete foundations.

Pole foundation anchor rods, bolts, nuts, and washers must be stainless steel.

Provide all exterior lighting mounted on poles with identification tags. Permanent, clearly visible, and unique identification tag must be installed or mounted securely on the pole.

C. Grounding System: Provide a ground rod at all light poles.

V. Electrical Service and Distribution

A. Perform electrical calculations to include but not limited to the following:

1. Load Analysis including Demand Load Calculations & Generator Sizing Calculations
2. Short Circuit Analysis including protective device interrupting rating
3. Protective device time-current coordination study
4. Arc Flash Analysis
5. Voltage Drop Calculations
6. Lighting Calculations

B. Service Entrance Equipment: Provide concrete encased underground service into the facility. Provide a main breaker at each service entrance.

C. Panelboards: Provide distribution and branch circuit panelboards to serve loads as required. Panelboards must be of sufficient ampacity to serve the designed loads plus a minimum of 15 percent additional ampacity to provide for future growth. Provide panels supplying sensitive electronic loads (i.e. server/LAN rooms, computer labs, telecom rooms, etc.) with Transient Voltage Surge Suppression. Provide separate dedicated panelboards at each Telecom Room. All panelboards must be bolt-on type with copper bus and separate ground bus.

D. Enclosed Circuit Breakers: Provide enclosed circuit breakers as required.

E. Other Service and Distribution: Provide transient voltage surge protective devices (SPD) at the following locations:

1. Service entrance
2. Panelboards serving the Telecom rooms
3. Panelboards serving the fire alarm/protection systems and emergency systems
4. Panelboards serving LED lighting
5. Panelboards serving HVAC systems
6. Panelboards serving electronic loads

Provide an interior distribution system consisting of insulated conductors in conduit so as to supply the required power to all lighting, convenience outlets, equipment connections and or special systems associated with the project. Provide connections for all equipment, plumbing systems, air conditioning and ventilation systems, fire alarm/protection systems, security systems, and other systems provided by other trades.

VI. Lighting and Branch Wiring

Provide electrical connections for all systems requiring electrical service/power.

Provide lighting and general-purpose receptacles throughout all spaces as required. All receptacles must be heavy duty type. Provide GFCI rated receptacles, weather resistant rated receptacles, and in-use type weatherproof receptacle covers as required by NEC.

Provide dedicated circuits and connections as required by Government/Users.

All receptacles, light switches, and equipment must be labeled to indicate the panelboard providing service. Identify each receptacle and light switch with panelboard identification and circuit number. Receptacles rated more than 120V must have voltage identified. Use hot, stamped or engraved machine printing with black-filled lettering on white field, self-adhesive nameplate attached to face of plate.

All lighting/devices and branch wiring installed at the exterior or non-conditioned space must be corrosion resistant.

A. Branch Wiring: Provide branch wiring consisting of insulated conductors in conduit. Provide minimum conduit size of ¾" diameter. Homeruns may have no more than three phase conductors.

B. Lighting Equipment: Provide a complete lighting system consisting of exit and emergency lighting and area lighting consisting of LED lighting including switches and automatic controls including occupancy sensors, vacancy sensors, automatic lighting shutoff systems, room controllers, and dimming systems.

   Generally, life safety illumination must be accomplished with integral battery backed-up fixtures. The emergency generator must not be used to comply with emergency lighting requirements.

   All luminaires installed at exterior or a non-conditioned space must include corrosion resistant enclosures. All exterior luminaire fixtures must have aluminum housing with stainless steel hardware and fasteners.

VII. Other Electrical Systems

Provide General Construction Items (Electrical) including, but not necessarily limited to,

all connections, fittings, boxes and associated equipment needed as required for a complete and usable system.

Conduits and pathways that penetrate fire-rated walls, fire-rated partitions, or fire-rated floors must be firestopped.

A. Emergency Lighting and Power: Provide power and wiring for emergency lights and exit lights throughout the facility. Use integral LED battery pack for emergency lighting. In non-finished spaces, use standalone emergency lighting units for emergency lighting. Provide emergency lighting units with self-testing and diagnostic control features.

B. Back-up Generator: Provide a permanent emergency generator system as indicated. The generator shall provide emergency power to the following loads within 10 seconds of normal power failure.

    1. Life Safety Panels
    2. Fire Alarm System
    3. PA/BGM
    4. Cafeteria Kitchen Refrigeration Equipment
    5. Computer Server Rooms
    6. Elevators
    7. Fire Pump
    8. Gymnasium
    9. Domestic Water Pump
    10. Gymnasium rainwater catchment pumps

    Provide a generator remote alarm annunciator powered by the engine starting battery system. The annunciator must have a lamp test switch and LED type indicating lamps. The annunciator must give visual and audible warnings for the following operating and alarm conditions:

    Provide lamps for the following operating conditions:
    1. Operating power source, normal or emergency
    2. Starting battery system trouble

    Provide lamps and an audible signal for the following alarm conditions:
    1. Low engine lubricating oil pressure
    2. Low engine coolant temperature
    3. High engine coolant temperature
    4. Low fuel
    5. Engine overcrank shutdown
    6. Engine overspeed shutdown

    Provide a remote manual stop station to allow the Users to shut down the prime mover (engine) of the emergency generator without the need to enter the generator room.

Provide a generator exerciser to allow the generator to be automatically tested. Include a programmable exerciser clock with integral battery backup to allow the generator and transfer equipment to be tested at programmed times (during least inconvenience and disruption to facility operations). Include “with or without load” selection.

The generator must be provided with an outdoor fuel tank and an indoor fuel day tank. Transfer of power must be achieved via automatic transfer switches (four pole) with bypass isolation switch. Generator set must be capable of providing full rated power within 10 seconds after failure of normal power. Generator set must be “tropicalized”.

Provide engine exhaust piping, exhaust silencer/muffler, and accessories.

C. Grounding Systems: Provide a complete grounding system for the facility electrical systems.

D. Building Photovoltaic System: Provide Photovoltaic (PV) System as indicated.

1. Provide required auxiliary equipment including disconnect switches, combiners, inverters, circuit breakers, and panelboards.
2. PV Modules must be mounted on the roof using manufacturer standard stainless steel channels. Panels must be oriented and tilted per the manufacturer’s recommendation. Installation must be rated to withstand the project’s windload requirement.
3. The PV system inverter output must connect to the building Electrical system. The power generated by the PV system must become available for utilization by the building load. The following must be provided with the PV system.
    a. Surge protection
    b. Integral ground fault protection
    c. Anti-islanding
    d. Over and under voltage trip function
    e. Over and under frequency trip function
    f. Voltage and frequency sensing and time delay functions per IEEE Std 929-2000
    g. A web box connection for remote monitoring.
    h. A kilo-watthour meter to track energy produced by the PV system.

TELECOMMUNICATIONS:

The telecommunications scope of work includes voice, data, commercial cable television, security, and other special communication systems to support the new Simon Sanchez High School, which consists of the main building, cafeteria, gymnasium, library, auditorium, GCC building, JROTC building, outdoor sports facilities, staff and student parking stalls, and a courtyard.

Criteria and reference

- SSHS Telecom v1.0
- ANSI/TIA Standards, Latest Edition as determined by the GDOE
- BICSI Outside Plant Design Reference Manual (OSPDRM); 6th Edition
- BICSI Telecommunications Distribution Methods Manual (TDMM), 14th Edition
- National Electrical Code (NEC), 2017 Edition

Site Design

Project will provide (4)-4" conduits from the nearest utility pole to the entrance facility in Main Quad Building. Utility connection point shall be determined by the commercial telecommunications service provider based on the configuration and orientation of the building. (4)-4" conduits will be provided between MDF and IDFs in Main Quad Building. Intrabuilding cables will consist of 12 strand single mode fiber optic cables, 25 pair copper cables, and 1 RG11 cable.

Main Quad building will be connected to other buildings within the campus via underground pathways and structures. A minimum of (3)-4" conduits will be provided between underground structures and building IDFs. Interbuilding cables will consist of 12 strand single mode fiber optic cables, 25 pair copper cables, and 1 RG11 cable.

Classroom Buildings

Classrooms shall have a minimum of three (3) CAT6A data jacks and one (1) CAT6A jack for voice (telephone). A minimum of three (3) Information Management Outlets (IMO) shall be installed in each classroom area. One of the IMO will be equipped with two (2) CAT6A RJ45 jacks for data and one (1) CAT6A RJ45 jack for voice (telephone) at the front of the classroom. The second IMO will be equipped with one (1) CAT6A RJ45 jacks for data at the rear of the room. The third IMO shall be equipped with one (1) CAT6A RJ45 data jack for a Wireless Access Point (WAP). In general, the IMO at the front of the room shall be located near the teacher's workstation and the IMO at rear of the classroom shall be located at the center. All IMOs with the exception of the WAP IMO shall be at least three (3) feet from an electrical outlet.

Cafeteria

Cafeteria shall have a minimum of five (5) CAT6A data jacks and two (2) CAT6A jack for voice. Two (2) IMOs shall be installed in the dining area and one (1) IMO in the Cafeteria's Manager Office. One (1) of the IMO will be equipped with three (3) CAT6A RJ45 jacks for data and one (1) CAT6A RJ45 jack for voice at the rear of the dining room or at a stage area (if applicable), and mounted no less than 18" above floor level, and at least three (3) feet from an electrical outlet. The second IMO shall be equipped with one (1) Cat 6A RJ45 jack for a WAP. The WAP IMO shall be located at the center of the dining area and mounted on a wall at least 18" below ceiling level. The third IMO equipped with one (1) CAT6A RJ45 jack for data and one (1) CAT6A RJ45 jack for voice shall be install in the Cafeteria's Manager Office. The third IMO shall be located next at a location suitable for an office workstation, and mounted no less than 18" above floor level and no more than three (3) from an electrical outlet. All data and voice cables shall be homerun back to the nearest network distribution frame (IDF or MDF). Note: Depending on size of the space, additional IMOs and cables may be required for additional wireless access points.

Gymnasium

Gym shall have a minimum of four (4) CAT6A data jacks and one (1) CAT6A jack for voice. Two (2) IMOs shall be installed in the Gym floor area. One (1) of the IMO shall be equipped with three (3) CAT6A RJ45 jacks for data and one (1) CAT6A RJ45 jack for voice at the front of the of the gym or at a stage area (if applicable), and mounted no less than 18" above floor level and at least three (3) feet from an electrical outlet. The second IMO shall be equipped with one (1) CAT6A RJ45 jack for WAP. The WAP IMO shall be located at the center of the gym area and mounted on a wall no more than 24" below the ceiling level. All data and voice cables shall be homerun back to the nearest network distribution frame (MDF or IDF). Note: Depending on size of the space, additional IMOs and cables may be required for additional wireless access points.

Auditorium

Auditorium shall have a minimum of four (4) CAT6A data jacks and one (1) CAT6A jack for voice. Two (2) IMO shall be installed in the auditorium area. One (1) IMO shall be installed at the front of the auditorium or stage area, and equipped with three (3) CAT6A RJ45 jack for data and one (1) CAT6A RJ45 jack for voice. The IMO shall be mounted no less than 18" above the floor level, and no more than three (3) feet from an electrical outlet. The second IMO shall be equipped with (1) CAT6A RJ45 jack for WAP. The WAP IMO shall be located at the center of the auditorium area and mounted on a wall at no more than 18" below the ceiling level. All data and voice cables shall be homerun back to the network distribution frame (MDF or IDF). Note:

Depending on size of the space, additional IMOs and cables may be required for additional wireless access points.

Library

Library shall have a minimum of twelve (12) CAT6A RJ-45 jacks for data and two (2) CAT6A RJ45 jack for voice. Three (3) IMOs shall be equipped with three (3) CAT6A RJ45 jacks for data. Two (2) IMO shall be equipped with one (1) CAT6A RJ45 for data and one (1) CAT6A RJ45 for voice. One (1) IMO equipped with one (1) data jack for the WAP. In general, the three (3) IMOs with three (3) CAT6A R45 jacks for data will be located next to the computer workstations for students as designated in the library's floor plan. One IMO with one (1) CAT6A RJ45 for data and one (1) CAT6A RJ45 for voice will be located near the librarian workstation. One (1) IMO with one (1) CAT6A RJ45 jack for date and one (1) CAT6A RJ45 jack for voice will be located near the library counter. And One (1) IMO with one (1) RJ45 jack for the WAP shall be located at the center of the Library's work area, and mounted on a wall no more than 18" below the ceiling level. All IMOs with the exception of the WAP IMO shall be located no more than three (3) from an electrical outlet. All data and voice cables shall be homerun back to the nearest network distribution frame (MDF or IDF). Note: Depending on size of the space, additional IMOs and cables may be required for additional wireless access points.

Computer lab

Computer lab shall have a minimum of twelve (12) CAT6A RJ-45 jacks for data and one (1) CAT6A RJ45 jack for voice. Three (3) IMOs shall be equipped with three (3) CAT6A RJ45 jacks for data. One (1) IMO shall be equipped with two (2) CAT6A RJ45 for data and one (1) CAT6A RJ45 for voice. One (1) IMO equipped with one (1) data jack for the WAP. In general, the three (3) IMOs with three (3) CAT6A data jacks will be located next to computer workstations as designated in the room's floor plan. One IMO with one (2) CAT6A RJ45 jack for date and one (1) CAT6A RJ45 jack for voice will be located at the front of the room near the teacher workstation. And One (1) IMO with one (1) RJ45 jack for WAP shall be located at the center of the room and mounted on a wall no more than 18" below ceiling level. All IMOs with the exception of the WAP IMO shall be located no more than three (3) feet from an electrical outlet. All data and voice cables shall be homerun back to the nearest network distribution frame (MDF or IDF). Note: Depending on size of the space, additional IMOs and cables may be required for additional wireless access points.

Office workstation

Office workstation shall have one (1) IMO with one (1) CAT6A RJ45 for data and one (1) CAT6A RJ45 jack for voice (telephone). The IMO shall be mounted no less than 18" above floor level and no more than 3 feet from an electrical outlet. The office workstations include but not

limited to workstations for Counselors, Nurse, CRT Office, Student Support Office, Main Offices for administrators and staff, PE Offices, Cafeteria Office, Main Office Counter, and other designated workstation(s) in the campus. All data and voice cables shall be homerun back to the designated MDF or IDF.

Main Office common area

Main Office common area shall have two (2) IMO equipped with one (1) CAT6A jack for data. One (1) IMO with one (1) CAT6A data jack is the WAP. The WAP IMO shall be located at the center of the common area and mounted on the wall no more than 18" below ceiling level. One (1) IMO with one (1) CAT6A data jack, if it is required, will be utilized for a time clock device connection, mounted at the designated area as indicated in the main office floor plan.

Teacher Lounge and school's conference rooms

Teacher Lounge and school's conference rooms shall be equipped with two (2) IMOs. One IMO shall have three (3) CAT6A RJ45 for data and one (1) CAT6A RJ45 for voice and shall be located next to a designated work area. This IMO shall be mounted no less than 18" above floor level and no more than 3 feet from an electrical outlet. The second IMO shall have one (1) CAT6A RJ45 jack for the WAP and shall be located at the center of the room and mounted on the wall no more than 18" below ceiling level. All data and voice cables shall be homerun back to the nearest network distribution frame (MDF or IDF).

Network copier

Network copier location shall be equipped with one (1) IMO equipped with one (1) CAT6A RJ45 jack for data, and located no less than 18" above floor level. The copier's IMO location shall be determined by the school's floor plan. The data cable shall be homerun back to the nearest distribution frame (MDF or IDF).

Network Rooms

Network rooms will be air conditioned and provided with fire suppression for electronics. A minimum of two (2) walls will be provided with fire-rated plywood backboards and cable ladders along with appropriate cable management will be provided in the rooms. An enclosed and lockable floor mounted enclosure rack with ventilated front and back door will be provided in the non-secured MDFs/IDFs to house all data and voice patch panels, fiber enclosure, and required network equipment. The 23.5"W x 42"D x 78"H rack enclosures shall include ventilated fans on top and bottom of the enclosed rack. Fans must be mounted on the relay rack within the lockable rack enclosure. A 23.5"W x 42"D x 78"H, four (4) post network rack will be provided in the secured MDFs/IDFs.

General

- The design and installation of conduits and pathway shall conform to TIA/EIA 569 pathway specifications.
- Pull string shall be provided in each conduit along with the cables.
- All intra-building data/voice cables shall be TIA/EIA Category 6A or better rated, TIA/EIA 568B, unshielded twist pair (UTP) cable, four (4) pair, UL approved, 24 AWG, solid copper. The cable jacket must state "(UL) Verified CAT".
- For data cabling, the cable length from IDF or MDF to IMO shall not exceed 290 feet.
- All cables installed shall have at least 8" of slack coiled in the box.
- Each cable shall be labelled, separately at both ends, within 6" of the termination ends.
- Typical outlet box for IMO shall consist of recessed double-gang,4-11/16" square by 2 1/8" deep, backbox with 2-gang mud ring and a blank faceplate in the up and down orientation.
- Provide a minimum of one (1) 1" conduit from each IMO to the nearest overhead distribution cable tray or homerun to the IDF. No-daisy-chaining.
- Fire stops will be used where applicable.
- Provide telecom handholes at strategic locations in the underground conduit system.

Commercial Cable Television (CATV)

A complete CATV system will be provided and coordinated with the local service provider to include all interior equipment required to provide high quality TV signals to all outlets with a return path for interactive television and cable modem access. System will include headend amplifier, amplifiers, splitters, combiners, line taps, cables, outlets, tilt compensators and all other parts, components, and equipment necessary to provide a complete and usable system.

Security (CCTV)

- An IP based security surveillance system will be provided with a network video recorder (14-day capacity).
- The system will be capable of providing motion detection and alerts.
- Indoor security cameras will be 4k and sound capable.
- Outdoor security cameras will be 4k, IP67-rated, tilt-pan capable.
- CCTV locations to be coordinated and determined by SSHS.

Public Address System (PA)

A complete PA system capable of multiple zone configurations will be provided throughout Simon Sanchez High School. PA speakers will be provided as required for adequate coverage.

The PA system equipment will be in the administration building with microphone connections at the location as determined by SSHS. The PA system shall have the capability to play prerecorded messages as well as manual messages from the microphone.

Intercom System

An intercom system will be provided at all exterior doors. Intercom system will provide two-way communication between the secured and non-secured side of the building. Entry into each building will be monitored.

Indoor Wireless Access Point

- Aruba Instant IAP-515 Wireless Access Point (US), Part Number Q9H63A, Indoor, dual radio, 5GHz 802.11ax 4x4 MIMO and 2.4GHz 802.11ax 2x2 MIMO, Supports 802.11b (DSSS) 802.11a/g/n/ac (OFDMA), 4 integrated dual-band downtilt omni-directional antennas, PoE supported or approved equivalent or better.
- Wireless Access Point Wall and Ceiling Mounting Kits

Outdoor Wireless Access Point

- Outdoor long arm bracket shall be securely mounted to the building's exterior structure. Outdoor WAP shall be mounted at the end of the arm bracket pointing or facing downwards.
- Mounted arm bracket shall house and support the Ethernet cable to outdoor access point. No cable to the WAP shall be exposed and shall be protected from weather elements.
- Outdoor wall mounting kit shall be included: AP-270-MNT-V1 AP-270 Series Outdoor Pole/Wall Long Mount Kit, Part Number JW052A.

Grounding and Bonding

- All grounding and bonding shall be done in accordance with TIA-607-C and NFPA 70
- Primary bonding busbar (PBB) shall be provided in the MDF and should be located adjacent to incoming service conduits. PBB shall be connected to the electrical building service ground with bonding conductor sized as required. Additional Secondary bonding busbar (SBB) shall be provided in each IDF with bonding conductor tied back to PBB.

PROCEDURES AND GUIDELINES HANDBOOK FOR ART IN PUBLIC BUILDINGS AND BUILDINGS SUPPORTED BY FEDERAL AND GOVERNMENT OF GUAM FUNDS IN THE TERRITORY OF GUAM AND THE PERCENT FOR THE ARTS ENHANCEMENT GRANT PROGRAM.

CHAPTER I. THE LAW

Public Law 20-27, Chapter 8 of Title 1 of the Guam Code Annotated, relative to "Arts in Public Buildings and Facilities" as amended by Public Law 31-118 amending subsections 850, 852 and 853 of the Guam Code Annotated.

CHAPTER II. PURPOSE

P.L. 31-118 Section 1 Subsection 850

The government of Guam recognizes its responsibility to foster culture and arts and the necessity for the development of the arts beginning with our young children and throughout the community. I Liheslatura (the legislature) declares it to be policy that a portion of appropriations for capital expenditures for public buildings be set aside either for the acquisition of works of art to be used in such buildings and in any buildings intended for use of the general public to the extent that the construction or improvement of such non-public buildings is supported by either federal or government of Guam tax incentives or other subsidy arrangement or the funds may be given to the Guam Council on the Arts and Humanities Agency for the purpose of fostering culture and the arts for the development of local artists, children and the community as a whole.

CHAPTER III. DEFINITIONS

A. Definitions as it applies to Art in Public Buildings and buildings supported by the Federal and Government of Guam Funds in the Territory of Guam.

1. "Art and Arts" means the graphic arts and other arts having aesthetic value that is to the public as defined by P.L. 20-27.

2. "Artist" means one who produces or aids in the production of art.

3. "Public Building" or "Public Facility": a building or facility owned by the government of Guam or any of its instrumentalities.

4. "Non-Public Buildings": Buildings that are supported by either government of Guam funds through tax abatements, rebates, loans, loan guarantee or bond financing or by Federal funds administered by the Government of Guam.

5. *"Department" means the Department of Public Works or that agency of the government which supervises the design of a public building or facility.*

6. "Public Area" means that part of a public building or facility to which the public is generally admitted during certain hours of the day. Public area does not include any office space to which the public generally has no access.

7. *"Local Artists" mean artists who are residents of Guam for at least 6 months and pay taxes on Guam.*

8. "Contracting Agency": The owner of the building identified including either governmental or non-governmental.

B. Definitions as it applies to the Percent for the Arts Enhancement Grant Program.

1. "Agency" means Guam Council on the Arts and Humanities Agency, government of Guam.

2. "Director" means Director of the Guam Council on the Arts and Humanities Agency.

3. "Board" means the council on the Arts and Humanities Agency Board, government of Guam.

4. "Fund" means the Percent for the Arts Enhancement Grant Fund.

5. "Grantee" means an applicant who is awarded a grant.

6. "Grant" means an approved award of funds from the Percent for the Arts Enhancement Grant Program.

7. "Government of Guam funds" means any funds received from a legislative appropriation, the Guam Visitors Bureau or from an autonomous agency.

8. "Government" means the government of Guam.

CHAPTER IV. HOW IT WORKS

A. Art in Public Buildings and buildings supported by the Federal and Government of Guam Funds. (P.L. 31-118 Section 2 subsection 852)

1. Plans for public buildings and buildings supported by federal or government of Guam subsidy which contain public areas, and plans for remodeling or renovation of public buildings or facilities where the total cost of construction, remodeling or renovation exceeds the sum of One Hundred Thousand Dollars ($100,000) shall contain provisions for the inclusion of works of art by local artists if available, including, but not limited to, sculptures, paintings, murals or objects relating to or consisting of native arts.

2. The owner of the building shall also have the option of allotting at least one percent (1%) of the overall construction, remodeling or renovation cost of a building to the Guam Council on the Arts and Humanities Agency (CAHA) in lieu of the inclusion of works of art.

3. If artwork plans are selected, however, a representation of the final selection shall be published in a newspaper of general circulation and/or the online version of the newspaper for public screening prior to implementation.

4. Before issuance of the occupancy permit for such construction, remodeling or reconstruction the owner of the building must obtain clearance from the Guam Council on the Arts and Humanities Agency that the provisions of this Chapter are being complied with.

5. At least one percent (1%) of the overall construction, remodeling or renovation cost of a building described in Subsection (a) of this Section shall be reserved for the purpose of the design, construction, mounting, maintenance and replacement and administration of works of art by CAHA in the public area of such a building or the owner shall give the amount to CAHA.

The Director of Public Works shall ensure that no construction, remodeling or renovating of a public building, or building supported by government of Guam funds, is granted an occupancy permit without this Chapter being complied with.

6. Such buildings with an overall construction cost of less than One Hundred Thousand Dollars ($100,000) are exempted from the requirements of this Chapter unless inclusion of works of art in their design and construction is specifically authorized by the owner.

7. The artist who creates these works of art shall be selected as provided in Subsection (f) of this section.

8. The Director of CAHA shall develop rules and regulations, pursuant to the Administrative Adjudication Law, for the selection of works of art under this Chapter and shall open competition for awarding any art contract under this Chapter by:

    a. Soliciting proposals from local artists by a project announcement published no less than three (3) times in a local publication or general circulation in print and online versions;

    b. Appointing a selection committee consisting of five (5) members to review all proposals and report to the Director the results of its deliberations regarding the proposed art contract. Such committee shall include a representative of the building' owner or of the agency or department involved, the project architect, the municipal mayor from the project site and at least two (2) practicing artists from Guam. The final decision regarding the use of art work and the selection committee's recommendations shall be by the Director of CAHA, who shall be the contracting officer for any art contract executed pursuant to this Chapter.

9. *The Director of CAHA shall include in the CAHA rules and regulations, pursuant to the Administrative Adjudication Law, procedures for the acceptance of funds as stated in this Section.*

a. *An account shall be established which shall be maintained separate and apart from other funds of the government of Guam, shall be kept in a separate bank account and shall not be subject to transfer authority of I Maga'alahen Guahan. Funds shall remain in such account and expended by CAHA for the purpose mandated in this Section. Said Fund shall be examined and reported upon as required by the law by the Director of CAHA who shall serve as the certifying officer of said Fund.*

b. *On the first (1st) day of each fiscal quarter, the CAHA Director shall provide to I Maga'Lahen Guahan and the Speaker of I Liheslaturan Guahan and post on the CAHA website, a detailed report of how funds were allocated and utilized.*

10. *Enforcement*

a. *CAHA shall identify public buildings in non-compliance with this Section and send written notices within ten (10) working days. Upon receipt of the notice, recipients have two (2) weeks (fourteen (14) calendar days) to acknowledge in writing, receipt. Recipients will be given up to one (1) fiscal year to comply with Section.*

b. *The Guam Economic Development Authority (GEDA) shall ensure that current Qualifying Certificate (QC) program beneficiaries are in compliance with this Section.*

c. *For monitoring purposes, GEDA shall provide to CAHA a list of past and current QC recipients. CAHA will determine whether former QC recipients complied with Subsections (a) and (c), and notify them in writing if non-compliance was determined. Upon receipt of the notice, recipients have two (2) weeks (fourteen (14) calendar days) to acknowledge, in writing, receipt. Recipients will be given up go one (1) fiscal year to comply with this section.*

d. *CAHA shall provide to the Department of Revenue and Taxation a list of QC recipients who fail to comply with this Section. The Department of Revenue and Taxation shall refuse to grant renewal of business license for current and past QC recipients in noncompliance, until the CAHA Director issues a written confirmation of compliance.*

11. *P.L. 31-118 Section 3 subsection 853 - Inclusion of Chamorro Artistry or Guam History Elements in Government Building: Government of Guam Buildings and Structures*

All government of Guam building and structures shall contain elements of either Guam History or of Chamorro artistry costing up to a maximum of three percent (3%) of the aggregate of the architectural and engineering , the construction or the renovation budgets therefore. Such elements may be made part of the internal or external physical structure of the building or structure and may be within the main

part of the building or structure or separated from the main part. In complying with the provision of this Section, a contractor for the government agency constructing the building or structure may consult with CAHA as to the various types of Chamorro or historic Guam artistic elements. The Department of Public Works (Department) shall monitor noncompliance with this Section during its plans approval process, unless such plans are exempted in accordance with Subsection (b) of this Section. If the Department determines that a non-exempted project does not comply with this Section, it shall refuse to issue either a building permit or an occupancy permit (as the case requires) for such project until compliance.

12. Exceptions to Applicability

Buildings and structures constructed for use as shelters for utility facilities or utility operations are not subject to Subsection (a) of this Section.

13. Compliance

Government of Guam agencies found in noncompliance of this Section shall be given up to one (1) fiscal year to comply. CAHA shall ensure compliance with this Section.

14. Government Lease Spaces

Government of Guam agencies leasing space are not exempt from this Section, and if found in noncompliance will be given up to one (1) fiscal year to comply. CAHA shall ensure compliance with this Section.

15. SELECTION COMMITTEE

The Selection Committee shall determine the scope, direction, and particular needs of each project. The Selection Committee shall include.

a. A representative of the building's owner or of the agency or department involved.

b. The project architect.

c. The Municipal Mayor from the project site.

d. At least two (2) practicing artists from Guam.

Voting: Each member of the selection committee will have one vote. The majority vote shall determine selection.

16. SELECTION PROCEDURE

The Selection Committee shall tour the site of the project and designate the various areas where artwork is to be placed. The Selection Committee shall then consider the

particular needs of the project including the budget, appropriate art forms, and the location and medium of the art form.

17. Selection Method

Open Competition: The Selection Committee shall solicit artwork samples from artists by a project announcement published no less than three (3) times in a local publication of general circulation.

The selection process may be in two stages whereby a limited number of finalists, selected from the competition will be asked to submit more detailed proposals. Each of the finalists will be paid a professional design fee.

18. Criteria for Selection

a. Style and Nature: Works of art that compliment the environment where the art work is to be displayed. The size of the artwork must also be compatible to the size of the location designated.
b. Quality: The inherent quality of the artwork is the most important criterion for selection.
c. Media: All visual art forms will be considered along with objects relating to or consisting of indigenous art. The artwork can be either portable or permanently fixed. If the artwork is to be permanently placed the Selection Committee will decide if the location identified is structurally capable of maintaining the artwork in terms of relative maintenance of repair costs.
d. Permanence: Due consideration will be given to structural and surface soundness and to permanence in terms of relative excessive maintenance or repair costs.
e. Method of Acquisition: Existing works of art specifically commissioned are eligible.

19. BUDGET

The selection Committee shall identify the funds available for the project and approve expenditures. The funds will be dispersed as specified by P.L. 31-118.

20. USE OF FUNDS

a. Funds identified may be used for:

1. For the purchase of existing artwork selected or commissioned by the Selection Committee.

2. Design: Artist's professional design fee.

3. Construction: The actual work and materials put into the creation of the artwork.

4. Mounting: Expenses for the purposes of affixing the artwork onto the location specified.

5. Maintenance: Expenses incurred towards the mechanical maintenance of the artwork for up to one year after installation.

6. Replacement: Artwork that are to be replaced due to irreparable damage.

7. Administration: Expenses to cover any administrative costs incurred by the Selection Committee of GCAHA in the selection of artwork. Those costs include but are not limited to hiring of contractual staff, advertisements, supplies and professional services. At least one percent (1%) of the identified funds will be awarded to the Guam Council on the Arts and Humanities Agency for the purposes of contracting administrative staff to coordinate and maintain the program.

8. Plaques and Labels identifying the art work.

9. Frames, mats and pedestals necessary for the presentation of the artwork.

10. Waterworks and electrical and mechanical devices, equipment and site work which are integral parts of the work of art.

11. Reproductions of up to 50 high quality limited edition prints, numbered and signed by the artist. Exclusively used for exhibition purposes and will not be for sale. (Subject to approval by the Selection Committee).

a. FUNDS IDENTIFIED MAY NOT BE USED FOR:

1. Reproductions, by mechanical or other means, of original works of art, unless mechanical means of reproductions are an integral part of the creative process. (Subject to approval by the selection Committee as mentioned on section (K) on USE ON FUND: Funds Identified May be used for)

2. Decorative, ornamental, or functional elements which are designed by the building architect or consultants engaged by the architect, as opposed to an artist commissioned for this purpose.

3. Those elements generally considered to be components of a landscape architectural design.

4. Art objects which are mass produced or of a standard commercial design, such as playground sculpture or fountains.

5. Directional, or other functional elements, such as super graphics, signage, color coding, maps, etc., except where these elements are an integral part of the original work of art.

6. Those items which are required to fulfill the basic purpose of the contracting agency. Examples would be works of art in the collection of a state museum, or works of art fulfilling an interpretive or educational role in a college or university art museum or gallery.

7. Preparation of the site necessary to receive the work of art.

8. Energy and water costs of operation of electrical and mechanical systems.

9. Art exhibitions and educational activities.

10. In connection with the works of art after delivery: registration, dedication, unveiling, insurance and security.

11. Architectural services.

12. Artistic staff salaries, equipment and supplies employed by the building owner.

21. WHO IS ELIGIBLE

Selection preference may be given to local artists who have resided in Guam for at least 6 months; who pay taxes in Guam; and are registered with CAHA. Selection preference may be given to local artists.

22. RESPONSIBILITES

a. Guam Council on the Arts and Humanities Agency in consultation with the various Government agencies and departments needed to comply with the law and the building owner shall:

1. Be responsible for the selection of the commissioning of artist for, reviewing the design, execution and placement of, and acceptance, of works of art in consultation with the selection committee.

2. Appoint the selection committee.

3. Assist the contracting agency in contract negotiation with the artists.

4. In consultation with the contracting agency, CAHA may transfer works of art between public buildings, whenever, in its judgment, the

transfer will be to the benefit of the citizens of Guam. This section only pertains to Government agencies and departments.

5. Handle public information aspects of the project. All expenses incurred will be the responsibility of the contracting agency.

6. Identify and carry necessary maintenance procedures (for up to one year after installation), and maintain accurate records of the collection in partnership with the contracting agency.

b. The Contracting Agency Shall:

1. Notify the Guam Council on the Arts and Humanities Agency upon Legislative approval of construction/renovation projects which costs over $100,000. If the contracting agency in this instance must notify GCAHA upon approval of support by either government of Guam funds through tax abatements, rebates, loans, loan guarantees or bonds financing or by Federal Funds administered by the government of Guam.

2. Notify the Guam Council on the Arts Humanities Agency of the Project details.

3. Consult with GCAHA and Selection committee on the determination of budget and selection procedures.

4. Contract with and pay for the architect for administrative and/or design services to be rendered in connection with the commissioning of works of art.

5. See that payment is made for all costs, professional fees, purchases and commissions in accordance with the Guam Law, these rules and GCAHA standards.

6. Provide project coordination to assure timelines of completion.

7. Be responsible for inventory and security of the work; and with advice and consent of the Guam Council on the Arts and Humanities Agency for maintenance and repair.

8. Assist GCAHA with public information aspects of the project, with assistance and approval from GCAHA.

9. The Guam Council on the Arts and Humanities Agency and the selection Committee must be informed of any changes in the proposed plans, costs, construction completion date or scope of the project before these changes are implemented.

c. The Architect Shall:

1. Recommend to the Guam Council on the Arts and Humanities Agency and the contracting agency specific sites for works of art and the scale and type of work thought to be most appropriate.

2. Act as a member of the selection committee.

3. Work closely with the artist where required, provide engineering and technical assistance to the artist if requested from the contracting agency.

4. Assure that all service requirements for the work of art met in the design documents and that the work may be installed with relative ease.

d. The Artist shall:

1. Be commissioned by the contracting agency (Defined as both governmental and private developments) with approval of the Director of the Guam Council on the Arts and Humanities Agency to execute and complete the work in a timely and professional manner. Be in close contact with the contracting agency before and during installation, and transfer title of an existing work of art to the agency for incorporation in its building inventory.

2. Deal personally with the other parties in all phases of the negotiations. However, the artist (s) may, at their option designates their dealers or agents to represent them in certain aspects of the project.

3. Copyright: The artist retains those rights concerning the reproduction and of the original artwork for commercial purposes unless specified in the original contract agreed upon by the artist and the contracting agency.

4. Maintain a close working relationship with the architect and contracting agency on commissioned pieces.

5. Upon completion of the work (s) or purchased, the artist shall submit to the Guam Council on the Arts and Humanities Agency a detailed description of the work (s) with instructions on its care and maintenance, high resolution digital files, scans and two 8 X 10 glossy photos. The description form shall be submitted concurrently with the final invoice.

6. All plans, drawings, and other materials related to a proposed work of art are the property of the Guam Council on the Arts and

Humanities Agency until the final work is installed, at which time such preparatory materials revert to the artist.

23. SCOPE AND NATURE EXPENDITURES

While no more than 1% can be dedicated from capital construction appropriations, it is possible that a dollar total greater than 1% can be expended for art in a project if funds are generated from other sources (i.e., governmental or private funds). The 1% figure is a minimum.

If 1% of total funds appropriated for a particular project is not required for that project, such un-required amounts can be: a) used to acquire art for existing government buildings; b) transferred to another construction project, or both, as determined by the Guam Council on the Arts and Humanities Agency, in consultation with the contracting agency. If the contracting agency is a non public building the contracting agency may use these funds to purchase art pieces that will be donated to the people of the territory of Guam, these funds can also be used to fund art related projects, although these expenditures must be approved by the Guam Council on the Arts and Humanities Agency.

Administrative costs of any particular project may be funded through the 1% appropriation and will be limited to the following area:

a. Supplies and services connected with public information, and artists' prospect for specific projects.

b. Selection committee per diem, and artist professional fees.

c. Contractual Services.

24. GENERAL PRINCIPLES AND PROCEDURES

Integration of Art and Architecture: So that artists and architects can gain from each others' design insights and, thereby produce a more integrated solution, all parties should strive for engagement of the artist as soon as possible after the approval of the architect's schematic design phase.

Freedom of Expression: Because of the bold attempt to meld together the imaginations and talents of so many individuals and groups, freedom to reach creative solutions must always be maintained. The artists, on their part, must be sensitive to the unique qualities of public art and the guidelines and parameters which, of necessity, may have been agreed upon.

Exhibitions and Educational Aspects: To serve the public more fully the contracting agencies should consider undertaking the following, funded with monies other than those made available under the Act:

a. Exhibition of sketches and scale models created in open competitions.

b. Involvement of students and art instructors in workshops with artists creating works.

c. Tours of those sites which exhibit many works, conducted by trained docents.

d. Use of State educational and other facilities by the artist in developing concepts and creating the work, so that the people of the territory of Guam can better understand the creative process. Such facilities might studio space, foundries, machine, welding and woodworking shops, printing and photographic facilities.

e. Filming or Videotaping the creation and installation of the work.

The Guam Council on the Arts and Humanities Agency is available to provide consultative assistance with these matters.

Accessibility of Information: All parties will strive to publicize widely all aspects of the program. All meetings of the Selection Committee are open to the public.

Community Support and advice: While firmly committed to the principle of selection of artists by the selection Committee, the Selection Committee welcomes advice from the interested public.

Conflict of Interest: All procedures will be conducted and all decisions will be made free of any conflict of interest. The Guam Council on the Arts and Humanities Agency will ensure that members of the Selection Committee and the Contracting Agency are not related in any way to the artists submitting portfolios either through kin and/or Business relations.

Dedication: If a dedication or "Unveiling" of work is desired, arrangements shall be the responsibility of the contracting agency in consultation with the Guam Council on the Arts and Humanities Agency.

25. DOCUMENTATION

Documentation:

A. Identification: The Guam Council on the Arts and Humanities Agency will assist the contracting agency with identification which will include plaques or labels identifying the work, which are securely affixed, unobtrusive, and well designed. Included should be the name of the artist; if any; medium; and year completed.

B. Registration: The Contracting agency shall maintain accurate inventory records. Copies will be filed with the Guam Council on the Arts and Humanities Agency.

C. Publications: As Collections grow, contracting agencies are encouraged to publish informative folders and booklets on works of art. The Guam Council

on the Arts and Humanities Agency is available to assist with editorial and technical assistance.

CHAPTER V. HOW IT WORKS – The Percent for the Arts Enhancement Grant Program. (P.L. 31-118 Section 2 subsection 852)

Public Law 31-118 establishes the fund. It mandates the Guam Council on the Arts and Humanities Agency to set up the eligibility requirements governing usage of the fund. The Director of CAHA shall include in CAHA rules and regulations, pursuant to the Administrative Adjudication Law, for the disposition of funds to meet the purpose of fostering culture and arts for the development of local artists, our children and the community as a whole.

CHAPTER VI. Purpose of Grants

Grants are available to enhance cultural and artistic learning opportunities for our youth and youth organizations. Funds of no more than $3,000 per project will be awarded to assist in areas of cultural and artistic development. These projects must demonstrate that they are vital to long term learning and development, and support the continued fostering of the arts and cultural education process for the youth.

CHAPTER VII. Eligibility

A. Organizations

1. If the applicant is an organization, it must be registered with the government of Guam as a nonprofit organization, or be a bona fide Guam school program, sanctioned by the school's principal and endorsed by the Director of Education, school master or Superintendant of Parochial schools.

2. Organizations that apply for a grant must be in compliance with all applicable laws and regulations.

B. Individuals

1. If the applicant is an individual, he or she must be a permanent resident of Guam.

2. If the applicant is an individual under the age of eighteen years of age, their parent or legal guardian will be able to apply on the minor's behalf.

CHAPTER VIII. Grant Criteria

Grants will be awarded only to individuals or organizations.

CHAPTER IX. Application Process

A. Step One: Submission.

1. To qualify for a grant, an application must be filled out and submitted to the Agency, along with the following information:

   A nonprofit organization requesting funds must provide a copy of its articles of incorporation of other proof of registration as a nonprofit organization with the government of Guam. A requesting school must submit a letter from the school's principal and the Director of Education, school master or Superintendent of Parochial Schools, endorsing the organization.

2. Grant applications which do not comply with the requirements of Step One shall not be considered complete and eligible for certification.

B. Step Two: Certification.

The Director will certify the grant application as to its completeness. If the application is not complete, the Agency will send a notification to the applicant either via email or by certified mail informing them of the application's status and that proper adjustment need to be made within 15 days of notification. The Director will certify the grant application as to its completeness. If the grant application is not complete, the Agency will mail a non-certification form to the grant applicant for proper adjustment.

C. Step Three: Consideration.

1. A certified grant application shall be submitted by the Director to the Board for consideration during the next grant review cycle for the program. Applications will be reviewed and considered by the Board on a biannual basis, every January and June of a calendar year.

2. The Board shall approve grant applications in accordance with the purposes stated in Chapter VI of these regulations.

3. The Board will not consider any grant application unless Steps One and Two have been completed.

CHAPTER X. Disbursement of Funds

A. The Director shall manage the Fund and the Agency's certifying officer shall be the Fund's certifying officer.

B. Upon Board approval of the application, the Agency shall process the necessary paperwork for the grant

C. Within thirty days after completion of project/program, the grantee shall provide the Director with a report and an accurate expenses report reflecting the expenditure of all government of Guam funds.

CHAPTER XI. Misuse of Funds

A. Any person who willfully misuses a grant received under these regulations shall be guilty of a petty misdemeanor and subject to a fine not to exceed $500.

B. If the grantee is delinquent in submitting the detailed narrative and expenditure report required by Chapter X, Section C, the Agency shall send a written notice, certified mail, return receipt requested, to the grantee giving the grantee fifteen days from the date of receipt of the notice to submit the report. Grantees failure to comply may be deemed a violation of said chapter.

CHAPTER XI. Grant Limitations

A. Only one grant from the Fund can be awarded per organization program or individual per year.

B. The maximum grant amount for each organization or individual cannot under any circumstances exceed $3,000.

C. All grants awarded through the Agency are contingent upon the availability of funds and final approval by the governor.

CHAPTER XII. Recording Requirements

Reporting Requirements – Art in Public Buildings and Buildings Supported by Federal and Government of Guam Funds in the Territory of Guam and the Percent for the Arts Enhancement Grants Program.

On the first (1^{st}) day of each fiscal quarter the CAHA Director shall provide I Maga'lahen Guahan and the Speaker of I Liheslaturan Guahan and post on the CAHA website a detailed report of how the funds were allocated and utilized.

A. The quarterly report for the Art in Public Buildings and Buildings Supported by Federal and Government of Guam Funds in the Territory of Guam shall include the following information concerning the use of the Fund:

1. The number and names of projects.
2. The amount allocated towards the program per project.
3. Other pertinent data concerning management of the fund.

B. The quarterly report for the Percent for the Arts Grants Enhancement Program shall include the following information concerning the use of the Fund:

1. The number and names of applicants.
2. The number, names of grantees and amounts of grants awarded.
3. Other pertinent data concerning management of the fund.

Furthermore, the Guam Council on the Arts and Humanities Agency shall annually make a public report on all Art in Public Buildings and Buildings Projects Supported by Federal and Government of Guam Funds in the Territory of Guam and the Percent for the Arts Enhancement Grants Programs of the previous year.

CHAPTER XIII. SEVERABILITY P.L. 31-118 Section 4

If any provisions of this Law or its application to any person or circumstance is found to be invalid or contrary to law, such invalidity shall not affect other provision or applications of this Law which can be given effect without the invalid provision or applications and to this end the provisions of this Law are severable.

IN CONCLUSION

Guam's 1% Program is dedicated to placing visual art of the highest quality by contemporary and traditional artists where the people of the Territory of Guam can appreciate. In so doing, the Territory of Guam is building a significant art collection of historic value for its people. Furthermore, it will enrich the lives of our children, local artists and the community as a whole.

ATTACHMENT B-17

DPW Construction Management (CM) Requirements

1. DPW Construction Management Oversight & Reporting

1.1 Developer Reporting Obligations

- Submit **weekly and monthly progress reports** to the DPW Construction Manager (CM), including:
    - Work completed.
    - Upcoming activities and critical milestones.
    - Risks, mitigation strategies, and outstanding issues.

1.2 Daily Construction Reports (DCRs)

- Submit **Daily Construction Reports (DCRs)** to the DPW CM **by 9:00 AM the following workday**.
- Reports must include:
    - Work performed (by trade and location).
    - Manpower on-site (contractor, subcontractors, and suppliers).
    - Equipment on-site and in use.
    - Weather conditions and any weather-related delays.
    - Quality control activities and testing performed.
    - Safety incidents or near misses.
    - Potential delays or issues requiring resolution.
- Provide **daily progress photos** highlighting work performed and critical activities.

1.3 Meetings & Coordination

- Attend DPW CM **weekly coordination meetings** and provide real-time project updates.
- The DPW CM has authority to **issue directives, require additional reporting, and approve work schedules**.

---

2. Work Hours & Overtime

2.1 Regular Work Hours

- **Monday to Friday, 8:00 AM – 5:00 PM**.

2.2 Non-Standard Work & Overtime Approval

- Any work outside these hours **requires DPW CM approval**.
- If work outside normal hours is due to **contractor delays**, costs are **contractor's responsibility**.
- Submit **Overtime Work Requests at least 48 hours in advance**, including:
    - Scope of work.
    - Justification for overtime.
    - Requested work hours.
    - Estimated CM inspection costs (if applicable).

2.3 DPW CM Overtime Inspection Costs

- If the contractor elects to **work overtime, weekends, or holidays**, the contractor shall be responsible for all associated DPW **CM overtime inspection costs**.
- DPW CM overtime rates shall be determined based on **contract rates established for Construction Management oversight personnel**.

---

3. DPW CM Field Office

3.1 Developer-Provided Office for DPW CM

- Office space for at least **6 personnel**.
- Conference room for **weekly coordination meetings**.
- High-speed internet, printers, and workstations.
- Office furniture (desks, chairs, filing cabinets, etc.).

3.2 Utilities & Maintenance

- Developer responsible for **utilities, janitorial services, and routine upkeep**.

3.3 Restroom Facilities

- The **Developer-Provided Office for CM** shall include **restroom facilities** that meet the following requirements:
    - **Flush toilets** with **septic or sewer connections**, or portable toilets maintained per **OSHA 29 CFR 1926.51(c)**.
    - **Separate restrooms** for men and women, or gender-neutral accommodations as required by law.
    - **Handwashing stations with potable water, soap, and disposable towels** per **OSHA 29 CFR 1926.51(f)**.

- **Regular servicing and maintenance** to ensure cleanliness and sanitation

---

4. Project Scheduling & Time Impact Analysis (TIA) Requirements

4.1 Baseline Schedule Submission – USACE UFGS 01 32 01.00 10

- Submit **Primavera P6 (or equivalent) schedule** within **30 days of NTP**.
- Schedule must include:
  - **Critical Path Method (CPM) analysis**.
  - **Work Breakdown Structure (WBS)**.
  - **Milestones, activity durations, and dependencies**.

4.2 Schedule Updates

- Monthly updates tracking **actual progress vs. baseline**.
- Identification of **schedule variances and recovery plans**.

4.3 Look-Ahead Schedules

- **Two-week and four-week look-ahead schedules** must be submitted weekly.

4.4 Recovery Schedule Requirement

- If progress falls **15 days or more behind schedule**, submit a **Recovery Schedule within 7 days**, including:
  - Revised sequencing and task prioritization.
  - Manpower and resource adjustments.
  - Acceleration strategies to mitigate delays.

4.5 Time Impact Analysis (TIA) – AACE 52R-06 & USACE UFGS 01 32 17.00 20

- Perform a **Time Impact Analysis (TIA)** whenever a delay event occurs.
- Analysis must use **contemporaneous schedule updates** and include:
  - **Event chronology** with documentation supporting delay claims.
  - **Fragnets (fragmentary networks)** inserted into the CPM schedule.
  - **Comparison of pre- and post-delay schedules**.
  - **Responsibility assignment** (contractor vs. excusable delays).

- The CM must **review and approve all TIA submissions** before any schedule extensions are considered.

---

5. Quality Control (QC) Program – Three-Phase Control System (Per USACE UFGS 01 45 00.00 10)

5.1 QC System Requirements

- The contractor shall establish and implement a **Three-Phase Control System** in compliance with **USACE UFGS 01 45 00.00 10**.
- The contractor's designated **Quality Control (QC) Manager** is responsible for enforcement.

5.2 Phase 1: Preparatory Phase (Before Work Begins)

- Conduct a **Preparatory Phase Meeting** for each major work feature.
- Review applicable contract requirements, specifications, and approved submittals.
- Verify materials, equipment, and workmanship standards before starting work.
- Establish initial testing and inspection procedures.

5.3 Phase 2: Initial Phase (Start of Work)

- Inspect the **first unit of work** performed for each construction activity.
- Confirm that proper methods, materials, and workmanship are used.
- Identify potential issues early and document any non-compliance.
- Validate that the workforce follows approved methods and safety procedures.

5.4 Phase 3: Follow-Up Phase (Ongoing Work)

- Perform **continuous inspections** to ensure that all work conforms to contract documents.
- Track and correct any deficiencies in real time.
- Document completed work for final inspections and turnover.
- Submit detailed **QC inspection reports** to the DPW CM weekly.

---

6. Submittals & Approval Process

6.1 General Requirements

- The developer shall submit **all required documents, drawings, and certifications** as per the submittal register and schedule utilizing the DPW CM document management system.

- All submittals must be **stamped for approval** by the Developer's **Design of Record (DOR) or Quality Control (QC) personnel** before submission.
- The DPW **CM must be copied on all submittals** for monitoring, record-keeping, and government oversight.

6.2 Submittal Classification & Approval Authority

1. Government-Approved Submittals (Through CM)

- Must be **formally reviewed and approved** by the government through the DPW CM:
    - Project Schedule (Baseline and Updates)
    - Quality Control Plan
    - Safety Plan
    - Environmental Protection Plan
    - Commissioning & Testing Reports
    - Warranty Documentation
    - Scope/Budget impacting changes
    - Any other submittal required by the DPW CM

2. Developer-Approved Submittals (DOR or QC Personnel)

- Approved by Developer's **DOR/QC**, but copies must be **sent to the DPW CM**:
    - Material & product data
    - Shop drawings
    - Construction methods & procedures
    - Testing & Inspection Reports (excluding final acceptance tests)
    - As-built drawings (before final approval)

3. Record-Only Submittals (For DPW CM Documentation)

- Provided for DPW CM records but **do not require approval**:
    - Daily reports
    - Weather logs
    - Field test results (non-critical)
    - Meeting minutes & progress photos

6.3 Submittal Format & Delivery

- All submittals must be **electronically submitted** via the designated **Document Control System** (Procore, SharePoint, etc.).
- Each submittal must include a **Transmittal Form**, indicating:
    - Submittal Type
    - Approval Authority (Government, DOR, or Record Only)
    - Submission Date & Required Review Duration
    - Contractor's Recommendation (Approval, Resubmission, or Information Only)

6.4 Submittal Review & Turnaround Times

- **Government-Approved Submittals:** Reviewed within **14 calendar days**.
- **Developer-Approved Submittals:** Reviewed internally within **7 calendar days**, with copies forwarded to CM.
- **Record-Only Submittals:** Must be submitted to the CM **within 48 hours**.

6.5 Non-Compliance & Re-Submittals

- **Unapproved or incomplete submittals** will be marked **"Rejected" or "Revise & Resubmit"** by DPW CM.
- The developer must **correct and resubmit** within the timeframe specified by the DPW CM.
- Any work performed with unapproved submittals is subject to **removal at the contractor's expense**.

---

7. Rain Days & Weather Delays

7.1 Definition of Weather Delay

- Delays are only excusable if **weather conditions exceed historical averages**, based on **10 years of NOAA data**.

7.2 Documentation Requirement

- Developer must submit **daily weather logs, site photos, and impact assessments** for CM approval.

7.3 Schedule Adjustments

- Approved **schedule extensions** shall be granted only for **actual lost workdays**.
- Developer must submit a **Recovery Plan** for any weather-related delays.

---

8. Personnel Requirements

8.1 General Personnel Requirements

- The contractor shall provide and maintain an adequate workforce of **qualified personnel** to perform and manage the work.
- The contractor shall designate specific **Key Personnel** to ensure compliance with **quality control, safety, and contract administration**.
- **Key Personnel shall be on-site full-time** whenever construction activities are being performed.

8.2 Required Key Personnel

Position	Minimum Qualifications	Primary Responsibilities
Quality Control (QC) Manager *(Per USACE UFGS 01 45 00.00 10)*	- Completed **USACE Construction Quality Management for Contractors (CQM-C)** course.- Minimum **5 years of construction quality control experience**.- Prior experience as a QC Manager on projects of similar size/scope.	- Implements and manages the **Three-Phase Control System**.- Ensures compliance with contract quality standards.- Reviews submittals, tests, and inspection results.- Maintains the Quality Control Program documentation.- Coordinates all QC inspections and corrective actions.
Site Safety and Health Officer (SSHO) *(Per OSHA Standards)*	- Completed **OSHA 30-Hour Construction Safety Training**.- Minimum **5 years of safety management experience**.- Certified in **First Aid and CPR**.- Previous SSHO experience on projects of similar scope.	- Oversees project safety program and compliance.- Conducts daily safety briefings and inspections.- Investigates and reports all safety incidents.- Ensures adherence to **OSHA 29 CFR 1926 safety requirements**.- Enforces contractor's **Accident Prevention Plan (APP)**.

FORM E

DECLARATION RE COMPLIANCE WITH U.S. DOL WAGE DETERMINATION

Procurement No. FY2023 RFP 730-5-1058-L-YIG

Name of Proposer Company: _____

I, _____ hereby certifies under penalty of perjury:

1) That I am _____ (the proposer, a partner of the proposer, an officer of the proposer) making the bid or proposal in the foregoing identified procurement;

2) That I have read and understand the provision of 5 GCA § 5801 and § 5802 which read:

§ 5801. Wage Determination Established.

In such cases where the government of Guam enters into contractual arrangement with a sole proprietorship, a partnership or a corporation ("contractor") for the provision of a services to the government of Guam, and in such cases where the contractor employs a person(s) whose purpose, in whole or in part, is the direct delivery of service contracted by the government of Guam, then the contractor shall pay such employee(s) in accordance with the Wage Determination for Guam and the Northern Mariana Islands issued and promulgated by the U.S. Department of Labor for such labor as is employed in the direct delivery of contracts deliverables to the government of Guam.

The Wage Determination most recently issued by the U.S. Department of Labor at the time a contract is awarded to a contractor by the government of Guam shall be used to determine wages, which shall be paid to employees pursuant to this Article. Should any contract contain a renewal clause, then at the time of renewal adjustments, there shall be made stipulations contained in that contract for applying the Wage Determination, as required by this Article, so that the Wage Determination promulgated by the U.S. Department of Labor on a date most recent to the renewal date shall apply.

§5802. Benefits.

In addition to the Wage Determination detailed in this Article, any contract to which this Article applies shall also contain provisions mandating health and similar benefits for employees covered by this Article, such benefits having minimum value as detailed in the Wage Determination issued and promulgated by the U.S. Department of Labor, and shall contain provisions guaranteeing a minimum of ten (10) paid holidays per annum per employee.

3) 3) That the proposer is in full compliance with 5 GCA § 5801 and §5802, as many be applicable to be procurement herein;

4) 4) That I have review the attached the most recent wage determination applicable to Guam issued by the U.S. Department of Labor. (INSTRUCTION – Please attach)

DPW CHECKLIST OF PROPOSAL RESPONSIVENESS

This checklist will determine if a Proposal is responsive. Proposers are reminded to read the Request for Proposal and to comply with the mandatory requirements listed below. Proposals not in compliance with the mandatory requirements below may be disqualified.

DPW Check-off

( ) **PROPOSAL PACKAGE**

- ☐ Package must be sealed, and the outside clearly marked with the Project Name, Project No. and the name of the Proposer
- ☐ One (1) original and six (6) copies of the Proposal enclosed
- ☐ Two (2) electronic copies of the Proposal on CD or USB portable storage device
- ☐ One (1) separate and sealed individual Term Sheet for financing and a separate individual Price Proposal & Addenda Acknowledgement of Receipt Form (Attachment 9)

( ) **EXECUTIVE SUMMARY (max. 1 page)**

( ) **TABLE OF CONTENTS**

( ) **COVER LETTER (max 1 page)**

- ☐ The name, phone number and email address of the Proposer's contact person relative to the proposal.
- ☐ The Proposer's principal place of business and the location of the office proposing/sponsoring the work relative to this proposal.
- ☐ Must also indicate whether operating as an individual proprietorship, partnership, corporation, or a joint venture.
- ☐ A brief statement acknowledging the firm's understanding of the scope of work.
- ☐ A positive commitment to perform the services described, with the personnel specified in the submission, within the budgetary parameters of the "MA KÅHAT ACT OF 2013" and any subsequent/ relevant public laws.
- ☐ An acknowledgement that all addenda were received (list each addendum number and date in the letter).

( ) **BODY OF THE PROPOSAL**

- ☐ Does not exceed forty (40), excluding front and back covers, Executive Summary, Table of Contents, Cover Letter, tabs, certificates of insurance, detailed scheduled charts, and required forms. Items that are not part of the forty (40) pages should be clearly tabbed and labeled accordingly.

- ☐ Single-spaced and pages are numbered consecutively on the bottom
- ☐ Subdivided into the sections identified in **Section VII. Instructions for Submitting a Proposal, Sections 1-7**
- ☐ Copy of Contractors License/s
- ☐ Name and license of Proposer's Architectural/Engineering Design Team

( ) **AFFIDAVIT OF DISCLOSING OWNERSHIP AND COMMISSIONS (Attachment 1)**

- ☐ The affidavit must be completed, notarized and dated

( ) **AFFIDAVIT OF NON-COLLUSION (Attachment 2)**

- ☐ The affidavit must be completed, notarized and dated

( ) **AFFIDAVIT re NO GRATUITIES OR KICKBACKS (Attachment 3)**

- ☐ The affidavit must be completed, notarized and dated

( ) **AFFIDAVIT re CONTINGENT FEES (Attachment 4)**

- ☐ The affidavit must be completed, notarized and dated

( ) **AFFIDAVIT re ETHICAL STANDARDS (Attachment 5)**

- ☐ The affidavit must be completed, notarized and dated

( ) **DECLARATION re COMPLIANCE WITH U.S DOL WAGE DETERMINATION (Attachment 6)**

- ☐ The declaration must be completed and signed

( ) **ACKNOWLEDGEMENT OF RECEIPT FORM (Attachment 7)**

- ☐ Must be complete and signed

( ) **DPW CHECKLIST OF RESPONSIVENESS (Attachment 8)**

- ☐ Must be completed

PRICE PROPOSAL & ADDENDA ACKNOWLEDGEMENT OF RECEIPT FORM

Date: _____

To: Director of Public Works
Government of Guam
542 North Marine Drive
Tamuning, GU 96913

Gentlemen:

The undersigned (hereafter called the Bidder),

_____
(Corporation, Partnership or Individual)

an organized and/or licensed to do business under the laws of Guam, hereby proposes and agrees to furnish all the necessary labor, materials, equipment, tools and services necessary for the **"New Simon Sanchez High School: FDDBLM, Project No. 730-5-1059-L-YIG"** all in accordance with the drawings, specifications and other RFP documents prepared by the Department of Public Works for the sum of:

_____
_____($ _____) plus any and all sums to be added and/or deducted resulting from all extra and/or omitted work in accordance with the unit and/or lump sum prices stated in the itemized price proposal form attached hereto exclusive to annual maintenance and insurance cost. The annual insurance and maintenance costs are excluded from this sum.

The undersigned has examined the location of the proposed work, the drawings, specifications and other contract documents and is familiar with the local conditions at the place where the work is to be performed.

The Proposal Guaranty attached, without endorsement, in the sum of not less than fifteen percent (15%) of the total amount of the price proposal but shall not exceed $3 million, is furnished to the Government as a guarantee that the contract will be executed and a performance and payment bond furnished within fifteen (15) calendar days after the acceptance of the price proposal of the undersigned. In the event that the undersigned Proposer shall fail to execute the contract and furnish a satisfactory performance and payment bond under the conditions and within the time specified in this price proposal, the Proposal Guaranty shall be forfeited as liquidated damages for the delay and additional work and costs caused thereby in obtaining another Proposer, said being beforehand determined as being reasonable and containing no penalties.

If written notice of the acceptance of this price proposal is mailed, telegraphed or delivered to the undersigned within sixty (60) days after the opening thereof, the undersigned agrees to execute the form of agreement included as one of the contract documents, and to furnish a performance and payment bond in an amount equal to one hundred percent (100%) of the contract amount within fifteen (15) calendar days after receipt of such notice.
